TIMON, the Phliasian, a Greek poet and philosopher, born in Peloponnesus, about the middle of the third century before Christ. After he had enriched himself by teaching philosophy and rhetoric, he visited Egypt, where he was noticed by Ptolemy Philadelphus; notwithstanding whose favours Timon wrote a satire against the museum of Alexandria, founded or at least improved by that prince. He afterwards went to the court of Antigonus Gonatus, where he was well received; and at length settling at Athens, he died at an advanced age. Timon was a disciple of Pyrrho, the sceptic, and some of his writings relate to the philosophy of that school. He also wrote a number of comedies, tragedies, and satiric dramas; but the most celebrated of his works are his satires, called "Silloi," still in part extant. The relics of these pieces were published by H. Stephen in his *Poesia Philosophica*, 1573; by Bruck in his *Analecta*, 1776; and more recently by F. Paul in a treatise *De Sillis Græcorum*, Berlin, 1821, 8vo.—*Diogen. Laert. Biog. Univ.*

TIMON (SAMUEL) a writer of history, was born at Tirnau in Hungary. He entered among the jesuits in 1693, but principally devoted himself to the history of his native country. His works are "Celebrorum Hungarie Urbium et Oppidorum Chorographia," Tim 4to, 1702; "Epitome Rerum Hungaricarum," Casov. 8vo, 1734; "Imago Novæ Hungariæ," Casov. 8vo, 1734, which last two were published together at Vienna, 1734, 4to. He died in 1736, at the age of sixty-one.—*Nouv. Dict. Hist.*

TIMOTHEUS, the name of one of the most celebrated lyric poets and musicians of anti-

quity, who flourished at the court of Philip of Macedon and his son Alexander, about the middle of the fifth century before the Christian era. He was a native of Miletus in Caria; and Pausanias attributes to him the completion of the lyre by the addition of four new strings.—There was also an Athenian general of this name, the son of Conon, celebrated alike for his success in war and his eloquence in peace, who however lived to experience the proverbial ingratitude of his fickle countrymen, and died in exile.—*Vossii Poet. Græc. Corn. Nepos.*

TIMOUR or TAMERLANE, one of the most celebrated of the Oriental conquerors, was born in the village of Sebzar in the territory of Kesh, about forty miles from Samarcand, in the year 1335. His ancestors were chiefs of the districts, and remotely related to the family of Zinghis. At the time of his birth great anarchy prevailed in his native country, which suffered from an invasion of the Gètes, against whom he acted at the head of a body of his countrymen, and endured much diversity of fortune, until at length being joined by a large body of volunteers, he was enabled to expel the Gètes from Transoxiana. A dispute with his confederate and brother-in-law Houssein, led to a brief civil war; but the latter being defeated and put to death, a general diet in 1370, seated him on the throne of Zagatai, on which he made Samarcand the seat of his empire. His elevation, so far from satisfying his ambition, only opened farther prospects to it; and in a very few years he reunited to Zagatai its former dependencies, Candahar and Carizme; overran Persia; passed as a conqueror through the whole course of the Tigris and Euphrates; reduced the Christians of Georgia; subdued the kingdom of Cashgar; and his emirs even crossed the river Irtysh into Siberia. He also despatched an army into Western Tartary, under a fugitive prince named Toctamish, who having established himself by its means, turned his arms against his benefactor, and obliged Timour to contend for his capital and empire. He was however finally defeated, and in the pursuit Timour captured a duke of Russia. In 1390 he invaded Hindostan, and rapidly penetrating to Delhi, soon completed the subjugation of the country. While on the banks of the Ganges he was informed of great disturbances on the confines of Georgia and Anatolia, and of the ambitious projects of the Turkish sultan Bajazet. He soon made arrangements to encounter this new enemy, whom, after a war of the most barbarous ferocity, which lasted two years and upwards, he encountered and conquered, and made captive in the decisive battle of Angora, fought in 1402. Concerning the treatment of his prisoner different accounts are given, the most common of which states that he was carried about by the conqueror in an iron cage, against the bars of which he in a few months beat out his brains in rage and despair. The conquests of the Tartar now extended from the Irtysh and Volga to the Persian gulf, and from the Ganges to the Archi-

pelago; and the want of shipping alone prevented him from crossing into Europe. His inordinate ambition was not yet satisfied, and he was making mighty preparations for an invasion of China, when death arrested his progress, at his camp at Otrar, and he expired April 1, 1405, in the seventieth year of his age, having previously declared his grandson Mahomet Jehan Ghis his successor. He left fifty-three descendants, and a name much revered in the East, where his posterity until lately still preserved the title of the Mogul emperors, although the dominion had passed into other hands. Timour was tall and corpulent, with a wide forehead, large head and pleasing countenance; but he was maimed in one hand and lame on the right side. He conducted his government alone, and without favourites, but was in the highest degree fierce and fanatical in his religion; and although no conquests were ever attended with greater cruelty, devastation, and waste of human life, he affected the title of a benefactor to mankind. Happily his ambition was too gigantic for its consequences to last, and his dominions rapidly became divided as before. Yet he was not a mere barbarian conqueror, if the Institutes are to be regarded as genuine, which under the title of "The Institutions of Timour," have been made known in England by a version from the Persian, executed by major Davy and professor White, Oxford, 1783.—*Mod. Univ. Hist. Gibbon.*

TINDAL, L.L.D. (MATTHEW) a controversial writer, was born about 1657, at Beer Ferris, in Devonshire, of which place his father was the clergyman. He was admitted of Lincoln college, Oxford, in 1672, where he graduated B.A. in 1676, and was afterwards elected a fellow of All Souls' college. In 1679 he took a bachelor of law's degree, and afterwards became a doctor in this faculty. At the commencement of the reign of James II he was induced to turn Romanist by some of the emissaries of that persuasion which then surrounded the universities, of which conversion, like Gibbon, he gave a very candid account, when in 1687 he returned to the worship of the church of England. Having heartily concurred in the Revolution, he was admitted an advocate, and sat frequently as a judge in the court of delegates, being favoured with a pension of 200*l.* per annum from the crown. He published several pieces political and theological, among which were: a "Letter to the Clergymen of the two Universities," on the subject of the Trinity and Athanasian creed, and a treatise entitled "The Rights of the Christian Church against the Romish and all other Priests, who claim an independent Power over it," &c. This work excited a considerable sensation among the high church clergy, who attacked it with great animosity and even indicted its vendors; while the celebrated Le Clerc, in his "Bibliothèque Choisie," spoke of it as a book of great argumentative power. Tindal, in the mean time, was by no means silent in his own vindication, and published a defence, the second edition of

which, in two parts, was ordered by a vote of the house of Commons to be burnt by the common hangman in the same fire with Sacheverel's sermon, thus treating the disputants on each side in the same manner. He soon afterwards defended the doctrine of necessity from the censure of the lower house of convocation, and actively engaged in political controversy, in the course of which he wrote several political pamphlets, which are now forgotten. Hitherto, although a declared enemy to priestly claims, he had made no attack on revealed religion, but in 1730 he published his celebrated "Christianity as old as the Creation, or the Gospel a Republication of the Religion of Nature." In this work, although he allows Christianity, stripped of the additions which policy, mistake, and circumstances have made to it, to be a most holy religion, his object was clearly to show that there neither has been, nor can be, any revelation distinct from what he terms the internal revelation of the law of nature in the hearts of mankind. This book was attacked by Dr Waterland, who affected to treat the author with great contempt, in opposition to the opinion of Dr Middleton, who thought it exhibited a degree of study and learning, which called for a very different kind of refutation. The author defended himself with his usual tenacity; but his health was now declining, and he died in consequence of concretions in the gall-bladder in 1733. He left in MS. a second volume of "Christianity as old as the Creation," the publication of which was prevented by Dr Gibson, bishop of London.—*Biog. Brit. Leland's Deist. Writers.*

TINDAL (NICHOLAS) nephew to the preceding, was born in 1687, and was entered of Exeter college, Oxford, where he took his degree of B.D. in 1713. He was presented to the rectory of Alverstoke in Hampshire, by the bishop of Winchester, and to that of Great Waltham, near Chelmsford, Essex, in 1722, by Trinity college, Oxford, of which he had become a fellow. He was finally appointed chaplain of Greenwich hospital, where he died June 27, 1774, at the advanced age of eighty-seven. He published a translation of Calmet on the history of the Hebrews, and wrote part of a history of Essex; but quitted the latter undertaking for a translation of Rapin's History of England, which was printed in folio and octavo, with a continuation. He also translated Cantemir's History of the Turkish Empire, and abridged Spence's Polymetis for the use of schools.—*Chalmers's Biog. Dict.*

TINDAL. (See TYNDALE.)

TINGRY (PETER FRANCIS) professor of chemistry and natural history at Geneva, was born at Soissons in 1743. He studied at Paris, under the celebrated Rouelle, and in 1770 he went to Geneva, where his talents and acquisitions recommended him to Saussure, Sennebier, and other men of science; and he determined to take up his abode at that place, where he was admitted a citizen in 1773. The following year he published "Analyse des Eaux de Marclaz," 8vo; and "Prospectus pour un Cours de Chimie théorique et pra-

tique," 4to. He contributed to the establishment of the Society of Arts at Geneva, of which he was vice-president; and under the patronage of this society he delivered lectures on chemistry for the use of artists. A variety of valuable treatises and memoirs, which he subsequently published, attest the zeal and ability with which he pursued his researches, leading to improvements in processes connected with natural philosophy and the arts. He died February 13, 1821, at the age of seventy-eight, displaying his regard for the interests of science, by bequeathing his country-house, on the borders of lake Leman, to the occupier of the chair of chemistry in the university of Geneva for the time being. Besides analyses of the mineral waters of Disse, near Carouge, and of the hot waters of St Gervais near Salanches, Memoirs on the Composition of Ether, on Phosphoric Acid, on the Inspiration of Oils through the Influence of Light, on the Phosphorescence of Sea Water, &c. and on the Electric Fluid, he published a "Theoretical and practical Treatise on the Art of making and applying the Varnishes proper for different Kinds of Painting," Geneva, 1803, 2 vols. 8vo.—*Biog. Nouv. des Contemp. Biog. Univ.*

TINTORETTO, the name generally given to Giacomo Robusti, the son of a Venetian dyer, whose father's occupation gave rise to the appellation. He was born in 1512, and having been placed under the celebrated Titian as a scholar in the art of painting, that eminent master, whose jealousy appears to have been scarcely inferior to his talents, endeavoured to crush the genius which he feared, and dismissed him abruptly. Notwithstanding this disadvantage, Tintoretto continued to persevere in his favourite pursuit, and by uniting the natural colouring of his instructor to the gusto and more correct design of Michael Angelo, established for himself a lasting reputation. The boldness of his style, the strong contrast which he exhibits in his lights and shadows, together with the rapidity and spirit of his genius, acquired him the epithet of Il Furioso. With his countrymen he was especially popular, and obtained from the senate the rights of citizenship. Tintoretto died at Venice in 1594, leaving a son, Dominico, who evinced some talent as a portrait painter, and died in 1637. Maria, a daughter, was equally eminent in the same line, and an excellent musician. Her death took place in 1630.—*D'Argenville. Pilkington's Dict. by Fuseli.*

TIPPOO SAHEB, sovereign of Mysore, son and successor to the famous Hyder Ally. He maintained the independence of his states against the Great Mogul, by the assistance of the French, during the war with America. When however the French Revolution deprived him of his European allies, he had to contend with the English, who defeated him in several battles, until in 1792 he was compelled by the marquis Cornwallis to sue for peace, which was granted on his payment of a large sum of money, ceding part of his territories, and giving up his two sons to the Eng-

TIP

lish as hostages. Of a fierce and haughty disposition, Tippoo naturally felt impatient at the humiliations that he had endured, which disposition led to a revival of the war in 1799, which was terminated by the capture of Seringapatam, by an English force under general now lord Harris, in the defence of which capital, the ill-fated sultan lost his life. An immense booty fell into the hands of the English, among which was the library of the deceased prince, consisting of many valuable works in Sanscrit; the Koran in all the languages in the East; a history of Tamerlane; memoirs of Hindostan, and other MSS. of great rarity, which are all in possession of the East India Company. Tippoo Saheb was personally brave, but rash and presumptuous, although possibly no qualities would long have preserved his dominion against the union of policy and force with which it was his bad fortune to see it assailed.—*Nouv. Dict. Hist. Ann. Register.*

TIPTOFT (**JOHN**) earl of Worcester, a patron of learning, and one of the few literary ornaments of England in the fifteenth century, was born at Everton or Evaston in Cambridgeshire, and educated at Balliol college, Oxford. He was the son of lord Tibetot or Tiptoft and Powys, and was created a viscount and earl of Worcester by Henry VI, who also appointed him lord-deputy of Ireland. By Edward IV he was made knight of the garter; and constituted justice of North Wales for life. Dugdale says he was soon after made constable of the Tower; while others assert that he was twice lord high constable, and twice lord high treasurer. He was also a second time deputy or lieutenant of Ireland, under the duke of Clarence, in which capacity he attained the earls of Kildare and Desmond for supporting the insurrection against government; and sentenced the latter to be beheaded. On the temporary reverse of fortune experienced by Edward IV and the house of York, in consequence of the junction between the earl of Warwick and the duke of Clarence, the earl of Worcester, the severity of whose judicial proceedings as high constable had rendered him extremely obnoxious to the Lancastrians, became one of the first objects of their vengeance. He endeavoured to find security for his person by concealment, but was discovered in a tree in the forest of Weybridge near Huntingdon, and thence conveyed to London, where he was rapidly tried on the accusation of cruelty in his Irish administration, particularly towards two infant sons of the earl of Desmond, and condemned to lose his head on Tower-hill, on the 18th of Oct. 1470, which sentence was executed accordingly. He was married three times, but left only one son and heir by his third wife. The earl of Worcester appears to have been a person of considerable learning and of great accomplishments for the age in which he lived. In his return from a pilgrimage to Jerusalem he had passed some time at Venice, Padua, and Rome. He was led to Rome by his desire to see the Vatican library, and he there made so elegant an oration to pope Pius II,

TIR

as to receive the admiration of his holiness in tears. He was a great collector of books, and gave manuscripts of five hundred marks value to the university of Oxford. Caxton speaks of him as one who "in his tyme flowered in vertue and cunning, and to whom he knew none like among the lordes of the temporalitie in science and moral vertue." Another writer, speaking of the earl's execution, says, "The axe then did at one blow cut off more learning than was left in the heads of all the surviving nobility." An opinion of the writer whose words are last quoted, that the earl's expedition to Jerusalem was undertaken at a time when he was in a state of suspense between gratitude to king Henry and loyalty to king Edward, is without foundation; for so far from his travelling to Jerusalem under such circumstances, he does not appear to have quitted his office in Ireland after his appointment in 1457, during the reign of Henry, and he had an office conferred upon him by king Edward in the first year of his reign. There is not probably much better foundation for the idea of Leland, in his History of Ireland, though adopted by Walpole in his Royal and Noble Authors, that the exertions of this earl against the Yorkists had drawn down the vengeance of that party upon him; for the principal charge against him, on which he was brought to the scaffold, was his severity to the Lancastrians, which shows him, notwithstanding his learning, to have been deeply imbued with the ferocity of the times. The literary works of this nobleman, as far as we are acquainted with them, are an English translation of "Tullius de Amicitia," and of "Two Declarations made by Publius Cornelius Scipio and Gayus Flamigneus, Competitors for the Love of Lucrece," both printed by William Caxton; some Orations and Epistles; and an English translation of "Caesar's Commentaries," as touching British affairs, supposed to be printed by John Rastall, temp. Henry VIII. In the sixth of Edward IV he drew up "Orders for the placing of the Nobility in all Proceedings," and "Orders and Statutes for Justs and Triumphs;" and in the Ashmolean collection are "Ordinances, Statutes, and Rules, made by John Tiptofte, Erle of Worcester and Constable of England, by the King's Commandment at Windsor, 29th May, 6th Edward IV, to be observed in all Justs of Peers within the Realm of England," &c. He is also said to have written "A Petition against the Lollards," and an "Oration to the Citizens of Padua;" and among the manuscripts belonging to Lincoln cathedral is a volume containing about twenty epistles, four of his writing and the rest addressed to him.—*Royal and Noble Authors. Fuller's Worthies. Original Communication.*

TIRABOSCHI (**GIROLAMO**) a learned Italian writer, born at Bergamo in 1731. He entered into the society of the jesuits; and for some time he taught grammar and rhetoric at the college of Brera at Milan. He was likewise appointed to the office of keeper of the college library, and in 1767 he was made libra-

rian to the duke of Modena. In 1780 his highness gave him the situation of superintendent of his cabinet of medals, and bestowed on him the honour of knighthood and a patent of nobility. His death took place June 8, 1794. The principal work of Tiraboschi is his "Storia della Letteratura Italiana," which has passed through several editions in quarto and octavo; and among his other productions are "Biblioteca Modenese, ovvero Notizie della Vite e delle Opere degli Scrittori nati degli Stati del Duca di Modena," 1781, 6 vols. 4to; "Vetera Humiliatorum Monumenta Annotationibus ac Dissertationibus prodromis illustrata," 3 vols. 4to; and "Memorie Storiche Modenesi," 3 vols. 4to; and he was also the conductor of a review, published under the title of "Nuovo Giornale de' Letterati d'Italia."—*Aikin's Gen. Biog. Biog. Univ.*

TISCHBEIN (JOHN ANTHONY) a native of Hesse in Germany, the son of a baker, and the fourth of seven brothers all devoted to the cultivation of the fine arts. He studied drawing at Frankfurt, and afterwards went for improvement to Paris and Rome. Having gone to Hamburg to establish a school of design, he died there in July 1784. He published a work on the Elements of the Art of Painting, Hamb. 1771, 8vo.—TISCHBEIN (JOHN HENRY) painter to the landgrave of Hesse Cassel and founder of a new school of art in Germany, was a younger brother of the foregoing. At the age of fourteen he was placed under an indifferent tapestry-painter, whom he soon excelled. Count Stadion having seen some of his work, was struck with the proofs of talent which it exhibited, and furnished him with the means of studying in France and Italy. He returned home in 1751, and was appointed painter to the landgrave of Hesse Cassel. His talents were employed in enriching the gallery of the landgrave, for which he produced several excellent paintings of subjects taken from ancient mythology, executed between the years 1762 and 1783. An academy of painting and architecture having been founded at Cassel in 1776, Tischbein was nominated director, and afterwards professor of painting at the Caroline college. He died at Cassel, August 22, 1789.—TISCHBEIN (JOHN HENRY CONRAD) nephew of the preceding, was also his pupil, and applied himself particularly to the painting of landscapes and natural history. After having travelled in Holland, he was in 1755 appointed inspector of the gallery of the landgrave, to the improvement of which his uncle had so much contributed. He acquired a knowledge of etching with aquafortis and engraving in wood; and in 1790 he published an "Elementary Treatise on Engraving with Aquafortis, with Plates executed in that Method," folio. This artist died in 1808, aged sixty-six.—TISCHBEIN (JOHN HENRY WILLIAM) brother of the last noticed, and student under his uncle in the gallery of Cassel, became one of the first historical painters of his time. After having been employed at Hamburg, in Holland, and at Hanover, he went in 1777 to Berlin, where he executed several por-

traits of the royal family. In 1779 he was at Rome, and in 1787 at Naples, where his talents attracted the notice of the court. In 1790 he was appointed director of the Academy of Painting; and he held the office till 1799, when the calamities of war falling on Naples, he was obliged to return to his own country. He published a Collection of Engravings from Antique Vases; Designs of Subjects from Homer; and various other works.—TISCHBEIN (JOHN FREDERIC AUGUSTUS) brother of the foregoing artists, was professor and director of the school of the fine arts at Leipsic. He excelled as a portrait painter, and died at Heidelberg, June 21, 1812.—*Biog. Univ.*

TISSOT (SIMON ANDREW) an eminent physician and medical writer, born at Grancy, in the Pays de Vand, in 1728. He studied at Geneva, and then at Montpellier, and having taken his doctor's degree in medicine in 1749, he settled at Lausanne, in Switzerland. The success with which he treated the confluent small-pox, by means of fresh air and a cooling diet, at a period when stimulants and sudorifics were generally adopted, fixed on the young practitioner the public attention. He published a tract in favour of inoculation in 1750, and he soon after translated into French Haller's Dissertations on Sensibility and Irritability, and on the Motion of the Blood. These pieces were followed by several other medical publications, the most distinguished of which is his "Avis au Peuple sur sa Santé," Lausanne, 1761, which was translated into English by Dr James Kirkpatrick, and probably served as the model of Buchan's Domestic Medicine, and other popular works. Among his other productions may be specified "Avis aux Gens des Lettres et aux Personnes sédentaires sur leur Santé," Paris, 1768; and "Essai sur les Maladies des Gens du Monde," Lyon, 1770, 12mo. After Tissot had refused advantageous offers made him by the kings of Poland and England, to induce him to quit Lausanne, he acceded to the request of the emperor Joseph II, and accepted of a professorship in the university of Pavia. This office however he relinquished after three years, agreeably to a stipulation he had made on accepting it. He returned to Lausanne, where he had been invested with the right of citizenship, and created a member of the council of Two Hundred. His death took place June 13, 1797. The principal works of Tissot were published together at Paris, 1809, 8 vols. 8vo, with the notes of professor Hallé.—*Biog. Univ.*

TISSOT (CLEMENT JOSEPH) a relative of the subject of the last article, was born at Ornans in the department of Jura, in 1750, and he studied medicine at Besançon, where he took the degree of doctor in 1776. He published a treatise entitled "Gymnastique Médicale," 1781, 12mo; and in 1785 he was chosen correspondent of the Royal Society of Medicine at Paris. Going afterwards to that capital, he was appointed adjunct physician to the household of the duke of Orleans, through the recommendation of his friend Dr Trou-

chie. In 1788 he was nominated chief surgeon-adjunct at the camp of St Omer's; and shortly after the king made him divisional inspector of the hospitals of Alsace and Franche Comté. After the Revolution he was surgeon-in-chief in various corps of the French armies; and in that capacity he served in the campaigns in Austria, Prussia, Poland, and Italy. At length he retired from the service, and settled in professional practice at Paris, where he died June 30, 1826. He was an officer of the legion of honour, consulting physician to the duke of Orleans, and vice-president of the Medico-practical Society. Besides the work already noticed, he published several essays and treatises, the result of his professional observations, of which a list is given in the first of the annexed authorities.—*Biog. Nouv. des Contemp. Biog. Univ.*

TITIAN or **TIZIANO VECELLI**, one of the most distinguished of the great Italian painters, was born at Capo del Cadore in the Alps of Friuli in 1480. His early indication of talent for the arts of design induced his parents to place him under Sebastiano Zuccati of Treviso, and subsequently under Giovanni Bellini of Venice. He soon made an extraordinary proficiency, and arrived at so exact an imitation of his master's style, that their works could scarcely be distinguished. This style however was stiff and dry, so that when the young artist had seen the performances of Giorgione, which were of a more free and elegant character, he quitted his former master, and soon by his facility excited envy in his new one. At the same time he by no means neglected the other objects of education, but made so great a progress under proper instructors, that at the age of twenty-three he was celebrated as one of the most promising poets of the day. With great judgment, however, he devoted himself to the pursuit for which he felt the most decided predilection, and he attained to great perfection in the three great branches of landscape, portrait, and history. He was particularly remarkable for his accurate observation and faithful imitation of nature, as regards the tones and shades of colouring; and as taste in design was a less conspicuous part of his excellence, it is in portraits and landscapes that he is deemed unrivalled. Indeed in the opinion of Mr Fuseli he is to be regarded as the father of portrait painting, as relates to resemblance, character, grace, and tasteful costume. His principal residence was at Venice, though he occasionally complied with invitations from princes to their courts. At Ferrara he executed the portraits of the duke and duchess, as also that of Ariosto, then a resident there. He was sent for to Rome by cardinal Farnese, and he attended Charles V at Bologna, who was so pleased with the portrait which he made of him, that he honoured him with the order of knighthood, and granted him a pension which was afterwards augmented by Philip II. Happily most of the princes and leading men of the day were ambitious of being painted by him, which renders his pictures doubly valuable as

portraits of eminent individuals and for beauty of execution. He resided for some time both in Spain and Germany, but his home was Venice, where he lived in great splendour, and maintained the rank due to his genius. He retained the spirit and vigour of youth to the advanced age of ninety-six, and then died of the plague in 1576. This great painter had his weaknesses, the chief of which was an extreme jealousy of all approaching excellence, which rendered him ungenerous to Tintoretto, and even to a brother of his own. The first of all colourists, this great excellence may possibly have rendered his other characteristics as a painter too subordinate. In general his male forms are less elastic than muscular, while his females partake too much of the fair, dimpled, soft, Venetian forms, which are too full for elegance, and for air and action too rotund. He left two sons, one of which obtained preferment in the church; the other became a distinguished painter; but being addicted to alchemy he wasted his patrimony and neglected his art. Of the historical pictures of Titian, two are mentioned as peculiarly excellent, a Last Supper in the Eccelesia, and Christ crowned with Thorns, in a church at Milan. The engravings from his pictures, including landscapes and pieces, cut in wood, amount to more than six hundred.—*D'Argenville. Pilkington by Fuseli. Tiraboschi.*

TITIUS (**THEOPHILUS GERARD**) a German lawyer, born at Nordhausen, in 1661. He studied at Leipsic, and afterwards going to Rostock, he devoted twenty years to researches concerning jurisprudence, and the publication of his works. In 1709 he became professor of law in the university of Leipsic, in 1710 counsellor of the tribunal of appeal at Dresden, and in 1713 assessor of the superior tribunal of Leipsic. He died in that city, April 10, 1714. His principal works are "Specimen Juris-publici Romano-Germanici," 1698, 12mo; "The German Feudal Law considered according to its Nature and to the Constitution of the Empire," 1699, 12mo; "Ars Cogitandi," 1702; "Observationes in Sam. L. B. de Puffendorf, Libros II. de Officio Hominis et Civis," 1703, 12mo; "An Essay on the Canon Law of Germany for the Protestant States," 1701; and other treatises on German jurisprudence, for the titles of which we must refer to the subjoined authority. His dissertations on legal topics were collected and republished by Hommel, Leipsic, 1729, 4to.—*Biog. Univ.*

TITON DU TILLET (**EDWARD**) celebrated for his zeal for the honour of literature, and the curious monument which he designed to perpetuate the fame of the learned. He was born at Paris in 1677, and was the son of Maximilian Titon, director general of manufactures and royal magazines of arms. Having finished his education, he entered into the army, and served till the peace of Ryswick. He then bought the office of maître-d'hôtel to the duchess of Burgundy, afterwards dauphiness; on whose death, in 1719, he travelled into Italy, and on his return home he was made

provincial commissary at war. In 1708 he conceived the idea of a Parnassus in bronze, in honour of the king and the great men who flourished in France during his reign. The work on a small scale was executed by Louis Garnier, the pupil of Girardon; and the projector flattered himself with the hope of obtaining from the government the means of constructing his Parnassus on a grand scale in a garden or public place; but he was disappointed. In 1726 he published a description of his poetical monument, with notices of the lives and works of the personages exhibited, to which he added supplements, the last of which appeared in 1760. He was also the author of "*Essais sur les Honneurs et sur les Monuments accordés aux illustres Savants pendant la Suite des Siècles*," Paris, 1734, 12mo. His death took place December 26, 1762.—*Biog. Univ. Aiken's Gen. Biog.*

TITSINGH (ISAAC) a Dutch voyager, born at Amsterdam about 1440. He went out in the service of the East India Company and obtained a place in the council at Batavia, where for seventeen years his constitution withstood the effects of the pestiferous climate, so peculiarly fatal to Europeans. In 1778 he went as chief of a commercial mission to Japan, where he remained for some time in the island of Devima, appropriated for the residence of the Dutch factory. He was repeatedly sent ambassador to Yedo, the residence of the secular emperor of Japan, and thus he obtained unusually favourable opportunities for making observations on a country and people seldom visited by Europeans. He left Japan in 1784, and was subsequently appointed governor of Chinchoora, on the banks of the Ganges, in Bengal. Returning to Batavia, he resumed his functions as counsellor of the government, which post he a second time quitted to go to Pekin as ambassador from the Dutch East India Company to the emperor of China. An account of this mission was published by M. Van Braam, who held the second place in the embassy. After a residence of thirty-three years in the East, Titsingh returned to Europe, and having acquired a considerable fortune, he devoted much of his time to the arrangement of the materials illustrative of the state of Japan, which he had collected, and intended to publish both in Holland and in France. He died at Paris, in February 1812, and the result of his labours subsequently appeared in his "*Cérémonies usitées au Japon, pour les Mariages et les Funérailles, &c.*" 1819, 2 vols. 8vo; and "*Mémoires et Anecdotes de la Dynastie régnante des Djogouns, Souverains de Japon, avec la Description des Fêtes et Cérémonies observées aux différentes Epoques de l'Année à la Cour de ces Princes*," 1820, 8vo.—*Biog. Univ.*

TITUS VESPASIANUS, the son and successor of the Roman emperor Vespasian, distinguished for his military talents and for the wisdom and beneficence of his government. His youth was tainted with the vices of extravagance and incontinence, and while an inmate of his father's palace, he chose his as-

sociates among the most abandoned of the youthful courtiers, and indulged in the gratification of every impure desire and unnatural vice. From one so little accustomed to restrain his passions, the Roman people anticipated nothing but the misrule of a second Caligula or Nero; but on ascending the throne Titus happily disappointed these gloomy prognostications, and relinquishing his vicious habits and debauched companions, he became the father of his people, the guardian of virtue, and the patron of liberty. His reformation, like that of our Henry V., appeared to be sincere and perfect; and the unworthy and dissolute youth assumed the character of the enlightened and munificent sovereign of a vast empire. All informers were banished from his court, and even severely punished; a reform took place in judicial proceedings; and the public edifices were repaired, and new ones erected for the convenience of the people. The memorable exclamation of Titus, "*Perdididi diem*," "*I have lost a day*," which he is said to have uttered one day when no opportunity had occurred for doing any service or granting a favour to any one of his subjects, has been considered as strikingly characteristic of his sentiments and behaviour, which procured for him the title of "*delicium generis humani*," the delight of mankind. Two senators having engaged in a conspiracy against his life, he not only pardoned them, but also admitted them to his friendship. During his reign there was a conflagration at Rome, which lasted three days; the towns of Campania were desolated by an eruption of Vesuvius, and the empire was visited by a destroying pestilence. In this season of public calamity the emperor's benevolence and philanthropy were most conspicuously displayed. He comforted the afflicted, relieved the sufferers by his bounty, and exerted all his care for the restoration of public prosperity. The Romans did not long enjoy the benefits of his wise and virtuous administration. He was seized with a violent fever, and retiring to a country-house which had belonged to his father, he there expired, lamenting with his latest breath the severity of his fate, which removed him from the world before he had perfected his plans for the benefit of his grateful subjects, whose sorrow for his loss was heightened by their apprehensions arising from the gloomy and unpromising character of his brother Domitian, who was even suspected of having hastened the catastrophe which was to contribute to his own elevation to imperial power. Titus died A.D. 81, in the forty-first year of his age, after reigning two years.—*Suetonius. Moreri.*

TOALDO (GIUSEPPE) a learned Italian meteorologist, was born in 1719 at Pianezza in Vercenza, and educated at Padua, where he took a degree as doctor of theology, but was principally engaged in mathematical studies. He however obtained some ecclesiastical preferment, and in 1762 was appointed professor of astronomy and meteorology in the university of Padua. Here he procured an observatory to be built, which was furnished

with instruments from England. In 1777 he was elected an honorary member of our Royal Society, and contributed some memoirs to our Philosophical Transactions. He however first became known throughout Europe by an ingenious work on the influence of the heavenly bodies on the weather and atmosphere, "*Della vera Influenza*," &c. 1770, 4to. His reputation was subsequently much increased by his "*Meteorological Journal*," which he began in 1773, and continued until his death. He also wrote a variety of works on kindred subjects, of which Fabroni has given a list. He died much esteemed in November 1797, in his seventy-ninth year.—*Fabroni Vite Italorum*.

TOBIN (JOHN) an English dramatic poet, who acquired a considerable degree of posthumous reputation about the commencement of the present century. He was a native of Salisbury, born in 1770, and was educated by his father, a West India merchant, for the inferior department of the law. With this view, after the usual period spent in preparatory study at Southampton and Bristol, he placed him in a conveyancer's office in the metropolis, where he served his time, and was admitted at its expiration as an attorney of the Court of King's Bench. His predilection however for lighter studies soon induced him to direct his attention towards writing for the stage, of which he was passionately fond. The critics of the green-room, proverbially the worst judges of dramatic composition, rejected all the pieces which he submitted for their acceptance, with the exception of a farce, really deficient in merit, which was produced on a benefit night; nor was it till some time after his decease, which took place at Cork, in 1804, that accident having brought his play of the "*Honeymoon*" before the public, the popularity it rapidly acquired induced the managers to bring out another of his pieces, the "*Curfew*," which, though it did not attain to the same degree of estimation as its precursor, met with a very favourable reception. In the first of these plays Mr Tobin was very happy in imitating the style of the older dramatists, from whom indeed not merely his characters, but even his incidents are manifestly borrowed, a circumstance which may perhaps in some degree account for its remaining so long in abeyance on the shelves of the prompter's room. A delicate state of health, which had long threatened the most serious consequences, terminated at length in a consumption, which carried him off, after embarking for the West Indies in 1804, and he was buried at Cork.—*Life by Miss Bengier*.

TODD, DD. (HUGH) a learned antiquary and divine, born at Blencow in the county of Cumberland, in 1658. He was admitted on the foundation of Queen's college, Oxford, which he quitted in 1678 for a fellowship at the opposite college of University. Having taken holy orders, he proceeded doctor in divinity in 1692, and enjoyed a stall in Carlisle cathedral through the interest of bishop Smith, to whom he was domestic chaplain; but being afterwards worsted in a contest carried on

with his patron's successor in the see, on a disputed point respecting the right of visitation, he resigned it in disgust, and subsequently his vicarage of Stanwix for that of Penrith and the rectory of Arthuret. He was the author of a History of the Diocese of Carlisle, another of its Cathedral, and one of the Priory of Wedderhall, never printed; besides a "*Description of Sweden*," and a "*Life of Phocion*," which have appeared, as also of a variety of papers to be found among the Philosophical Transactions of the Royal Society. Dr Todd died in 1728.—*Hutchinson's Cumberland*.

TODERINI (GIOVANNI BATTISTA) an Italian writer, born at Venice in 1728. He entered into the order of the jesuits, and became professor of philosophy at Verona and at Forli. After the suppression of the jesuits he attached himself to the bailli Garzoni, whom he accompanied in 1781, in his embassy to Constantinople. Toderini remained there till 1786, and employed himself in collecting a library of books and Arabian MSS. On his return to Italy he published the work on which his reputation is founded "*Della Letteratura Turchesca*," 1787, 3 vols. 8vo, afterwards translated into French and German. He was also the author of some other productions, chiefly relative to philosophy and natural history; but they require no particular notice. He died at Venice, July 4, 1799.—*Biog. Nour. des Contemp. Biog. Univ.*

TOFINO DE SAN MIGUEL (don VICENTE) a Spanish astronomer, born at Carthagena in Mexico in 1740. He entered young into the navy, and having distinguished himself by his application to mathematical science, he was in 1770 appointed professor at the marine academy in the Isle of Leon. During the American war he was directed to survey the Spanish coasts and the islands visited by vessels in voyages to America. Tofino had in 1786 been made director of the companies of royal marine guards; and he was afterwards brigadier of the naval forces of Spain, member of the academy of history at Madrid, and correspondent of the academies of sciences of Paris and of Palma. He died at Madrid in 1806. He was the author of an Atlas of the coasts of Spain, 1786; Astronomical Observations made at Cadiz, 2 vols. 4to; besides other works.—*Biog. Univ.*

TOGRAY (MOUAYAD EDDIN ABU ISMAEL HOSEIN AL) a native of Isfahan, who lived in the twelfth century, celebrated as a writer both in prose and verse. He was the vizir of Masoud, the seljuk sultan of Mosul, who going to war with his brother Mahmoud, was defeated in a great battle near Hamadan, AD. 1120; and Togray falling into the hands of the victors was put to death. The most famous of his compositions is his "*Lamiyya al Adjem*," so called from every verse terminating with the letter lam or l, and as distinguished from a more ancient poem, the "*Lamiyya of the Arabs*," al Adjem, signifying the Persians. The poem of Togray, with a Latin version by Edward Pocock, was published at Oxford in 1661; and another translation by

Goliuss was printed with the original Arabic at Utrecht in 1709. Both the Lamiyyas, without any version, were published at Casan in 1814.—*Biog. Univ.*

TOLAND (JOHN) a writer of considerable note, in political and religious controversy, was born in 1669 near Londonderry in Ireland. His parents were Catholics of a good family, who educated him in the religion of his ancestors. He however discarded the Romish faith before he had attained the age of sixteen, and finished his education at the universities of Glasgow and Edinburgh, in the latter of which he graduated MA. in 1690. He then went to England, where he became introduced to some respectable dissenting families, who enabled him to pursue his studies for two years more at Leyden. Returning to England he collected materials for various literary designs, and composed several treatises, one of which was to prove the common narrative of the death of Regulus a fable. He also began the work that commenced the controversial warfare which he ever after sustained. This he published in 1696, under the title of "Christianity not Mysterious, or a Treatise showing that there is nothing in the Gospel contrary to Reason or above it, and that no Christian Doctrine can be properly called a Mystery." The foregoing work naturally excited a considerable sensation among divines of all persuasions, and various answers were published; and among the rest a confutation, not unusual at the time, in the form of a pre-sentment by the grand jury of Middlesex. To withdraw himself from the obloquy, he visited his native country, where the character of his work having preceded him, he was assailed with even greater violence than in England. The correspondence between Molyneux and Locke shows that some portion of this outcry was produced by his own vanity and imprudence; and he seriously offended Locke, who had recommended him to Molyneux, by the ostentatious manner in which he boasted of his acquaintance. The result was, that a grand jury of Dublin imitated that of Middlesex; and the Irish parliament not only voted his book to be burnt by the hangman, but ordered him to be taken into custody by the sergeant-at-arms, and prosecuted by the attorney-general. He was therefore obliged to quit Ireland, and soon after his arrival in London he published an account of his treatment in that country, and declared himself a Protestant latitudinarian. He followed this publication by a pamphlet, entitled "The Militia Reformed;" and by a life of Milton, in which he strongly opposed the common notion, that the Eikon Basilike was written by Charles I. This production drew upon him a double set of adversaries, political and religious, against whom he defended himself in a treatise entitled "Amyntor," in which he gave a complete history of the publication of Eikon Basilike, and also a catalogue of such primitive writers as he deemed spurious; which latter topic bearing upon the authenticity of the received canon of Scripture, was answered by

Mr. afterwards Dr Samuel Clarke and others. In 1699 he published a life of Denzil lord Holles, and in the following year sent out an edition of Harrington's Oceana. These he followed up with various publications; and one of them being in favour of the act of succession, passed on the death of the duke of Gloucester in 1701, he was allowed to accompany the earl of Macclesfield to Hanover, where he was introduced to the electress Sophia. On his return to England, after a second visit to the same court and to Berlin, he published his philosophical "Letters to Serena," meaning the queen of Prussia; and two latter dissertations, one vindicating Livy from the charge of superstitious credulity; and the other with a view to show that Strabo's account of the Jewish religion was to be preferred to that of the Jews themselves. Omitting allusion to a variety of political and other pamphlets, in 1718 he published a work entitled "Nazarenus, or Jewish, Gentile, and Mahometan Christianity," in which he stated his own views of primitive Christianity. It was followed two years after by a Latin tract, called "Pantheisticon," &c. which work has subjected him to the charge of atheism, as one of the philosophers who identify Deity with the nature of things, and represent it rather as a principle than a person. In the second year he published "Tetradymnus," in four parts, the second of which on the exoteric and esoteric philosophy of the ancients, is deemed one of his most learned and valuable productions. In the conclusion of this work he professed his preference of the Christian religion, pure and unmix'd, to all others. He soon after fell into a declining state of health, and being in narrow circumstances, received very kind attentions from lord Molyneux; but his disease being beyond remedy, brought his life to a close on the 11th March 1722, in the fifty-third year of his age. The posthumous works of this author, who was more estimable for learning and abilities than for character or conduct, were published in 2 vols. 8vo, 1726, and again in 1747, with an account of his life and writings by Des Maiseaux.—*Life by Des Maiseaux. Biog. Brit.*

TOLLIUS (CORNELIUS) a philological writer, born at Utrecht about 1620. He studied at Amsterdam under G. J. Vossius, to whom he became secretary. Being afterwards appointed professor-extraordinary at Harderwyk, he obtained in 1648 the chair of rhetoric and the Greek language; and the following year he delivered a funeral oration for his benefactor Vossius. He died after 1662, but in what year is uncertain. He was the editor of the work of J. P. Valeriano, "De Iufelicitate Litteratorum," Amsterd. 1647, 12mo, to which he added a supplement; and he published an edition of Palephatus, "De Incredibilibus," 1649, 12mo.—TOLLIUS (ALEXANDER) brother of Cornelius, studied also at Amsterdam, and became corrector of the press to John Blaeuw, the printer. He is supposed to have succeeded his brother at Harderwyk, and he died there in 1673. He is known for having

published the variorum edition of Appian, Amsterdam, 1670, two volumes octavo.—TOLLIVUS (JAMES) another brother of the same family, was born near Utrecht about 1630. He was educated at Amsterdam and Utrecht, and after having been clerk to a bookseller, he went to Stockholm, to become secretary to N. Heinsius, who dismissed him for keeping copies of the notes he transcribed. He returned to Holland, and obtained the direction of the gymnasium of Gouda. At his leisure he studied medicine, and took the degree of doctor in that faculty in 1669. He was afterwards professor of classical learning at Duisbourg; and at length he engaged in speculations relative to the philosopher's stone, and died in distress in 1696. His principal work is entitled "*Epistolæ Itinerariæ*," containing details of his travels and observations. He also published editions of Ausonius, 1669, 8vo; and of Longinus, 1694, 4to; and he wrote much on alchemy and other subjects.—*Biog. Univ.*

TOLLIVUS (HERMAN) a Dutch critic, born at Breda in 1742. He studied jurisprudence at Leyden, and was admitted doctor of law in 1763. In 1767 he was made professor of rhetoric and Greek at Harderwyk, and in 1784 the stadtholder William V appointed him tutor to his children. He became professor of statistics and diplomacy at Leyden in 1809, and he died professor of the Greek and Latin languages in 1822. Besides a number of tracts and memoirs on political affairs and other subjects, he published "*Apollonii Lexicon Homericum*, Græcè, cum Notis Villosionii et H. Tollivii," Leyden, 1788, 8vo.—*Id.*

TOMASINI (GIOVANNI FILIPPO) a native of Padua, born 1597. He at the usual age received the tonsure, and by his learning and abilities rose to be bishop of Citta Nuova, in Istria, under the patronage of Urban VIII. He published a life of his illustrious countryman, the historian Livy, an account of the manuscripts in the public library at Padua; "*Petrarcha Redivivus*;" "*Gymnasium Patavinum*;" "*Illustrium Virorum Elogia*," 3 vols.; and "*De Donariis ac Tabellis Votivis*," a learned work on the Votive tablets of the ancients. His death took place in 1654.—*Moreri.*

TOOKE (ANDREW) was one of two brothers educated at the Charterhouse, of which the subject of this article came to be head master. He was a native of the metropolis, born 1673, and having graduated at Clare-hall, Cambridge, returned to the seminary where he had been brought up, in quality of a junior master, when in his twenty-second year. In 1704 he obtained the geometry professorship at Gresham college, which he resigned in 1728, on being appointed to the headship of the school. This situation he continued to fill till his death, although a considerable fortune, which his brother had amassed in trade as a bookseller, fell to him by his decease, and rendered him perfectly independent in his circumstances. He was the author of several useful school-books, especially of a synopsis

of the Greek language; an edition of the "*Fasti*" of Ovid; a translation of the "*Whole Duty of Man*," from Puffendorf; and another of the "*Pantheon, or Heathen Mythology*," better known in this country by his name than by that of its real author, the jesuit Pomey, to whom he had not the candour to acknowledge his obligations, but printed it as an original work. His death took place of dropsy in 1731.—He must not be confounded with another eminent schoolmaster, his contemporary, THOMAS TOOKE, a native of Kent, who having received a classical education at St Paul's school and Bene't college, Cambridge, presided for upwards of thirty years over the grammar-school at Bishop Stortford, with a high reputation. With this situation he held the rectory of Lamborne, Essex, and was buried in the church belonging to that parish, on his death, which took place in the spring of 1721.—*Biog. Brit.*

TOOKE (JOHN HORNE) a person of considerable celebrity both in the literary and political world, was born in Newport-street, Westminster, in June 1736. His father, John Horne, was a poulterer in Newport market, who having acquired considerable property, reputedly brought up a family of seven children. John, the third son, was educated both at Westminster and Eton, whence he was removed to St John's college, Cambridge, where he took the degree of BA. In 1756 he had entered himself of the Inner Temple, but at the earnest request of his family he consented to be ordained, and was inducted to the chapelry of New Brentford, which his father had purchased for him. Three years afterwards he accompanied, as travelling tutor, the son of Mr Elwes of Berkshire, in a tour to France. On his return he took a warm share in opposition politics, in behalf of the celebrated John Wilkes, to whom on a second visit to Paris he was personally introduced, and an intimate friendship ensued. On this second tour he retained in his appearance no outward mark of the clerical office, of which, in an often-quoted letter to Wilkes, he expressed himself with sarcastic contempt. When he returned to England however he resumed his black coat and his functions, and obtained some distinction in the pulpit, until the return of Wilkes, who became a candidate to represent the county of Middlesex, plunged him again into politics, and it was very much through his influence and activity that the latter was successful. It was also through his instigation that Mr Beckford, then lord-mayor, made the verbal rejoinder to his majesty's answer to a remonstrance of the city of London, subsequently inscribed on the pedestal of that magistrate's statue in Guildhall. He is likewise regarded as the principal founder of the "*Society for supporting the Bill of Rights*." In 1770 and 1771 a public altercation took place between Messrs Wilkes and Horne, arising from the indignation of the latter at seeing attempts made to render the above-mentioned society instrumental to the discharge of the former's private debts. As usual in such dis-

putes, disclosures took place to the injury of both parties; but there appeared no political stain in the character of Mr Horne, who however lost much of his popularity. In 1771, after some opposition, he graduated M.A. at Cambridge. It was through his means that two printers of the newspapers were in the same year induced to violate the orders of the house of Commons, by publishing their debates, which brought on those extraordinary proceedings which terminated in a disgraceful defeat of the house, and the unopposed practice of such publication ever since. The same year also witnessed his contest with Junius, in which in the general opinion he came off victor. In 1773 he resigned his clerical gown, and shut himself up in retirement, with a view to study for the bar: and it was by affording legal advice to Mr Tooke of Purley, in his opposition to an enclosure bill, and defeating the same by a boldness of stratagem peculiarly in character, that he acquired the good will and ultimately shared in the fortune of that gentleman. He was a warm opponent of the American war, and was prosecuted for sedition, for the wording of a resolution, by which the Constitutional Society voted 100*l.* to the widows and children of the Americans who fell in the battle of Lexington. For this obnoxious paragraph he was tried at Guildhall in 1777, on which occasion he defended himself with his characteristic spirit and acuteness, but was sentenced to a year's imprisonment and a fine of 200*l.* In 1779, after having fully prepared for the bar, he applied for admission to the society of the Inner Temple, and was refused, on the ground that he was still a priest and ineligible; a decision which destroyed all his future views in a profession for which he was eminently calculated. In 1780 he published a keen review of lord North's administration, in a pamphlet entitled "Facts," and in 1782 addressed "A Letter on Parliamentary Reform, with a Sketch of a Plan," which did not embrace the principle of universal suffrage. About this time he became the avowed friend of Mr Pitt, then also favourable to parliamentary reform, and a vehement opponent to Mr Fox for his coalition with lord North. In 1786 he appeared in a character more important to his lasting reputation than that of a subordinate politician, by the publication of an octavo volume, entitled "Epea Pteroenta, or the Diversions of Purley," which he afterwards expanded into two volumes quarto. In this celebrated work he gave expression to those ideas concerning grammar and the formation of words of which the germ had appeared in a letter to Mr Dunning some years before. Of these one of the most prominent was the derivation of prepositions and conjunctions from verbs and nouns, and in consequence assigning them a determinate meaning, often different from that which had been arbitrarily given to them. The knowledge of language and logical acuteness which he displayed in this performance raised him to a high rank as a philologist, and it was thought that he would form a new era in the philo-

sophy connected with the theory of language. He himself seemed to entertain an opinion of this kind; but no one has hitherto attempted any adequate superstructure upon his foundation. In 1788 he published "Two Pair of Portraits," the figures in which were the two Pitts and the two Foxes, of the past and present generation, the preference being given to the Pitts. In 1790 he offered himself as a candidate for Westminster, in opposition to Mr Fox and lord Hood, when he distinguished himself by the strong vein of humour in his daily addresses to the populace; and although he failed, he polled one thousand seven hundred votes, without solicitation or corruption. The year 1794 was an important era in his life, being apprehended and committed to the Tower on a charge of high treason, founded on the presumed objects of the corresponding and other societies to overthrow the constitution. It is unnecessary here to enter into the details which led to this severity, his trial with that of the other parties accused at the same time, holding a conspicuous place in the historical annals of a period rendered so remarkable by the excitement produced by the French revolution. The trial of Mr Tooke, although made interesting by the ease, self-possession, and acuteness displayed by the accused, was deprived of much political importance by the previous acquittal of Hardy insuring his own. From this time, however, he was more cautious in his company, and seems to have declined the visits of persons of violent characters and principles at Wimbledon. It is to be noticed that after the death of Mr Tooke of Purley, he had taken his name, in consequence of inheriting a portion of the fortune of that gentleman, which, after some litigation, ultimately reached him. In 1796 he again offered himself for Westminster and failed, although with a greater accession of votes than before; and in 1801, notwithstanding his sarcasm against rotten boroughs, he accepted a seat for Old Sarum, on the nomination of lord Camelford. His parliamentary career was neither long nor distinguished; but an attempt to exclude him on the ground of ordination was turned aside by the minister, Mr Addington, who substituting a bill to determine the future ineligibility of persons in that predicament, the political life of Mr Tooke closed with the dissolution of parliament in 1802. In 1805 he published a second part of the "Diversions of Purley," which is chiefly dedicated to etymology, and adjectives and participles, and their formation; but also abounded like the former, with various satirical strictures on literary characters of note, the reputations of some of whom have been permanently affected by them. He survived, although latterly with considerable infirmity, until March 19, 1812, when he expired at Wimbledon, in his seventy-seventh year. His latter days were cheered by easy circumstances, and the attention of numerous visitors, whom he treated with great hospitality, and amused with his conversation, which was singularly pleasant and lively, although at the same time he

would often make his guests objects of his satire, which he would cover with the most imperturbable countenance. At the same time his manners were polished, and his appearance that of a gentleman of the old school. The stronger points of his character are tolerably well unfolded by his singular career. As regards the essentials of truth, honour, and integrity, forming in a popular sense the morality of a gentleman, his character was never seriously impeached; but he manifested a libertinism in his habits and discourse, very unbecoming his profession, and latterly his age. As a public man he exhibited too much cynicism and asperity for a perfect patriot, being rather an able and active offensive partisan. As a scholar he possessed considerable learning, but it is supposed that his knowledge of modern languages was in proportion more considerable than his profundity in Greek and Latin: his acquaintance with the Gothic, as he has shown in his etymological researches, was very extensive. He was never married, but left natural children, to whom he bequeathed his property.—*Stephens's Memoirs of J. H. Tooke.*

TOOKE, FRs. (WILLIAM) a native of Islington, in the neighbourhood of London, born 1744, and bred a printer; but having obtained ordination, he went out to Russia as chaplain to the English factory at Cronstadt, which situation he subsequently exchanged for a more lucrative one of a similar description at St Petersburg. Mr Tooke is known as the author of a "History of Russia;" a "Life of the Empress Catherine II;" "A View of the Russian Empire;" a miscellany entitled "Varieties of Literature," 8vo, 2 vols.; and as the translator of the works of Lucian in two quarto vols. and the sermons of Zollikoffer. Although much of his life was passed abroad, his death took place in England in 1820.—*Ann. Biog.*

TOPHAM (EDWARD) a miscellaneous writer, was the son of Dr Topham, judge of the prerogative court at York. He was educated at Eton, whence he was removed to Trinity-college, Cambridge, on quitting which he entered the guards, where he attained the rank of major. He ultimately became proprietor of a fashionable paper entitled the *World*, which he contributed to support by various lively pieces in prose and verse. His curious memoir of the celebrated miser, John Elwes, of Berkshire, which, when published separately, ran through two editions, appeared first in this journal. He also wrote "Letters from Edinburgh," 8vo; "Address to Edmund Burke, Esq." 8vo; "Account of a Stone which fell from the Clouds on his Estate in Yorkshire." He died in 1820.—*Gent. Mag.*

TOPLADY (AUGUSTUS MONTAGUE) a strenuous advocate for the Calvinism of the church of England, was born at Farnham in Surrey, November 4, 1740. His father, a captain in the army, died at the siege of Carthage soon after his birth. He received the rudiments of his education at Westminster school, but his mother being obliged to visit Ireland, to pursue a claim to an estate in that country,

he accompanied her thither, and was entered of Trinity college, Dublin, where he graduated B.A. He received orders in 1762, and after some time was inducted into the living of Broad Hembury, in Devonshire. Here he lived for several years, and composed most of his writings, occasionally visiting and spending intervals in London. At length, in 1775, finding his constitution much impaired by the moist atmosphere of Devonshire, he removed to London entirely, and at the solicitation of his numerous friends, engaged the chapel belonging to the French Protestants in Leicester-fields, where he preached twice in the week while his health permitted, and afterwards occasionally, until his death in August 11, 1778, which event, it is supposed, was hastened by his intense application to study. His writings, collected in six volumes, octavo, are almost exclusively controversial, in favour of the Calvinism of the Church of England, and in opposition to John Wesley, to whom he more especially opposed himself. The chief of these are "The Church of England vindicated from the charge of Arminianism;" "The Doctrine of absolute Predestination stated and asserted;" and "Historical Proofs of the Calvinism of the Church of England." This zealous divine possessed considerable talents for argumentation, and brought a larger share of metaphysical acuteness into the Calvinistic controversy than any other of the modern writers on the subject.—*Life prefixed to Works.*

TORELLI (GIUSEPPE) an Italian mathematician and miscellaneous writer, who was a native of Verona. He studied at Pisa, and took the degree of doctor of law, but he did not engage in professional practice. He was not only skilled in Latin, Greek, and Hebrew, but also acquainted with the English and other modern languages. Mathematics principally occupied his attention, to which he added a considerable knowledge of classical archaeology. He died in 1781, at the age of sixty. He published an Italian translation of the first two books of the *Æneid*; and a version in the same language of Gray's *Elegy* written in a Country Churchyard; but he is principally known on account of his edition of the works of Archimedes, printed at Oxford, 1792, folio.—*Biog. Univ.*

TORELLI (POMFONIO) count of Montechiarugolo, in the Parmesan, a poet and man of letters of the sixteenth century. He was educated at Padua, whence, after a residence of eleven years, he returned to his native place, and married. He chiefly employed himself in literary composition, and besides publishing several Italian poems, and a treatise "Del Debito del Cavaliero," 1596, composed four tragedies, entitled "La Merope," "Il Tancredi," "La Galatea," "La Vittoria;" and "Il Polidoro." These, for elegance of style and regularity of plan, are equal to any of the age, although rendered insipid by too close an attention to the Greek models. He also left a number of pieces in manuscript, which are preserved at Reggio. He died in 1608.—*Tiraboschi.*

TORFÆUS (**THEAMODUS**) a learned Danish historian and antiquary, was born in Iceland. He was partly educated in his native place, but in 1654 was sent to the university of Copenhagen. He ultimately so distinguished himself by his acquaintance with history, that he was recommended to the king of Denmark to translate the Icelandic MSS. in his library. He executed this task so much to the king's satisfaction, that he retained him for several years in his court, and employed him in general affairs. As a reward for these services, a valuable place in the customs was bestowed upon him; which employment not suiting him, he was soliciting an exchange, when the king died, and his successor Christian V appointed Torfæus his historiographer, with a salary of 600 German crowns. This stipend enabled him to pursue his researches into history and antiquities at his ease until his death in 1719 or 1720, at the advanced age of eighty. As an historian he occupies a high rank among his countrymen, notwithstanding which all his works are scarce. Those best known are "*Historia Rerum Norvegicarum*," Copenhagen, 1741, 2 vols. folio; "*Orcades, seu Rerum Orcadeniarum Historiæ libri tres*," ibid. 1697—1715, folio; "*Series Dynastiarum et Regum Daniæ à Skjoldo Odini Filio ad Gormum Grandævum*," ibid. 1702, folio; "*Historiæ Vinlandiæ antiquæ*," 1705, 8vo; "*Groenlandia antiqua, seu Veteris Groenlandiæ Descriptio*," 1706, 8vo.—*Moreri. Biog. Univ.*

TORNIELLI (**AGOSTINO**), a learned ecclesiastic, born at Novara in 1543, entered into the society of the Barnabites, of which he became the general. He composed an ecclesiastical history, from the beginning of the world to the time of Christ, in the form of annals; and was the first who did so, to any extent, and with due accuracy. This work, which clears up many obscurities in chronology, geography, and topography, is regarded as an excellent commentary on the books of the Old Testament. An edition of it, with several additions by father Negri, of the same order, was published at Lucca in 1757, in 4 vols. folio. Tornielli was offered a bishopric by the duke of Mantua, but preferred the tranquillity of his cloister, where he died in 1622.—*Dupin. Tiraboschi.*

TORQUEMADA (**JOHN DE**), a celebrated dominican, better known by the name of Turrecmata, was born in 1388 of a noble family of Valladolid. He attended the council of Constance in 1417, and was admitted a doctor of the Sorbonne in 1429; he also held some important offices in his order, and was appointed master of the sacred palace at Rome. He was sent by pope Eugenius IV to the council of Basil, where he strongly defended the interests of Rome; for which, in 1439, he was created a cardinal. He performed great services for his order, and died at Rome in 1468, aged eighty. His works are, "*Commentaries on Gratian's Decretal*," Venice, 1578; "*A Treatise on the Church and Papal Authority*," Venice, 1568; "*Expositio super toto*

Psalterio," Rome, 1470; "*Meditations*," Rome, 1474. He also wrote several short treatises in Latin, in servile defence of ultramontane opinions, and the policy of the court of Rome. This bigoted and persecuting prelate was confessor to Isabella, queen of Castile, from her infancy; and is said to have made her promise, that if ever she came to the throne she would make the punishment and destruction of heretics her principal object.—*Dupin. Moreri.*

TORRE (**FILIPPO DEL**), a learned antiquary, was born in 1657 of a noble family at Ciudad de Friuli. He studied polite literature at Padua, under the celebrated Ottavio Ferrari; and after adding to his other acquisitions the knowledge of mathematics, jurisprudence, and anatomy, he returned to his native country. In 1687 he proceeded, for further improvement, to Rome, where he gained the esteem and friendship of some of the most eminent prelates in the papal court, and in 1702 was nominated bishop of Adria by pope Clement XI. He then removed to his see, which he governed with great reputation until his death, which took place in 1717. The principal writings of this prelate are "*Monumenta Veteris Antii*," 4to, which ranks high among those of the class; "*Taurololium Antiquum, Lugduni repertum*, 1704, cum Explicatione;" "*De Annis Imperii M. Aurelii Antonini, Heliogabali*," &c. 4to, 1714.—*Fabroni. Tiraboschi.*

TORRE (**GIOVANNI MARIA DELLA**), an eminent natural philosopher, was born at Rome of a family originally of Genoa, and studied at the Clementine college. He afterwards became professor of philosophy and the mathematics at Ciudad de Friuli; which he quitted for Naples, where, in 1754, he was appointed librarian to the king, superintendent of the royal printing office, and keeper of the museum. Here he applied himself to his favourite pursuits, one of which was the improvement of microscopes, which he brought to a high degree of perfection, by inventing the highest magnifiers that had ever been known, some of which he presented to our Royal Society. He was a member of all the principal academies of Italy, as well as a corresponding one of those of Paris, London, and Berlin. He died March 7, 1782. His principal works are, "*On Natural Philosophy*," Naples, 1749, 2 vols.; "*Elementa Physicæ*," 1767, 8 vols.; "*History and Phenomena of Vesuvius*," 1755, 4to; "*Microscopical Observations*," 1766, &c.—*Nouv. Dict. Hist.*

TORRENTIUS (**JOHN**) a Dutch painter, a native of Amsterdam, who disgraced himself by the prostitution of his talents. He displayed great skill in his spirited delineations of small figures; but on account of his obscene pictures and irregular conduct while in Italy, he was seized by order of the inquisitors, and died in the prison of the holy office in 1640.—*Sandart. Orlandi.*

TORRENTIUS (**LÆVINUS**) the Latinized denomination of a learned Flemish critic, whose family name was Vander Beken. His

was born at Ghent in 1525, and he studied at Louvain, and afterwards at the university of Bologna. After having been employed in diplomatic affairs, he entered into holy orders, and was raised to the see of Antwerp. He was subsequently archbishop of Mechlin, where he died in 1595. Torrentius was distinguished as a classical commentator and a writer of Latin poetry. His notes on Horace have been frequently printed. He was the founder of a jesuit's college at Louvain, to which he bequeathed his library and museum. — *Moreri. Biog. Univ.*

TORRICELLI (EVANGELISTE) an illustrious mathematician and philosopher, born at Faenza, in Italy, October 15, 1608. He was instructed in Greek and Latin by his uncle, who was a monk, probably with a view to his obtaining preferment in the church; but his genius induced him to devote himself to the study of mathematics, which he attended to for some time without a master; but at the age of twenty he went to Rome, and prosecuted his studies under father Benedict Castelli. Torricelli thus assisted made great improvement, and having read Galileo's Dialogues, he composed a treatise concerning Motion, according to his principles. Castelli, astonished at the ability displayed in this piece, took it to Galileo at Florence, who conceived a high opinion of the author, and engaged him as his amanuensis. He entered on this office in October 1641, but Galileo dying three months after, Torricelli was about to return to Rome, when the grand duke of Tuscany, Ferdinand II, engaged him to continue at Florence, giving him the title of ducal mathematician, and the promise of a professorship in the university on the first vacancy. Here he applied himself closely to study, and made many improvements and some discoveries in mathematics, physics, and astronomy. He vastly improved the construction of microscopes and telescopes; and he is generally considered as having first ascertained the gravity of the air, by means of mercury in a glass tube, whence resulted the barometer. He would probably have added more to the stores of science if he had not been cut off prematurely, after a few days' illness, in Oct. 1647. He published in 1644 a volume entitled "Opera Geometrica;" and his academical lectures were printed in 1715. — *Martin's Biog. Philos. Aikin's Gen. Biog.*

TORRIGIANO (PIETRO) a Florentine artist of great eminence, who flourished towards the close of the fifteenth and the commencement of the succeeding century. He was born in 1472, and while yet a lad gave evidence of that genius for sculpture which time only was wanting to bring to perfection. Being at the time a fellow-student with the famous Michael Angelo Buonarroti, a dispute, arising from a jealousy excusable perhaps in such artists, with respect to their comparative proficiency, terminated in blows; one of which from the hand of Torrigiano broke the bridge of his antagonist's nose, and inflicted a mark which he carried to his grave. While in the

zenith of his reputation, he came to this country, which he afterwards quitted for Spain, and there fell into the hands of the holy office, being denounced as guilty of impiety and sacrilege in breaking to pieces a statue of the virgin, which he had himself executed for an hidalgo, who afterwards refused to pay him an adequate reward. He was condemned to expiate his crime at the stake, but avoided the torture and ignominy of a public execution, by refusing all manner of food, and dying in consequence of exhaustion, previously to the celebration of the auto da fé in 1522. He has left a splendid specimen of his abilities here, in the beautiful tomb of Henry VII, to be seen in the chapel erected by that monarch in Westminster abbey. — *Cumberland's Anec. of Paint.*

TOTILA, king of the Ostrogoths in Italy, succeeded to the throne on the murder of his uncle Eraric in 541, having previously much distinguished himself in the war against the Romans. The confusion among the Goths at this period, induced the Romans to make an attempt upon their capital Verona, which was unsuccessful; and soon after Totila defeated them still more signally near Faenza. He then invested Florence, but broke up the siege to meet the Romans, whom he a second time defeated, and reduced all the strong places in Tuscany. He then marched through Italy, took Beneventum, and formed the blockade of Naples. After the failure of two fleets, despatched by the emperor to succour the garrison, it was obliged to surrender; and Totila, who in the meantime had reduced the provinces of Lucania, Apulia, and Calabria, led his army to the neighbourhood of Rome, and posted himself at Tivoli, within eighteen miles from the capital. The danger of Rome now urged the emperor Justinian to recal Belisarius from the Persian war, and send him to its relief. Rendered unable, from disparity of force, to meet the Goths in the field, that able general sailed to the mouth of the Tiber, and sought to throw succours into the city; but not succeeding, Rome was abandoned to its fate, and fell into the possession of Totila. Very little bloodshed ensued; but he indulged his Goths with free liberty of pillage, and many of the wealthy citizens and their families were reduced to beggary. He then sent Pelagius on an embassy to Justinian to proffer a treaty of amity; which being rejected, he was so much incensed, that he proceeded to the demolition of the city, and had destroyed a third part, when he was induced by Belisarius to desist. On quitting it, however, to march to Lucania, he carried the senators along with him; and Belisarius and his small army soon after occupied the vacant city, and began to repair the fortifications and recal the inhabitants. Upon intelligence of this event, Totila returned, and made a furious assault, in which he was repulsed with great loss, and symptoms of disobedience began to appear in his army. Having received a reinforcement, however, he made a second attempt, and, by the treachery of some Isaurian guards, was en-

abled to re-enter Rome. On this occasion, policy induced him to master his resentment, and he not only restored the senators to their honours, and the inhabitants to their possessions, but repaired many of the walls and buildings which he had formerly demolished. He then made proposals to Justinian a second time, which were not even listened to; on which, after taking Rhegium and Tarentum, he passed over to Sicily, and made himself master of that island; as also those of Sardinia and Corsica. His troops were in the mean time besieging Ancona; but a naval force being sent to its relief, the siege was raised, and the recovery of Sicily soon after followed. At length Justinian, resolved to free Italy, recalled Belisarius, and despatched a powerful army to its relief under the able and valiant Narses, with which he advanced directly towards Rome. Totila, assembling all his forces, met him in the neighbourhood of that capital; and Narses proposing no better terms than a simple offer of pardon, the Gothic monarch declared his resolution to conquer or to die. A day was agreed upon for the combat; but in the interval Totila attempted to surprise his foe, who, being wary and prepared, a furious battle was the consequence, in which the Goths were entirely defeated, and their leader, perceiving the day was lost, quitted the field with no more than five companions. Being overtaken by a party of Gepidæ, Asbad, their commander, not knowing him, ran a lance through his body. His faithful companions bore him seven miles from the scene of action, when he expired in July, 552, in the eleventh year of his reign; and with him expired the revived glory of the Goths in Italy. His character is highly spoken of by the historians of the time, who commend him for valour, tempered by humanity and moderation, and for the justice and equity of his government, when it was once submitted to.—*Univ. Hist. Gibbon.*

TOULMIN (JOSHUA), a dissenting divine, of the general baptist persuasion, and also an unitarian, was born in London, about 1742. He officiated several years as minister to a congregation at Taunton, in Somersetshire, where he also carried on the business of a bookseller. On the emigration of Dr. Priestley to America, he was appointed to succeed him by the united congregation at Birmingham, where he died in 1815, aged seventy-three. Dr. Toulmin, who obtained a degree from an American college, was a very industrious writer and compiler, and published several works, of which the principal are, "The Life of Socinus," 8vo; "Dissertation on the Evidences of Christianity," 8vo; "Life of John Biddle;" "History of Taunton," 4to; a new edition of Neal's History of the Puritans, 5 vols. 8vo; "Biography of Dr. Priestley;" "Memoirs of Samuel Brown;" "Historical View of the Protestant Dissenters."—*Monthly Mag.*

TOUP (JONATHAN), a learned divine and critic, was born in 1713 at St Ives, in Cornwall, being the son of the curate of that place.

After receiving a regular school education, he was entered of Exeter college, Oxford, where he graduated BA; his degree of master being taken at Pembroke-hall, Cambridge, in 1756, having previously been presented to the rectory of St Martin's, Cornwall. In 1760 he was made known to the learned world by the first part of his "Emendationes in Suidam;" the second of which appeared in 1764, and the third in 1766. This work, which displays great erudition, but unfortunately in a positive and self-sufficient manner, recommended him to bishop Warburton, who became his correspondent and patron. In 1767 he published "Epistola Critica," addressed to that prelate, containing various remarks on Greek writers. In 1772 appeared his "Curæ posteriores sive Appendicula Notarum atque Emendationum in Theocritum, Oxonii superprime publicatum," 4to; the merits of which were again balanced by a contemptuous and vituperative spirit. The interest of Warburton procured him in 1774 a presentation to a prebend in the church of Exeter, and in 1776 another to the vicarage of St Merryn. In 1715 he printed "Appendicula Notarum in Suidam;" and in 1778 he closed his critical labours by his edition of Longinus. This work was received very favourably by the learned world, and a second edition was printed in 8vo. He continued to reside at his living of St Martin's until his death, in January, 1785, in his seventy-third year. Notwithstanding his asperity as a critic, he was kind and beneficent in private life, and was a liberal and tolerant divine. As a writer of profound learning and critical sagacity, he ranks very high, and in the opinion of Dr Burney, he is to be regarded as one of the seven pre-eminent scholars of the eighteenth century.—*Nichols's Lit. Anec.*

TOURNEFORT (JOSEPH PIRON de) an eminent French physician and botanist, was born of noble parents at Aix in Provence, in 1656. He was educated at the jesuits' college in that city, where his passion for botany disclosed itself at an early age, so that in a short time he had made himself acquainted with all the plants in the vicinity. He was destined for the church, and placed in a seminary of theology; but he continued his botanical researches by stealth, and encouraged by a paternal uncle, who was an eminent physician, applied to the study of anatomy and chemistry. In 1677, being left by the death of his father to pursue his own inclinations, he determined to adopt the medical profession, and for that purpose repaired in 1679 to Montpellier. He had previously enriched his herbarium from the mountains of Dauphiny; and he not only examined all the plants in the neighbourhood of Montpellier, but in 1681 crossed to Barcelona, and attended by a numerous troop of students, ascended the hills of Catalonia. Thence he proceeded to the Pyrenees, and undeterred by danger or hardship, pursued his researches. On his return to France he was appointed professor of botany to the garden of plants at Paris; and soon after he resumed his travels, revisiting Spain,

and thence proceeding to Portugal, England and Holland. In 1691 he was elected a member of the Academy of Sciences, and in 1694 he published his first work, entitled "*Elémens de Botanique*," 3 vols. 8vo, with numerous plates. The method established by Tournefort was primarily founded upon the varieties of the petals of flowers, taken in conjunction with the fruit. It became rapidly popular by its facility and elegance, although imperfections were early pointed out in it by our English naturalist Ray, which objections were replied to by Tournefort in a Latin epistle, addressed to Sherard. In 1696 he was admitted a doctor of the faculty of Paris; and being now a regular member of the medical body, he composed a work on the history of plants in the neighbourhood of Paris, with their medicinal properties. This work, the first edition of which appeared in 1698, was reprinted by Jussieu in 1725, in 2 vols.; and an English translation was given by professor Martyn in 1732. In 1700 he gave a Latin version of his "*Elémens of Botany*," with many valuable additions, and a learned preface, which he published under the title of "*Institutiones Rei Herbariæ*," 3 vols. 4to. In the same year he received an order from the king to travel into the Levant, for the purpose of examining the plants mentioned by writers of antiquity, and accordingly, accompanied by Gundelsheimen, an able German physician, and by a skilful draughtsman, he visited Greece and its islands, and Asia Minor as far as the frontiers of Persia. He returned to France by way of Smyrna in 1702; and the first botanical fruits of his travels appeared the following year, in a supplement to his *Elements of Botany*. He now purposed to quietly follow the practice of physic at Paris; but his various avocations at the royal gardens and royal college, in which last he held the station of a medical professor, together with the business of preparing his travels for the press, began to affect his health; and a violent blow which he received upon the chest from the axle-tree of a passing carriage, after some months of decline, terminated his life in December 1708. He left his cabinet of curiosities to the king for public use, and his botanical books to the abbé Bignon. The first volume of his travels was printed at the Louvre before his death, and the second being completed from his MSS. both were published in 1717, with the title of "*Rélation d'un Voyage du Levant, fait par ordre du Roi, &c.*" 2 vols. 4to. Of this work, which stands high among books of the class, there have been several editions, and it has also been translated into English and Dutch. Dr Banier published from the papers of Tournefort a "*Traité de Matière Médicale*," 2 vols. 12mo, 1717.—*Halleri Bibl. Bot. et Med.—Life prefixed to Voyage.*

TOURNON (CHARLES THOMAS MAILLARD de) a cardinal, was born at Turin in 1668, of an ancient Savoyard family. He was brought up at Rome, and having embraced the ecclesiastical profession, he acquired so much reputation, that pope Clement XI consecrated him

bishop of Antioch, and afterwards sent him as apostolic legate to China, to decide the differences between the missionaries in that empire respecting the toleration of the Chinese ceremonies among the Christian converts. He arrived in China in 1705, and his first measure at Nankin was to issue a mandate to forbid the fixing up of tablets in churches, inscribed "*Adore Heaven*," (or *Tien*), as also the honours paid by the Chinese to Confucius, to their parents, and to the planets. Proceeding to Peking, he was at first well received by the emperor, but his apostolic vicar having imprudently declared that the Chinese rites were incompatible with the Christian religion, he was sent back to Macao, and imprisoned in the jesuits' house, where in 1707 he received a cardinal's hat from the pope, who also confirmed his decision against the appeal of the jesuits. He died in confinement at Macao in 1710. He acted with good intentions, but much too precipitately for China, from which those disputes soon after produced the expulsion of Christianity.—*Dupin. Moreri.*

TOURRETTE (MARC ANTOINE LOUIS CLARET de la) a naturalist, was born at Lyons in 1729. He studied first in the jesuits' seminary in his native city, and then proceeded to the university of Paris. On his return home he became a magistrate, which office he filled with much reputation, and devoted his leisure hours to science, especially natural history. He formed an extensive collection of insects, and also a curious botanical park and garden. His death took place in 1793. He is author of "*Elementary Demonstrations of Botany*," 2 vols. 8vo; "*Journey to Mount Pilate*," 8vo; "*Chloris Lugdunensis*," 8vo; "*Conjectures on the Origin of Belemnites*;" "*Memoirs of Singular Vegetables*;" "*Memoir upon Helminthocorton, or Corsican Moss*."—*Nouv. Dict. Hist.*

TOUSSAINT. See L'OUVERTURE.

TOWERS (JOSEPH) a political and miscellaneous writer, was born March 31, 1737, in Southwark, where his father was a dealer in second-hand books. He appears to have received no regular education; and at the age of seventeen was bound apprentice to a printer at Sherborne in Dorsetshire. Here in his leisure hours he applied himself to the study of Greek and Latin, and perused the best books in every branch of learning. In 1763 he commenced author, by publishing "*A Review of the Genuine Doctrines of Christianity*," in which he states his reason for quitting Calvinism, in which he had been educated. He soon after left Sherborne and came to London, where he supported himself by working as a journeyman printer. He was soon after employed by his late master in the compilation entitled "*British Biography*," the first volume of which appeared in 1766; and he composed seven of the latter ten volumes of which the work consists. Having acquired some property by marriage, he opened a bookeller's shop in Fore-street, but with no great success. In 1774 he resigned his business, and became a preacher among the dissenters, and was pas-

tor of a congregation at Highgate; which office he gave up for that of forenoon preacher at Newington-green, where Dr Price preached in the afternoon. When Dr Kippis was employed by the booksellers on a new edition of the *Biographia Britannica*, he adopted Mr Towers as his assistant; and he accordingly composed several lives, and necessarily, now and then, under the bias of his own political and religious opinions. In 1779 he received the degree of LL.D. from the university of Edinburgh, and continued occasionally to communicate his opinion on public affairs in pamphlets, of which, together with various miscellaneous tracts, he published by subscription, in 1796, a collection in 3 vols. 8vo; of these the principal are "A Vindication of the Political opinions of Mr Locke;" "A Letter to Dr Samuel Johnson;" "Observations on Mr Hume's History of England;" "Observations on the Rights and Duties of Juries;" "An Examination of the Charges brought against Lord W. Russell and Algernon Sidney;" "Remarks on the Conduct, Principles, and Publications of the Crown and Anchor Association;" "An Essay on the Life of Dr Samuel Johnson," &c. &c. He died May 20, 1795, in his sixty-third year. Dr Towers, whose life points out how much may be done by industry and application to remedy original want of education, appears in his religious opinions to have been a modified Arian.—*Finn. Sermon by Lindsay. Gent. Mag.*

TOWGOOD (MATTHEW) a Protestant dissenting divine of eminence, was born at Axminster in Devonshire, December 6, 1750, where his father was a physician. He received his education at Taunton, and becoming a minister, was first pastor to a congregation of dissenters at Moretonhampstead, whence he removed to Crediton, both in Devonshire. His first publication was a pious tract upon "Recovery from Sickness," which was followed by a pamphlet entitled "High-down Episcopal and Priestly Claims freely Examined," and "The Dissenter's Apology." In 1741 he published a pamphlet in favour of a Spanish war, and in 1754 another against the legitimate birth of the pretender; his best work however is "The Dissenting Gentleman's Answer to Mr White," the person addressed being a clergyman of the diocese of Norwich, who had written against dissent with considerable ability. Towgood's letters to him appeared separately from 1746 to 1748, and collectively have passed through six editions. In 1748 he published a pamphlet in examination of the character of Charles I, and in 1750 composed several tracts in favour of infant baptism. In 1761 he became the head of an academy at Exeter for the education of dissenting ministers. The infirmities of age obliged him to resign the pulpit in 1784, but he lived to the advanced age of ninety-two, his death taking place at Exeter, January 31, 1792.—*Life by Manning.*

TOWNLEY (CHARLES) a gentleman of large and independent fortune, which he employed in the collection of every thing which

could illustrate the ages of antiquity. He was descended of an ancient Roman Catholic family, for many generations resident at Townley-hall, in Lancashire, where he was born in 1737. The religious opinions of his family preventing his enjoying the benefit of a university education in England, he was sent to the continent, and placed under the care of the learned John Tuberville Needham. From this very able instructor he imbibed a fine classical taste, which the affluence to which he was born permitted him to indulge, and a residence of some continuance at Rome enabled him to form a noble museum, replete with valuable manuscripts, specimens of the finest sculpture, medals, vases, urns, and other relics of ancient art. These he transported eventually to England, where they filled two large adjoining houses purchased by him for that purpose in Park-street, Westminster. His acknowledged taste and liberality procured his election as a fellow of the Royal and Antiquarian Societies, as well as a trustee of the British museum, to which noble institution he bequeathed contingently the whole of his collection of antiquities, and his heirs not complying with the alternative mentioned in his testament, it has accordingly now become the property of the nation. A work has been published in two quarto volumes by M. D'An-carville, a French antiquary, illustrative of part of it; and one of the rare manuscripts it contains was used in a late edition of the *Iliad*. His death took place January 3, 1805.—JOHN TOWNLEY, uncle to the above, born in 1697, resided almost wholly in France, where he held a commission in the army, and was a chevalier of St Louis. He is known as the author of an admirable French translation of *Hudibras*, and he died in 1782.—*Whitaker's Hist. of Whalley.*

TOWNLEY (JAMES) a clergyman of the church of England, who is supposed to have been the author of a popular farce. He was a native of London, and studied at St John's college, Oxford, where he proceeded MA. in 1738. Having been ordained, he was appointed morning preacher at Lincoln's-inn, afterwards lecturer of St Dunstan's in the East, and at length he obtained the rectory of St Bennet, Gracechurch-street. He was likewise chosen master of Merchant Tailors' school, in which he had been educated. He died in 1778. The amusing drama, "High Life below Stairs," is said to have been his production, and he wrote some other light pieces, and assisted Hogarth in his *Analysis of Beauty*.—*Biog. Dramat.*

TOWNSEND (JOSEPH) an English physician, fellow of Caius college, Cambridge, and a graduate of the university of Edinburgh, where he studied medicine under Cullen; till becoming a convert to the opinions of Calvin, his disposition, naturally enthusiastic, was so heated that he renounced medicine, and became a popular preacher in the methodist connexion. Having taken holy orders he was presented to the living of Pewsey, Wilt, but for some time resided principally at Bath, where

he officiated as domestic chaplain to the countess of Huntingdon. Besides some miscellaneous sermons, and a treatise on the accuracy of the Mosaic history, in two quarto vols. he published an account of his travels in the Peninsula, in 3 vols.; a tract on the Poor Laws, and two works on medical subjects, entitled "The Physician's Vade-Mecum," and "A Guide to Health." His death took place at Pewsey in 1816.—*Gent. Mag.*

TOWNSON, DD. (THOMAS) archdeacon of Richmond, Yorkshire, a distinguished clergyman of the established church. He was a native of the county of Essex, born in 1715, and educated at Christchurch, Oxford, till he obtained a demyslip at Magdalen college in the same university, and in due course became fellow. Having attracted the notice of the late Beilby Porteus, bishop of Chester and afterwards of London, he obtained, through the influence of that prelate, some valuable church preferment, of which the livings of Hatfield Peveril, Blithfield, and Malpas, constituted a part. The works of this eminent divine consist of a series of sermons on the Gospels, with some other devotional tracts of great merit, and a posthumous treatise on evangelical history, printed with a biographical sketch of his life prefixed. His death took place in 1792.—*Life by Churton.*

TRADESCANT (JOHN) the name of two, or according to the epitaph on their tomb, which has been recently restored in Lambeth churchyard,

"Beneath this stone

Lie John Tradescant, grandsire, father, son," of three eminent gardeners, travellers, and antiquaries, of whom the two last are by far the most celebrated.—The second JOHN TRADESCANT is supposed to have been born in the Netherlands, and to have arrived in England, whither it would seem he was accompanied by his father, in the early part of the reign of James I, after having travelled over most of the European continent and part of the East. He obtained the appointment of gardener to king Charles I, in which situation he was assisted by his son. The Tradescants are celebrated as being the first collectors of rarities in this country, which they deposited during their lives in a large house situate in the parish of Lambeth. This became a popular place of fashionable resort from the curiosities it contained, and obtained the appellation of Tradescant's ark. A catalogue of its contents, which have since formed the nucleus of the Ashmolean museum at Oxford, was printed by the younger of the three in 1656, under the title of "Museum Tradescantianum," with portraits of himself and his father, whom he survived about ten years, dying in 1662.—*Pulteney's Sketches of Bot.*

TRÆTTA or TRAJETTA (TOMASO) a Neapolitan musician and composer of the last century, one of the most celebrated pupils of the famous Durante. He was born in 1738, and was educated at the conservatorio of La Pietà, which he had scarcely quitted two years, when the extraordinary success of an opera,

which he brought out at the theatre of St Carlos, entitled "Farnace," raised him at once to the first rank in his profession, and procured him an immediate engagement to compose six different operas for as many theatres. On the death of the infant don Philip, he went to Venice, and was employed for a short time in superintending the conservatory of the Ospedaletto, but soon quitted this situation, on receiving an invitation from Catherine II to succeed Galuppi as her principal chapel-master at St Petersburg. After remaining seven years in Russia he came to England, where Sacchini was then in the zenith of his reputation; and in consequence not succeeding so well as he had anticipated, Trajetta retired to his native country, where he died about the year 1779. Dr Burney speaks highly of the talents of this composer, whose works are but little known in this country. They consist principally of twenty operas, of which his "Ippolito ed Aricia," was perhaps the most popular.—*Burney's History of Mus.*

TRAILL (ROBERT) a presbyterian divine, of an ancient Scottish family, was born at Ely, in the county of Fife, in 1642. He was educated at Edinburgh, but afterwards went to Holland, whence he returned in the reign of Charles II, and suffered imprisonment under the conventicle act. On gaining his liberty, he removed to London, and became minister to a congregation of dissenters. He died in 1716. He was a rigid Calvinist, and his Sermons are extremely popular among persons of that persuasion. They were published so lately as 1811 in 4 vols. 8vo, with the life of the author prefixed.—Dr. JAMES TRAILL, grandson of the preceding, conformed to the establishment, and became bishop of Down and Connor, in Ireland.—*Life prefixed to Sermons.*

TRAJAN M. ULPIUS TRAJANUS, a Roman emperor, born in Italica, in the Spanish province of Bætica, was the son of Trajanus, a distinguished Roman commander under Vespasian. He accompanied his father in a campaign against the Parthians, and also served on the Rhine, where he acquired so high a character, that when the excellent and aged Nerva came to the throne, he saw no one so fit to succeed him as Trajan. He accordingly adopted and raised him to the rank of Cæsar, in 97, being then in his forty-second, or according to others, in his forty-fifth year, and of a most dignified appearance and commanding aspect. His elevation immediately curbed the insolence of the pretorian guards; and Nerva dying a few months after, he peaceably succeeded to the throne. He was at that time in Germany, where he remained for more than a year to settle a peace with the German states, and in 99 set out with a numerous escort to Rome. After a liberal largess to the soldiers and people, he interested himself in promoting measures for duly supplying the capital with corn; in which he was eminently successful. He then proceeded to punish and banish the pernicious tribe of delators or informers, and to reduce some of the most odious of the taxes; and showed the most praise-

worthy solicitude for the occupation of the most important posts by men of talent and integrity. Like Augustus, he cultivated personal friendships, and visited his intimates at their houses with entire confidence, and as a private person. His palace was not only open to his friends, but to all who chose to enter it, and his audiences were free and unrestrained to all the citizens. At his table were always some of the principal and most respectable of the Romans, who indulged in all the ease and pleasantry of mixed conversation. Although his early military experience had prevented him acquiring the accomplishments of learning, he was sensible of its importance, and founded libraries; and under his patronage the studies were revived which had suffered from the persecution of Domitian. All these proofs of the possession of virtues, calculated to make the Romans happy, procured for him, by the unanimous voice of the senate, the title of Optimus, which although conferred on him in the early part of his reign, he never lost. In the third year of his reign he accepted of a third consulship; and it was during his possession of this magistracy, that the celebrated panegyric upon him was pronounced by Pliny, which is still extant. In the following year a war broke out with Decebalus, king of the Dacians, whom, after a campaign attended with some severe service, he subdued, and made a vassal of the empire. He then returned to Rome, and enjoyed the honours of a triumph, with the name of Dacicus. The two following years were passed by Trajan at Rome; and in the last of them, 103, Pliny went as governor of Pontus and Bithynia, which circumstance has afforded a series of official letters between him and Trajan, which, beyond any rhetorical panegyric, afford proof of the liberal spirit of the government. Among these are the famous epistles respecting the Christians, whom he directs Pliny not to look out for, but to punish if brought before him; and on no account to listen to anonymous charges. This conduct, compared with the deportment of opposing sects of Christians to each other for several centuries, may be deemed highly humane and considerate. In 104 Decebalus renewed the war with the Romans, which immediately called out the warlike emperor, who, with a view to form a road for his troops, constructed a bridge over the Danube, which was deemed one of the greatest works of antiquity. He then marched into Dacia, and reduced the capital of Decebalus, who in despair killed himself, and Dacia became a Roman province. His innate passion for war, the only fault which can be charged on Trajan as a sovereign, exhibits him for the remainder of his reign rather as a victorious commander, engaged in distant expeditions for the enlargement of the empire, than as a sovereign ruler. The disposal of the crown of Armenia led, in the first instance, to a contest with Chosroes the Parthian, of which warfare the reduction of Armenia to a Roman province was the result. The succeeding eastern campaigns of Trajan,

and renewal of the war with Parthia, cannot be detailed in summaries of this nature; but it may be remarked in proceeding, that the year 114 is given as that of his dedicating the magnificent Forum which he built in Rome, and erecting the column sculptured with his exploits, which still remains under his name. In a final campaign in the East, after with great pomp giving a king to the Parthians, he laid siege to Atræ, the capital of an Arabian tribe, which he was obliged to raise, and to withdraw to Syria. In the following year, 117, when he proposed returning into Mesopotamia, he was attacked by a paralytic disorder, attended by a dropsey, which induced him to repair to Italy, leaving the army under the command of Adrian. He had proceeded no farther than Selinus, in Cilicia, when he had another seizure, from which he did not recover. The empress Plotina took advantage of his last moments to secure the adoption of Adrian for his successor, not without some suspicion of a gross deception. Trajan died in his sixty-fourth year, after a reign of nearly twenty years. As a sovereign the only blemish in his character was his great passion for war, the extension of empire produced by which—the greatest that ever acknowledged Roman sway—scarcely lasted longer than his own lifetime. In his private character he lay under the imputation of being addicted to sensual indulgences, of which a passion for wine was by far the least disgraceful. Happily these feelings of the man did not affect his good qualities as a ruler, and at the distance of two hundred and fifty years from his death, the senators, in their acclamations on the accession of a new emperor, were accustomed to wish that he might be more fortunate than Augustus and better than Trajan.—*Univ. Hist. Crevier.*

TRALLES (BALTHASAR LEWIS) the name of a highly intelligent native of Switzerland, eminent for his skill in the mathematics, of which science he was professor, first at Berne and afterwards at Berlin. He commenced, in concert with his friend Hassler, the astronomer, a trigonometrical survey of his native country; the completion of his undertaking was however prevented by the breaking out of the French Revolution. Afterwards, when the French government invited other nations to assist in forming one standard of weights and measures, calculated for universal adoption, M. Tralles on the part of the Swiss, and M. Van Swinden on that of the Dutch, were selected to draw up the reports of the committee. On the establishment of a university at Berlin in 1813, Tralles was chosen professor of mathematics and astronomy, in which situation he continued until his death, which took place the 19th November, 1822, at the age of sixty, in England, to which country he had come for the purpose of selecting and purchasing scientific instruments for the Russian government. Several able papers of his composition are to be found among the memoirs of the Berlin academy.—*Ann. Biog.*

TRALLIANUS. See ALEXANDER TRALLIANUS.

TRAPEZUNTIUS. See **GEORGE** of **TRABISOND**.

TRAPP, DD. (**JOSEPH**) an English poet, second son to a clergyman of the same name, incumbent of the living of Cherington in Gloucestershire, where he was born in 1679, and was educated by his father till he had attained a sufficient degree of classical learning to prepare him for Oxford. Here he obtained a scholarship, and in due course a fellowship at Wadham college, in his twenty-fifth year. Four years after he was unanimously elected professor on the first institution of that appointment by Dr Henry Birkhead of All Souls. He was also chaplain to the lord Bolingbroke, father of the celebrated writer who subsequently bore that title; and in 1711 went to Dublin in a similar capacity with sir C. Phipps, the Irish chancellor. Being strongly attached to high church principles, which he never attempted to conceal, it was not likely that opinions so adverse to those of the party then in power would procure him that advancement in the church which his blameless manners and unquestioned learning might otherwise have placed within his reach; he succeeded however in obtaining some small pieces of preferment, such as the living of Dantsey, Wilts, which he exchanged for that of the united parishes of Christchurch and St Leonard in the city of London, to which was added in 1733 the rectory of Harlington, Middlesex. Dr Trapp in the mean time was an active and an upright minister, and distinguished himself much by his eloquence in the pulpit, especially at St Martin's-in-the-Fields, of which parish he held the evening lectureship. His mode of delivery was however censured by some, as one better adapted for a theatre than a church. In his capacity of professor he published his "*Prelectiones Poeticæ*," in three vols.; a work which proves that it is much easier to lay down regulations for the composition of good poetry than to become a good poet, inasmuch as in his subsequent metrical attempts he failed to embody his own conceptions of the character. Of this a strong instance is afforded by a translation which he produced of Virgil's *Æneid* into blank verse, the work by which his name is now principally known, unfortunately perhaps, as it is clearly inferior to some other pieces of his composition, and though a closer transcript of the original, is utterly destitute of the fire which glows in the animated version of Dryden. The opinion of a witty contemporary with regard to this poem is perpetuated in a well-known couplet, written on the first appearance of Glover's *Leonidas*:—

"Equal to Virgil? It may perhaps,

But then, by heaven, 'tis Dr Trapp's."

He was also the author of a tragedy called "*Abramule, or Love and Empire*;" some miscellaneous Poems in English and Latin, and a Latin translation of the *Paradise Lost* of Milton, which met with but indifferent success. His other writings are principally on devotional subjects, and consist of a polemical treatise entitled "*The Church of England defended*

against the false Reasoning of the Church of Rome;" "*A Preservative against unsettled Notions in Religion*;" some Annotations on the four Gospels, and a variety of Sermons. His death took place at Harlington in the November of 1747.—*Brit. Biog.*

TRAVERS (**JOHN**) an eminent English musician and composer of the earlier part of the last century. Dr Godolphin, dean of St Paul's and provost of Eton, having marked his musical talent while a boy in the choir at Windsor, placed him at his own expense under the tuition of the celebrated Dr Greene, with whom and Pepusch he completed his education. Travers succeeded Jonathan Martin in 1737 as organist at the chapel royal, a situation which he retained till his death in 1758. There are several delightful pieces of sacred music composed by him to be found in the collections of most of our cathedrals; but he is perhaps best known to the world in general by his celebrated Canonets, eighteen in number, the words of which are chiefly taken from the writings of Prior, and more especially by one of them, the still popular air, "*Haste, my Nannette*." He died in 1758.—*Burney's Hist. of Mus.*

TRAVIS (**GEORGE**) a divine of the church of England, was born at Royton in Lancashire, and educated at the free-school of Manchester, whence he was removed to St John's college, Oxford, where he took his degree in arts. On entering into orders he obtained the vicarage of Eastham and the rectory of Hendley in Cheshire. He afterwards obtained a prebend in the cathedral of Chester, and was made archdeacon of that county. He is recorded here for the ardour with which he pursued a controversy with Mr Gibbon on the authenticity of the celebrated text, 1 John v. 7, a dispute which was subsequently set entirely at rest by professor Porson and bishop Marsh. He died in 1797.—*Gent. Mag.*

TREBELLIIUS POLLIO, a Latin historian, who flourished about the year 298. Vossius states that he wrote the lives of the Roman emperors, from the two Philips to Claudius; but there remains only the close of the life of the elder Valerian, and that of his son, those of the two Gallieni, of the usurpers called the thirty tyrants, and of Claudius. As a historian his judgment is not superior to the others who compose the "*Historiæ Augustæ Scriptores*," but his style is somewhat superior, and he is exact as to dates.—*Vossii Hist. Lat.*

TREBY (sir **GEORGE**) an able judge and lawyer, was born at Plympton, in Devonshire, in 1644; and was admitted a commoner of Exeter college, Oxford, in 1660. On quitting the university, he went to the Inner Temple, and being admitted to the bar, obtained considerable practice. In 1678 and 1679 he sat in parliament for his native place, and was appointed chairman of the committee of secrecy for the investigation of the popish plot, and one of the managers in the impeachment of lord Stafford. When Jefferies was dismissed from the recordership of London, Mr Treby

was appointed to succeed him; on which occasion he received the honour of knighthood; but when the quo warranto was issued, and the city charter, for which he pleaded along with Pollexfen, was forfeited, he lost the recordership; which was, however, restored to him at the Revolution. He rapidly ran through the offices of solicitor and attorney-general; and in 1692 was promoted to the chief justiceship of the Common Pleas. He died in March 1701-2, aged fifty-six. Sir George Treby published a collection of papers on the Popish Plot; and his Pleadings and Arguments in regard of the quo warranto, are published with those of Finch, Sawyer, and Pollexfen, London, 1690, &c.—*Burnett's Own Times*.

TREMBLEY (ABRAHAM), an eminent naturalist, was born at Geneva in 1710, and was intended by his father for the church, for which reason he was sent to pursue his studies in Holland. He there became tutor to the children of M. Bentinck, and thence proceeding to London, was engaged to instruct the young duke of Richmond. He returned to Geneva in 1737, where he settled, and devoted his leisure to certain branches of natural history. His reputation as a naturalist was first promoted by his discoveries on the nature of polypi; which, although discovered by Leuwenhoek, their wonderful properties were not known until made public by M. Trembley in his "*Mémoires sur les Polypes*," Leyden, 1744. He also wrote several communications on the subject to the Royal Society, of which he was elected a member in 1743. He was likewise the author of some useful books for young persons, particularly "*Instructions d'un Père, à ses Enfants, sur la Nature et la Religion*," 2 vols. 8vo; "*Instructions sur la Religion Naturelle*," 3 vols. 8vo; and "*Recherches sur le Principe de la Vertu et du Bonheur*," 8vo. He died in 1784.—*Nouv. Dict. Hist.*

TREMELLIUS (EMMANUEL) a converted Jew of the sixteenth century, who became much distinguished for his piety and learning. He was a native of Ferrara in Italy, born about the year 1510, and was early instructed by his parents in all the arcana of Hebrew learning; but becoming a proselyte, first to the Romish church, and afterwards, through the exertions of Peter Martyr, to the reformed religion, he travelled, in company with his instructor in the faith, through great part of Italy, thence to Germany, and afterwards to this country, where he settled for a while at Cambridge as professor of Hebrew, and lectured to a numerous class of pupils. The temporary predominance of the Roman Catholic party in England on the accession of Mary to the throne, induced him once more to retire to the continent, and to accept an invitation made him from Heidelberg, to hold a situation there, similar to the one he had vacated. From this place he removed to Sedan, where he died in 1580. He translated the Bible into Latin, with the assistance of Junius, which was first published in 1575. Seven years after his decease his coadjutor reprinted

the work, with emendations and additional notes, which version was much approved by the reformed church. He was also the author of a Latin translation of the New Testament from the Syriac.—*Melchior Adam*.

TRENCH (JOHN) a political writer, son of a secretary of state to king William III, who was born in 1669. He was educated for the legal profession; but being appointed commissioner of forfeited estates in Ireland, and leaving by the death of an uncle and by marriage obtained a considerable fortune, he relinquished the law for politics. In 1698 he commenced his literary career by publishing two tracts against standing armies, which provoked the animadversions of several other writers. In November 1720 he commenced, in conjunction with Gordon, the translator of Tacitus, a series of letters on public affairs, under the signature of Cato, which appeared in the London Journal, and afterwards in the British Journal. In letters signed Diogenes, Trenchard warmly attacked the ecclesiastical establishment of the country; and his principles were animadverted on by the rev. John Jackson and by Dr Clarke. He sat in the house of Commons for some years as MP. for the borough of Taunton. His death took place December 17, 1723, in consequence of an ulcer in the kidneys. Besides the works already mentioned, he was the author of "*The Natural History of Superstition*," 1709; and several pamphlets on temporary topics. Gordon printed collectively, in 4 vols. 8vo, "*Cato's Letters, or Essays on Civil and Religious Liberty and other important subjects*," of which a fourth edition appeared in 1737.—*Biog. Brit.* vol. vi. part 2.

TRENCK (FREDERIC, baron von) a Prussian officer, memorable for the persecutions which he experienced, and for the courage and address with which he contrived to extricate himself from the power of his enemies. He was born at Königsberg, February 16, 1726, and was the descendant of an ancient and illustrious family. In his youth he displayed an adventurous disposition, and while at the college where he was educated he fought two duels. At the age of sixteen he was admitted to the court of the great Frederick, as a cadet in the regiment of guards; and he became a great favourite with the king, who made him his aide-de camp. The war which subsequently broke out between Austria and Prussia, in which Trenck greatly signalized himself, raised him to the highest degree of favour; and he was rewarded with the order of merit. An amorous intrigue, which he had the imprudence to carry on with the princess Amelia, the younger sister of Frederick II, put a period to his credit with the king, and involved him in severe misfortunes. As he persevered in maintaining this connexion, notwithstanding repeated warnings from his royal master, he was at length imprisoned in the fortress of Glatz. The pretext for his punishment was a correspondence which he had carried on with his cousin Francis von Trenck, commander of the Pandours, in the service of

T R E

Austria. Believing that he was destined to confinement for life, he resolved to attempt an escape; and with some difficulty he effected it, with the assistance of a lieutenant of the garrison, named Schell, who accompanied him in his flight. He took refuge at Vienna, and then went to Nuremberg, where his relation, general Lieven, who was in the service of Russia, persuaded him to go to Moscow, where the empress Elizabeth then held her court. He was exceedingly well received; but his disposition for intrigue led him to the commission of some imprudence, from the consequence of which, however, he had the address to extricate himself; after which he travelled to Petersburg, and having visited Sweden, Denmark, and Holland, he returned to Vienna, to take possession of the property of his cousin, mentioned above, who died October 4, 1749. He obtained, after engaging in tedious law-suits, only a part of the immense riches which had been bequeathed to him by Trenck the Pandour; and, dissatisfied with the treatment he had received, he took a journey to Italy. On his return he was appointed a captain of Austrian cuirassiers, and joining his regiment in Hungary, he contributed materially to its improvement in discipline. The death of his mother taking place in 1758, he went to Dantzic, to arrange with his brothers and sisters the disposition of her property, when he was arrested at the request of the Prussian resident, and conducted to the fortress of Magdeburg, where he remained in close and rigorous confinement till 1763. His involuntary seclusion was devoted to ineffectual projects for effecting his escape, to study, and to writing verses. Being at length set at liberty, probably through the interference of the princess Amelia (who had never ceased to take a lively interest in his fate, and had liberally supplied him with money), he went to Vienna, and afterwards to Aix-la-Chapelle, where he fixed his residence; and in 1765 he married the daughter of a burgo-master of that city. Literature, politics, and commerce as a wine-merchant, then alternately engaged his attention. He wrote a piece entitled "The Macedonian Hero," the professed design of which was to unmask the character of Frederick II; and he edited a weekly paper called "The Friend of Men." In 1772 he commenced a gazette at Aix-la-Chapelle, which he conducted for some time with considerable success. From 1774 to 1777 he travelled through various parts of France and England, and in the former country he became acquainted with Dr Franklin and with the war-minister, St Germain, both of whom persuaded him to go to America, but his affection for his wife and children prevented him from quitting Europe. His wine-trade failing, he returned to Germany, and was employed in various political missions. At Vienna he received new favours from the empress Maria Theresa, who bestowed a pension on the baroness Trenck, which however she lost on the death of that princess, for whom Trenck composed a funeral oration and ode. He then retired to his castle

T R E

of Zwerback, in Hungary, where for six years he devoted himself to agricultural pursuits. He also published by subscription various works in prose and verse, including the history of his own life. After an exile of forty-two years he was permitted to revisit his native country in 1787, when he was kindly received by the successor of the great Frederick; and he had an interview with the princess, to whose favour he had owed so many of his misfortunes. She listened with interest to the details of her adventures, and assured them that she would extend her protection to his children; but she survived this meeting only a few days. The publication of his memoirs excited great temporary attention from the public, especially at Paris, where his portrait and his figure in wax were generally exhibited, and a dramatic piece, entitled "Baron de Trenck, ou le Prisonnier Prussien," was performed at one of the minor theatres. The revolutions which successively took place in Belgium and France, found a ready partisan in Trenck, who published some political pamphlets, which involved him in disgrace with the Austrian government, and he not only lost a pension which he had hitherto received, but also suffered a short imprisonment. Towards the end of 1791 he revisited France, hoping to gain the notice and favour of the dominant party; but he was deceived, and he lived at Paris in a state of great penury. At length he was arrested on suspicion of being a secret emissary of the king of Prussia, and was imprisoned at St Lazarus. There being no evidence to support this charge, he was accused of having taken part in a conspiracy in the prison, for which he was guillotined July 25, 1794. Besides the works already mentioned, he wrote several others, including memoirs of his cousin, Francis baron Trenck. — *Aikin's Gen. Biog. Biog. Nouv. des Contemp. Biog. Univ.*

TRESHAM, RA. (HENRY) a native of Ireland, distinguished as a proficient in the sister arts of painting and poetry. A long residence in Italy, and a correct and classical taste, enabled him to draw together at a small expense, a valuable collection of articles of virtù, the disposal of which to the late earl of Carlisle and other patrons of the arts, laid the foundation of his future fortunes. As a poet he is principally known by a clever production, entitled "The Sea-sick Minstrel," while his professional works procured him the honourable distinction of a seat among the royal academicians. — His death took place in 1814. *Gent. Mag.*

TRESSAN (LOUIS ELIZABETH de la VERONNE, count de) was born in 1705, at Mans, in the palace of his great uncle, the bishop of that city. Educated at the college of La Flèche and Louis le Grand, he had the honour at the age of thirteen to partake of the studies and amusements of Louis XV. In 1723 he entered into the army, and he afterwards travelled in Italy with recommendations from M. de Bissy, the French ambassador at Parma. Returning home, a war soon broke

out between France and Austria, and he was appointed aide-de-camp to the duke de Noailles, with whom he was at the siege of Kehl. He also distinguished himself in the attack of the lines of Eslingen, and he was wounded at the siege of Philippsburg, in 1734. After hostilities were concluded he was nominated brigadier and ensign of the Scots gardes du corps. War being rekindled in 1741, Tressan was employed in Flanders. In 1744 he obtained the rank of *maréchal-de-camp*, and in that quality he served at the sieges of Menin, Ipres, and Furnes. He was aide-de-camp to the king at the battle of Fontenoi, where he was wounded. In 1750 he was appointed governor of Toulouse and French Lorraine, and soon after made grand marshal to the ex-king of Poland at Luneville, where he remained till the death of that prince. In 1781 he was admitted into the French Academy; and he took up his residence in Paris, where he died October 31, 1783. He published a translation of the Orlando Furioso of Ariosto, which, together with extracts and translations of many other Italian and old French romances, appeared in "*Les Œuvres Choiesies de Tressan*," Paris, 1787—91, 12 vols. 8vo. He also wrote "*Reflexions sommaires sur l'Esprit*;" "*Discours, prononcé à l'Acad. de Nancy*;" "*Eloges*;" &c.—The abbé de Tressan, younger son of this nobleman, was the author of "*Le Chevalier Robert le Brave*," a romance; "*La Mythologie comparée avec l'Histoire*," 8vo; and a French translation of Blair's Sermons, 5 vols. 8vo. He died in 1809, aged sixty.—*Biog. Univ.*

TREW (CHRISTOPHER JAMES) a distinguished naturalist, was born at Lauffen in Franconia in 1695. He studied medicine at Nuremberg, where he became director of the academy known by the name of *Naturæ Curiosorum*. In conjunction with some members of this society, he conducted a work entitled "*Commercium Litterarium ad Rei Medicæ et Scientiæ naturalis Incrementum institutum*." He died in 1769. His principal works are "*Icones posthumæ Gesnerianæ*;" "*Selectarum Plantarum, Decades*;" "*Librorum Botaniorum*;" "*Plantæ Selectæ quarum Imagines, ad Exemplaria Naturalia, Londini in Hortis Curiosorum nutritæ*;" "*Cedrorum Libani Historia*." He also published a much improved edition of Blackwell's Herbal, in English and German, with an appendix of new plants, which is much esteemed.—*Hallerii Bibl. Bot. Pulteney's Sketches.*

TREW (WILLIAM) an eminent professor of elocution, born at Havant near Chichester, on the 15th of December 1756. At an early age he came to London, where his rising talents attracted the notice of the celebrated Mr John Walker, who received him as his pupil; and on the retirement of that gentleman from his professional pursuits, he introduced Mr Trew to his connexions, as a fit person to succeed him in business. Mr Trew was consequently appointed master of elocution at Kensington school, and held the same situation at Loughborough-house school, North Brixton, from

1792 till his decease, a series of thirty-two years. During the lent season of 1785, the public were much amused by the recitations of Mr Thomas Sheridan and Mr John Henderson at Freemason's-hall; and on the death of the latter, and when the Attic Evening's Entertainment at this place was resumed the next and subsequent seasons, Mr Trew supplied his place, and gave much satisfaction by his public readings, both in London and at Oxford. To his powerful delivery of the celebrated Ode on the Passions at Chichester, the birth-place of its author, William Collins, may also be attributed the erection of a monument to the memory of the poet in the cathedral church of that city in 1793. He had likewise the honour of being selected as teacher of elocution to the late princess Charlotte, whom he attended for a period of five years. Mr Trew died, deeply lamented by his family and friends, on the 8th of September, 1824, in the sixty-eighth year of his age.—*Orig. Com.*

TRIBONIANUS, an eminent Roman lawyer in the reign of the emperor Justinian, and the object of equal praise and censure, was a native of Sade in Pamphylia; and esteemed a man of extensive learning. He made the Roman civilians his more particular study; and his knowledge of law conducted him to some of the highest posts in the empire. From the bar of the prætorian prefect he was called to the office of quæstor; but he became so unpopular by his avarice, that his removal formed one of the demands of the people in the seditious of 532. He was however soon restored, and during twenty years preserved the favour and countenance of Justinian. When the latter determined to form a new code, from the works of former civilians, Tribonianus was placed at the head of the commission. In the performance of this task he deserves great praise; and the result, the celebrated Digest and Pandects, would have transmitted his name with great honour to posterity, but for his moral defects. In the administration of justice he is accused of having been notoriously influenced by bribes; and he was also charged with atheism, which Gibbon deems a calumny. The latter historian has drawn a parallel between Tribonianus and Bacon.—*Univ. Hist. Gibbon.*

TRIEWALD (MARTIN) a Swedish mathematician and engineer, born at Stockholm in 1691. He went to England, where he was engaged to superintend the machinery at some coal-works near Newcastle. He there met with a steam-engine, with the construction of which he made himself acquainted, and by his improvements in it, and his invention of various other machines, he made himself advantageously known. After having attended the lectures of Dr Desaguliers in London, he returned to Sweden, whence he had been absent ten years. He erected a steam-engine, and commenced lectures on natural philosophy, illustrated by experiments. He also enriched his native country with many inventions of utility in the mines and iron-works; and he contributed much to propagate

TRI

a taste for the physical sciences. His services were rewarded with several important employments, and he became a member of the Academy of Sciences at Stockholm, to whose Memoirs he was a considerable contributor. Much of his attention was devoted to the improvement of the diving-bell, relative to which he wrote a treatise in Swedish, entitled "The Art of Living under Water," 4to. 1741. He died suddenly in 1747.—*Aikin's G. Biog. Biog. Univ.*

TRIMMER (SARAH) a literary lady, whose writings are principally adapted for the religious and moral instruction of the more juvenile members of society. Her maiden name was Kirby, being the daughter of Joshua Kirby, who held the situation of clerk of the works at Kew-palace, and was himself a good draughtsman and instructor to some of the then younger branches of the royal family in the art of designing.. The subject of the present article was born about the commencement of the year 1741 at Ipswich, and was early initiated in classical as well as English literature. She married her husband, Mr Trimmer, in 1762, by whom she had twelve children, to whose education she devoted herself with exemplary assiduity. She was distinguished through life as an active and benevolent instructress of youth, for whose use she produced a variety of ingenious tracts, several of which have been adopted by the Society for promoting Christian Knowledge. Her death took place in the winter of 1810.—*Chalmers's Biog. Dict.*

TRISSINO (GIOVANNI GIORGIO) one of the fathers of Italian poetry. He was descended of a noble family of Vicenza, where he was born in 1478, and received a liberal education at Milan and at Rome. The death of his first wife, to whom he was married early, drove him from the quiet of domestic privacy, to which his disposition seems to have inclined him, into active life. He acquired by his abilities the favour of that great encourager of talent, Leo X. under whose auspices he produced his first literary effort, a tragedy entitled "Sophonisba." The successor of this munificent pontiff held him in no less esteem, and availed himself of his services in several diplomatic missions, especially to the emperor Charles V, and to the republic of Venice. His best production, and that on which his fame now principally rests, is an heroic poem in blank verse, being the first attempt of the kind in the Italian language; and which, if inferior in spirit and elegance to the epic of Tasso, is yet by no means deficient either in energy or invention. The subject of this poem is the deliverance of Rome from the Goths by Belisarius, and it is entitled "Italia liberata da Goti." In private life he was unfortunate; a second marriage involved him in a quarrel with his son by the first wife, which ended in an appeal to the laws. Trissino was worsted in the contest, which affected him so much that his anxiety during the progress of the suit, and the chagrin he experienced at its result, are said to have materially accelerated his death, which took place at Rome in 1550.—*Tiraboschi. Ruscoe's Life of Leo X.*

TRO

TRISTAN L'HERMITE (FRANÇOIS) a native of Souliers in La Marche, distinguished at the French court in the earlier moiety of the seventeenth century as a wit, poet, and accomplished gentleman. He was born about the year 1601, and at first held a situation about the person of the marquis de Verneuil, the illegitimate son of Henri Quatre. An unfortunate quarrel, which terminated in the death of his antagonist, a young nobleman, who fell in the rencontre, drove him for a while into exile; but he afterwards obtained his pardon, and became a member of the household of Gaston d'Orleans. His works, consisting principally of dramatic compositions, have been published in three quarto volumes. The production by which he is principally known is his tragedy of "Mariamne." His death took place in 1649.—*Moreri. Nouv. Dict. Hist.*

TRITHEMIUS (JOHN) abbot of Spanheim, a Benedictine monk of the fifteenth century, born at Tritenheim in Germany in 1462. He is known as an industrious compiler as well as writer of some talent on subjects not altogether confined to those which, during the period in which he lived, occupied almost exclusively the attention of the brethren of his order. Two treatises on steganography and polygraphy, written with some ability, evince his ingenuity, while his industry is proved by his other writings, "Opera Historica," folio, 2 vols.; "On the illustrious Writers of the Church," 4to, 1546; "On illustrious Members of the Order of St Benedict;" "On illustrious Germans," 4to; and "Annales Hirsangieses," folio, 2 vols. He died abbot of a religious house dedicated to St James at Wurzburg in 1516.—*Niceron. Dupin.*

TRIVET (NICHOLAS) a Dominican friar, son of sir Thomas Trivet, lord-chief-justice, lived in the reigns of Edward I, II, and III. He was the author of "Annales Regum Angliæ," published by Anthony Hall of Queen's college, Oxford, in 1719, in 2 vols. 8vo. Bishop Nicolson speaks of this work as having formed part of the library of Merton college, Oxford, under the title of "Les Gestes des Apostoiles;" but the latter must evidently have been a different production. Trivet, who was educated at Oxford, left many other MSS. on various subjects of philosophy and theology. He died in 1328.—*Nicolson's Hist. Lib. Bale. Tanner.*

TROGUS POMPEIUS, a Latin historian, who flourished in the reign of Augustus. His family were Vocontian Gauls, a tribe of Gallia Narbonensis; his grandfather having been made a Roman citizen by Pompey the Great, while his father became keeper of the seal and secretary to Julius Cæsar. He wrote forty-four books of a history, which he called "Philippics," from their subject, which was the Macedonian empire, taking its rise from Philip, the father of Alexander. Of this work we have only the epitome by Justin, who terms Trogus a man of antique eloquence; he is also often referred to by the elder Pliny, who calls him a very exact author.—*Vossii Hist. Lat.*

TROIL (UNO von) the son of the arch

bishop of Upsal, was born at Stockholm in 1746, and being destined for the church, he was educated at the university of Upsal. He then travelled in Germany, France, and England; and becoming acquainted with the late sir Joseph Banks, he accompanied that gentleman and Dr Solander to Iceland, and returned with them to London. In 1773 he proceeded to Holland, and thence to Sweden, where the king appointed him almoner to a regiment, and employed him to translate the *Memoirs of Whitelocke*, English ambassador at the court of queen Christina. This work was published at the expense of the government in 1774; and the following year von Troil was made preacher in ordinary to the king. In 1777 he published the work by which he is principally known, his "Letters on a Voyage to Iceland," 8vo. since translated into several languages. He was at length raised to the bishopric of Lindköping, afterwards made president of the consistory of Stockholm, and in 1786 promoted to the archbishopric of Upsal. He died July 27, 1803. Von Troil was invested with the royal orders, and was a member of the academies of Sweden; and he also held the office of vice-chancellor of the university of Upsal. He published "Memoirs relative to the History of the Church and the Reformation in Sweden," Upsal, 1790—95, 5 vols. 8vo.—*Biog. Univ.*

TROMP (MARTIN HERBERTSON) a celebrated Dutch naval officer, born at Brill, in 1597. He went to sea when young with his father, and was taken prisoner in a combat with an English piratical vessel, on board which he continued two years. Being restored to his country, he was made lieutenant on board a ship of the line in 1622; and two years after he received the command of a frigate. After experiencing some neglect he was created lieutenant-admiral in 1637, and appointed commander of a squadron of eleven vessels, with which he attacked and beat a superior fleet of the Spaniards. In October 1639 he defeated the Spaniards again under admiral Oquendo. But his principal services were against the English. Before the declaration of hostilities against Holland in 1652, a rencontre took place in the Downs between Tromp and admiral Blake, which was disadvantageous to the former. He was dismissed from his command, but being soon after restored, he fought another battle with Blake, whom he compelled to retreat to the Thames with the loss of five ships. In February 1653 Tromp and De Ruyter, convoying a great fleet of Dutch merchantmen, were attacked by the united squadrons of Blake, Monk, and Dean, when an engagement ensued which lasted three days, and terminated in the loss of nine men-of-war to the Dutch, who however retreated in good order, and saved their convoy. Another bloody combat took place off Nieuport, June 12, 1653, in which the English admiral Dean was killed, but the Dutch were beaten. On the 6th of August Tromp again met the English fleet near the coasts of Holland, and on the following day a most ob-

stinate engagement occurred, in which this brave and meritorious officer was killed by a musket-ball; and the dearly purchased victory remained with the English. The body of Tromp was honourably interred in the church of Delft, where a magnificent monument was raised to his memory.—CORNELIUS TROMP, son of the preceding, born at Rotterdam in 1629, was also a distinguished naval commander. At the age of twenty-one he was captain of a vessel in a squadron sent against the emperor of Morocco, and two years after he was made a rear-admiral of the Admiralty of Amsterdam. In 1653 he took an English man-of-war in the Mediterranean. He succeeded to the reputation of his father, and like him he distinguished himself against the navies of Britain. He was one of the admirals in the sea-fight off Solebay, in which the Dutch commander Opdam was blown up, and the Dutch were defeated; but Tromp, by a masterly retreat, contributed to lessen the advantage of the victors. In the famous battle in the Downs, in June 1666, which lasted four days, Tromp was inferior to De Ruyter only in the glory of successful valour, and he was obliged repeatedly to shift his flag from ships which had been disabled in the terrible conflict. He was again present in the engagement of the 4th and 5th of August following, in which it is said that he neglected properly to second his rival coadjutor De Ruyter. The complaints of that officer caused him to be superseded; and it was not till 1673, when the States General were involved in a war with England and France at the same time, that Cornelius Tromp was again called to the service of his country. The rival admirals were now reconciled, and they fought in concert with the French and English off the Dutch shores in June and August. Peace soon followed, and in 1675 Tromp made a visit to London, where he was honourably received by Charles II, who created him a baronet. The same year he was sent with a fleet to assist the king of Denmark against Sweden, when he was invested with the Danish order of the Elephant. In 1677 he succeeded De Ruyter as lieutenant-admiral-general of the United Provinces; and he died at Amsterdam, May 29, 1691, just as he was about to take the command of a fleet destined to act against France. He was buried in the splendid tomb of his father at Delft.—*Moreri. Aikin. Biog. Univ.*

TRONCHIN (THEODORE) one of the most celebrated physicians of the eighteenth century. He was born at Geneva in 1709, and being maternally related to lord Bolingbroke, he was sent at an early age to England, to receive the benefit of his patronage. That statesman however falling into disgrace at court, could only assist his kinsman with advice for the direction of his studies. He went to the university of Cambridge, and thence to Leyden, where he became a favourite pupil of Boerhaave; and having taken the degree of MD. in 1730, he settled in medical practice at Amsterdam. He was made a member of the

college of physicians, and an inspector of hospitals in that city, and he distinguished himself much by promoting inoculation for the small-pox. In 1750 he returned to Geneva, where his reputation induced the council of state to give him the title of honorary professor of medicine. In 1756 he was called to Paris to inoculate the children of the duke of Orleans; and some years after he accepted the office of chief physician to that prince, when he removed to the French metropolis. Tronchin there became intimately connected with Voltaire, J. J. Rousseau, Diderot, Thomas, and other philosophers and men of letters, who have amply celebrated in their writings his talents and his virtues. The practice of Tronchin was simple, and founded on close observation of the phenomena of health and disease. He administered medicine sparingly, trusting principally to diet and regimen, and to the regulation of the passions and mental affections. He paid particular attention to the diseases of women and children, and especially to nervous disorders; and he has the merit of having adopted the cooling plan in the treatment of the small-pox. He died at Paris, November 30, 1781. Besides articles relating to medicine, in the *Encyclopedie*, and an edition of the works of Baillou, he published academical theses "De Nympha; de Clitoride," Leyd. 1736, 4to; a small treatise "De Colica Pictorum," Genev. 1757, 8vo; and papers in the *Memoirs of the Academy of Surgery*. He belonged to the principal scientific and medical societies in Europe.—*Aikin's G. Biog. Biog. Univ.*

TRUBLET (NICHOLAS CHARLES JOSEPH) a French abbé and man of letters, was born at St Malo, in December 1697. He was brought up to the church, and became treasurer of the cathedral of Nantes, and afterwards archdeacon and canon of St Malo. His first appearance as an author was in 1717, when he published in the French *Mercur*, his "Reflections on Telemachus," which introduced him to La Motte and Fontenelle. For some time he was attached to cardinal Tencin, whom he accompanied to Rome; but disliking a life of dependence, he returned to Paris, and employed himself in literary pursuits. He was received into the French academy in 1761, and about six years afterwards he retired to St Malo, where he died in March 1770. His principal works are "Essais de Littérature et de Morale," 4 vols. 12mo, which have been often reprinted and translated into other languages. These essays, although he was neither gifted with the elegance of La Bruyere nor the penetration of Rochefoucault, contain much lively remark, and knowledge of books and men. "Panegyriques des Saintes," a work feebly written, but to which he prefixed some valuable reflections upon eloquence; "Mémoires pour servir à l'Histoire de Mess. de la Motte et de Fontenelle." He was also a contributor to the "Journal des Savans" and "Journal Chrétien," in which last work he spoke of Voltaire in a manner which drew upon him some severe epigrams from that irritable wit.—*Nouv. Diet. Hist.*

TRUMBULL, or TRUMBALL. (sir WILLIAM) an English statesman, born at East Hempsted in Berkshire, in 1636. He studied at Oxford, and having taken the degree of bachelor of laws in 1659, he travelled in France and Italy. On his return home, he finished his legal studies, and became a barrister in the court of chancery. In 1682 he obtained the office of clerk of the signet; and after having occupied various posts, diplomatic and political, he was at length made secretary of state. He resigned this office, after holding it two years, in 1697, and retired to his estate at East Hempsted, where he died December 14, 1716. Burnet describes him as an able civilian and most virtuous man, but he is chiefly known as the friend of Pope, who wrote his epitaph, and has preserved some of his letters.—*Biog. Univ.*

TRUSLER (Dr JOHN) a singular literary compiler, was born in London in 1735, and brought up in one of the humblest lines of physic. He however contrived to get into holy orders, and for some time officiated as a curate, but at length, in 1771, he hit upon the more profitable scheme of composing abridgments of popular sermons, printed in imitation of manuscript, for the use of the pulpit. He next established a bookselling concern upon an extensive scale, and by business and the success of his numerous but very puerile compilations for youth, &c. realised a handsome fortune. He died at Englefield-green, where he had purchased an estate, in 1820. His compilations are not worth enumerating; the best are his "Hogarth Moralized," and a "Compendium of Chronology."—*Gent. Mag.*

TRYPHIODORUS, a Greek poet, was by birth an Egyptian. The time when he lived is uncertain, but it is usually referred to the reign of the emperor Anastasius, at the beginning of the sixth century. Nothing is known of his personal history, more than that he was a grammarian, and that he wrote a great many works, the titles of which are given by Suidas. Of these nothing is extant except a poem on the destruction of Troy, which has no poetical merit. The standard of this writer may be taken from the circumstance of his being one of the tribe of Lipogrammatists, having composed an *Odyssey* of twenty-four books, each of which dropped a letter of the alphabet in succession, but of this piece of laborious absurdity no specimens remain. The existing poem of Tryphiodorus was first printed by Aldus, with those of Quintus Calabar and Coluthus. Of the subsequent editions the best are those of Merrick, with an English version, of Bandini, Florence, 1765, and of Northmore, Oxford, 1791.—*Merrick's Dissertation. Bayle. Spectator, No. 59.*

TSCHIRNHAUSEN (ERHNFRIED WALTER von) an ingenious mathematician, lord of Killingswald and of Stolzenberg, in Lusatia, was born April 10, 1651. He studied some time at the university of Leyden, and in 1672 entered the Dutch army, in which he served some time as a volunteer, and then travelled into most of the leading countries of Europe.

On his return, being desirous to perfect the science of optics, he established three glass-houses in Saxony, and showed how porcelain might be made from a particular kind of earth, thereby entitling himself to be considered as the founder of the celebrated Dresden porcelain manufactory. He likewise directed his attention to mathematics, and discovered a particular kind of curves, endowed with very remarkable properties, called after him Tschirnhausen's caustics, an account of which he communicated to the Academy of Sciences of Paris, in 1682, which body elected him a member. About the year 1687 he constructed an extraordinary burning mirror, and soon after succeeded in making a glass lens, three feet in diameter, and convex on both sides, which had a focus of twelve feet, and weighed one hundred and sixty pounds. Its effects were astonishing; wood was set on fire with it in an instant, and all earthy substances, asbestos excepted, converted by it into glass. It was purchased by the regent duke of Orleans, who subsequently presented it to the Academy of Sciences. The only work which he published separately was his "De Medicinâ Mentis et Corporis," printed at Amsterdam in 1687; but he was the author of several papers on burning-glasses, and on his discoveries in regard to curves, which appear in the *Leipsic Transactions* and the *Memoirs of the French Academy of Sciences*.—*Hutton's Math. Dict.*

TSCHUDI (GILES de) one of a family of Swiss writers, and landman of the canton of Glarus, was born in 1505. He devoted much of his time to historical researches, and produced, among other works of less note, "The Helvetic Chronicle," which remained in manuscript until 1734, when it was edited and published by Iselin, in 2 vols. folio.—Another of the family, DOMINIC TSCHUDI, who died in 1654, wrote in Latin on the constitution of the Benedictine congregation in Switzerland, and an account of the founder of the abbey, which was printed in 1651.—A third, JOHN HENRY TSCHUDI, who died in 1729, was the author of an *Account of the Abbots of St Gall*, 1711, 4to, and a "Chronicle of the Canton of Glarus," both in German. He also conducted a literary journal from 1714 to 1726.—There was likewise a JOHN PETER TSCHUDI, who wrote in German a *History of Weidenberg*, published in 1726.—*Nouv. Dict. Hist. Sarr. Onom.*

TUCKER (ABRAHAM) an English writer on morals and metaphysics, who was the son of a merchant of London, where he was born in 1705. After completing his studies at Oxford, and learning French, Italian, and music, to which he was passionately attached, he travelled in France. He married in 1736, and having lost his wife in 1754, he published under the title of "A Picture of Love without Art," all the letters she had written to him during his frequent absences in various parts of England and Scotland. Some time after he produced his "Advice from a Country Gentleman to his Son;" and he commenced his great work, called "The Light of Nature pursued," 7 vols. 8vo;

the first three of which appeared in 1768, under the pseudonym of Edward Search, Esq; and the remaining volumes were printed after the death of the author, which took place November 20, 1774.—*Dict. Hist. Biog. Univ.*

TUCKER (JOSIAH) an eminent political writer, who was the son of a Welsh gentleman of small property, who farmed his own estate. He was born in 1711, and having been educated at St John's college, Oxford, he entered into holy orders, and obtained the curacy of the parish of All Saints at Bristol. Bishop Butler appointed him his chaplain, and procured him the rectory of St Stephens in the same city. His situation in this seat of commerce probably drew his attention to that subject, and in 1747 he published "A brief Essay on the Advantages and Disadvantages which respectively attend France and Great Britain with regard to Trade;" and this piece was followed by "Reflexions on the Expediency of a Law for the Naturalization of Foreign Protestants," for which measure he was an advocate, as he likewise was for the naturalization of the Jews, which he defended in "Letters to a Friend concerning Naturalisations." He obtained the degree of DD. in 1755, and was also made a prebend of Bristol. The exertion of his influence among his parishioners to procure the election of Mr Nugent (lord Clare) as MP. for Bristol, procured him the deanery of Gloucester in 1758. He afterwards wrote against the petition for relieving the clergy from subscription to the thirty-nine articles; "Letters to Dr Kippis," against repealing the corporation and test acts; several tracts on the disputes between Great Britain and her American Colonies; and a "Treatise concerning Civil Government," 1781; in which he combats the principles of Locke, on the origin, extent, and end of civil institutions. His life was terminated by a paralytic stroke in 1799. Besides the works already noticed and a volume of sermons, he produced a multitude of publications on commerce, politics, and religion. In his tracts on the American war, he warmly condemned the opposition of the colonies to the authority of the mother country; and recommended, at an early period of the contest, as a matter of absolute necessity, a separation of the former from the British empire, and a consequent recognition of their independence.—*Gent. Mag. Aikin's Gen. Biog.*

TULL (JETHRO) an agricultural writer, distinguished for having recommended what has been termed the horse-hoeing method of husbandry. He was a gentleman of an ancient Yorkshire family, and was born about 1680. After receiving a liberal education at a university, he studied at the Temple, and was admitted a barrister-at-law in the early part of the eighteenth century. He then appears to have made the tour of Europe, in the course of which he diligently observed the soil, the modes of culture, and the productions of the countries which he visited. Returning home he married, and settled on a farm of his own in Oxfordshire, where he diligently engaged in a course of agricultural experiments. Illness in-

duced him again to go abroad; and after three years' absence he came home, and resumed his projects on another estate in Berkshire. His grand object was to substitute labour and arrangement in the place of manure and fallowing in the culture of land. With that view he invented various instruments, adapted to what he called horse-hoeing husbandry. Like most innovators, he experienced many losses and disappointments from the stupidity or unfaithfulness of his labourers and others whom he employed; and in a pecuniary point of view his scheme appears to have been unsuccessful. In 1733 he published "An Essay on Horse-hoeing Husbandry," folio, which was translated into French by Duhamel; and from that time he continued occasionally to publish other pieces in defence of his system, &c. He died in 1740.—*Aikin's Gen. Biog.*

TULLY (THOMAS) a learned divine and controversial writer, was born at Carlisle in 1622. He became a fellow of Queen's college, Oxford, and in 1642 was appointed master of the grammar school at Tetbury in Gloucestershire. In 1657 he took his degree of bachelor of divinity, and soon after was made master of Edmund-hall. After the Restoration he was created DD. and appointed chaplain to the king; and was also presented by one of his pupils to the rectory of Grittleton in Wiltshire, to which was added the deanery of Ripon. He died in 1656. This divine, who carried on a controversy with Dr Bull and Mr Baxter on the subject of justification, published "Logica Apodeictica;" "Enchiridion Didacticum, cum Appendice de Cæno Domini, &c.;" "Justificatio Paulina, sine Operibus."—GEORGE TULLY, nephew of the preceding, was also educated at Queen's college, Oxford. He became subdean of York, and published among other works a discourse on "The Government of the Thoughts." He died in 1697.—*Athen. Oxon.* vol. ii.

TULP (NICHOLAS) an eminent physician and distinguished patriot, was the son of a rich merchant of Amsterdam, where he was born in 1593. He studied physic at Leyden, where he graduated, and then settled in his native place. He not only rose to eminence in his profession, but possessing much judgment as a politician, he was elected a counsellor of Amsterdam in 1622, and nominated six times to the office of sheriff. He was finally appointed to the important post of burgomaster, which he occupied on the unprincipled invasion of Holland by Louis XIV in 1672. Notwithstanding his advanced age, he retained so much firmness and vigour, that it was chiefly through his persuasion that his fellow citizens were animated to the resistance that saved their country. For his services on this occasion a silver medal was struck to his honour, with a motto from the *Æneid*, "Vires ultra sortemque senectæ." Tulp was the author of a volume of rare and curious cases, entitled "Observationum Medicarum, Libri Tres," 1641, 12mo, reprinted subsequently with a fourth book, Amst. 1672—1675, and Leyden, 1716. It is written in Latin, with great purity of dic-

tion and conciseness, and contains many valuable anatomical remarks. According to Haller, Tulp was the first who observed the lacteal vessels.—*Halleri Bibl. Med. Eloy.*

TUNSTALL or TONSTAL (CURTENEY) an eminent English prelate, was born at Hatfield in Yorkshire about 1474. He was the natural son of a gentleman of the same name, who sent him to Balliol college, Oxford, whence he removed to Cambridge, where he was chosen fellow of King's-hall, now Trinity college. He next proceeded to Padua, where he took the degree of doctor of laws, and on his return was made vicar-general to archbishop Warham, obtaining various preferments, until in 1516 he was appointed master of the rolls. The same year he was sent ambassador, in conjunction with sir Thomas More, to the emperor Charles V, then at Brussels, during which mission he lived in the same house with Erasmus. Various additional preferments followed this service, until in 1522 he was made bishop of London, and the following year appointed keeper of the privy seal. In 1527 he attended Wolsey in his embassy to France; and he was also one of the ministers appointed to negotiate the treaty of Cambrai. In 1530 he was translated to the see of Durham, and during the reign of Henry VIII he concurred in most of the proceedings adopted by that self-willed monarch for the reformation of the church. Under Edward VI he was deprived of his bishopric, on pretences by no means creditable, and he remained a prisoner in the Tower until the accession of Mary, when he was restored to his bishopric. He conducted himself with great moderation in this sanguinary reign, to the Protestants in his diocese, a deportment that was by no means agreeable to Mary and her council. On the accession of Elizabeth it was supposed that he would easily reconcile himself to the meditated settlement of the church, but he resolutely refused the oath of supremacy; and was again deprived and committed to the custody of archbishop Parker, who treated him with great respect, and under whose roof he died November 18, 1559. This able prelate was uncle to the celebrated Bernard Gilpin, who supplied many curious particulars of his conduct and deportment, which exhibit him as much of a courtier, but possessed of sense and humanity. Several sermons and theological tracts of his were published in his life time, and many of his letters and papers will be found in Burnet's History of the Reformation, Strype's Memorials, Collier's Church History, and Lodge's Illustrations.—*Athen. Oxon.* vol. i. *Tanner. Strype's Life of Parker. Biog. Brit.*

TUNSTALL (JAMES) a learned divine and classical critic, born in 1710, and educated at St John's college, Cambridge. He there became a fellow and a tutor, and in 1741 he was chosen public orator of the university. He subsequently was chaplain to archbishop Potter, who gave him the rectory of Great Chart, in Kent, which he exchanged for the valuable vicarage of Rochdale, in Lancashire. He died in 1772. His principal works are "Epistola

ad Virum eruditum Conyers Middleton, Vitæ M. T. Ciceronis Scriptorem," impugning the authenticity of the letters between Cicero and Brutus, of which Middleton had made great use in his life of Cicero; "Observations on the present Collection of Epistles between Cicero and M. Brutus;" "Academica, or Discourses on Natural and Revealed Religion;" and "Lectures on Natural and Revealed Religion," a sequel to the discourses, published posthumously.—*Nichols's Lit. Anec.*

TURBERVILLE (**GEORGE**) an English poet, descended from an ancient family in Dorsetshire, is supposed to have been born about 1530. He received his education at Winchester school, and became a fellow of New college, Oxford, in 1561. He left the university without taking a degree, and resided for some time in one of the inns of court, where he began to exhibit his predilection for poetry. His abilities soon after recommended him to Mr Randolph, sent ambassador by Elizabeth to the court of Russia, who appointed him his secretary during the mission. On his return he was much courted as a man of accomplished education and manners, and the first edition of his "Songs and Sonnets," published in 1567, seems to have added considerably to his reputation. His other works are translations of "The Heroical Epistles of Ovid," the Eclogues of B. Mantuan, and a collection entitled "Tragical Tales," translated from various Italian writers. He is also supposed to be in reality the author of the "Booke of Falconrye," attributed to another writer of the same name. He was living in 1594 in great esteem, but no account of his death is recorded. There is some diversity of fancy and sentiment in Turberville's pieces, mixed up with much pedantry, flatness, and common-place; but unlike many poets of that early age, he seldom infringes upon morals or delicacy.—*Censura Lit.* vol. ii. and iii. *Ellis's Specimens.*

TURBILLY (**LOUIS FRANCIS HENRY de MÈMON, marquis de**) a French officer and agriculturist, born in 1717, of a distinguished family of Anjou. Becoming the master of a considerable estate by the death of his father in 1737, he commenced various improvements on it, especially by draining. The war of 1741 called him to his regiment, and he has repeatedly left the ploughshare for the sword, and returned to the former as often as his duty permitted him. He engaged in various schemes, and like most projectors ruined himself in attempts to benefit the public. He was the first person in France who instituted agricultural prizes, and to him also his country owes the establishment of societies of agriculture. He died in 1776, and his property being sold for the benefit of his creditors, all traces of his improvements were subsequently destroyed. Turbilly was the author of "Mémoire sur les Defrichements," 1760, 12mo; and "Pratique des Defrichements," of which the fourth edition, with improvements and additions, was published in 1811, 8vo. Voltaire has contributed to the celebrity of this ingenious but unfortunate speculator, whom he

thus refers to in his "Épître à Madame Denis sur l'Agriculture."

"Turbilly dans l'Anjou t'imité et t'aplaudit."

An interesting account of the marquis's projects and labours is given in the first volume of Arthur Young's "Travels in France."—*Biog. Univ.*

TURENNE (**HENRY de la TOUR d'Auvergne, viscount de**) one of the greatest captains of modern times, was the second son of the duke of Bouillon, and was born at Sedan, September 16, 1611. From his childhood he was destined for the military profession, and he learnt the rudiments of war under his maternal uncle, prince Maurice of Nassau. In 1634 he was placed at the head of a French regiment, with which he served under marshal de la Force, at the siege of La Mothe, in Lorraine, when he greatly distinguished himself. The same year he was made *maréchal-de-camp*, and he added so much to his reputation, that after the taking of Brisac in 1638, cardinal Richelieu, desirous of securing the young warrior to his interest, offered him one of his nieces in marriage, but he declined the proposal through his attachment to the reformed religion. In 1639 he served in Italy, where he raised the siege of Casal, and obtained a victory at Montcallier. He signalized himself at the conquest of Roussillon in 1643, and the next year he was made *marshal of France*. He then had the command of the army in Germany, where he vanquished general Merci; but he was himself defeated in 1645, at Mariendahl; yet he took his revenge soon after in the victory of Nordlingen. The following year he obliged the duke of Bavaria to sue for peace, and on his breaking the treaty drove him entirely out of his dominions. In the civil war of the Fronde he first opposed the court, who sent against him the marshal du Plessis Praslin, by whom he was defeated near Rhetel in 1650. Afterwards joining the royal party, he gained the battle of Dunes in 1657, which led to the peace of the Pyrenees. When the war with Spain was renewed in 1667, Turenne, who had the title of *marshal-general of the French armies*, was chosen by Louis XIV as his ostensible tutor in the art of war. His success obliged the enemy to make peace the next year, and about this period he gratified his royal master by turning Catholic. His subsequent services against the Dutch, his conquest of Franche-Compte in 1674, his brilliant success in Germany, with the barbarous devastation of the Palatinate by his troops, must be traced in the pages of the historian, as the slightest details would exceed our limits. After he had defeated the imperialists at Mülhausen, and again at the more terrible battle of Turckheim, he was opposed by the celebrated Montecuculi; and these rivals for glory were about to meet at Saltzbach, when Turenne was killed by a cannon-ball as he was examining the ground for raising a battery, July 27, 1675. He was honoured with a splendid funeral, and interred at St Denys, among the sovereigns of France. His private character is said to have been amiable,

TUR

and his disposition was disinterested; but the love of military glory led him to tarnish his fame by cruelty and barbarity.—*Aikin's Gen. Biog.*

TURGOT, a monkish historian of the eleventh century, was an Anglo-Saxon of a good family in Lincolnshire. He became a monk, and subsequently prior of Durham, and in 1107 was invited to Scotland, and elected bishop of St Andrew's under the patronage of Malcolm and his Saxon queen Margaret. On the death of that king and queen he returned to Durham, where he employed his leisure hours in writing the history of the church of Durham, the MSS. of which falling into the hands of Simeon of Durham, he dishonourably published it in his own name. This curious fact, which was not known when the brief article of Simeon of Durham was written, is demonstrated by Selden in his preface to Twissen's "Decem Scriptores." Turgot also composed lives of king Malcolm and his queen, often quoted by Fordice and others but not supposed at present to exist. He died in 1115.—*Hutchinson's Durham.*

TURGOT (**ANNE ROBERT JACQUES**) a patriotic and enlightened French minister, was the son of Michael Etienne Turgot, president of the grand council. He was born at Paris in 1727, and in his youth gave himself up to the study of theology at the Sorbonne. At the age of twenty-four he commenced a translation of Virgil's Georgics, and soon after attaching himself to Quesnay and the Economists, quitted the Sorbonne in order to accompany De Gournay, intendant of commerce, in his travels. On his return he was himself appointed intendant of Limoges, which post he occupied for twelve years, and long caused himself to be remembered with gratitude for his wise, salutary, and benevolent reforms and regulations. When raised to the post of comptroller-general of the finances, he gave a wider extent to the principles of amelioration. He moderated the duties on entrance of articles of the first necessity, without loss to the revenue; freed commerce from many fetters, and encouraged industry by enlarging the rights of individuals and abolishing the exclusive privileges of companies and corporations. He also formed a project for commuting the feudal rights, for rendering salt an article of free merchandise, and for reforming the royal household. The return for these useful and benevolent views was opposition and ridicule, the ordinary payment of such services under the former government of France. He was however able to carry into effect some very important improvements; but as he endeavoured to control the nobility, restrict the clergy, and restrain the licence assumed by the officers of the crown, they all united against him. The result was his dismissal from office in 1776, from which period he lived a retired and studious life until his death in 1781, at the age of forty-nine. Turgot having written for the Encyclopedie and been attached to the principles of the Economists, has, in common with all the reasoning and philosophical characters of the period, been accused

TUR

of being one of the promoters of the French Revolution, his innovations in favour of the people, according to this reasoning, having led them to the expectation of greater. It is unnecessary to add, that every alteration on the side of justice and humanity is chargeable with the same consequence, and that it is obviously unjust to impute to moderate schemes of amelioration the fatal result of the very excess of corruption, which had rendered them nugatory.—*Life by Condorcet. Nouv. Dict. Hist.*

TURNEBUS (**ADRIAN**) an eminent French critic, whose real name was Tournebrœuf, or Turnbull, was born in 1512, at Andeli in Normandy. He was educated at Paris, and soon became profoundly versed in every branch of classical literature. He was for some time a teacher of the classics at Toulouse, but in 1547 became professor of Greek at Paris. He was one of the few profound scholars the mildness and amenity of whose disposition did honour to their learning. His high reputation produced him offers from Italy, Spain, Germany, and England, but he preferred living on a scanty income in his own country. He died at Paris in 1565. The works of Turnebus consist of annotations upon Cicero, Varro, Thucydides, and Plato; writings against Ramus, and Latin translations from Aristotle, Theophrastus, Plato, Plutarch, and other ancient authors. His works were printed collectively at Strasburgh, in three volumes, folio, 1606.—*Thuan's Hist. Nouv. Dict. Hist.*

TURNER (**FRANCIS**) an English divine, who was one of the seven bishops prosecuted for resisting the royal authority in ecclesiastical affairs under James II. He was the son of the dean of Canterbury, and was educated at New college, Oxford, where he proceeded DD. and obtained a fellowship. After holding some inferior preferments, he became bishop of Rochester in 1683, and a few months after he was translated to Ely. Notwithstanding his opposition to king James, he followed the example of Sancroft and Ken in refusing to take the oath of allegiance to William III, and was consequently deprived of his benefice. His death took place in 1700. He was the author of "A Vindication of the late Archbishop Sancroft, and his Brethren the rest of the deprived Bishops, from the Reflections of Mr Marshall, in his Defence of our Constitution;" besides sermons, poems, and other works of little importance.—*Wood's Athen. Oxon.*

TURNER (**SAMUEL**) a traveller and diplomatist, born in Gloucestershire about 1749. He entered into the military service of the East India Company, and attracted the favourable notice of governor Hastings. In 1774 the latter had sent an embassy to the court of Tibet, and the envoy was well received by the Tchou-lama, the tutor or minister of the Dalai-lama, or ostensible sovereign of the country. The Tchou-lama dying in 1780, and the decease of the ambassador, Mr Bogle, happening about the same time, Mr Hastings thought it proper to send another embassy to

congratulate the new potentate of Tibet. The mission was confided to captain Turner, who set off from Calcutta, about the middle of January 1783; and on the first of June he reached Tassi-Soudon, the capital of Boutan, where he received every attention from the Deb rajah, the sovereign of Boutan. After waiting three months, he received permission from the regent of Tchou Lumbo to enter the territories of Tibet; but he was to be accompanied by only one Englishman. On the 8th of September he left Tassi-Soudon, and after a perilous journey over lofty mountains, he entered, on the 19th, the monastery of Tchou-Lumbo, situated to the south of the city of Jikadzé. The next day he had an audience of the regent. He wished to have been present at the solemn recognition of the Lama, which took place a few days after; but he could not obtain permission, as it would have given offence to the Chinese delegates, who were to attend the ceremony. November 30th, the ambassador received his audience of leave from the regent, who sent despatches to governor Hastings, and expressed his wishes to preserve relations of sincere friendship with the English. Captain Turner, in the beginning of March 1784, arrived at Patna in the province of Bahar, where he met Mr Hastings. In 1792, in the war with Tippoo Sahib, this officer signalized himself at the siege of Seringapatam. He was afterwards sent ambassador to the sovereign of Mysore, and he acquitted himself so much to the satisfaction of the East India Company, that he received a present of 500*l*. Having acquired a large fortune he returned to England, but he did not long enjoy it, dying in London, Jan. 2, 1802, in consequence of an attack of paralysis. He published "An Account of an Embassy to the court of the Teshoo Lama in Thibet, containing a Narrative of a Journey through Boutan and Part of Thibet, with Views taken on the Spot, by Lieutenant Davis, and Observations, botanical, mineralogical, and medical," 1800, 4to; and "A Description of the Yak of Tartary, called Soora-Goy, or the bushy-tailed Bull of Thibet," in the Asiatic Researches. Captain Turner's account of Tibet was translated into French by Castera, and into German by M. C. Sprengel.—*Biog. Univ.*

TURNER (WILLIAM) an English naturalist of the sixteenth century. He was a native of Morpeth in Northumberland, and was educated at Cambridge, where he was a fellow collegian with the reformer Ridley, whose doctrines he imbibed. Having become a travelling preacher of Protestantism, bishop Gardiner had him arrested and imprisoned; and on being liberated he went to Ferrara, in Italy, and took the degree of MD. He then resided in Germany till the accession of Edward VI, when he returned home, and obtained various benefices in the church; besides which he was appointed physician to the duke of Somerset. He went abroad again in the succeeding reign, but after the death of queen Mary he repaired to his native country,

recovered his church preferment, and died in 1568. Turner is distinguished in the annals of botany as the author of the earliest English Herbal, of which the first part was published in 1551, London; the second at Cologne, 1562; and a third, together with the others, in a complete edition, Cologne, 1568. He also wrote "Avium præcipuarum quarum apud Plinium et Aristotelem mentio est, brevis et succincta Historia," Colon. 1554, 8vo, a work which has obtained the praise of Conrad Gesner. Some other of his pieces on natural history are likewise extant, besides several religious compositions.—*Wood's Athen. Oxon. Haller's Bibl. Bot. Aikin's Gen. Biog.*

TURPIN, TULPIN, or TILPIN, a monk of St Denis, afterwards archbishop of Rheims, to which see he was probably raised about 753, and after holding it more than forty years, he died at the close of the eighth or the beginning of the ninth century. He encouraged literature by procuring books to be copied, and he enriched the library of his church, for which he procured from Charlemagne many privileges. His name has escaped oblivion only in consequence of its having been prefixed to the romantic History of Charlemagne and Roland, one of the grand sources of the tales of chivalry of the middle ages. From internal evidence it appears that this mass of fable was compiled in the eleventh century, about the time the first crusade was projected. Various unsatisfactory conjectures have been hazarded relative to the real author. It was translated from Latin into French in 1206 and 1207, by a clerk dependant on Renaud, count of Boulogne; and a more recent version was published by Robert Gaguin, in the beginning of the sixteenth century. The original first appeared in the historical collection of Schardius, Frankfort-on-the-Main, 1566, folio; and M. Ciampi printed at Florence in 1822, 8vo, an edition of the work, with a preliminary dissertation.—*War-ton's Hist. of Eng. Poetry. Biog. Univ.*

TURPIN (FRANCIS HENRY) an industrious writer on history and biography, born at Caen in Normandy, in 1709. He obtained a professorship in the university of his native city, which he resigned to go to Paris, and employed himself in literary composition. He possessed some talents, having a lively imagination and considerable command of language; but writing almost continually for hire, the haste with which his works are executed has in some respects impaired their value. In the early part of his career he was indebted to the liberality of the celebrated Helvetius; and in 1795 he was among the men of letters who obtained pecuniary aid from the government. He died in indigence at Paris, in September 1799. His principal works are the *Lives of the Grand Condé and of marshal de Choiseul*, in continuation of D'Auigny and Perau's *Hommes illustres de la France*; "*Histoire du Gouvernement des anciennes Républiques*," 12mo; "*Vie de Mahomet*," 2 vols. 12mo; "*Histoire de l'Alcoran*," 2 vols. 12mo; "*La France illustre, ou le Plutarque Français*," 4 vols. 4to, republished in duodecimo; and an abridg-

ment of the English Universal History.—*Dict. Hist. Aikin's Gen. Biog. Biog. Univ.*

TURPIN DECRISSE (LANCELOT, count) an eminent French writer on military affairs, born of a noble family in the province of Beauce, about 1715. Having chosen the profession of arms, he obtained a company in 1734, and ten years after a regiment of hussars, at the head of which he displayed his valour in the wars of Italy and Germany. He quitted the army and retreated to the abbey of La Trappe; but repenting of the step he had so hastily taken, he returned to his post, and not long after he married the daughter of the celebrated general Lowendhal. His leisure was dedicated to study, and in 1754 he published, in concert with Castillon, "*Les Amusements philosophiques et littéraires de deux Amis.*" Being called to active service in the war of 1757, he distinguished himself as a skilful tactician, and he was appointed marshal-de-camp in 1761, and in 1771 a commander of the order of St Louis. After forty years' service, during seventeen campaigns, he at length obtained the rank of lieutenant-general in 1780; and the next year he was made governor of the fort of Scarpe at Douai. His name appeared on the list of lieutenant-generals in 1792; and all that is known of his subsequent history is, that he emigrated and died in Germany. He was a member of the academies of Berlin, of Nanci, and of Marseilles; and he published the following works, in addition to the volume above-mentioned—"Essai sur l'Art de la Guerre," Paris, 1754, 2 vols. 4to, of which there are English, Russian, and German translations; "*Commentaires sur les Mémoires de Montécuculi,*" 1769, 3 vols. 4to; "*Commentaire sur les Institutions de Végèce,*" Montargis, 1770, 3 vols. 4to; and "*Les Commentaires de César, avec des Notes historiques, critiques et militaires,*" Montargis, 1785, 3 vols. 8vo, reprinted at Amsterdam in 1787.—*Biog. Univ.*

TURRETINI (BENEDICT) a Protestant divine, born at Zurich in 1588. He studied at Geneva, where he was appointed professor of theology in 1612; and he died in 1631, after having published a great number of theological dissertations, sermons, &c. of which a list is given by Senebier, in *Hist. Litt. de Geneve*.—**TURRETINI** (FRANCIS), son of Benedict, born in 1623, followed the same career with his father. After studying at Geneva and Leyden, he went to Paris, to hear the philosophical lectures of Gassendi. Returning to Geneva, he was admitted to the ministry; and having refused the chair of philosophy he officiated for some time as pastor of a Calvinist church at Lyons. In 1653 he was invited to accept the theological professorship at Geneva, which he held till his death in 1687. He published a volume of sermons and many tracts, theological and controversial, besides his "*Institutiones Theologiæ Elenchicæ,*" 1679–85, 3 vols. 4to, a work still held in estimation.—**TURRETINI** (JOHN ALPHONSO) son of the foregoing, the most celebrated of all the members of his family, was born at Geneva in 1671.

Having finished his studies in divinity, in 1691 he travelled for improvement; and after visiting England, Holland, and France, and becoming acquainted with the learned in those countries, he returned home, and was admitted to the evangelical ministry in 1694, and aggregated to the society of pastors in the following year. In 1697 he became the first professor of ecclesiastical history at Geneva, and in 1705 professor of theology, both which offices he held during the remainder of his life. He was not less distinguished for his liberality than for his learning and abilities; and besides engaging with Wake, archbishop of Canterbury, and some German divines, in schemes for a reunion among Protestants, he assisted in obtaining a dispensation from signing the formula of faith called Consensus, to which the Genevan clergy had been subjected. Among his principal works are "*Pyrrhonismus Pontificius,*" 1692, designed as an antidote to the celebrated Bossuet's *Variations des Eglises Protestantes*; "*Nubes Testium pro moderato et pacifico in Rebus Theologicis Judicio Præmissa est Disquisitio de Articulis fundamentalibus,*" 1719, 4to; "*Historiæ Ecclesiasticæ Compendium, a Ch. N. usque ad an. 1700,*" 1734, 8vo; *Commentaries on the Epistles to the Thessalonians, and the Epistle to the Romans*; *Sermons*; and numerous academical *Discourses and Dissertations*. Professor Turretini died in 1737. His works were published collectively at Leeuwarden, 1775, 3 vols. 4to.—*Aikin's Gen. Biog. Biog. Univ.*

TURSELIN (HORACE) a learned and indefatigable Italian jesuit, was born at Rome in 1545. He entered into the society of Jesus in 1562, and was for twenty years professor of rhetoric in that capital. He was also successively rector of the seminary at Rome, and of the colleges of Florence and Loretto. He died in 1599. Turselin was the author of several works written in elegant Latin, the principal of which are "*De Vita Francisci Xavierii,*" 1594, often reprinted and translated into French and Italian; "*Historia Lauretana,*" or History of the House of Loretto, also often reprinted, and probably edifying to good Catholics, as it was translated into French, Italian, and Spanish; "*De Particulis Latine Orationis,*" a treatise in great esteem; and "*Epitome Historiarum,*" an abridgment of universal history, 1598; a French translation of the latter work, which has little merit beyond its style, by the abbé Lagneau, is enriched with useful and copious notes.—*Tiraboschi. Nouv. Dict. Hist.*

TUSSER (THOMAS) an English georgical poet of the sixteenth century, was born about the year 1515 at Rivenhall near Witham in Essex. At an early age he was sent, much against his will, to a music school, and was first a chorister in the collegiate chapel of the castle of Wallingford, and afterwards at St Paul's cathedral, where he attained a considerable proficiency in music under the able organist John Redford. From St Paul's he was sent to Eton, and thence to King's college, Cambridge. He however soon quitted the

university, and was employed most likely in a musical capacity at court, through the patronage of lord Paget. After a residence in London of ten years he married, and took a farm in Suffolk, where he composed a book on husbandry, which he published in 1557, and dedicated to his patron. He subsequently endured considerable vicissitudes, sometimes as a chorister and at others as a farmer, until his death in London, about 1580. Tusser's "Five Hundred Points of Good Husbandry," which is an amplification of the work already mentioned, has induced Gooze and others to rank him with Columella and Palladius, but Scillingfleet regards him as exhibiting more resemblance to Hesiod. The best editions are those of 1580 and 1585, which are very rare; but in 1812 Dr Mavor published a new edition, with copious notes, a biographical sketch, and a glossary.—*Life by Mavor. Censura Litteraria.*

TUTCHIN (JOHN) a political writer about the period of the Revolution, distinguished for the virulence of his style and the boldness of his opposition to the ruling powers both in church and state. At the time of Monmouth's rebellion he published a pamphlet in his favour, and being arrested among his partizans, he was tried before judge Jefferies, who sentenced him to be whipped through all the principal market towns in the west of England. He petitioned the king that this sentence might be commuted for hanging; and being seized with some dangerous disease in prison, he was at length pardoned. On the death of James II he wrote an invective against the unfortunate monarch, which subjected the author to the merited contempt of all parties. He commenced a paper called "The Observer," on the 1st of April, 1702; and he was also the author of poetry, and a play called "The Unfortunate Shepherd," 1685, 8vo. He died in the Mint (prison) Southwark, September 23, 1707. Pope has noted Tutchin in his Dunciad; and some particulars relating to him are preserved in the works of Swift, and in Bowles's edition of Pope.—*Bing. Dram.*

TWEDDELL (JOHN) an accomplished scholar and traveller, was born June 1, 1769, at Threepwood, near Hexham in Northumberland, where his father, Francis Tweddell, esq. acted as a magistrate. He was educated in the first instance at Harforth school in Yorkshire, next under Dr Parr, and lastly at Trinity college, Cambridge, where he obtained a fellowship in 1792. He distinguished himself very much at the university for his compositions, which repeatedly gained prizes, and were published by him in 1794, under the title of "Prolusiones Juveniles." On quitting the university he became a student in the Middle Temple, but subsequently resolved to travel with a view to accomplish himself for diplomacy. After remaining abroad nearly four years, having explored Switzerland, the north of Europe, and various parts of the East, he died prematurely at Athens on the 25th of July 1799. As it was known that he had amassed large materials with a view to

publication, the learned world anxiously expected the fruits of his labours; but unfortunately, although his manuscripts were officially placed in the custody of the British ambassador at Constantinople, none of them, notwithstanding their earnest enquiries, have ever come to the hands of his anxious friends. A volume of his remains, consisting of a selection from his letters, a republication of his "Prolusiones Juveniles," and a memoir, appeared in 1815, edited by his brother, the rev. Robert Tweddell.—*Memoir prefixed to Remains. British Critic*, vol. v. N.S.

TWELLS (LEONARD) a learned divine, was educated at Jesus college, Cambridge, where he proceeded B.A. in 1704. He became vicar of St Mary, Marlborough, where he wrote "A Critical Examination of the late new Text and Version of the Testament in Greek and English," the object of which was to prove the incorrectness of the version alluded to. For this publication he was honoured by the university of Oxford with the degree of M.A. In 1737 he was presented to the rectory of St Matthew, Friday-street, and St Peter's, Cheap, in London, and also was made a prebendary of St Paul's, and chosen lecturer of St Dunstan's in the West. His other works are "A Vindication of the Gospel of St Matthew," 8vo; "An Answer to the Enquiry into the Meaning of the Demoniacs;" and a "Life of Dr Pocock."—*Nichols's Lit. Anec.*

TWISS (RICHARD) an English tourist, who died at an advanced age in 1821. Being a man of fortune, he thought proper to indulge his curiosity by travelling, and after taking a journey to Scotland, he went to the continent, and successively visited Holland, the Netherlands, France, Switzerland, Italy, Germany, and Bohemia. He spent several years in travelling through these countries, and returned to England in 1770. Two years after he took a voyage to Portugal and Spain, and in 1775 he went to Ireland. At the period of the Revolution he revisited France, and returning home he devoted the latter part of his life to literature and the arts, particularly music. His works are "Travels through Spain and Portugal, in 1772 and 1773," 1775, 4to, translated into French and German; "A Tour in Ireland in 1775," 1776, 8vo, in which the freedom of the author's animadversions provoked the wrath of the Hibernians, and occasioned the publication of "An Heroic Epistle from Donna Teresa Pinna y Ruiz of Murcia, to R. Twiss, with Notes by Himself," Dublin, 1776, 8vo; "Anecdotes of the Game of Chess;" "A Trip to Paris in July and August, 1792," 1793, 8vo; and "Miscellanies," 1805, 2 vols. 8vo.—*Gent. Mag. Bing. Univ.*

TWYNE (JOHN) one of a family of Oxford antiquaries, was the son of sir Brian Twyne, of Long Parish, Hants, knight, and was born at Bolingdon, in the same county. He was educated at New Inn-hall, Oxford, and after he left the university, was appointed master of the free grammar-school at Canterbury, and in 1553 became mayor of that an-

cient city. He acquired property, and was held in great esteem as an antiquary, but Tanner has much lowered his character by producing a record dated 1560, which shows that he was formally ordered to abstain from riot and drunkenness. He died at an advanced age, November 24, 1581, leaving a posthumous work, which appeared in 1590, under the title "De Rebus Albioniciis, Britanniciis atque Angliæ Commentariorum, Libri duo," 8vo. His MSS. were given by his grandson to the library of Corpus Christi college, Oxford.—The aforesaid grandson, BRYAN TWYNE, was born in 1579, and became a scholar of Corpus Christi college, where he obtained a fellowship, and was appointed Greek reader. He afterwards was presented to the rectory of Rye in Sussex, and made keeper of the archives at Oxford, where he died in 1644. He was author of "Antiquitatis Academia Oxoniensis Apologia," 4to, a very credulous performance. He also left large collections relative to the history of the university.—*Athen. Oxon.*

TWYSDEN (sir ROGER) the second baronet of the family, of Roydon-hall, East Peckham, Kent, was born in 1597. He received a learned education, and becoming an excellent antiquary, assisted Philpot in his Survey of Kent. He suffered severely for his attachment to the royal cause, for which he endured a personal confinement of seven years, besides being under the necessity of compounding for his estate. The appearance of the "Decem Scriptores," with other collections, was chiefly owing to his endeavours. He also wrote a book entitled "The Historical Defence of the Church of England." He died in 1672.—*Collins's Baronetage.*

TYCHSEN (OLAVUS) professor of the Oriental tongues at Rostock, was born in the duchy of Sleswick in 1734. He studied at the gymnasium of Altona, where he not only acquired a knowledge of classical learning, but also became acquainted with the Hebrew and Arabic languages, previously to his removal to the university of Halle. There he added to his acquirements a knowledge of the English, the Hindustani and Tamul languages, which he was taught by the ex-missionary B. Schulz; and the Ethiopic, which he studied under the professor J. H. Michaelis. Thus qualified he was employed by a society for the conversion of the Jews and Mahometans, and in 1759 and 1760, he traversed various parts of the north of Germany, Prussia, Denmark, and Saxony, on this mission. Soon after he was appointed adjunct at the newly founded university of Butzow, where he obtained the professorship of the Oriental languages in 1763. This establishment being suppressed, and reunited to the university of Rostock in 1789, the library which had been founded by professor Tychsen, and of which he had been keeper since 1770, was removed to Rostock, and still committed to his care. He was subsequently chosen a member of several learned societies; and his death took place December 30, 1815. His works are

numerous, including "Tentamen de variis Codicum Hebraicorum Vet. Test. MSS. Generibus," 1772, 8vo; "Introductio in Rem Numariam Muhammedanorum," 1794, 8vo, with a Supplement; "Physiologia Syrus, sive Historia Animalium XXXII, in S. S. memoratorum, Syriacæ," 1795, 8vo; tracts on Samaritan coins; on the nail-headed characters of Persæpolis; and editions in Arabic and Latin of Makrizi's works on the money and on the weights and measures of the Mahometans.—*Biog. Univ.*

TYE (CHRISTOPHER) an eminent church composer, was preceptor in music to prince Edward, afterwards Edward VI. He was admitted a doctor of music at Cambridge in 1545, and was incorporated a member of the university of Oxford in 1548. In the reign of Elizabeth he was organist of the chapel royal, where, according to Anthony Wood, he made so free with the queen, as, in answer to a message that he was out of tune, to observe that her own ears were in fault. According to the same writer he did much to restore church music after it had been nearly ruined by the dissolution of the monasteries; and Dr Burney mentions with great applause his clear and masterly manner of composing for the church service in Latin. In the reign of Edward he translated the first fourteen chapters of the Acts into metre, and set them to music, the poetry, which closely resembled that of Sternhold, being rendered still more ridiculous by the elaborate nature of the music, which consisted of fugues and canons of the most complicated and artificial kind. He died about 1590.—*Burney's Hist. of Music. Hawkins's Hist. of Music.*

TYERS (THOMAS) a miscellaneous writer, was one of the two sons of Jonathan Tyers, the original embellisher of Vauxhall gardens. He was born in 1726, and being intended for one of the learned professions, was sent very early to Exeter college, Oxford, where he graduated MA. in his nineteenth year. In 1753 he was admitted a student of the Inner Temple, but never followed the legal profession, possessing a handsome fortune, and a share in Vauxhall gardens, which enabled him to live at his ease. He was a great lover of literature, and intimate with Dr Johnson and most of the eminent men of the day, but he published only "Rhapsodies on Pope and Addison;" "Political Conferences;" and certain pastoral and lyrical pieces for Vauxhall. He died February 1, 1787, in his sixty-first year.—*Nichols's Lit. Anec.*

TYNDALE (WILLIAM) also named Hit-chins, a learned martyr to the Reformation, was born in the year 1500, somewhere near the borders of Wales. Of his family there is no account, but he was learnedly educated, and placed at Magdalen college, Oxford, where he imbibed the doctrines of Luther. Bearing an excellent character for morals and diligence, he was admitted a canon of Wolsey's new college of Christchurch, but his principles becoming known, he was subsequently ejected. He then withdrew to Cambridge, where he

took a degree, and soon after went to reside as tutor in the family of sir John Welch in Gloucestershire. While in this capacity he translated Erasmus's "Enchiridion Militie Christiani" into English; but in consequence of his openness as to his opinions, articles were preferred against him before the chancellor of the diocese, and after receiving a reprimand he came to London, and preached at St Dunstan's in the West. Having obtained the patronage of sir Henry Guildford, to whom he presented a translation of an oration of Isocrates, that courtier recommended him to Tunstall, bishop of Durham, which recommendation was not however attended to, and he accepted of a retreat in the house of an alderman of London, where he assiduously employed himself in preparing an English version of the New Testament. England not being a place where such a work could with safety be effected, he was enabled, by a small annuity, to proceed to Saxony, where he was introduced to Luther and other reformers. He thence proceeded to Antwerp, where, with the assistance of John Fry, and one Roze, a friar, he completed his work, which was printed in that city in 1526, 8vo, without a name. Of the fifteen hundred copies printed, the greater part were sent to England, which produced great alarm among the church dignitaries, and the prelates Warham and Tunstall collected all they could seize or purchase, and committed them to the flames. By this means Tyndale was enabled to print another edition, which was circulated very widely; and in conjunction with Miles Coverdale he commenced translating the Pentateuch, and subsequently the prophecy of Jonas, which formed the whole of his labours on the Scriptures, although others have been ascribed to him. He then returned to Antwerp, where he took up his residence with an English merchant named Pointz. The detestable spirit of the times would not however leave a heretic unmolested even in another country, and Henry VIII and his slavish council employed a wretch of the name of Phillippe to betray Tyndale to the emperor's procurator, who obtained possession of his person, and in 1536 he was brought to trial upon the emperor's decree, at Augsburg, where he was condemned to the stake, which sentence he quietly endured, being first strangled and then burnt. His last words were "Lord, open the king of England's eyes!" Thus perished a man of the most blameless life and manners, simply for facilitating to Christians the perusal of a book which is the foundation of their religion. Besides his translations he wrote other pieces, which were collected and printed with those of Fryth and Barnes's work, folio, 1572. Dr Geddes thinks very highly of Tyndale's translation of the Scripture, although not a perfect one, and considers that in point of perspicuity and noble simplicity of idiom, it has never been surpassed.—*Biog. Brit.*

TYRANNIO, an eminent Greek grammarian, was a native of Amisæa in the kingdom of Pontus. When Lucullus defeated Mithri-

dates and subdued his kingdom, BC. 70, Tyrannio became a captive, but was released by Murena. He was taken to Rome, where he set up a school, and rendered himself eminent among the friends of literature. He was very serviceable to Cicero in putting his library in order, and was the instructor of that great orator's son and nephew. He became rich, and collected a library of thirty thousand volumes. Literature is indebted to Tyrannio for the preservation of many of the writings of Aristotle and Theophrastus, which, after several changes, had fallen into the hands of Sylla, from whose library he procured them, and afterwards imparted them to Andronicus of Rhodes. Tyrannio was an author, but none of his works have reached modern times.—*Moreri.*

TYRRELL (JAMES) historian and political writer, was the eldest son of sir Timothy Tyrrell, knight, of Shotover near Oxford, by Elizabeth, the only daughter of archbishop Usher. He was born in London in 1642, and in 1657, was admitted of Queen's college, Oxford. On quitting the university he entered himself a student in the Inner Temple; and in 1666 was called to the bar, although he never practised professionally, but lived studiously as a private gentleman on his estate in Buckinghamshire. In 1681 he published an answer to the patriarchal scheme of sir Robert Filmer, under the title of "Patriarcha non Monarcha, or the Patriarch unmasked." He was struck out of the commission of the peace by James II, for refusing to aid in the measures in favour of the Catholic religion. He heartily concurred in the Revolution, in support of which he published fourteen Political Dialogues, published from 1692 to 1695, which he subsequently collected into a folio publication, which he called "Bibliotheca Politica." He also drew up an abridgment of Dr Cumberland's "De Legibus Nature," which he entitled "A Brief Disquisition of the Law of Nature, according to the Principles laid down in the Rev. Dr Cumberland's Latin Treatise on that subject." The bishop's approbation was prefixed, and a second edition, corrected and enlarged, appeared in 1701. Mr Tyrrell's principal performance, however, was his "General History of England," which he intended to bring down to the Revolution, but only completed to the conclusion of that of Richard II, in 5 vols. folio, 1700—1704. The chief merit of this work consists in the copious translations from the old English historians and their methodical arrangement, so as to afford comparative reviews of their different accounts. Hence, although not so agreeable to the reader as histories otherwise composed, it possesses an intrinsic value; several mistakes, however, have been detected in these translations. In other respects its political purpose appears to have been to confute the leading doctrine in that of Dr Brady, who contends that all the liberties of the people of England were concessions from their kings, and that the representation of the Commons did not exist until the 49th of Henry III. N:

Tyrrel died in 1718 in his seventy-sixth year.—*Biog. Brit. Athen. Oxon.* vol. ii.

TYRTÆUS, an ancient Greek poet, celebrated for his martial strains, is said to have been a native of Miletus, who settled at Athens in the capacity of poet, musician, and school-master. He is described as being short, lame, and blind of one eye; but he possessed a manly and elevated soul. In the war between the Lacedæmonians and Messenians, the former were promised victory by the oracle, if they obtained a general from Athens. The Athenians, it is supposed in derision, sent them Tyrtæus, who so animated the Spartans by his spirited strains, and aided them so effectually by his advice, that the Messenians were reduced to subjection. For these services the Spartans treated him with great respect, and granted him the rights of citizenship. The war poems of Tyrtæus must have been in high repute, as Horace joins him with Homer in that department. He also composed "Moral Precepts," and a work "On the Policy of the Lacedæmonians." Some fragments of his war poems remain, which are characterised by their masculine simplicity. They have been published with the other minor Greek poets.—*Vossii Poet. Græc. Mœneri. Univ. Hist.*

TYRWITT (THOMAS) a profound scholar and distinguished critic, who was the son of the rector of St James's, Westminster, and was born in 1730. He was educated at Eton school and Queen's college, Oxford, where he took his degrees, and in 1755 he obtained a fellowship at Merton. He was acquainted with almost all the European languages, as well as those of classical antiquity. In 1756 he was appointed under-secretary in the war department; and in 1762 he succeeded Mr Dyson as clerk of the house of Commons. This office he resigned in 1768, and the remainder of his life was devoted to study. He became a fellow of the Royal and Antiquarian Societies, and also one of the curators of the British Museum. His death took place August 15, 1786. Mr Tyrwhitt published a valuable edition of "The Canterbury Tales of Chaucer, with a Glossary," 1778, 5 vols. 8vo, reprinted, Oxford, 1798, 2 vols. 4to; "Dissertatio de Babrio (Gabrio) Fabularum Æsopæarum Scriptore; nescitur Fabulæ quædam Æsopææ numquam antehac editæ, ex Cod. MS. Bodleiano; accedit Babrii (Gabriæ) Fragmenta," Lond. 1776, 8vo; "Auctarium Dissertationis de Babrio adiecit Tb. Tyrwhitt sua Orpheï de Lapidibus Edit." 1781, 8vo; Rowley's (Chatterton's) Poems, with a Preface and Glossary, 8vo; "Vindication of the Appendix to the Poems called Rowley's Poems, in reply to the Answers of the Dean of Exeter, Jacob Bryant, Esq. and a third anonymous Writer, with some further Observations on these Poems, and an examination of the Evidence which has been produced in support of their Authenticity;" besides Poems in English and Latin, which were his earliest productions. Mr Tyrwhitt likewise left materials for a new edition of the Poetics of Aristotle, which was printed at Oxford in 1794, 4to and 8vo, under the superin-

tendence of Dr Burgess, now bishop of Salisbury, and Dr Randolph, afterwards bishop of London.—*Aikin's Gen. Biog.*

TYSON (EDWARD) an able physician, was a native of Somersetshire, where he was born in 1649. He was admitted a commoner of Magdalen-hall, Oxford, in 1667; and after graduating M.A. he embraced the profession of physician. He was early made a member of the Royal Society, and proceeded M.D. at Cambridge in 1680. He was a very skilful anatomist and ingenious writer, as appears by his essays in the Philosophical Transactions. He published "The Anatomy of a Porpoise, dissected at Gresham College," London, 1680; "The Anatomy of a Pigmy compared with that of a Monkey, an Ape, and a Man," London, 4to; and a "Philosophical Essay on the Pigmies of the Ancients." He was physician to the hospitals of Bridewell and Bethlehem at the time of his death, which took place August 1, 1708.—*Athen. Oxon.*

TYSSENS (PETER) a Flemish painter, born at Antwerp in 1625, whose excellence in historical composition has procured him a reputation almost equal to that of Rubens. The love of gain, however, induced him to forsake history for portrait-painting; but he applied himself again to the former with great success. He painted the Assumption, for the altar of the Virgin, in the church of St James at Antwerp, and many pictures for different churches in Flanders, which have been much and deservedly admired. He displays boldness of conception, freedom of colouring, and accuracy of execution, being well acquainted with architecture and perspective. In 1661 he was director of the Academy of Painting at Antwerp; and he died in 1692.—Tyskens (—) born at Antwerp about 1660, and supposed to have been a son of the preceding, became eminent as a painter of birds. He travelled in Italy, Germany, and Holland, and at length settled in England, where he died.—Tyskens (AUGUSTIN) brother of the foregoing, was born about 1659. He was a landscape painter, and executed pieces with cattle in the style of Berghem; and in 1691 he was director of the academy of Antwerp.—*Biog. Univ.*

TYTLER (HENRY WILLIAM) a Scottish physician, who died at Edinburgh, August 24, 1808, at the age of fifty-six. He distinguished himself principally as a poetical translator, and published the Hymns of Callimachus, from the Greek; the Coma Berenices, from the Latin of Catullus; the Poem on the Punic War, from the Latin of Silius Italicus; Pædoprophia, or the Art of Nursing and Rearing Children, a poem in three books, from the Latin of St Marthe, with medical and historical notes, and the life of the author, 8vo; besides "The Voyage Home from the Cape of Good Hope, with other Poems relating to the Cape, and Notes," 1804, 4to.—*Biog. Univ.*

TYTLER, MA. (JAMES) a person of eminent abilities and of a singular character, born at Brechin in the county of Forfar in Scotland, in 1747. He first made himself

known in the literary world by the publication of "Essays on the most important Subjects of Natural and Revealed Religion," Edinburgh, 1772, 8vo. This work was printed by the author himself, at a press which he had erected for the purpose within the privileged precincts of Holyrood house, where he had sought refuge from his creditors. It had also the peculiarity of being printed as the ideas arose in the mind of the author, who had no manuscript or notes whatever. He afterwards produced, in the same manner, "A Letter to Mr. J. Barclay, on the Doctrine of Assurance." In 1780 he commenced the publication of a periodical paper, called "The Weekly Mirror;" and in 1786 he published at Glasgow "The Observer," another hebdomadal paper, comprehending a series of essays, extending to twenty-six numbers, folio. Among his many other productions may be mentioned "A System of Geography," 1788, 8vo; "A History of Edinburgh," 12mo; "A Geographical, Historical, and Commercial Grammar," 2 vols. 8vo; "Remarks on Pinkerton's Introduction to the History of Scotland," 8vo; a Poetical Translation of Virgil's Eclogues, 4to, "The Historical Register," a periodical work; "The Gentleman and Lady's Magazine;" and "The Weekly Review." He is also said to have been the principal conductor of the second edition of the *Encyclopædia Britannica*, in which he wrote many of the scientific treatises, and almost all the minor articles. He had also (according to Dr Watt) the sole merit of projecting and executing the original *Encyclopædia*, published in 3 vols. 4to, by C. M'Farquhar. Numerous articles of his composition are likewise scattered in various periodical publications; and he also wrote several poetical pieces, among which is a ballad entitled "The Pleasures of the Abbey," (Holyrood-house.) This eccentric and laborious, but apparently imprudent and unfortunate retainer of literature, died in America in 1805.—*Watt's Bibl. Brit.*

TYTLER (WILLIAM) an historical and miscellaneous writer, born at Edinburgh in 1711. He received his education at the high school and the university of that city, and adopting the legal profession he became a writer to the signet, or solicitor, which profession he exercised till his death, which took place in 1792. He was an active member and one of the vice presidents of the Edinburgh Antiquarian Society, to whose Transactions he was a contributor; but he is chiefly known as the author of "A Historical and Critical Inquiry into the Evidence produced against Mary Queen of Scots, and an Examination of the Histories of Dr Robertson and Mr Hume with respect to

that Evidence," 1759, 1767, 8vo, 4th edit. Lond. 1790, 2 vols. 8vo, with large additions. Mr Tytler also published "The Poetical Remains of James I of Scotland, consisting of the King's Quair, in six Cantos, and Christ's Kirk on the Green, to which is prefixed a Dissertation on the Life and Writings of King James," Edinb. 1783, 8vo; and a "Dissertation on Scottish Music." A memoir of W. Tytler, by H. Mackenzie, may be found in the Transactions of the Royal Society of Edinburgh, vol. iv.—TYTLER, (ALEXANDER FRASER) lord Woodhouselee, one of the senators of the college of justice in Scotland, son of the preceding, was born at Edinburgh in 1747, and died in 1813. He published "The Decisions of the Court of Session, from its first Institution to the present Time, abridged and digested under proper Heads, in the form of a Dictionary," 1778, folio, 1797, 2 vols. folio. Having been elected professor of history at Edinburgh, he printed in 1783, "Outlines of a Course of Lectures on Universal History," 8vo, which was followed by his most popular work, "Elements of General History, ancient and modern," 2 vols. 8vo. Among the other works of lord Woodhouselee are "Memoirs of the Life and Writings of the Hon. H. Home, Lord Kames, containing Sketches of the Progress of Literature and general Improvement in Scotland in the Eighteenth Century," 1807, 2 vols. 4to, with a Supplement, 1810, 4to; "An Historical and Critical Essay on the Life of Petrarch, with a Translation of a few of his Sonnets," Lond. 1810, 8vo; and "An Essay on the Principles of Translation," 8vo. Memoirs of his life, by the rev. A. Alison, were published in the Transactions of the Royal Society of Edinburgh, vol. viii. part 2.—*Chalmers's Biog. Dict.* *Watts's Bibl. Brit.*

TZETZES (JOHN) a Greek poet and grammarian of the twelfth century, was famous in his time for a variety of acquisitions and a prodigious memory. He was the author of "Allegories on Homer," which he dedicated to Irene, wife of the emperor Michael Comnenus; and also of "Miscellaneous Histories," in thirteen ciliads, composed in the *lax* measure called political or popular verse. Some of his poetry, which is at once insipid and arrogant, is contained in a collection, printed at Rome by Arsenius. He was more respectable as a critic, and gave useful scholia on Hesiod. His "Allegories" were published by Morel, Paris, 8vo, 1616, and his Histories or Ciliads at Basle, folio, 1546.—ISAAC TZETZES, brother of the preceding, published learned commentaries on Lycophron, which are inserted in Potter's edition of that obscure ancient.—*Bailet. Moreri.*

UBALDINO (PETRUCCIO) a Florentine artist, eminent in the sixteenth century for the beauty and elegance of his illuminations on vellum. Arriving in this country, he derived great encouragement from Elizabeth, who then filled the English throne. One of the finest specimens of his art was preserved in the library at Gorbambury, consisting of a series of scriptural extracts executed for the lady Lumley. He is also known as an author, and his life of Charlemagne, which appeared in 1581, in one volume, quarto, is said to have been the first book printed in England, composed in the Italian language. His other works are a "Description of Scotland," folio, Antwerp, 1588; and "The Lives of illustrious Females of England and Scotland," 1591. The precise date of his decease is uncertain. Several of his performances are still to be seen in the national collection at the British Museum.—*Walpole's Anec.*

UDAL, the name of several learned and ingenious persons, of whom the first on record in point of time was **NICHOLAS UDAL**, head master of the grammar-school of Westminster. He was a native of the county of Hants, born soon after the commencement of the sixteenth century, and received a university education at Corpus Christi college, Oxford, of which foundation he afterwards became fellow. Having taken orders, he was preferred in succession to the livings of Braintree, Essex, and Calbourne, in the Isle of Wight, benefices which he held with the mastership of Eton till his reputation as a pedagogue procured his removal to Westminster. Mr Udal was an excellent classical scholar, and was the author of more than one dramatic production, composed, as was the fashion of his day, in the Latin tongue, and also of some books of instruction for youth. The latter are yet in existence, but the former have perished. As a schoolmaster he appears to have been the Busby of his day. The time of his decease is uncertain.—**JOHN UDAL**, a learned Orientalist and good Biblical scholar, is known as the author of "A Key to the Holy Tongue," being the first Hebrew grammar printed in England. He was a rigid precisian, and having suffered much persecution for his religious opinions, died at length in confinement in 1592.—**EPHRAIM UDAL**, son to the above-mentioned John, graduated at Emanuel college, Cambridge, in 1614, and obtained the living of St Augustine in the city of London, which was united after the great fire in 1666, to that of St Faith under St Paul's. He was the author of a "Treatise on Sacrilege," and was alike remarkable for the extent of his learning and the purity of his life and manners; but his attachment to the royal cause being equally conspicuous, he was ejected by the parliamentary party from his living. His death took place in 1647.—*Walker's Sufferings of the Clergy. Wood's Athen. Oxon.*

UDINA (GIOVANNI DA) an Italian painter, born in 1489. who was the disciple of Gior-

gione, and afterwards of Raphael. He studied the grotesque, and carried that branch of his art to great perfection. Raphael invited him to Rome, and employed him in ornamenting the Vatican. After the sack of Rome he visited various parts of Italy, where he left specimens of his talents, particularly in the palace Grimani, which he painted for his patron, the patriarch of Aquileia, in a manner which has excited general admiration. He also worked for the Medicis family at Florence, and returning to Rome, he died there in 1562.—*Biog. Univ.*

UFFEMBACH (ZACHARY CONRAD) a native of Frankfurt, born 1683, and educated at Rudelstadt, Strasburg, and Halle, in which latter university he graduated in civil law. He was the author of an "Historical Account of Germany during the Middle Ages;" "Selections, historical and literary;" and some autobiographical memoirs of himself. As a book-collector he was unrivalled in his day, and at his death, which took place at Frankfurt in 1734, left behind him one of the first private libraries in Europe.—*Chaufepie.*

UGHELLI (FERDINANDO) a Cistercian monk of the seventeenth century, distinguished for his learning, modesty, and other amiable qualities. He was a native of Florence, born 1595, and rose to several offices of honour and responsibility in his order. He is now principally remembered as the author of a history of the Papal States, first printed in 1662, in nine folio volumes, under the title of "Italia Sacra." This work was reprinted in 1772, with an additional volume. Ugheili died at Rome, abbot of the monastery of Trois Fontaines, in that capital, May 19, 1670.—*Tiraboschi.*

UULKENS (JAMES ALBERT) a Dutch divine and naturalist, born at Wierum, near Groningen, in 1772. He passed through his academical studies at Groningen with reputation, and in 1795 he took the degree of MD. On proceeding doctor in philosophy, he supported an ingenious thesis "On the Nature of the Atmosphere, and its Influence on the Vegetable Kingdom;" and he afterwards produced an "Elementary Treatise on Physics," for which he obtained the prize offered by a learned society. This work became very popular, and has been often printed. His "Discourse on the Perfections of the Creator considered in the Creature," 4 vols. 8vo, is another valuable piece, as also are his "Memoir on the Utility of Insects;" and his "Manual of Technology." In 1815 he was chosen to fill the newly established chair of rural economy at Groningen, and in 1819 he published a treatise on that subject. He died in 1825, having written several other works besides those which have been noticed.—*Biog. Univ.*

UITEMBOGAERT (JOHN) an Arminian pastor, a native of Utrecht, born in 1557. Having studied divinity at Geneva, under the celebrated Theodore Beza, he returned in 1583 to his native city, and there took charge of

the spiritual concerns of a congregation of re-moistrants, as the sect to which he belonged was then called in Holland. After a ministry of eight years at Utrecht, he removed to the Hague, where he passed the next twenty years of his life, and then accompanied the embassy from the States General to the court of Paris in quality of its chaplain. On his return to Holland he took a prominent part in the disputes then raging in the Low Countries between the Lutherans and Calvinists, and eventually found it advisable to retire from the hostility of the latter party, first to Antwerp, and eventually into Normandy. After a stay of some continuance in the capital of that province, during which the religious heats of the opposing sects in his own country had in a degree subsided, he returned once more to La Hague, and died there in the year 1644. He was the intimate friend of Episcopius, whom he is considered to have exceeded in literary acquirements, as much as he fell short of him in genius. An "Ecclesiastical History," in folio, written with much elegance and purity of style, and an autobiographical sketch of his own life, are all of his writings that have appeared.—*Aikin's G. Biog.*

ULLOA (don ANTONIO de) a celebrated Spanish mathematician and commander of the order of St Jago, was born at Seville, January 12, 1716. He was brought up in the royal marines, in which he obtained the rank of lieutenant-general. Having much distinguished himself as an engineer and man of science, he was in 1735 joined in a commission with don George Juan and others to measure a degree of the meridian in Peru. He remained nearly ten years in South America on this occasion, and on his return to Europe in 1745 he was intercepted, and carried into an English port. Here his talents and character recommended him to Martin Folkes, then president of the Royal Society, of which he was elected a member in the same year. On his return to Spain he published his voyage to South America, which was soon translated into German, French, and English; but the latter version, which appeared in 1758, in 2 vols. 8vo, is miserably garbled and inaccurate. He was afterwards appointed by Ferdinand III to travel over Europe, to collect useful information in regard to improvements in the arts, sciences, and agriculture, the result of which was very useful to his country. He became the chief promoter of the royal woollen manufactories; newly organised the colleges of history and surgery; superintended and completed the basins at Ferrol and Cartagena, and gave new activity to the celebrated quicksilver-mines of Almadan. In 1766 he was made governor of Louisiana, which had been ceded to Spain. In 1772 he published another important work, entitled "Entretenimientos Physico-Historicos sobre la America Meridionale, &c." 4to, which contains some ingenious disquisitions on the peopling of America. This eminent Spaniard, who contributed several scientific papers to the Royal Society, died in the Isle of Leon near Cadix, on the 5th of July, 1795.—He must not

Bios. Dict.—Vol. III.

be confounded with don BERNARD DE ULLOA, a near relation, who published in 1740 an interesting work "On the Revival of the Manufactures and Commerce of Spain."—*Nouv. Dict. Hist. Ulloa's Voyage.*

ULLOA Y PEREIRA (Louis de) a Spanish poet of the age of Philip IV, was born at Toro in the kingdom of Leon; and having the good fortune to secure the friendship of the count-duke d'Olivarez, was raised by the patronage of that powerful minister from a comparatively humble rank in life to be governor of his native province. His works, which consist principally of miscellaneous poetry, exhibit a pleasant vein of humour, while some of a graver cast are by no means deficient in elegance or pathos. There is an edition of them in one quarto volume, printed at Madrid in 1674. His death took place in 1660.—*Antonio Bibl. Hispan.*

ULPHILAS, a Gothic bishop, and the first translator of a part of the Bible into that language, flourished in the fourth century, and obtained leave of the emperor Valens that the Goths should reside in Thrace, on condition that he himself embraced the Arian faith. Little more is known of him, than that he translated the Evangelists, and perhaps some other books of the New Testament into the Gothic language, which he achieved by inventing a new alphabet of twenty-six letters. His translation is now in the library at Upsal; and there have been three editions of it, the best of which is that of Mr Lye, printed at Oxford in 1750. Much controversy has taken place with regard to the authenticity and antiquity of this version, which has been increased by the discovery of another written fragment of the translation of Ulphilas, discovered in the library at Wolfenbuttel, containing a portion of the Epistle to the Romans. The latter has been published by Knittel, archdeacon of Wolfenbuttel, who thinks that Ulphilas translated the whole Bible.—*Nouv. Dict. Hist. Saxii Onom.*

ULPIANUS (DOMITIUS) an eminent lawyer, the tutor, friend, and minister of the emperor Alexander Severus. When Alexander became emperor, one of his first acts was to recal Ulpian, who had been exiled by Helio-gabalus, and to place him at the head of his council of state. He was also made secretary of state, and ultimately pretorian prefect. He lived in great repute for his wise and virtuous administration, until the emperor, probably at his suggestion, undertook the dangerous task of reforming the army. The discontent of the soldiery broke out into a mutiny, and Ulpian, pursued by a body of them, was massacred in the presence of the emperor and his mother, in the year 228. Ulpian has obtained the praise of all the heathens, but the Christians accuse him of a determined enmity to their sect, which he carried so far as to collect all the edicts and decrees of the preceding sovereigns against them. There are remaining or Ulpian twenty-nine titles or fragments, which are inserted in some of the editions of the civil law.—*Crenier. Gibbon.*

ULUGH-BEIGH or OLEG BEK, a Tartar

prince, celebrated as an astronomer in the fifteenth century. He was the son of the sultan Shah Rohk, and grandson of Timur Bek, and his birth took place in 1393. His proper name was Mohammed Taragai, that by which he is usually known being an epithet, signifying Great Lord. He entered on the government during the life of his father in 1407, and conducted himself so well as to acquire general esteem. He formed a seminary for the learned at Samarcand; and directed much of his attention to mathematics and astronomy, having constructed an observatory, and invited men of science to his capital, to assist in his observations. After reigning forty years, he was put to death by one of his sons, who had rebelled against him. To this prince science is indebted for a series of observations on the fixed stars, the results of which are given in the "*Tabulæ Longitudinum et Latitudinum Stellarum Fixarum*," published by Dr Thomas Hyde, Oxford, 1665, 4to. The works of Ulugh Beigh on Chronology, Geography, and Astronomy were also previously published in Latin, by John Greaves, MA.—*Moreri. Aikin's Gen. Biog.*

UNGER (JOHN FREDERICK) private secretary to the duke of Brunswick, was born in 1716, and died at Brunswick in 1781. He published a tract "On the Nature of the Electric Fluid," which was crowned by the Academy of Sciences at Berlin in 1745; and a work "On the Price of Corn, on its Sale, on its Variations, and on the Influence which it has on the most important Affairs of Human Life," Gottingen, 1752. He invented in 1749 a self-acting machine for noting down any tune as it is played on the harpsichord; and an artist of Berlin executed this piece of mechanism, of which a description was inserted in the Memoirs of the Academy of Berlin for 1771; and the author himself published, at Brunswick, in 1774, a "Circumstantial Description of his Invention, and of the Manner in which he discovered it," 4to.—*Biog. Univ.*

UNZER (JOHN AUGUSTUS) a German physician and copious writer on medicine and physiology. He was born at Halle, in the duchy of Magdeburg, in 1727, and after having been engaged in professional practice at his native place and at Hamburg, he established himself at Altona, where he arrived at extraordinary reputation. He died April 2, 1799. Kuttner, in his "Characters of the German Poets and literary Men," says, "Unzer united to experience the most profound knowledge of medicine. He was the writer of the nation and of mankind. Like the English Spectator, he knew how to please, to attach, and to make a deep impression, in treating the driest and most abstruse subjects. In his writings he endeavoured to excite the attention of his readers to their health, and warn them against the dangers of quackery. And he attained his purpose." Among his works are "A new Doctrine concerning the Movements of the Soul and of the Imagination," Halle, 1746, 8vo; "Thoughts on Sleep and Dreams," 8vo; "Philosophical Medita-

tions on the Human Body," 1750, 8vo; "The Physician, or Journal of Medicine," published at Hamburg, from 1759 to 1764, 8vo; "A Collection of Writings and Dissertations on Philosophy and Medicine," 1768, 3 vols. 8vo; "On the Sensitive Faculties of animated Bodies," Lunebourg, 1768, 8vo; "A Manual of Medicine," Hamb. 1770, 2 vols. 8vo; "The Physiology of Animal Nature in living Bodies," Leipsic, 1771, 8vo; and "Physiological Researches relative to the Criticisms on the Physiology of Unzer," 1773, 8vo; besides publications on contagious diseases.—UNZER (JANE CHARLOTTE) wife of the preceding, was an honorary member of learned societies at London, Gottingen, and Helmstadt; and she published poetry, which in 1753 obtained a prize offered by the university of Helmstadt. She died January 29, 1782. Besides two volumes of poems, she published "Principles of Conduct and of Wisdom for Women," 8vo.—*Biog. Univ.*

UPTON (JAMES) the name of two English divines, father and son, both eminent for learning and ability in the last century. The elder, a native of Winslow, in the palatinate of Chester, was born in 1670, and educated at Eton, whence he removed on the foundation to a fellowship at King's college, Cambridge. Having taken orders, he accepted the appointment of head-master to the grammar-school at Taunton, and was presented in succession to the livings of Brompton and Mount Silver, both in Somersetshire. He was the author of several useful publications, calculated for the instruction of youth in classical rudiments, such as "Novus Historiarum et Fabellarum Delectus," &c. and new editions of Roger Ascham's "Schoolmaster," with a commentary, 8vo, 1711; "Aristotle's Art of Poetry," and "Dionysius of Halicarnassus on Rhetoric." His death took place in 1749.—His son, born in 1707, was educated at Oxford, and obtained a fellowship at Exeter-college, in that university. He was the author of a commentary on the writings of Shakspeare, 8vo, and superintended the publication of new editions of Spenser's works in two quarto volumes, and of Epictetus, 4to, 2 vols. Mr Upton held a prebendal stall in Rochester cathedral with the rectory of Rissington, Gloucestershire, and died in 1760.—*Memoirs by Toulmin.*

URBANI, the name of an eminent Italian composer, who lived a good deal in this country and in Ireland about the latter end of the last century. He was the author of two operas, "Farnace" and "Il Trionfo di Clelia," both of which met with considerable success at Dublin, where they were originally produced. He was also very happy in his arrangement of old Scottish melodies, several volumes of which he published at Edinburgh, and in some of his own airs, especially in that of "The Red Rose," printed in the Vocal Anthology, he imitated that style of music with great success. His death took place in the metropolis of the sister island in 1816.—*Biog. Dict. of Music.*

URBAN VIII. (pope) one of the Roman pontiffs who deserve notice on account of their learning and attention to literature, was born in Florence in 1568. His name was Maffei Barberini, being that of a very ancient and honourable family. His father dying in his infancy, he was entrusted to the care of an uncle, who was a prothonotary at the Roman court. The latter placed him under Tursellinus, in the Jesuits' college; and being subsequently sent to Pisa, he obtained the degree of doctor in his twentieth year. He then returned to Rome, where he inherited a handsome fortune from his uncle, and having obtained the patronage of cardinal Farnese, he gradually passed through all the grades of preferment, until he was created a cardinal in 1606 by pope Paul V. In 1623, while legate at Bologna, he was elected pope, in succession to Gregory XV, and took the name of Urban VIII. The public transactions of his pontificate fall within the province of history. The errors in his government, which were not very numerous or glaring for so zealous an advocate for the church, arose principally from his early attachment to the jesuits, and his nepotism, or regard to his relations, on whom he bestowed red hats and temporal employments with a very liberal hand. As a man of learning and a patron of learned men, he has merited considerable praise, but he was no antiquary, and destroyed some Roman antiquities, which the Goths had spared. It was this conduct that gave rise to the famous pasquinade "*Quod non fecerunt Barbari fecerunt Barberini.*" He wrote several Latin poems in an elegant style, of which an edition was published at Paris in 1642, and a very beautiful one at Oxford in 1726, 8vo, with a life and learned notes by Brown. His patronage of learned men was very liberal, and he received those of all nations with equal respect. Among the rest are to be included the two Scottish writers Dempster and Barclay, the latter of whom has celebrated him in his "*Argenis*," under the anagram of Iburranis. Urban published a remarkable edition of the Roman breviary, and several bulls and decrees, the most noticeable of which are those which abolish the order of female jesuits and certain festivals; and in compliance with the jesuits condemn the propositions of Jansenism. Among his foundations was the college "*De Propaganda Fide.*" This pontiff made no fewer than seventy-four cardinals. He died on July 29, 1644, and was buried in a stately tomb erected by his own orders by the celebrated Bernini.—*Life by Dr Brown. Bower's Hist. of the Popes.*

URBAN (FERDINAND DE ST) an eminent artist, born at Nanci in 1654. He studied painting when young, without a master; and in 1671 he went to Munich, and afterwards visited the most celebrated academies of Germany and Italy. Arriving at Bologna he was admitted a member of the academy; and the municipal council confided to him the direction of its cabinet of medals, and appointed him first engraver and first architect to the council. He had held these offices ten

years, when Innocent XI called him to Rome, and made him his first architect, and director of his cabinet of medals. He executed a great number of moulds or matrices of rare beauty, both for the current coin and for medals struck during the pontificates of Innocent XI, Alexander VIII, and Innocent XII. At length his sovereign Leopold I, duke of Lorraine, recalled St Urban to Nanci, where he held the same offices he had filled at Bologna and Rome. Besides the pieces he executed for the popes and the dukes of Lorraine, he produced a great many commemorating royal personages, Italian princes, cardinals, and illustrious men. In 1735 pope Clement XII sent him the insignia of the order of Christ. His death took place at Nanci, January 11, 1738.—*Biog. Univ.*

URCEUS CODRUS (ANTHONY) an Italian satirist and grammarian of the fifteenth century, born about the year 1446, at Rabiera, in the vicinity of Reggio. He lectured in the belles lettres at Forl with some reputation, till an accidental fire destroying his books, of which he was passionately fond, a temporary derangement ensued of a very formidable character. On his recovery he settled at Bologna, and became professor of eloquence and grammar in that university. There is an edition of his works, containing all his epigrams, satires, pastorals, and other poetical pieces, together with some orations and other prose compositions printed in quarto, 1515, and another which appeared at Basle in 1540. His death took place in the beginning of the year 1500.—*Tiraboschi.*

URFE, the name of two ingenious French writers, brothers, the elder of whom is better known by the family title of *compte de Lyon*. He was the author of several poetical compositions on miscellaneous subjects, and died in 1621.—His brother *HONORE D'URFZ*, survived him about four years. He was born in 1567 at Marseilles, where he received his education in the Jesuits' college. His writings consist chiefly of romances and other works of fiction, of which the principal is entitled "*L'Astrée*," 8vo. 4 vols. Much scandal was occasioned by his contracting a marriage with the divorced wife of his brother, a profligate woman, from whom he afterwards in turn separated. His death took place in 1625.—*Nouv. Dict. Hist.*

URQUHART or **URCHARD** (sir THOMAS) of Cromarty, a Scottish writer of the seventeenth century, who is known as the translator of Rabelais. He was a cavalier officer among the followers of Charles II, and was present at the battle of Worcester in 1651, relative to which he published a piece entitled "*The Discovery of a most rare Jewel, found in the Kennel of Worcester Streets the Day after the Fight, and six before the Autumnal Equinox, anno 1651, serving in this Place to frontal a Vindication of the Honour of Scotland from that Infamy whereunto the rigid Presbyterian Party of that Nation, out of their Covetousness and Ambition most dissembledly hath involved it.*" London, 1652, 8vo. He was also the author of a work on Trigonometry;

an "Introduction to the Universal Language, in six Books," 1653, 4to; and a Genealogy of the Urquhart Family, which, with other tracts of the author was printed at Edinburgh in 1782, 12mo.—*Watt's Bibl. Brit.*

URQUIJO (MARIANO LOUIS, chevalier de) a Spanish minister of state, born in Old Castille in 1768. He received a careful education, and he travelled when very young, and passed some years in England, where he acquired ideas of philosophy and independence, which had much influence on his character. Returning home, he published a translation of Voltaire's tragedy on the Death of Cæsar, with a "Discourse on the Origin and Present State of the Spanish Theatre, and its indispensable Reformation," which drew on him the notice of the inquisition. He was however employed under the secretary of state, count d'Aranda; and during the ministry of Godoy, then duke de la Alcudia, he became secretary of state for foreign affairs, through the influence of the queen. In this important office he acted on the most enlightened and liberal principles, and he succeeded in greatly curbing the power of the inquisition and of the clergy, by which means however he excited the displeasure of those who from principle or interest were attached to the ancient institutions of the kingdom. Having also offended the favourite Godoy, he was at length disgraced, and towards the close of 1800, confined in the citadel of Pampeluna. He languished there several years, in the most severe imprisonment, being debarred the use of paper, ink, books, and even light. Ferdinand VII, on his accession in 1808, declared the persecutions of Urquijo to be unjust, and he was set at liberty. He endeavoured to prevent that prince from taking his journey to Bayonne; and though repeatedly summoned by Buonaparte, Urquijo did not go himself to Bayonne till after the abdication and renunciation of the crown by Charles IV, Ferdinand VII, and the Infants, and when those princes had quitted that city. Not being able to prevail on Napoleon to abstain from his projects against Spain, he accepted the office of secretary of the Junta of Spanish Notables, assembled at Bayonne, and afterwards that of minister of state. He had the satisfaction to see the inquisition suppressed by Buonaparte in 1808, and by the Cortes in 1813. After the reverses of the French in Spain, he was obliged to follow king Joseph Buonaparte; and in 1814 he fixed his residence at Paris. He died there May 3, 1817.—*Biog. Nouv. des Contemp. Biog. Univ.*

URSINS (ANNA MARIA, princess des) wife of Flavio des Ursins, first lady of the bed-chamber to the queen of Spain. She was descended of the noble French family de la Tremouille, and was born in 1642. Being a woman of great natural parts and an intriguing disposition, she involved herself to a considerable extent in the politics of the day, and contrived to exercise a strong influence for many years in the Spanish cabinet, till falling into disgrace with Philip V, that monarch banished her from his dominions. This event took place in 1712.

She survived her disgrace about ten years dying at Rome in the winter of 1722.—*Nouv. Dict. Hist.*

URSINUS. There were several eminent scholars of this name, who flourished in different ages.—FULVIVS URSINUS, born at Rome in 1529, being abandoned in his infancy by his father, whose vow of celibacy as a knight of Malta prevented his acknowledging him as his son, had the good fortune while yet a child to attract the notice of one of the dignified ecclesiastics attached to the cathedral of St Giovanni di Laterano, by name Delfini, who gave him a classical education, and continued to patronize him till his death. He was well versed in antiquarian researches, especially as respects ancient literature; and was particularly celebrated for his method of ascertaining the dates of manuscripts, which he did with great accuracy. As an author he is known by several ingenious commentaries on the works of various classical writers, as well as by his "Imagines Virorum illustrium et eruditorum," and his treatise "De Familiis Romanis." His death took place about the commencement of the seventeenth century.—ZACHARY URSINUS, a native of Breslau, the capital of Silesia, born 1534, was among the most celebrated polemics of the age of the Reformation. Having in early life acquired the friendship of Philip Melancthon, while a student in the university of Wittemberg, he accompanied him to the conference held at Worms in 1559, and at its close went to Paris by the way of Geneva. After a stay of some continuance in the French metropolis, he accepted an offer made him by the magistrates of his native city, to superintend their principal school, but becoming at length obnoxious to the Lutheran party there, on account of his rigid adoption of the peculiar tenets of Calvin he experienced a series of persecutions which induced him to resign his situation, and retire to Zurich in 1560. Here he was received with great distinction by those of his own creed, and remained till the following year, when the influence of the elector palatine procured him the divinity chair in the university of Heidelberg. This appointment he held till 1577, attending in the mean time at the conference of Maulbrun, where, though deficient in pulpit eloquence, he yet distinguished himself by his speeches against the doctrine of ubiquity. Although a modest and most industrious scholar, he appears to have united a considerable degree of religious enthusiasm to a warm and irritable temper, which circumstance involved him a second time in disputes, when being left comparatively unprotected by the death of his illustrious patron, the elector Frederick, he was once more compelled to change his abode. On this occasion he settled at Neustadt, where he continued to read lectures in theology till his death in 1583. About twenty years after his decease, his writings were collected and published together in three folio volumes.—JOHN HENRY URSINUS, a German divine of the seventeenth century, presided over the Protestant congregations at Ratisbon, and is known as the au

thor of a history of the " Rise and Progress of the Churches of Germany ;" " A Commentary on the Bible ;" a Disquisition on the Philosophy of Zoroaster, and two devotional Treatises, entitled " Sacra Analecta," and " Parallela Evangelica." His death took place at Ratisbon in 1667.—GEORGE HENRY URSIUS, son to the last-mentioned, was himself a divine of great erudition. He wrote an able work " On the Etymology and Signification of Words;" " On the Taprobana, Cerne, and Ogygia of the Ancients;" " On Locusts;" " Philological Remarks," &c. and died in 1707.—*Moreri. Nouv. Dict. Hist.*

URSUS (NICHOLAS RAIMARUS) a native of Holstein in the Danish dominions, who from the humble condition of a swineherd raised himself into considerable notice as a mathematician and astronomer. He was born at Henstedt in the province above-mentioned, about the middle of the sixteenth century, and till his eighteenth year is said to have been so utterly illiterate, as to be unacquainted even with the alphabet. An opportunity offering itself of obtaining instruction, he seized it with avidity, and by the most unwearied assiduity made such a proficiency in his favourite science, astronomy, that some of the discoveries in it, usually attributed to Tycho Brahe, have been also assigned to Ursus. It is certain that the latter advanced his claim to them, and that a serious dispute arose between the two philosophers in consequence. Ursus settled at Stutgard, and resided for some time in that city, till the offer of a handsome appointment as imperial astronomer, induced him to remove to Prague. His death took place in 1600. Several of his tracts connected with the celestial system are yet extant.—*Ibid.*

USHER (JAMES) archbishop of Armagh in Ireland, a celebrated divine and historian, born at Dublin, January 4, 1580. His attention is said to have been particularly directed to the study of history by the perusal of Sleidan's work " De Quatuor Imperiis," which fell into his hands at the age of fourteen. After the death of his father, who was one of the six clerks in chancery, and who had designed him for his own profession, he gave up the paternal estate to his younger brother, and determined to devote himself to the church. He prosecuted his studies at Trinity college, in his native city, with great success, and when only eighteen, he entered into a public controversy with the jesuit Fitz Simons, then a prisoner in the castle of Dublin, who had issued a general challenge to the opponents of the doctrines of Bellarmine, engaging to defend them against all opposers. Reading the controversial works of Stapleton induced him to study the writings of the fathers and the schoolmen, whence he compiled a systematic body of extracts, entitled " Bibliotheca Theologica," still in manuscript in the Bodleian library. In 1601 he entered into holy orders, and was appointed afternoon preacher at Christchurch, Dublin. Soon after, he visited England to purchase books and MSS. for Trinity college library, and visiting London, Ox-

ford, and Cambridge, he became acquainted with sir T. Bodley, sir Robert Cotton, Allen, Camden, Selden, and other learned men. His talents, and the favour of his sovereign James I, successively procured him the professorship of divinity at Trinity college; in 1607 the office of chancellor of St Patrick's; the bishopric of Meath, in 1620; the post of privy counsellor, in 1623; and the following year the primacy of Ireland. In this high and influential station he displayed the same zeal against the Catholics for which he had been distinguished in the early part of his career. He warmly opposed the passing an act of parliament in favour of the professors of the ancient faith; though he was willing to accept the contributions they offered towards the exigencies of the state, on condition of the suspension of the anti-catholic penal laws then in force. He employed his pen as well as his influence in supporting his opinions, and among the works he published are a treatise " De Ecclesiarum Christianarum Successione et Statu," Lond. 1613; " An Epistle concerning the Religion anciently professed by the Irish and Scottish, showing it to be for Substance the same with that at this Day established in the Church of England," 4to; and " Veterum Epistolarum Hibernicarum Sylloge," 1632, 4to. He was not more disposed to favour the Arminians than the Catholics, as appeared from his work entitled " Goteschalci et Prædestinarianæ Controversiæ ab eo motæ Historia," Dublin, 1631, said to have been the first Latin book printed in Ireland. Though an archbishop and metropolitan, he held peculiar ideas relative to the origin and nature of those dignities; his notions of church government verging towards presbyterianism. The enemies of Usher took advantage of this to destroy his credit with James I; but his undeviating support of the royal supremacy, and the excellence of his character, saved him from suffering by their machinations, and he enjoyed to the last the esteem of king James. He endeavoured to prevent Charles I from sacrificing to the public displeasure his minister lord Strafford, whom Usher attended in prison and at his execution. He adhered to the king's interest during the civil war, and wrote in his defence a treatise on " The Power of the Prince and the Obedience of the Subject." Having witnessed the execution of his unfortunate master, the scene had such an effect on his senses that he fainted in the arms of an attendant; and he commemorated the event by an anniversary celebration of funeral rites for the deceased monarch. After that event he experienced civility and flattering promises from Cromwell, but the latter were not fulfilled. His death took place at Ryegate, in Surrey, March 21, 1656; and the protector ordered that he should be splendidly interred in Westminster abbey, leaving however the primate's relations to defray the greater part of the funeral expenses. Archbishop Usher carried on an extensive correspondence with the learned in various parts of Europe, and collected at considerable ex-

pense valuable books and MSS. Among the latter were the Samaritan Pentateuch, and a Syriac version of the Old Testament. Such was the general esteem excited by his character and literary reputation, that on his quitting Ireland in consequence of the rebellion, he was offered a professorship at Leyden; and cardinal Richelieu invited him to settle in France, promising him his patronage, with perfect freedom as to religion. But he thought proper to decline both these proposals. His principal works are "The Annals of the Old and New Testament," folio, a treatise of the highest authority in chronology and sacred history; "Britannicarum Ecclesiarum Antiquitates," folio; and "A Body of Divinity," folio, compiled surreptitiously from his sermons and notes. A collection of his letters, with his life, was published by his chaplain, Dr Richard l'arr.—*Smithii Vitæ quorund. erud. et ill. Viror. Biog. Britan.*

USTARIZ (JEROME) a Spanish writer, distinguished as the first who applied himself to the study of political economy. He was a native of Navarre, and died about the middle of the eighteenth century. He is chiefly known on account of his work on the "Theory and Practice of Commerce and Navigation," 1724, 4to, Madrid, 1742, folio, of which there are many other editions. Nothing can prove the value and importance of this production more than its having been translated into the languages of two of the most enlightened commercial nations. An English version of the work, by John Kippax, B.D. was printed in London, 1751, 2 vols. 8vo; and there is a French translation by Forbonnaie, Paris, 1753, 4to.—*Biog. Univ.*

USTERI (LEONARD) a Swiss writer, distinguished for his improvements in the art of education. He was born at Zurich in 1741, and having become an ecclesiastic, he resided some time at Geneva, and travelled in France and Italy. Returning home he obtained a professorship in the university of Zurich, and

a canonry in the church, the latter only a short time before his death, which occurred in 1789. The reform in the schools and gymnasiums effected in 1773, were principally owing to his exertions; and he published the details of their "New Organisation," in an octavo volume, Zurich, 1773. He also laid before the public five "Reports" on the same subject, from 1777 to 1789. He was keeper of the public library, and member of the philosophical society at Zurich; and he took an active part in the measures of that association for the encouragement of agriculture.—*Biog. Univ.*

UTENHOVIUS (CHARLES) a Protestant divine of the sixteenth century. He was born at Ghent about the year 1536, and received his education in the university of Paris. After the death of Mary he visited England, and employed his pen in defence of the reformed religion, and of the title of Elizabeth to the English throne, with a degree of industry and ability which raised him high in the favour of that princess. Besides these polemical and political writings he was the author of "A Century of Epistles;" "Mythologia Æsopica Metro Elegiaco, 8vo, 1607; "Epithalamia Græca;" and of a variety of miscellaneous poems both in Greek and Latin. He died at Cologne about the close of the century.—*Moreri.*

UVEDALE, LLD. (ROBERT) an eminent botanist, master of the foundation school at Enfield. He was a native of the metropolis, born in 1642, and educated at Westminster school, whence he removed on an exhibition to Trinity college, Cambridge. He was a good classical scholar, and assisted Dryden and his associates in translating the works of Plutarch. None of his botanical writings have been printed, but his garden at Enfield was justly celebrated for the extent and variety of his collection of rare plants. The precise time of his decease is not recorded.—*Pulteney's Sketches.*

VAC

VACCA (FLAMINIO) a Roman sculptor of the sixteenth century, less known on account of his own works, which ornament the churches and other public places at Rome, than as the restorer of ancient statues. He was employed at Rome under Sixtus V, and also in Tuscany. In 1594 he finished a collection of "Memorie di varie Antichità di Roma," published by Octavio Falconieri in 1704, and translated by Montfaucon into Latin, and inserted in his "Iter Italicum."—*Biog. Univ.*

VACCA BERLINGHIERI (FRANCIS) a physician, who was a native of Ponsacco, near Pisa, in the university of which city he studied, and afterwards became professor of surgery. Both by his lectures and his writings

VAD

he endeavoured to promote the cause of medical science, carefully distinguishing real knowledge as founded on observation, from conjecture and hypothesis. Hence, when the Brunonian theory of medicine (see JOHN BROWN) began to prevail in Italy, he attacked it in his "Meditazioni sull' Uomo malato e sulla nuova Dottrina di Brown," 1795, 8vo. He was offered the chair of clinical medicine at Pavia in 1796; but his attachment to his native country induced him to refuse it. He died October 6, 1812. His works relative to malignant fevers, the philosophy of medicine, &c. are enumerated in our authority.—*Biog. Univ.*

VADE (JOHN JOSEPH) a native of Ham in Picardy, who after having spent his youth in

dissipation, attached himself in some degree to study, and acquired much reputation as a farce writer and lyric poet. His verses are chiefly in the style which the French term *Poissard*, [Billingsgate] displaying, in the energetic language of the mob, their manners and occupations. He was in fact the *Teniers* of French poetry; and his songs, parodies, bouquets, fables, and epistles, as well as his comic operas, exhibit the humour and vivacity, as well as the rustic coarseness of low life. He died July 4, 1757, at the age of thirty-seven, owing to disease occasioned by his early excesses. His works, consisting of twenty comic operas, &c. were published in 4 vols. 8vo, and 6 vols. 12mo.—*Biog. Univ.*

VAHL (MARTIN) an eminent botanist, born at Bergen in Norway, in 1749. He went to Copenhagen to learn natural history under Dr Stroem, whence he repaired to Upsal, and attended for five years the lectures of Linnæus. Returning to Copenhagen in 1779, he was appointed reader at the botanic garden; and he was sent, at the expense of the king, to travel in Holland, France, Spain, the coasts of Barbary, Italy, Switzerland, England, and Lapland. Appointed professor at Copenhagen in 1783, he made a second journey to the coasts and mountains of Norway, to collect new materials for the "*Flora Danica*," the continuation of which national work had been entrusted to him; and in conjunction with Hornemann, he published parts VIII—XXIV, from 1787 to 1810, the first seven parts having appeared at Copenhagen, 1761—1782, folio. In 1799 and 1800 Vahl undertook another journey to Holland and France, at the expense of the government; and on his return to Copenhagen he was appointed professor of botany and inspector of the botanic garden. His death took place December 24, 1804. Among his most important works are "*Eclogæ Americane, seu Descriptiones Plantarum, præsertim Americæ Meridionalis, nondum cognitæ*," folio; and "*Enumeratio Plantarum, vel ab aliis, vel ab ipso Observatarum, cum earum Descriptionibus succinctis*," 2 vols. 8vo, 1805 and 1807.—*Biog. Univ. Rees's Cyclop.*

VAIDJAN or VIDJAN (ABU SAÏD MOHAMMED) a mathematician and astronomer of great celebrity among the Arabs, who was born at Cufah about the middle of the tenth century. He flourished at Bagdad under the government of the sultan Adalodawla and his sons. One of the latter, Scherifedjawla, having erected an observatory in the garden of his palace at Bagdad, placed it under the direction of Vaidjan, who was charged with the operation of observing the periods of the summer solstice and the autumnal equinox, for the year 378 of the Hegira (AD. 988); and the days, as determined by his experiments, were the 16th of June and the 18th of September. Vaidjan wrote "*On the Centre of the Earth*," "*Commentaries on Euclid's Elements*," and several other works.—*Cusiri Bibl. Arab. Hisp. Ecur. Bog. Univ.*

VAILLANT (FRANCIS le) a celebrated traveller, born at Parimambo in Dutch Guiana,

(S. A.) in 1753. His father, who was a rich merchant, originally from Metz, exercised the functions of consul. He went with his family to Holland in 1763, and afterwards resided in France, Germany, Lorraine, and the Vosges. In 1777 circumstances drew him to Paris, and having examined the cabinets of natural history in that capital, he conceived an irresistible desire to visit the countries whence the curiosities he saw were procured. Africa became the first object of his attention; and embarking in Holland, he arrived in March 1781 at the Cape of Good Hope. Between that period and July 1784 he made repeated excursions into the interior of Caffraria, and returning to Europe in January 1785, he employed himself in drawing up an account of his travels and observations. Though he took little interest in politics, he did not escape the calamities of the Revolution; and being imprisoned on suspicion in 1793, he owed his life to the fall of Robespierre. He possessed a considerable estate at La Noue near Sezanne, which was his chief residence in his latter years; and there he passed in hunting (to which amusement he was much attached) the time which was not devoted to the composition of his works. He died in his retreat, November 22, 1824. He published "*Voyage dans l'Intérieur de l'Afrique par le Cap de Bonne Espérance*," Paris, 1790, 2 vols. 8vo; and "*Second Voyage dans l'Intérieur de l'Afrique*," 1796, 3 vols. 8vo, both which have been translated into English and several other languages. He was also the author of "*Histoire Naturelle des Oiseaux d'Afrique*," 1796—1812, 6 vols. folio, two more volumes to complete the work being left in manuscript; "*Histoire Naturelle des Perroquets*," 1801—5 2 vols. folio; "*Histoire Naturelle des Oiseaux de Paradis*," 1801—6, folio; "*Histoire Naturelle des Cotingas et des Todiers*," 1804, folio; "*Histoire Naturelle des Calaos*," 1804, folio. Le Vaillant had observed in the climates of which they are natives almost all the birds which he describes; and the figures which accompany his works are considered as very accurate.—*Biog. Nouv. des Contemp. Biog. Univ.*

VAILLANT (JOHN FO) a celebrated writer on numismatics, born at Beauvais in France in 1632. He was brought up by a maternal uncle, who destined him for the magistracy, in consequence of which he studied jurisprudence. The death of his relative, who left him his name and a part of his fortune, having freed him from all restraint, he relinquished the law for medicine, and took the degree of doctor in that faculty. He was engaged in practice at Beauvais, when his attention was drawn to numismatics, by the accidental discovery of a parcel of ancient medals which came into his possession. On a visit to Paris he became acquainted with Seguin and other antiquaries; and being introduced to Colbert, that minister employed him to travel over Italy, Sicily, and Greece, in search of medals for the royal cabinet. In 1674, having embarked in the Mediterranean to return to Rome, he was taken

by a Barbary corsair, and detained more than four months at Algier. On being set at liberty he recovered twenty gold medals which had been taken from him; and on his homeward voyage, the dread of being again captured, induced him to swallow his medals, which he fortunately obtained again without suffering from his imprudence. He afterwards visited Egypt and Persia, in quest of medals and antiquities; and he made repeated visits to Italy, and also went twice to England and Holland, for the purpose of augmenting the treasures of the king's cabinet. On the organization of the Academy of Inscriptions (1701) he was admitted an associate, and he succeeded Charpentier as one of the pensioners. He died of apoplexy, October 23, 1706. Among his works are "Numismata Imp. Rom. præstantiora, à J. Cæsare ad Posthumum et Tyrannos," 1694, 2 vols. 4to; "Selucidarum Imperium, sive Hist. Regum Syriæ ad fidem Numismatum accommodata," 1681, 4to; "Numismata Imp. Aug. et Cæsarum," 2 vols.; "Historia Ptolemæorum, ad fidem Numismatum accommodata," 1701, folio; "Nummi Antiqui Familiarum Romanarum," 1703, folio; and "Arsacidum Imperium, &c. et Achæmenidarum Imperium, &c." 2 vols. 4to, published posthumously. He was also a contributor to the *Memoirs of the Academy of Inscriptions*.—His son, JOHN FRANCIS FOI VAILLANT, studied medicine, and took the degree of MD. in 1691. He was instructed by his father in the science of medals, and some of his dissertations on that subject appeared in the "*Mém. de Trévoux*." He also wrote a *Treatise on Coffee*, never published. His death took place November 17, 1708, at the age of forty-four.—*Nicéron. Chaufepie. Biog. Univ.*

VAILLANT (SEBASTIAN) member of the Academy of Sciences and demonstrator of the royal garden of plants at Paris. He was born at Vigny near Pontoise in 1669; and at a very early age he displayed a taste for botany. His father had him instructed in music, in which he became such a proficient, that at the age of eleven he succeeded his master as organist to the Benedictines at Pontoise. His inclination however prompted him to study surgery, and after being assistant surgeon to a hospital, he entered into the army, and was at the battle of Fleurus. In 1691 he went to Paris, where the lectures of Tournefort revived his botanical taste; and he at length became secretary to Fagon, the first physician to Louis XIV. His patron made him director of the royal garden, and subsequently resigned in his favour the offices of professor and sub-demonstrator. His botanical lectures attracted a great concourse of pupils; and his reputation in 1716 procured him admission into the Academy of Sciences. He died of asthma, May 22, 1722. The principal work of Vaillant is his "*Botanicon Parisiense*," Amsterd. 1707, folio, with three hundred figures, published by Boerhaave, with a life of the author. He also wrote "Discours prononcé le 10 Juin, 1717, à l'Ouverture du Jardin Royal des Plantes, sur la Structure des Fleurs, leurs Différences

et l'Usage de leurs Parties;" besides several other tracts, in which he proposed an arrangement of plants founded on the parts of fructification, in some degree forestalling the system of Linnæus.—*Biog. Univ. Rees's Cyclop.*

VAILLANT (WALLERANT) a painter, born at Lisle in Flanders, in 1623. He studied painting at Antwerp, under Erasmus Quellinus, and attached himself principally to portrait, in which branch of his art he was very successful. Going to Frankfort at the coronation of the emperor Leopold, he executed a portrait of his imperial majesty, which procured him great reputation and abundance of employment. He afterwards spent four years in France, where he was patronized by marshal Grammont, and painted the portraits of the queen mother and the duke of Orleans. At length he settled at Amsterdam, where he acquired great riches. He likewise practised the art of engraving in mezzotinto, the secret of which he learnt from prince Rupert; and several portraits, from his own designs and those of other masters, are extant, which he executed in this manner.—*Pilkington. Biog. Univ.*

VAISSETE (DOM JOSEPH) a learned Benedictine of the congregation of St Maur, born at Gaillac in the diocese of Alby, in 1685. After studying at Toulouse, he became an advocate, and obtained the office of king's attorney. A strong attachment to historical researches induced him to give up his profession for a monastic life in 1711. Two years after he entered the abbey of St Germain at Paris, where he was amply supplied with the means of prosecuting his studies. He employed twenty-five years in writing the history of Languedoc, in which Dom Claude de Vic was his coadjutor; and the work appeared in five volumes, folio, 1730—45. He died at Paris in 1756. Besides his great history, he published *Abrégé de l'Histoire générale du Languedoc*, 1749, 6 vols. 12mo; "*Dissertation sur l'Origine des Français*," 1722, 12mo; "*Géographie historique, ecclésiastique, et civile*," 1755, 4 vols. 4to, and 12 vols. 12mo.—*Tassin Hist. de la Cong. de S. Maur. Biog. Univ.*

VALAZE (CHARLES ELONORE DE FRICHÉ DE) a native of Alençon, who after receiving a good education, entered into the army, and was appointed in 1774 lieutenant in the provincial regiment of Argentan. On leaving the service he employed himself in agriculture, and he also composed a work on the "*Penal Laws*," 1784, 8vo, which procured him great reputation. In 1792 he was chosen a deputy to the National Convention, in which he joined the party of the Girondins, and connected himself particularly with Vergniaux. He displayed great warmth against the king, but on the trial he voted for death conditionally, with an appeal to the people. He was himself included in the proscription of his party, and he avoided a public execution by stabbing himself to the heart with a poniard, as soon as he heard his sentence pronounced. This catastrophe took place October 30, 1793. In

prison he wrote "*Défense de C. E. Dufriche Valazé*," 8vo, published in 1795; and he was the author of some other pieces besides that above mentioned.—*Dict. Hist. Biog. Univ.*

VALCARCEL (JOSEPH ANTHONY) a Spanish agriculturist, born at Valentia in 1722. Rural economy as a science had been entirely neglected in Spain from the time when Alphonso de Herrera wrote on that subject, till the attention of the public was recalled to it by Valcarcel. He not only collected accounts of the improvements in agriculture which had been made by foreigners, but he likewise made experiments himself; and the result of his researches, observations, and inquiries appeared in a work which he published under the title of "*Agricultura general, y gobierno de la Casa del Campo*," 7 vols. 4to, 1765—1786. He also wrote "*Directions for the Culture of Rice*," 1768; and "*Directions for the Culture of Flax, and its Preparation for Spinning*," 1781. Valcarcel died at Valentia in 1800.—*Biog. Nouv. des Contemp. Biog. Univ.*

VALCKENAER (LOUIS CASPAR) a celebrated critic and philologist, born in 1715, at Leeuwarden, in Friesland. He studied the learned languages at Franeker and at Leyden, after which he became co-rector of the gymnasium of Campen. In 1741 he was called to the chair of Greek literature at Franeker, to which in 1775 was joined that of Greek antiquities. In 1766 he removed to Leyden, where he was professor of the Greek language and antiquities, and also of history. He became one of the most distinguished hellenists of his time, and both as a public teacher and writer he arrived at great reputation. His death took place March 15, 1785. Among his principal publications may be mentioned "*Euripidis Phœniassæ*," with collections of MSS. scholia, critical observations, &c. Franek. 1755, 4to; "*Euripidis Hippolytus, et Diatribe in deperditas Euripidis Tragedias*," Leyd. 1768, 4to; "*Theocriti X Idyllia, cum Notis; ejusd. Adonizassæ, uberioribus Adnotationibus instructæ*," 1773 8vo. "*Callimachi Elegiarum Fragmenta, cum Elegiæ Catulli Callimacheæ*," 1799, 8vo; "*Observationes Academicæ, quibus Via munitur ad origines Græcæ investigandas, Lexicorumque Defectus resarciendos*," Utrecht, 1790, 8vo, edited by Everard Scheidius; Two Discourses of St John Chrysostom; and "*Specimen Adnotationum criticarum in loca quedam Novi Fœderis*," Leyd. 1789, 8vo. In 1809 were printed at Leipzic, "*L. C. Valckenarii Opuscula Philologica, Critica et Oratoria, nunc primum conunctim edita*."—JOHN VALCKENAER, son of the preceding, studied jurisprudence, and became professor of that science at Franeker. About 1787, having joined the patriotic party, against the house of Orange, he was made professor of law at Utrecht, in the room of Tydeman; but on the restoration of the stadtholder he was obliged to take refuge in France. He returned at the invasion of Holland by the French in 1795, when he published a periodical paper, entitled "*The Advocate of Batavian*

Liberty." He was then appointed to the chair of jurisprudence at Leyden, on which occasion he delivered a discourse "*De Officio Civis Batavi in Republicâ turbatâ*." After being employed on a diplomatic mission to Prussia, he was chosen a member of the legislative body of the republic, and subsequently sent by the Batavian directory ambassador to Spain. He returned, and went a second time in 1799, as minister plenipotentiary. Coming home in 1801 he resumed his place in the academical senate, and became a member of the administration of the Rhinland. He was also a member of the Dutch Institute. In 1810 Valckenaer was sent to Paris to endeavour to prevent the incorporation of Holland with the French empire; and returning unsuccessful, he afterwards took no part in public affairs. He died January 19, 1820. He left some learned dissertations on juridical topics; legal opinions on affairs of political controversy, &c.—*Biog. Univ.*

VALDES, or VAL D'ESSO (JOHN) a Spanish gentleman, who served as a military officer under Charles V, to whom he was afterwards secretary. Having in the latter part of his life retired to Naples, he employed himself in religious inquiries, and though he did not openly separate from the church of Rome, he adopted many of the principles of the German reformers, and appears to have had several secret disciples, some of whom, as Peter Martyr and Vergerius, afterwards became Protestants. Valdes died in 1540. He wrote a treatise of ascetic divinity, entitled "*Considerations on a religious Life*," which was translated into English by Nicholas Ferrar, and published in 1638.—*Biog. Univ.*

VALDEZ (JUAN MEXENDES) regarded as the Spanish Anacreon, was born of noble parentage at Ribera in Estremadura, and was educated at Salamanca. He took the degree of doctor of laws at the age of twenty-two, and might have been professor of that faculty had not his inclinations led him to prefer the chair of belles lettres. In 1780 his poetical "*Panegyric on a Country Life*" was crowned by the Spanish Academy, and some time after he gained another prize by his "*Bathyllus*." He was appointed a judge at Saragossa in 1789; and in 1797 he was called to the office of advocate general in the metropolis, where he ultimately was made a counsellor of state, and director general of public instruction. He died at Montpellier in 1817, leaving many works which are highly esteemed by his countrymen.—*Biog. Univ.*

VALDO (PETER) the chief of the heretics called Vaudois or Waldenses, who was a native of Vaux, in Dauphiny. He acquired a considerable fortune by commerce, at Lyons; but the sudden death of one of his friends induced him to sell his property, and give the produce to the poor, and devote himself to works of piety. He fancied that it was the duty of every Christian to imitate the example of the apostles, and like the Quakers, he taught that both men and women might conduct the offices of public worship, without the interven-

tion of the order of priesthood. This doctrine was condemned by the general council of Lateran, in 1179; and Valdo, driven from Lyons, took refuge with his followers in the mountains of Dauphiny and Piedmont, whence they spread over several parts of Europe. They were however exterminated everywhere except in the three vallies of Piedmont, where the Waldenses still subsist, amounting to the number of twenty thousand souls, and possessing thirteen churches. By a decree of the 10th of January, 1834, their sovereign, the king of Sardinia, authorized them to erect a hospital for their sick poor, to be attended by a physician and surgeons of their own persuasion.—*Bosquet Hist. des Variations. Pluquet Dict. des Hereses. Biog. Univ.*

VALENTIN (MICHAEL BERNARD) a physician and naturalist, born at Giessen, in Germany, in 1657. After having finished his studies, he visited the universities, cabinets, hospitals, and other medical establishments in Holland, England, and France, and having practised his profession at Philipsburg, he became a professor in the university of Giessen, and died there in 1726. Among his principal works are "Museum Musæorum, sive Descriptio Rerum naturalium, præcipue in Indiis nascentium," Frankfurt, 1704, folio, repr. 1730, 3 vols. folio; "Historia Simplicium; accedit India litterata, edit. 2, auctior per Christoph. Bern. Auctoris fil." 1716, folio; "Amphitheatrum Zootomicum," 1720, folio; "Viridarium Reformatum, seu Regnum Vegetabile," 1719, folio; and "Letters from the East Indies," in German, chiefly relating to the vegetable productions of that part of the world, and affording information interesting to the cultivators of natural history.—*Aikin's Gen. Biog. Biog. Univ.*

VALENTIN (MOSES) a French painter, born at Coulommiers in the county of Brie Champenoise, in 1600. He is said to have been a disciple of Vouet, and he studied in Italy, where he became acquainted with Poussin, and obtained a zealous protector in cardinal Barberini, the nephew of Urban VIII. Through his recommendation he painted for the church of St Peter's "The Martyrdom of the Saint's Processus and Martinian;" and this chef d'œuvre of Valentin was removed to Paris by Buonaparte, but restored in 1815. The subjects on which he usually employed his pencil are similar to those chosen by Michael Angelo da Caravaggio, representing social scenes and rustic amusements. His death took place in 1632.—*Pilkington. Biog. Univ.*

VALENTINE (BASIL) a chymist or alchymist of the fifteenth century, to whom is ascribed the discovery of antimony, or rather of the properties of the native sulphuret of antimony. He is supposed to have been a native of Erfurt in Germany, and to have been a member of the monastic order of Benedictines; but his history is very obscure and imperfect, as he is merely known as the author of a treatise entitled "Curus triumphalis Antimonii," and other works of a like description. His writings were printed collectively in Ger-

man at Hamburg, in 1677, 1717, and 1740; and many of the pieces ascribed to him have been published in French and English.—*Dict. Hist.*

VALENTINUS, an ancient heretic, founder of a sect from him termed Valentinians. He was a native of Egypt, and was educated at Alexandria. Having it is said been disappointed in his expectation of obtaining the office of a bishop, he adopted the principles of the Gnostics, and opposed the Catholic faith, for which, after causing great dissensions at Rome, he was excommunicated. He subsequently went to Cyprus, where he is supposed to have returned to the bosom of the church, and died AD. 160. The Valentinians, whose heresy consisted in certain notions relative to angelic beings, and their influence in the creation and government of the world, seem to have been a branch of the widely extended sect of the Gnostics; and they acquired considerable importance in the age in which their founder flourished.—*Mosheim. Lardner.*

VALENTYN (FRANCIS) a Dutch clergyman and traveller, born at Dordrecht about 1660. He engaged as a chaplain in the service of the East India Company, and sailing for Batavia in May 1685, he arrived there the 30th of December following. He was for a time preacher at Japara, and afterwards exercised his functions at Amboyna. He studied the Malay language, and in 1689 he engaged in making a translation of the Scriptures into that widely-extended dialect. In 1694 he returned to his native country, in consequence of ill health; but he made a second voyage to Java in 1706, and the following year again settled as a preacher at Amboyna. After five years' residence there he requested leave to resign his post; but he did not return to Europe till 1714. He subsequently employed himself in arranging the materials of a work which he published in Dutch, under the title of "The East Indies, ancient and modern, comprising an exact and detailed Account of the Power of the Dutch in those Countries," Dordrecht and Amsterdam, 1724—26, 8 vols. folio. This work, which is illustrated with charts and other engravings, contains copious information relating to the Dutch Indies, forming a sort of East Indian Cyclopædia.—*Biog. Univ.*

VALERIANUS (JOANNES PIERIUS) or VALERIANO BOLZANI, an Italian writer, born at Belluno in 1477. The poverty of his family was such that he had no opportunity of acquiring the elements of learning till he was fifteen years old; but he then made so rapid a progress in his studies as to attract the favour of some of the most celebrated scholars of his time. Laurence Valla and Lascaris taught him Latin and Greek; and cardinal Bembo, Leo X. and Clement VII. afforded him their patronage. Wishing to devote himself to literature, he refused the bishoprics of Capo d'Istria and of Avignon, and accepted the office of apostolic prothonotary and private chamberlain to the pope. He undertook the education of Hippolyto and Alexander de Medicis, the nephews of Clement VII. with whom

he retired to Placentia, on the capture of Rome by the imperialists in 1527. His pupil Hippolyto becoming a cardinal in 1529, he lived with him as secretary; and after his death he attached himself to duke Alexander, who was killed in 1537. Valerianus then retired to Padua, where he died in 1558. The work by which he is principally known, is his treatise "*De Infelicitate Litteratorum*, Lib. ii." Venice, 1620, 8vo, often reprinted. Among his other productions may be mentioned his "*Hieroglyphica, sive de Sacris Ægyptiorum, aliarumque Gentium Litteris Commentaria*," Basil, 1566, republished, with additions, at Frankfort-on-the-Mayne, 1678, 4to.—*Aikin's Gen. Biog. Biog. Univ.*

VALERIUS MAXIMUS, a Roman historian, who lived in the reign of the emperor Tiberius. He served in Asia under Sextus Pompeius, who was consul in the year of the death of Augustus; and returning to Rome, he appears to have taken no part in public affairs. He devoted his leisure to the composition of a work entitled "*De Dictis et Factis Memorabilibus Antiquorum*, Lib. ix," which is a collection of anecdotes and observations, comprising some curious facts and details, recorded by no other ancient writer. This treatise is dedicated, in a style of high eulogy, to Tiberius. It is quoted by the elder Pliny, by Plutarch, and by Aulus Gellius; and it attracted much notice on the revival of literature in the fifteenth century, having been one of the earliest books which issued from the press after the invention of printing. The first edition, without date, is supposed to have been executed by J. Mentel in 1469; and several other impressions appeared before the end of the fifteenth century. Among the best modern editions are those of Torrenius, Leyden, 1726, 4to; of Kapp, Leipzig, 1782, 8vo; and of T. B. Helfrecht, Iloff, 1799, 8vo.—*Vassius de Hist. Lat. Biog. Univ.*

VALLA (GEORGE) a native of Placentia in Italy, who became professor of the belles lettres at Pavia. In 1481 he was professor at Venice, where, in consequence of his interference in political affairs, he was thrown into prison; but after a time he was released, and restored to his office. As he was one morning preparing to go to his lecture-room, where he explained Cicero's Tuscular Questions, and held disquisitions on the immortality of the soul, he died suddenly, about the end of the fifteenth century. He translated into Latin some of the works of Aristotle and other Greek writers; and he was the author of a treatise "*De Expetendis et Fugendis Rebus*," published by his son in 1501, 2 vols. folio.—*Tiraboschi. Biog. Univ.*

VALLA (LAURENCE) probably a relation of the preceding, was born at Rome in 1406. He was educated in his native city, and remained there till 1431, when he visited Placentia, to take possession of some property bequeathed to him by his relations. He afterwards went to Pavia, where he obtained the professorship of rhetoric. His invectives against Bartolus drew on him the enmity of

the scholars of that celebrated civilian, and Poggio also brings against Valla serious accusations of misconduct, for which, however, there does not appear to have been any just foundation. He did not remain long at Pavia, for the plague dispersed the members of the university, and he went and lectured at Milan, Genoa, and Florence. At length he became known to Alphonso, king of Arragon, whom he followed in his wars and travels from 1435 till 1442, when that prince made himself master of the kingdom of Naples. In 1443, on the return of pope Eugenius to Rome, he settled in that city. A work which he wrote on the pretended donation of Constantine to the holy see, discrediting that imaginary grant, and reflecting on the characters of some of the popes, excited the displeasure of Eugenius; and Valla found it necessary to withdraw first to Ostia and afterwards to Barcelona. Thence he addressed an apologetical defence of his writings to the pontiff, though without retracting the offensive opinions which he had maintained. He afterwards returned to Naples, and under the protection of king Alphonso he opened a school of eloquence, to which many scholars resorted. Notwithstanding however his great reputation for learning, he narrowly escaped suffering in consequence of the freedom with which he attacked notions sanctioned by antiquity; and it was to the influence of his patron Alphonso that he owed his preservation from the vengeance of the inquisition. At length he was invited to Rome by Nicholas V, and he there commenced giving lectures on rhetoric in 1450. He engaged in a literary dispute with George Trapezuntius, on the comparative merits of Cicero and Quintilian; and he also carried on a controversy with Poggio, which was conducted with a degree of illiberality and virulence discreditable to both parties. He did not however neglect more profitable occupations, and among the labours of his later years were Latin translations of the histories of Thucydides and Herodotus, the latter of which he left unfinished at his death, which occurred in August 1457. Among the revivers of literature Valla has always held a high rank, which he merited by unwearied application and an enlarged course of study, including history, criticism, dialectics, moral philosophy, and divinity. Of his numerous writings his treatise "*De Elegantiâ Latini Sermonis*," still maintains its reputation. His original works were published together at Basil in 1543.—*Fabricii Bibl. Med. et Infim. Latin. Aikin's Gen. Biog.*

VALLANCEY (CHARLES) an enthusiastic investigator of Irish antiquities, was born in England in 1721, his real name being Vallance, which he altered it is said on the score of euphony. His education was liberal, and at an early age he entered into the military profession, and for several years served in Gibraltar as a captain in the 12th foot. He subsequently obtained a commission in the corps of engineers upon the Irish establishment, and thereby securing a settlement in the country, he assiduously devoted himself

to the study of the language, topography, and antiquities of Ireland. He also made a survey of the island, for which he received a thousand pounds, and an extra allowance of fifteen shillings per day. Previously to the publication of his map of Ireland, he wrote two treatises, one entitled the "Field Engineer," and the other "On Stonecutting;" but his principal work is a grammar of the Irish language, which appeared first in 1773, and again in 1781, with an essay on the Celtic. He was also author of an "Essay on the Antiquity of the Irish Language," which he traces to the Phœnician, and carried on a periodical work, which he afterwards published in two volumes, octavo, entitled "Collectanea de Rebus Hibernicis," a production in which the zeal of the antiquary occasionally interferes with the judgment of the calm enquirer. He next employed himself in the laborious task of constructing a dictionary of the Irish language. To his learning as an antiquary he united a taste for the fine arts, particularly architecture, of which a fair specimen exists in the Queen's bridge at Dublin. Besides the rank of general to which he attained before his death, he was a doctor of laws of Trinity college, Dublin, and a member of the Royal Irish Academy, and of various institutions. He died at Dublin in 1812, in his ninety-first year.—*Gent. Mag.*

VALLE (PETER de la) a celebrated traveler, was a Roman gentleman, and member of the academy dell' Umoristi. He commenced his travels in 1614 over the East, and did not return until 1626; and his account of them in Italian, 1662, 4 vols. 4to, has always been considered the best that had then appeared of Egypt, Persia, Turkey, and India. He married at Babylon an amiable young woman, who accompanied him on his travels until her death at Mina in Caramania in 1622. Her death so much affected him, that he caused her body to be embalmed, and he bore it about with him in a coffin until his return to Rome, where he buried it with great magnificence in his own family vault, and spoke a funeral oration on the occasion himself, which may be found in Italian and French in the 12mo edition of his travels. He died at Rome in 1652. Gibbon styles De la Valle "a gentleman and a scholar, but intolerably vain and prolix." An English translation of his travels was published in London, 1665, folio.—*Tiraboschi Moreri.*

VALLEMONT (PETER le LORRAIN, better known by the name of the abbé de) a miscellaneous writer, born at Pont-Audemur in 1649. Having adopted the ecclesiastical profession, he took the degree of doctor in theology. After residing some time at Rouen, he went to Paris, and became tutor to the son of M. Polart, a counsellor of parliament, and subsequently to the marquis de Courcillon, son of the marquis de Dangeau. At length he was attached as professor to the college of cardinal Le Moine; but towards the close of his life he retired to his native place, and died there in 1721. Besides several works on numis-

matics, on which subject he carried on a controversy with M. Baudelot, he was the author of "La Physique occulte, ou Traité de la Baguette divinatoire," 1693, 12mo; and "Éléments d'Histoire," 4 vols. 12mo, of both which works there are several editions.—*Biog. Univ.*

VALLI (EUSSEBIUS) an eminent Italian physician, born at Pistoia in 1762. He studied at the college of Prato, and afterwards applied himself to medicine at the university of Pisa. He travelled to Smyrna and Constantinople, where he made observations on the plague, and returning after some years to Tuscany, he distinguished himself by his attention to the subject of vaccination. In a second visit to Constantinople, where he introduced Dr Jenner's discovery, he made a bold experiment to determine whether the cow-pox might not prove a preservative from the plague. But the result of his inoculating himself with the virus of those diseases successively, nearly cost him his life, as he was seized with the plague, from which he had the good fortune to recover. He returned to Italy in 1804, and in the following year he served in a medical capacity in the Gallo-Italian army in Dalmatia. In 1809 he went to Spain to observe the yellow fever, and he afterwards practised medicine in Tuscany. At length he fell a victim to his imprudence; for in September 1816, having gone to Havannah, to add to his observations on the yellow fever, he purposely exposed himself to the influence of the contagion, and caught the disease, of which he died September 24, 1816. He published "Memoria sulla Peste di Smyrna, nel 1784," 12mo; "Saggio sulle Malattie croniche," l'isa, 1792, 12mo; "Memoria sulla Tisi ereditaria," Florence, 1796, 12mo; "Memoria sulla Peste di Costantinopoli del 1803," 12mo; and "Memoria sui mezzi d'impedire la Fermentazione dei varj liquidi estratti, &c." 1814, 12mo.—*Biog. Univ.*

VALLISNIERI (ANTHONY) an Italian naturalist, born in 1661, in the territory of Modena. He studied among the jesuits at home, and afterwards went to Bologna; and having taken his degrees at Reggio in 1684, he returned to Bologna to apply himself to medicine. He then passed some time at Padua, Venice, and Parma; and at length settled as a physician at Reggio. In 1700 he became professor of the practice of medicine at Padua, where he rose successively from one professorship to another, till in 1711 he obtained the first chair of the theory of medicine. The emperor Charles VI, to whom he dedicated a work on the "History of Generation," appointed him his honorary physician, and in 1728 the duke of Modena bestowed on him a patent of knighthood. Academical honours were also liberally extended to him, as he was an associate of the *Academia Naturæ Curiosorum*, the Royal Society of London, and many other scientific societies. He died January 18, 1730. A list of his works on medicine and natural history may be found in the first of the annexed authorities. A collective edition was published by his son at Venice,

1733, 3 vols. folio.—*Bug. Univ. Rees's Cyclop. Fabroni. Eloy Dict. Hist. de la Med.*

VALMIKI, a celebrated Hindoo poet, author of the epic poem entitled "Ramayana," recounting the adventures of the Hindoo deity Rama. The first two books of the Sanscrit text of the Ramayana, with an English version, were published at Serampoor, by W. Carey and J. Marshman, 3 vols. 4to. 1806—10; and some episodes from the poem have been translated into French by M. Chezy; and into German by M. Fr. Bopp, of Berlin. A. W. von Schlegel has also promised to the learned world a complete edition of the work of Valmiki, in Sanscrit and Latin, with a commentary. Sir W. Jones advanced the opinion that this Hindoo bard was the same personage with Cuth, mentioned by Moses; but no biographical information is extant concerning him.—*Rees's Cyclop. Biog. Univ.*

VALOIS (HENRY de) or HENRICUS VALESIUS, historiographer to the king of France, a distinguished scholar and critic, born at Paris in 1603. He studied among the jesuits at the college of Verdun, and afterwards at that of Clermont, under the celebrated Denis Petau. He then went to the university of Bourges, and having taken his degrees in law, he was admitted a counsellor of the parliament of Paris. After attending to his profession awhile, he abandoned it that he might devote himself entirely to literature. The works of the Grecian and Roman writers especially engaged his attention, and he continued his studies till the excess of his application injured his sight. The president de Mesmes however having bestowed on him a pension, he was enabled to keep a secretary, and proceed in his researches. The death of the president in 1650 deprived him of this resource, and he was also disappointed in some expectations of advantage which he had been led to form from the patronage of Christina, queen of Sweden. But he was relieved from his difficulties, by being employed by the body of the French clergy to edit the Greek ecclesiastical historians; and in 1660 he received the title of royal historiographer, with a considerable pension. At the age of sixty-one he married a lady possessed of youth and beauty, by whom he had seven children; and he survived this union twelve years, dying in 1676. His principal literary undertaking was his edition of the Ecclesiastical Histories of Eusebius, Socrates, Sozomen, Theodoret, and Evagrius, with the Fragments of Philostorgius, Paris, 1659, 1668, 1673, 3 vols. folio, in Greek and Latin, with notes and learned dissertations. He also published "Excerpta Polybii, Diodori Siculi, &c. ex Collectan. Constantini Porphyrogen." Paris, 1634, 8vo; and "Amnian Marcellini Rerum Gestarum, Lib. xviii," 1636, 4to; besides a number of opuscula, republished collectively by Peter Burmann, jun. under the title of "H. Valesii Emendationum, Lib. v et de Critica, Lib. ii, &c." Amsterd. 1740, 4to.—VALOIS (ADRIAN de) brother of the preceding, was born at Paris in 1607, and studied under the jesuits. He applied himself

with ardour to classical learning; but he afterwards attached himself more particularly to the study of French history. In 1646 he laid before the public the fruits of his researches in the first volume of his "Gesta Francorum," which was completed, making three volumes, folio, in 1658. He defended this work against the criticisms of father Launoi and other writers; and he acquired so much reputation by his labours that he was associated with his brother in the office of historiographer. In 1675 he published "Notitia Galliarum, ordine Litterarum digesta," folio, being a general topographical dictionary of the kingdom of France, which has been superseded by the more recent work of D'Anville, under the same title. He lived in intimate friendship with his brother, whose life he wrote; and he followed the example of that relative by marrying late in life. He published some other works besides those above-mentioned; and his death took place in 1692.—His son, CHARLES de VALOIS DE LA MARX, inherited the family taste for letters, and was a member of the Academy of Inscriptions, and held the office of royal antiquary. He published from his father's MSS. a miscellaneous work, entitled "Valesiana," 12mo; and he was a contributor to the Memoirs of the academy to which he belonged. He died in 1747, aged seventy-six.—*Moreri. Biog. Univ.*

VALPERGA DI CALUSO (THOMAS de) comtes Massino a Piedmontese mathematician, born at Turin in 1737. After he had studied at Rome, meeting by accident with the history of marshal Saxe, he was seized with military enthusiasm, and entering on board a Maltese galley in 1764, he at length became commander of a vessel. He afterwards served as a sub-lieutenant in the navy of his sovereign; but he forsook the profession of arms to enter into the church as a member of the congregation of the Oratory, founded by St Philip Neri. He took the habit of the order at Naples, where he became librarian and professor of theology. Returning subsequently to his native country he settled at Turin, and established there a literary society, and was admitted into the academy of painting and that of sciences, of which he was secretary for eighteen years. He afterwards employed much of his time in travelling; and being at Lisbon in 1772 he met with the celebrated Alfieri, with whom he contracted a close intimacy. From 1800 to 1814 he consecrated a great part of his evenings to the instruction of youth in Greek and Oriental literature. He was a member of the grand council and director of the observatory of the university of Turin; and in 1814 he was appointed president and director of one of the classes of the Academy of Sciences and Letters. He was also a member of the legion of honour, a correspondent of the French Institute and of the Italian Society of Verona, &c. His death took place April 1, 1815. A catalogue of his numerous publications, which embrace a variety of subjects (including mathematics and astronomy), may be found in the annexed authority.—*Biog. Univ.*

VALSALVA (ANTON-MARIA) an eminent anatomist, born at Imola in Italy, in 1666. He studied at Bologna under the celebrated Malpighi; and having graduated in 1687, he connected together the practice of medicine and surgery. He simplified and improved surgical instruments, and succeeded in abolishing at Bologna the painful and uncertain operation of cauterizing the arteries after amputation. In 1697 he was elected professor of anatomy at the university, which acquired under his direction great celebrity as a school of medical science. Some of his pupils attained great eminence, in the number of whom was Morgagni, who became the editor of some of the works of his master, and also his biographer. Valsalva died of apoplexy in 1723. His principal production is "*De Aure Humana Tractatus, in quo integra ejusd. Auris Fabrica multis novis Inventis et Iconibus suis illustrata describitur omniumque ejus Partium usus indagatur.*" 1704, 4to, often reprinted. Morgagni also published three *Academical Dissertations of Valsalva*; and inserted some of his accounts of dissections in his own work, "*De Sedibus et Causis Morborum.*"—*Halleri Bib. Anat. Biog. Univ.*

VALVASONE (ERASMUS di) an Italian poet, of eminence among those of the second order, who was lord of Valvasone, a castle in Friuli, where he was born in 1523. He lived retired on his own domain, dividing his time between his literary studies and the chase, to which he was passionately addicted. His principal work is a didactic poem on chess, "*La Caccia*," in eight cantos, in octave verse, first printed in 1591. This piece is reckoned inferior to none of the kind, except "*The Bees*" of Ruccellai, and Alamanni's poem on "*Cultivation*." Valvasone translated the "*Thebais*," of Statius, the "*Electra*," of Sophocles, and wrote a poem, called "*Il Lancellotti*," and an epopea entitled "*Angeleida*," on the combat of the good and bad angels, which, according to Tiraboschi, afforded some hints to Milton. Erasmus di Valvasone died in the castle of his ancestors in 1593.—*Biog. Univ.*

VANBRUGH (sir JOHN) a dramatist and architect, descended from a Flemish family expatriated through the cruelties of the duke of Alva, and settled in England in the 16th century. He was born about 1672; and his father holding a respectable station in society he entered into the army, and obtained an ensign's commission. How long he remained in the service is uncertain; but it appears that early in life he became a writer for the stage. In 1697 was represented his comedy, "*The Relapse*;" and in the following year he produced that very popular drama, "*The Provoked Wife*," and also another entitled "*Æsop*," afterwards altered by Garrick. When Betterton and Congreve obtained a patent for erecting a theatre in the Haymarket, which was opened in 1707, they were joined by Vanbrugh, who wrote for this house his comedy "*The Confederacy*," the most witty as well as the most licentious of his productions, which,

notwithstanding its faults, long kept possession of the stage. "*The Provoked Husband*, or the Journey to London," which he left imperfect at his death, was completed and brought forward by Colley Cibber; and it still retains its attraction as an amusing though exaggerated picture of obsolete manners and characters. As an architect Vanbrugh has been the subject of much depreciating and illiberal criticism; but that he held a high station in that profession may be inferred from his having been selected to build the monument of national gratitude to the duke of Marlborough, Blenheim-house; and that structure, as well as another of his erections, Castle Howard, affords proofs of the skill and genius of the artist. More wit than argument has been directed against the taste of Vanbrugh, and many persons know nothing more of his character than what may be inferred from the sarcastic epitaph written for him by Dr Abel Evans:—

"Lie heavy on him, earth, for he
Laid many a heavy weight on thee."

He obtained in 1704 the heraldic office of clarencieux-king-at-arms; and in 1714 he received the honour of knighthood. He was also appointed comptroller of the board of works and surveyor of Greenwich hospital. His death occurred March 26, 1726.—*Walpole. Rees's Cyclop. Biog. Univ.*

VANCOUVER (GEORGE) a modern circumnavigator, and captain in the British navy. He served as a midshipman under the celebrated captain James Cook, and upon a determination being taken for a voyage of discovery, to ascertain the existence of any navigable communication between the North Pacific and North Atlantic oceans, he was appointed to command it. Of this voyage captain Vancouver compiled an account, under the title of "*Voyage of Discovery to the North Pacific Ocean, and round the World, in the years 1790—5*," 3 vols. 4to, which work was nearly ready for the press when the author died, May 10, 1798.—*Naval Register.*

VANDALE (ANTONY) a meritorious man of letters, was born in Holland in 1638. He received a learned education, but was destined for commerce, in which he was engaged for a few years, but at the age of thirty he resumed his literary pursuits, and applied to medicine, in which he graduated, and became a practitioner, and was also for some time a preacher among the Menonites. At length he dedicated himself almost exclusively to study, and wrote several works, which rendered him advantageously known in the learned world. Of these the most noted was his "*Dissertationes duæ de Oraculis Ethnicorum*," first printed in 1683, 12mo, and afterwards in an enlarged form in 1700, 4to. The scope of this production was to prove the heathen oracles forgeries, and that they did not cease on the coming of Christ, a position at that time deemed erroneous and in opposition to tradition and the fathers. As the author was destitute of the graces of style, and defective in arrangement, Fontenelle gave the subject of these dissertations in

a more agreeable form, in his "Histoire des Oracles," which popular production produced much theological opposition. His other works are a dissertation "On the Progress and Origin of Idolatry;" "A Dissertation on true and false Prophecy;" "A Dissertation on the Narrative of Aristæus on the Seventy Interpreters;" the "History of Baptisms, Jewish and Christian;" "A Dissertation on Sancho-niatho;" and "Dissertations on some ancient Marbles." All these writings display great erudition and sagacity, obscurely and unmethodically conveyed. Like all writers who disturb received opinions, however erroneous, he was accused of indulging a dangerous liberty of discussion. He died at Haerlem in 1708.—*Le Clerc Bibl. Chois.*

VANDELLI (DOMINIC) an Italian physician and naturalist, who was the correspondent of Patrick Browne, at whose suggestion Linnaeus gave the name of Vandellia to a genus of plants of the order of Personatæ. Dr Vandelli published at Padua in 1761, a treatise in Latin, on the hot-baths in that neighbourhood, with notices of some cryptogamic plants growing in them. Being subsequently appointed superintendent of the royal botanic garden at Lisbon, he published there in 1771, a small "Fasciculus Plantarum," describing some supposed new genera and several new species, with figures. He likewise wrote on zoology; and he opposed Haller's doctrine of the insensibility of tendons and membranes, by which he gave great umbrage to that illustrious physiologist. Vandelli made a visit to London in 1815, and died not long after, at a very advanced age.—*Rees's Cycl.*

VANDER LINDEN (JOHN ANTONIDES) was born at Enckhuisen, January 13, 1609, his father being a learned professor of physic at Leyden. He was also brought up to physic, and became professor at Franeker in 1639, whence he removed to the chair of the same faculty at Leyden, which he filled with high reputation until his death on March 4, 1664. He wrote several works on medical subjects, together with a work entitled "De Scriptis Medicis," being a catalogue of books upon physic, which he several times enlarged during his life-time, and which was considerably more so after his death, in a thick quarto, under the title of "Lindenius Renovatus," Nuremberg, 1686. He was also editor of the works of Celsus and of Hippocrates.—*Eloy Diet. Hist. de Med.*

VANDER-MERSCH (JOHN ANDREW) born at Menin in the Netherlands, of a noble family, in 1734. After finishing his studies, which were particularly directed to mathematics and geography, he entered into the French service as a volunteer. He signalled his courage on many occasions in the seven years' war, and he at length arrived at the rank of lieutenant-colonel of cavalry. Having experienced however some injustice from his superiors, he quitted the French army for that of Austria in 1778, and after the peace of Teschen he retired, with the title and pay of a colonel, to his own estate. When the revolt

against the emperor Joseph II took place in the Austrian Netherlands in 1789, he was chosen commander of the insurgent forces, at the head of which he beat the imperialists at Turnhout, on the 27th of October, and having obtained various other advantages, he made his entry into Namur, the 17th of December. A misunderstanding afterwards arising between the general in chief and the sovereign congress of the states, the former was accused of treason, and an army was assembled to oppose him under the command of the Prussian general Schoenfeld. On that officer advancing against him, Vander-Mersch was obliged to submit; and going to Brussels to defend his conduct, the congress committed him a prisoner to the citadel of Antwerp, and he was afterwards confined at Louvain till the restoration of tranquillity. He died at Menin in 1792. He had a considerable share in the composition of a work entitled "Mémoire historique, et Pièces justificatives pour M. Vander-Mersch," Lille, 1791, 3 vols. 8vo, published by one of his officers named Dinne, who was adjutant general in La Vendée, and died in 1795.—*Biog. Nouv. des Contemp. Biog. Univ.*

VANDERMONDE (CHARLES AUGUSTIN) the son of a Flemish physician, settled at Macao in China, where he was born in 1727. Being brought to Europe by his father in 1731, he studied at Paris, and was admitted a member of the medical faculty. He took the degree of MD. in 1748. The first work which he published was "Histoire d'une Maladie singulière de la Peau," translated from the Italian, with valuable notes; and in 1756 appeared his "Essai sur les Moyens de perfectionner l'Espèce Humaine," which procured him great reputation. Shortly after he became editor of the "Journal Général de Médecine," still continued. He died May 28, 1762, leaving in manuscript papers relating to the state of medicine in China, partly derived from the notes and observations of his father.—*Biog. Univ.*

VANDERMONDE (——) a mathematician, born at Paris in 1735. He studied geometry under Fontaine, and afterwards under Dionis de Sejour, who introduced him to the notice of the Academy of Sciences, of which he was admitted a member in 1771. He published successively memoirs on the "Resolution of Equations," and other subjects; and in 1772 appeared his work on the "Elimination of unknown Quantities in Algebra." Vandermonde was very fond of music, the science of which he had profoundly studied; and at a public session of the Academy of Sciences in 1780 he established, according to two general rules, the succession of concords and the arrangement of parts, demonstrating that these two rules, recognized by musicians, depend on a higher law, which ought to govern the whole construction of harmony. This system was approved by Philidor, Gluck, Piccini, and other eminent composers. Vandermonde became a warm partisan of the Revolution, and was unhappily connected with the demagogues

whose influence was so perniciously exercised. After the suppression of the Academy of Sciences he was for some time director of the clothing department of the army. In 1795 he was appointed professor of political economy at the Normal School, and the same year admitted into the first class of the Institute. He died January 1, 1796, on his return from a sitting of the Institute, in consequence of a vomiting of blood, arising from a disease of the stomach, with which he had been for some years affected.—*Biog. Univ. Biog. Nouv. des Contemp.*

VANDERVELDE (WILLIAM) called the OLD, one of a distinguished family of painters, was born at Leyden in 1610. He was originally bred to the sea, but afterwards studied painting, and retained enough of his former profession to make it the source of his future fame. He became early distinguished for his excellence in marine subjects, which induced him to come to England with his son, both of whom entered into the service of Charles II. He repaid this service more gratefully than patriotically, by conducting, as it is said, the English fleet to burn Schelling. He was so much attached to his art, that in order to be a near spectator of sea engagements, he hired a light vessel, in which he approached both friends and enemies, in order to sketch all the incidents of the action upon the spot; and in this manner he is said to have been a spectator of the engagement between the duke of York and Opdam, and of the memorable three days' engagement between Monk and De Ruyter. He chiefly painted in black and white, on a ground so prepared on canvas as to give it the appearance of paper. He died at London in 1693.—*Walpole's Anecdotes.*

VANDERVELDE (WILLIAM) called the YOUNG, he was born at Amsterdam in 1633, and was the son of the preceding. After being carefully instructed by his father, he was placed under Simon de Vlioger, a celebrated marine painter, who however was far surpassed by his pupil. His subjects were similar to those of his father, whom he not only surpassed, but no age since the revival of art has produced his equal in his own peculiar line, of which Walpole calls him the Raphael. He was equally with his father a copyist of reality, and by order of the duke of York attended the engagement at Solebay in a small vessel; as also the junction of the English and French fleets at the Nore. The principal performances of this admirable artist are chiefly to be found in the royal collections and cabinets of England. He died April 6, 1707, in his seventy-fourth year.—*Ibid.*

VANDER-WERF (ADRIAN) a Dutch painter, born near Rotterdam in 1639. He was first instructed in his art by Piccolett, a portrait-painter, and he afterwards became a pupil of Vander-Neer. Having settled at Rotterdam, he obtained great reputation as a painter of portraits, and he executed a piece for M. Steen, a rich merchant of Amsterdam, which procured him the patronage of the elector palatine. That prince having visited Hol-

land with his family in 1696, went to Rotterdam, and ordered Vander-Werf to paint for him "The Judgment of Solomon," and his portrait. The artist took the pictures to Dusseldorf when they were finished; and the elector wished to retain him in his service, but he only engaged himself for six months in the year, receiving a handsome pension. In 1703 he went to present to his patron his "Christ carried to the Sepulchre," which is regarded as his best production. He was honoured with knighthood by the elector, who treated him with great liberality, augmenting his pension, and bestowing on him many marks of his esteem. He died at Rotterdam, November 12, 1722. Vander-Werf was particularly noted for his small historical pieces, which are most exquisitely finished, and which are still in high request, though his reputation is not quite equal to what it was during his life.—His brother and pupil, PETER VANDER-WERF, painted portraits and conversation-pieces, and was a very able artist. He died in 1718, aged fifty-five.—*Pilkington. Biog. Univ.*

VANDOEVREN (WALTER) a physician, born in Dutch Flanders in 1730. He was educated at Leyden and Paris, and on taking his degrees at the former university in 1753, he published a treatise on Worms, which procured him much reputation, and was translated into French. He became professor of anatomy and surgery at Groningen; and he was afterwards called to the medical chair at Leyden. He died of the gout in 1783. Besides two inaugural dissertations, he was the author of a much esteemed work on the Diseases of Females.—*Lond. Med. Journ. Biog. Univ.*

VANDYCK (sir ANTONY) a portrait painter of peculiar excellence, was born at Antwerp, March 22, 1598-9, being the son of a merchant in that city, by a mother who was very skilful in flower painting and needle-work. He received his first instructions from Van Bale, after which he entered the school of Rubens. He highly distinguished himself among the pupils of that great master, by whose advice he travelled for improvement into Italy, and resided at Genoa, Rome, and Venice, from which last place he derived the perfection of colouring that rendered him nearly the rival of Titian. The reports of the favour shown to the arts by Charles I drew him to England, where he was at first disappointed in the expected introduction; but subsequently he received an invitation from the king, through sir Kenelm Digby, with which he complied, and England was afterwards his principal abode. He was highly patronized at court, being employed to paint many portraits of the king and royal family; and in 1632 he received the honour of knighthood and a pension for life. According to Walpole, the prices of Vandyck were 40*l.* for a half portrait, and 60*l.* for a whole length; but it seems that he painted for the royal family sometimes so low as 25*l.* a portrait, and even less. He lived in a splendid style, kept the first company, and was himself a liberal patron of the arts. His works in

England, chiefly portraits, are exceedingly numerous, for he was very industrious, and many of his pieces rank among the most excellent productions of that branch of the art. He possessed a perfect knowledge of the chiar-oscuro; gave singular grace and variety to the airs of his heads; and a surprising expression of soul and character when really existing in his subjects. His colouring was also excellent, and no part of his figures was neglected. He drew hands with particular exactness and delicacy, and his draperies were at once grand and simple. He so little flattered the fair sex in his portraits, that we are left to wonder at the reputation of some celebrated beauties of the day. His earlier works in England are deemed the best, particularly some of the portraits of king Charles, of the duke of Buckingham, of lord Strafford, and of the Pembroke family. He latterly injured his fortune by high living, and vainly sought to repair it by the philosopher's stone, which only involved him the more; but he must have maintained a prosperous appearance, as the king negotiated for him a marriage with the daughter of lord Gowrie, by whom he left a daughter. His constitution early gave way to repeated attacks of the gout; and he died in London in 1641, at the premature age of forty-two, and was interred at St Paul's, Covent-garden. The engravings from this eminent master are very numerous.—*Walpole's Anec. Pilkington.*

VANE (sir HENRY) the younger, a conspicuous and extraordinary character, in the time of Charles I and the Commonwealth, was the son of Sir Henry Vane of Hadlow in Kent, and Raby castle in Durham; secretary of state and treasurer of the household to Charles I, until dismissed for taking part against the earl of Strafford. The subject of this article was born about 1612, and was educated at Westminster school, whence he was removed to Magdalen college, Oxford. He then proceeded to Geneva, from which he returned, much indisposed towards the English liturgy and church government. About this time several persons, who were uneasy at home on account of their religious opinions, migrated to New England; among whom was Vane, who notwithstanding his youth, was elected governor of Massachusetts; but his enthusiasm soon led the colonists to repent their choice, and his government terminated at the next election. He then returned privately to England, and with his father's concurrence married a lady of good fortune, and was appointed a joint treasurer of the navy. He was chosen to represent Hull in the next parliament, yet still kept on such terms with the royal party as to obtain knighthood. The spirit of the times, however, soon led him to take part against the court, and he was very instrumental in producing the condemnation of lord Strafford, and he also carried up to the Lords the articles of impeachment against archbishop Laud. He likewise acted as one of the parliamentary commissioners at the treaty of Uxbridge in 1645; and at the negotiations in the isle of Wight in 1648 he was an opposer of the

terms of peace. Either from policy or feeling, however, he had no immediate concern in the king's trial or death; but he was one of the council of state appointed to supreme power after that event. In 1651 he was appointed a commissioner to be sent into Scotland, in order to introduce the English government there. He continued a strenuous adversary to Cromwell during the whole progress of that leader to sovereignty, on which account the latter found means to imprison him in Carisbrook castle. He even sought to intimidate him by questioning his title to the Raby estate, notwithstanding which he continued inflexible during the whole of the protectorate. After the restoration of the long parliament he was nominated one of the committee of safety; when he strenuously exerted himself to restore republican government, until the Restoration put an end to all farther contest. On this event he had considered himself in no danger, but he was notwithstanding arrested and committed to the Tower as a person whom it was dangerous to allow to be at large. The convention parliament petitioned in favour of him and Lambert, and the king promised that his life should be spared. Charles II however kept his word in this instance much the same as in other matters, and sir Henry was brought to trial for high treason. Although accused only for transactions that occurred after the king's death, he was found guilty in the teeth of a defence of great vigour and ability, in which he pleaded that, if complying with the existing government was a crime, all the nation had been equally criminal. He farther observed that he had in every change adhered to the Commons as the root of all lawful authority. His trial took place early in June 1662, and on the 14th of the same month he was beheaded on Tower Hill, when he behaved with great composure and resolution. He began to address the people at the scaffold in justification of his conduct, but was rudely interrupted by drums and trumpets, which was deemed a novel, as it was certainly a most indecent practice. Sir Henry Vane, like most religious enthusiasts who interfere in politics, was a very doubtful and equivocal character, and mingled much fanatical speculation with an extraordinary degree of acuteness and general good sense. Although he employed craft and dissimulation as his means, there is little reason to doubt that he was sincere as to his ends, and the real convert to republicanism which he professed to be. His enemies scarcely charged him with mercenary views, and his friends regarded him as a mistaken lover of his country. He was the author of some writings, chiefly on religious subjects, upon which the cloudiness and confusion of his expressions and ideas singularly contrast with his clearness of mind on other subjects.—*Clarendon. Biog. Brit. Hume.*

VAN-EUPEN (PETER JOHN SIMON) grand penitentiary of Antwerp, distinguished among the Flemish revolutionary statesmen of the last century. He was born in 1744, and

having studied philosophy and theology at the university of Louvain, he entered into the church. He became successively professor at the episcopal seminary, curate of Cuntich, and canon and penitentiary of Antwerp. Though he opposed the innovations projected by Joseph II, he took no ostensible part in the proceedings of the insurgents against the Austrian government, till after the victory of Turnhout. (See *VANDER-MENSCH*.) He subsequently became secretary of the states of Brabant and of the sovereign congress; and he was considered as the soul of the aristocratic party. On the triumph of the Imperialists he fled to Holland. After the French conquest in 1794 he returned to his native country, but his intriguing disposition exciting the alarm of the police, he was arrested, and sent to Lisle, and afterwards to Paris, where he was imprisoned till after the death of Robespierre. He then retired to the village of Zutphaas, near Utrecht, where he exercised the sacerdotal office for ten years, and died May 14, 1804.—*Biog. Univ.*

VAN-EYCK (HUBERT). See *EYCK (H. VAN)*.

VAN-EYCK (JOHN). See *EYCK (J. VAN)*.

VAN-GOYEN (JOHN) a landscape painter and aquatinta engraver, born at Leyden in 1596. He was the disciple of William Geeritz and Isaiah Van den Velde. His compositions generally represent rivers with boats and fishing-barks, or peasants returning on the water from market, and in the background villages or small towns. Some of his engravings from his own designs are very rare, and bear a high price. He died at the Hague in 1656. *Biog. Univ.*

VAN-HÜGTENBURG (JOHN) a famous battle painter, born at Haarlem in 1646. He studied at Rome, and afterward at Paris, under Vander-Meulen. In 1670 he returned to Holland, where his reputation had preceded him, and his works became much in request. In 1710 prince Eugene took him into his service, and employed him to paint views of the battles and sieges in which he had been engaged. He practised engraving as well as painting, and executed many plates from his own designs, and those of Vander-Meulen. This artist carried on a lucrative commerce in paintings and engravings at the Hague, but he died at Amsterdam in 1733.—*Biog. Univ.*

VANIERE (JACQUES) a French poet of some note in the early part of the last century. He was born at Causes in the province of Languedoc, in the spring of 1664, and having received his education in the jesuits' college at Montpellier under Joubert, when he became of sufficient age, entered the order. Very early in life he displayed considerable talents for metrical composition, especially in the Latin tongue which he wrote with great facility and elegance. His principal production in this language is entitled "*Prædium Rusticum*," or "*The Country Farm*," a work in sixteen cantos, in which he has imitated the *Georgics* of Virgil with great success, though with too much of prolixity. This poem has

gone through several editions, the best of which is that of 1756, printed at Paris in 12mo. His other writings are a volume of "*Opuscula*," containing epigrams, epistles, &c.; and a "*Poetical Dictionary*," in Latin. Father Vaniere rose to be president of the seminary in which he was brought up, and afterwards of those belonging to his fraternity at Auch and Toulouse, in which latter city he died in 1739.—*Nouv. Dict. Hist.*

VANINI (LUCILLO) a writer stigmatised with atheism, was born at Taurozano, in the kingdom of Naples, in 1583, and was the son of John Baptist Vanini, steward to the viceroy of that kingdom. He was early sent to Rome for education, and he finished his studies, which were various, at Padua. His mind seems to have been perverted by the works of Cardan and Pomponatus, of which he most admired the least intelligible parts; and the philosophy of Aristotle and Averroes, with the absurdities of astrology, served to confirm his tendency to mysticism and delusion. He entered into ecclesiastical orders, and preached; but his discourses were in general unintelligible to his hearers, and very likely not much less so to himself. After having resided for some time in his own country, he travelled, with a view, it is said, of propagating his opinions, and visited Germany, the Netherlands, France, and England, in which last country his theological disputes on the subject of heresy subjected him to a brief imprisonment. On his return to Italy he for some time kept a school of philosophy at Geneva; but being regarded with suspicion, he again visited France, and lived partly at Paris and partly at Lyons, where in 1615 he published a mystical work, under the title "*Amphitheatrum eternæ Providentiæ, Divino-Magicum, Christiano-Physicum, Astrologico-Catholicum, adversus veteres Philosophos, Atheos, Epicureos, Peripateticos, et Stoicos*," which, although full of extravagance, exhibited nothing atheistical, and was formally licensed. The following year he composed another work, addressed to marshal de Bassompierre, entitled "*De Admirandis Naturæ Reginæ Deusque Mortalium Arcanis*," which was also printed with a privilege, but subsequently burnt by a decree of the Sorbonne. His imputed atheism in this production resembled that of some of the ancient sects, which ascribed to the goddess Nature the attributes of deity. On this incident he quitted Paris and proceeded to Toulouse, where he professed to teach philosophy, medicine and theology. Being, however, suspected of inculcating atheistical opinions, he was denounced, prosecuted, and condemned to have his tongue cut out, and to be burnt to death, which sentence was executed February 19, 1619. At his trial, so far from denying the existence of a God, he took up a straw, and said, that it obliged him to acknowledge the existence of one. Gramont, president of the parliament of Toulouse, gives an evidently prejudiced and sophisticated account of his deportment at his death, where it seems that, on refusing to put out his tongue

for the executioner to cut it off, it was torn from his mouth with pincers, such being the Christianity of the French district, which afterwards got up the tragedy of Calas. He suffered this cruel punishment in the thirty-fourth year of his age. Mosheim remarks that several learned and respectable writers regard this unhappy man rather as the victim of bigotry and prejudice than as a martyr to impiety and atheism, and deny that his writings were so absurd or so impious as they were said to be. A direct apology for Vanini was published by a learned lawyer, named Peter Arpe, and his life has been written in French by Durand, and translated into English in 1730. He was evidently a weak and vain enthusiast, but his treatment was much more brutally opposed to the doctrines of Christianity than any thing of which he had himself been the author.—*Tiraboschi. Mosheim. Life by Durand.*

VANLOO (JOHN BAPTIST) an eminent painter, was born at Aix in 1684, and distinguished himself at an early age, both in portrait and historical painting. He entered the service of the king of Sardinia, who kept him attached to his household; but he eventually gave up his appointment and settled at Paris. While in this capital he was induced to embark nearly the whole of his property, which was considerable, in Law's famous Mississippi project, the failure of which reduced him to indigence. He had however sufficient perseverance to attempt the realisation of a second fortune, and with that view came over to England, where he soon grew into great repute among the nobility, and acquired sufficient wealth to enable him to return once more with affluence to his native country. This artist possessed great quickness of invention, and drew with great facility. His touches were light and spirited, and he had a very fine tone of colouring, his carnations approaching those of Rubens. Most of his best pieces are to be found in the churches and private collections of Paris. His death took place in 1746.—*D'Argenville Vies de Peint. Walpole's Anec.*

VANLOO (CHARLES ANDREW) younger brother by many years, and pupil to the preceding, was born in 1704 at Nice. Having acquired a sufficient familiarity with the rudiments of painting at home, he went to Rome, and there completed his education in the art under Lutti. Afterwards settling at Paris he grew into great estimation at court, was created a chevalier of the order of St Michael, with the title of first portrait painter to the king, and the appointment of master of the royal school of painting. His branch was that of history, in which he showed a lively and fertile imagination, an elegant taste, and a solid judgment, with great power of pencil, and a sweet and brilliant tone of colouring. His principal performances are in the churches of Paris, the most admired being his "Peter healing the Cripple." His "Iphigenia in Aulis," is also very highly regarded. His death took place in 1765.—*Lewis Michael Vanloo and his brother, Charles Amadéus Philip, sons of John*

Baptist, also enjoyed a considerable degree of reputation, the one at Madrid, the other at Berlin, where they held appointments in the royal academies.—*Ibid.*

VAN-LOON (GERARD) a Dutch historian and numismatical writer, born at Leyden in 1683. He was the author of many learned works in his native language, including "The Medallic History of the Netherlands, from the Abdication of Charles V to the Peace of Baden, in 1716," 1723, 4 vols. folio; "The Ancient History of Holland," 1732, 2 vols. folio; "Modern Numismatics," 1734, folio; "A Description of the Ancient Dutch Government;" in six parts, 1744, 8vo; and he published an edition of the rhymed Pseudo-Chronicle of Klaas Kolyn, with literary and historical Observations, Hague, 1745. folio.—*Bing. Univ.*

VAN-MANDER (CHARLES) a Dutch poet, painter, and biographer, of the sixteenth century. He was a native of Meulebeke, born in 1548, and having early displayed a strong genius for the fine arts, travelled into Italy for improvement. On his return to his native country he settled at Haerlem, and there founded a school of painting, to which art, however, he did not so entirely devote his time as to prevent his cultivating the belles lettres. Several dramatic pieces of his production, both humorous and pathetic, were highly successful, while his "Lives of the Painters" afford a favourable specimen of his talents for prose composition. As an artist he excelled equally in fresco painting and in oils, in historical pieces and in landscapes. His celebrated picture of our first Parents in the Garden of Eden is a happy amalgamation of the two latter. His "Universal Deluge" is also much admired. Van-Mander died in 1605.—*Pilkington by Fuseli.*

VANNI (FRANCESCO) an eminent artist of the Italian school of painting, the pupil of Salimbeni, Passerotti, and afterwards of Da Vecchia. He was a native of Sienna, born about the year 1563. To great excellence as a painter he added a strong genius for mechanics and architecture, which latter he studied as a science with great perseverance and success. Vanni, whose paintings, executed chiefly after Corregio and F. Barocche, are principally on religious subjects, was held in great esteem by Pope Clement VIII, who knighted him, and gave him other and more substantial marks of his favour. There is a fine picture by him in the papal collection, on the subject of Simon Magus. His death took place at Rome early in 1610.—*Ibid.*

VANSOMER (PAUL) a portrait painter, who was born at Antwerp in 1576. He resided for some time at Amsterdam, and with his brother Bernard practised his art there with considerable success. In the beginning of the reign of James I he removed to London, where he was much employed; and his portraits are frequently to be found in the collections of our nobility. Among the portraits he executed, were those of king James and of his queen, Anne of Denmark. He died in January 1621, 2 B 2

and was interred in the church or cemetery of St Martin-in-the-fields, in which parish he probably had resided.—*Walpole. Reses's Cyclop.*

VAN-SWIETEN (GERARD) a celebrated physician, born at Leyden, May 7, 1700. After studying at Louvain, his parents being Catholics, he returned to Leyden, and became the pupil of Boerhaave. In 1725 he took his doctor's degree, and published an inaugural thesis "On the Structure and Use of the Arteries." He afterwards employed himself in illustrating the doctrines of his master, in his "Commentaria in H. Boerhaavii Aphorismis de Cognoscendis et Curandis Morbis," of which the first volume appeared in 1741. Soon after he was appointed to a medical professorship at Leyden; but objections arising on the score of his religion, he was obliged to resign his office. The empress Maria Theresa indemnified him abundantly for the injury he had sustained from the illiberality of his enemies, by inviting him to Vienna, where in 1745 he was made a professor in the university, and afterwards first physician to the empress and a baron of the empire. He was also imperial librarian, and director-general of the study of medicine in Austria, an office which afforded him opportunities for introducing many important improvements in the healing art. He continued his work on the Aphorisms of Boerhaave, which was completed by the publication of the fifth volume in 1772. These commentaries were reprinted at Paris and Turin, and they have been translated into French and English. He enjoyed the highest reputation till his death, which took place at Schoenbrunn, June 18, 1772; and he was interred in the Augustine church at Vienna. He was the author of a treatise on the Diseases of the Army; and of a work on Epidemics, the latter of which was published posthumously, by professor Stoll, 1782, 2 vols. 8vo.—*Eloy Dict. Hist. de la Med. Biog. Univ.*

VANUDEN (LUCAS) a Dutch painter and engraver of the seventeenth century, born at Antwerp about the year 1595. He assisted Rubens in putting in the back-grounds to his paintings, and in his own landscapes was remarkable for the delicate accuracy with which his foliage and other objects are delineated. His death took place in 1660, or as others say in 1663. Some of the etchings by this artist are much admired.—*D'Argenville. Pilkington.*

VANVITELLI or VAN VITEL (CAR) a painter, born at Utrecht in 1647. He went to Rome at the age of nineteen, and by his application to the study of nature and the antique, he became eminent as a painter of architecture and landscape. He visited Venice, Bologna, Milan, and Florence; and returning to Rome, he settled there, and was admitted a Roman citizen, and made a member of the academy of St Luke. He died in 1736.—VANVITELLI (LOUIS) son of the preceding, one of the most celebrated architects of modern times, was born at Naples in 1700. He first studied painting, but afterwards applied himself to architecture, under Ivara. Cardinal de St Clement employed him to restore the Al-

bani palace at Urbino, where he also constructed the churches of St Francis and St Dominic. He was then appointed architect of St Peter's; and though that magnificent edifice had been previously completed as to its principal parts, the architect found ample scope for the exercise of his genius, in the arrangement of Mosaics and other interior decorations. Among the buildings he erected at Rome, the most considerable was the monastery of St Augustin. His reputation at length induced the king of Naples, Charles III (afterwards king of Spain) to choose him as the architect of his projected palace at Caserta, a structure in grandeur and magnificence not inferior to any work of the kind in Europe. Vanvitelli left many other monuments of his talents in various parts of Italy; and after long holding a high station in his profession, he died at Caserta in 1773. He published from the royal printing-office at Naples, in 1756, "Plans and Designs of the Palace of Caserta."—*Nitizia Memorie degli Architetti. Biog. Univ.*

VARCHI (BENEDETTO) an eminent man of letters, was born at Florence in 1502, being the son of a lawyer of that city. He was educated at the university of Padua, where he made a great progress in the belles lettres, but was designed for the law, which he studied during the life of his father, and was even admitted a notary. When the decrease of his parents left him at liberty to pursue his own inclinations, he forsook the law, and devoted himself entirely to literature. He accordingly studied the Greek language and philosophy, until driven from Florence by his attachment to the Strozzi. He returned to Padua, where he became a member of the Academy degli Infiammati, and read public lectures on morals and literature. The grand duke of Tuscany, Cosmo I, hearing of his reputation, invited him back to Florence, although he had opposed the Medici, and assigned to him the office of writing a history of the late revolution. Whilst thus employed he was attacked at night by some persons, who feared that his strictures might be unfavourable to them, who stabbed him in several places. He however recovered, and had either the prudence or the lenity not to name the parties, although he knew them. Cosmo recompensed him for his services with the provostship of Monte Varchi, on which occasion he took holy orders; but before he could remove thither he was carried off by an apoplexy in 1565, at the age of sixty-three. Varchi was a man of indefatigable industry, and there is scarcely a branch of literature which he did not cultivate. His "Storia Fiorentina," although comprising only the period of eleven years, is very voluminous, and is written in a diffuse languid manner. It is also charged with gross adulation to the house of Medici. Varchi likewise wrote poems and a comedy, and as a grammarian obtained reputation by his dialogue entitled "L'Ercolano," on the Tuscan language. His "Lezioni lette nella Accademia Fiorentina," display a very multifarious erudition; and upon the whole Italian

V A R

literature was highly indebted to him.—*Moreri. Tiraboschi.*

VARENIUS. There were two of this name, **AVGVSTVS**, a learned Lutheran divine of the seventeenth century, was born at Lunenburg in 1620. He was celebrated for his familiar acquaintance with early Oriental literature and his knowledge of the Scriptures, which he is said to have committed to memory in the original language. He was also the author of a Commentary on the Prophecies of Isaiah, in one volume, 4to, and died in 1684.—**BERNARD VARENIUS**, a native of Holland, travelled in quality of physician to some of his countrymen to the Japanese Islands and the kingdom of Siam, of which countries he afterwards published an account in the Latin language. He was also the author of a useful work entitled "*Geographia Universalis*," 8vo, of which there are translations both in French and English; the former by Puisieux, in 4 vols, 12mo; the latter by sir Isaac Newton, 2 vols. 8vo, 1672. His death took place in 1660.—*Nouv. Dict. Hist.*

VARGAS (FRANCIS) a Spanish lawyer, who held several judicial offices under Charles V and Philip II. He was a member of the Supreme Council of Castile, and for a long time advocate-fiscal. The emperor in 1548 sent him to Bologna, to protest against the translation of the Council of Trent to that city; and in 1550 he was sent to Trent to congratulate the fathers of the council on their return thither. After the dissolution of the council he resided seven or eight years in a public capacity at Venice; and he was subsequently envoy from Philip II at Rome, where he was highly respected by the pope and the cardinals. Towards the close of his life he retired to a monastery near Toledo, where he died in 1560. He was the author of a treatise "*De Episcoporum Jurisdictione et Pontificis Max. Autoritate*," Venice, 1563, 4to; and "*Letters and Memoirs relative to the Council of Trent*," a French translation of which was published by Levasseur, Amsterdam, 1700 and 1720, 8vo.—*Moreri. Aikin. Biog. Univ.*

VARGAS (LOUIS de) a Spanish painter of eminence, born at Seville in 1502. He studied at Rome, under Pierino del Vaga, and after fourteen years' residence there, he returned to his native place, where he acquired great reputation. The first piece he executed, representing "*The Nativity*," attracted much notice; and he afterwards painted a representation of "*The Temporal Generation of Jesus Christ*," and many works in fresco, for the cathedral of Seville. His skill was also displayed as a portrait-painter, and his portrait of the duchess of Alcana has been ranked with the finest productions of Raphael in the same department. His death took place in 1568.—*Biog. Univ. Pilkington.*

VARGASY PONCE (don JOSEPH) a Spanish geographer and navigator, born at Seville or Cadix about 1755. He had already made himself known by a Eulogium of King Alphonso the Wise, which the Royal Academy

V A R

of Madrid had crowned and published in 1782, when he was appointed an assistant to D. Vincent Tofino in the formation of the "*Atlas of the Spanish Coasts*." He resided some time at Ivica, while engaged in this undertaking, which led to the publication of his "*Description of the Pityusas and Bileares*," Madrid, 1787, 4to. He afterwards published, by order of the king, "*An Account of the last Voyage to the Straits of Magellan, made by the Frigate Santa Maria de la Cabeza*," 1788, 4to. Vargas was a member of the Academy of History; and he had become captain of a frigate when he quitted the service. He sat as a member of the Cortes after the revolution of 1820, and he died at Madrid in 1821.—*Biog. Univ.*

VARIGNON (PIERRE) an eminent French mathematician, was born at Caen in 1564. He was the son of an architect, and was intended for the church, but early showed a great fondness for mathematical pursuits, which, by the generosity of the abbé St Pierre, who studied at the same college, he was enabled to indulge. So much attached was the latter to Varignon, that he took him with him to Paris in 1686, where the two friends resided together. Here he became acquainted with many other men of science and learning, and made himself favourably known to the public by a work entitled "*Projet d'une Nouvelle Mécanique*." This work, which contained many new ideas, procured for him the offices of geometrician in the Academy of Sciences, and of professor in the college of Mazarin. In 1690 he published "*Nouvelles Conjectures, sur le Pésanteur*;" and when the science of infinitesimals was first promulgated, he became one of its most early cultivators. Although possessed of a strong constitution, he brought on a dangerous illness by intense study, which on his recovery he recommenced with as much ardour as ever. The last two years of his life he was afflicted with an asthmatic complaint, which carried him off suddenly, after delivering a lecture at the college of Mazarin, on the 22d of December 1722. The private character of Varignon was as simple and amiable as his scientific one was profound. Few mathematicians have laboured more in the theory of the mathematics, into which he introduced a spirit of generalization, while he simplified many of its principles, and resolved a number of questions which had not been before touched. Besides the works already mentioned, he was author of "*Nouvelle Mécanique ou Statique*," an enlargement of his first work, 1725, 2 vols. 4to; "*Un Traité du Mouvement et de la Mesure des Eaux Courantes*," 1725, 4to; "*Eclaircissement sur l'Analyse des Infiniment-petits*," 4to; and "*Des Cahiers de Mathématiques*." He also wrote a strange work for a mathematician, to prove the possibility of the real presence in the Eucharist. His Memoirs in the Academy of Sciences are extremely numerous.—*Niceron. Hutton's Math. Dict.*

VARILLAS (ANTONY) a French historian, was born in 1624 at Gueret, in the Upper L^r Marche, where his father was an attorney

the presidential court. After being employed as a domestic tutor in his native province, he came to Paris, and was patronized by Gaston duke of Orleans, who gave him the title of his historiographer. In 1655 he obtained a place in the royal library, where he prosecuted his historical studies with great assiduity. He was a pleasing writer as regards style, but was more solicitous to please the general reader by the ease and vivacity of his narrative, than by the accuracy of his relations, which has ultimately rendered his historical productions of little or no value. He was however at first successful, and obtained a pension from Colbert, of which he was subsequently deprived; but he obtained another from the French clergy, for a work entitled, "*Histoire des Révolutions arrivées en Europe en Matière de Religion*," a party performance, which produced a severe critique from bishop Burnet; and the numerous mistakes and falsifications in which have been ably exposed by Bayle and others. With the exception of the foregoing work, his writings relate chiefly to French and Spanish affairs; but as they are seldom at present either read or quoted, it would be useless to enumerate their titles. He died in 1696.—*Huet de Robus Suis. Nouv. Dict. Hist.*

VARIN, or WARIN (JOHN) an engraver of medals, who was a native of Liege, and being the son of an attendant of the count de Rochefort, he was admitted very young among the pages of that prince. At his leisure he cultivated the art of drawing, and having acquired great skill, he devoted himself to engraving of medals, in which art he made many improvements. In 1635 he executed the seal for the then newly-founded French Academy, and soon after he was appointed to the direction of the mint, to which was afterwards added the office of intendant of the crown buildings. He practised the art of statuary, and was one of the first members of the academy of painting and sculpture. He executed the statue of Louis XIV in marble, besides two busts of that prince in marble and bronze, of colossal proportions; and he had undertaken a medallion history of his reign, when he died, at the age of sixty-eight, in 1692.—*Perrault. Biog. Univ.*

VARIN (JOSEPH) an eminent French engraver, born at Chalons-sur-Marne in 1740. He studied his art first under his father, who had founded at Chalons, in 1755, a gratuitous school of design; and he afterwards went to Paris, where he was protected by count de Caylus and other amateurs. He first devoted himself to engraving maps and architectural designs, and in conjunction with St. Aubin he executed the plates for Blondel's "*Treatise of Architecture*," &c. In 1766 he was employed with his brother, who was also an engraver, to transfer to copper plates the designs of Moreau and Blarmerbergh, representing the fêtes which took place at Rheims, on the inauguration of the pedestrian statue of Louis XV. He subsequently made engravings for the "*Voyage pittoresque de Naples et de Sicile*,"

of St Non; the "*Voyage en Grèce*" of Choiseul-Gouffier; the "*Tableau de l'Empire Othoman*;" the d'Oulsson; and various other works. The Revolution deprived this able and industrious artist of his property; and he died November 6, 1800.—*Biog. Univ.*

VAROLI (CONSTANTINO) a Bolognese surgeon of the sixteenth century, celebrated as one of the first anatomists of the age in which he lived. He was born about the year 1542, and having distinguished himself by the success of his practice, especially in his operations for the stone, came to Rome, where he read lectures to a numerous assemblage of pupils both in surgery and medicine. His reputation at length induced pope Gregory XIII to make him first physician to the papal court. He was the author of a valuable treatise on the optic nerves, and of another on the construction of the human frame. Varoli died in the prime of life in 1575.—*Eloy Dict. Hist. de la Med.*

VARRO (MARCUS TERENTIUS) usually considered as the most learned of the ancient Romans, was born BC. 118. He early served his country in various considerable posts, and at first joined the party of Pompey in the civil war against Cæsar, but soon submitted to the latter; by whom he was so much esteemed, that when that eminent leader adopted the design of forming a public library at Rome, he fixed upon Varro as the person to whom the collection of books should be confided. The death of Cæsar interrupted this design, and Varro was involved in the proscriptions of the triumvirate, from which he escaped with life, but with the loss and dispersion of his valuable library. On the restoration of tranquillity he devoted himself to his studies in retirement, continuing to compose books so late as his eighty-eighth year. He survived to the age of ninety, dying about BC. 27. The prose writings of Varro were exceedingly numerous, and treated of various topics in antiquities, chronology, geography, natural and civil history, philosophy, and criticism. He was besides a poet of some note, and wrote in every kind of verse. Of his works however there only remain three books "*De Re Rustica*," five "*De Lingua Latina*," which he addressed to Cicero, who in his turn dedicated his Tusculan Questions to Varro; some fragments of his "*Menippean Satires*;" and a few of his epigrams. His whole works, with the notes of Scaliger, Turnebus, &c. were printed by Henry Stephens, 1573, 8vo, and again in 1581. The work "*De Re Rustica*" is scarcely worthy the very high reputation of Varro, being filled with much trite matter and many absurdities, but it is still amusing, as giving a notion of the agriculture of his day, and the method of laying out gardens and providing for the luxuries of the table among the Romans. A good translation of this work appeared in 1800, 8vo, by the rev. T. Owen, of Queen's college, Oxford.—*Vossii Poet. Lat. Brucker. Saxii Onom.*

VARRO (ATACINUS) a contemporary of the preceding, and sometimes confounded with

him, was a native of Atace, in the Narbonnensian Gaul. He wrote an esteemed poem, entitled "De Bello Sequanico," and also translated into Latin verse the Argonautics of Apollonius Rhodius, which is liberally commended by Quintilian. A few fragments of his poetry are to be found in the *Corpus Poetarum Latinorum*.—*Vassi Poet. et Hist. Lat. Tiraboschi.*

VARTAN, *Vertabied*, or Armenian Doctor, one of the most learned writers Armenia has ever produced. He flourished in the thirteenth century of the Christian era; and he was the author of a "History of Armenia," from the commencement of the world to A.D. 1267; "Fables," partly original and partly from Æsop; "Poems;" "Commentaries on the Old Testament;" "Homilies;" and various other works. The Armenian History of Vartan is preserved in MS. in the library of the Armenian convent at Venice, but it has never been printed. The fables were published, with a French translation, by J. M. St Martin, Paris, 1825, 8vo.—*Biog. Univ.*

VASARI (GROZZO) a Florentine artist of the sixteenth century, eminent as a painter, architect, and author. He was born in 1512, or as others aver in 1514, at Arezzo, in the dominions of the grand duke, and at first studied the art of painting on glass under the celebrated William of Marseilles. This branch of the profession he afterwards abandoned for the higher department, and became the pupil of Andrea del Sarto, and afterwards of Michael Angelo, while his progress in classical learning was so far from being neglected, that he is said to have been able to repeat the entire Æneid before he had attained his tenth year. Those munificent patrons of the arts, the Medici family, gave him great encouragement, and the literary work by which he is principally known as an author, "The Lives of the most excellent Painters, Sculptors, Architects, &c." Florence, 1550, 2 vols. 4to, was written at the instigation and under the auspices of the cardinal of that name. A second edition of this treatise appeared in 1568, 4to, 3 vols. a third in 1571, and a fourth at Rome as late as 1758, in 7 vols. His death took place in 1574. His nephew of the same name printed a treatise on painting, Florence, 1619, in 4to.—*Moreri. Tiraboschi. Duppa's Life of Mich. Angelo.*

VASI (JOSEPH) an engraver and designer of antiquities, born in Sicily in 1710. He settled at Rome, where he passed the greater part of his life, employing himself in the production of various works, which procured him the title of a knight of the golden spur. He was particularly patronized by pope Benedict XIV and Charles III of Naples; and he published a collection of the finest public monuments of Rome, including buildings, gardens, fountains, &c. 1761, 10 vols. folio, with descriptions by father Bianchini. This was followed by his "Tesoro Sacro," exhibiting the Roman basilicas, churches, cemeteries, sanctuaries, &c. 2 vols. and in 1777 he published "Itinerario istruttivo di Roma nella Pittura, Scultura, e Architettura, &c." of which there

is an abridgment in 16mo, often reprinted. Vasi died at Rome, April 16, 1782. J. B. Piranesi was one of his pupils.—*Biog. Univ.*

VASSALLI-EANDI (ANTON-MARIA) a learned Piedmontese, born at Turin in 1761. He was educated under his uncle, who was a professor at the university of Turin, and in 1779 he was elected to a place at the royal college of the provinces, where he studied philosophy under the celebrated father Beccaria. In 1785, having become a priest, he was sent as professor of philosophy to Tortona, and he published in 1786 a botanical dissertation, which procured him the acquaintance of Senebier, Saussure, Toaldo, and Volta. In 1792 he was called to Turin, where he was made supplementary professor of physics. After the overthrow of the Sardinian monarchy by the French, Vassalli continued his labours as a public teacher, and he was sent to Paris in 1799, as a member of the commission for the reformation of weights and measures. After the battle of Marengo, in 1800, he returned to Turin, where he was appointed professor of physics. He became a member of the Legislative Consulta, and in 1805 he received from Buonaparte the cross of the legion of honour. On the return of the king of Sardinia to his territories in 1814, Vassalli was displaced from his chair, retaining however the title of honorary professor, and that of perpetual secretary of the Academy of Sciences. In 1819 he obtained a salary as director of the Museum of Natural History and of the Observatory. He died July 5, 1825. Among the works he published are a memoir "On the Affinities of the Gases;" "Physicæ Elementa et Geometriæ," 3 vols. 8vo; "Letters on Galvanism;" besides memoirs of the Academy of Sciences of Turin from 1792 to 1809; annals of the Observatory from 1809 to 1818; and meteorological observations from 1757 to 1817.—*Biog. Univ.*

VASSOR (MICHAEL) a French writer of singular character, was born at Orleans in 1648. He was a member of the congregation of the Oratory, where he distinguished himself as much by eccentricities as by his learning. In 1690 he forsook the Catholic communion, and removed to Holland, whence he was invited to England, and obtained a pension from William III. He died here in 1718, aged seventy. He wrote a theological treatise and paraphrases of the Gospels and Epistles, but his principal work is a history of Europe during the reign of Louis XIII, in 20 vols. 12mo, and 7 vols. 4to.—*Nouv. Dict. Hist.*

VATABLUS, the assumed name of Francis Gastbled, a native of Gamache in Picardy, distinguished as an eminent biblical scholar in the earlier moiety of the sixteenth century. Francis I made him professor of Hebrew in the Royal College at Paris, where the learning and ingenuity he displayed procured him many pupils, especially among the Hebrew nation itself. Robert Stephens having procured a surreptitious copy of his lectures, digested them into a series of annotations which he affixed to the version of the Bible by Leo Suda, 1545. The publication

of this commentary caused much discussion, and almost a schism in the church; the doctors of the Sorbonne condemning it as impious and heretical, while its orthodoxy was as strenuously maintained by the university of Salamanca. The best edition of these notes is that of 1729, folio, 2 vols. Vatablus was afterwards engaged in Marot's version of the Psalms, and in translating some of the works of Aristotle. He died in 1547.—*Dupin*.

VATER (ABRAHAM) an eminent physician, the son of Christian Vater, professor of medicine at Wittemberg, and author of some works on medicine and philosophy, who died in 1732. The subject of this article was born at Wittemberg in 1684, and in 1710 he was nominated to the first medical chair in that university. He travelled for improvement in Germany, Holland, and England; and on his return to Wittemberg he exchanged his professorship for that of botany and anatomy, which king Augustus II. endowed with royal magnificence. He formed an anatomical cabinet, and he had the honour of first introducing into Germany inoculation for the small-pox. His death took place November 18, 1751. His works, which are written in Latin, relate to the structure of the lungs, the secretion of the nervous fluid, the gravid uterus, calculous diseases, &c. besides a description of his anatomical museum, a system of physiology and some tracts on botany.—*Biog. Univ.*

VATER (JOHN SEVERINUS) a distinguished writer on philological literature, born at Altenburgh in Saxony, in 1771. He was appointed professor at the university of Jena in 1798, and the following year he obtained the chair of the Oriental languages at Halle. He removed in 1810 to Königsberg, where he was made professor of theology; but in 1820 his literary projects recalled him to Halle, and he resumed his office as Oriental professor, which he retained till his death in March, 1826. Professor Vater was the editor and continuator of Adelung's treatise on languages, entitled "Mithridates;" besides which he published "Synchronistic Tables of Ecclesiastical History;" "General Archives of Ethnography and Linguistic Science;" "Linguarum totius Orbis Index Alphabeticus;" "An Universal Chronological History of the Christian Church, from the Reformation to our own Time;" and many other works, for which we must refer to our authority.—*Id.*

VATEL, or WATTEL (EMER de) an eminent publicist, was the son of a clergyman of Neuchâtel, where he was born April 25, 1714. After completing his studies he went to Berlin, and subsequently to Dresden, where he was introduced to the king of Poland, elector of Saxony, who received him with great kindness, and some years after he was appointed privy counsellor to the elector. He was residing at Dresden in 1765, when his health began to decline, and he sought relief from the air of his native country, but the removal proved ineffectual, and he died at Neuchâtel in 1767, in the fifty-third year of his age. He owed his early literary reputa-

tion to works which are little known in this country, namely, "A Defence of the Philosophy of Leibnitz against M. de Crousaz," published in 1741, and "Pièces Diverses de Morale et d'Amusement," Paris, 1746. His grand work did not appear until 1758, when it was published at Neuchâtel, under the title of "Droits des Gens, ou Principes de la Loi naturelle, &c." It was translated into most of the leading modern languages, including the English, in which it is entitled "The Law of Nations, or Principles of the Law of Nature, applied to the Conduct and Affairs of Nations and Sovereigns," 1760, 4to, and 1793, 8vo. This work was particularly admired in England, from the predilection of the author for English authorities, while several of the maxims of Puffendorf and Grotius, who too often adapted their opinions to the states in which they lived, are forcibly refuted. In general Vattel takes the celebrated Saxon philosopher Wolff for his guide; but he differed with him in some points, in relation to which he published in 1762, "Questions sur le Droit Naturel, et Observations sur le Traité du Droit de la Nature de M. le Baron de Wolff." The authority of this able writer since his death has rather increased than diminished.—*Nowv. Dict. Hist. Biog. Univ.*

VATTIER (PETER) a learned Orientalist, born at Lisieux in Normandy, in 1623. Having studied medicine and taken the degree of doctor in that faculty, he settled at Paris, and became physician to Gaston duke of Orleans. In 1658 he obtained the professorship of Arabic at the college de France, and he held it till his death in 1667. He published an abridgment of the Mahometan history, 1657, 4to; the History of Tamerlane the Great, 1658, 4to; a portraiture of Tamerlane the Great, with a sequel, 4to; besides the Logic of Avicenna, from the Arabic, and other translations from the same language.—*Moreri. Biog. Univ.*

VAUBAN (SEBASTIAN LE PRESTRE, seigneur de) marshal of France, and the greatest engineer which that country has produced, was the son of Urban, seigneur de Vauban, a descendant of an ancient and noble family of Nivernois. He was born May 1, 1633, and early entered the army, where his uncommon talents and genius for fortification soon became known, and were signally displayed in various successive sieges. He consequently rose to the highest military rank by his merit and services, and was made governor of the citadel of Lisle in 1668, and commissioner-general of fortifications in 1678. He took Luxembourg in 1684, and was present in 1688 at the sieges and capture of Philippsburg, Mannheim, and Frankendal, under the dauphin. He was made marshal of France in 1703, and died at Paris March 30, 1707, aged seventy-four. Marshal de Vauban was a man of high and independent spirit, of great humanity, and altogether devoted to the good of his country. As an engineer he carried the art of fortifying, attacking, and defending towns, to a degree of perfection unknown before.

tified above three hundred ancient citadels, erected thirty-three new ones, had the principal management and direction of fifty-three sieges, and was present at a hundred and forty-three engagements. His works consist of a treatise entitled "*La Dixme Royale*," 1704, 4to and 12mo; a plan for a consolidation of the taxes; and a vast collection of MSS. in twelve volumes, which he calls "*Mea Oisi-vetés*," which contain his ideas, reflections, and projects for the advantage of France. The following works have also been published either under his name or avowedly from his ideas: "*Manière de Fortifier par M. de Vauban, mise en ordre par le Chevalier de Cambray*," 1689 and 1692; "*L'Ingénieur Français*," with notes by Herbert; "*Nouveau Traité de l'Attaque et de la Défense des Places, suivant le Système de M. Vauban*," 1736; "*Essais sur la Fortification, par M. de Vauban*," 1746.—*Eloge par Fontenelle. Nouv. Dict. Hist.*

VAUGELAS (CLAUDE FAVRE de) an elegant French writer, born in 1585, at Chamberry, of an ancient and respectable family, long settled in that neighbourhood. He held a situation in the household of the duke of Orleans, and had acquired so high a character as a critic and philologist, that cardinal Richelieu, in his favourite design of forming a complete dictionary of the French tongue, thought it advisable to put the whole project under his superintendence. His services on this occasion were requited by the payment of the arrears of a pension which had been withheld from him, a cheap recompence, arising from his own property; but the lasting reputation which he acquired by the work, formed perhaps his best reward. He was the author of a valuable treatise, entitled "*Remarks on the French Language*," in one quarto volume, and of a singularly faithful as well as elegant translation of "*Quintus Curtius' Life of Alexander the Great*," which latter work, owing to his fastidious nicety in composition, is said to have occupied him nearly thirty years, in which time it was more than once nearly rewritten. His death took place about the middle of the seventeenth century.—*Niceron. Nouv. Dict. Hist.*

VAUGHAN (sir JOHN) a learned chief-justice of the Common Pleas, was born in Cardiganshire in 1608, and educated at Worcester school, whence he removed to Christchurch, Oxford, and next to the Inner Temple, where he contracted an intimacy with Selden, who made him one of his executors. During the civil war he lived in retirement, but at the Restoration he was elected member of parliament for the county of Cardigan, and in 1668 made chief-justice of the Common Pleas. He died in 1674. Sir John Vaughan's "*Reports and Arguments*" in the Common Pleas are all special cases, and ably reported. They were first printed in 1677, and again in 1706 by his son Edward Vaughan.—*Bridgman's Legal Bibliography.*

VAUGHAN (HENRY) commonly known by his assumed name of the Silurist, adopted that appellation somewhat affectedly, from the place

of his nativity, Newton in Brecknockshire, a county forming part of the ancient kingdom of the Silures. He was born in 1621, and studied at Jesus college, Oxford, in which his brother, Thomas Vaughan, also held a fellowship. He afterwards settled in his native province, and practised medicine there, although he appears never to have graduated either in physic or in arts. His writings consist of "*The Mount of Olives*," a poem, "*Thalia Rediviva*," "*Olor Iacanus*," and "*Silex Scintillans, or the Bleeding Heart*." His death took place in 1695.—The THOMAS VAUGHAN before alluded to, is known as the author of some absurd treatises on Alchymy and Judicial Astrology, to which he was devoted, though a clergyman, and a man of talent as well as learning. He had however sufficient sense not to give them to the world under his own name, but under the fictitious one of Eugenius Philalethes. They are now deservedly forgotten. He died rector of St Bridget's in Brecknockshire, in 1666.—*Athen. Oxon. vol. ii.*

VAUGHAN (WILLIAM) an ingenious Welsh poet, descended of a highly respectable family in Carmarthenshire, the seat of which was known by the name of Golden Grove, was born in 1577, and having gone through the usual course of academical education at Jesus college, Oxford, the favourite college of the principality, graduated in that university as L.L.D. He was the author of a variety of miscellaneous poems, the principal of which are entitled "*De Sphærarum Ordine*," "*The Golden Fleece*," 4to; "*The Golden Grove moralized*," &c. and of a metrical version of the Psalms and Solomon's Song. Some time previously to his decease he quitted England for Newfoundland, where he remained till his death in 1640.—*Ibid. vol. i.*

VAUVENARGUES (LUC DE CLAPIERS, marquis de) a French writer of eminence on moral philosophy. He was born at Aix in Provence, in 1715; and at the age of seventeen he entered into the army as a sub-lieutenant, and served in Italy, in the campaign of 1734. He was again employed in Germany in 1741, when the fatigues he underwent ruined his health, and obliged him to retire from the service. He afterwards endeavoured to obtain a diplomatic employment, but he was disappointed; and he passed the remainder of his life in study, the fruit of which appeared in his "*Introduction à la Connaissance de l'Esprit Humain*," which he published in 1746. His death took place the following year, in which a new edition, corrected and enlarged, from the papers he had left behind him, was published by the abbés Trublet and Séguy. This work has been several times reprinted with additions; and in 1818 appeared a supplementary volume of the writings of Vauvenargues, containing "*Dialogues*," "*Pensées Diverses*," "*Paradoxes*," "*Réflexions et Maximes*," "*Characteres*," "*Eloge de Louis XV.*" &c. This Supplement is included in a complete edition of his works, published at Paris, 1821, 3 vols. 8vo.—*Nouv. Dict. Hist. Bug. Univ.*

VAUVILLIERS (JEAN FRANÇOIS). There were two learned French professors of this name, father and son, the elder of whom read lectures on eloquence and Greek in the university of Paris, with considerable reputation, about the beginning of the last century. A treatise written by him, on the excellence of Greek literature, gives a favourable specimen both of his taste and scholarship.—The son, born in 1736, was educated under his father, and in 1778 himself succeeded to the professor's chair. This situation he filled with great ability till the Revolution, when becoming obnoxious to the prevailing faction, on account of his aristocratical principles, he fled to Russia. He published some clever essays on the writings and genius of Pindar and Horace; "An Historical Examination of the Government of Sparta;" and a "Selection from the Works of various ancient Greek Authors, for the Use of the Military School," in six duodecimo volumes. His death took place at St Petersburg in 1800.—*Biog. Moderna.*

VAUX. The name of a noble English family, originally of French extraction, which during the fifteenth and sixteenth centuries was possessed of considerable property in the county of Northampton, where was situated their family seat of Harrowden.—**NICHOLAS**, first lord **VAUX**, was the son of sir William Vaux, and himself received the honour of knighthood for his gallantry at the battle of Stoke in 1487. He ranked deservedly high in the favour of Henry VIII, who carried him with him into France, where he was present at the celebrated meeting between that king and the French monarch in the "field of cloth of gold;" and was afterwards ennobled. His death took place in 1530.—His son, **THOMAS** lord **VAUX**, who inherited the talents and valour of his father, and succeeded him in the esteem of his prince, was born in 1510. He attended Henry on his second French expedition, and was made governor of Jersey, with the collar of the order of the Bath. Like many of the young nobility of the age, he joined the cultivation of poetry to the study of martial exercises; and several of his poetic effusions are yet to be found in *The Paradise of daintie Devyces*, of which his "Aged Lover's Renunciation of Love," and "The Assault of Cupid," have been much admired. His death took place soon after the accession of Mary to the throne.—The noble French family, with which the one above mentioned is supposed to have been collaterally connected, was long settled in the vicinity of Geneva: **NOËL JORDAN DE VAUX**, one of its most eminent members, distinguished himself by a long course of military service in the wars of the last century. He was born about the year 1705, and having entered the French army at an early age, rose in it eventually to the rank of a general and marshal of France. In the course of his long life, which was extended to the commencement of the Revolution, he was present at fourteen pitched battles and nineteen sieges, in one of the latter of which, that of Bergen-op-Zoom, he received a severe wound

from the bursting of a bomb-shell; among the former may be reckoned those of Guastalla, Parma, Fontenoy, and Rocroix. He was a good officer, but a severe disciplinarian, which occasioned some charges of cruelty to be exhibited against him while governor of Corsica, of which island he completed the reduction in 1769. On inquiry, however, he satisfied his government that the severity he had used was justified by circumstances. He died in the autumn of 1788 in the province of Dauphiné, whither he had been despatched to quiet some local manifestations of popular discontent.—*Walpole's Royal and Noble Authors. Biog. Univ.*

VAVASSEUR (FRANÇOIS) a French critic, poet, and philologist, born at Paray in the bishopric of Autun, in 1605. He received his education in the Jesuits' college, and having become a member of that fraternity, read lectures on eloquence and the polite arts, both in the provinces and capital, till at length settling entirely at Paris, he devoted his attention principally to the instruction of youth in theology and classical literature. A work of his, entitled "*De Ludicrá Dictione*," exhibits tokens of deep erudition and great antiquarian research; its main object being to prove that the humour of the ancients never showed itself in the burlesque style of composition. This treatise first appeared at Paris in 1638. His second production, "*De Epigrammate*," involved him in a controversy with Rapin, a brother of his own order, who held that species of writing in great contempt. His other writings, all of which were collected and printed by Le Clerc at Amsterdam in 1709, consist of *Poems on the Miracles*, the *Book of Job*, *Epigrams*, *Epigrams*, &c. Father Vavasseur died at Paris about the close of 1681.—*Nouv. Dict. Hist.*

VEGA (LOPEZ DE la) or LOPE FELIX DE VEGA CARPIO, a celebrated Spanish poet, was born at Madrid, November 25, 1562. He studied four years in the university of Alcalá, and afterwards became private secretary to the duke of Alva and to the count de Lemos. He also spent some time in travel, and with some of his brothers served in a military capacity in the armada, designed by Philip II for the conquest of England, being driven to a change of scene by the grief which he indulged in the death of his wife. He lost a brother in this disastrous expedition, which possibly heightened his indignation against sir Francis Drake, on whose death he wrote a poem, entitled "*Dragontea*," in which both that commander and his royal mistress are treated with much virulence. In 1520 he returned to Madrid, and married a second time; and for the next eight or ten years exercised himself in every species of poetical composition, including the drama, with such an astonishing celerity of production, that his mental fertility, without ample authority, would be scarcely credible. He was then a second time plunged into affliction, by the death of his second wife and only son, which induced him to take orders, and he also became an honorary member of the

brotherhood of St Francis. This step by no means turned his attention from composition. He seldom passed a week without giving some poem to the press, and scarcely a month, or even a week, without producing some play upon the stage. At the same time his "*Pastores de Belen*," a work in prose and verse, on the nativity; and rhymes, hymns, and poems without number on sacred subjects, evinced his zeal in the profession which he had latterly embraced. Few poets have met with the encouragement or admiration which was experienced by Lope de Vega. Besides the honours and rich presents which he received in his own country, pope Urban VIII wrote him a flattering letter on the production of his poem on the death of Mary queen of Scots, obtained him the insignia of a knight of Malta and conferred upon him the degree of doctor of theology. His annual income was therefore large, and he might have been very rich but for his improvident and indiscriminate charity. His imprudence in this respect produced inconveniences, which he had the unreasonable weakness to attribute to ill-usage and neglect, while living in the highest state of splendour and prosperity, and absolutely regarded as the idol of the whole nation. He continued to publish plays and poems, and to receive every remuneration that adulation and generosity can bestow, until 1635, when his ill-judged religious austerities rendered him melancholy and hypochondriacal, and at length led to his decease on the 26th of August, in that year, at the age of seventy-three. Such was the honour paid to his remains, that the ceremonies of his funeral lasted nine days, and all the pulpits of Spain, and all the poets of the age, vied in eulogistic tributes to his memory. Lope de Vega is with some justice regarded as the parent of the modern continental drama, by the inexhaustible fertility of his invention in the construction of plots, and the faculty of pouring out verse without stint or premeditation. In other respects the de-huge of his fancy seems to have been composed of but very ordinary matter, which can readily be imagined when it is added, that his miscellaneous works in prose and verse are contained in 22 vols. 4to, Madrid, 1776—9, and his dramatic pieces in 25 vols. 4to, 1609—1647. Lord Holland, in his able and interesting account of his life, regards this Spanish literary prodigy as one of the men who merit honour for having promoted literature by their labours, and prepared the way for others to eclipse their own reputation.—*Life by Lord Holland.*

VEGA (GEORGE, baron de) an Austrian officer of artillery, born at Sagoritz in Carniola, in 1734. He studied at the college of Laybach, where he made a rapid progress in mathematics. Being appointed an engineer in Carniola, and afterwards in Hungary, he became known as a man of talent in his profession, and was patronized by the emperor Joseph II. He served in several campaigns against the French, and having distinguished himself on many occasions, especially in 1796, he was made a major, and afterwards a lieu-

tenant-colonel, knight of the order of Maria Theresa, and a baron of the empire. His death took place in September 1802. He was a member of the academies of Gottingen, Erfurt, Berlin, and several others, and he was considered as a mathematician of the first rank. He published "*A Course of Mathematics, for the Use of the Artillery of the Imperial Army*," Vienna, 1786—1800, 4 vols. 4to, 3d edit. 1802, folio; "*A Logarithmo-trigonometrical Manual*," Leipsic, 1793, 4to; "*A Complete Collection of grand Logarithmo-trigonometrical Tables*," 1794, folio; "*Manuale Logarithmico-trigonometricum*," 1800, 4to; "*An Introduction to Chronology*," Vienna, 1801, 8vo; and "*A natural System of Measures, Weights, and Coins*," 1803, 4to.—*Bing. Univ.*

VEGETIUS RENATUS (FLAVIUS) the most celebrated of the Roman writers on the military art, flourished towards the end of the fourth century, in the reign of the emperor Valentinian II. The title of illustrious joined to his name in some MSS. of his treatise "*De Re Militari Lib. v.*" proves that he belonged to a family of distinguished rank; and some authors have given him the title of count. He is supposed to have been an inhabitant of Constantinople, but nothing certain is known of his history. The work of Vegetius is to be found in various editions of the *Veteres de Re Militari Scriptores*; and it has been often printed separately. Among the best editions are those of Schwabel, Nuremberg, 1767, 4to; and Straasburg, 1806, 8vo. (See art. TURPIN DE CRUSS.)—PUBLIUS VEGETIUS, who, notwithstanding the difference of prænomens, has been carelessly confounded with the military tactician, was a writer on farriery. His work, entitled "*Artis Veterinariæ sive Mulo-medicinæ Lib. iv.*" was first printed at Basil in 1528; but the best edition is that of J. M. Gesner, Manheim, 1781, 8vo. This treatise likewise is included in the *Scriptores Rei Rusticæ*.—*Moreri. Bing. Univ.*

VELASQUEZ, or DON DIEGO VELASQUEZ de SILVA, an eminent Spanish history and portrait painter, was born at Seville in 1594. He studied under Herrera and Pacheco, and his first efforts were employed in familiar and domestic subjects, until the sight of some of the pictures of the Italian masters inspired him with loftier ideas. He was in particular charmed with the colouring of Caravaggio, whom he began to make his model, and his success in that style equalled his most sanguine expectation. Having spent five years with Pacheco, he repaired to Madrid, where he obtained the patronage of the duke d'Olivarez, who introduced him to Philip IV, by whom he was appointed his principal painter. While in that situation, Rubens arrived at Madrid, and recommended him to spend some time in Italy, which advice he followed, and acquired such an improvement in taste, correctness, composition, and colouring, as placed him at the head of his profession. On his return to Spain he was received with the most flattering distinction, and he was some time after employed by the king to make the tour of

VEL

Italy, and procure the best collection of pictures and statues that were to be bought, and to copy such as were unpurchaseable. During this progress he visited Rome, where he was employed on the portraits of pope Innocent X, and most of the cardinals. The compositions of Velasquez are remarkable for strong expression, freedom of pencil, and an admirable tone of colouring. His most celebrated picture is the historical representation of the expulsion of the Moors by Philip III. He died at Madrid in 1660, in his sixty-sixth year, and was interred with great magnificence.—*Cumberland's Anec. of Painters in Spain.*

VELDE (CHARLES FRANCIS VANDER) a native of Breslau, who occupied several offices of the magistracy in Silesia, and distinguished himself by his literary productions. He commenced his career as an author in 1809, by inserting some pieces in periodical works. At the same time he wrote for the theatres of Breslau, Vienna, Prague, and Magdeburg; but his dramatic efforts not proving very successful, he devoted himself to the composition of romances, in which he attained such excellence, that he received the appellation of the German Walter Scott. From the year 1817 he was employed in writing for the "Evening Journal," to which paper he owed much of his celebrity. He died in March 1824. His works were published at Dresden, 1823, 14 vols. 8vo. The following have been translated into French: "Nalidock le Noir, ou le Brigand aux Pyrénées," 3 vols.; "Wlaska, ou les Amazones de Bohême," 3 vols.; "Les Anabaptistes;" "Les Patriiciens;" and "Arwed Gyllenstierna," 2 vols. *Biog. Univ.*

VELEZ DE GUEVARA (LOUIS) a Spanish comic poet and satirist of the seventeenth century, was born at Icija in Andalusia. He recommended himself at the court of Philip IV by his humour and vivacity, which obtained for him the title of the Spanish Scarron. He was the author of several comedies, and of a humorous piece, entitled "El Diablo Cojuelo, novella de la otra Veda," Madrid, 1641, which production was the origin of the celebrated *Diable Boiteux* of Le Sage, translated into English under the strange title of the "Devil on two Sticks." The piquancy and spirit of the latter work it is unnecessary to point out, but it is said that Le Sage has exceedingly improved on the Spanish original. Velez died at Madrid in 1646.—*Antonio Bibl. Hispan.*

VELEZ (MICHAEL) a poet of Csokomakilla, in Hungary, who died in 1806. He was the author of a hero-comic poem, in four books, entitled "Dorothea, or the Triumph of the Ladies at the Carnival," published in 1804. In the preface, which, as well as the poem, is written in the Hungarian language, Velez treats of the nature of heroic poetry, a branch of literature which had scarcely occupied the attention of any previous Hungarian writer. He also published, in 1805, a collection of songs, which obtained great popularity.—*Aikin's Atheneum.*

VEL

VELLI, or VELLY (PAUL FRANCIS) a French jesuit of the last century, born in 1711, at Nismes, in the province of Champagne. He is advantageously known as the author of a "History of France," of which eight quarto volumes were completed prior to his decease, after which event it was continued by Villaret and Garnier, who extended it to fifteen. The work is written in a plain but energetic style, and the facts are given with every appearance of accuracy and impartiality. Velli quitted the order to which he had belonged some time before his death, and acted as tutor in the family of a counsellor to the parliament of Paris. He died September 4, 1759.—*Nouv. Diet. Hist.*

VELLUTI (DONATO) the author of a celebrated Chronicle of Florence, born in that city in 1313. He was educated at Bologna and Florence, and having studied jurisprudence, he acquired great reputation as a lawyer. The duke of Athens having usurped the supreme power at Florence, placed Velluti at the head of the magistracy, called *priori di libertà*, and appointed him advocate of the poor. The duke being expelled, new judicial arrangements were made, in which Donato co-operated; and the remainder of his life was devoted to his profession as an advocate, and to the execution of his duty in several important situations. In 1350 he became gonfalonier of justice, in which high post he exerted himself to settle the disputes which existed among the Florentine nobility, and was otherwise serviceable to his native country. At the age of fifty-four, when prevented by the gout from more active employment, he undertook the composition of his Chronicle; and three years after he died, in 1370. The best edition of the work of Velluti is that published by Dom. Maria Manni, under the title of "Cronico di Firenze di Donato Velluti, dall' anno 1300, in circa fino al 1370," Florence, 1731, 4to.—*Biog. Univ.*

VELSER or WELSER (MARK) a man of letters and an eminent patron of learning, was born at Augsburg in 1558, of an ancient and opulent family in that city. He was educated with great care, and sent to Rome to study, under the celebrated Muretus. Returning to his native place, he practised at the bar, and rose through different grades of the magistracy to the highest rank in the municipal government of his native place. He held a correspondence with the most eminent men of letters throughout Europe, and was looked upon as one of the most distinguished promoters of science and literature in Germany. He was also the author and editor of several works, the principal of his own writing being "Rerum Augustanarum Vindelicarum Lib. viii." Venet. 1594, and "Rerum Boicarum Lib. v." Aug. Vind. 1602. He likewise composed the lives of some martyrs of Augsburg, and was one of the principal contributors to Gruter's Collection of Inscriptions. He has by some too been deemed the author of the famous "Squittinio de la Liberta Veneta." The writings of Velsar were collected in a folio volume, Nuremberg, 1681.—*Freheri Theat. Bayle.*

VEN

VELTHEIM (AUGUSTUS FERDINAND, count) member of the Royal Society of London and that of Helmstadt, was born in the duchy of Magdeburg in 1741. Having shown a taste for the study of mineralogy when young, he was placed at the university of Helmstadt; and in 1762, having a situation in the chamber of finance at Brunswick, he travelled with his father through Germany, to visit the mines and salt-works. On his return in 1766 he was appointed sub-inspector of mines in the Harz mountains. This situation he relinquished in 1779, on the death of his wife, and retired to the castle of Harbke, in the territory of Magdeburg, where he continued chiefly to reside the remainder of his life. He published many works on mineralogy and other subjects, among which are "Regulations against Fires," Helmstadt, 1794, 4to; a treatise on the Barberini or Portland Vase," 1791, 8vo; "On the Formation of Basalt, and the Ancient State of the Mountains in Germany;" "Mineralogy," Brunswick, 1781, folio; and a work on the Forest Trees of North America, which he had cultivated in his park at Harbke. He printed at Helmstadt a collective edition of his works, historical, archaeological, and mineralogical, in 2 vols. 8vo. In 1798 he was nominated deputy of the duchy of Magdeburg, to do homage to the king of Prussia, Frederick William III, who raised him to the rank of a count. He died at Brunswick, October 2, 1801.—*Biog. Univ.*

VENANTIUS FORTUNATUS (HONORIUS CLEMENTIANUS) a Christian poet of the sixth century. He was born at Trivigi in Italy, and studied at Ravenna, where he distinguished himself in the meagre acquirements of the period. On the invasion of the Lombards he quitted his country for France, and was ordained a priest at Poitiers about the year 565, and afterwards elected bishop of that see. He was much esteemed by Sigebert, king of Austrasia, and by Gregory of Tours; and he is supposed to have died in the beginning of the seventh century. The writings of Venantius are for the most part in verse; the Life of St Martin of Tours consists of four books; and there are eleven of miscellaneous poetry, chiefly on ecclesiastical subjects. One, however, is exclusively filled with pieces addressed to queen Radegonda; two or three of which, says a French writer, may be termed "very pretty madrigals." His prose writings are principally lives of saints. His works were republished at Rome in 1786—87, in 2 vols. 4to.—*Nouv. Dict. Hist. Tirabuchi.*

VENDOME (LOUIS JOSEPH, duke of) a distinguished French general, who was the great-grandson of Henry IV, and his mother was one of the nieces of cardinal Mazarin. He was born in 1654, and entering young into the army, he served in the wars of Louis XIV in Holland. After signalizing himself on many occasions, he was employed in Spain, and in 1697 he took Barcelona. Being afterwards sent into Italy, he was very successful against the imperialists, defeating prince Eugene in 1706, at the battle of Cassano, and having

VEN

nearly made himself master of Turin, when he was recalled to oppose the English and their allies in the Netherlands. He was subsequently again sent to Spain, to support the cause of Philip V, to whose establishment on the Spanish throne he greatly contributed by the victory of Villaviciosa in 1710; and in reward of his services he was admitted to the honours of a prince of the blood royal, being descended from one of the illegitimate sons of Henry IV. He died at Tignarus in Spain, June 11, 1712. Vendome possessed undoubted military talents and a vast deal of courage; but his manners were brutal and repulsive, and his character highly deserving of reprobation.—*Dict. Hist. Biog. Univ.*

VENEL (GABRIEL FRANCIS) an eminent French physician of the last century, who filled the professor's chair in medicine at Montpellier for several years with great reputation. He was born in 1723 at Pezenas, and is now principally known by his writings on the respective properties of the mineral waters of Selts, Passi, &c. He also wrote on the use of the Houille or Pitcoal. His death took place at Montpellier in 1776.—*Nouv. Dict. Hist.*

VENERONI (JOHN) a native of Verdun, whose proper name was Vigneron. Having engaged in the profession of an Italian master at Paris, he adopted the name by which he is usually designated, that he might pass for a native of Florence. He published an Italian Grammar and an Italian and French Dictionary, which obtained the approbation of the Cruscan Academy; and he likewise produced some translations of Italian authors. He was also the author of "Dictionnaire Manuel, en quatre Langues, Français, Italien, Allemand, et Russe," Moscou, 1771, 8vo. The Grammar of Veneroni is still held in estimation, but his Italian Dictionary has been superseded by that of Alberti. He held the office of secretary-interpreter to the king. Neither the period of his birth nor that of his death can be ascertained; but from the dates of his publications it appears that he lived in the latter part of the seventeenth and the beginning of the eighteenth centuries.—*Biog. Univ.*

VENEZIANO. The name of two eminent artists, assigned to them on account of the country which produced them. DOMENICO VENEZIANO was an early painter of great merit, and is said to have been the first who introduced oil painting into Italy. He was barbarously assassinated about the middle of the fifteenth century by his friend and pupil, Andrea del Castagno, whom he had initiated in his secret, and who murdered him that he might himself become its sole possessor.—A celebrated Italian engraver, whose family name was AGOSTINO DE MUSIS, is also known by this appellation. He studied the art under the celebrated Raimondi, and produced many excellent prints, most of which are now extremely rare and valuable. His death took place in 1540 at Rome.—*D'Argenville Vies de Peint.*

VENIUS, or VAN VEEN (OTHO) a Dutch painter of eminence, was born in 1556, of a

considerable family in Leyden. He was carefully educated in the belles lettres, and studied design under Isaac Nicholas. He subsequently repaired to Liege and to Rome, where he perfected himself in his profession, and especially in chiar-oscuro, and became the first who explained to the Flemish artists the principles of lights and shadows, which his disciple Rubens afterwards carried to so high a degree of perfection. He was much patronized by the archduke Albert, governor of the Low Countries, who made him master of the Mint. He drew the full-length portrait of this prince and the infanta Isabella, to be sent to James I of Great Britain. To show his acquisitions in polite learning, he published several treatises, with cuts of his own designing, among which are "Horatii Emblemata," 1607, 4to; "Amoris Divini Emblemata," 1615, 4to; "Amorum Emblemata," 1608; "Batavorum cum Romanis Bellum," 1612, 4to, &c. He died at Brussels in his seventy-eighth year.—*D'Argenville Vies des Peint.*

VENNER, MD. (TOBIAS) an English physician of great eminence in his profession during the earlier moiety of the seventeenth century. He was a native of the village of North Petherton, Somerset, where he was born about the year 1577. Having prosecuted his studies with great success at St Alban-hall, Oxford, he visited the continent for the purpose of extending his medical inquiries in various foreign hospitals and universities, and in one of the latter took his degree as doctor of physic in 1613. On his return to England he commenced practice at Bridgewater, in his native county, whence, as his reputation increased, he removed to Bath, and died in that city in 1660. His treatise "On the Prolongation of Life" was long a very popular work. His other writings consist of a tract on the properties of the Bath water; another on that of St Vincent's rocks, in the neighbourhood of Bristol, which he condemns as unsalutary; and a third on "Fumigation by Tobacco."—*Athen. Oxon.*

VENTENAT (STEPHEN PRTER) a celebrated French botanist, born at Limogés, March 1, 1757. At the age of fifteen he entered into the order of the canons regular of St Geneviève, and having distinguished himself by his progress in philosophical and theological studies, his superiors wished him to become a preacher; but he preferred the cultivation of science, and with that view he procured a situation in the library of his convent. In 1788 being sent to England to procure books, his notice was attracted by many beautiful works on plants, and his subsequent visits to some of the finest gardens in England gave him a decided predilection for botany, to the study of which he determined to devote himself on his return to France. In 1792 he combated the theory of Hedwig, on the fructification of mosses, in his "Dissertation sur les Parties des Mousses qui ont été regardées comme Fleurs mâles et Fleurs femelles," 8vo; and three years after appeared a "Mémoire sur les meilleurs Moyens de dis-

tinguer le Calice de la Corolle." In 1796 he gave a course of lectures on botany at the Lyceum, which he afterwards published. He was appointed subsequently chief librarian of the Pantheon, and a member of the Institute; and in 1799 he published "Tableau du Règne Végétal," 4 vols. 8vo, which is a translation of the "Præmium" of the "Genera Plantarum" of Jussieu, with additions. The chief merit of Ventenat lay in descriptive botany, and he belonged to the class of botanists termed by Linnæus Iconographers. Among his works of this kind are "Description des Plantes nouvelles, ou peu connues, du Jardin de J. M. Cels," Paris, 1800, folio; "Le Jardin de la Malmaison," 2 vols. folio; "Le Choix de Plantes," folio; and "Decas Generum Novorum," folio. During the prevalence of revolutionary principles, Ventenat followed the example of many of his brother canons in taking a wife. His death took place at Paris, August 13, 1808. He was the author of many interesting memoirs in the Transactions of the Institute, the Botanical Annals of Usteri, and the *Magasin Encyclopédique*.—*Journ. de Botanique. Biog. Univ.*

VENTURI (POMPEIO) an Italian critic, who was a native of Sienna, and entered into the society of the jesuits in 1711. He taught philosophy at Florence, and afterwards rhetoric successively at Sienna, Prato, Florence, and at Rome, till 1746. In consequence of ill health he then retired to Ancona, where he died in 1752. His commentary on Dante, first printed at Lucca in 1732, 3 vols. 8vo, and dedicated to Clement XII, has been repeatedly republished; but the only complete editions are said to be those of Verona, 1749, 8vo; and Venice, 1751, 8vo.—*Biog. Univ.*

VENTURI (JOHN BAPTIST) a writer on natural philosophy, was born at Bibiano, in the duchy of Reggio, in 1746, and he studied in the seminary of that city, under the celebrated Spallanzani. At the age of twenty-three he became professor of metaphysics and geometry in the same seminary, whence in 1773 he removed to occupy the chair of philosophy at Modena. In 1796, being sent to Paris on a political mission, he remained in France, employing himself in the cultivation of physical science. Returning to his native country he was nominated a member of the legislative body at Milan. But after the overthrow of the republican government in 1799, the duke of Modena had him imprisoned, and he did not recover his liberty till after the battle of Marengo. He was then chosen professor of physics at Pavia, and afterwards decorated with the cross of the legion of honour, and the order of the iron crown. He subsequently occupied for twelve years the post of chargé d'affaires of the kingdom of Italy at Berne. He retired with a pension in 1813, and his death took place September 10, 1822, at Reggio. Among his principal works are "Commentari sopra la Storia e la Teoria dell' Ottica," t. i. Bologna, 1814, 4to; "Dell' Origine e de' Progressi delle odierne Artigierie," Reggio, 1815, 4to; and "Memorie e Lettere

VER

inedite e disperse di Galileo Galilei," Modena, 1818, 2 vols. 4to.—*Biog. Univ.*

VERBIEST (FERDINAND) a celebrated jesuit missionary, a native of Flanders, who much distinguished himself in China in the beginning of the seventeenth century. Being drawn from prison, into which all the missionaries had been cast, to correct some errors in the Chinese calendar, he so convinced the emperor Cam-Hi of the ignorance of his chief astrologer, that he was appointed in his place. He also obtained leave to preach the Christian religion in China, and the emperor was so much attached to him, that he himself composed an eulogy on him when he died, and caused him to be buried with Christian honours. His principal work is entitled "*Astronomia Europæa, sub Imperatore Tartaro-Sinico Cam-Hi, &c.*" Dilingæ, 1687, 4to. This celebrated missionary, at the request of the emperor, caused to be made under his own inspection, various astronomical instruments, and wrote sixteen volumes in the Chinese language, on their use and construction. He died in 1688.—*Montucla Histoire des Mathématiques.*

VERDIER. There were several ingenious French writers of this name.—**ANTOINE DU VERDIER**, lord of Vauprivas, was a native of Montbrissan in Forez, born of a noble family about the year 1544, and held a situation in the household of the French king. He was the author of a variety of miscellaneous works, of which the principal are his "*Bibliothèque des Auteurs Français*," folio; "*Prosopographie*," or memoirs of illustrious personages, in 3 vols. folio; "*Les Diverses Leçons*," &c. 8vo; and a humorous work entitled "*Le Comptesécutique*." He obtained the post of historiographer royal, and died about the beginning of the seventeenth century.—**CLAUDE DU VERDIER**, son of the above, was born in 1566, and distinguished himself by the severity of his hypercriticisms in an essay, in which he deals out censure on almost all the principal authors of antiquity, especially on the poet Virgil. His death took place in 1649.—**CESAR VERDIER**, an eminent surgeon and professor of anatomy, was a native of Molieres, a village in the vicinity of Avignon. He was the author of a great variety of tracts on professional subjects, which he treated in an able manner. Of these the best known are his "*Abridgment of Anatomy*," 12mo, 2 vols. to which *Sebatier* added a commentary; "*Medical Observations*;" "*On the Diseases of the Bladder*," &c. &c. He died at Paris in the spring of 1759.—*Nouv. Dict. Hist.*

VERE (EDWARD) earl of Oxford, one of the literary courtiers of queen Elizabeth. He was descended from one of the most ancient families of the English nobility, his father being the sixteenth peer who had held the title, which became extinct in the reign of queen Anne. He was born about 1540, and received an education suitable to his rank. He held the office of lord high chamberlain, and sat as such at the trials of the queen of Scots, and subsequently at those of the earls of

VER

Arundel, Essex, and Southampton. Specimens of his talents as a poet are preserved in the "*Paradise of Dainty Devices*." His personal character seems to have been by no means favourable. He had a quarrel with sir Philip Sidney, which did him no credit; and he is said to have ill-treated his wife, who was the daughter of lord Burleigh. His death took place in 1604.—*Berkenhout's Biog. Lit.*

VERE (FRANCIS) a celebrated English captain, was the grandson of John Vere, earl of Oxford, and was born in 1554. He served first in the Netherlands, under the earl of Leicester, and next under lord Willoughby, who conferred on him the honour of knighthood for his gallantry at the siege of Bergen-op-Zoom. After this he was intrusted to throw supplies into the town of Berg on the Rhine, in which arduous service he received several wounds. He also took a fort near Zutphen in 1591, and was chiefly instrumental in the capture of Deventer. In 1596 he was recalled from the Netherlands, and employed in the expedition against Cadiz, with the title of lord marshal. He returned to Holland the following year, and was appointed governor of the Brill, one of the customary honours in the Low Countries. In 1600 he served under prince Maurice, who was principally indebted for his victory at Nieuport to sir Francis Vere, who was severely wounded. His last great action was the defence of Ostend, which he maintained with a garrison of twelve hundred men against a besieging army of ten thousand. His death took place in 1608, in his fifty-fourth year, and he was magnificently interred in Westminster abbey. He has recorded his own exploits in a work entitled "*The Commentaries of Sir Francis Vere, being diverse Pieces of Service, wherein he had Command, written by himself*." This piece was published from the original MS. by Dr Dillingham, Camb. 1637, folio.—*Biog. Brit.*

VERE (HORACE) baron Vere of Tilbury, younger brother of sir Francis Vere, was born at Kirby-hall in Essex, in 1565. He adopted the military profession, and served under his brother in the Netherlands, where he distinguished himself at the battle of Nieuport, and in the defence of Ostend against the Spaniards. He was sent to Germany in the reign of James I, with a body of troops to assist the elector palatine, the king's son-in-law, when he was opposed by the celebrated Spinola; and he strikingly displayed his talents in effecting a retreat before the superior forces of that general. He was raised to the peerage by Charles I, and he died in 1635.—*Biog. Brit.*

VERELIUS (OLOF) a celebrated Swedish antiquary and librarian in the academy of Upsal, was born in 1618 in East Gothland, where his father was a clergyman. After receiving a learned and collegiate education, he made the tour of Europe, as tutor to some Swedish gentleman; and on his return was appointed professor of eloquence at Dorpt, by queen Christina. In 1653 he was made treasurer to the academy at Upsal, and in 1666 constituted antiquary of the kingdom. He died at Upsal

VER

in 1682. He was a most enthusiastic student of Swedish antiquities. His principal works are "Runographia Scandica Antiqua," folio, Upsal, 1675; "Historia Gothrici et Rolonis, Westrogothum Regum," 4to, 1680; "Historia Horvure," folio, 1671, with a supplement thereto, &c.—*Moreri. Biog. Univ.*

VERGENNES (CHARLES GRAVIER, count de) a French statesman, born at Dijon in 1717, who was the son of a president à mortier of the parliament of that city. His relative, M. de Chavigny, took him in 1740 to Lisbon, where he occupied a diplomatic situation; and in 1750 he was himself appointed French minister at the court of the elector of Treves. In 1755 he succeeded the count Desalleurs as ambassador in Turkey; and in both these posts his conduct gave great satisfaction. He was however recalled in 1768, in consequence of a difference of opinion with the duke de Choiseul, relative to the propriety of exciting hostilities between the Turks and Russians; and returning home he retired to his estate at Toulougeon in Burgundy. After the fall of Choiseul, he was summoned from his retreat, and sent to Sweden in 1771; and he had no small share in the revolution which took place in that country under Gustavus III. When Louis XVI came to the crown he recalled M. de Vergennes and made him minister of foreign affairs in July 1774. Among the principal acts of his ministry were the treaty of Soleure with the Swiss in 1777; that with the United States of America in 1778; the treaty of Teschen with the emperor Joseph II in 1779; and that which concluded the American war in 1783. To which may be added the treaty of commerce negotiated with England in 1785 and 1786, which was one of the last labours of the count de Vergennes, whose death happened February 13, 1787. Louis XVI had so high an opinion of the talents of this minister, that he used to say the Revolution would not have taken place if he had lived.—*Dict. Hist. Biog. Univ.*

VERGÈRE DE HAURANE (JOHN du) abbot of St Cyran, by which title he is best known, was born of a noble family at Bayonne in 1581. He was educated for the church at Paris and Louvaine, where he contracted a friendship with the celebrated Jansenius. He was made a canon by the bishop of Bayonne, but afterwards repaired to Paris; and in 1620 he was presented to the abbacy of St Cyran. He continued his intimacy with Jansenius, whose opinions he zealously propagated, and by his soft and insinuating address made many proselytes, particularly among the females. At length he was denounced as a dangerous person to cardinal Richelieu, who was otherwise piqued at his refusal to declare in favour of the nullity of the marriage of Gaston duke of Orleans with Margaret of Lorraine. That despotic minister in consequence imprisoned him in the castle of Vincennes, from which confinement he was not released until the death of the cardinal. The abbot St Cyran did not long survive his liberation, dying at Paris in 1643. His principal works are "Lettres Spi-

VER

rituelles," 2 vols. 4to; "Question Royal;" "L'Aumône Chrétienne;" "Petrus Aurelius," a controversial work, in which he fiercely attacked the jesuits. He was regarded as a champion and martyr of the Jansenists, and must have possessed some ability to gain such disciples as the MM. Arnauld, De Sacy, D'Andilli, and others of the Port Royal; but his writings by no means support his reputation in other respects.—*Nouv. Dict. Hist.*

VERGERIUS (PETER PAUL). There were two eminent ecclesiastics of this name, both natives of Capo d' Istria, and descended of the same family. The first, in point of time, was born about the middle of the fourteenth century, and was the pupil of Chrysoloras and Zabarella. He was considered one of the most able ecclesiastical lawyers of his day, and distinguished himself in the general council held at Constance. Besides a translation of the works of Arrian, he was the author of a "History of the princely House of Carrara," a family in which he had acted for many years as instructor to some of its junior branches. His other writings are an "Essay on the Republic of Venice;" the Lives of St Jerome and of the celebrated Petrarch, and a treatise "De Moribus ingenuis." His death took place in 1431.—The younger VERGERIUS, who eventually succeeded to the see of Capo d' Istria, was a prelate of considerable learning and ability, and was employed as legate on various missions, both by Clement VII and his immediate successor in the papal chair. While assisting in that capacity at the council of Augsberg in 1530, his zeal against the reformers was unquestioned; but at the expiration of twelve years appears to have so much diminished in its fervour, that at the diet of Worms he excited the suspicions of his court, as feeling an inclination in their favour. His sincere attachment to the Romish church, however, at this period of his life is not to be doubted, if we are to believe the generally accredited tradition, that being excited by the manifest distrust of the reigning pontiff to do something which might evince his orthodoxy, he set about a treatise levelled directly against the "German Apostates," but was himself in reality converted to their opinions, while engaged in reading their books for the purpose of oppugning their arguments. His falling off from Catholicism drew on him the indignation of the inquisition, whose power he narrowly escaped by a precipitate flight. The sudden death of his brother, the bishop of Pola, universally attributed to the effects of poison, would seem to intimate that he was less successful, as his opinions also had notoriously undergone a similar change. Vergerius in his timely retreat took refuge at Tubingen, where he superintended a complete edition of his own writings, in one volume, quarto, 1563, and survived its publication something less than three years.—*Tiraboschi. Melchior Adam.*

VERGIL (POLYDORUS) an historical and philological writer of eminence in the sixteenth century. He was a native of Urbino in Italy, and became a member of the ecclesiastica.

profession. One of his first productions was a collection of Latin poems, which was followed in 1499 by his work "De Rerum Inventoribus," which has been often republished. Pope Alexander VI sent him to England, as collector of the tribute called Peter's pence; and he was the last person who held that office in this country previously to the Reformation under Henry VIII. That prince bestowed on him the archdeaconry of Wells and several other benefices in the church; and at the request of Henry he composed a general History of England, from the earliest ages to his own time. This work, which is written in Latin, considered as the production of a foreigner, is highly creditable to his talents; but his reputation has suffered in some degree from the charge of having destroyed memoirs and records which he made use of in his undertaking. The History of Polydore has passed through several editions. He quitted England in the reign of Edward VI, and going to Italy, he died at Urbino in 1533. Besides the works noticed he was the author of a treatise on Prodigies.—*Aikin. Biog. Univ.*

VERHEYEN (PETER) a physician and anatomist of considerable reputation, was born at Vesbronck in Holland, in 1648. He was brought up to husbandry, but the curate of the parish perceiving his capacity, gave him instruction, and procured him admission into the college of Louvain, where he became professor of medicine. His "Corporis Humani Anatomia," published in 1693, is a work which still maintains a considerable portion of reputation as containing the opinions of the ancients, and more accurate descriptions of modern discoveries than had previously appeared. He died in 1710.—*Eloy Dict. Hist. de Med.*

VERNES (JACOB) a Genevese divine, born in 1728. After he had completed his studies, he was admitted to the evangelical ministry, but not obtaining any immediate preferment, he devoted his time to the cultivation of literature, and commenced a periodical work entitled "Choix Littéraire," which is not so much a journal as a collection of pieces in prose and verse. It was continued from 1755 to 1760, forming 24 vols. 8vo. Vernet was at one time intimate with J. J. Rousseau; but that irritable genius having quarrelled with him, he published "Lettres sur le Christianisme de J. J. Rousseau," 1763, 8vo, and other tracts relating to the "Profession de Foi du Vicairé Savoyard," to which the philosopher refused to make any reply. Vernet after a time became pastor at Seligny, and in 1771 he was called to Geneva. In 1782 he was, with other distinguished citizens, exiled for opposition to the changes made in the Genevese constitution. Having obtained permission to return home in 1789, he died at Geneva in October 1791. Besides the works already noticed, he was the author of "Conference Philosophique," 1781, 8vo, fourth edition, 1788, 2 vols. 8vo, and "Sermons," 1792, 2 vols. 8vo, published by his son, with a biographical memoir.—*Biog. Univ.*

BIOG. DICT.—VOL. III.

VERNET (JACOB) professor of theology at Geneva, where he was born in 1698. He first studied under his uncle, Daniel Leclerc, the learned author of the History of Medicine; but he afterwards adopted the ecclesiastical profession. He visited Paris in his youth, and then travelled in Italy, Germany, and England. In 1739 he became professor of ancient literature at Geneva, and he held that office till 1756, when he passed to the chair of theology. He was connected with Rousseau and Voltaire; but when the latter settled at Ferney, the Genevan professor thought it his duty to warn the public against the dangerous principles of the author of the *Essai sur l'Histoire*, in a letter printed in the *Nouvelle Bibliothèque Germanique*; and this produced a rupture of their acquaintance. Vernet afterwards combated the opinions of Voltaire and his friends, in a work published under the title of "Lettres critiques d'un Voyageur Anglois sur l'Article Genève de l'Encyclopédie." He was also the author of "Traité de la Vérité de la Religion Chrétienne, tiré en Partie du Latin de J. A. Turretini," 10 vols. 8vo: "Dialogues Socratiques, ou Entretiens sur divers Sujets de Morale;" "Réflexions sur les Mœurs, la Religion, et le Culte;" "Instruction Chrétienne," 4 vols. 8vo; and "Opuscula Selecta," 1784, 8vo. His death took place March 26. 1789.—*Hist. Litt. de Geneve. Biog. Univ.*

VERNET (JOSEPH) a celebrated marine painter of the last century, whose skill in his profession appears to have been almost intuitive, and procured him from some of his contemporaries, the compliment that "his talents had never known infancy or old age." He was a native of Avignon, born there of humble parents in 1712, and during the earlier years of his life subsisted by painting houses, waggons, and implements of agriculture, till an accidental visit to a seaport, which he delineated at once, developed his genius. He subsequently visited Italy for improvement, and on his return painted many of the seaports of his native country. Louis XVI conferred a pension on him, and the title of marine painter to the king, both of which he enjoyed till his death in the winter of 1789.—*Nouv. Dict. Hist.*

VERNIER (PETER) a French mathematician, who was the inventor of an astronomical instrument, which bears his name. He was born about 1580, at Ornans, in the county of Burgundy, and he studied mathematics under his father. After being employed in Flanders, he was appointed captain-commandant of the castle of Ornans, counsellor to the king of Spain, and director-general of the mint in the county of Burgundy. He died in 1637. He was the author of a work describing his invention, entitled "La Construction, l'Usage, et les Propriétés du Quadrant nouveau de Mathématiques," 1631, 8vo.—*Biog. Univ.*

VERNON (EDWARD) a distinguished English admiral, descended from a Staffordshire family, but born in Westminster in 1684. He adopted the naval profession in opposition to the wishes of his father, who held the post of

secretary of state to William III. He first went to sea with admiral Hopsoun, and in 1704 he served under sir George Rooke at the battle of Malaga. He was also employed on many other occasions, and gradually arrived at the rank of vice-admiral. In 1739, when the treatment of the English traders by the Spaniards in America had excited great indignation in this country, admiral Vernon, who was a member of the house of Commons, spoke warmly against the indifference of the ministry to the complaints of the merchants, and pointed out the means of redressing or avenging the injuries which they had suffered. In consequence of these representations he was sent with a squadron to the West Indies, where he took the town of Porto Bello, and destroyed the fortifications. In 1741 he was sent out again to attack Carthage; but the expedition proved unsuccessful. During the rebellion in 1745 he was employed in defending the coasts of Kent and Sussex; but on account of his opposition to the ministry, he was subsequently superseded, and even struck off the list of admirals. His death took place October 29, 1757.—*Charnock's Naval Biog. Smollett's Hist. of England.*

VERNON (WILLIAM) an antiquary and topographer of the seventeenth century. He was descended from the Vernons of Shipbrook, and was probably born about 1588. He married Margaret, the daughter of Philip Oldfield, of Bradwall, and widow of Peter Shakerley, of Shakerley and Hulme, esq. in whose right he resided at Shakerley in Lancashire. The antiquarian collections of his father-in-law relative to Cheshire, and his own descent from one of the barons of the Palatinate, led him to undertake a history of the county of Chester. He corresponded, between 1647 and 1652, with the celebrated Dugdale, from whom he derived considerable assistance in the prosecution of his work. Much was expected from the skill, zeal, and systematic industry of Vernon, with the aid of Dugdale's learning and ability; but from some unknown cause the History of Cheshire was never completed, and the undertaker died at Shakerley in 1667, leaving numerous MS. volumes of Collectanea, preserved in a private library; and transcripts of some portions of them may be found among the Harleian MSS. in the British Museum.—*Ormerod's Hist. of Cheshire*, vol. i.

VERONESE (PAUL). See CAGLIARI.

VERONESE. See GUARINO.

VERSCHUURING (HENRY) a celebrated Dutch artist, whose principal excellence lay in the lively delineation of battles, camps, skirmishes, and other warlike subjects. He was a native of the province of Holland, born in 1627, at Gorcum, of which place he rose to be the chief public functionary, but without abandoning his profession. Verschuuring was a pupil first of Goverts and then of John Both of Utrecht, with whom he studied six years, and afterwards proceeded to Rome in order to perfect himself in his art by the careful examination of the numerous antiquities in that capital. So great indeed was his partiality for

the particular branch of painting to which he principally devoted himself, that he actually made a campaign in 1672 at some personal risk, in order that he might be able to represent his battle pieces with the greater accuracy, by taking his designs from real life. His style is original, and his pictures in general are remarkably well finished. His death took place in 1690, off Dort, the vessel in which he was sailing being suddenly capsized in a gale of wind.—*D'Argenville Vies des Peint.*

VERSTEGAN (RICHARD) an ingenious writer, well versed in antiquarian research, especially with respect to the earlier periods of English history. He was born in London, of Dutch parents, and having gone through the usual course of classical education at Oxford, took up his abode at Antwerp. While resident in this city, his zeal in the cause of the Romish church, of which he was a member, broke forth on the occasion of certain jesuits, who were executed in this country in the latter part of the sixteenth century. The work which he produced however on this subject in 1592, under the title of "*Theatrum Crudelitatum Hereticorum nostri Temporis*," met with but indifferent success among those of his own communion, while it occasioned his being thrown into prison at Paris, through the influence of the English embassy, during a visit which he paid to that capital. His antiquarian writings were much more favourably received, and on them it is that his reputation now rests. Of these the principal is his "*Restitution of decayed Intelligence concerning the Antiquities of the noble and renowned English Nation*," first printed in 4to at Antwerp, 1605, of which curious and valuable treatise there are also two later editions, both of London, the first in 1634, the second in 1674. His other productions are "*Antiquitates Belgicæ*," in one vol. 12mo, and an essay "*On the regal Government of England*," with a few metrical and other miscellanies. His death took place at Antwerp in 1635.—*Athen. Oxon.*

VERTOT D'AUBEUF (RENE AUBERT de) a pleasing French historian, whose works have been translated into English, was born at the castle of Benetot, in Normandy, of a good family, November 25, 1635. His application to study was early and persevering; but much against his father's will he entered among the Capuchins, and took the name of brother Zachary. The austerities of his order not agreeing with his health, he was induced to change it for that of the Premonstratenses, when he became successively secretary to the general of the order, rector, and at length prior of the monastery. All this however did not suffice, and after other changes of situation he became a secular ecclesiastic, and in 1701 came to Paris in that character. His talents soon procured him patronage. In 1705 he was made associate of the academy of belles lettres, and after a while secretary of languages to the duke of Orleans. In 1715 the grand master of Malta appointed him his historiographer, and but for some reasons not specified, he would have been entrusted with the

education of Louis XV. His last years were passed in much bodily infirmity, from which he was relieved by death, June 15, 1735. His literary career is remarkable; he was bordering on his forty-fifth year when he wrote his first history, and had past his seventieth when he finished his last, that of Malta. The French regard him as their Quintus Curtius; his style is lively, pleasing, and elegant; his reflections always just, and often profound. He however wanted the industry and research which are justly considered among the leading requisites of the historian in these days; and he yielded too much to imagination, and depended too much upon memory, to be either accurate or trustworthy. His principal works, which have been long both before the French and English public, are "Histoire des Revolutions de Portugal," Paris, 1689, 12mo; "Histoire des Revolutions de Suede," 1696, 2 vols. 12mo; "Histoire des Revolutions Romaines," 3 vols. 12mo; "Histoire de Malthe," 1727, 4 vols. 4to; "Traité de la Mouance de Bretagne;" "Histoire Critique de l'Etablissement des Bretons dans les Gaules," 2 vols. 12mo. He wrote also some dissertations in the Memoirs of the Academy of Belles Lettres, and had much intercourse with the literati of his day. His correspondence with lord Stanhope on the senate of ancient Rome has been published by the Roman historian Hooke.—*Nouv. Dict. Hist. Biog. Gallica.*

VERTUE (GEORGE) an eminent engraver and antiquary, was born at St Martin's-in-the-Fields, in London, in 1684. His parents, who were in humble circumstances, placed him with an artist who engraved arms on plate, but who failed from imprudence at the end of three years. He then studied drawing for two years, and afterwards engaged himself for three more to the engraver Vandergucht, which term he protracted to seven. In 1709, having received instruction and advice from several painters, he commenced business on his own account, being principally engaged in drawings and engravings for books. He soon after acquired the patronage of sir Godfrey Kneller, and was employed by lord Somers to engrave the portrait of archbishop Tillotson, which was followed by that of George I, from a picture by Kneller, from both of which he acquired considerable reputation. He also employed himself in biographical and antiquarian Researches, and was noticed and employed by Harley, earl of Oxford, whom he accompanied in several tours, and who, as well as lord Burlington and most of the nobility and gentry who favoured the arts, very much employed him. In 1730 appeared his twelve heads of distinguished poets, which work he was to have followed with those of other eminent men, but the scheme was taken out of his hands by the Knaptons. He then undertook the portraits of Charles I, and the sufferers in his cause, with illustrations from Clarendon; which labour he followed up with engravings of the effigies of the kings, and other pictorial embellishments for Rapin's

History of England. In 1749 he acquired a still more exalted protector in Frederick prince of Wales, from whose encouragement he expected considerable benefit, inasmuch that when the prince died, his health was permanently affected by the disappointment, and he died in 1756, aged seventy-two. Lord Orford has given a catalogue of the engravings of Vertue, which amount to five hundred, and are more valuable for their authenticity than style of execution. The public however owe another obligation to this industrious artist, whose manuscript notes and observations being purchased from his widow by lord Orford, formed the principal materials of his useful and interesting *Anecdotes of Painting in England*. His collections amounted to nearly forty volumes, having carried them on with extraordinary industry from 1713 till his death. The private character of Vertue appears to have been in the highest degree amiable, modest, and exemplary.—*Walpole's Anec. Nichols's Lit. Anec.*

VESALIUS (ANDREAS) a celebrated surgeon and anatomist, who was born at Brussels in 1514. His grandfather, Everard Vesalius, wrote commentaries on the works of Rhazes, and on the aphorisms of Hippocrates; and his father held the office of apothecary to the emperor Charles V. He studied the languages and philosophy at Louvain, and at an early age he displayed his predominant taste for anatomical inquiries, by dissecting the bodies of dogs, cats, and other animals. He then went to Paris, and studied the medical sciences under James Sylvius. When only eighteen he composed his treatise "*De Corporis Humani Fabrica*;" and returning to Louvain, he delivered lectures on anatomy. He afterwards visited Italy, where science had made a greater progress than in the Netherlands, and by his lectures and demonstrations at Pisa, Bologna, and other Italian cities, he acquired great reputation. In 1537 the government of Venice appointed him professor of anatomy in the university of Padua, where he remained seven years. He was subsequently physician to Charles V, as he also was to Philip II. of Spain. At length when in the height of his fame, he suddenly engaged in a pilgrimage to Jerusalem. The motive to this undertaking is thus related in a letter of Hubert Languet to Caspar Peucer: "Vesalius believing a young Spanish nobleman whom he had attended to be dead, obtained leave of his parents to open him for the sake of inquiring into the real cause of his illness, which he had not rightly comprehended. This was granted; but he had no sooner made an incision into the body, than he perceived the symptoms of life, and opening the breast, he saw the heart beat. The parents coming afterwards to the knowledge of this, were not satisfied for prosecuting him for murder, but accused him of impiety to the Inquisition, in hopes he would be punished with greater rigour by the judges of that tribunal than by those of the common law. But the king of Spain interposed and saved him, on condition

However, that by way of atoning for the crime, he should undertake a pilgrimage to the Holy Land." The credit of this story seems to be rather dubious, and different motives for the journey of Vesalius have been assigned by other writers. But however the undertaking might have originated, its result was unfortunate. He went with Nicholas de Rimini, general of the Venetian army, to Cyprus, whence he passed to Jerusalem. He was returning to occupy the chair of medicine at Padua, left vacant by the death of Fallopius in 1563, when he was shipwrecked on the island of Zante, and he died there, from the effects of hunger and hardship, in October 1564. The great work of Vesalius on the structure of the human body was first published at Basil, 1543, folio; and the second edition, augmented and corrected by the author, appeared in 1555. Many subsequent editions and translations have been printed; but of all the editions of the writings of this great anatomist, the most accurate and complete is that published at Leyden, in 1725, 2 vols. folio, by Boerhaave and Albinus. This collection includes the letter printed at Ratisbon in 1546, under the title of "Epistola ad Joachimum Rœlants, &c. Rationem Modumque propinandi Radicis Chynæ Decocti, quo nuper invictissimus Carolus V Imp. usus est;" the answer to Fallopius, written in 1561, entitled "Anatomicarum G. Fallopii Observationum Examen;" and "Chirurgia Magna," a compilation probably from the lectures of Vesalius, published four years after his death, by Prosper Bogarucci.—*Hutchinson's Biog. Med. Aikin's Gen. Biog. Biog. Univ.*

VESLING (JOHN) an eminent writer on natural history and anatomy, born at Minden in Germany, in 1598. He studied at Vienna, and afterwards took a journey to Palestine, where he employed himself in botanical researches. Returning to Europe he obtained the professorship of anatomy at Padua; but he quitted that office to become keeper of the botanic garden, of the plants cultivated in which he published a catalogue. He then visited Egypt, where he made observations on the mode of hatching fowls by means of artificial heat, practised in that country. His death took place in 1649. Among his works are "Syntagma Anatomicum;" "De Pullione Ægyptiorum, et aliis Observationes Anatomicæ;" and "Observationes et Notæ ad Prosp. Alpini Librum de Plantis Ægypti."—*Aikin's Gen. Biog.*

VESPASIANUS (TITUS FLAVIUS) emperor of Rome was born near Rieti, in the country of the Sabines, towards the close of the reign of Augustus. His father, T. Flavius Sabinus, was a receiver of taxes in Asia; and in that generally disreputable office he was distinguished for moderation and integrity. Vespasian displayed but little ambition in his youth; and it was not till the reign of Claudius that he exhibited his military talents. Being then appointed commander of a legion, he acquired great reputation in Germany and in Britain; and on his return to Rome he was

made consul. In the beginning of Nero's reign he lived in retirement, but was at length appointed proconsul of Africa; and on the rebellion of the Jews he was sent with an army into Judea, A.D. 66. After taking some important fortresses, and reducing almost the whole of Galilee to subjection, he was preparing to attack Jerusalem, when he received the news of the death of Nero, A.D. 68. After the transient reigns of Galba, Otho, and Vitellius, he was himself elevated to imperial power; and such was his good fortune, that he found himself seated on the throne without having recourse to those hostilities which he had anticipated as necessary to support his claims. Reaching Rome about the middle of the year 70, he was received with general and sincere rejoicing, the reputation he had acquired promising relief from the miseries of misgovernment under which the people had long suffered. He did not disappoint the expectations which his character had excited. He reformed the discipline of the army, purified the senatorial and equestrian orders, by degrading the unworthy, and filling their places with respectable citizens; and he appointed a commission to settle the vast multitude of suits which had accumulated during the late troubles; besides presiding on the bench frequently himself that justice might be administered with impartiality. He was an enemy to luxury, and devoid of personal or family pride, being by no means desirous to conceal the obscurity of his origin. On the other hand he is charged with displaying a degree of meanness and rapacity in the accumulation of wealth, inconsistent with his character and station. Though this reproach is not destitute of foundation, it appears however to be exaggerated; and necessity probably obliged him to have recourse to the means he employed for the exigences of government, after the treasury had been exhausted by the luxury and profusion of his predecessors. Among the principal public events of the reign of Vespasian are the termination of the dangerous rebellion of the Gauls under Civilis, and the capture of Jerusalem by Titus, whom the emperor had made his lieutenant in Judea. After reigning ten years he died, in June, A.D. 79, greatly regretted by the Romans, who under his dominion enjoyed a degree of national prosperity to which they had long been strangers.—*Tacitus. Suetonius. Crevier Hist. Rom.*

VESPUCCI (AMERICUS) or AMERIGO VESPUCCI, an able Italian mariner, who has very unjustly attained the honour of giving a name to the largest quarter of the globe, was born of a distinguished family of Florence, March 9, 1451. He received an excellent education under a paternal uncle, who was a learned Dominican, but of his subsequent life nothing certain is known until 1490, when he was sent by his father to carry on a commercial concern in Spain. While at Seville he was informed of the discoveries of Columbus, and became inflamed with a desire of participating in his glory, which ambition implies a previous life of nautical experience, agreeably

to the suggestions of his biographer Bandini. His story now becomes a matter of controversy, but his own account is, that having been engaged by Ferdinand, king of Spain, to continue the discoveries in the New World, he sailed from Cadiz in May 1497, and after touching at the Canaries, in thirty-seven days arrived at a land which was judged to be Terra Firma. Had this account been true, he would have certainly anticipated the discovery of the coast of Paria by Columbus, by an entire year. It is however remarked that no other writer takes the least notice of such an expedition, and that in 1497 Columbus himself was in Spain, and highly honoured at the court of Ferdinand and Isabella. It is therefore generally concluded that Vesputius's account of this voyage is either a mere fiction, or antedated as the account of a voyage which really took place subsequently. He for some time quitted the service of Spain for that of Portugal, and conducted an expedition of three ships, in which he assumes to have coasted along the whole American coast, from Brazil to Patagonia. In 1505 he undertook another expedition for the same power with a fleet of six ships, in order to discover a way to Malacca by the west, in which endeavour he encountered the greatest dangers, and lost one of his vessels. On the death of Columbus, Vesputius was again invited into the service of Spain, and in 1507 placed at Seville with the title of pilot major. It being part of his office to mark out the tracks to be followed by navigators, he always distinguished the new countries by the word America, or "Amerigo's Land." Hence, notwithstanding the complaints of the Spaniards, the honour was stolen from the rightful possessor, although the renown has not gone with the name, Vesputius being deemed a very inconsiderable person in comparison with Columbus. He left a journal of his four voyages, which was printed in Latin at Paris in 1532, and at Basle in 1537, and afterwards in Ramusio's collections. Bandini having at length discovered the Italian originals, also gave them to the public. Some of his letters were printed at Florence in 1516, in a thin quarto of twenty-two pages. They are addressed to Soderini and Lorenzo de' Medici, and are said to discover a very superior knowledge of navigation. The date of his death is not recorded.—*Tiraboschi. Biog. Univ.*

VESTRIS (GAETANO APOLINE BALTHAZAR) a celebrated professor of the art of dancing, born at Florence in 1729. He received lessons when very young from Dupré at Paris, and in 1748 he made his début at the opera. In 1753 he became a member of the Academy of Dancing, which had been founded by Louis XIV. On the retirement of Dupré from the stage Vestris succeeded him; and he was in his turn surnamed Dieu de la Danse. His vanity appears to have been at least equal to his merit. It is reported that in answer to the question, who were the three greatest men of the age, he said, "Myself, Voltaire, and Frederick the Great;" and many other amus-

ing traits of his extraordinary self-estimation are recorded. He had the office of ballet-master, but his choregraphical compositions were not of much importance. He retired with a pension in 1781; and his death took place at Paris September 27, 1808.—His wife, ANNA FREDERICA HEINEL, who was his pupil, became highly distinguished as an opera-dancer. She was born at Bareuth in 1752, and died in 1808, a few months before her husband.—*Biog. Univ.*

VESTRIS (MARIE ROSE GOURGAUD DU-GAZON) a distinguished French actress, who was the wife of Paco Vestris, brother of the subject of the last article. She made her first appearance on the stage in December 1768, and having been instructed by the celebrated tragedian Lekain, she speedily attained great reputation, not only in tragic characters, but also in the higher walks of comedy. Her quarrels with the rival actresses, mademoiselle Sainval and her sister, not only engrossed a great deal of the public attention at Paris, but required the interference of the government, which was exerted in favour of madame Vestris. She died at Paris, October 6, 1804, not long after she had retired from the stage.—*Idem.*

VETTORI. See VICTORIUS.

VIAL DU CLAIRBOIS (HONORE SEBASTIEN) director of the school of naval engineers, and chief of the maritime artillery at Brest. He was a native of Paris, and after having been a lieutenant in the navy, in 1754 he entered the army, and served till 1777, when he resumed his former profession, in the office of marine sub-engineer. The talents which he displayed in the construction of vessels, procured him in 1793 the post of engineer-constructor-in-chief. He had some other appointments previously to that of director of the school of engineers at Brest, which he held from 1801 till 1810, when his great age and infirm health obliged him to retire from the service of his country. He died in 1816, aged eighty-three. He published "*Essai Géométrique et Pratique sur l'Architecture Navale*," Brest, 1776, 2 tom. 8vo; "*Traité Élémentaire de la Construction des Vaisseaux*," Paris, 1787—1805, 2 vols. 4to; and a translation of an English work on Ship-building. He was also a principal contributor to the "*Encyclopédie Méthodique*."—*Biog. Univ.*

VIBIUS SEQUESTER, an ancient geographer, who is supposed to have been a Roman, and according to Oberlin he flourished between the fifth and the seventh centuries. He is only known as the author of a work entitled "*De Fluminibus, Fontibus, Lacubus, Nemoribus, Paludibus, Montibus, Gentibus, quorum apud Poetas fit mentio*." This piece has been published with the writings of other ancient geographers; and it was edited separately by Hessel, Rotterdam, 1711, 8vo; and by Oberlin, Strasburg, 1778, 8vo.—*Biog. Univ.*

VIBORG (ERICH NISSEN) an eminent veterinary surgeon, born in the duchy of Sleswick in 1759. His father, who was a Protestant minister, gave him some classical instruc-

tion, and in 1777 sent him to the university of Copenhagen, to study theology. Relinquishing his original destination to the church, he applied himself to mathematics and natural history, under the veterinary professor Abildgaard, to whose office he succeeded in 1801. He was subsequently made a counsellor of state, and a knight of the order of Dannebrog. He died September 25, 1822. Besides a considerable number of memoirs and treatises on veterinary surgery and medicine, he was the author of tracts on moving sands, and the means of preventing the mischief arising from them; and in consequence of the importance of his researches on this subject, he was appointed inspector-general of flug-sand, or moving sands.—*Biog. Univ.*

VICCARS (JOHN) a zealous puritan, conspicuous in the time of the Commonwealth for his intemperate and fanatical writings, which drew upon him the sarcastic wit of Butler in his *Hudibras*. He was born and educated in London, the period of his birth being fixed about the year 1582. From Christ's hospital he removed to Queen's college, Oxford; and having taken his degrees, became one of the under-masters of the seminary in which he had originally imbibed the rudiments of education. His tirades against the monarchy and the episcopal form of church government are scarcely more remarkable for their violence than for the very absurd titles under which some of them were produced, and which are quite in the style of the enthusiasts of that day. They consist of "God's Arke overthrowing the World's Waves;" "The Burning Bush not consumed;" and "God in the Mount," afterwards published in one volume as "The Parliamentary Chronicle;" and an attack on Goodwin, called "Coleman Street Conclave visited." He died about the middle of the seventeenth century.—*Athen. Oxon.*

VICENTE (GIL) the earliest and most celebrated of the Portuguese comic poets. He was born about 1480, and he received his education at the university of Lisbon, where he studied jurisprudence. Having composed some pastoral poems in 1502 for recitation at court on public festivals, they were so much admired that he was induced to relinquish his profession, and devote himself to dramatic composition. He continued to write till 1536, when he produced the last and most spirited of his comedies, "Floresta d'Engaños," "The Garden of Deceptions." His death took place at Evora in 1557. None of the dramas of Gil Vicente were printed during his life; but his son, Louis Vicente, collected and published them in a folio volume in 1562. They consist of comedies, tragi-comedies, farces, &c. besides works of devotion, or autos. It may be noticed, as a proof of the merit of this dramatist, that Erasmus learnt Portuguese in order to be able to read his works, which he found to be superior to the idea he had conceived of them.—*Dict. Hist. Biog. Univ.*

VICO (ÆNEAS) better known perhaps as Æneas Vighi, was a native of Parma, eminent about the middle of the sixteenth century for

his acquaintance with the study of ancient medals. Although following the profession of an engraver, he yet found time to give to the world several useful treatises, the result of his numismatic researches. Of these the principal are "Cæsarum verissimæ Imagines ex antiquis Numismatibus desumptæ," a valuable series; "Discourses on the Medals of the Ancients," 1555; "Augustorum Imagines Formis expressæ, Vitæ quoque earundarum breviter enarratæ," 4to, 1558; and "Monumenta aliquot Antiquorum ex Gemmis et Camæis incisa." Of his life little is known farther than that he resided chiefly at Rome, and had learned the principles of his art under the famous Raimondi, who did not however consider him one of his best scholars.—GIOVANNI BATTISTA VICO, an Italian rhetorician, born in 1670, was professor of eloquence at Naples, of which capital he was a native, and is known as the author of a work entitled "Scienza Nuova." His death took place about the year 1740.—*Tiraboschi.*

VICQ-D'AZYR (FELIX) an eminent French physician and anatomist, born at Valogne in 1748. He went to Paris in 1765, and after having devoted several years to the study of medicine and the sciences connected with it, especially anatomy and physiology, he commenced giving lectures on human and comparative anatomy in 1773. Through the influence of Daubenton he was enabled to prosecute with advantage his researches concerning the structure of foreign animals; and the memoirs in which he gave an account of his discoveries, procured him admission into the Academy of Sciences in 1774. The following year he was sent by the minister Turgot into Languedoc, to investigate the causes of a destructive disease among cattle. Soon after he became one of the principal founders of a medical society at Paris, of which he was appointed perpetual secretary; and in that capacity he wrote the biographical eulogies of many of the members. The reputation he acquired by this exertion of his talents occasioned his being chosen to succeed Buffon in 1788, as a member of the French Academy. He was constituted first physician to the queen in 1789, and notwithstanding his connexions with Condorcet and other philosophers, which injured his credit at court, he had also the reversion of the office of first physician to the king. He died June 20, 1794. Vicq-d'Azyr in 1786 commenced the publication of a work entitled "Traité d'Anatomie et de Physiologie," with coloured plates, folio. This part, which is all that appeared, relates only to the brain, with an introductory discourse on anatomy in general. He also wrote part of "Système Anatomique des Quadrupèdes," for the *Encyclopédie Méthodique*; a treatise entitled "Médecine des Bêtes à Cornes," 1781, 2 vols. 8vo; and many medical and anatomical memoirs. His "Eloges Historiques," were published in 1797 and in 1826; and his works appeared in 6 vols. 8vo, with an Atlas in 4to, Paris, 1805.—*Aikin. Biog. Univ.*

VICTOR (SEXTUS AURELIUS) a Roman

historian, who lived in the fourth century. He was the son of humble parents, and did not enjoy the benefit of a learned education. The place of his birth is not recorded; but however obscure his origin, he possessed talents which procured him the highest honours. In the year 361 the emperor Julian appointed him prefect of Pannonia; and a long time afterwards he was prefect of Rome, and in the year 369 consul with Valentinian. He appears to have lived till towards the end of the fourth century. The following works are extant under his name, "Origo Gentis Romanæ;" "De Viris illustribus Urbis Romæ;" "De Cæsaribus Historia ab Augusto Octavio usque ad Consulatum decimum Constantii Augusti et Juliani Cæsaris tertium;" "De Vita et Moribus Imperatorum Romanorum Excerpta, e Cæsare Augusto usque ad Theodosium Imperatorem." It is thought that the work "De Cæsaribus Historia," can alone be ascribed with certainty to Aurelius. The first edition of Aurelius Victor was printed at Antwerp, 1579, with notes by Schottus. There are several other good editions, of which the latest is the Bipont of 1789.—*Vossii Hist. Lat. Saxii Onom.*

VICTOR AMADEUS II, duke of Savoy and first king of Sardinia, was born in 1666, and succeeded his father, Charles Emanuel, in 1674, under the guardianship of his mother. In 1684 he married Anna Maria of Orleans, daughter to the duke of Orleans, by Henrietta Anna of England, sister to Charles II, which might have conveyed the crown of Great Britain to this family, but for the Revolution of 1688. The first military transaction of this prince was his expelling with great bloodshed his Protestant subjects of the Vaudois. In 1687 he joined the grand alliance against France, but was a severe sufferer in the contest, being defeated by marshal Catinat, who entered Piedmont, and took all his strong places. He still however remained so formidable by his activity and resources, that France strained every nerve to detach him from the confederacy, and he at length agreed to a treaty, by which all the places taken from him were to be restored with a sum of money, by way of indemnification, and a contract of marriage was entered into between his eldest daughter and the duke of Burgundy, heir apparent to the crown of France. The duke of Savoy then joined his troops to those of his new ally; and in less than a month, from being generalissimo of the emperor, became that of Louis XIV. This state of things was terminated the following year by the peace of Ryswick. Soon after a marriage was entered into between the second daughter of Victor Amadeus and Philip of Anjou, called to the throne of Spain; and thus he had the rare fortune of seeing the two principal kingdoms of Europe fall to his immediate descendants. This close connexion, however, did not prevent him from entering into negotiations with the allied powers in 1702; which conduct produced immediate hostilities on the part of France, who took from him a number of towns, and at

length in 1706 laid siege to Turin, his capital, which was relieved by the imperialists under prince Eugene. The duke in consequence recovered all that he had lost, and assisted the emperor to expel the French from Lombardy. His importance in the eyes of the contending powers was proved by the terms he obtained at the peace of Utrecht. Besides being restored to all his own possessions, France made several cessions to him, and the emperor conferred on him a part of Montserrat and several provinces in Italy. The king of Spain also resigned to him the kingdom of Sicily, which gave his house the royal title; and it was also agreed that in default of heirs to the Spanish monarch, the crown of Spain should descend to the house of Savoy, in preference to that of Bourbon. Victor Amadeus with his duchess were accordingly crowned at Palermo in the close of the same year; but great confusion soon after arose, in consequence of the terms of the cession, which terminated in the resignation of Sicily by Victor, who received the island of Sardinia in lieu of it, with the royal title appended to it. This event took place in 1718, and ever since the dukes of Savoy rank among the sovereigns of Europe as kings of Sardinia. From that time Victor Amadeus dedicated himself solely to the arts of peace, until in 1730, after a reign of fifty-three years, he was induced to abdicate in favour of his son Charles Emanuel. Instigated by an ambitious mistress, to whom he was privately married, he had soon after the weakness to seek to resume his authority, which being opposed by the new king and council, the abdicated monarch was placed under a degree of personal restraint, in which situation he died, at the castle of Rivoli near Turin, in 1732, in his sixty-seventh year.—*Mod. Univ. Hist. Nouv. Dict. Hist.*

VICTORIUS, or VETTORI (PETER) an eminent Italian scholar, was born at Florence, in July 1499. He early began his studies in the Greek and Latin languages, philosophy, mathematics, and jurisprudence. In 1522 he visited Spain in the train of a relative appointed to accompany the new pope, Adrian VI, into Italy, and took copies of the Roman antiquities in Catalonia. In the disputes at Florence he sided with the republican party, but would not take part in the deliberations to settle a new form of government, after the assassination of duke Alexander de' Medici, and retired to Rome. His fame for learning was so great, that, notwithstanding his opposition to the house of Medici, he was invited by Cosmo II to become Greek and Latin professor in the university of Florence, the duties of which office he exercised with celebrity for upwards of forty years. Literature was as much indebted to Victorius as to any scholar of the age. Had he done nothing but collate and correct other editions of the Greek and Latin authors which had appeared from the invention of printing to his own time, his services would have been eminent; but he also supplied the learned world with notes and commentaries to Aristotle, Terence, Varro, Sallust, Euripides,

Porphyry, Plato, Xenophon, and more especially to Cicero, his edition of which author, printed in 4 vols. folio, 1534—37, has always received extraordinary commendation. Besides these, and his "Varia Lectiones," of which there have been several editions, he was likewise author of some Latin poetry, and orations and letters, both in Latin and Italian. He died in 1585, in his eighty-sixth year, and was interred with great magnificence at the public expense. —*Tiraboschi. Moreri.*

VIDA (MARK JEROME) a celebrated modern Latin poet, born in 1490 at Cremona, of parents who were poor but of noble descent. He studied with distinction at Padua, Bologna, and Mantua, and he was admitted while young into the congregation of the canons regular of St Mark. He afterwards went to Rome, and became a canon of St John Lateran. His talent for Latin poetry recommended him to Leo X, who gave him the priory of St Silvester near Tivoli. There he wrote his "Christiad," which was finished in the pontificate of Clement VII, who in recompence of his merit, bestowed on him in 1532 the bishopric of Alba. Paul III intended to have translated Vida to the see of Cremona, but the death of the pope prevented his promotion, and he died at Alba, September 27, 1566. His poetical productions, besides the Christiad, are "Scacchia Ludus," the Game of Chess, which has been highly praised by Warton; "Poeticorum Libri iii," translated by the abbé Batteux into French, and published with the Poetics of Aristotle, Horace, and Boileau; "Bombycum Libri ii," on Silk-worms, esteemed the most correct and elegant of the works of Vida; "Hymni de Rebus Divinis;" "Carminum Liber." His prose works consist of "Dialogi de Reipublicæ Dignitate Libri ii.;" "Discorsi contra gli Abitanti di Pavia," Paris, 1562, 8vo, republished at Venice in 1764, under the title of Cremonensium Orationes tres adversus Papienses in Controversia Principatûs;" and Synodal Constitutions, Letters, &c. Most of these works were published collectively at Padua, 1731, 2 vols. 4to; and the Poems of Vida were printed at Cremona, 1550, 2 vols. 8vo; at Oxford, 1722, 4 vols. 8vo; in 1725 and 1733, 3 vols. 8vo. The Poetics of Vida were translated into English by the rev. Christ. Pitt, and the Poem of Chess by George Jeffreys. —*Biog. Univ.*

VIDUS VIDIUS, the Latinized name of Guido Guidi, a Florentine physician of the sixteenth century. After completing his education he went to Paris, where he was much noticed by Francis I, who made him his first physician, and created for him the office of lecturer on medicine at the Royal college, then recently established. After the death of his patron in 1547, he returned to Florence, where he became first physician to the grand duke Cosmo de' Medici, and a member of the Florentine Academy. He was afterwards professor of philosophy, and then of medicine, at Pisa. His death occurred in 1569. His works, which are very numerous, were published together, in 3 vols. folio, Venice, 1614,

and reprinted at Frankfort in 1626, 1643, and 1657. —*Portal Hist. d'Anat. Tiraboschi.*

VIEL (CHARLES FRANCIS) an architect, who was a native of Paris, and studied at the college of Beauvais, and afterwards became the pupil of Chalgrin. He erected the Monte de Piété, the Hospital Cochon, the amphitheatre of the Hotel Dieu, and many other buildings at Paris and elsewhere; and he distinguished himself also by his professional writings. He published "Projet, Plan, et Elévation d'un Monument consacré à l'Histoire Naturelle, dédié à M. le Comte de Buffon," 1780, 4to; "Moyens pour la Restauration des Piliers du Dôme du Panthéon," 1797, 4to; "Principes de l'Ordonnance et de la Construction des Bâtimens," 1797—1814, 5 vols. He died at Paris, December 1, 1819. —*Biog. Univ.*

VIETA (FRANCIS) an eminent French mathematician, born in the province of Lower Poitou in 1540. He has been represented by some writers as the inventor of algebra, but he merely improved that branch of science by introducing letters as symbols of known or unknown quantities. On this subject he wrote a treatise "Denumerosa Potestatum Resolutione ad Exegeasin," Paris, 1600, folio. He held the office of master of requests at Paris, and he died in that city in 1603. Vieta assisted in the correction of the Gregorian Calendar; and he was distinguished for his skill in the art of decyphering. According to De Thou he pursued his mathematical speculations in such complete abstraction from the common concerns of life, and with so little regard for the exigencies of nature, that he would sit in profound meditation at his table for three days together, almost without taking food or rest. His trigonometrical tracts were published in 1579, and the rest of his works were edited by Schooten in 1646. —*Blount Censura Celebris. Auctor. Hutton's Math. Dict.*

VIEUSSENS (RAYMOND) an eminent French anatomist, physician to the court. He was born at Rouergue, in 1641, and studied the science of medicine at Montpellier, where he graduated. His principal writings are, a treatise on "Internal Diseases," published many years after his death by his grandson, in four quarto volumes, and another in folio, entitled "Neurologia universalis," an able work on the nervous system, printed in his life-time, about the year 1685. His declining health induced him to retire from the capital to Montpellier, some short time previously to his decease, which took place in 1716. —*Halleri Bihl. Med.*

VIGILIUS, bishop of Tapsus in Africa, an ecclesiastical writer of the fifth century. He was involved in a persecution of the catholics by Hunneric the Arian, king of the Vandals. This is supposed to be the cause of his composing a number of writings under the names of persons eminent in the church. Thus he composed a supposed discussion between Arius and Athanasius, at Laodicea. He also wrote a dialogue against Arius, in the name of St Augustin; and to him is also attributed a dispute of St Augustin and Pascent-

tius, and the celebrated Athanasian creed. After he retired to Constantiople, he published works in his own name, which, with others attributed to him, were printed at Dijon in 1665, 4to.—*Fleury Hist. Eccles.*

VIGNE (PIER DELLA) a celebrated minister of the emperor Frederick II, was born of mean parents, at Capua, towards the latter end of the twelfth century. He was a mendicant scholar of Bologna, but pursued his studies to such good effect, that he was advanced successively by the emperor to the posts of prothonotary of his court, judge, and chancellor. He was also employed as a negotiator in various embassies, and took a leading part in that eventful reign. Ultimately, however, he was accused of betraying his master's interest to pope Innocent IV; and being thrown into prison and deprived of sight, he terminated his life with his own hand. Six books of letters are remaining in his name, which Tiraboschi regards as one of the most valuable monuments of the thirteenth century. He also collected and arranged the laws of Sicily, composed a book on consolation, in imitation of Boethius, and several Italian poems. In common with his master, he has a share in the imputation of being concerned in the composition of the famous book "De tribus Impostoribus;" a work of which it is equally disputed who was the author, or whether it ever really existed.—*Tiraboschi.*

VIGNIER, the name of two ingenious French writers, who stood to each other in the relation of grandfather and grandson.—NICHOLAS VIGNIER, the elder of the two, was a native of Troyes, born in 1530, and distinguished himself as a sound scholar and a learned antiquarian. He was the author of a variety of able works, principally connected with the early history of his native country. These consist of "An Essay on the Origin and Condition of the ancient Franks," folio; "On the ancient State of Armorica or Brittany;" "A Summary of the History of France," folio; "Annals of the ancient Jews, Greeks, and Romans," 4to; and an "Historical Dictionary," in four volumes, folio. He died historiographer royal in 1596.—JEROME VIGNIER was born in 1606 at Blois. He was educated in the reformed religion, but reconciled himself to the Romish church, took the vows, and became a priest of the Oratory. Jerome inherited the antiquarian propensities of his grandfather, and especially distinguished himself by his acquaintance with the pedigrees of the principal continental families. In the course of this pursuit he collected and published genealogies of the house of Hapsburg, of the counts of Champagne, and of the feudal seigneurs of Alsace. He was also the author of a theological treatise "On the Harmony of the four Evangelists," and died in 1661.—*Moreri. Nouv. Dict. Hist.*

VIGNOLA, or GIACOMO BAROZZIO, a celebrated Italian architect, who derived the former appellation, by which he is best known, from the small town of Vignola, in the duchy of Modena, where he was born in 1507. He

applied himself first to painting, but his inclination leading him to prefer architecture, he studied the works of Vitruvius and other ancient writers, and then went to Rome, where he carefully surveyed and measured the remains of ancient art. He visited France in the reign of Francis I, and he furnished the designs for several edifices in that country. Returning to Italy, he designed the church of St Petronius at Bologna, and built a magnificent palace for count Isolani. He executed many other works of importance in various parts of Italy, but none of them to be compared with the palace of Caprarola, which he erected for cardinal Alexander Farnese. The immense reputation which he acquired, induced Philip II to invite him to Spain; but he declined going thither on account of his great age, and his engagements as architect of St Peter's, where he had succeeded Michael Angelo. However he sent designs for the Escorial, which were preferred before those of the other celebrated architects who were his competitors on that occasion. Vignola died in 1573, and was interred with great pomp in the Pantheon at Rome. He was the author of a treatise on Perspective, commented on by Ignazio Dante; and of a work on the Five Orders of Architecture, translated into French, with a Commentary by Daviler. A new edition of the works of Vignola was commenced at Paris, in 1815, folio. *Aikin's Gen. Biog. Biog. Univ.*

VIGNOLES (ALPHONSO de) a French Protestant clergyman, who was the son of a Calvinist officer, and was born at Aubais in Languedoc, in 1649. After having been in the army, he studied theology at the university of Saumur; and he was minister first at Aubais and then at Cailar, where he continued till the revocation of the edict of Nantes in 1685. He found an asylum in the territories of the elector of Brandenburg, and became successively minister of Schwedt, of Halle, and of Brandenburg near Berlin. He was one of the first members of the Academy of Sciences at Berlin, on its establishment in 1701; and he was chosen director of that institution in 1727. He published many learned works, of which the most important is his "Chronologie de l'Histoire Sainte et des Histoires Etrangères qui la concernent, depuis la Sortie d'Egypte jusqu'à la Captivité de Babylone," 1738, 2 vols. 4to. He died at Berlin, July 24, 1744.—*Dict. Hist. Aikin's Gen. Biog.*

VIGNOLI (JOHN) a learned writer on archæology and numismatics, born in Tuscany, about 1680. After having studied philosophy and theology, he took the ecclesiastical habit, consecrating his leisure to the investigation of medals and other ancient monuments. In 1720 he succeeded, on the death of Zaccagni, to the office of librarian of the Vatican; and his death took place in 1753. Besides an edition of the Lives of the Popes, by Anastasius Bibliothecarius, 1724, 1753, 1755, 3 vols. 4to; he published "Antiquiores Pontificum Denarii," 1709, 4to; "Dissertatio de Columna Imp. Antonini Pii, una cum Antiquis Inscripti-

uonibus," 1705, 4to, and other works.—*Biog. Univ.*

VILLA (GHIRON FRANCIS, marquis de) one of the most distinguished military officers of the seventeenth century. He was the son of Guido, marquis de Villa, a general in the French service, who was killed at the siege of Cremona, in 1648. The son, who inherited the talents and courage of his ancestors, after having been employed in the wars of Italy, entered into the service of the Venetians, and was sent in 1665 with a body of troops to Candia, then attacked by the Turks. He defended that place, notwithstanding the inferiority of his forces, and the repeated wounds which he received, against the assaults of the enemy, in a manner highly creditable to his talents and bravery. In 1668 he quitted Candia, in obedience to the commands of his sovereign, the duke of Savoy; and he died not long after, in consequence of the injuries he had suffered. An account of the Travels of the Marquis de Villa in Dalmatia and the Levant, and of the Siege of Candia, by J. B. Rostagno, counsellor and secretary of state to the Duke of Savoy, was published at Turin, 1668, 4to; and there are two abridged translations of the work into French.—*Biog. Univ.*

VILLALPANDI (JOHN BAPTIST) a learned Spanish jesuit, was born at Cordova, in 1552; and he entered the society of jesuits in the twenty-sixth year of his age. He was distinguished for extensive theological and mathematical knowledge, and was associated with Jerome Prado, in a commentary on Ezekiel. He particularly distinguished himself in a dissertation upon the structure of Solomon's Temple, in respect to which, having adopted a theory that it was perfect, as the model had been given by God himself, he exhausted much fancy and ingenuity to describe an edifice which should answer that character. Calmet's Dictionary contains some account of this curious inquiry, as also several engravings in illustration of it. Villalpandi likewise edited a theological tract by St Remi. He died at Rome, 1608.—*Calmet. Antonio Bibl. Hist.*

VILLANI, the name of three historians of the same family, natives of Florence, of which republic they wrote the annals in conjunction.—GIOVANNI, the elder, was a traveller over great part of the European continent, but died in his native city, where he enjoyed a post under the government, in 1348, before the completion of the work.—MATTEO VILLANI went on with it; but he, too, dying in 1363, it was reserved for Filippo, son of the latter, and nephew to Giovanni, to put a finishing hand to it.—FILIPPO afterwards published the "Memoirs of illustrious Florentines," and died soon after the commencement of the fifteenth century. Their History, which was not printed till above a century after their decease, has gone through several editions. The first is that of Florence, 1537; another, that of Milan, in two folio volumes, 1729, and several still later.—*Tiraboschi.*

VILLARET (CLAUDE) a French historian born at Paris about 1715. He was intended

for the legal profession, but he preferred the study of the belles lettres; and after assisting with Bret and Daucour in the composition of a comedy in one act, he published in 1743 a novel called "Histoire du Cœur Humain." and in 1745 another, "La Belle Allemande." The derangement of his affairs obliging him to leave Paris, he went in 1748 to Rouen, where he appeared on the stage; and he continued that mode of life till 1756. He then returned to Paris, and having obtained a financial situation, he relinquished his lighter studies, and applied himself to the investigation of the history of his native country. On the death of the abbé Velly in 1759, he was selected to continue the History of France, commenced by that writer, and he was at the same time made secretary to the peerage. His portion of the work, which is reckoned superior to that of his predecessor, extends from 1329 to 1469, or from the reign of Philip de Valois to that of Louis XI. He also assisted in the "Cours d'Histoire Universelle," undertaken by Luceau de Boisgermain. His death took place in February 1766.—*Dict. Hist. Biog. Univ.*

VILLARS (DOMINIC) a French botanist, born in 1745. His father was a farmer in the south of France, on whose death he was obliged to undertake the care of the farm for the support of his family. Resolved however to study medicine and botany he quitted his home, and in 1771 went to Grenoble, where he fortunately obtained the patronage of M. de Marcheval, intendant of Dauphiny, who procured for him a pension, and admission as a pupil at an hospital. In 1773 he commenced a course of lectures on botany, and in 1778 he took his degrees in the faculty of medicine at Valence. In 1781 his friend M. de Marcheval obtained for him the office of chief physician to the military hospital at Grenoble, and a botanic garden being founded there in 1783, he lectured on botany. The suppression of the hospital in 1803, and that of the central school soon after, left him without employment; but in 1805 he was nominated professor of botany and medicine at Strasburg, and in 1807 he became dean of the faculty in that city. He died June 27, 1814. His principal works are "Histoire Naturelle des Plantes du Dauphiné," Grenoble, 1786, 4 vols. 8vo; "Mémoires sur la Topographie et l'Histoire Naturelle," 1804, 8vo; and "Précis d'un Voyage Botanique fait en Suisse, dans les Grisons, &c. en 1811," Paris, 1812, 8vo.—*Biog. Univ.*

VILLARS (LOUIS HECTOR, duke de) marshal of France, was the son of Peter, marquis of Villars, and was born at Moulins in 1653. He bore arms at an early age, as aide-de-camp to his cousin, the marshal de Bellefons; and he served in Holland in 1672, and the following year signalized his courage at the siege of Maestricht. In 1674 he obtained the command of a regiment of cavalry, and in 1678 he distinguished himself in Germany under the marshal de Crequi. He was made a lieutenant-general in 1693; and after the peace of Ryswick he went as envoy extraordinary to Vienna. War being renewed, he was em-

ployed in Germany, where in 1702 he gained the victory of Friedlingen, and obliged the imperialists to abandon their lines at Haguenau. He was rewarded with the staff of a marshal of France. In 1704 he was sent to Languedoc against the insurgent fanatics of the Cevennes, with whom he made a treaty of pacification; and on his return to Paris he was made a duke, and received the collar of the royal orders. After serving against the imperialists in 1705, and against the duke of Savoy in Dauphiny in 1708, he was sent the following year to the Netherlands, where he was wounded and defeated at Malplaquet. After having gained the victory of Denain, he negotiated with his antagonist prince Eugene at Rastadt in 1714. He preserved his credit at court after the death of Louis XIV. In 1715 he was appointed president of the council of war, and was admitted into the council of regency in 1717. When the duke of Bourbon succeeded to power on the death of the duke of Orleans, during the minority of Louis XV, marshal Villars was consulted on all important affairs of state, and he was then at the height of his fortunes. War taking place in 1733, he was sent to command in the Milanese, where he took Pizzighitone; but age and debility prevented him from making more than one campaign. He was taken ill as he was returning to France, and died at Turin June 17, 1734. There are extant "*Mémoires du Maréchal de Villars*," 3 vols. 12mo, printed in Holland, of which the first part only was written by himself. In 1784 M. Anquetil published "*La Vie du Maréchal de Villars*," 4 vols. 12mo, containing letters, recollections, and a journal of the marshal, arranged by the editor.—*MARIE GIGAULT DE BELLEFONS*, marquise de Villars, mother of the marshal, was a correspondent of mad. de Coulanges, and her letters are printed with those of mad. de Sevigné.—*Aikin's Gen. Biog. Biog. Univ.*

VILLARS (MONTAUCON de) a French abbé, related to the celebrated antiquary Montaucou. He was either a native of Toulouse, or educated there; but came early to Paris, where he attracted much attention by his talents as a preacher, and his lively and ingenious conversation. He also published various works of imagination and criticism, written in a peculiar style of humour, the most celebrated of which is "*Le Comte de Gabalis, ou Entretiens sur les Sciences secrètes*," with an addition entitled "*Les Génies assistants et les Gnomes irréconciliables*." When the book first appeared, it was universally read as a mere sport of the imagination, at once innocent and amusing; but ultimately, certain theologians professed to discover a secret and irreligious aim in it, and the abbé was forbidden the pulpit, and his book prohibited. The second volume which he promised would have set this silly matter at rest, but the unfortunate abbé was soon afterwards assassinated by ruffians in his way to Lyons, the direct perpetrator of the deed being a member of his own family. This catastrophe took place in 1675. It was avowedly from the "*Comte de Gabalis*" that Pope derived the hint of his

machinery for the Rape of the Lock. It is merely the general notion however that has been so felicitously adopted, the spirits in the original work being much more important personages than in the poem.—*Nouv. Dict. Hist. Warton's Essay on Pope.*

VILLAVICIOSA (JOSEPH de) a Spanish inquisitor, distinguished as one of the best hero-comic poets of his nation. He was born in 1589, and studied at Cuença, where he applied himself to poetical composition. After some essays of less importance, he wrote "*La Mosquera, Poetica Inventiva en octava rima*," 1615, 8vo. This piece, consisting of twelve cantos, is conceived in the same spirit with the *Batrachomyomachia*, ascribed to Homer, and the *Gatomaquia* of Lope de Vega; and it is deserving of perusal, not only on account of the grace and facility of the author's style, but also for the bold originality of invention which it exhibits. Villaviciosa seems to have relinquished poetry after this effort; and continuing his studies as a lawyer and an ecclesiastic, he gradually rose to be archdeacon of Moya, and inquisitor of Cuença, where he died in 1658.—*Biog. Univ.*

VILLEBRUNE (JOHN BAPTIST LEFEBVRE de) a learned Hellenist and Orientalist, born at Senlis, about 1732. He studied medicine, and having taken the degree of doctor in that faculty, he appears to have practised for some years as a physician. At length he abandoned his profession, and applied himself to the study of various languages. Having an excellent memory he acquired a knowledge of almost all the principal dialects of Europe and Asia. He became Oriental professor at the College of France, and in 1796 he succeeded Chamfort as keeper of the national library. In 1797 he was proscribed by the Directory, for having, in a printed letter, proclaimed the necessity of a single governor for France. After residing in various departments, he settled at Angoulême, where he was for a time professor of natural history at the central school and then of classical literature and mathematics. He died October 7, 1809. His works, both original and translated, are very numerous. Among the most important are his versions of *Silicis Italicus* on the Punic War; the *Manual of Epictetus*, and the *Table of Cebes*; the *Aphorisms and Coac Pronotions of Hippocrates*; and the *Deipnosophists of Athenæus*. He also assisted in the magnificent editions of *Herodotus* and *Strabo*, published in folio, at Utrecht and Oxford.—*Biog. Univ.*

VILLEFEU (JOSEPH FRANCIS BOURGOIN de) a French biographer, was born at Paris December 24, 1652, being the son of a king's counsellor and hereditary judge and warden of the mint. He was singularly attached to study and retirement, and although chosen a member of the Academy of Inscriptions, voluntarily withdrew from it in order to retire to a small apartment in the cloisters of the metropolitan church, to pursue his avocations unmolested. In this retreat he composed a great number of works, residing there a layman

and unmarried, to December 1737, when he died at the age of eighty-five. His biographical productions are "The Life of St Bernard," 4to; "The Lives of the holy Fathers of the Desert," 5 vols. 12mo; "The Life of St Theresa," with the "Select Letters" of the same saint, 4to and 12mo; "Anecdotes and secret Memoirs of the Constitution of the Bull Unigenitus," 3 vols. 12mo, subsequently prohibited; "Life of the Duchess of Longueville," 2 vols. 8vo. He also translated several of the works of Cicero, St Augustin, and St Bernard.—*Nouv. Dict. Hist.*

VILLEHARDOUIN (GEOFFRY de) an ancient French chronicler, was marshal of Champagne, an office held by his father and descendants. He acted a considerable part in the fourth crusade of 1198, which led to the capture of Constantinople by the French and Venetians in 1204. Of this expedition he wrote, or dictated a narrative which is extant in the rude idiom of his age and country. It is an interesting narrative from its simplicity and apparent fidelity, and is much referred to by Gibbon in his account of the events which it describes. The best edition is that of Du Cange, folio, 1657.—*Moreri. Gibbon.*

VILLENA (HENRY D'ARAGON, marquis de) one of the most distinguished persons in the history of Spanish literature during the fifteenth century. He was descended of a family connected by blood with the royal houses of Castile and Aragon; and he was born in 1384. He manifested an early propensity for study, and attached himself to the service of John II, king of Castile, an eminent patron of literature. Having obtained the earldoms of Cangas and Tineo, in the province of Asturias, he was induced to resign them in order to become grand master of the military order of St Mary of Calatrava; but his election being contested, the pope deprived him of the title, and he retained only the post of commandant of the small town of Iniesta, which he held in right of his wife. He consoled himself for his ill-fortune by employing himself in the study of literature and philosophy, and wrote much both in prose and verse, though nothing more than the titles of some of his works have been preserved. None of his productions appear to have been printed, and the destruction of his papers after his death, in consequence of the imputation of cultivating the cabalistic sciences, occasioned a loss which the Spanish critics represent as a circumstance deeply to be regretted. The marquis de Villena died at Madrid, December 15, 1434.—*Antonio Bibl. Hispan. Biog. Univ.*

VILLENEUVE (GABRIELLE SUSANNE BARBOT, dame de) a French novelist, who was the daughter of a gentleman of Rochelle, and was married to M. Gaalon de Villeneuve, lieutenant colonel of infantry. Becoming a widow, and being destitute of fortune, she settled at Paris, and found resources for her support in the exercise of her talents. Her first essays in literature attracted the favourable notice of the elder Crebillon, who examined them in the course of his official duty as censor. Si-

ilarity of taste and disposition having produced a close intimacy between madame de Villeneuve and Crebillon, they resided together, lodging in the same house, till the death of the former, which happened Dec. 29, 1755, when she was about sixty years of age. Her works are "Les Contes Marins, ou la jeune Americaine," 4 vols. 12mo; "Les Belles Solitaires," 3 vols. 12mo; "La Jardinière de Vincennes, ou les Caprices de l'Amour et de la Fortune," 4 parties, 12mo, reckoned the best and most interesting of her productions; "Le Beau-frère supposé," 4 vols. 12mo; and "Le Juge prévenu," 5 parties, 12mo. Several other novels have also been erroneously attributed to this writer.—*De la Porte Hist. Litt. des Femmes Fran. Biog. Univ.*

VILLERS (CHARLES FRANÇOIS DOMINIQUE de) a French writer of modern times, a native of Belchen in Lorraine, where he was born in 1764. In the earlier part of his life he served in the French army as a lieutenant of artillery, but on the breaking out of the Revolution emigrated, and joined the Royalist force under the prince de Condé. On the failure of the hopes of the party to which he had attached himself, he went to Lubec, and devoted himself to literary pursuits. Villers, who was a man of considerable talent, and some reading, soon obtained a rising reputation in the republic of letters, which was much increased by his obtaining the prize given by the Institute, for an "Essay on the Influence of the Reformation;" and was at length invited to fill the professor's chair in philosophy at the university of Göttingen. This situation, when the French influence predominated, he was compelled to resign, but received a pension in lieu of it. During the occupation of Hanover by the troops of that nation, under Davoust, the excesses committed by the soldiery induced him to address a letter to Fanny Beauharnois, with the hope of procuring, through her interest, some mitigation of the evils under which the unhappy country of his adoption then laboured. The work was printed, but the only effect it produced was to draw on its author the personal hatred of the French commander. He also addressed to the Institute two reports on the state of ancient literature, and on the history of Germany. The honours which his own country denied him were accorded by the Swedish government, which made him a chevalier of the order of the polar star. M. de Villers died in the spring of 1815.—*Biog. Univ.*

VILLIERS (GEORGE) first duke of Buckingham, the favourite and minister of James I and Charles I, was the third son of sir George Villiers, and was born at Brooksbury in Leicestershire, August 20, 1582. After receiving an indifferent education at home, he was sent to France at the age of eighteen, and he spent three years there, chiefly in acquiring personal accomplishments. After his return he was introduced to the notice of king James at a play represented for his amusement by the students of Cambridge. His handsome person and

agreeable manners gained him the royal favour, and in 1613 he was promoted to the office of cup-bearer. The disgrace and fall of the earl of Somerset made way for the elevation of this new minion, who became the object of his master's gross and doating affection. In 1615 he was knighted, and made a gentleman of the bedchamber, with a pension of 1000*l.* a year. He soon after received the post of master of the horse, and in 1616 he was honoured with the garter, and created a baron and viscount. The earldom of Buckingham and admission into the privy council soon followed; and after having accompanied James into Scotland in 1617, he was created a marquis, and received the office of lord high admiral, and several other posts of importance. He likewise became the grand dispenser of court favour, which advantage he made use of for the promotion of his family and connexions. His travels in Spain and France on a matrimonial expedition with prince Charles, afterwards Charles I, and his intrigues in those countries, as well as the events to which they gave origin, are matter of history. Though the conduct of Buckingham abroad is said to have given offence to the king, yet his favour appears to have been but little diminished, since during his absence he was raised to the rank of a duke, and after his return was made lord warden of the cinque ports. On the death of James he retained all the influence he had acquired over the new monarch, who bestowed on him still greater confidence than his father. But though so highly esteemed by the king, he was the object of national jealousy and dislike. He increased his unpopularity by advising his master to dissolve the parliament, and raise supplies without the consent of the people. In the midst of the public discontents a war broke out with France, and the duke conducted an expedition to the isle of Rhé. He returned unsuccessful, and wishing to redeem his credit, he was preparing to lead a new armament to the relief of Rochelle, when he was killed at Portsmouth by a discontented officer named Felton. This catastrophe happened August 23, 1628. He possessed the qualities of generosity and courage, but he owed his station much more to favour and accident than to his talents or acquirements. By his wife, lady Catherine Manners, daughter of the earl of Rutland, he left two sons.—*Aikin's Gen. Biog.*

VILLIERS (**GEORGE**) second duke of Buckingham, son of the preceding, was born at Wallingford-house, in Westminster, Jan. 30, 1627. After studying at Trinity college, Cambridge, he travelled abroad, and on his return home after the commencement of the civil war, he was presented to the king at Oxford. He served in the royal army under prince Rupert and lord Gerard. His estate was seized by the parliament, but having obtained the restoration of it, he travelled with his brother into France and Italy. In 1648 he returned to England, and was with Charles II in Scotland, and at the battle of Worcester. He followed that prince abroad, and served as a vo-

lunteer in the French army in Flanders. He afterwards returned to England, and in 1637 married the daughter of lord Fairfax, by which means he repaired the ruin of his fortune in the royal cause. He however preserved the favour of Charles II, and at the Restoration he was made master of the horse. He also became one of the king's confidential ministers, who were designated by the appellation of the Cabal. His political conduct was, like his general behaviour, characterized by unprincipled levity and imprudence. In 1666 he engaged in a conspiracy to effect a change of the government; notwithstanding which he recovered the favour of king Charles, which he repeatedly abused. The profligacy of his private life was notorious. He seduced the countess of Shrewsbury, and killed her husband in a duel; and he was more than suspected of having been the instigator of the infamous colonel Blood to his brutal outrage against the duke of Ormond, whom he attempted with the assistance of other ruffians to carry to Tyburn, and hang on the common gallows. In 1676 he was, together with the earls of Shaftsbury and Salisbury, and lord Wharton, committed to the Tower for contempt, by order of the house of Lords; but on petitioning the king, these noblemen were released. After plotting against government with the dissenters, and making himself the object of contempt to all parties, he died neglected and unregretted, at Kirby Moorside, in Yorkshire, April 16, 1688. His abilities were far superior to those of his father; and among his literary compositions the comedy of "The Rehearsal" may be mentioned as a work which displays no common powers, and which greatly contributed to the correction of the public taste, which had been corrupted by Dryden and other dramatists of the age.—*Id.*

VILLOISON (**JEAN BAPTISTE GASPARD D'ANSE DE**) a distinguished French scholar and critic of modern times, born about the middle of the last century at Corbeille sur Seine, and educated in the Royal college at Paris under Capperonier. His learned labours in illustrating the Greek poets, in bringing to light valuable but forgotten manuscripts of their works, and in collating them with the generally received editions, were as successful as they were praiseworthy. In the pursuit of this object he visited several of the principal continental libraries, especially those belonging to the Venetian republic in the palace of St Mark, and that of the duke of Saxe Weimar, to whose court he went on the express invitation of the sovereign. In the first mentioned of these collections, he was particularly fortunate in finding a MS. of the Iliad of as early a date as the tenth century, which he gave to the press in 1788, in one folio volume. He subsequently sailed into the Levant, and had got together numerous materials for a new edition of the "Palaeographia Græca" of Montfaucon, which it was his design to have published, had he not been prevented by death. During the Revolution, he suffered, in common with many other learned men con-

siderably in his property; but on the restoration of order, resumed his literary career, and was appointed by Buonaparte professor of ancient and modern Greek; but only filled that situation a few months, dying in the spring of 1803. Villoison was a man of great critical acumen and patient research, to which he added a soundness of scholarship and a depth as well as variety of erudition, much beyond the common average of scholastic attainments. He had been admitted a member of the French Institute in his twenty-fourth year, in consequence of his edition of the Homeric Lexicon of Apollonius, the manuscript of which he had found at St Germain des Prés. His other productions are, an edition of the works of Longus, with notes; "Anecdota Græca," 4to, 2 vols. Venice, 1782, being a selection from the writings of some unpublished Greek authors; "Epistolæ Vimarenses," a collection of letters on literary subjects published at Zurich; and a translation of part of the Hebrew Scriptures, made by a Jew as early as the tenth century.—*Eloge by Dacler.*

VINCE, AM. FR.S. (SAMUEL) an eminent mathematical scholar, Plumian professor of astronomy and experimental philosophy at Cambridge. He was of humble parentage, his friends being settled at Tressingfield, in Suffolk; but the munificence of Mr. Tilney, of Harleston, enabling him to enter himself of Caius College in 1775, he soon distinguished himself by gaining one of Smith's mathematical prizes, and became the senior wrangler of his year. In 1796, being then a fellow of Sidney Sussex college, he was elected to the professorship, which he afterwards filled in so distinguished a manner, and which he held till his death in 1821. His works are, a treatise on the "Elements of Conic Sections," 8vo, 1781; another on "Practical Astronomy," 4to, 1790; "Plan of a Course of Lectures on Natural Philosophy," 8vo, 1793; "The Principles of Fluxions," 2 vols. 8vo, 1795; "The Principles of Hydrostatics," 8vo, 1796-1800; "A complete System of Astronomy," 2 vols. 4to, 1797-1799; 3 vols. 4to, with additions, 1814. A Vindication of Christianity against the objections of Hume, in two discourses preached before the University, 1798-1809; a treatise on Trigonometry, 'the nature and use of Logarithms, &c. 8vo, 1800; "A Confutation of Atheism, from the Laws of the Heavenly Bodies," 8vo, 1806; and "On the Hypotheses accounting for Gravitation from Mechanical Principles," 8vo, 1806. He obtained several pieces of preferment in the church, and at the time of his decease was rector of Kirby Bedon, vicar of South Creek (both in Norfolk), and archdeacon of Bedford.—*Ann. Biog.*

VINCENT (THOMAS) a nonconformist minister, who received his education at Oxford, and obtained a living in London, from which he was ejected in 1662. He then became a tutor in a dissenting academy at Islington; and during the great plague in London in 1665, he distinguished himself by his zeal in attend-

ing persons attacked with that malady. He subsequently published a tract, entitled "God's terrible Voice in the City, by Plague and Fire," which comprises some interesting details relative to occurrences which fell under his observation. He died in 1678, aged forty-four.—*Calamy's Nonconformist's Memorial. Censura Literaria.*

VINCENT (WILLIAM) a distinguished critic and divine, who was born in London in 1739. He was educated at Westminster school and Trinity college, Cambridge, where he obtained a fellowship. In 1762 he became an usher at Westminster, and nine years after he succeeded to the office of second master. He took the degree of DD. and was appointed chaplain in ordinary to the king. In 1778 he became vicar of Longdon, in Worcestershire; but he soon after resigned his benefice for the rectory of Allhallows, Thames-street, in London. In 1788 he arrived at the station of head master at Westminster, where he continued to preside till 1801, when he was made a prebend of Westminster; and two years after he succeeded to the deanery, on the promotion of Dr Horsley to the see of St Asaph. As an author dean Vincent is principally known on account of his Commentary on Arrian's Voyage of Nearchus; and his Periplus of the Erythrean Sea, republished together under the title of "The Commerce and Navigation of the Ancients in the Indian Ocean," 1807, 2 vols. 4to. The Voyage of Nearchus was translated into French by Billecocq, Paris, 1800. Dr Vincent died in December 1815. Besides the works just mentioned, he published "The Conjugation of the Greek Verb, and the Greek Verb analysed;" "A Defence of Public Education," and a Charity Sermon. A volume of his Discourses, with his life, was published posthumously.—*Gent. Mag. Biog. Univ.*

VINCENTIUS LIRINENSIS, or ST. VINCENT of LERINS, a monk of the fifth century, who was the author of a tract entitled "Commonitorium adversus Hæreticos," of which an English translation by the rev. William Reeves was published in 1709. Vincentius who after having served as a soldier, entered into the monastery of Lerins in Provence, died about AD. 440.—*Dupin. Moreri.*

VINCI (LEONARDO) an illustrious Italian painter. He was the natural son of one Pietro, a notary at Florence, and was called da Vinci, from the place of his birth, a small borough of Valdarno di Sotto. He was born in 1452, and at an early age having given indications of extraordinary genius, he was placed under Verrochio, an eminent artist of that period. He soon surpassed his master, and executed several pictures at Florence; which gave him so high a reputation that Lodovico Sforza, then regent of Milan, invited him to that capital in 1489, and settled upon him an annual stipend. Here he displayed the universality of his genius, not only by his paintings, but by his skill in music, and skill as an engineer. It was in Milan also that he painted his celebrated Last Supper in the Dominican convent of St Maria;

which being executed on a wall not sufficiently secured from moisture, has been much defaced long ago, although in a certain sense preserved by a copy taken by order of Francis I. On his return to Florence in 1508, he executed many of his best pieces, and in particular, was employed by the senate to paint the council chamber in conjunction with Michael Angelo, then a much younger man; and his admired cartoon of Piccinino's battle of cavalry was a product of the emulation of these great artists. On the elevation of Leo X to the pontificate, Leonardo is said to have visited Rome, and to have painted several pictures for that pope, who was however dissatisfied at the slowness of his execution. The rivalry of Michael Angelo seems also to have disgusted him, so that he willingly accepted an invitation to France from Francis I. He was advanced in years when he undertook this journey, which was soon followed by a languishing distemper, which confined him to his bed at Fontainebleau. During his illness the king went frequently to visit him, and one day as he was raising himself on his couch to thank that monarch for the honour done him, he was seized with a fainting fit, and died in the arms of Francis, who had stepped forward to support him. This event took place in 1520, in his sixty-seventh year. Leonardo da Vinci is allowed to have been one of the greatest geniuses of his country, and few men have united more various excellencies. As a painter he possessed correctness of design, taste, and great powers of expression. He had also a perfect knowledge of the theory of his art, and was the first who made anatomical drawings. His ideas of perfection, and solicitude to finish with nicety, made him slow, and his colouring was defective, which has been attributed to his fondness for chemical experiment. The strength of his conception lay principally in the delineation of male heads, in respect to which and to his other excellencies, it is with apparent justice asserted, that to him Raphael and Michael Angelo owe a part of their subsequent celebrity. Leonardo da Vinci was the author of a "Treatise on Painting," which is still in esteem. He also left a number of drawings and manuscript books, containing figures relative to architecture, mechanics, anatomy, and other sciences, some of which are in the possession of his present majesty. Of his poetry a moral sonnet has been preserved, of considerable merit for the time.—*Tiraboschi. Pilkington by Fuseli.*

VINCI (LEONARDO DA) an eminent musical composer, was born at Naples in 1690. He early showed great ability, and was a pupil at the Conservatory when engaged at Rome to compose the opera of "Semiramis." The applause he obtained by this performance on his return to Naples, led to his composition of the opera of "Astanax," and from which moment the most distinguished theatres of Italy solicited his services. He gave the preference to that of Venice, where he produced "Sofici," and "Ifigenia." He concluded his career at Rome, where it began, with the operas of "Artaserse," and "Didone," the

first of which is deemed his master-piece, and among the first productions of the Italian theatre. This able composer was poisoned in a cup of chocolate, administered to him by the relation of a Roman lady of rank, of whose favours he had boasted. Da Vinci was the first composer who effected any great improvement in the musical drama, after the invention of recitative by Peri, in 1600. The accompanied recitations in "Didone," are peculiarly celebrated. He composed several other operas besides those mentioned in this article, including several of a comic kind.—*Biog. Dict. of Mus. Rees's Cyclop.*

VINER (CHARLES) an eminent English lawyer, born about the year 1680, at Aldershot, Hants. He is celebrated as the founder of the Vinerian professorship in the university of Oxford, and the industrious compiler of a "General Abridgment of the Law of England," which laborious work occupied him more than twenty-four years. It was originally printed under his own immediate superintendence, and in his own house, in twenty-four folio volumes. The last edition is in octavo. He was a great benefactor to Oxford, where he endowed several scholarships; and to the professorship already mentioned we are perhaps indebted for Blackstone's Commentaries, the learned author of that work having originally commenced it as a university lecture. Mr Viner died in 1756.—*Bridgman's Legal Bibliog.*

VINET (ELIAS) an industrious French scholar of the sixteenth century. He was the son of a labourer at Vinets, a village of Saintonge, but he received a literary education at Barbesceux and Poitiers, which he followed up himself at Paris. He ultimately taught philosophy and mathematics in the university of Bordeaux, an office which he filled with great reputation for a quarter of a century. Vinet was the editor of various classical authors, on whom he noted and commented with great erudition and critical skill. He also translated some ancient authors into French, and published some original works, including treatises on the "Art of making Dials," and on Mensuration, and the "Antiquities of Saintes and Barbesceux," 4to, 1571; and "Antiquities of Bordeaux and Berry," 4to, 1574. He died in 1587.—*Thunian Hist. Moreri.*

VINNIUS, or VINNEN (ARNOLD) an eminent jurist, was born at Holland in 1588. He studied at Leyden, in which university he ultimately became professor of law. He distinguished himself by various very able works on jurisprudence, which he composed in a style that has rendered them more agreeable in their perusal than most of those on legal topics. Of his publications, the principal are, "Commentarius Academicus et Forensis, in quatuor Libros Institutionum Imperialium," of which a valuable edition was given by Heineccius, with a preface and annotations, Lugd. 1726, 4to; *Notæ ad Institutiones*, printed with the above; "Jurisprudentia Contracta;" "Questiones Juris Selectæ;" "Tractatus de l'actis," &c. He died in 1657.—*Moreri. Sarii Onom.*

VIOTTI (G. B.) an eminent musician, justly considered the first violinist of his age. He was a Piedmontese, born at Fontaneto, a village near Crescentino, in 1755, and was placed early in life under the tuition of Pugnani, by whose instructions he profited so rapidly, that in his twenty-first year he obtained the appointment of first violinist at the royal chapel in Turin. After retaining this situation rather more than two years, he visited Berlin and Paris, in which latter capital his fame for the beauty of his compositions, as well as for the brilliancy of his execution, rose to a great height and attracted the notice of the queen, Marie Antoinette. He was ordered to play before the royal family, and complied; but being interrupted in the performance of a favourite solo, by the noise made at the entrance of the count d'Artois, he evinced his independence, as well as his indignation, by breaking off abruptly and quietly leaving the room. From that time he persevered in a resolution he then formed, never again to play at a public concert in France. On the breaking out of the Revolution, Viotti took refuge in England, and from the year 1794 till 1798 had a share in the management of the king's theatre, himself leading in the orchestra. At the latter period however he received a peremptory order from the Alien Office to quit the country, a circumstance which has been by some attributed to the misrepresentations of those who envied him his skill as a performer. He retired in consequence to Holland, and thence to Hamburg, in the neighbourhood of which city he resided about three years, associating principally with his fellow-exile Jarnowick. In 1801, the storm having by that time blown over, he returned to London, and engaged in the wine trade, which he carried on for several years, till the speculation failing, he lost the whole of his property. After the restoration of the Bourbons to the throne of France, Louis XVIII invited him to preside over the Academie Royale de Musique at Paris, which situation he accepted, but did not retain it long, owing to his increasing age and bodily infirmities. In 1822, having obtained permission to retire on a moderate pension, he settled finally in London, and there remained till his death in the spring of 1824. Though Viotti had long seceded from his profession, he to the last did all in his power towards its advancement, and assisted occasionally at the Philharmonic Society, of which he was one of the original members. Viotti was a man of superior intellect, unquestioned honour, and refined manners, though of eccentric habits. He has also obtained from some of his admirers the character of a wit, but such of his repartees as have been recorded do not rank very high in the scale of humour. He was the author of a great variety of music for the violin, but his only two vocal compositions are the polaccas "Che Gioja," and "Consola, amato bene," both of them master pieces in their way.—*Biog. Dict. of Mus.*

VIRET (PETER) a Swiss divine of the sixteenth century, who was a native of Orbe in

the canton of Berne. He was educated at Paris, and having contracted an intimacy with William Farel, who had embraced the doctrines of the Huguenots, he went with him to Geneva, where he contributed his aid towards the destruction of popery. He afterwards removed to Lausanne, and thence to Lyons, whence he was invited to Bearne by the great patroness of the reformers, Jane d'Albret, queen of Navarre. He wrote many works against the doctrines of the Catholic church, one of which, exhibiting a curious commentary on the sacramental service, was translated into English by Thomas Stone, and published under the title of "The Cateches of the Masse," 1584, 12mo. Viret died in 1571.—*Moreri. Aikin's Gen. Biog.*

VIRGIL, or **PUBLIUS VIRGILIUS MARO**, the most eminent of the Roman poets, was born B.C. 70, at Andes, a village near Mantua. His father was a man of obscure origin, who became bettered in circumstances by marriage, and who appears ultimately to have become the owner of a small estate cultivated by himself. Virgil enjoyed the benefit of a liberal education, and Cremona, Milan, and Naples are said to have successively contributed to his instruction. Physics and mathematics were in the first instance his favourite studies, and he cultivated the Epicurean philosophy under Syro, a master much praised by Cicero. It has been generally supposed that he wrote in early life the poems which go by the title of "Catalecta Virgilii;" but some of these are undoubtedly spurious, and of others the date is uncertain. If, as generally believed, he relates his own adventures in his first eclogue, his earliest visit to Rome was undertaken in his thirtieth year, with a view to recover his lands, which had been occupied during the first triumvirate by the soldiers of Octavius, to whom he obtained an introduction by means of Pollio, or of some other protector. He also became known to his great patron Mæcenas, and through their influence his farm was restored to him. The veteran who had acquired possession, was however so little disposed to give it back to him, that he found his life in danger; and was obliged to fly back to Rome, where a second application proved effective. He subsequently proceeded in the composition of his eclogues, the tenth and last of which, dedicated to Gallus, appears to have been written in his thirty-third or thirty-fourth year. He then commenced his "Georgics," at the request of Mæcenas, which production contains many masterly proofs of an exalted genius in its vigour and maturity. He is supposed to have been in his forty-fifth year when he began to compose the "Æneid," which occupied many of the latter years of his life. Augustus, with whom he was at this time in the greatest favour, entreated him by letter to communicate it to him in its progress; with which request he at length complied, and read himself the sixth book to the emperor, in the presence of his sister Octavia, who fainted when she heard his exquisite tribute to the me-

mory of her son, the young Marcellus, so beautifully introduced into that portion of his poem, and rewarded him with a present of ten sesterces a line, which amounted to upwards of 2000*l*. When he had finished his *Æneid*, he visited Greece, in order to correct and polish it at leisure; but meeting Augustus at Athens, on his return from the east, he resolved upon going back in his company. Unfortunately he was attacked at Megara by an indisposition, which became still more serious during his voyage to Italy, and which terminated his life a few days after his arrival at Brundisium, B.C. 19, in the fifty-second year of his age. According to his request, his bones were conveyed to Naples, and interred in the Puteolan Way. He died with such steadiness and tranquillity, as to be able to dictate his own epitaph in the following words:

"Mantua me genuit, Calabri rapuere, tenet nunc

Parthenope: cecini Pasceua, Rura, Duces."

From the concurrent testimony of various writers, including Pliny the elder and Aulus Gellius, it appears that on his death-bed he wished to commit the *Æneid* to the flames as an imperfect production; but it was either saved by the interposition of his friends, Tucca and Varius, or by the injunctions of Augustus to his executors, a convincing proof of the modest self-estimation which was a characteristic of this great poet. His disposition in other respects was so mild and unassuming, that he was singularly beloved, not only by Augustus and Mæcenas, but by all the distinguished persons of the period. He also obtained all the honours which his modesty led him to shun; and it is said, that on some of his verses being recited in the theatre when he was present, the audience rose up, and paid him the same respect which was usually paid to the emperor. Virgil was tall, of a swarthy complexion, and sickly constitution, affected with frequent head aches and spitting of blood. Notwithstanding some licentious verses written in early youth, no longer in existence, and certain passages in his *Bucolics*, his conduct was as temperate and regular as his manners were modest and amiable. In respect to genius, scarcely any poet has more occupied the critics, both ancient and modern, and all concur in ranking him in the first class of poetical merit. He is however distinguished less by the faculty of invention than most of the leading poets; his *Bucolics*, *Georgics*, and *Æneid*, being full of imitation, and even of translation; but in all that can exemplify the art of poetry, he has never been excelled, and his admirers will not allow that the splendour and majesty of his style have ever been equalled. Hence his select passages are dwelt upon with more pleasure than those of almost any other classical poet. His *Georgics* have been the object of imitation to all who have since attempted to mingle practical instruction with the beauties of description; and although inferior to the *Iliad* in point of genius, his *Æneid* is regarded as presenting the finest example of the epic after that immortal poem, from the most

BIOC. DICT.—VOL. III.

ancient times to the present day. The fame of Virgil is testified by almost innumerable editions, commentaries, and translations. The best editions are those of Masvicius, Leuwarden, 1717, 2 vols. 4to; of Burmann, Amsterdam, 1746, 4 vols. 4to; and of Heyne, 1793, 6 vols. 8vo. Of his translators the most popular are Dryden, Pitt, and Warton, to which is to be added the recent version of John Ring, Esq. in 2 vols. 8vo. The *Bucolics* and *Georgics* have been published separately by professor Martyn, of Cambridge, with an English version in prose and curious notes.—*Vita à Donat. Warton's Life prefixed to his Virgil.*

VISCONTI (JOHN BAPTIST ANTHONY) an Italian antiquary, born at Vernazza in the diocese of Sarzano, in 1722. He was educated at Rome by an uncle, who was a painter, and who designed his nephew for the same profession. But the latter preferred the study of antiquities to any other pursuit; and that he might be at liberty to follow his inclination, he purchased the office of apostolic notary. He became connected with the celebrated Winckelmann, whom he succeeded in 1768, in the station of prefect or commissary of antiquities at Rome; and Clement XIV. on his elevation to the pontifical throne the following year, having formed the design of founding a new museum in the Vatican, the execution of the plan was entrusted to Visconti, who superintended the researches for ancient monuments carried on at Rome under popes Clement XIV and Pius VI. Among the relics of former ages brought to light was the tomb of the Scipios, relative to which Visconti published Letters and Notices in the Roman Anthology; and he was the author of some other archaeological memoirs. His death took place September 2, 1784. He was appointed editor of the "Museum Pio-Clementinum," but the text accompanying the engravings of that work was written by his son, the subject of the next article.—*Biog. Univ.*

VISCONTI (ENNIVS QUIRINIUS) eldest son of the preceding, was born at Rome, November 1, 1751. He studied under his father, and showed such a precocity of talent, that at three years and a half old he was able to read Greek and Latin, as appeared from a public examination. His subsequent progress in knowledge was not less remarkable; and in 1764 he translated from Greek into Italian verse the *Hecuba* of Euripides, printed at Rome in 1765. His father designed him for the church, hoping through the patronage of pope Pius VI that he might obtain a cardinal's hat. He therefore studied the canon and Roman law, and in 1771 took the degree of doctor. Soon after he was made a papal chamberlain and sub-librarian of the Vatican. Having however formed an attachment to a lady, whom he wished to marry, he refused to enter into holy orders; in consequence of which he was deprived of his posts, through the interference of his father. A reconciliation subsequently took place, when J. B. Visconti being charged with the preparation of the descriptions to accompany the plates of the

"Museum Pio-Clementinum," found it necessary to call his son to his assistance; and the latter published the first volume of the work in 1782, and the second in 1784. He was then appointed conservator of the museum of the Capitol, and obtained the restoration of those emoluments of which he had been deprived. The remaining volumes of the "Museum Pio-Clementinum" appeared between 1788 and 1807, when the seventh and last was published at Rome, though after the removal of the author to Paris. When the French took possession of Rome, and established a provisional government in 1797, Visconti was nominated minister of the interior; and the following year, when the mode of administration was changed, he became one of the five members of the new government. In 1798 he was obliged to retire from Rome to Perugia, on the approach of a Neapolitan army; and in 1799 he quitted Rome entirely, and took refuge in France, where he met with a most flattering reception. He was appointed surveyor of the Museum of Antiquities at the Louvre and professor of archaeology, with a liberal pension; and in 1804 he was admitted into the class of history and ancient literature at the Institute. His death took place February 7, 1818. Among the most important of his very numerous publications may be mentioned the Catalogue of the Antiquities of the Museum at Paris; "Grecian Iconography," 3 vols. 1808; "Roman Iconography," vol. 1st, 1817; "Mémoire sur des Ouvrages de Sculpture du Parthenon, et de quelques Edifices de l'Acropole à Athènes, &c." 1818, 8vo. He also was a co-operator in the Musée Napoléon, and many other works. A complete edition of the works of E. Q. Visconti was commenced at Milan in 1818.—*Biog. Notice by Zannoni in Antholog. No. 18, Florence, 1822. Biog. Univ.*

VISDELOU (CLAUDE) a French jesuit and missionary in China, who was born in Brittany in 1656. After studying among the jesuits, he became one of the brothers of the order at an early age; and he was only nineteen when he was sent to reinforce the mission in China. He arrived at Macao in 1687, and having studied the Chinese language, he devoted himself for more than twenty years with great zeal to the duties of his station. At length he became involved in the disputes between the missionaries of different nations; and when cardinal de Tournon arrived in China, Visdelou, who rendered some services to that prelate, was exposed to the animosity of his enemies. In vain did he receive the titles of vicar-apostolic and bishop of Claudopolis, for his opponents disputed the legitimacy of his appointment; so that he was obliged to quit China, and in 1709 he embarked for Pondicherry. His conduct was approved by pope Clement XI; but in answer to an apology which he sent to France, the regent duke of Orleans ordered him to remain at Pondicherry, where he continued till his death in 1737. Besides several works relating to China, Visdelou drew up a History of Tartary, published

as a Supplement to D'Herbelot Bibliothèque Orientale.—*Biog. Univ.*

VISHNOO-SARMA, the name of a Bramin, to whom is ascribed the composition of the celebrated collection of apologues, known under the title of the Fables of Pilpay or Bidpai. The original of this work, composed in the Sanscrit language, bears the title of "Pancha-tantra," and it has given birth to two other works, one of which, called "Hitopadesa," has been translated by sir William Jones and by Mr Wilkins. The version of the latter was published at Bath in 1787, 8vo; that of the former is printed in the collection of his works; and the Sanscrit text has been published at Serampore in 1806, and in London in 1810. The abbé Dubois published a French version of the "Pancha-tantra," Paris, 1826. Nothing certain is known concerning Vishnoo-Sarma, the alleged author of this curious monument of Hindoo literature.—*Trans. of the Royal Asiatic Society, vol. i. Biog. Univ.*

VITELLIO or VITELLO, a Polish mathematician, born in the thirteenth century of the illustrious family of Ciolek, who, according to a common custom of the learned in former times, translated his Polish name into Latin. He resided near Cracow, where he arranged the materials which had been the result of his inquiries in his travels, and the numerous optical experiments which he had made. His work, which did not appear till long after his death, was first printed at Nuremberg, 1553, folio, under the title of "Vitellionis Perspectivæ Lib. x." It was dedicated by the author to William de Morbetta, who in 1262 was grand-penitentiary at the court of Rome. Vitellio is the earliest writer who gives a philosophical explanation of the cause of the rainbow.—*Biog. Univ.*

VITRINGA (CAMPEGIUS) an eminent and learned Protestant divine, was born May 16, 1659, at Leuwarden in Friesland. He took the degree of DD. at Leyden in 1679, and was successively professor of Oriental languages, divinity, and sacred history at Franeker. He died March 3, 1722, of an apoplexy. He is author of "A Commentary on Isaiah," 2 vols. folio, Lat.; "Apocalypseos Anachrysis," 1719, 4to; "Typus Theologus Practicæ," 8vo; "Hypotyposis Historiæ et Chronologiæ Sacræ," 8vo; "Synagoga vetus," 4to; "Archisynagogus," 4to; "De Decemviris otiosis Synagoga," 4to, &c.—CAMPEGIUS VITRINGA, one of his sons, born March 23, 1693, was also professor of divinity at Franeker, and died nine months after his father in 1723, aged thirty-one, leaving an able "Abridgment of Natural Theology," and "Sacred Dissertations."—*Niceroh. Saxii Onom.*

VITRUVIUS POLLIO (MARCUS) a celebrated writer on architecture, who is supposed to have flourished in the times of Julius Cæsar and Augustus; and of whose parentage and place of nativity no certain knowledge can be attained. The most probable opinion is that he was born at Formia, a city of Campania, now called Mola di Gaeta. He plainly appears to have been liberally educated; and that to

travelled for information and improvement we learn from his writings. He acquired by the exercise of his profession some property, though he seems to have been less employed than some of his contemporaries; and the only public edifice which he mentions as being constructed from his designs is a basilica at Fano. He wrote at an advanced age his work "*De Architectura Lib. x.*" which he dedicated to Augustus, under whose reign he had held the office of inspector of the military machines. This treatise was first printed at Venice, 1497, folio; and among modern editions the most valuable is that of Schneider, Leipsic, 1808, 3 vols. 8vo. An English translation of the work of Vitruvius, with a commentary by William Newton, appeared in 1771, folio, repub. 1791, 2 vols. folio; and a new translation by W. Wilkins, with an Introduction containing an historical View of the Rise and Progress of Architecture among the Greeks, was published in 1812, folio.—*Rees's Cyclop. Biog. Univ.*

VIVES (JOHN LOUIS) one of the revivers of literature, was born at Valencia in Spain, in 1492. He studied at Paris and Louvain, after which he visited England, having previously become one of the first fellows of Corpus Christi college, Oxford. He was much respected and patronised by Catherine of Aragon; and in 1522 dedicated his Commentary upon St Augustine "*De Civitate Dei*," to king Henry VIII. He was also appointed to instruct the princess Mary in polite literature and the Latin language, for whose use he wrote the tracts "*De Ratione Studii Puerilis*," and "*De Institutione Fœminæ Christianæ*." During his residence at Oxford he was admitted doctor of laws, and acquired much favour with Henry VIII; but venturing to argue and write against his divorce from Catherine, he was disgraced and imprisoned. On regaining his liberty he repaired to Brussels, where he married, and remained for the rest of his life, occupied as a teacher of the belles lettres. He died in 1541. His works were printed at Basil in 1555, in 2 vols. folio, but this collection did not include his Commentary on St Augustine, which was esteemed too bold and free by the Louvain doctors; it has however been published separately. Among his works are "*De prima Philosophia*;" "*De Explanatione Essentiarum*;" "*De Censura Veri*;" "*De Iuitis Sectis et Laudibus Philosophiæ*;" and "*De corruptis Artibus et tradendis Disciplinis*," which writings, in the opinion of Brucker, exhibit great strength of judgment, and a mind capable of things beyond the level of the age in which he lived.—*Antonio Bibl. Hispan. Dupin. Brucker.*

VIVIANI (VINCENTIO) a celebrated Italian physician, was born at Florence in 1621 or 1622. He was a disciple of the justly celebrated Galileo, and lived with him from his seventeenth to his twenty-first year. He early distinguished himself by his attempt for the restoration of Aristeus, an ancient geometrical, who was contemporary with Euclid, and had composed five books of problems "*De*

Locis solidis, which were lost, with the exception of the names of the propositions. This labour he however discontinued, in order to restore the lost fifth book of the Conic Sections of Apollonius. This work he published in 1659, in folio, under the title "*De Maximis et Minimis Geometrica Divinata in quintum Conicorum Apollonii Pergei*," which was esteemed superior to Apollonius himself. In 1664 he was honoured with a pension from Louis XIV, and in 1666 the grand duke of Tuscany, who employed him both in public works and in negotiation, gave him the title of his first mathematician. In 1669 he was chosen to fill a chair in the Royal Academy of Sciences of Paris, which honour induced him to finish three books of his Divination of Aristeus, and address them to the king of France. He died in 1703, in the eighty-first or eighty-second year of his age. Fontenelle speaks warmly of the integrity and simplicity of manners of Viviani, who composed several mathematical treatises in the Latin and Italian languages, besides those already alluded to, the principal of which is entitled "*Enodato Problematum*," comprising the solution of three problems which had been submitted to all the mathematicians of Europe.—*Fabroni Vite Italorum. Hutton's Math. Dict.*

VLITIUS or VAN VLIET (JOHN) a philological writer, whose birth-place is unknown, and who died at Breda in 1666. He received a liberal education, and travelled in England and France, in both which countries, as well as in Holland, he was connected with many men of eminence in literature. Among his publications are "*Jani Vlitii Venatio novantiqua*," 1645, 12mo; a treatise in Dutch, on the law of succession according to the custom of Breda, appended to which is the Lord's Prayer, in twenty German or northern dialects; and a new edition of the Gothic Glossary of Francis Junius.—*Biog. Univ.*

VOET (GISEBERT) a Dutch theologian, born at Heusden in 1593. After having studied at Leyden, he settled as a minister at his native place, where he remained till 1634. He was then invited to teach the eastern languages and theology at the Schola Illustris at Utrecht, which was two years after made a university. He also became co-pastor of one of the churches of Utrecht; and being a zealous supporter of the system of orthodoxy promulgated by the synod of Dordrecht, he distinguished himself by his attacks on the Arminians or remonstrants. The Cartesian philosophy engaging the public attention, Voet in 1639 wrote against Descartes, whom he accused of atheism, and treated with great illiberality. He likewise entered into a controversy with the Leyden professor, Coccejus; and he engaged in many other disputes with contemporary divines. He died at Utrecht in 1677. His principal works are "*Selectæ Disputationes Theologicæ*," 5 vols. 4to; and "*Politica Ecclesiastica*," 4 vols. 4to.—His son, **PAUL VOST**, was successively professor of logic, metaphysics, the Greek language, and civil law, at Utrecht, where he died in 1677. He was the

author of several learned works on jurisprudence and theology.—JOHN VOET, the son of Paul, professor of law at Herborn, afterwards at Utrecht, and ultimately at Leyden, was the author of a valuable "Commentary on the Pandects," Leyden, 1698, 2 vols. folio, often reprinted. He died in 1714.—*Burmanni Traject. Erudit. Mosheim. Biog. Univ.*

VOISENON (CLAUDE HENRY FUSÉE de) a man of letters, distinguished for his eccentricities and his talents. He was born January 8, 1708, at the castle of Voisenon near Melun, and was educated for the ecclesiastical profession. He commenced his career as a divine, by the appointment of grand-vicar of the see of Boulogne; and he also obtained the abbacy of Jardi, bestowed on him by cardinal Fleury, after he had declined accepting the bishopric of Boulogne, from a sense of his own unfitness for such a dignified situation in the church. He was of a lively humorous disposition, and he determined to pursue the studies for which nature had qualified him. In 1763 he was admitted a member of the French Academy; and the duke de Choiseul gave him a pension of six thousand livres, to write a French history, in return for which, however, he produced nothing but some "Historical Fragments" of little interest. His other works consist of "Literary Anecdotes;" fugitive poetry, in the style of Chaulieu; romances; and comedies, the most esteemed of which are "Mariages assortis," and "La Coquette fixée." Both in his personal and his literary character he seems much to have resembled Piron; and though he belonged to the Academy, he was no favourite with his coadjutors, who had many of them been the objects of his satirical wit. His private character was singularly dissolute; and like many other libertines, in the fits of illness to which he was subject, he was occasionally a zealous devotee. He died November 22, 1775. His works were published in 1781, 5 vols. 8vo, with a life of the author.—*Dict. Hist. Biog. Univ.*

VOITURE (VINCENT) a celebrated French wit, was born at Amiens in 1598. His father was a wealthy wine-merchant, who lived freely, but the health of the subject of this article was delicate, and he drank only water. His agreeable manners and conversation early introduced him to good company, and he was a distinguished visitor at the Hotel de Rambouillet. He was also well received at court and by Gaston duke of Orleans, who made him his master of the ceremonies. In 1634 he was admitted into the French Academy, and was subsequently sent on a mission to Spain, where he was much caressed, and where he composed some verses in such pure and natural Spanish, that every body ascribed them to Lope de Vega. He also visited Rome and England, and was the person employed to notify the birth of the dauphin, afterwards Louis XIV., to the court of Florence. He enjoyed several considerable pensions, but attachment to play and to women prevented him from growing rich. He died in 1648. Voi-

ture was one of the first in France distinguished by the title of *bel esprit*. He wrote verses in French, Spanish and Italian; the former are occasionally easy and sprightly, with a refined turn of thought, but for the most part fall into strained wit and affected sentiment, without being nice in point of delicacy, which, however, was rather the fault of the age than of the man. His letters make up the bulk of his works, and also proved the chief cause of his literary reputation; they exhibit a perpetual attempt at wit, which is sometimes successful, and places the writer high in the class of epistolary writers; but on the other hand, they often degenerate into affectation, plays on words, insipid pleasantries, and far-fetched allusions. Nothing, as well observed by Voltaire, flows from the heart, paints the manners of the times, or shows the characters of men; they are rather an abuse than an exercise of wit. They were however extremely admired in their day, and a letter from Voiture was a passport into the politest companies. One of the latest editions of his works is that of Paris, 1729, 2 vols. 12mo.—*Nouv. Dict. Hist.*

VOLKOFF (THEODORA) a Russian dramatist, born at Kostroma in 1729. He was sent when young to Moscow, to study music, and at the age of fifteen he had also acquired a knowledge of geometry, drawing, and the French, Italian, and German languages. Returning home, he secretly employed his pen in writing plays, and having collected a small company of young actors, he exhibited at Jaroslaw some pieces composed by St Dimitri de Rostoff. Going to Petersburg in 1746, he formed an acquaintance with the Italians attached to the court theatre; and on his return to Jaroslaw, he found means to erect a theatre, which would hold a thousand spectators. There he performed the tragedies of Sumorokof, and other pieces, with so much success, that the empress Elizabeth sent for him to Petersburg, where he was appointed first actor of the Russian theatre. In 1759 he was sent to establish a national theatre at Moscow; and Catherine II, on her accession to the throne, bestowed on him an estate, with a patent of nobility. He was engaged by order of the court, in 1763, in preparing a grand dramatic spectacle, called "The Triumph of Minerva," for which he had just completed the arrangements, when he was taken ill, and his death occurred a few days after, April 4, 1763. His funeral obsequies were celebrated with a degree of magnificence not inferior to those of Garrick. He possessed considerable talents as a poet, a musician, and a sculptor; and also a general acquaintance with literature.—*Biog. Univ.*

VOLNEY (CONSTANTINE FRANCIS CHASSEAU, count de) a celebrated French writer, was born at Craon in Brittany, in 1755. Inspired at an early age with a desire to visit foreign countries in search of knowledge, he no sooner became master of a small patrimonial estate, than he converted it into money, and embarked for the Levant. He travelled

through several parts of Egypt and Syria, and after a residence for some time in a Maronite convent on Mount Libanus, for the purpose of studying the Oriental languages, he returned to France, whence he had been absent more than two years. The fruits of his inquiries appeared in his "*Voyage en Syrie et en Egypte*," 2 vols. 8vo, which was translated into English, Dutch, and German. This work procured him much reputation, and taking up his residence at Auteuil near Paris, he became intimately connected with some of the most eminent among his literary contemporaries. On the convocation of the States General in 1789, Volney was elected a deputy from the Tiers Etat of Anjou, when he embraced the cause of liberty, and frequently appeared with advantage as a public speaker. In 1791 he published his deistical work, entitled "*Les Ruines, ou Méditations sur les Révolutions des Empires*," the first idea of which he is said to have conceived in the cabinet of Dr Franklin. After the conclusion of the sessions of the National Assembly, he accompanied M. Pozzo di Borgo to Corsica, where he had projected some agricultural improvements. He made attempts to establish in that island the cultivation of the sugar-cane, indigo, and other tropical plants, but he was unsuccessful. Returning to Paris, he suffered persecution under the reign of terror; and after ten months' imprisonment, the fall of Robespierre restored him to liberty. In November 1794 he was appointed professor of history at the Normal School, and the course of lectures on the philosophy of history which he delivered (and which was published and translated into English) added considerably to his reputation. In 1795 he made a voyage to the United States of America, where, as the friend of Franklin, he experienced a flattering reception from Washington, who invited him to visit him in his retirement from the toils of warfare and politics. Volney would probably have settled in America, had not the prospect of a war with France induced him to return home in the spring of 1798. After the revolution which elevated Buonaparte to the consulship, he was nominated a senator; and it is said the office of second consul was designed for him, but his political opinions prevented the appointment from taking place. In the senate he co-operated with Lanjuinais, Cabanis, Destutt de Tracy, Collaud, Garat, and others, whose influence was constantly exerted in the cause of freedom. After the return of the king, Volney, by a decree of the 4th of June 1814, was designated a member of the Chamber of Peers, where he remained faithful to his principles, always appearing among the ardent defenders of the rights of the nation. His death took place, after a short illness, at Paris, April 24, 1820. Besides the works already mentioned, he published "*Simplification des Langues Orientales, ou Méthode nouvelle et facile d'apprendre les Langues Arabe, Persane et Turque, avec les Caractères Européens*," 1795, 8vo; "*Tableau du Climat et du Sol de l'Amerique*," 1803, 2 vols. 8vo, with a Voca-

bulary of the Language of the Miamis: "*Rapport fait à l'Académie Celtique sur l'Ouvrage Russe de M. le Prof. Pallas, Vocabulaires comparés des Langues de toute la Terre*," 1805, 4to; *Supplément à l'Herodote de Larcher, ou Chronologie d'Herodote conformé à son Texte*," 1808, 2 vols. 8vo, "*Questions de Statistique à l'Usage des Voyageurs*," 1813, 8vo; "*Recherches nouvelles sur l'Histoire Ancienne*," 1814—15, 3 vols. 8vo. Volney was a member of the Institute from its foundation; and he belonged to the Asiatic Society of Calcutta, and to several European literary associations.—*Biog. Nouv. des Contemp. Biog. Univ.*

VOLPATO (JOHN) an eminent engraver, born at Bassano, in Italy, in 1733. He was a self-taught artist, and his first essays were so successful as to attract the admiration of the most skillful professors. The celebrated Bartolozzi, then employed at Venice, instructed Volpato in the secrets of his art. He afterwards went to Rome, where he was engaged to make engravings from the paintings of Raphael at the Vatican. His death took place at Rome, August 21, 1802. He published a work, entitled "*The Principles of Design, deduced from the best ancient Statues*," Rome, 1786, folio, with thirty-six plates. The famous Raphael Morghen was the pupil and son-in-law of this artist.—*Biog. Univ.*

VOLPI (JOHN ANTHONY) an elegant modern Latin poet, descended of a noble family, and born at Como in 1514. He studied jurisprudence at Pavia, and afterwards went to Rome in search of preferment. Being disappointed in his expectations, he returned to his native place, and eventually succeeded Bernardine della Croce, bishop of the church, in 1559. His death took place in 1568. His poems, which were published at Padua, in 1725, have been highly praised; two of his satires in particular are said to be the finest modern compositions of the kind, happily imitating the style of Horace.—*Rees's Cyclop.*

VOLTA (ALEXANDER) an Italian philosopher, distinguished for his discoveries relative to Galvanic electricity. He was descended of a noble and ancient family, and was born at Como in 1745. He applied himself particularly to the study of the natural sciences, and especially electricity; and in 1769 he addressed to father Beccaria a dissertation "*De Vi attractiva Ignis Electrici*." In 1774 he was appointed professor of natural philosophy at Pavia; and he was in that situation when the discoveries of Galvani were published in 1789. Volta immediately turned his attention to the subject of Galvanism, or animal electricity; and to his researches is due the discovery of what has been termed the principle of electro-motion, or the excitement of electricity by the contact of heterogeneous substances, as exhibited in the phenomena of the Voltaic pile, or electric column. Volta addressed to the Royal Society of London, in 1792, an account of his observations, and in 1794 he was presented with the Copleian

medal. In 1801, Buonaparte invited professor Volta to Paris, where he exhibited his discoveries to the members of the Institute. He was subsequently deputy from the university of Pavia to the consulta of Lyons, and then a member of the college of the Dotti, a senator, and at length a count. He died March 6, 1826. A complete edition of his works appeared at Florence in 1816, 5 vols. 8vo.—*Biog. Univ.*

VOLTAIRE (MARIE FRANCIS AROUET de) indisputably the most celebrated literary character of his own age, was born at Chateaufort near Paris, in 1694. His father, Francis Arouet, had been a notary, and was a treasurer of the chamber of accounts. The subject of this article showed a singular fondness for verse from his cradle, which was fostered by his godfather, the abbé de Chateaufort. He received his classical education at the jesuits' college of Louis le Grand, under father Porée, an eminent preceptor, and was presented when very young to the celebrated Ninon de L'Enclos, who left him two thousand livres for a juvenile library. On quitting college his father destined him for the bar; and he was sent to the schools of law, which he completely neglected, and obtained admission to a society of wits and Epicureans, including Chaulieu, the marquis de la Fare, the grand prior of Vendome, the marshal de Villars, and others. His father, fearful of his becoming a poet merely, induced the marquis de Chateaufort, ambassador from France to Holland, to take him in his suite in quality of page; but falling in love with the daughter of madame Du Noyer, a refugee, he was sent back again. Returning to Paris, he was excluded from his father's house, and refused re-admission, except on the condition of entering an attorney's office, which however he would not fulfil. Having early imbibed a turn for satire, he was imprisoned by the regent duke of Orleans almost a year in the Bastille for some philippics against the government. He had some time before composed his tragedy of "Œdipe," which produced him two advantages besides considerable reputation, the regent releasing him from the Bastille, while his father, moved to tears at its representation, was reconciled to him upon the spot, and never more pressed him to become a lawyer. In 1722 he made an excursion to Brussels, where he became acquainted with Jean Baptiste Rousseau; but the poets quickly became disgusted with each other; Rousseau was jealous of a rival, and the bon mots of Voltaire (for so was he from about this time called) were not of a nature to conciliate his good-will. On his return to Paris in 1722, he produced his tragedy of "Mariamne," which escaped success, owing to an exclamatory witticism from an individual among the audience, a similar fate having previously attended another tragedy called "Artemire." His reckless vivacity, his imprudence, and sentiments in regard to religion, also contributed to subject him to many mortifications; and he was soon after again imprisoned in the Bastille, in consequence of a broil with the

chevalier de Rohan. After an imprisonment of six months, he was released on condition of quitting the kingdom, on which he chose England for his retreat; and took with him the "Henriade." He was favourably received by George I, and still more so by the princess of Wales, afterwards queen Caroline, who obtained for him a great number of subscriptions; and this liberality laid the foundation of his fortune. In England he was introduced to many persons eminent for rank and literature, but whom, according to tradition, he disgusted by the levity and indelicacy of his conversation. In 1728 he obtained permission to return to France, where he put the money he had acquired into a lottery, established by the comptroller-general of the finances, by which, and other fortunate speculations he realised much property, which he still farther improved by economy and good management. In 1730 he produced his tragedy of "Brutus," which did not become popular; and it has been said that La Motte and Fontenelle recommended him to renounce the drama, instead of which he produced his celebrated "Zaire," deemed the most pathetic tragedy on the French stage, after the "Phædre" of Racine. The freedoms which he took with revealed religion in his "Lettres Philosophiques," which were burnt by order of the parliament of Paris, obliged him once more to quit the capital, to avoid an arrest of his person, which had been directed by the same authority. He retired to the castle of Cirey in Champagne, the seat of the marchioness de Chatelet, with whom he was intimately associated. Here he occupied himself in writing his "Elements of the Newtonian Philosophy," then scarcely known in France, where the Cartesian still predominated. It was but a slight work, but answered the intended purpose, by opening the avenue to more profound expositions, which ultimately rendered it as triumphant in France as in England. He continued to write tragedies, of which his "Alzire" appeared in 1736, his "Mahomet" in 1741, and his "Merope" in 1743. The latter tragedy, celebrated for its pathos, without the intermixture of love, a thing almost unprecedented on the French stage, first gave origin to the custom of calling for the author of an approved play. Before this period he had made his peace with the court, by the able manner in which he executed a political mission to Frederick II, who had just then ascended the throne of Prussia, with whom he had previously held a literary correspondence when prince royal. This favourable opening he improved by securing the good graces of madame d'Etioles, afterwards marchioness de Pompadour, the well-known mistress of Louis XV. He was in consequence employed to write a dramatic piece for performance at the festivities which took place on the marriage of the dauphin, and was rewarded by the posts of gentleman of the king's chamber in ordinary and of historiographer of France. In 1746 he also overcame the numerous obstacles which had opposed his admission into the French Academy, and was the

brat who broke the hacknied custom of repeating the praises of cardinal Richelieu on admission. He was however so much annoyed by literary and ecclesiastical enmity, that he retired with madame de Chatelet to the court of king Stanislaus at Luneville. On the death of that lady in 1749 he returned to Paris, and in the June of the following year paid his long-solicited visit to the king of Prussia at Potsdam, where he was assured of an annual pension of 22,000 livres and other important benefits. All that was expected of him was to spend two hours a day with the king, correcting his works, being left in other respects at his own disposal. Tranquillity seldom lasts long in courts, and against Frederick's express wishes, Voltaire took part in a literary squabble between the mathematicians Maupertuis and Koenig, and made the former the butt of his powerful railery. The result was his dismissal, on which he returned to the king his chamberlain's key and the cross of his order, with some lines implying that he parted with them as a lover resigns the portrait of his mistress. The king however sent him back his key and ribbon, and he paid a visit to the duchess of Saxe Gotha, and might possibly have been recalled to Berlin, but for a bon mot wherein he compared Frederick's writings to dirty linen that he had to wash, which piece of wit reaching the king's ears, rendered his return impossible. He was even arrested at Frankfort by order of the Prussian resident, who roughly obliged him to restore some poems by the king, which he had in his possession. He now wished to obtain permission to reside at Paris, but his witty and licentious poem, "*La Pucelle d'Orleans*" having caused a great outcry against him, he purchased a country house near Geneva. His restless and petulant disposition soon involved him in the party squabbles of that disputatious place, on which he heaped ridicule upon both parties, until he was again obliged to remove; on which he purchased an estate at Ferney in the Pays de Gex, an almost savage desert belonging to France, but within a league of Geneva, which place he had the satisfaction of fertilizing. The village of Ferney, which contained but fifty inhabitants, became by his means the residence of 1200 persons, among which were a great number of artists, principally watchmakers, who established their manufacture under his auspices, and exported their labours throughout the continent. He also invited to his house and afforded protection to the great niece of the celebrated Corneille, and nobly distinguished himself by his services to the persecuted Servin and those victims to fanaticism and superstition, the unhappy members of the family of the judicially murdered Calas. He may be said to have erected in this retreat a sort of universal and independent tribunal, in which he freely passed judgment on all human affairs. The most powerful dreaded the force of his pen, and endeavoured to secure his regard, as was the case with Arétin in the sixteenth century; but Arétin often received in-

sults as well as rewards, whereas the far superior wit and address of Voltaire secured universal homage. With an apparently inexhaustible vein, he was continually pouring out a great variety of works, which were eagerly read by all Europe. They were generally directed to the subversion of civil and ecclesiastical tyranny, and indeed, every sort of abuse of power, and inculcated a horror of ambitious war, and the most unfettered toleration. In his attacks on the usurpations of the priesthood, however, his hostilities reached to revealed religion generally, and although he admitted natural religion, it is to be lamented that he did little to establish its moral efficacy. Some of the greatest sovereigns of the age might at this time be esteemed his pupils, and more especially the king of Prussia, who renewed his correspondence with him, and Catherine II of Russia, who sent him magnificent presents, and most obliging letters. In the mean time his principles had made such a progress in Paris, that that capital was filled with his admirers, which rendered him once more anxious to visit it. He accordingly arrived there very unexpectedly in February, 1778, much to the dissatisfaction of a powerful party, who regarded him with aversion and alarm. He felt his situation, and when his carriage was stopped at the barriers by the officers of the customs, and he was asked if he had any thing for which duty should be paid, he replied with his usual constitutional vivacity, "No, gentlemen, here is nothing contraband but myself." In fact, the decree of the parliament of Paris was still in force against him, but the government allowed public feeling to take its course, and the scenes which it produced were highly and nationally characteristic. The French Academy deputed three of their members instead of one to congratulate him, and placed his bust by that of Corneille; while the actors paid him their homage in a body. His bust was also crowned in full theatre, on the sixth representation of his new tragedy of "*Irene*;" and dramatic glory could scarcely be carried to a greater height. This excess of stimulus, joined to literary labour and a great change in his manner of living, was too much for the feeble frame of a man of eighty-four; and it became apparent that he had not long to live. "I am come to Paris," he exclaimed, "to find glory and a tomb." He was unable to sleep, and it is supposed that a large dose of opium, which he took to produce it, without consulting his physician, hastened his death. When near his end, the marquis of Villette, with whom he resided, sent for the rector of St Sulpice, and of this interview various very contradictory accounts have been published; but it is certain that he did not receive the last ceremonies of the Catholic church. His death took place May 30, 1778, in the eighty-fifth year of his age; and in consequence, it is said, of the refusal of the archbishop of Paris to allow him Christian burial, he was interred secretly at Sellices, a Benedictine abbey, between Nogent and Troyes, whence he was brought in

1791 by a decree of the National Assembly, and interred at St Genevieve. The part performed by Voltaire in a long and extraordinary life, was of too strong and decided a cast, as regards opinions which agitate and divide mankind of all classes, not to have operated very materially on the numerous portraits which have been drawn of him. His physiognomy is said to have partaken of the eagle and the monkey, whence has been inferred his possession of the fire and rapidity of the one animal, and the mischievous restlessness and petulance of the other. With strong perceptions of moral excellence, he was often replete with petty design, disingenuous, and extremely capricious in his personal attachments. He was also deemed somewhat mean and avaricious, until the latter part of his life, when he certainly did many generous and benevolent actions. Of a temperament which never allowed him to be at rest, either in mind or body, he was a philosopher rather in his opinions than in his actions, which often appeared to be guided more by caprice and impulse, than by settled resolution and firmness of purpose. This censur.e must be confined to a portion of his conduct in respect to social intercourse, literary enmities, and personal deportment, as no one could display more steadiness and firmness of purpose as regarded such party or public principles as he either espoused or opposed. A youth spent among the dissipated wits of Paris, in the sensual and corrupt period of the regency, was scarcely calculated to form a moralist, and no small portion both of its licence and licentiousness pervaded his manners, conduct, and not unfrequently his writings. As an author, he was himself probably most anxious for his reputation as a dramatist and poet. His "Henriade" is the finest, if not possibly the only, epic poem in the French language: it displays correctness and elevation of thought, well drawn characters, striking descriptions, and harmonious versification; but the subject, taken from comparatively recent history, precludes fancy and invention, which indeed are not characteristics of Voltaire. As a dramatist, he immediately follows Corneille and Racine in the estimation of the French; and possibly precedes them in that of most of the foreign readers of their language. Comedy he has attempted with no great success, like many other men of brilliant wit, which quality rather impedes than assists genuine representations of life and manners. As a writer of history, he is celebrated for his light, rapid, and pervading glance at events, their causes and results, but is often careless, and occasionally also inaccurate as to fact, and sometimes, it is contended, designedly. His "Essai sur l'Histoire Générale," "Siècles de Louis XIV et de Louis XV," and "Histoire de Charles XII," are the most admired performances in this line. His style in prose may be regarded as perfect in its kind, which is the middle species, that aims neither at elegance nor fine writing; but is lively, pointed, in unaffected good taste, and admirably adapted for his light and fugitive pieces, which are

among the happiest of their class. They are very numerous, assuming the form of tale, romance, dialogue, and every variety of pastime. The general purpose of these, when not stimulated by personal distaste, were to repel what he deemed usurpation upon human reason in every quarter, and confining the remark to the evils produced to mankind by superstition, intolerance, and fanaticism, it has been the lot of few men to work a more rapid change in the sentiments of mankind than Voltaire. However extraordinary the intellectual diversity of this remarkable genius, possibly that quality by which he was most signally distinguished and set apart from other men, was the astonishing talent which he possessed of placing whatever he pleased in a ludicrous light, and raising a laugh whenever, and at whatever he thought proper. This faculty rendered his raillery an affliction of the most unbearable kind, and the fear of it operated even upon persons of the most powerful and influential description. The mass of the works of all kinds by this rapid and indefatigable writer amounts to 30 vols. 4to of the Genevan edition, and 71 vols. 8vo in the more complete edition of Basle; and French editions, in all sizes, and at all prices, are continually multiplying (although probably with some exclusion) at Paris. The greater part of these have been translated into English by Smollet and Franklin, or at least under their names; and the "Dictionnaire Philosophique," which they omitted, received an English version in 1825, in 6 vols. 12mo. That the whole of works so voluminous will reach posterity, is to be doubted; but there can be no doubt that the name of Voltaire will ever remain the most conspicuous in the literary history of the eighteenth century.—*Nouv. Dict. Hist. Life by Condorcet. Aikin's Gen. Bing.*

VOLTERRA (DANIEL JE) an Italian painter and sculptor, whose proper name was Ricciarelli, was born at Volterra in Tuscany in 1509. He was educated at the schools of Peruzzi and Razzi in Sienna, but derived the principles of art chiefly from Michael Angelo, to whom he was an assistant. He was slow in execution, and owed his reputation chiefly to two or three great works, of which it is doubtful how much he owed to the advice and assistance of his great patron and adviser. His most noted performance was the fresco in a chapel of the Trinita del Monte in Rome, which engrossed the labour of seven years. He was subsequently nominated superintendent of the paintings at the Vatican by pope Paul III, of which place he was deprived by Julius III, disgusted, as he said, by his slowness. Under the pontificate of Paul IV he was employed to cover the nudities of some of the figures in the Last Judgment of Michael Angelo, which obtained for him the ludicrous title of Bragghettone. He died at Rome in 1566, at the age of fifty-seven.—*D'Argenville. Pilkington by Fuseli.*

VONDEL (JOOSR VAN den) a distinguished Dutch poet, born in 1587. He was originally a hosier at Amsterdam; but prefer-

ring literature to commerce, he neglected his shop, and at the age of thirty commenced learning Latin, and ten years after he studied logic. He wrote tragedies, odes, a treatise on the art of poetry, and various other original compositions; and he translated into Dutch the works of Virgil, Horace, and Ovid. On relinquishing trade, he obtained an office under government, and his death took place in 1679. His productions have been published together in nine quarto volumes. He belonged in early life to the sect of the Menonites; but when religious disputes arose between the Arminians and the Gomarists, he took part with the former, and joined their communion. Afterwards he became disgusted at the conduct of the Dutch divines belonging to the Orange faction, and forsaking the Protestants altogether, he turned Catholic. Two of his tragedies, "Palamedes, or Innocence oppressed;" and "Gisbert Van Amstel," relate to the political transactions of his own age and country.—*Moreri. Biog. Univ.*

VORSTIUS (CONRAD) an eminent divine of the Arminian sect, born at Cologne in 1569, was the son of a dyer with a numerous family, who secretly seceded to the Protestant communion. Conrad, who was destined to a literary life, after passing five years at a village grammar-school, was entered, in 1587, at the college of St Lawrence at Cologne, which he quitted without taking a degree, but was subsequently sent to Haerlem and Heidelberg, at which university he was created a doctor of divinity. After visiting the academies of Switzerland, and giving lectures on theology at Geneva in 1596, he accepted the professorship of the latter faculty at Steinfurt, where he also officiated as minister until 1610, when he received a call to succeed Arminius in the professorship of theology at Leyden. Having accepted this offer, he soon became involved in the controversial war which raged in the Netherlands; and the Gomarists, or rigid Calvinists, taking advantage of a book which he had lately published, entitled "Tractatus Theologicus de Deo, sive de Natura et Attributis Dei," they accused him of heresy, and engaged several foreign universities in the party. In particular, they obtained the aid of our own James I, who, on receiving the book of Vorstius in an hour's time drew up a large catalogue of heresies from it, which he sent to his minister at the Hague, with an order to certify to the States how much he detested those alleged errors. He also caused his book to be burnt in London; and informed the States, who had sent a doubtful reply, that they would inquire into the case, that if they did not dismiss Vorstius none of his subjects should visit Leyden. James moreover wrote against Vorstius, who respectfully replied; all which would not have prevailed upon the States to dismiss him, but for the untimely appearance of a book by some of his disciples, entitled "De Officio Christiani Hominis," which contained some anti-trinitarian doctrines; and although formally disclaimed by Vorstius, so much odium was thereby excited against him,

that he provisionally resigned the professorship, from which, by the synod of Dordrecht, he was entirely dismissed, and banished by the States of Holland from their territories. He lived for more than two years in secrecy, frequently changing his abode in fear for his life, until in 1622 the duke of Holstein collected the dispersed followers of Arminianism, and assigned them a spot of ground for building a city. To this place Vorstius retired, but died soon after at Toningem, in September 1622, at the age of fifty-three. According to Bayle and Sandius, the opinions of this theologian probably leaned towards Socinianism, or at least he dogmatized on the doctrines of God in a manner which was quite unusual at the period.—His son, WILLIAM VORSTIUS, also an Arminian minister, published some works on rabbinical literature.—There was also a JOHN VORSTIUS, a German divine, who was librarian to the elector of Brandenburg, in whose service he died in 1676. He wrote a work on the Hebraisms of the New Testament, part of which was republished at Leyden in 1658, under the title of "Philologia Sacra."—*Freheri Theat. Bayle. Moreri.*

VOS (MARTIN DE) an eminent painter of the Flemish school, was born at Antwerp in 1520. He studied under his father, who was an able artist, and having made himself eminent in Flanders, he visited Venice, Rome, and Florence, where he made a curious collection of drawings from various sorts of vases used by the Greeks and Romans at their entertainments, funerals, and sacrifices. His fame as an artist induced some of the Medici family to sit to him, and on his return to Flanders he executed various altar-pieces, which were much admired, as also several festival solemnities of the ancients, to which his drawings afforded much lively representation. He possessed a fertile invention, a ready pencil, and a colouring approaching to that of Tintoret. He died at Antwerp in 1604, in the eighty-fourth year of his age.—Two other painters of this name, SIMON DE VOS of Antwerp, and PAUL DE VOS, of Hulst, a painter of battles and hunting, also obtained considerable distinction.—*D'Argenville Vies de Peint. Pilkington.*

VOSS (JOHN HENRY) a German poet and critic of eminence, born at Summersdorf in 1731. He was educated at the school of Neu Brandenburg, and having attracted some notice by his poems, inserted in the Almanac of the Muses, of Gottingen, in 1770, he procured the means of studying in the university at that place, where he attended the lectures of professor Heyne. A literary society having been formed, called "The Friends of Gottingen," he became one of the members, among whom were count Stolberg, Holty, Burger, Klopstock, and other persons who obtained great literary reputation. In 1775 Voss engaged in the publication of the Almanac of the Muses, or Anthology (Blumenlese) of Gottingen, which he conducted till 1800, inserting in it annually a number of pieces of his own composition. In 1778 he was nomi-

nated rector of the college of Ottendorf, in the territory of Hanover, whence he removed to occupy a similar office at Eutin, in the duchy of Oldenburg. He remained there twenty-three years; and in 1805 the grand duke of Baden invited him to Heidelberg, where he remained till his death, which occurred March 29, 1826. Voss translated the works of the following Greek and Roman poets: Homer, 1793; Virgil, 1799; Horace, 1806; Hesiod, and the Pseudo-Orpheus, 1806; Theocritus, Bion, and Moschus, 1808; Tibullus and Lygdamus, 1810; Aristophanes, 1821; Aratus, 1824; and extracts from the *Metamorphoses* of Ovid, 1798. His original writings comprise "Letters on Mythology;" "Idylls;" and other poems; besides numerous papers in periodical works. He was also engaged in various literary controversies with Heyne, count Stolberg, Creuzer, and others of his learned contemporaries.—*Biog. Univ.*

VOSSIUS (GERARD) a Flemish divine and man of letters in the sixteenth century. He was a native of the bishopric of Liege, and became apostolic protonotary, and dean of the college of Tongres. He died at Liege in 1609. Vossius was the first editor of the works of St Ephrem Syrus; and he also published some of the writings of St Chrysostom, Theodoret, and St Bernard; besides which he was the author of "*Gesta ac Monumenta Gregorii Papæ IX, cum Scholiis*," 1586.—*Biog. Univ.*

VOSSIUS (GERARD JOHN) a celebrated writer on criticism and philology, born near Heidelberg in 1577. He studied at Dordrecht, and afterwards at Leyden, where he proceeded to the degree of doctor in philosophy. At the age of twenty he commenced his literary career by the publication of a Latin panegyric on prince Maurice of Nassau; and two years after he became director of the college of Dordrecht. In 1614 the chair of philosophy was offered him at Steinfurt; but he preferred the direction of the theological college established at Leyden; and after having occupied that post four years, amidst the storms of religious controversy, he procured the more peaceable appointment of professor of rhetoric and chronology. Having declared himself in favour of the Remonstrants, he became obnoxious to the prevailing party in the church; and at the synod of Terkou, or Gouda, in 1620, he was deprived of his office. Through the influence of archbishop Laud, the great patron of Arminianism in England, Vossius was in some measure indemnified for his loss by a prebendal stall at Canterbury, with permission to continue his residence in the Netherlands. In 1633 he was invited to Amsterdam, to occupy the chair of history at the *Schola Illustris*; and he continued there till his death, March 19, 1649. Among his numerous works may be specified the treatises "*De Origine Idololatrise*;" "*De Historicis Græciæ, et de Historicis Latinis*;" "*De Poetis Græciæ et Latinis*;" "*De Scientiis Mathematicis*;" "*De Quatuor Artibus popularibus*;" "*Historia Pelagiana*;"

"*Institutiones Historiæ, Grammaticæ, Poeticæ*;" "*Etymologicon Lingvæ Latinæ*;" "*De Vitiis Sermonis*;" "*De Philosophorum Sectis*." A collective edition of the works of G. J. Vossius appeared in 6 vols. folio, Amsterdam, 1695—1701. He was twice married, and had several children. His five sons, DENYS, FRANCIS, GERARD, MATTHEW, and ISAAC were all men of letters; and the last and most distinguished is the subject of the ensuing article.—*Moreri. Dict. Hist. Biog. Univ.*

VOSSIUS (ISAAC) was born at Leyden in 1618, and possessing great natural talents, and the advantage of his father's tuition, he acquired early reputation among the learned. At the age of twenty-one he published an edition of the *Periplus of Scylax*, with a Latin version, and notes. Christina, queen of Sweden, prepossessed by report in his favour, invited him to Stockholm, and chose him for her preceptor in the Greek language. His quarrels with Saumaise having rendered the court of Sweden disagreeable, he quitted it in 1649, and returned to his native country, where he employed himself in the production of various learned works. In 1670 he visited England, and was admitted to the degree of L.L.D. at Oxford; and in 1673, having been presented to a canonry at Windsor, by Charles II, he passed the remaining part of his life in this country. He died February 10, 1688, O.S. Besides editing the works of Scylax, Justin the historian, Catullus, Pomponius Mela, St Barnabas, and St Ignatius, he published "*Dissertatio de vera Ætate Mundi*;" "*De Septuaginta Interpretibus eorumque Translatione et Chronologia Dissertationes*," in which he defended the chronology of the Septuagint version against the Hebrew text of the Old Testament; "*De Poematum Cantu et Viribus Rhythmi*," the most original of all his productions; "*De Sibyllinis aliisque quæ Christi Natalem præcessere Oraculis*;" and "*Variarum Observationum Liber*." Isaac Vossius was, while in England, intimate with St Evremond and the duchess of Mazarin; but though he lived much in the society of the great, his behaviour was sometimes rude, and his language by no means decent. In his writings he maintained extravagant paradoxes, while he was generally considered as an infidel in religion. Hence Charles II said he was a strange divine, for he believed every thing except the Bible.—*Rees's Cyclop. Biog. Univ.*

VOUET (Samon) a French painter, very considerable in his day, was born at Paris in 1582, and was bred up under his father, who was also an artist. He accompanied the French embassy at Constantinople, and drew the grand signior from memory after an audience in the train of the ambassador. He then visited Venice and Rome, at which latter capital he acquired great distinction. He remained in Italy fourteen years, when he was sent for by Louis XIII to work in his palace, and he furnished some of the apartments of the Louvre, the palace of Luxemburg, and

VUL

the galleries of cardinal Richelieu and other public places, with his works. He was a good colourist, but had little genius for grand composition, although France was certainly indebted to him for introducing a better taste. Most of the succeeding French painters who gained distinction, were bred up under him, including Le Brun, Perrier, Mignard, Le Sueur, Doriguy, Du Fresnoy, and others. He died in 1641, aged fifty-one.—*Pilkington. D'Argenville.*

VOYER. See ARGENSON.

VROON (HENRY CORNELIUS) a Dutch painter, was born at Haerlem in 1566. Being shipwrecked on the coast of Portugal during a voyage to Spain, he succeeded so well in painting the storm which caused his misfortune, that he dedicated himself entirely to sea-pieces on his return home. About this time the earl of Nottingham, lord high admiral of England, being desirous of preserving the details of the defeat of the Spanish armada, in which he bore so conspicuous a part, bespoke a suit of tapestry, descriptive of each day's engagement. For this tapestry Vroon was employed to furnish designs, and the tapestry has often excited great admiration in the house of Lords, where it was placed. The date of the death of this artist is not recorded.—*Walpole's Anec. of Painting.*

VULCANIUS (BOVAVENTURE de SMET, or SMITH, known under the Latinized name of) a learned Fleming, born in 1538. Having finished his studies at the university of Louvain, he went to Spain, and became secretary and librarian to cardinal F. de Mendoza, bishop of Burgos. In 1570 he returned to the Netherlands, whence (in consequence of the

VUL

disturbed state of public affairs) he removed to Cologne, and subsequently to Basil and Geneva. He at length fixed his residence at Antwerp, and was for some time rector of the school in that city. In 1578 he obtained the chair of Greek literature in the university of Leyden; and being declared professor emeritus in 1612, he died October 9, 1614. Vulcanius translated from Greek into Latin, and published with notes, the works of Arrian, Callimachus, Bion, Moschus, Agathias, and other authors; and he edited several Latin works, ancient and modern, among the latter of which is a curious anonymous piece, entitled "De Litteris et Lingua Getarum, sive Gothorum; item de Notis Lombardicis quibus accesserunt Specimina variorum Linguarum." Leyd. 1597, 8vo.—*Andree Bibl. Belg. Moreri. Bing. Univ.*

VULSON (MARC de) sieur de la Colombe, a writer on the heraldic science, and a gentleman of the king of France's bedchamber. Living at Grenoble in 1618, he surprised his wife with a gallant, and having killed them both on the spot, he rode post to Paris to solicit a pardon, which he obtained. He was the author of a treatise, entitled "La Science Héroïque, traitant de la Noblesse, de l'Origine des Armes," &c. 1644, reprinted with augmentations in 1699, folio. This is accounted the most complete French work on the subject. He also wrote "Le Théâtre d'Honneur et de Cavalerie; ou le Miroir Historique de la Noblesse," 2 vols. folio, 1648, a work useful for the knowledge of the ceremonial belonging to ancient chivalry; and "Recueil de plusieurs Pièces et Figures d'Armoires." He died in 1658.—*Nouv. Dict. Hist.*

WAC

WACE, or WAICE (ROBERT) a French poetical chronicler of the twelfth century. He belonged to the clerical order, and was canon of Bayeux, and chaplain to Henry II, king of England. Being a native of Jersey, he wrote in the Norman-French dialect an account of the history of England and the Norman conquest, of which there are copies in the British Museum and the Royal Library at Paris. The title of this work is "Le Brut, ou Histoire des Rois d'Angleterre, traduite en Vers François, par Robert Wace, et continuée par un autre jusqu'à Henry III." Wace is also said to be the author of a poem called "Le Roman de Rou;" and several other romances are ascribed to him.—*Moreri. Archæologia*, vol. xii.

WACHTER (JOHN GEORGE) a learned German antiquary and linguist, a native of Memmingen, who died in 1758. He was the author of "Glossarium Germanicum," Lips. 1737, 2 vols. folio, relating to the dialect which prevailed in Germany in the middle ages; "Archæologia Nummaria," 1740, 4to;

WAD

and "Naturæ et Scripturæ Concordia, Commentario de Litteris ac Numeris primævis, aliisque Rebus memorabilibus cum Ortu Litterarum conjunctis illustrata," Lips. et Hafn. 1752, 4to.—*Nouv. Dict. Hist. Zupf.*

WADING or WADDING. The name of two eminent ecclesiastics, Irishmen by birth, who both flourished in the earlier part of the seventeenth century. LUKE WADING, born in 1588 at Waterford, assumed the cowl as a cordelier, or monk of the order of St Francis, and held a divinity professorship in the university of Salamanca. In 1618 he accompanied the bishop of Carthage on his mission to Rome, undertaken for the purpose of healing some divisions which existed between the Spanish church and the apostolical see. Of this journey and the negotiations which it gave rise to, he afterwards printed a detailed account in Latin. Wading continued to reside in Rome for the remainder of his life, and founded in that capital a college for Irishmen of his own order, dedicated to St Isidore. On the breaking out of the Irish rebellion in 1641, he is

said to have entered deeply into the intrigues of the period, and to have assisted the insurgents both with money and advice; yet personal ambition seems to have had little power over him, as it is notorious that he declined the offer of a cardinal's hat, made him through the favour of the reigning pontiff. His principal work is a "History of the Order of St Francis," folio, 8 vols. 1654, and folio, 19 vols. 1745. He was also the compiler of a "Catalogue of Franciscan Authors," and edited the works of Duns Scotus, folio, 12 vols. and the Concordance of Calasio. His death took place at Rome in 1657.—**PETER WADING**, a native of the same city, and probably of the same family, received his education among the jesuits, and became a member of their order. He read theological lectures at Prague with great reputation, and afterwards settled at Lourain, where he filled the divinity chair for many years. From this university he at length removed to that of Gratz in Styria, being elected to the chancellorship, and died there in 1644. He was an elegant as well as a sound classical scholar, of which he left convincing proofs in numerous metrical compositions in the Latin language, besides other works of merit.—*Harris's Edition of Ware.*

—**WADSTROM** (**CHARLES BERN**) a Swedish traveller and writer, was born at Stockholm in 1746. Having finished his academical studies, he was employed as an engineer in the Swedish service; but after executing several considerable works, he conceived the design of visiting Africa, with a view to acquire particulars to further the abolition of the slave trade. On his return to Europe, he was examined at the bar of the English House of Commons upon that subject. He next published, by the literary assistance of Dr. William Dickson, an "Essay on Colonization, particularly applied to the Western Coast of Africa," 4to, 1794, a work which attracted considerable notice. He followed with "Observations on the Slave Trade during a Voyage made to the Coast of Africa in 1787." He ultimately settled in Paris, and engaged in a pottery. He died in 1799, with the character of an enthusiastic philanthropist, and an able but eccentric man.—*Decade Philosophique.*

WAFFER (**LIONEL**) an English voyager, was bred a surgeon in London, and in 1677 embarked as such on board a ship bound for Bantam. He afterwards became surgeon to a trading vessel to Jamaica, but at length engaged with Linch and Cook, two celebrated buccanniers, which brought him into the company of Dampier; but a quarrel ensuing, the band divided, and Wafer was left on shore on the isthmus of Darien. Here he remained some months among the Indians, who treated him kindly on account of his medical skill, and gave him his liberty when an English vessel arrived on the coast. He returned to England in 1690, when he published an interesting account of his personal adventures, with many curious particulars of the isthmus of Darien.—*Wafer's Narrative.*

WAGENÄAR (**JOHN**) a native of Amster-

dam, born in 1709. He devoted himself to a literary life, and received the appointment of historiographer to the States General, on producing an elaborate history of his native country in 21 volumes. He was also the author of a Biographical Memoir of John de Witt; a "Description of the City of Amsterdam," folio, 3 vols.; and a Statistical Account of the United Provinces, in twelve volumes. His death took place in 1773.—*Nouv. Dict. Hist.*

WAGENSEIL (**JOHN CHRISTOPHER**) an able scholar and ingenious polemic, born in November 1633, at Nuremberg in Germany. He received his education at the university of Altorf; and from his great proficiency in literary attainments, as well as his general information, was selected by the count de Traun to accompany his sons in the grand tour as travelling tutor. With his pupils he visited on this occasion France, Italy, Spain, England, and Holland; studiously frequenting the society of the most learned persons of all those countries to whom he could obtain access, during a six years' absence. While in France he was treated with much distinction by the king, and received the honorary degree of LL.D. at Orleans. On his return in 1667 he obtained the professor's chair in history and jurisprudence at Altorf, in which sciences he lectured alternately, till in 1675 he exchanged the historical professorship for that of Oriental literature, and was subsequently employed by the government to conduct their negotiations with the imperial court. As an author he is most advantageously known by his "Tela Ignea Sathanae," a controversial treatise of great ability, in which he gives a collection of the principal tracts written by the Jewish rabbins against the Christian religion, with an accompanying commentary in individual refutation of their contents. This work was first printed in two quarto volumes, 1681. He also wrote a "History of the City of Nuremberg," in quarto; "Pera Librorum Juvenilium," 12mo, and several other pieces both in French and Latin. His death took place October 9, 1705.—*Nouv. Dict. Hist.*

WAGNER (**JOACHIM**) a famous German organ-builder, who erected a large organ in the garrison-church at Berlin, in 1725, which is on several accounts very curious. It is not only remarkable for compass, having fifty keys in the manuals, and for its great number of pipes, amounting to 3,220; but yet more so on account of the ornaments and machinery of the case, which are in the old Teutonic taste. At each wing is a kettle-drum, which is beat by an angel placed behind it, whose motions the organist can regulate by means of a pedal; at the top of the pyramid, or central column of pipes, are two figures in the costume of Fame, spreading their wings when the drums are beat, and raising them as high as the top of the pyramid; each of these figures sounds a trumpet, and then takes flight. There are also two suns, which move to the sound of cymbals, and the wind drives them across the clouds; at the same time two eagles are seen to take their flight.—*Rees's Cyclop.*

WAGNER (**JOHN JAMES**) a Swiss physi-

cian, who was librarian to the city of Zurich, and was a member of the *Academia Curiosorum Naturæ*, to which he communicated a number of memoirs. He was also the author of "*Historia Naturalis Helvetiæ Curiosa*," 1680, 12mo. His death took place in 1695, at the age of fifty-four.—*Nouv. Dict. Hist.*

WAGSTAFF (THOMAS) a learned nonjur-ing divine, was born in Warwickshire in 1645. He was educated at the Charter-house, and New-inn, Oxford, where he graduated M.A. in 1667. He was inducted into the living of Martin's Thorp in Rutlandshire, after which he became chancellor of Lichfield, and rector of St Margaret Patten in London. At the Revolution he refused taking the oaths, and consequently lost his preferments, on which he practised physic, and in 1693 was consecrated a bishop among the nonjurors. He wrote numerous tracts in favour of passive obedience, and other jacobite principles; but is now best known by his "*Vindication of Charles I. and his Right to the Eikon Basilike*." He died in 1712.—*Chalmers's Biog. Dict.*

WAGSTAFFE, FRIS. (WILLIAM) an ingenious and humorous writer, a native of Cublington, Bucks, in which village he was born in 1685. He became a member of Lincoln college, Oxford, where he took his degrees in medicine, and afterwards enjoyed an extensive practice in London, being one of the physicians of St Bartholomew's hospital. Dr Wagstaffe published some notes on the Tatler, and was the author of two octavo volumes of miscellaneous pieces. His death took place in 1725.—*Idem.*

WAKE (sir ISAAC) an eminent scholar and able diplomatist, a native of Billing, Northants, where he was born in 1575. He received his education at Merton college, Oxford, where he obtained a fellowship in 1598, and six years after was elected public orator. Mr Wake was subsequently much employed by the government in various negotiations carried on with the French, the Venetian republic, and the duke of Savoy, and received the honour of knighthood, with other more substantial marks of approbation in reward of his services. As an author he is principally known by his "*Rex Platonius*," (an account of king James I's visit to Oxford in 1605); a treatise on the Swiss Cantons, "*On the Proceedings of the King of Sweden*;" "*A Statistical Account of Italy*," &c. Sir Isaac died in France in 1632.—*Athen. Oxon.*

WAKE (WILLIAM) archbishop of Canterbury, a prelate of distinguished learning and ability as well as of exemplary morals, born at Blandford, Dorsetshire, in 1657. He commenced his university education at Oxford on a studentship at Christchurch in 1672, and graduated there as A.M. in 1679. Having taken holy orders, he afterwards accompanied ord Preston's embassy to Paris in quality of chaplain; and on his return to England was elected by the benchers of Gray's-inn to the honourable appointment of preacher to their society. Soon after he began to take a prominent part in the religious disputes of the

period, distinguishing himself by the zeal with which he espoused the Protestant side of the question, in opposition to the wishes and influence of the court. On the abdication of James, and the consequent triumph of those doctrines of which he was the persevering advocate, Mr Wake rose high in the favour of William III, and having taken the degree of doctor in divinity in 1689, was made a king's chaplain and deputy clerk of the closet, with a canonry in his college in the course of the same year. To this piece of preferment the rectory of St James, Westminster, was added in 1693, which he held about eight years, and then vacated it, on being promoted to the deanery of Exeter. In 1705 he was raised to the episcopal bench as bishop of Lincoln, and after presiding over that diocese till the beginning of 1716, was translated in the spring of that year to the primacy. Few prelates have conducted themselves in the discharge of this high office with greater dignity, firmness, moderation, or Christian benevolence, than archbishop Wake. Although on principle averse to the proposed abolition of the Test Act, yet his liberality towards dissenters from the church, and his earnest endeavours to effect a union between the churches of England and France, were deserving as much of praise as they produced him vituperation from those who either misunderstood, or wilfully misrepresented his motives and conduct. Posterity, however, has done justice to both, except in the representations of some Catholic writers, who naturally cast censure upon a project which, if completed, would have affected the influence of the pope in Europe. His controversial writings, which are numerous, though nervously written, betray no acrimony; the principal of these are his reply to the celebrated Bossuet's Exposition of the Doctrine of the Catholic Church, printed in 1686; an English version of the Genuine Epistles of the Apostolical Fathers, 8vo, 1693; "*The State of the Church and Clergy of England considered*," folio, 1697, a work written against the opinions of bishop Atterbury and others, respecting the rights of convocation, &c. and generally admitted to be by far the ablest and most luminous of the numerous tracts published on both sides of that warmly agitated question; three volumes of Sermons; a variety of Tracts against the Doctrines and Practice of the Church of Rome; "*An Exposition of the Catechism of the Church of England*," which has gone through many editions, and other devotional pieces. This eminent prelate died on the 24th of January, 1737, at Lambeth-palace, whence his remains were removed to the archiepiscopal precincts at Croydon for interment. A numerous family of daughters survived him.—*Biog. Brit.*

WAKEFIELD (GILBERT) a distinguished scholar and critic, was the son of the reverend George Wakefield, rector of St Nicholas, Nottingham, in which town he was born in 1756. After a grammatical education in various schools, he was entered, in 1772, in Jesus college, Cambridge, where he pursued his

studied with great ardour, and in 1776 graduated BA, and was soon after elected a fellow. In the same year he gave the public a small volume of Latin poems, with a few critical notes upon Homer. In 1778 he received deacon's orders, and on leaving college engaged in a curacy at Stockport in Cheshire, and subsequently at another near Liverpool. He performed the duties of his office with seriousness and punctuality, but some dissatisfaction which he had previously entertained at the doctrines and liturgy of the church of England progressively increasing, he determined to take the first opportunity of resigning his situation in it, which design he fulfilled in 1779, soon after his marriage, and accepted the office of classical tutor at the dissenting academy at Warrington. Having early formed a design of giving a new version of the New Testament, he published a specimen in "The First Epistle of St Paul to the Thessalonians," Warrington, 1781, which was followed the next year by a "New Translation of the Gospel of St Matthew, with Notes Critical, Philological, and Explanatory," 4to. On the dissolution of the Warrington academy, he removed to Bramoote in Nottinghamshire, with a view of taking private pupils. Here he published, in 1784, the first volume of an "Enquiry into the Opinions of the Christian Writers of the First Three Centuries concerning the Person of Jesus Christ," a work which he never concluded. He subsequently removed to Richmond and Nottingham, until, in 1789, he commenced his "Silva Critica," the object of which was to illustrate the Scriptures by the philology of Greece and Rome. Of this learned performance, five parts appeared in succession, until 1795, the three first from the Cambridge press. In 1790 he quitted Nottingham, in order to accept the office of classical tutor at the dissenting college at Hackney. Here his services were highly esteemed, until he advocated the superiority of private to public worship, and wrote a book in support of his opinions, which tended to dissolve the connexion. In 1792 he gave the world his "Translation of the New Testament, with Notes Critical and Explanatory," in 3 vols. 8vo; and in 1795 he published "Memoirs of his Own Life," a curious and characteristic performance. He next defended revealed religion by his "Evidence of Christianity," in answer to Paine's Age of Reason; and planned a new edition of Pope's Works, in which he was anticipated by Dr Warton. He however proceeded so far as to publish a first volume, and a volume of "Notes on Pope;" as also an edition of his versions of the Iliad and Odyssey. He followed up this labour with editions of "Select Greek Tragedies;" of "Horace;" of "Hion and Moschus;" of "Virgil;" and finally of "Lucretius," in 3 vols. 4to, a work which has ranked him among the most erudite and industrious of critical editors. He soon after entered the stormy path of politics, and severely censured the policy of the war against France, produced by the French Revolution, in a pam-

phlet written in 1798, entitled "A Reply to some Parts of the Bishop of Llandaff's Address to the People of Great Britain," for which work he was subjected to a crown prosecution for libel, which terminated in a trial and conviction in February 1799, when he was sentenced to two years' imprisonment in Dorchester gaol. He endured the whole of this sentence, which was however alleviated by a subscription amounting to 5000*l.*, that took away his anxiety for the future support of his family. On his restoration to liberty, he opened a course of lectures upon Virgil, in the metropolis, but in August of the same year was seized with a typhus fever, which terminated his life, September 9, 1801, in the forty-sixth year of his age. Mr Wakefield was a zealous and industrious scholar, who followed what he deemed truth, without regard to consequences, wherever it might lead him: hence his abandonment of the church, and of public worship, and formation of a system of divinity of his own; for he never, formally, joined any body of dissenters. Hence also the peculiarity of his arguments against animal food; and even his classical emendations occasionally exhibited strange singularities of taste and opinion. In conjectural criticism, indeed, he evinced much of the bold and fearless character of Benly and Markland. His private character was peculiarly amiable and estimable, and far removed from the frequently blamable asperity of his controversy, and of even his criticism. Besides the works already mentioned, and a few more of minor importance, a "Collection of Letters," in a correspondence between him and the right honourable C. J. Fox, has been published since his death, chiefly relative to topics of Greek literature.—*Memoirs of Mr Wakefield. Sketch by Aikin. Brit. Critic.*

WAKEFIELD (ROBERT) an eminent Orientalist and Biblical scholar of the sixteenth century. The precise date as well as place of his birth is uncertain, but he is generally supposed to have been a native of a northern county. The university to which he was indebted for his education is also variously stated as Oxford and Cambridge. He appears, however, on its completion to have proceeded immediately to the continent, and in 1519 obtained, through the favour of the imperial court a Hebrew professorship at Louvain. His reputation however having reached his native country, Henry VIII induced him to return to England, and gave him the Hebrew professorship at Oxford, with a canonry of Christchurch annexed. For this preferment he was, perhaps, as much indebted to the zeal which he exhibited in espousing his master's cause with respect to his divorce from queen Catherine, as to his acknowledged learning and talent. He was the author of a eulogy on the Arabic, Chaldaic, and Hebrew languages; "Syntagma Hebraeorum;" a "Paraphrase on the Book of Ecclesiastes," &c. His death took place in 1537.—*Athen. Oxon.*

WALÆUS (JOHN) an eminent anatomist, who was a native of Middleburg in Zealand.

He studied medicine at Leyden, where he graduated in 1631; and the following year he was nominated professor extraordinary of medicine, and in 1648 professor in ordinary. He was one of the first who publicly taught the Harveian doctrine of the circulation of the blood, though he insidiously endeavoured to lower the fame of Harvey by ascribing the knowledge of the circulation to the ancients. His anatomical observations, which are valuable, are contained in "*Epistolæ duæ de Motu Chyli et Sanguinis, ad Thom. Bartholinum*," which have been repeatedly printed. He died in 1649, at the age of forty-five.—*Halleri Bibl. Anat. Eloy Dict. II. de la Med.*

WALDENIS, the assumed name of Thomas Netter, an English monk of the fifteenth century, who so designated himself from the place of his nativity, Walden in the county of Essex. He was born about the year 1367, and prosecuted his theological and classical studies at Oxford. In 1409 he attended at the council of Pisa on the part of the English church. Waldensis was high in the confidence of Henry IV and V, which latter monarch he accompanied on his French expedition, and was with him at the time of his decease. On the death of this monarch he returned to England, but again went to France with the young king Henry VI, when carried there by his uncle for the purpose of being crowned. There is a polemical treatise of his extant on the doctrine and practice of the early Christians, entitled "*Doctrinale Antiquum*," &c. folio, 3 vols. Paris, 1521. His death took place in 1430.—*Bala. Pitt.*

WALDO (PIERRE). See VALDO.

WALE, FRAS. (WILLIAM) an eminent English astronomer and mathematician, born in 1734. Having visited Hudson's bay in the year 1769, and published an account of his observations made there on the transit of Venus, his acknowledged ability and scientific acquirements pointed him out to government as a proper person to be despatched on the voyage of discovery about to be undertaken by captain Cook. Mr Wales accepted the appointment, and accompanied that celebrated circumnavigator on both his first voyages, of which he kept a journal, afterwards printed under the title of "*Astronomical Observations in the Southern Hemisphere*," 4to. He was also the author of a treatise "*On the Achromatic Rising of the Constellation Pleiades*," inserted by Dr Vincent in his *Nearchus*; "*On the Discovery of the Longitude by means of Time-pieces*;" "*Remarks on Forster's Account of Cook's last Voyage*;" "*Enquiry into the Population of England and Wales*;" "*Robertson's Elements of Navigation improved*;" and "*Restoration of a Work of Apollonius*;" besides a variety of papers to be found among the *Philosophical Transactions* of the Royal Society, of which he was a member. At the time of his decease, which took place in 1798, he filled the situations of mathematical master at Christ's hospital and secretary to the Board of Longitude.—*Hutton's Math. Dict.*

WALKER (ADAM) a native of Westmore-

land, in which county his father had a small woollen manufactory. He was born in 1731, and though taken from school, and placed at his father's business before he could well read, his turn for mechanics developed itself very early, in spite of the obstacles thrown in his way. He employed his leisure hours in the construction of models of corn-mills, paper-mills, fulling-mills, &c. which he erected in miniature on a little brook near his father's dwelling; and having borrowed a few books, built himself a hut in a neighbouring thicket, that he might enjoy their perusal undisturbed. An offer of a situation as usher in the school at Ledsham, in the West riding of Yorkshire, drew him from his retreat at the age of fifteen, in which capacity he so far improved his opportunities as to qualify himself for the mathematical mastership in the free school at Macclesfield, which he obtained three years afterwards. In this town he also engaged in business, but trade appears not to have suited him, and becoming bankrupt, he is said to have entertained at one time a romantic intention of passing the remainder of his life as an anchorite in one of the small islands of his native Windermere. Fortunately the ridicule of his friends induced him to give up this absurd project, and the reception which a public lecture on astronomy, delivered by him, met with at Manchester, decided his future prospects. Relinquishing an extensive seminary which he had established in that place, he visited most of the principal cities and towns in the kingdom as a lecturer on astronomy, and with such encouragement, that at length in 1778 he undertook, at the instance of Dr Priestley, to open the Haymarket theatre in that capacity. His success was decided, and now fixing his abode in the metropolis, he continued to read a course of lectures every winter in a house which he had taken for that purpose in George-street, Hanover square, attending at intervals Eton, Winchester, Westminster, and other great foundation schools. His death took place on the 11th of February 1821. His writings consist of an *Analysis of his Lectures*, printed in 8vo; a treatise on the "*Cause and Cure of Smoky Chimnies*;" "*Philosophical Estimate of the Causes, Effects, and Cure of Unwholesome Air in Cities*," 8vo; "*Ideas suggested in an Excursion through Flanders, Germany, Italy, and France*," 8vo, 1791; "*Remarks made in a Tour to the Lakes of Westmoreland and Cumberland in the Summer of 1791, to which is annexed a Sketch of the Police, Religion, Arts, and Agriculture of France, made in an Excursion to Paris in 1785*," 8vo, 1792; a "*System of Familiar Philosophy in Lectures*," 4to, 1799; "*A Treatise on Geography and the Use of the Globes*," 12mo; and various papers in the *Magazines*, *Philosophical Transactions*, *Young's Annals of Agriculture*, &c. His mechanical skill is attested by several ingenious inventions, and especially by his Eidouranion, or transparent orrery, and the revolving lights on the rocks of Scilly.—*Gent. Mag.*

WALKER (CLEMENT) a political write.

of the time of the civil wars, a native of Cliffe, in Devonshire. He received a classical education at Christchurch, Oxford, though he does not appear to have graduated there. He afterwards obtained the appointment of usher to the exchequer, and took his seat in parliament for the borough of Wells; when being a rigid presbyterian in his principles, he opposed the attempts of the party styling themselves independents, to possess themselves of the supreme power. The genius of Cromwell prevailing in the struggle, Walker wrote a strong attack upon his party in three tracts, which fill a quarto volume. This singular work first appeared in 1648; it is entitled "A History of Independency," and contains a highly coloured portrait of the state of England at the period. He was also the author of another treatise of a similar description, called "Cromwell's Slaughter-house;" and at length attracted the resentment of that personage, who was not of a disposition to put up with such attacks. Walker was accordingly arrested by his orders, and thrown into prison in the Tower of London, where he died in 1651.—*Athen. Oxon.*

WALKER (sir EDWARD) garter-king-at-arms, was born in the earlier part of the seventeenth century at Netherstowey, a village in Somersetshire. Soon after the breaking out of the civil war, his loyalty and attachment to the royal party procured him the notice of the court; he obtained the post of clerk to the privy council, and distinguished himself at the battle of Edgehill. In 1644 he accompanied the king to Oxford, where he received the honour of knighthood; and on the ruin of the royal cause joined the exiled monarch on the continent till the Restoration. Sir Edward, in his capacity of herald, wrote an "Account of the Celebration of St George's Day at Windsor in 1674;" and "Acts of Knights of the Garter in the Civil Wars." He was also the author of "Iter Carolinum;" an Account of the Progress of the King's Troops, &c.; a work on tactics, entitled "Military Discoveries;" and "Historical Discourses," in one volume, folio. His death took place in 1677.—*Ibid.*

WALKER (GEORGE) an Irish divine, who distinguished himself by his military prowess, in opposition to James II after the Revolution. He was a native of the county of Tyrone, and studied at the university of Glasgow. Having taken orders, he obtained the living of Donoughmore, where he was settled when Ireland was invaded by king James and his French allies. Mr Walker raised a regiment, and defended the town of Londonderry against the united forces of the French and Irish, till the siege was raised on the approach of colonel Kirk, July 21, 1689. His gallantry was rewarded by a vote of thanks from the house of Commons; and he was nominated bishop of Derry, but he did not long enjoy his honours and preferment, being killed at the battle of the Boyne in July 1690. He wrote an "Account of the Siege of Londonderry," 1639, 4to.—*Harris de Script. Hibern.*

WALKER (JOHN) a divine of the establishment, was a native of Devonshire, and a graduate of Exeter college, Oxford, about the commencement of the last century. Having taken holy orders, he obtained the living of St Mary, Exeter, and in 1714 published a work, in one volume, folio, entitled "An Attempt towards recovering an Account of the Numbers and Sufferings of the Clergy sequestered in the grand Rebellion," as a kind of counterpart to Calamy's work in favour of the nonconformists. The university of which he was a member complimented him in consequence with the honorary degree of DD. Dr Walker died at Exeter in 1730.—*Biog. Brit.*

WALKER (JOHN) a philological writer, was a native of Friern Barnet, Herts, where he was born in 1732. He joined with a Mr Usher about the year 1767, in setting up a school at Kensington; but the speculation not succeeding to his wishes, he settled in London, where he gave lectures on elocution; having, it is said, in the earlier part of his life studied the art with a view to making the stage his profession, although his questionable success on the boards had induced him, after a short trial, to adopt another calling. Mr Walker died August 1, 1807, at his house in Tottenham-court-road. He is known as the author of several useful elementary works, such as a "Rhetorical Grammar," 8vo; "A Pronouncing Dictionary," 8vo; "Elements of Elocution;" "Key to the correct Pronunciation of Greek, Latin, and Scriptural Names," 8vo; and a "Rhyming Dictionary." He was an amiable as well as learned man, and was the friend of Johnson and Burke.—*Gent. Mag.*

WALKER (THOMAS) a dramatic performer of considerable merit, who was the contemporary of Quin and Garrick. He was born in London in 1698; and after being educated at a grammar school he went on the stage, and about 1716 he made his first appearance at Drury-lane theatre. He was afterwards engaged at the rival theatre in Lincoln's-inn-fields, where, on the production of the Beggar's Opera, he was the original representative of Macheath, in which character he was extremely successful, and acquired an established reputation. His fame however proved his ruin; for becoming a general favourite and the frequent associate of dissipated persons of rank and fortune, he fell into habits of intemperance, which injured his faculties, and occasioned his ultimate dismissal from the London stage. This took place in 1743, on which he went to Dublin, where he died the following year in great distress. He possessed in a high degree the physical requisites for his profession, having a handsome figure, a bold open countenance, and a good voice. Hence he excelled in such parts as those of Falconbridge in King John, and Hotspur in Henry the Fourth; and in comedy, in Worthly, Recruiting Officer; Belmour, Old Bachelor; Harcourt, Country Girl, &c. He altered some of D'Urfey's plays, and produced "The Quaker's Opera," and "The Fate of Villany," a

tragedy; but his literary efforts were not calculated to add to his reputation.—*Davies's Life of Garrick. Theat. Dict.*

WALKER (WILLIAM) an English clergyman of the seventeenth century, of great learning and ability. He was a native of Lincolnshire, and graduated as B.D. at Trinity-college, Cambridge. He resigned the mastership of Louth grammar-school, to which he had been appointed soon after quitting the university, for that of Grantham, over which he presided for several years with great credit, sir Isaac Newton being one of his scholars, and the preceptor holding the living of Colsterworth, where his distinguished pupil was born. Mr Walker was a sound grammarian, as well as an acute critic, and left behind him a variety of useful tracts, principally elementary, for the use and instruction of youth. Of these the best known are "An Explanation of Lilly's Latin Grammar;" "On English Particles;" "A Dictionary of Latin Idioms;" "English Examples of Latin Syntax;" a treatise "On the Art of Teaching;" "On Rhetoric;" &c. His death took place in 1634.—*Athen. Oxon.*

WALL (JOHN) an eminent English physician, to whom the public is indebted for a discovery of the medicinal qualities of the Malvern springs. He was a native of Powick, in Worcestershire, born there in 1708, and after going through the usual course of education at Worcester grammar-school, removed to Merton college, Oxford, where he obtained a fellowship. Dr Wall afterwards settled at Worcester, and the establishment of the Worcester porcelain manufactory was principally owing to his exertions. The frontispieces to the original edition of Hervey's *Meditations* are favourable specimens of his talents as a draughtsman. His works were collected by his son Dr Martin Wall, and printed at Oxford in 1780, four years after the decease of their author.—*Nash's Worcestershire.*

WALL, MD. FRS. &c. (MARTIN) a physician of great eminence in his profession. His father was son of the preceding, whose life, with a collection of his medical tracts, was published by his son in 1780. Dr M. Wall was born in the year 1744, and was educated at New college, Oxford, of which society he was a fellow, taking his degree of AM. in 1771, MB. 1773, and MD. 1777. On the death of Dr Parsons in 1785, he contested the clinical professorship with Dr W. Vivian, of Corpus Christi college, regius professor of medicine, and carried the election in convocation by a majority of two only, the number of votes being 196 to 194. The remainder of his life was spent in Oxford, where he enjoyed an extensive practice, as well among the inhabitants of the city as with his brethren of the gown. He was justly popular, as well from the benignity of his disposition as from his general hilarity and the fund of anecdote which he possessed. His professional works are "Dissertations on select Subjects in Chemistry and Medicine," 8vo, 1783; "Clinical Observations on the Use of Opium in Slow

Fevers," 8vo, 1786; and an essay on the properties of the Malvern waters, 8vo, 1806. Some tracts of his are also to be found in the Transactions of the Manchester Literary Society. He died at Oxford June 21, 1824.—*Ann. Biog.*

WALL (WILLIAM) an English divine of the last century, vicar of Shoreham, Sussex, and of Milton, next Gravesend, Kent. He was born about the year 1646, but the place of his nativity is uncertain. Dr Wall is principally known as the author of an able reply to Dr Gale on the subject of infant baptism, which he published in 1707, and the merits of which were acknowledged by the university of Oxford, in presenting the writer with the honorary degree of DD. His other writings are "Critical Notes on the Old Testament," 8vo, 2 vols, 1733; and a treatise on the plurality of worlds, annexed to Swinden's work on the locality of hell. His death took place in his eighty-second year, at Shoreham, of which parish he had been the incumbent more than half a century.—*Nichols's Lit. Anec.*

WALLACE (SIR WILLIAM) a celebrated Scottish patriot and warrior, who was the son of a small landholder of an ancient family in the west of Scotland. Possessing great strength of body and undaunted courage, as well as a warm attachment to his native country he beheld its subjugation by the English king, Edward I, with the utmost impatience, and resolved to undertake the task of liberating Scotland from a foreign yoke. Having collected a small band of followers, he commenced an irregular warfare with the English troops left to secure the conquests of Edward; and his enterprising spirit and local knowledge soon rendered him a formidable foe. In 1297 he planned an attack on the English judiciary at Scone; but that officer and his colleagues eluded the threatened danger by flight. Many of the barons, encouraged by this success, joined the standard of Wallace, or secretly favoured his designs. Earl Warrenne, the governor of Scotland, under king Edward, assembled an army of 40,000 men, with which he marched against the Scottish champion, who retreated to Cambuskenneth, on the banks of the Forth, where the English were defeated with great slaughter, and their commander led the remains of his army into England. Wallace was now declared regent of Scotland under the captive king, John Baliol. The English monarch, alarmed at the reverse which his partisans had experienced, hastened from Flanders to oppose Wallace, against whom he led an army of ninety thousand men. Jealousy at his elevation had already thinned the ranks of the Scottish hero, who having resigned the regency, retained his command only over his particular followers. The Scottish army, under the steward of the kingdom, and Comyn of Badenoch, waited the approach of Edward at Falkirk, where an engagement took place in the summer of 1298, in which the English were completely victorious. Wallace retired to the mountains, and resumed his system of predatory warfare, and

maintained his independence at the head of those who still continued attached to him. King Edward at length obtained possession of the person of his formidable adversary, through the treachery of sir John Monteith; and the deliverer of his country being conveyed to London, suffered the death of a traitor, August 23, 1305. His memory is still highly revered in Scotland, and his deeds have been the frequent theme of the poet and the historian.—*Rapin. Hume. Henry.*

WALLENSTEIN or **WALSTEIN** (ALBERT) duke of Friedland, a celebrated German commander, was born of an ancient family in 1584. He was placed as a page with the son of the archduke Ferdinand of In-spruck, and soon after changed the Protestant religion, in which he had been educated, for that of the church of Rome, and then travelled into various parts of Europe. At Padua he first exhibited an inclination for study, which he had previously disliked, and applied to politics, and to astronomy with its then concomitant, astrology. He soon after married, but losing his wife, he entered into the service of archduke Ferdinand, and finally into that of the emperor Ferdinand II, to whom he offered an army of volunteers, provided he was allowed to command them, which proposal was accepted. His military talents soon became conspicuous, and he was created duke of Friedland, and served the emperor against the Protestants, when called upon to give up the church lands and benefices, which had been in their hands since the treaty of Passau. He executed his orders with such rigour and military licence, that even the Catholics complained of him, and the emperor was obliged to dismiss him his service; to which disgrace he the more readily submitted, as he was assured by an attendant astrologer, in whom he implicitly confided, that he would be gloriously restored. This event happened as predicted, in consequence of the entrance of Gustavus Adolphus into Germany, and his defeat of count Tilly at Leipsic. In 1632, Wallenstein was declared head of the Catholic army, with a power to act independently of the council at Vienna. He was at first successful, but ultimately defeated in the celebrated battle of Lutzen, dearly purchased by the death of the heroic Swedish monarch. Wallenstein retreated into Bohemia, followed by the Swedes, over whom he again gained some advantages; but instead of following them up, it now became manifest that he was pursuing some scheme of his own, and he is supposed to have aspired to the acquirement of the kingdom of Bohemia. For this purpose he is said to have negotiated with the Protestant party, and with France, as also to have tampered with his own officers and army. These circumstances being reported, with exaggerations, at Vienna, his commission was revoked, and given to count Galas. In this emergency, he made overtures to the Swedes, who doubting his sincerity, he affected to be willing to retire from the command, which was only a feint, his courtiers being instructed to foment a

plot among the officers and soldiers to retain him: in consequence of this intrigue, fifty-two officers formally subscribed an engagement to follow him and defend his person, one of whom, Piccolomini, forthwith betrayed the plot to the emperor. The immediate consequence was a proclamation, declaring him and his army rebels, and Piccolomini was placed at the head of a body of troops to repress them. Wallenstein, whose plans were not mature, retired with his more confidential officers to Egra, garrisoned by some Irish troops, on whom he thought he could depend. Here, with a view to secure pardon and preferment, Lesley and Gordon, two Scottish officers under the command of Wallenstein, in conjunction with Butler, an Irish colonel, formed a plot for the assassination of his confidential officers, and immediately after of himself. He was accordingly killed by Butler with a partisan, in his own apartment, where he fell dead without uttering a word. This adventurer had great military qualities, was sober, thoughtful, and managed most of his affairs himself. He was at the same time severe in punishment, and lavish in reward; proud, haughty, and ambitious; and, owing to a mixture of good and bad qualities, a very dangerous enemy to the house of Austria. It has been thought that he was deluded into a part of his intended treachery by his confidence in the vain prediction of his astrologer. The fine tragedy founded on his story, by Schiller, will probably do more than history to render his name immortal.—*Moreri. Mod. Univ. Hist.*

WALLER (EDMUND) an eminent English poet, born at Coleshill in Warwickshire, in March 1605, was the son of Robert Waller, esq. a gentleman of Agmondesham in Buckinghamshire. His father died during his infancy, leaving him the then ample fortune of 3500*l.* per annum. He was educated at Eton, whence he was removed to King's college, Cambridge. He was chosen member of parliament in his sixteenth or seventeenth year; and he evinced himself a poet almost as soon as a politician, his verses "On the Prince's Escape at St Andero" being written in his eighteenth year. What is more remarkable, they exhibit a style and versification as perfectly formed as those of his more mature productions, which proves that he must have possessed instinctively a fine ear for poetical melody. He continued to employ his muse on courtly topics; and not insensible of the value of money, augmented his fortune by a marriage with a rich city heiress. He was a widower at the age of twenty-five, when he became the suitor of lady Dorothea Sidney, eldest daughter of the earl of Leicester, whom he has immortalized under the poetical name of Sacharissa. He describes her as a haughty and scornful beauty; and his addresses being unsuccessful, he acted as poetical, as well as other lovers, under such circumstances, frequently act, and married somebody else. In the parliament of 1640 he was again chosen to represent Agmondesham, and took a decided part with those who thought that a re-

dress of grievances ought to precede a vote of supply. He also sat for the same borough in the long parliament, and joined Hampden, who was his uncle, in his opposition to ship-money. He continued to vote with the opposition, but did not fall in with all their measures, but absented himself from the house of Commons on the commencement of open hostilities. He is also thought to have sent the king some pecuniary aid at Nottingham. He was one of the commissioners employed to treat with Charles at Oxford, who treated him with great kindness. His mind being then entirely disposed towards the royal party, he entered into a sort of plot with his brother-in-law, named Tomkyns, clerk of the council to the queen, who possessed considerable influence, to produce a rising in the city. When arrested, there was little to convict them of the design; but the fear of Waller was so great, according to lord Clarendon, that to save himself, he betrayed every body and every thing. The conclusion of this business, in which he displayed great baseness, was the execution of Tomkyns and Challoner, with his own expulsion from the house; after which he was tried and condemned, but on paying a fine of 10,000*l.* he was allowed to leave the kingdom. He retired first to Rouen, and subsequently to Paris, where he lived on his wife's jewels, until after a lapse of ten years, perceiving himself getting to the end of his resources, he applied for permission to return to England, which, by the interest of colonel Scroope, who had married his sister, was granted him. He was also restored to his estate, although now reduced to half its value, and he fixed his abode at a house he had built near Beaconsfield. He next paid his court to Cromwell, to whom his mother was related, and the very noblest tribute of his muse was offered to the protector. On the Restoration, he was equally complaisant to Charles II, but not so successful; which being remarked to him by the king, "Poets succeed much better in fiction than in truth," was the courtly reply. In a reign of oblivion for past offences, and no regard for character, his wit and poetry soon made him a favourite at court, and in the highest circles; and he had also interest to obtain a seat in all the parliaments of the reign. In 1665 he was emboldened to request the provostship of Eton college, which was given him; but Clarendon refused to set the seal to the grant, which produced a rupture of the friendship which had long subsisted between them, and he joined Buckingham and the enemies of that minister, the ground of whose refusal was afterwards legally established. On the accession of James II, Waller, then in his eightieth year, was chosen representative for Saltash; and he appears to have taken advantage of his freedom with that besotted monarch, to give him very sound advice. He now, like many other men of gaiety, turned his thoughts to devotion, and composed "Divine Poems," which are spoken of very favourably by Dr Johnson. He died at Beaconsfield in 1687, in the eighty-third year of

his age. The moral estimate of Waller's character it is easy to form from the circumstances of his life, which, although summed up with rigorous severity by Clarendon, are not to be gainsayed. His intellectual powers were of a superior order, being at once a prompt, elegant, and graceful speaker, while the wit and pleasantness of his conversation made him a favourite, even with those whom his abject pliancy must necessarily have disgusted. His merit as a poet is estimated with very superior critical acumen by Dr Johnson, who possibly thinks more highly of him than the opinion entertained since the rise of a more varied and less Gallic school of poetry will altogether sanction. English versification is, however, generally allowed to be much indebted to him; and for ease, gallantry, gaiety, brilliancy, and wit, his amatory poetry has not been frequently surpassed. The dignity which he assumes in some heroic themes he not unfrequently attains, and his thoughts are often worthy of the sonorous versification in which they are clothed. He was not, however, sufficiently natural for pathos, or elevated for sublimity; but he trifles with ingenuity, and is serious with an air of grandeur; nor will he ever be entirely neglected by the student of English poetry. He left several children by his second wife, one of whom, a daughter, was married to Dr Birch; and Edward, who succeeded to his estate, ultimately became a quaker. His descendants still reside at Beaconsfield, in great affluence.—*Biog. Brit. Johnson's Lives. Clarendon's Life and Hist.*

WALLER (sir WILLIAM) an eminent military officer, who distinguished himself in the civil wars between Charles I and the parliament. He was born in 1597, and, as well as the preceding poet, was descended from the ancient family of the Wallers of Spendhurst in Kent. He received his academical education at Magdalen college and Hart-hall, Oxford, after which he completed it at Paris. He began his military career in the service of the confederate princes against the emperor, where he acquired the reputation of a good soldier, and upon his return home he received the honour of knighthood. He was elected a member of the long parliament for Andover, and having suffered under the severity of the star chamber, acquired a predilection for the presbyterian discipline. He soon became strenuous in his opposition to the court, and when hostilities commenced was appointed second in command of the parliamentary army, under the earl of Essex. The west of England was the principal theatre of his exploits, where he obtained several signal advantages, but ultimately sustained defeats by the king's forces at Roundway Down near Devizes, and at Cropredy Bridge in Oxfordshire. The blame was thrown by him on the jealousy of other officers; and soon after, having refused to fall in with the views of the independents, he among others was removed by the self-denying ordinance. Being deemed a great support to the presbyterian party, he was one of the

eleven members impeached of high treason by the army, and finally expelled the house of Commons, and committed to prison. He was again taken into custody, on suspicion of being engaged in sir George Booth's insurrection, but was released upon bail. On the Restoration he was elected one of the representatives for Middlesex, but he interfered little with public business. He died at his seat of Osterly park, September 19, 1668. He published "Divine Meditations," which were written during his retirement, and give a faithful picture of his sentiments, frailties, and failings. He also left behind him a manuscript, which being in possession of one of the noble families descended from him, was by its permission published in 1793, under the title of "Vindication of the Character and Conduct of Sir William Waller, Knight, Commander-in-Chief of the Parliamentary Forces in the West; explanatory of his Conduct in taking up Arms against King Charles. Written by Himself." It is composed in a very singular and characteristic style, and proves that Waller, like many other of the original parliamentary leaders, had no views beyond the protection of general freedom. The noble families of Courteney and Harcourt are descended from sir William Waller, by the marriage of two of his daughters by his first and second wives.—*Vindication. Critical Review.*

WALLERIUS (NICHOLOAS) a Swedish philosopher, born at Nerika in 1706. After studying at the academy of Strangnaes, he went to the university of Upsal in 1725; and in 1737 he became adjunct of the philosophical faculty, and gave lectures on philosophy and mathematics. He was afterwards appointed professor of logic and metaphysics; and in 1751 he entered into holy orders, and the following year took the degree of DD. In 1755 he was nominated to a new theological professorship, founded by Dr Kalesius, bishop of Westeras, which he held till his death in 1764. His principal works are "Systema Metaphysicum," 4 vols. 8vo; "Psychologia Empirica," 8vo; "Psychologia Rationalis," 8vo; and "Prænotiones Theologicæ."—*Aikin's Gen. Biog.*

WALLERIUS (JOHN GOTTSCHALK) an eminent Swedish chemist and mineralogist, who was a knight of the order of Vasa, and held the professorship of chemistry at Upsal. His death took place at an advanced age in 1785. He was the author of several scientific works, among which are "Chemia Physica," 2 vols. 8vo; "Elementa Metallurgicæ," 8vo; and "Systema Mineralogicum," 2 vols. 8vo. His System of Mineralogy, of which a French translation was published at Paris, exhibits a classical arrangement of mineral substances, according to their chemical relations, displaying to advantage the science and judgment of the author.—*Zopf Hist. Univ. Dict. Hist.*

WALLIS (GEORGE) an eminent physician and medical writer, born at York in 1740. His first literary essays were of the poetical kind, and he published successively "The Juveniliad, a Satire," 1773, 4to; "Perjury, a Poem,"

1774; and "The Mercantile Lovers, a Dramatic Satire," which was exhibited at the York theatre. Among his professional publications are "The Art of preventing Diseases and restoring Health;" and a treatise "On the Evil Consequences attending injudicious Bleeding in Pregnancy." He also edited the works of Sydenham, with notes, in two vols. octavo; and he produced an improved edition of Dr Motherby's Medical Dictionary, folio. He died in London, January 30, 1802.—*Genl. Mag. Reuss.*

WALLIS (JOHN) a celebrated mathematician, born in 1616, at Ashford, in Kent, where his father was minister. He was educated for the church at Emanuel college, Cambridge; and having regularly taken his degrees, he entered into holy orders, and in 1641 became chaplain to a Yorkshire baronet. In 1643 he obtained the living of St Gabriel, Fenchurch, in London; and the following year he was one of the secretaries to the assembly of divines at Westminster. He was one of the first members of the scientific association which gave birth to the Royal Society; and in 1649 he was appointed by the parliamentary visitors, Savilian professor of geometry at Oxford. In 1653 he published a grammar of the English tongue, written in Latin, for the use of foreigners, a work of standard authority on that subject. He was admitted to the degree of DD. in 1654, and on the death of Langbaine he was chosen custos archivorum to the university. He was particularly skilful in the art of cryptography, or decyphering; and having by this means been enabled to render considerable service to the royal cause, he was, on the restoration of Charles II, very favourably received at court, and not only confirmed in his offices and benefices, but also made one of the royal chaplains. In 1661 he was one of the divines appointed to review the book of Common Prayer, and as he complied with the terms of the act of uniformity, he continued a steady conformist to the established church till his death. When the Royal Society was founded, in 1663, the name of Dr Wallis was included in the list of the earliest members; and he contributed much to the reputation of that body by his valuable contributions to the Philosophical Transactions. After a long life devoted to science and to the duties of his clerical profession, he died at Oxford, in October 1703. Among his mathematical works the most important are "Arithmetica Infinitorum;" "Mathesis Universalis, sive Opus Arithmeticum;" "Mechanica, sive de Motu tractatus geometricus;" "De Sectionibus Conicis tractatus;" and his Algebra. He also published some of the writings of Archimedes, Ptolemy, Aristarchus, and Porphyry. His works, including various treatises on theology, were published at Oxford, 1692—99, 3 vols. folio; and a volume of his sermons, printed from the original MSS, appeared in 1791.—*Biog. Brit. Aikin's G. Biog.*

WALLIS (JOHN) a topographical writer, who was a native of Cumberland. He studied at Queen's college, Oxford, where he pro-

seeded to the degree of MA.; and having taken orders in the church, he obtained a curacy in Hampshire. Thence he removed to Simonsbury in Northumberland, and afterwards to the neighbourhood of Durham. In 1779 he published a "History of the County of Northumberland," 2 vols. 4to; and he was the author of a series of "Letters to a Candidate for Holy Orders," 8vo. His death took place in 1793, at the age of seventy-eight.—*Gent. Mag.*

WALLISER (CHRISTOPHER THOMAS) an eminent composer and musical author of Germany, director of music in the cathedral at Strasburg during the first half of the seventeenth century. He is known as the first who attempted in Germany to imitate the ancient Greek custom of introducing choruses in dramatic pieces. His work is entitled "Chori musici novi, in Chariclis tragica comedia, in Argentoratensis academice theatro exhibitae, interpositi," 1641. He also set the choruses in "The Clouds" of Aristophanes to music, and was the author of an elementary work on the principles of harmony. His death took place at Strasburg in 1648.—*Biog. Dict. of Mus.*

WALMESLEY (CHARLES) a learned Benedictine of the last century, vicar apostolic of the western district of England, of which country he was a native, being born about the year 1721. He was an excellent mathematical scholar, and well read in the divinity of the church of which he was a member. Besides a theological treatise on the Revelations, he was the author of some valuable treatises on scientific subjects, the principal of which are "De Inequalitatibus Motuum Lunariorum," in Latin; "Analyse des Mésures, des Rapporis, et des Angles;" and "Théorie du Maniement des Apsides," written in the French language. Dr Walmesley was a fellow of the Royal Society of London and a doctor of the Sorbonne at Paris. His death took place at Bath in 1797.—*Gent. Mag.*

WALPOLE (ROBERT) earl of Orford, was the third son of Robert Walpole, esq. M.P. for Castle Rising in Norfolk. He was born at Houghton, his father's seat, in the same county, August 26, 1676. He received part of his education at a private school and part at Eton; and in April 1696 he was admitted a scholar of King's college, Cambridge. In 1698, in consequence of the death of his elder surviving brother, he became heir to the family estate, on which he resigned his scholarship. He was then taken from college by his father, and in the joviality of the life of a wealthy country gentleman soon lost his inclination for literature. In 1700 he married Catherine the daughter of sir John Shorter, lord mayor of London, and soon after succeeded to his paternal estate by the death of his father. He was also returned representative for Castle Rising, and quickly became an active member of the whig party. In 1702 he obtained his election for King's Lynn, which he also represented in several succeeding parliaments. In 1705 he was nominated one of the council to

prince George of Denmark as lord high admiral of England, and in 1708 was appointed secretary at war, and the following year treasurer of the navy. In 1710 he was one of the parliamentary managers in the trial of Sacheverel; but on the dissolution of the whig ministry he was dismissed from all his employments, and soon after was voted by the house of Commons guilty of a high breach of trust, and notorious corruption in his office of secretary at war, for which imputed offence he was expelled the house and committed to the Tower of London. This severity being esteemed a party proceeding, and not altogether justifiable, but little affected his character, so that in 1714 the borough of Lynn re-elected him, and he became a formidable opponent of the tory administration. On the accession of George I a new whig ministry was formed, and Walpole, who had previously ingratiated himself with the family of Hanover, was appointed paymaster of the forces, treasurer of Chelsea hospital and a privy counsellor. Being nominated chairman of the secret committee formed to inquire into charges against the late ministers, he drew up and moved the impeachment of lord Bolingbroke, the earl of Oxford, the duke of Ormond, and the earl of Strafford. In the subsequent year, 1715, he displayed so much energy and vigour in support of government during the rebellion, that he was raised to the important posts of first lord of the treasury and chancellor of the exchequer. In the course of the following two years a disunion took place in the cabinet on the question of supplies, to enable George I to vindicate his purchase of the duchies of Bremen and Verden against Charles XII of Sweden, and Mr Walpole resigned. On the day of his resignation he brought in the famous sinking fund bill, which he subsequently rendered nugatory by misapplication, as much more elaborate projects of the same kind have been treated by his successors. In the next session he became a strenuous opposer of measures which, had he been in place, he would as certainly have supported, and mainly contributed to the rejection by the Commons of the noted peerage bill of 1719. He was the opposer in 1720 of the South Sea scheme for liquidating the national debt, on which subject he wrote a pamphlet. At length the earl of Sunderland finding his ministry involved in great difficulties, made overtures to Walpole, who resumed his former post of paymaster of the forces. His reputation as a financier induced all eyes to be directed towards him on the occurrence of the unprecedented disasters arising from the bursting of the South Sea bubble; and lord Sunderland being obliged to retire, as being implicated in the affairs of that company, he resumed his post of first lord of the treasury and premier. An account of his succeeding administration would be the history of the country for the period of it. He was indisputably a most serviceable minister to the house of Brunswick, and mainly contributed to the discomfiture of the plots and intrigues of the Jacobite party in favour of the pre-

tender. His general policy was principally characterised by the desire of preserving peace abroad, and avoiding subjects of contention at home. He was an able financier, and certainly exerted himself with considerable success to improve the trade and revenues of the country, although the introduction of the excise scheme will always form a very dubious claim to popular applause. A pursuit of utility rather than of splendid objects, joined to a sincere zeal for the Protestant succession, formed the leading principles of his government, and the means which he employed were prudence, vigilance, and a degree of corruption, certainly not greater than what was practised by many of his predecessors, although more general and systematic. He is the reputed author of the saying that "all men have their price;" but his biographer, archdeacon Coxe, asserts that the words were, "all those men," speaking of a particular body of his opponents. He was an artful rather than an eloquent speaker, and discerned, as if by intuition, the prevalent humour of the house, and pressed or receded accordingly. He was particularly clear in financial debates, and a most excellent and diligent man of business. In private life he was distinguished by frankness of manners, and a species of jovial good-nature; but his mirth was coarse, and his moral conduct assumed much of the easy licence of rank and fashion. Letters he neither loved nor patronised, except the productions of subaltern writers in his praise or defence, whom he rewarded liberally. On the whole, without being an exalted character, he was an able minister; and owing to the biographical labours of archdeacon Coxe, his character has of late rather gained in historical reputation than otherwise. His ministry was finally shaken by the unpopularity of his exertions to maintain peace with Spain in 1739; from which time the opposition to him gained ground, until in 1742 he resigned, and was created earl of Orford. A parliamentary inquiry into his conduct was subsequently instituted, but after repeated fruitless attacks, all proceedings against him were dropped. His health soon after began to decline, owing to repeated attacks of the stone, which at length carried him off, on March 18, 1745, in the sixty-ninth year of his age. He was the author of several political pamphlets, which are enumerated in our authority.—His brother, HORATIO, lord Walpole, was born in 1678. He filled several offices under government, and was an able diplomatist. He was raised to the peerage in 1756, and died the following year. He wrote several political tracts, and an answer to Bolingbroke's *Letters on History*.—Coxe's *Memoirs of Walpole*.

WALPOLE (HORACE) earl of Orford, third and youngest son of sir Robert Walpole, was born in 1718. He received his early education at Eton, whence he removed to King's college, Cambridge. He quitted the university without a degree, and by the interest of his father was nominated to no fewer than three valuable sinecures, which he held to the time

of his death. In 1739 he set out on a tour to the continent, accompanied by the poet Gray, with whom he had a difference, and they parted; Walpole, subsequently, taking all the blame upon himself. He entered parliament in 1741, as member for Callington, and spoke spiritedly in opposition to a motion against his father; but was, in general, a very silent and inactive member. It was soon apparent that he was not destined for the paths of public life. With much vivacity and love of occupation, his chief delight was in the indulgence of literary curiosity and a taste for antiquity and the fine arts. In 1747 he represented the borough of Castle Rising, and in 1754 and 1761 that of King's Lynn, and always adhered to the whig principles, in which he was educated; and his parliamentary conduct was uniformly correct and independent. In 1748 he purchased his small but celebrated villa at Twickenham, called Strawberry-hill, which it formed no small part of the business of his future life to render a miniature specimen of Gothic architecture, and a splendid collection of pieces of art and relics of antiquity, many of them curious and valuable, and others of rather a trifling description. He first made himself known as a writer by some papers in *The World*, and a few poems in *Dodley's Collections*. His first separate publication appeared in 1752, entitled "*Ædes Walpolianæ*," being a description of his father's seat at Houghton. In 1757 he set up a printing press at Strawberry-hill, at which he printed Gray's *Odes*, and various other works. From his own press also appeared, in 1758, the first edition of his "*Catalogue of Royal and Noble Authors*." This was followed by a collection of "*Fugitive Pieces*;" and in 1761 by his "*Anecdotes of Painting in England*," 2 vols. 4to, compiled from the papers of the artist George Vertue. Two more volumes were afterwards added, and the whole forms a valuable collection. In 1764 his friendship for general Conway, the only person to whom he appears to have been sincerely and constantly attached, elicited from him a pamphlet on the dismissal of that officer from the army, on account of the vote which he gave on general warrants. In 1765 appeared his romantic fiction of "*The Castle of Otranto*," the prolific parent of the *Radcliffe* romance and a vast variety of similar invention. Being at Paris in 1765, he composed a French letter to Rousseau, in the name of the king of Prussia, by way of exposing the vanity and self-consequence of that singular character, who acted on the occasion with his usual extravagance. Walpole was, however, scarcely excusable for this attack upon the morbid sensibility of a man who had given him no provocation; but his correspondence with Hume supplies a very extraordinary specimen of his aristocratical contempt for authors by profession. In 1767 he declined being again chosen to sit in parliament, soon after which appeared his "*Historic Doubts on the Life and Reign of King Richard III.*" It is an acute and ingenious performance, but failed in convincing the public; and the brief

but conclusive investigation of it by Gibbon, in his miscellaneous works, has possibly disposed of the question for ever. Mr Walpole forgot his aristocratic dignity so much in regard to this performance, as to expunge his name from the list of members of the Antiquarian Society, because two papers were read before them counteracting part of his evidence. In 1768 he printed his "Mysterious Mother," a very powerfully written tragedy, on a disagreeable subject, and one which altogether precludes it from the stage. About this time occurred the transaction with the unhappy Chatterton, which subjected him to so much censure; no part of which appears to have been deserved beyond his general apathy towards literary men of all grades. He visited Paris in 1771 and 1775, and became much distinguished in the circle of the celebrated madame du Deffand, who particularly admired him. The principal incident of his advanced years was his accession to the earldom of Orford, by the death of his nephew, an elevation which gave him more trouble than satisfaction, and that made no alteration in his mode of living or literary pursuits. His death, which was hastened by an hereditary gout that had reduced him to a cripple, took place in March 1797, in his seventy-ninth year. He bequeathed to Robert Berry, esq. and his two daughters, all his printed and manuscript works, of which a collective edition was published in 1798, in five volumes, quarto. The most valuable addition to what had formerly appeared, consisted in his letters to a great variety of correspondents, written with great epistolary ease and vivacity, but occasionally exhibit of affectation and effort. He is certainly however one of the most lively and witty of letter-writers, but too frequently deemed his letters a grace and a favour accorded to his literary correspondents, which superseded the necessity of any thing more substantial. But although his plan of life was evidently formed upon a selfish principle of self-enjoyment, his attachment to general Conway showed that he was open to the kind and social affections, and he was at least capable of generous actions to persons in his own sphere. He also respected virtue, and possessed liberal feelings towards the best rights and interests of mankind. As an author, if he does not merit a first-rate place in any of the lines of literature which he cultivated, he has done enough to rank respectably among general writers, a degree of credit which had he anticipated, he would have affected to disregard. He was in fact a votary of curious rather than of profound literature, although his "Catalogue of Royal and Noble Authors," and his "Anecdotes of Painting," are doubtless among the most useful of the class to which they belong.—*Nichols's Lit. Anec. D'Israeli's Calamities of Authors. Walpoliana.*

WALSINGHAM (sir FRANCIS) an illustrious statesman in the reign of queen Elizabeth, who was descended of an ancient family, and was a native of Chislehurst in Kent. He was educated at King's college, Cambridge,

and at an early age he travelled on the continent, where he acquired a knowledge of the languages, manners, and policy of foreign nations. His first employment was that of ambassador to the court of France, whence he returned in 1573; and being appointed one of the principal secretaries of state, and a member of the privy council, he received the honour of knighthood. In the important situation which he filled he rendered great services to his sovereign, and contributed by his policy to the stability of her government. It must however be admitted that the means he adopted for the attainment of his purposes were not of the most honourable description. Lloyd, in his *State Worthies*, says, "Sir F. Walsingham outdid the jesuits in their own bow, and over-reached them in their equivocation and mental reservation; never settling a lie, but warily drawing out and discovering the truth. Few letters escaped his hands, whose contents he could read, and not touch the seals. He had the wonderful art of weaving plots, in which busy people were so entangled that they could never escape, but were sometimes spared upon submission; at others, hanged for example. He would cherish a plot for years together, admitting the conspirators to his own and the queen's presence familiarly, but dogging them out watchfully." Such was the policy of this celebrated statesman, who is stated to have maintained fifty-three agents and eighteen spies in foreign courts. In 1581 he went on a second embassy to France, to treat of a marriage between Elizabeth and the duke of Anjou; and in 1583 he was sent to the court of James VI of Scotland, whence he is said to have brought back a higher opinion of the abilities of the future sovereign of Britain than the event justified. He acted a very important, but by no means honourable part, in the detection of Babington's plot against the life of the queen in 1586, and in the subsequent proceedings against Mary queen of Scots. His death took place in April 1590, in the ninetyeth year of his age; and his remains were interred privately, by night, in St Paul's church, apprehensions being entertained that his corpse might be arrested on account of his debts. His poverty and consequent disinterestedness cannot, however, be decidedly inferred from this circumstance, as he might possess considerable landed property, not subject to the claims of his creditors. He left an only daughter, successively married to sir Philip Sidney, the earl of Essex, and the earl of Clancarde, by all of whom she had children. An account of his negotiations and his dispatches from France, appeared under the title of the "Complete Ambassador," 1635, folio; and a work called "Arcana Aulica," has been ascribed to him, but its authenticity is questionable.—*Biog. Brit. Ropin.*

WALSINGHAM (THOMAS of) an English chronicler of eminence in the fifteenth century. He was a Benedictine monk of the abbey of St Albans, where he held the office of precentor; and he also styles himself royal historiographer. His works are "Historial

Brevis," containing the annals of England, from the end of Henry III's reign, forming a continuation to the history of Matthew Paris; and "*Hypodigma Neustriæ*," giving an account of the occurrences in Normandy from the time of Rollo to the sixth year of Henry V. These pieces were published by archbishop Parker, London, 1574, folio.—*Nicolson's Hist. Libr.*

WALSH (WILLIAM) a minor English poet, the friend of Pope and Dryden, both of whom have spoken much more highly of his talents than posterity has considered they deserve. He was the son of Mr Joseph Walsh, a gentleman of Aberley, Worcestershire, where he was born in 1663. At the age of fifteen he entered as a gentleman commoner at Wadham college, Oxford, but never graduated, and on quitting the university became a wit and a man of pleasure about town. His writings, which are principally of an amatory cast, consist of "*A Dialogue concerning Women, being a Defence of the Fair Sex, addressed to Eugenia*," (supposed to have been his mistress), 1691; "*Æsculapius, or the Hospital of Fools*," in imitation of Lucian; an "*Essay on Pastoral Poetry*;" "*Letters and Poems, Amorous and Gallant*," with a variety of Odes, Elegies, Epitaphs, &c. to be found in the collection of minor poets, printed in 1749. Mr Walsh became a member of parliament, and held the post of gentleman of the horse to the queen. His death took place in 1710.—*Cibber's Lives.*

WALTHER (AUGUSTINE FREDERICK) an eminent physician and anatomist, who in 1723 was appointed to the chair of anatomy and surgery at Leipsic, where he died about 1746. He published a great number of academical dissertations on anatomical subjects, which afford valuable information, though they have been censured for obscurity of style. He was also the author of "*De Lingua Humana Libellus*," 1724, 4to; and "*De Articulis, Ligamentis et Musculis, in incensu statuque dirigendis*," 1728, 4to; besides some botanical publications.—*Halleri Bibl. Anat. Nouv. Dict. Hist.*

WALTHER (BERNARD) an eminent astronomer of the fifteenth century, who was a native of Nuremberg. He studied mathematics and astronomy under Regiomontanus, whom he assisted in most of the observations he made at Nuremberg. When that philosopher was called to Rome, to assist in the reformation of the calendar, Walther continued to make astronomical observations with great accuracy for nearly thirty years, that is from 1475 to the time of his death in 1504. He is regarded as the first discoverer of the regular effect of atmospheric refraction. After the death of Regiomontanus he purchased his papers and instruments, the former of which he unfortunately kept secluded from the public. After his death they were purchased by the senate of Nuremberg, and parts of them were published by Schoner.—*Montucla. Aikin's G. Hist.*

WALTHER (CHRISTOPHER THEODOSIUS) a German missionary, born at Schildeberg in

1699. He was sent as a missionary to the Danish settlement of Tranquebar in the East Indies, about the year 1720; and he returned to Europe in 1740, having suffered considerably in his health from the climate of the intertropical regions. At Tranquebar he printed a "*Sacred History*," in the Malabar language; and he was the author of a treatise entitled "*Doctrina Temporum Indica*," published in Bayeri Historia Regni Bactriani, Petrop. 1738, 4to. Walther died at Dresden in 1741.—*Nouv. Dict. Hist.*

WALTHER (JOHN GODFREY) the author of an historical and biographical musical dictionary, which is superior to most works of the kind. It was published in German at Leipsic in 1782, under the following title, "*Musicalisches Lexicon oder Musicalische Bibliothek*," 8vo. It comprises not only all the technica of ancient and modern music, but biography, as far as the names, dates, and works of almost all eminent musicians, ancient and modern; and though the author's information is most ample concerning Germany, what relates to other countries is not neglected. A new and enlarged edition of this work was published at Leipsic, 1790—92, 2 vols. 8vo, by Ernest Ludwig Gerber.—*Ross's Cyclopedia.*

WALTHER (JOHN LUDOLF) the author of a curious and useful work relative to the modes of writing in use in the middle ages. He was librarian and private secretary to his British majesty George II, as elector of Hanover. The title of his work is "*Lexicon Diplomaticum Abbreviationes Syllabarum et Vocum in Diplomatus et Codicibus a Sæc. viii. ad xvi. usque occurrentes exponens: Juntis Alphabetis et Scripturæ Speciminibus integris: cum Præf. Jo. Dav. Koeleri*," Gottingæ, 1745—47, folio, republished at Ulm in 1756. The whole work is engraved on copper-plates.—*Idem.*

WALTON (BRIAN) a learned divine and critic, distinguished as the editor of a Polyglott Bible. He was born about 1600, in the district of Cleaveland in Yorkshire; and in 1613 he was admitted a student of Magdalen college, Cambridge, whence he removed to Peter-house in the same university. He took the degree of MA. in 1623, when he held a curacy in Suffolk. Removing to London, he obtained the rectory of St Martin's Orgar in 1626; and ten years after he was instituted to the rectories of St Giles's in the fields, and Sandon in Essex, the former of which he soon after resigned. In 1639 he commenced DD. and he is said to have been collated to a prebend in St Paul's cathedral. In the civil wars he favoured the royal cause, and was consequently stripped of his preferment, and obliged to take shelter at Oxford. There he formed the scheme of a grand Polyglott Bible, to which he owes his literary reputation. This work was completed and published in 6 vols. folio, in 1657, under the following title, "*Biblia Sacra Polyglotta complectentia (textus originales) Hebraicum, cum Pentateucho Samaritano, Chaldaicum, Græcum; (versionumque antiquarum) Samaritanæ, Græcæ LXX interpp., Chaldaicæ, Syriacæ, Arabicæ, Æthio-*

picæ, Persicæ, Vulg. Lat. quicquid comparari poterat: cum Textuum et Versionum Orientalium Translationibus Latinis: ex vetustissimis MSS. undique conquisitis, optimisque exemplaribus impressis, summa fide collatis; quæ in prioribus editionibus deearant suppleta; multa antehac inedita de novo adjecta; Omnia eo ordine disposita, ut textus cum versionibus uno intuitu conferri possent." Dr Walton had several assistants in his laborious undertaking, of whom the principal was Dr Edmund Castell. On the restoration of Charles II, to whom he presented his Bible, with a new dedication (the original one to Oliver Cromwell having been cancelled) he was made one of the royal chaplains; and in December 1660 he was raised to the bishopric of Chester. He survived his elevation but a short time, as his death took place in London, November 29, 1661, and he was buried in St Paul's cathedral. He published "Introductio ad Lectionum Linguarum Orientalium," 8vo; an elaborate Defence of the Polyglott, against the animadversions of Dr Owen; and a pamphlet on Tythes.—*Biog. Brit. Aikin's Gen. Biog.*

WALTON (ISAAC) an ingenious and amusing writer, who was born at Stafford in August 1593. He was probably of low parentage, for he settled in London as a sempster or milliner and linen-draper, and kept a shop in Fleet-street. About 1632 he married the sister of bishop Ken, by whom he had a son and a daughter, who survived him. In the beginning of the civil wars he removed from the metropolis; and his death took place at Winchester, December 15, 1683. He was the editor of several publications; but he gained considerable celebrity by a treatise, entitled "The Complete Angler, or the Contemplative Man's Recreation," which has passed through numerous editions; and his Biographical Memoirs of Bishop Sanderson, Hooker, Sir H. Wotton, George Herbert, and Dr Donne, which have attained an equal share of popularity. Though possessed of much general information, Walton made no pretensions to learning, and the charm of his writings depends on the air of verisimilitude and unaffected benevolence which they exhibit. Some short pieces of poetry are interspersed in his works, which evince much taste and feeling. Towards the close of his life he published "Thealma and Clearchus, a Pastoral History, written by John Chalkhill, an Acquaintance of Edmund Spenser," with a preface containing a character of the author.—*Life by Sir John Hawkins.*

WANLEY (NATHANIEL) a clergyman, who was vicar of Trinity church, Coventry, where he died about 1690. He was the author of a popular work, called "The Wonders of the Little World, or the History of Man," which has passed through many editions.—WANLEY (HUMPHREY) son of the preceding, was born at Coventry, March 21, 1671-2. He was apprenticed to a draper, but displaying a partiality for study, bishop Lloyd sent him to Edmund-hall, Oxford, where he

assisted the principal, Dr. Mill, in collating MSS. for his edition of the Greek Testament. He removed to University college, and being admitted to the Bodleian library, he made copious extracts from the MSS. in that collection. Dr George Hickes afterwards employed him to travel through the kingdom in search of Anglo-Saxon MSS. of which he drew up a catalogue for the "Thesaurus Linguarum Septentrionalium," forming the third volume of that work. He was then appointed secretary to the Society for Propagating Christian Knowledge; and at length he obtained the more congenial situation of librarian to Harley, earl of Oxford, which he held till his death in July 1726. He formed various literary schemes, and made numerous collections relative to archaeology and bibliography, which have proved serviceable to subsequent writers. He also kept a curious journal of transactions connected with the Harleian library, which remains in manuscript in the British Museum.—*Nichols's Lit. Anec. Dibdin's Bibl. Decam.*

WANSLEBEN, or WANSLEBIUS (JOHN MICHAEL) a learned critic, born at Erfurt, in Germany, in 1633. After finishing his studies at the university of Königsberg, he visited England, in order to superintend the printing of the Ethiopic Lexicon and Grammar of Job Ludolf, which was published in London, 1661, 4to. Wansleben subsequently assisted Dr Castell in his "Lexicon Heptaglotton;" and on his return to Germany, Ernest duke of Saxe Gotha engaged him to go to Abyssinia to study the language and natural history of that country. He proceeded no farther than Cairo, in Egypt; and after staying there some time, he went to Italy, and forsaking the Lutheran religion, in which he had been educated, he became a Dominican friar. He then went to Paris, and in 1670 Colbert gave him a commission to go to Abyssinia in search of Oriental MSS. for the French king's library. He went again to Egypt, whence he transmitted 334 MSS. Arabian, Persian, and Turkish; but not being able to enter Abyssinia he proceeded to Constantinople, whence he was recalled to France, the irregularity of his conduct having given offence to Colbert, as it had to his former patron, the duke of Saxe Gotha. He died neglected, and in obscurity, in 1679. He published "An Account of the present State of Egypt," in Italian; "A Journal of a Voyage to Egypt in 1672 and 1673," in French; besides other works.—*Moreri.*

WARBURTON (JOHN) an English antiquary and herald, who was a native of Lancashire. His original employment was that of an exciseman; but applying himself to the study of provincial and family history and genealogy, he was admitted a fellow of the Antiquarian Society, and in 1720 he obtained the appointment of Somerset herald. In 1749 he published a work entitled "London and Middlesex illustrated by an Account of the Names, Residence, Genealogy, and Coat Armour of the Nobility, principal Merchants, and other eminent Families therein," 8vo; which publication drew on the author a reprimand from

the earl marshal. He was also the author of "Vallum Romanum, or the History of the Roman Wall in Cumberland and Northumberland," 1753, 4to. His death took place in 1759, at the age of seventy-seven.—*Nichols's Lit. Anec.*

WARBURTON (WILLIAM) a celebrated prelate of the English church, descended from an ancient Cheshire family, but born at Newark-upon-Trent in Nottinghamshire, December 24, 1698. He was the second son of George Warburton, an attorney and town-clerk of Newark; and after being educated at a school at that place, and at another at Okeham in Rutlandshire, he was in 1714 articled to an attorney at East Markham in his native county. After completing a clerkship of five years, he was admitted in one of the courts at Westminster, and returning to Newark, he engaged in legal practice. Not finding, however, the profession adapted to his taste or talents, he relinquished it, and in 1723 took deacon's orders in the church. His first work, consisting of "Miscellaneous Translations, in Prose and Verse," from Roman authors, was published with a Latin dedication to sir George Sutton, who in 1726 bestowed on him a small vicarage. Shortly after he visited London, and formed an acquaintance with some of the inferior retainers of literature of that period, among whom was Theobald, then engaged on an edition of Shakspeare, to which Warburton became a contributor. With these minor wits he joined in the confederacy against Pope, of whom Warburton said that whilst "Milton borrowed by affectation, and Dryden by idleness, Pope borrowed by necessity." In 1727 he began to distinguish himself as an original writer, by his "Critical and Philosophical Inquiry into the Causes of Prodiges and Miracles, as related by Historians," which he dedicated to sir Robert Sutton, through whose interest he was placed in the list of the king's masters of arts, on his majesty's visit to Cambridge in 1728; and he thus supplied the want of an academical education. His patron also presented him to the rectory of Brand Broughton in Lincolnshire, where he remained several years, during which he composed most of those works which contributed to the establishment of his fame in the republic of letters. In 1736 appeared his "Alliance between Church and State, or the Necessity and Equity of an established Religion and Test Law demonstrated from the Essence and End of Civil Society, upon the fundamental Principles of the Law of Nature and Nations;" which work passed through four editions during the life of the author, though it is said to have given satisfaction neither to the zealots of the church nor to the advocates for religious liberty. At the conclusion of "The Alliance" was announced the scheme of his great work, the first volume of which was published in 1738, under the title of "The Divine Legation of Moses demonstrated on the Principles of a Religious Deist, from the Omission of the Doctrine of a Future State of Rewards and Punishments in

the Jewish Dispensation." This bold and paradoxical performance met with adversaries among all parties, who concurred in criticising and censuring the theory on which it is founded. Undismayed by animadversion, he published a "Vindication" of his opinions, and persevered in the prosecution of his work, which, whatever may be thought of the leading principle, will ever remain a monument of genius and learning scarcely to be paralleled among the theological productions of any age or nation. With the view probably of conciliating Pope, he published in the literary journal called *The Works of the Learned*, in 1739 and 1740, a defence of the *Essay on Man*, against the remarks of M. de Crousaz of Geneva. Whatever may have been Warburton's object, Pope acknowledged his obligations to his advocate, and an intimacy ensued, which eventually proved very advantageous to the latter. The second volume of "The Divine Legation" appeared in 1741; and the same year the author was introduced by his friend Pope to Mr Allen of Prior-park near Bath, at whose house he became a frequent visitor. He returned the favour by vindicating the poet's works by notes and comments; and in consequence of the friendship thus excited and cemented between them, Pope, at his death in 1744, bequeathed to our author half his library, and the copyright of such of his works already printed as were not otherwise disposed of, a legacy supposed to have been worth 4000*l.* Among the numerous antagonists of Warburton and his "Divine Legation," were Drs Middleton, Pococke, R. Grey, Sykes, and Stebbing, against whom he published, in 1744 and 1745, two defences, in which he treats all his opponents, except Middleton, with a high degree of asperity and self-confidence, exhibiting the conscious superiority of talents and learning, which characterises more or less all the productions of his pen. In 1745 he married Miss Gertrude Tucker, the niece of Mr Allen; and this connexion ultimately made him possessor of the splendid seat of Prior-park. He became in 1746 preacher to the Society of Lincoln's-inn; and in the following year he appeared as the editor of Shakspeare. He now rapidly advanced in the course of preferment in his profession, becoming prebend of Gloucester in 1753; king's chaplain in ordinary in 1754; then prebend of Durham; DD. by archiepiscopal mandate; dean of Bristol in 1757; and two years after bishop of Gloucester. In 1762 he severely animadverted on the principles of Methodism in his "Doctrine of Grace, or the Office and Operation of the Holy Spirit vindicated from the Insults of Infidelity and the Abuses of Fanaticism." The third, fourth, and fifth volumes of the "Divine Legation" were published in 1765; and some remarks which he introduced on the character of Dr W. Lowth, father of the learned bishop of London, involved him in a new controversy, in which he was assisted by Dr Richard Hurd. In 1768 he established a lecture at Lincoln's-inn, on the evidence in favour of Christianity from the Prophecies of the Old and New Tes-

tament. The last years of his life were embittered by the decease of an only son, who fell a victim to consumption at the age of nineteen. Bishop Warburton died at Gloucester, June 7, 1779, and was interred in the cathedral church, where a monument was erected to his memory. His works were collected and published by his friend bishop Hurd in 1788, 6 vols. 4to; and a biographical memoir, forming a seventh volume, appeared several years after. Dr Johnson, in his *Life of Pope*, says of Warburton, "He was a man of vigorous faculties, a mind fervid and vehement, supplied by incessant and unlimited inquiry with wonderful extent and variety of knowledge, which yet had not oppressed his imagination, nor clouded his perspicuity. To every work he brought a memory full fraught, together with a fancy fertile of original combinations; and at once exerted the powers of the scholar, the reasoner, and the wit. But his knowledge was too multifarious to be always exact, and his pursuits were too eager to be always cautious. His abilities gave him a haughty consequence, which he disdained to correct or mollify; and his impatience of opposition disposed him to treat his adversaries with such contemptuous superiority, as made his readers commonly his enemies, and excited against the advocate some who favoured the cause. He seems to have adopted the Roman emperor's determination '*Oderint dum metuant*.' He used no allurements of gentle language, but wished to compel rather than to persuade. His style is copious without selection, and forcible without neatness; he took the words that presented themselves; his diction is coarse and impure, and his sentences are unmeasured."—*Encyc. Brit. Aikin's Gen. Bing.*

WARD (EDWARD) a burlesque poet and miscellaneous writer, born in Oxfordshire, about 1667. He kept a tavern in Moorfields, London, and his compositions, while they evince considerable talent of the humorous kind, are strongly tinged with the vulgarity and indecency of low life and profligate society. He was the author of some dramatic pieces, which are deservedly forgotten. His poems possess more merit, but he is chiefly remembered as the author of a work in prose, called "*The London Spy*." He died June 20, 1751, and was interred in the churchyard of St Pancras, near London.—*Cibber's Lives of the Poets.*

WARD (JOHN) a philological writer of eminence, who was born in London in 1679. He obtained a situation in the Navy office, which he relinquished in 1710 to become a schoolmaster. He then delivered lectures in the metropolis on civil law, and the law of nature and nations; and in 1712 he published a small tract in Latin, containing rules for composition. Continuing to distinguish himself as a classical scholar and antiquary, he was chosen in 1720 professor of rhetoric at Gresham college. In 1736 he was admitted into the society of antiquaries, of which he subsequently became a vice president. He was in 1751 created LL.D. by the university

of Edinburgh, and in 1753 he was elected one of the first trustees of the British Museum. He died at Gresham college, October 17, 1758. Besides several works of minor importance, he was the author of the "*Lives of the Gresham Professors*," 2 vols. folio, 1740; and "*A System of Oratory*," 2 vols. 8vo, published after his death.—*Nichols's Lit. Anec.*

WARD (SERP) an eminent English prelate, distinguished as a philosopher and mathematician. He was the son of an attorney at Buntingford, in Hertfordshire, where he was born in 1617. After previous education at a grammar-school at his native place, he was sent in 1632 to Sidney college, Cambridge. He afterwards obtained a fellowship, from which he was expelled in 1644, for refusing to take the covenant. After leaving the university, he became a tutor in various gentlemen's families; and on the deprivation of Greaves, the Savilian professor of astronomy at Oxford, he succeeded him, but was obliged to take the oath called the engagement. In 1654 he was made DD. together with Dr Wallis, Savilian professor of geometry; and he was one of the members of the philosophical association which gave origin to the Royal Society. On the establishment of that institution he was nominated a fellow, and he had the honour to be the second president. In 1659 he was chosen master of Trinity college, which post he resigned at the Restoration, when he obtained the rectory of St Lawrence Jewry, London; and he was installed into the precentorship of Exeter, to which he had a few years before been presented by the expelled bishop. Soon after he was made dean of Exeter, and in 1662 promoted to the bishopric. In 1667 he was translated to Salisbury, and in 1671 he obtained the chancellorship of the order of the garter, which has ever since been annexed to the see of Sarum. He distinguished himself greatly by his public spirit and munificence in his last diocese, having largely contributed to several public undertakings, besides founding and liberally endowing a college of matrons, for ten clergymen's widows. He died in 1689, having been for some years unfortunately reduced to a state of mental imbecility. Bishop Ward was the author of several works on astronomy and different branches of mathematical science, which were formerly in high esteem, but have been superseded by modern improvements. He also published a Latin treatise against the philosophy of Hobbes; sermons; "*A Philosophical Essay on the Being and Attributes of God, the Immortality of the Soul, &c.*"—*Life by Dr Walter Pope. Cassan's Lives of the Bps. of Salisb.*

WARD (THOMAS) a Catholic writer on polemical divinity, born in Yorkshire in 1632. He was educated in the Protestant faith, on renouncing which he was disinherited by his father, after whose death however he converted his mother, and the whole of his family. He then went to Rome, and obtained a commission in the pope's guards. On the accession of James II he returned to England, and

employed his pen in support of the church of Rome, attacking the Protestants both with satire and argument. He criticised the authorized translation of the Scriptures in his "Errata to the Protestant Bible;" and he published a Hudibrastic poem, entitled "England's Reformation," besides other works. He died in France in 1708.—*Chalmers's Biog. Dict.*

WARE (JAMES) an eminent surgeon and oculist, distinguished for his skill as an operator, and for the variety and importance of the professional works of which he was the author. Among these may be mentioned "A Treatise on Ophthalmv, Psorophthalmv, and the Purulent Eye;" "Chirurgical Observations relative to the Epiphora, or Watery Eye," &c.; "A Treatise on the Cataract," translated from the French of baron Wenzel, with remarks; "An Enquiry into the Causes which have most commonly prevented the Success of the Operation of extracting the Cataract;" "Remarks on the Fistula Lachrymalis;" and "Chirurgical Observations," 1798, 2 vols. 8vo, including his various tracts previously published. Mr Ware was a fellow of the Royal Society, and of the London Medical Society; and some of his contributions appear in the memoirs of the latter society, and in the Philosophical Transactions. After having been long engaged in the practice of his profession in London with the highest reputation, he died at the age of sixty, April 13, 1815.—*Gent. Mag. Reus.*

WARE (sir JAMES) the name of two eminent scholars, father and son, who in succession filled the offices of auditor general, and secretary to the lords deputies of Ireland. The second and most celebrated of the two was born at Dublin in 1604, and received his education at Trinity college in that capital. On the death of his father in 1632, he succeeded him in his appointments, having been knighted three years before through his interest. In 1639 he was chosen representative for the university of Dublin, and sworn a member of the privy council, and in the course of the same year published his useful work, entitled "De Scriptoribus Hiberniæ." When Pym, at the head of the Commons, commenced those attacks upon the earl of Strafford, which eventually cost that nobleman his life, sir James distinguished himself by the zeal and ability which he displayed, though unsuccessfully, in his defence; and on the retreat of king Charles to Oxford in 1644, he came over from Ireland on a mission from Ormond to that monarch, on which occasion the university complimented him with the honorary degree of LL.D. On his return he was intercepted while crossing the Channel by the parliamentarians, who committed him close prisoner to the Tower. Having at length obtained his liberation, which was not effected without considerable difficulty, he returned to Dublin, where he remained till on the surrender of that city he was once more in duress as a hostage for the performance of the conditions of the capitulation. From this period

till the death of Cromwell he resided partly in Normandy and partly in the French metropolis, during which period he employed himself in completing and preparing for publication a valuable work on the ancient monuments and early history of Ireland, entitled "De Hibernia et ejus Antiquitatibus Disquisitiones," printed first in 1654, and reprinted with considerable additions four years after. When monarchy was restored, he accompanied Charles II to England, and was restored to his former posts, which he continued to hold till his decease in 1666, having previously exhibited his moderation in declining several offers of advancement made him by the court. In addition to the works already mentioned, he was the author of "Rerum Hibernicarum Annales," &c. folio;" "De Prasulibus Hiberniæ," folio;" an edition of the works of the venerable Bede, &c. beside some curious and highly interesting remains in manuscript, which at his death came into the possession of Hyde, earl of Clarendon, and subsequently of archbishop Tenison. There are two editions of his writings, that of 1739, folio, 3 vols. and that of 1764, in two. He left a son, Robert who is known as a controversial writer on the Protestant side of the question.—*Biog. Brit. Harris's Edition of Ware.*

WARGENTIN (PETER) a Swedish philosopher, secretary to the Academy of Stockholm, among whose transactions are to be found many valuable papers of his composition. He was born in 1717, and having acquired a considerable reputation as an astronomer, became FRS. and honorary member of several foreign literary societies, while at home his merits were acknowledged by the order of the polar star, conferred on him by his sovereign. He completed some useful tables for calculating the eclipses of the satellites of Jupiter, to be found in the Nautical Almanac, 1779, and died in the enjoyment of great reputation, in the Royal Observatory at Stockholm, December 13, 1785.—*Hutton's Math. Dict.*

WARHAM (WILLIAM) an English prelate and statesman of the sixteenth century. He was a native of Hampshire, and was educated at Winchester school and New college, Oxford, where he obtained a fellowship in 1475. He subsequently practised as an advocate in the court of arches; and after an embassy to Burgundy, he was appointed chancellor of Wells, and master of the rolls. Henry VII at length raised him to the dignity of lord chancellor, and he successively became bishop of London and archbishop of Canterbury. He was one of the early patrons of Wolsey, whose excessive influence under Henry VIII gave umbrage to Warham; and in 1515 he resigned the great seal, and at length withdrew his attention from affairs of state. He died in 1532. This prelate was an encourager of learning, and was the friend and patron of the celebrated Erasmus.—*Godwin. Birch.*

WARNER (WILLIAM) an English poet of the sixteenth century. He was an attorney of

W A R

the court of Common Pleas, and was the author of a poetical production of considerable merit, entitled "Albion's England, or an historical Map of the same Island," first published in 1586. He also wrote a fictitious narrative, in prose, called "Syrinx, or a sevenfold History," 1597. Warner was a native of Oxfordshire, received a liberal education, and appears to have been patronized by Henry Carey, lord Hunsdon. He died suddenly, at Amwell, in Hertfordshire, March 9, 1608-9.—*Ritson's Bibliog. Poet.*

WARNERY (**CHARLES EMANUEL**) a writer on military tactics, who was a native of the Pays de Vaud. He entered at the age of fourteen into the service of the king of Sardinia, which he quitted for that of Prussia, and at the beginning of the seven years' war he had attained the rank of lieutenant-colonel. His services were rewarded with the knighthood of the order of merit; but having been concerned in the capitulation of Schweidnitz in 1758, he resigned his commission, and went to Poland, where he became a major-general. He subsequently retired to an estate in Silesia, and devoted his time to study. His death took place in 1786. Besides other works he was the author of an account of the seven years' war, published under the title of "Campagnes de Frederic II, Roi de Prusse, de 1756 à 1762," Vienna, 1788, 8vo.—*Aikin's Gen. Biog.*

WARREN, FSA. (**CHARLES**) an eminent engraver, who first succeeded in removing the difficulty of engraving on steel, an art of which he may be considered the inventor. Dying suddenly of apoplexy, the gold medal awarded him by the Society of Arts, was presented by H.R.H. the duke of Sussex to his brother, in trust for his orphan daughter. He died in the prime of life, April 21, 1823.—*Ann. Biog.*

WARREN, bart. G.C.B. (**sir J. BORLASE**) a distinguished officer in the British navy, descended from the ancient family of the Borlases in Cornwall. From Winchester school he entered the naval service at an early age, but soon after availed himself of a temporary opportunity to complete his studies, and entered himself of Emanuel college, Cambridge. On the breaking out of the French war he was appointed to the *Flora* frigate, and received the command of a flying squadron, for the purpose of annoying the coast of France. In 1794 he obtained for his services the ribband of the order of the Bath, and the year following acted as commodore of the division of ships which landed a body of emigrants in Quiberon bay, his flag then flying on board *La Pomone*. Having removed into the *Canada* seventy-four, he joined the Brest fleet under lord Bridport, and being detached with a squadron, came up on the 10th of October 1798, off the coast of Ireland, with the *Hoché*, a French man-of-war, and three frigates laden with troops, for the conquest of that island. After a smart engagement he succeeded in capturing the whole squadron, and received the thanks of parliament on the occasion. Soon after he

W A R

hoisted his flag as rear-admiral, whence he arrived in due course at the rank of admiral of the white. On the conclusion of peace, sir John, then recently nominated a privy-counsellor, went out as ambassador extraordinary to the Russian court, a situation which the dispute with that power respecting the retention of the island of Malta rendered one of great delicacy. In this negotiation he appears to have conducted himself with great prudence, and to have smoothed the path very adroitly for his successor. He sat in four parliaments, being returned in those of 1774 and 1780 for the borough of Great Marlow, and in those of 1796 and 1802 for that of Nottingham. He died February 27, 1822, in the apartments of sir R. Keats, at Greenwich hospital, and was buried in the family vault at Stratton-Ardley, Oxfordshire.—*Ann. Biog.*

WARREN (**sir PETER**) an English admiral, distinguished alike for his professional talents and his private virtues. He was descended from an ancient family in Ireland, and he received an education suitable to the employment for which he was destined. Having entered young into the navy, he gradually rose to the rank of commodore, which he held in 1745, when he was appointed commander of an armament destined for the attack of Louisbourg, (N.A.) then belonging to the French. He joined the fleet of transports from Boston in Canso bay on the 25th of April, having under his command the *Superb* man-of-war, and the *Launceston* and *Eltham* frigates; and being afterwards joined by several other ships of war from England, he took possession of Louisbourg on the 17th of June. The French considered the loss of this place of so much importance, that in 1747 they fitted out a powerful fleet for the purpose of re-taking it; and at the same time another squadron was sent to the East Indies. The views of the French government were rendered abortive by the courage and activity of admiral Anson and sir Peter Warren. The latter, who had been made a rear-admiral, with a large fleet, fell in with the French squadron, completely defeated them, and captured the greater part of their men-of-war. This was his last service in the line of his profession, peace being concluded the succeeding year. He was now elected MP. for Westminster; and in the height of that popularity which he had so deservedly acquired, he paid a visit to his native country, where he was seized with an inflammatory fever, of which he died in 1752.—*Encyc. Brit.*

WARREN (**RICHARD**) a medical practitioner of great eminence in London, who was physician in ordinary to the king and to the prince of Wales. He died in 1797, at the age of sixty-five. Dr Warren was a fellow of the Royal and Antiquarian societies, and his professional talents were of the highest order; but his productions as an author consist only of two papers in the *Medical Transactions*, relative to the bronchial polypus, and the colica pictorum.—*Genl. Mag.*

WARTON (**JOSEPH**) son of the rev. Tho-

mas Warton, professor of poetry at Oxford, who died in 1745. He was born in 1722, at Dunsfold in Surrey, of which his maternal grandfather, the rev. Joseph Richardson, was rector. At the age of fourteen he entered on the foundation at Winchester school, and in 1740 at Oriel college, Oxford. He left the university after taking his first degree, and became curate to his father, afterwards exercising the same office at Chelsea. He was created MA. by diploma in 1737; and in 1768 he was admitted to the degree of DD. He published in 1744 a small volume of "Odes;" and in 1748 he was presented by the duke of Bolton to the rectory of Winslade, Bucks; and soon after he married. In 1751 he accompanied his patron the duke of Bolton to France, as his chaplain, for the purpose of uniting him in the bands of wedlock to his mistress, Miss Fenton, a public singer, on the occurrence of the expected death of the duchess. The chaplain, however, returning to England before that event took place, another clergyman solemnized the nuptials of the amorous peer. In 1753 Warton published a new translation of the *Eclogues* and *Georgics* of Virgil, accompanied by Pitt's version of the *Æneid*, with dissertations and notes; and he became a contributor to Dr Hawkesworth's *Advertiser*. In 1754 he was presented to the rectory of Tamworth, and the following year he was chosen second master of Winchester school. His "Essay on the Writings and Genius of Pope" first appeared anonymously, in 1756; and twenty-six years after he added a second volume, part of which had been printed at the same time with the former. In 1766 he was advanced to the station of headmaster at Winchester, where he presided with high reputation nearly thirty years. His subsequent preferments in the church were the living of Thorley in Hertfordshire, and a prebend of St Paul's, bestowed on him by bishop Lowth in 1782; and a prebendal stall at Winchester, and the rectory of Easton, which he obtained in 1788. He resigned the mastership of Winchester school in 1793, and retired to the rectory of Wickham in Hampshire, which he had procured in exchange for another. In 1797, an edition of the works of Pope, with notes, issued from the press under his superintendence, in 9 vols. 8vo; and he then undertook an edition of Dryden's works, of which he had prepared for the printer only two volumes at the time of his death, which took place at Wickham, February 23, 1800, and his remains were buried in Winchester cathedral. His poetical productions, consisting of miscellaneous pieces, are now seldom read, with the exception of his "Ode to Fancy," which is an elegant and spirited composition. Memoirs of his life and writings were published, in 2 vols. 4to, by his pupil Dr Woolf.—*Lempriere. Aikin's Gen. Biog.*

WARTON (THOMAS) brother of the preceding, was born at Basingstoke in 1728. He received his education at Winchester school, and Trinity college, Oxford; and in his twenty-first year he distinguished himself by his

poetical vindication of his Alma Mater against the reflections in Mason's elegy of "Isis." Warton's poem, "The Triumphs of Isis," displayed great merit, and procured the bard much reputation; though he afterwards excluded it from his volume of collected pieces. His "Progress of Discontent," said to have been composed as a college exercise in 1746, added to his fame. In 1750 he took the degree of MA, and the next year he was chosen a fellow of his college. His "Observations on Spenser's Fairy Queen," published in 1754, made him advantageously known as a critic, and as conversant with poetical antiquities; and prepared the way for his election, in 1757, to the professorship of poetry at Oxford, which office he filled for ten years with great ability. Having taken the degree of BD. in 1761, he was instituted to the living of Kidlington, in Oxfordshire, in 1771. Several years afterwards he published an archaeological and topographical account of his parish, under the title of a "Specimen of the History of Oxfordshire," 1783, 4to; but it does not appear that he ever contemplated the completion of such a work. He had indeed previously engaged in an undertaking of more importance and of deeper interest to the learned world, and which was left unfinished at his death. This was his "History of English Poetry," the first volume of which, in quarto, was published in 1774, and the second and third, respectively, in 1778 and 1781. His plan was much more extensive, including the period from the eleventh to the eighteenth century; but the history goes no lower than the reign of Elizabeth, and a few sheets only of a fourth volume were prepared for the press, when he suspended and ultimately relinquished his undertaking. What he has executed is however extremely well done, the work exhibiting an extent of research and reading, and a correctness of taste and critical judgment, highly creditable to his talents, which render it a subject of regret that he should have been diverted from carrying on his design to its destined conclusion. A new edition of the History of Poetry, with notes and a useful index, was published a few years since, in four volumes, octavo. He now obtained some augmentation of his income by his promotion to a donative in Somersetshire, and in 1785 he became Camden professor of history at Oxford, and also succeeded Whitehead in the office of poet laureate. His last publication was an edition of the smaller poems of Milton, elucidated with curious notes. In his sixty-second year he was seized with a paroxysm of the gout; and though a journey to Bath removed the complaint, yet it probably laid the foundation for a paralytic attack, which occasioned his death at Oxford, May 21, 1790. He was interred with academic honours in the chapel of Trinity college. Among his various literary labours not already noticed, were an edition of the Greek Anthology, 1766; another of Theocritus, 1770, 2 vols. 4to; "The Life and Literary Remains of Dr Ralph Bathurst," 1761, 8vo; "Life of

Sir T. Pope," 1780, 8vo; and "An Enquiry into the Authenticity of the Poems attributed to Rowley," 1782, 8vo. He published a collection of his poetical productions in 1777, 8vo; and his "Poetical Works," with an account of his life, by Richard Mant, appeared, in 2 vols. 8vo, Oxford, 1802.—*Rees's Cyclop. Lond. Mag.*

WARWICK (sir PHILIP) an historical and miscellaneous writer of the seventeenth century. He was born in Westminster, and after studying at Eton college he travelled to Geneva. On his return home he obtained a subordinate office under government, in the reign of Charles I. He had a seat in parliament, where he opposed the impeachment of the earl of Strafford; and when the civil war took place, he retired to Oxford with the king, whose confidence he enjoyed. In 1646 he was one of the royal commissioners empowered to treat with the parliament about a pacification; and the following year he attended his majesty in the Isle of Wight as his secretary. After the restoration he became MP. for Westminster, and obtained the office of clerk of the signet, which he formerly held. His death took place in 1682, at an advanced age. He was the author of a "Discourse on Government;" and of some interesting "Memoirs of King Charles I."—*Lempriere.*

WASE (CHRISTOPHER) a learned and ingenious scholar of the seventeenth century, a native of Hackney, in the vicinity of the metropolis. He commenced his education at Eton, whence he was elected off on the foundation to King's college, Cambridge. Of his fellowship there he was afterwards deprived, in consequence of his monarchical principles, displayed in a preface annexed to the "Electra" of Sophocles, of which he published an edition in 1650. The parliamentarian party took great offence at some of the expressions contained in this essay, as well as at the general tenor of its contents, and would in all probability have proceeded to extremities with the author, had he not withdrawn himself suddenly to the continent. While abroad, he acted as tutor in the earl of Pembroke's family, and after the Restoration obtained the headmastership first of Dedham grammar-school, and subsequently of that founded by sir Andrew Judd at Tonbridge. Some time before his death he resigned this situation for the law readership at Oxford, which he held, together with a situation in the Clarendon printing-office, till his death in 1690. His writings consist of an English translation of the "Cynegeticon" of Grotius; one of Grotius's Catechisms into Greek verse, 8vo; an English and Latin Dictionary, in 4to; "Structura Nonianæ;" and "Senarius, sive de Legibus et Licentia veterum Poetarum."—*Chalmers's Biog. Dict.*

WASHINGTON (GEORGE) commander-in-chief and first president of the United States of America. He was born February 11, 1732, in the parish of Washington in the county of Westmoreland in Virginia, where

his great-grandfather, descended from an ancient Cheshire family, settled in 1657. His father, Augustine Washington, dying when he was only ten years of age, the care of his education devolved upon his mother. His scholastic instruction was probably very bounded, which, however, included some knowledge of the mathematics. His youth displayed a grave, prudent, and thoughtful character; notwithstanding which a degree of latent ardour induced him, at the age of fifteen, to seek the appointment of a midshipman in the British navy, which station he was prevented from accepting by the entreaty of his mother. Little is known of the manner in which he passed his time until his nineteenth year, when his reputation must have been thoroughly established, as he was appointed one of the adjutants-general of Virginia, with the rank of major. He was first actively employed in some hostilities which ensued in consequence of the plans of the French to establish a chain of forts from the Canadian hills to the Ohio, which would have limited the English colonies to the east of the Alleghany mountains. In 1755 open war took place, and general Braddock was sent to command in America, in whose fatal expedition Washington served with great bravery as a volunteer, having then obtained the rank of colonel. All the regular troops being withdrawn from Virginia, sixteen companies were raised for the defence of its frontiers, the command of which was conferred upon him, with the title of commander-in-chief of all the forces raised or to be raised in that state. After having acted a considerable part in a subsequent expedition to the Ohio, when the successes in the northern colonies had secured the back settlements in the south, he retired in 1758 with injured health from the service. He soon after married an opulent widow, and by the death of his elder brother inherited an estate on the Potomack, called Mount Vernon, of his beautiful seat at which place many descriptions exist. During the fifteen following years he attended only to agricultural pursuits and to his duties as a magistrate and member of the state assembly. On the disputes breaking out between the American colonies and the mother country, he took a decided part against the claims of the latter. As a distinguished citizen, he was elected a member of the first congress, which assembled at Philadelphia in 1774, and was upon all the committees appointed to concert on measures of defence. At length, when it was determined to raise a general army, he was unanimously appointed commander-in-chief, which important charge he accepted with all the modesty and disinterestedness by which his conduct was ever so invariably distinguished. At the time he assumed the command of the American army it consisted of about 14,500 men, who were entrenched at different posts near Boston, opposite to the British army under general Gage, entrenched on Bunker's hill. A farther detail of his military services would be to supply a summary of the events of the American war. It is only

therefore necessary to remark, that by his bravery, prudence, firmness, and soldierly abilities he overcame obstacles and surmounted difficulties of the most perplexing and complicated nature, and, as it has often been remarked, seemed born for the crisis in which he acted so distinguished a part. The surrender of the British army under earl Cornwallis, in 1781, was the virtual termination of his important services in the field; but even the auspicious era of a triumphant peace was attended with circumstances which it required all his characteristic consideration and prudence to encounter. This originated in a disposition in the army to resist disbandment, until its services were expressly remunerated. Happily his weight, character, and salutary influence ultimately produced a unanimous declaration on the part of the officers to trust their cause to congress, and the forces were quietly disbanded in November 1783. In the same month he made his public entry into New York, and soon after took a solemn leave of his officers, the scene of which is described as equally tender and dignified. His manly demeanour, softened by sensibility, filled every eye with tears, and after grasping the hand of each in silence, he proceeded to the place of embarkation, followed by the officers in mute and silent procession. On entering the barge, he waved a last adieu with his hat to his companions in arms, many of whom answered with their tears, and the whole kept their eyes upon him until he was no longer distinguishable. On his way to Annapolis, then the seat of congress, he delivered to the comptroller of Philadelphia an account of all the public money which he had received while in arms, amounting in eight years to less than 16,000*l.*, nothing being charged for personal services. He then proceeded to congress, which received him as the greatest and best citizen of America, and after a suitable address he resigned his commission into the hands of the president, who energetically expressed the national sense of his great talents. Such were the feelings of public gratitude towards him, he could have asked nothing that would not have been granted; but making no sort of request, either for himself, family, or relatives, he limited himself to an indirect recommendation to congress of some young officers without fortune, who had served him as aides-de-camp, and hastening to Mount Vernon, quietly descended into private life. The patriotism of this estimable character would not however allow him to confine his attention exclusively to his own property; besides attending to an improved system of general agriculture, he was the zealous promoter of an extended plan of inland navigation. The legislature of Virginia not only engaged in the works that he recommended, but passed an act to vest in him 150 valuable shares in the navigation of the rivers James and Potomack, as a testimony of gratitude for his exertions. These however he would only accept on condition of appropriating the proceeds to the establishment of a seminary of learning in the vicinity of

each river; as it was reasonable to expect, the period succeeding the peace with Great Britain, was one of much confusion, arising out of the democratic jealousy and opposing interests of the different states. No one felt the mischief and danger of such a state of things continuing more than Washington, who was indefatigable in furthering his sentiments from his retirement, to the leading men throughout the Union. The result of these and correspondent exertions was a general convention, in order to revise and settle the federal government, which assembled at Philadelphia in May 1787, general Washington being unanimously chosen president. Their labours were completed in the September of the same year, and the result was the recommendation of a new form of federal government, by which ample powers were given to congress, without recurrence to the consent of each particular state, for national acts. The plan was submitted to a convention of delegates in each state, and its merits were warmly discussed in writings and speeches, in which Washington took no part, wisely wishing the final decision to appear as much as possible the act of the people. The constitution having been accepted by eleven of the states, their next task was to choose a chief, and Washington was unanimously elected the first president of the United States of America. This honour was officially announced to him on April 14, 1789, and without delay he set out for New York, receiving on his way addresses of congratulation, and all manner of tokens of public respect and esteem. The difficulties at this time pressing upon the American states were very great. An empty treasury, with large demands upon it; divisions in relation to the new constitution, which two of the states had refused to accept; disputes with Great Britain; interfering claims of Spain, in regard to the Mississippi; restricted trade; and hostilities with the Indians, formed a mass of public evil which it was no easy task to surmount. All these, however, the new president, assisted by the ablest men in the country as coadjutors, was enabled gradually to overcome. He made a peace in 1790 with the Creek Indians; obtained the free navigation of the Mississippi from Spain; and in 1794 settled the differences with Great Britain, by a treaty signed in London, an agreement which had been much impeded by the intrigues of the French republican resident, Genet. Calm and wise in his love of freedom, the president did not hesitate to risk some unpopularity in checking the current of animosity against England, and of predilection for France, which marked this era in America; and even exercised his prerogative in refusing to communicate to the house of representatives the treaty with the former country. At length, having steered the country during an unquiet period of eight years, being then sixty six, he declined re-election to his high office. He announced this intention in a long address to the people of the United States, replete with the most excellent advice for their future conduct, and with the

sondest views of their political state. There was no point on which he more enlarged in his parting counsel, than the impolicy of entering into the political intrigues of foreign countries, and of indulging a spirit of favoritism towards particular nations; and upon the whole, although many state papers may have shown greater eloquence and force of genius, none ever displayed more wisdom, ingenuousness, honesty, and fervent affection for country and for mankind. It was in the beginning of 1797 that he resigned his authority to his successor, Mr Adams; and although the stirring nature of the times had latterly given rise to no small portion of party enmity, a few party zealots excepted, he received on this occasion abundant proofs of continued esteem and affection from the whole Union. He returned with joy to the comforts of domestic life, from which however he was recalled the following year, and once more nominated to the command of the armies of the United States, in consequence of some aggressions on the part of France, which called for defensive preparations. These were however rendered unnecessary by the fall of the Directory, and an accommodation with Buonaparte. The life of this great and valuable man did not long outlast the period of his services, but yielded to an inflammation of the windpipe, produced by cold, after an illness of only thirty-five hours, on the 14th of December, 1799, in the sixty-eighth year of his age. He left a widow, but no issue; and honours of every kind were paid to his memory by his grateful country. It has been said of general Washington, "that the whole range of history does not present a character on which posterity can dwell with such entire and unmingled admiration." With the exception of some occasional strictures on his military severity to major André, and the ultra democratic censure originating in party spirit towards the close of his career, every order of testimony unites in praise of the public character of this great man, in whom the moral and intellectual qualities were so happily blended, that while capable of the most strong and decisive measures when necessary, they were uniformly tempered with the moderation and lenity which flow from unaffected humanity and general benevolence. Equally inaccessible to the flat-teries of life, or the suggestions of despondency, he held on his firm, patriotic, and disinterested career, under all fortunes, with unvarying consistency. In the character of his intellect, judgment and good sense predominated, to the exclusion of fancy or vivacity, to which he made no pretension. It was however a proof of a strong power of acquisition, that, with a very scanty education, he became master of an English style at once pure, elegant, and energetic; and few better specimens of public addresses can be shown, than those which are the products of his pen. With more brilliant characters the pages of history frequently abound, but with few which claim from unbiassed reason a more exalted respect than that of Washington.—*Ramsey and Brose Dict.*—Vol. III.

Marshall's Lines of Washington. Aikin's Gen. Biog.

WASSE (JOSEPH) an ingenious scholar, a native of the county of York, born in 1672, and educated at Queen's college, Cambridge, where he graduated as B.D. in 1707. He is known as the author of several literary articles to be found in the Transactions of the Royal Society, and as the editor of Sallust's works. Kuster and Duker were also indebted to him for assistance in their editions of Suidas and Thucydides. His death took place in 1738, at Aynhoe, Northants, of which parish he had been many years incumbent.—*Nichols's Lit. Anec.*

WATELET (CLAUDE HENRY) a French writer of eminence on the fine arts and the belles lettres. He held the office of a receiver-general of the finances; and he was a member of the French academy, and of several foreign learned societies. He died at Paris, January 13, 1786, aged sixty-eight. He published in 1760 a poem "Sur l'Art de Peindre," which was translated into German; and he was the author of several other works, the most important of which is the Dictionary of Painting, Sculpture, and Engraving, forming part of the Encyclopédie Méthodique.—*Dict. Hist.*

WATERHOUSE (EDWARD) a writer on heraldry and on miscellaneous subjects, was born in 1619. He received a learned education, and resided some time at Oxford for the sake of the Bodleian library. In 1668 he was chosen a member of the Royal Society, and although a man of good fortune, he afterwards entered into orders. He died in 1670, aged fifty. He was author of the following works, some of which are much sought for by collectors: "An Apology for Learning and Learned Men," 1653, 8vo; "Piety, Policy, and Charity of Elder Times and Christians," 1655, 12mo; "A Defence of Arms and Armoury," 1660, 8vo; "Portescutus Illustratus, or a Commentary on Sir John Fortescue De Laudibus Legum Angliæ," 1663, folio.—*Gent. Mag. Athen. Oxon.*

WATERLAND (DANIEL) a learned English divine, and writer on controversial theology. He was born in 1683, at Wasely in Lincolnshire, of which place his father was rector; and he was educated at Lincoln free-school, and Magdalen college, Cambridge. In 1704 he obtained a fellowship, and taking the degree of MA. in 1706, he became distinguished as a private tutor. He was appointed master of his college in 1713, and presented to the rectory of Ellingham in Norfolk. He was subsequently made chaplain in ordinary to George I; and in 1717 he received the royal nomination to the degree of DD. His future preferments were the united rectories of St Austin and St Faith, London, the chancellorship of York, the archdeaconry of Middlesex, a canonry at Windsor, and the vicarage of Twickenham. His death occurred in 1740. Among his works may be mentioned "A Vindication of Christ's Divinity," against Dr Samuel Clarke; "History of the Athana-

sian Creed;" "On the Importance of the Doctrine of the Trinity;" and Sermons at lady Moyer's Lecture. Among the literary opponents of Dr Waterland were Whitby, Conyers Middleton, Sykes, Hoadly, and Dr M. Tindal. It should be mentioned, to the honour of this sturdy polemic, that though a zealous defender of orthodoxy, he did not display that uncharitableness and illiberality which the advocates for established systems of faith too often exhibit in their treatment of those who dissent from their opinions.—*Biog. Brit. Seed's Fun. Sermon.*

WATSON (RICHARD) a celebrated English prelate, born at the village of Heversham in Westmoreland, in 1737. His father was a clergyman, and master of a free grammar-school, where the son received his early education. In 1754 he became a sizar of Trinity college, Cambridge, where he was distinguished for his intense application to study, and for the singularity of his dress, which consisted of a coarse mottled Westmoreland coat, and blue yarn stockings. He regularly took his degrees, and became a college tutor, and in 1760 he obtained a fellowship. In 1764 he was elected professor of chemistry, when he first applied himself to the study of that science, and with great success, as appears from the five volumes of "Chemical Essays" which he subsequently published. On the death of Dr Rutherford, in 1771, he succeeded him as regius professor of divinity. He early distinguished himself by a display of his political opinions, in a sermon preached before the university on the anniversary of the Revolution, which was printed, under the title of "The Principles of the Revolution Vindicated." This discourse excited a degree of public attention, only exceeded by Hoadly's celebrated sermon on the Kingdom of Christ. A short time previous to this exhibition of his politics, Dr Watson appeared with advantage in the field of controversy as the opponent of Gibbon, to whom he addressed a series of letters, entitled "An Apology for Christianity." The patronage of the duke of Rutland was exerted to obtain his promotion to the see of Llandaff, where he succeeded bishop Barrington in 1782; and he was permitted to hold at the same time the archdeaconry of Ely, his professorship, and other ecclesiastical preferments. Shortly after, he addressed to the archbishop of Canterbury a letter containing a project for equalizing the value of church benefices. In 1785 he published a collection of "Theological Tracts," selected from various authors, with additions, in 6 vols. 8vo. The following year he experienced a large addition to his income by the bequest of a valuable estate from Mr Luther, of Ongar in Essex, who had been one of his pupils at Cambridge. During the illness of the late king in 1788, the bishopric of St Asaph became vacant by the death of Dr Shipley, when bishop Watson, in a speech in the house of Lords, strongly defended the right of the prince of Wales to the regency, in opposition to the doctrine maintained by Mr Pitt. If his

conduct on this occasion arose from interested motives, he was disappointed; for the unexpected recovery of his majesty left the advocates for the prince regent little to hope for from the royal favour, and Dr Watson never obtained any farther promotion. In 1796 the bishop appeared a second time as the defender of revealed religion, in his "Apology for the Bible," designed as an answer to Paine's Age of Reason. In 1798 he published "An Address to the People of Great Britain," in which he animadverted on the danger which threatened this country, in common with other parts of Europe, from the influence of those principles which had occasioned the Revolution in France. Gilbert Wakefield having published a reply to this address, was prosecuted for sedition, and sentenced to imprisonment; but in the proceedings against him bishop Watson took no part whatsoever. Though he always continued to be the advocate for liberality, both in politics and religion, yet the fervour of his feelings became somewhat abated towards the close of his life, and his fears from the ascendancy of French principles were strongly expressed in a publication which he issued under the title of "The Substance of a Speech intended to have been spoken in the House of Lords, November 22, 1803." The latter part of his life was chiefly spent in retirement at Calgarth-park, a seat delightfully situated near the lakes of his native county, where he amused himself with making extensive plantations of timber trees. He died at that place, July 4, 1816. Besides the works already mentioned, he published several papers in the Philosophical Transactions; Sermons; and Theological Essays: and after his death his autobiographical memoirs were edited by his son.—*Univ. Mag. Rees's Cyclop.*

WATSON, LL.D. (ROBERT) a native of St Andrew's in Scotland, who studied at the university there, and afterwards at Glasgow and Edinburgh. He adopted the ecclesiastical profession, and became a preacher; but after having delivered lectures on rhetoric and the principles of composition at Edinburgh, he obtained the professorship of logic at St Andrew's, to which was added, by royal patent, those of rhetoric and the belles lettres. On the death of principal Tulideph, Dr Watson succeeded him, through the interest of the earl of Kinnoul. He did not survive this appointment many years, dying in 1780. He published the history of Philip II of Spain, which work was so favourably received, that he was encouraged to undertake the history of Philip III, which being left imperfect at his death, it was completed and published by Dr William Thomson.—*Encyc. Brit.*

WATSON (sir WILLIAM) an eminent physician and natural philosopher, born in London in 1715. He was educated at Merchant Tailors' school, and then studied pharmacy, and engaged in practice as an apothecary. His researches into physical science procured him admission into the Royal Society; and having been honoured with the diploma of MD. from two German universities, he practised as a

physician. In 1762 he was elected physician to the Foundling hospital; he became a fellow of the Royal College of Physicians in 1784; and two years after he was knighted. He made some electrical discoveries, for which he was rewarded with the Copleian medal by the Royal Society; and he published, in the *Philosophical Transactions*, "An Account of the Blue Shark." He was likewise the author of "An Account of Experiments on Inoculating for the Small-Pox;" and a treatise "On Time," 1785, 8vo. Botany was also one of the favourite pursuits of sir W. Watson; and he was one of the trustees of the British Museum. His death took place May 10, 1787.—*Pulteney's Sketches of the Prog. of Botany in Eng. Reuss.*

WATT (JAMES) a distinguished cultivator of natural philosophy and the kindred arts and sciences, who, especially by his improvements in the steam-engine, has gained a high degree of celebrity. He was the son of a tradesman, and was born in 1736, at Greenock in Scotland. He was brought up to the occupation of a mathematical instrument maker, and in that capacity became attached to the university of Glasgow, in which he had apartments, where he resided till 1763; at which time, having entered into the married state, he settled in business for himself in the city. In 1764 he conceived the idea of improving the steam-engine, and having carried it into effect, he acquired so much reputation for knowledge of mechanics, as induced him to adopt the profession of a civil engineer, and he was frequently employed in making surveys for canals and other undertakings. To facilitate his labours he invented a new micrometer, and likewise a machine for making drawings in perspective. In 1774 he quitted Glasgow to remove to the vicinity of Birmingham, where he entered into partnership with Mr Boulton, in conjunction with whom he carried on his improvements in the steam-engine, which he brought to a high degree of perfection. Here he became associated with Dr Priestley and other philosophical experimentalists; and he shared in the chemical researches which they prosecuted with so much success. He was admitted a fellow of the Royal Society, to whose *Transactions* he contributed an interesting paper, entitled "Thoughts on the constituent Parts of Water, and of dephlogisticated Air, with an Account of some Experiments on that Subject;" and another "On a new Method of preparing a Test-liquor to show the Presence of Acids and Alkalies in Chemical Mixtures." Mr Watt was also a fellow of the Royal Society of Edinburgh; and in 1806 he received from the university of Glasgow, the honorary degree of LL.D, as a tribute to his merit as a successful labourer in the cause of science. Various inventions of great practical utility originated from his ingenuity, among which may be mentioned a polygraph or copying-machine. His death took place Aug. 25, 1819.—*Gent. Mag. Ann. Biog.*

WATTEAU (ANTOINE) a painter of great

merit, talents, and industry, born in 1684, at Valenciennes. His parents, who filled a very humble situation in life, with difficulty contrived to give him the instructions of a very inferior master in the country, who qualified him for the situation of a scene-painter at the Parisian opera. The genius of Watteau, however, soon carried him beyond the lowly sphere to which he appeared to have been condemned; and at length, without any further assistance, he was fortunate enough to produce a picture which gained the prize at the academy. His subsequent rise in his profession was as rapid as well merited. The king, whose notice his performance had attracted, settled a pension on him for the purpose of enabling him to complete his study of the art in Italy. The opportunities he enjoyed at Rome, and the intimate acquaintance he formed with some of the best works of Rubens and Vandyck, whose style he afterwards more especially imitated, rescued him entirely from the disadvantages which his early penury had thrown in his way, and obtained him a great reputation, particularly for his conversational pieces, in which his heads and the attitudes of his figures are highly admired. From Rome he came over to this country, and was much noticed during the year he passed in it; but the incessant application with which he devoted himself to his easel had already begun to make formidable inroads on a constitution naturally weak; and although he succeeded in returning to France, he did not long survive, dying at Nogent, in the neighbourhood of the capital, in 1721.—*Pilkington.*

WATTS (ISAAC) a nonconformist divine, eminently distinguished for his learning and piety. He was born at Southampton in 1674, and after being educated there, under a clergyman of the established church, he removed, at the age of sixteen, to an academy for dissenters, in London, kept by the rev. Thomas Rowe. After pursuing his studies five years with great credit and advantage, he returned to Southampton, and remained two years at home, employed in the farther cultivation of his talents. In 1696 he became tutor to the son of sir John Hartopp, at Stoke Newington, near London; and in 1702 he succeeded Dr Isaac Chauncy (to whom he had previously been assistant) as minister of a dissenting congregation in the metropolis. An attack of fever in 1712 obliged him to relinquish for a time his pastoral duties, when he obtained an asylum at the house of sir T. Abney, a London alderman at Newington; and there he resided during the remainder of his life. His literary reputation became greatly extended by numerous works which he produced, not only on subjects immediately connected with his profession, but also on several branches of science and letters; in consequence of which he received diplomas of DD. from the universities of Aberdeen and Edinburgh: and he was generally respected by the friends of learning and virtue of all denominations. He died November 25, 1748. Among his works are "Lyric Poems;" "Psalms," and "Hymns;"

' Sermons ;' " Philosophical Essays ;" " A Discourse on Education ;" " An Elementary Treatise on Astronomy and Geography ;" " A Brief Scheme of Ontology ;" " Logic ;" and a valuable supplement to it, entitled " The Improvement of the Mind ;" besides theological tracts, and various controversial pieces.—*Johnson's Lives of the Poets. Aikin's Gen. Biog.*

WAY (GREGORY LEWIS) an English poet, born in 1756. He deserves to be noticed for having contributed to excite a taste in this country for the chivalric romances of the middle ages. His death took place April 26, 1799 ; and in the following year was published " Fabliaux, or Tales, abridged from French MSS. of the twelfth and thirteenth Centuries, by M. Legrand, selected and translated into English verse, by G. L. Way, with a Preface, Notes, and Appendix, by George Ellis," 2 vols. 8vo.—*Reuss.*

WAYNFLETE (WILLIAM of) an eminent English prelate of the fifteenth century. He derived the name by which he is distinguished from his birthplace, Waynflete in Lincolnshire, his family name being Patten. He became provost of Eton college, and in 1447 he was raised to the see of Winchester, and he also held the office of lord chancellor. He died in 1486. This bishop is noted as the munificent founder of Magdalen college, Oxford.—*Fuller's Church Hist.—Chalmers's Hist. of Oxford Univ.*

WEBB (DANIEL) an ingenious writer, born at Maidstown, in the county of Limerick, in Ireland. The publications by which he distinguished himself are " An Enquiry into the Beauties of Painting," 1760, which was translated into German ; " Some Reasons for thinking that the Greek Language was borrowed from the Chinese, in Notes on the Grammatica Sinica of Fourmont," 1787, 8vo ; and " Miscellanies," including his former productions, with pieces of poetry and other additions, 1802, 4to. He died at Bath, August 2, 1798.—*Gent. Mag.*

WEBB (PHILIP CARTERET) the name of an attorney of the last century, eminent both as a constitutional lawyer of great reading and experience and as a sound antiquary. He was born in 1700, and made his first appearance in quality of an author in 1747, when he produced a professional treatise on the proceedings and practice of the high court of admiralty. A strong predilection for the study of antiquities, more especially of those of his native country, caused him to take a very prominent part in the organization of the Antiquarian Society in 1751, while his professional abilities rendered his assistance very valuable in drawing up and procuring the ratification of their charter. Of this society he was one of the original members, and several papers of his composition are preserved among their transactions. In 1754 he obtained a seat in parliament for the borough of Haslemere, in the neighbourhood of which his residence was situate, and soon after, through the patronage of the earl of Hardwicke, was appointed one

of the joint solicitors to the treasury and a secretary of bankrupts ; notwithstanding which he took the popular side of the question in the memorable contest between the government and John Wilkes, and even wrote against ministers on the illegality of general warrants. His other writings consist of a curious " Account of Domesday Book ;" " An Account of a Tablet of Copper discovered in the Bay of Tarentum," the subject of which he presented to the king of Spain ; " A Short Account of Danegeld ;" and a reply to bishop Warburton on the Divine Legation, &c. He was a great collector of objects of curiosity, as well in scarce literary productions as in articles of virtu, all of which were brought to the hammer and dispersed after his decease in 1770.—*Nichols's Lit. Anec.*

WEBBE (SAMUEL) one of the most eminent English musicians and composers (especially of glees) of the last century. He was born in 1740 of a respectable family, his father holding an official situation under government in the island of Minorca, where he died ; and the succession to his property being litigated, the circumstances of his widow were so reduced, that she was compelled to bind her son apprentice to a cabinet-maker. The expiration of his indentures however having released him from a business he disliked, young Webbe turned his attention to music, of which he was passionately fond, as a profession, employing the time he did not absolutely devote to the acquisition of the science with the most unwearied industry to the study of languages. Thus by his own unassisted efforts he contrived to acquire a tolerable acquaintance with the Latin classics, as well as with the French, Italian, and German tongues ; and is even said to have had some slight knowledge of Hebrew. His glees and part songs, which have been collected and published in three large volumes, are above a hundred in number, many of which regularly acquired the Glee Club prize medals, till the time of the discontinuance of those rewards of genius, and still enjoy at least as high a reputation as those of any other composer. His death took place May 25, 1816, in his seventy-sixth year.—*Bug. Dict. of Mus.*

WEBER (GEORGE HENRY) a German naturalist, who was professor of medicine and botany in the university of Kiel. He was distinguished for his acquaintance with cryptogamic botany, and was the author of " Spicilium Floræ Gottingensis Plantas imprimis Cryptogamicas Hercyniæ illustrans," Gothe, 1778, 8vo, a classical work in the department of science to which it relates. His death took place in 1786, at the age of thirty-five. Schreber bestowed the name of Webera on a genus of East Indian evergreen shrubs, in commemoration of this botanist.—*Rees's Cyclop.*

WEBER (CARL MARIA von) one of the most original and talented composers of the German school since the time of Mozart, born of a respectable family at Eutin, a small town in Holstein, December 16, 1786. He was the younger of two sons, and as well as his brother

ther Edmund, afterwards director of the opera at Salzburg, displayed at a very early age an unconquerable attachment to music. The easy circumstances of his father enabled him to give his children a liberal education, and the peculiar bent of his younger son's genius being discovered, every facility was afforded to its due cultivation, by his being placed under Heuschkel of Hilburghausen, an eminent musician, and an able though severe instructor. As he advanced in years he farther benefited by the lessons of Michael Haydn and Kalcher, to the latter of whom he was especially indebted for his proficiency in the theory of music, while Valesi subsequently taught him singing at Munich. His first production, six fugues in four parts, published in 1798, was well spoken of by the Musical Gazette, as a composition of great promise. This was immediately succeeded by an opera, entitled "The Power of Love and Wine;" and some other pieces, which the maturer judgment of the author committed to the flames. In the following year his musical studies suffered some interruption from the success of Sennefelder, in the newly invented art of lithography. Weber fancied that he could improve upon the original method, and prevailed on his father to remove with him to Freiburg in Saxony, for the more conveniently carrying on his new pursuit; and from the ardour with which he at first followed it up, the world (to use the words of one of his biographers) "was on the point of obtaining perhaps a bad engraver in exchange for an admirable musician." Fortunately the comparative tediousness of lithography soon disgusted him, and returning with added vigour to the study of composition, he produced in the November of 1800, his opera "Das Waldmädchen," which met with great success at Prague, Vienna, and Petersburg, and was afterwards recast by him at Carlsruhe, under the name of "Silvana." "Peter Schmoll," his next production, was a failure, although his master Haydn speaks in high terms of the overture. In 1802 he occupied himself in making a professional tour through many of the great German cities, in the course of which he completed and published his "Analysis of the Vogler's 12 Chorale" of Bach. The year following he visited Vienna, where he pursued his studies with the most indefatigable perseverance under the abbé Vogler. In 1805 he accepted an invitation to be chapel master at Breslau, where he brought out his "Rubezahl," or "Number-Nip," but the breaking out of the Prussian war in the succeeding year induced him to resign his situation for a similar one under the duke of Wirtemberg. After four years spent in the service of this prince at Carlsruhe, he made a second tour through part of Germany, and at Darmstadt produced his opera of "Abon Hassan." From 1813 to 1816 he conducted the opera at Prague, where he wrote his "Preciosa," and a splendid cantata in commemoration of the battle of Waterloo, called "Kampf und Sieg," lately performed in London. At length being requested by the king of Saxony

to form a national opera at Dresden, he settled in that capital, and held the appointment of director of music to the court there until his death. The next, and perhaps the greatest effort of his genius, was his celebrated opera "Der Freischütz," still so popular in this country. This work was first produced June 21, 1821, at Berlin, where, as well as at Vienna, Stuttgart, Munich, and Dresden, it was received with a degree of enthusiasm excited by no other composition since the "Zauberflöte," and Weber at once rose by general acclaim to the head of his profession. His "Euryanthe," performed at Vienna in the autumn of 1823 did not meet with equal approbation, partly perhaps from the extravagant height to which public expectation had been raised by his previous fame, and partly from the insipidity and confusion of the plot, which was written by madame de Chezy. It is however an excellent and scientific composition. The high reputation which "Der Freischütz" had procured its author in this country, induced the managers of Covent Garden theatre to enter into a negotiation with him in 1825 to write an original opera for that theatre, and to superintend its production in person. Accordingly, early in the spring of the next year, Weber came to London, and although at that time labouring under a severe pulmonary affection, set himself in earnest about his task. It was completed, and brought out on the 12th of April, the composer himself presiding in the orchestra, on which occasion he was received with the most distinguished honours. The plot of this piece is founded on Wieland's poem of "Oberon," which name it bears, and being supported by Mr Braham and very ably by Miss Paton, with a view to whose particular powers the principal parts were composed, produced a powerful sensation, although much inferior to that created by "Der Freischütz." This opera closed his theatrical career; death was advancing with hasty strides; his debility became every day more apparent; and although he exerted himself to compose a song from Moore's Lalla Rookh, first sung by Miss Stephens, on the 26th of May, and even to appear at Miss Paton's benefit concert a few days afterwards, life ebbed apace, and he was at length found dead in his bed at the house of sir George Smart, who had hospitably entertained him during his residence in England, on the 3d of June, 1826, four days previous to the one appointed for his return to Germany. He was interred on the 21st of the same month, with the accustomed solemnities of the Roman Catholic church, in the chapel at Moorfields, attended by all the leading instrumental and vocal performers in the metropolis. In addition to the works already noticed, this eminent composer published some vocal compositions in four parts, with accompaniments for the piano-forte, as also a great number of pieces for various instruments. He is also said to have left a work in manuscript, entitled "Künstler Leben" (Lives of Artists), which contains narratives of the principal events of his own life, with observations on the most

celebrated ancient and modern composers.—*Ann. Bag.*

WEBSTER (JOHN) a dramatic poet of the seventeenth century. He was clerk of the parish of St Andrew, Holborn, and a member of the company of Merchant Tailors. His works are, "The White Devil, or the Tragedy of P. Giordano Ursini, Duke of Brachiano, with the Life and Death of Vittoria Corombona, the famous Venetian Courtesan," 1612; "The Devil's Law-Case," tragi-com. 1623; "The Duchess of Malfy," trag. 1623; "Appius and Virginia," trag. 1654; "The Thracian Wonder," comical hist. 1661; and "A Cure for a Cuckold," com. 1661. He was also the author of a pageant, exhibited in 1624 by the Tailors' company; and he assisted Dekker in writing Wyatt's History.—*Biog. Dram.*

WEDDERBURN (ALEXANDER) earl of Roselyn, a distinguished lawyer, was the eldest son of Peter Wedderburn, of Chester-hall, esq. one of the senators of the college of justice in Scotland. He was born in 1733, and bred up to the law in his native country, but early removed to the Middle Temple, by which Society he was called to the bar in 1757. He rapidly acquired reputation, and also obtained the patronage of the earls of Bute and Mansfield. He was appointed solicitor-general in 1771, in which office he gave an offence to Franklin, in arguing before the privy council on American affairs, which that distinguished person never either forgot or forgave. In 1778 he was made attorney-general, and in 1780 chief justice of the Common Pleas, with the title of lord Loughborough. He adhered to the party of Mr Fox when Mr Pitt first came into power; but joined the administration, with many others, under the alarm produced by the French Revolution in 1793, when he succeeded lord Thurlow as chancellor, which high office he held until 1801, when he retired with the title of earl of Roselyn. As a lawyer, he was able, plausible, subtle, and eloquent; but as a politician, rather a partizan than a statesman, but very serviceable to the side which he espoused. He died without issue, January 3, 1805. Lord Roselyn wrote a work on the management of prisons, published in 1793.—*Brit. Peerage.*

WEDEL (GEORGE WOLFGANG) an eminent physician and copious writer, born at Golsau in Lusatia in 1645. He studied at Jena, where he took the degree of MD. in 1667; after which he entered on professional practice at Gotha. He soon removed to Jena, to become professor of medicine, which station he occupied with high reputation for nearly fifty years. To great skill as a physician he added considerable knowledge of mathematics and philology, as well as of the Oriental and classical languages. He was a member of the Academia Naturæ Curiosorum and the Royal Society of Berlin, physician to several German princes, a count palatine, and an imperial counsellor. He died in 1721. Besides numerous academical dissertations he was the author of "Opiologia;" "Pharmacia in Artis

Formam redacta;" "De Medicamentorum Facultatibus cognoscendis et applicandis;" "De Morbis Infantum;" and "Exercitationes Medico-Philologicae." Wedel is chiefly celebrated for his pharmaceutical science, and the elegance of his prescriptions, so that many of his formulæ have been adapted in dispensatories.—*Eloy Dict. H. de la Med. Rees's Cycl.*

WEDGWOOD (JOSIAH) an ingenious improver of the English pottery manufacture. He was born in July 1730, and was the younger son of a potter, to whose business he succeeded. He almost immediately distinguished himself by his discoveries of new species of earthenware and porcelain, as well as by the taste and fancy displayed in the forms and decorations of the various results of his ingenuity. So important was the result, that in a very few years he turned the current of importation of the finer earthenwares into that of exportation. In 1763 he obtained a patent for a new species of ware, which received the name of queen's ware, and continuing his experimental researches, added six more different species of ware to the English manufacture. His ingenuity was not altogether confined to his own business, being versed in several branches of natural philosophy, and in particular he invented a thermometer for measuring the higher degrees of heat employed in the various arts. He was also the proposer of the Grand Trunk canal uniting the Trent and Mersey, and subsequently communicating with the Severn and the Grand Junction canal. To this navigation, which was of the greatest benefit to the pottery district, he added a turnpike-road, ten miles in length, which gave still greater facilities to that extensive branch of manufacture. His own pottery was near Newcastle-under-Lime, in Staffordshire, where he built a village, which he called Etruria. In 1786 he was the promoter of an association in London, denominated "The General Chamber of the Manufactures of Great Britain," and he much distinguished himself by opposing Mr Pitt's proposition for adjusting the commercial intercourse between Great Britain and Ireland. His death took place January 3, 1795, in his sixty-fourth year. To great public spirit and an ever open hand in the distribution of the large fortune which he acquired by his spirit and enterprise, in beneficial objects and institutions, Mr Wedgwood united great private benevolence, and was a benefactor to the poor in the most enlarged sense of the term. He was a member of the Royal and Antiquarian societies.—*Gent. Mag.*

WEENINX (JOHN BAPTIST) an artist of the Flemish school of painting, a native of Amsterdam, born there in 1621. He was a scholar of Bloemaert, whose style he imitated, and attained to considerable eminence, both as an historical and portrait painter, besides producing some good landscape pieces. Weenix resided principally at Utrecht, where he died at the age of thirty-nine.—*Nouv. Dict. Hist.*

WEEVER (JOHN) whose name is also spelt Weaver, was born in the palatinate of

Lancaster, about the year 1576, and received a classical education at Queen's college, Cambridge, where he imbibed so strong a passion for the study of antiquities, that as soon as he had completed the usual course of academical learning, he set out for the continent for the avowed purpose of acquainting himself more thoroughly with the yet subsisting remains of the classic ages. On his return he visited most of those parts of the United Kingdom which contain any vestiges of the works of our own ancestors, which he was indefatigable in hunting out. His "Antient Funeral Monuments of Great Britain, Ireland, and the adjacent Islands," first printed in folio, 1631, and afterwards in quarto, 1766, though occasionally inaccurate, is a highly useful treatise, and exhibits the perseverance and industry of its author in a remarkable degree, and has been often referred to by the historian. This laborious antiquary resided during the latter part of his life in the metropolis, where he died in 1632, and was interred at Clerkenwell.—*Gough's Topog.*

WEICKARD (MELCHIOR ADAM) a German physician of great eminence, who was director of the medicinal establishments in the territory of Fulda. He was an advocate for the Brunonian system of medicine, in favour of which he published several works; and he was likewise the author of one entitled "The Philosophical Physician." He died in 1803. Besides an autobiographical memoir, which he published himself, he also composed an interesting history of his life, entitled "Denkwürdigkeiten seines Lebens," intended for posthumous publication, and distinguished by a greater degree of freedom and unreservedness than the former production.—*Zopf Hist. Univ. Month. Mag.*

WEIDLER (JOHN FREDERICK) an eminent mathematical writer, who belonged to the university of Wittenberg. In 1741 he published "Historia Astronomiæ, sive de Ortu et Progressu Astronomiæ Liber sing." Vitemb. 4to; and this learned work was followed by "Institutiones Astronomiæ selectis Observationum et Calculorum Exemplis illustratæ," 1754, 4to; and "Bibliographia Astronomica Temporis quo Libri vel compositi vel editi sunt, ordine observato, ad supplendam et illustrandam Astronomiæ Historiam digesta," 1755, 8vo.—*Saxii Onomast. Lit.*

WEIGEL (CHRISTIAN EHRENFRIED) a German physician, distinguished for his researches concerning chemistry and the natural history of vegetables. He was professor of chemistry in the university of Gripswald in Upper Saxony; and his reputation as a profoundly learned practical botanist rests chiefly on his "Observationes Botaniciæ," published as an inaugural dissertation under his presidency in 1772. He was a correspondent of Linnæus; and he is commemorated by Thunberg, who bestowed the appellation of Weigelia on a Japanese genus of plants. Besides some works in the German language, he was the author of "Flora Pomerano-Rugica, exhibens Plantas per Pomeraniam, anteriorem

Suecicam et Rugiam sponte nascentes," Berol. 1769, 8vo; and "Observationes Chemicæ et Mineralogicæ," p. ii. Gotting. et Gryph. 1771, 1773, 4to.—*Rees's Cyclop.*

WEIGEL (ERHARD) an eminent mathematician of the seventeenth century, who was educated at Halle and Leipsic. In 1653 he became professor of mathematics at Jena; and having gained the favour of William duke of Saxony, whom he instructed in astronomy, he was appointed mathematician to the court and chief director of buildings. He laboured with great diligence in improving the calendar, and invented many curious instruments for facilitating the study of astronomy. The latter years of his life were spent chiefly in travelling, and he died in 1699, aged seventy-four. Among his works, which are very numerous, may be mentioned "Geoscopia Selenitarum," 1654, 4to, describing the appearances of the earth as seen from the moon; and "Pancosmus sive Machina totius Mundi superioris Phænomena velut ad vivum exprimens," 1671, folio.—*Aikin's Gen. Biog.*

WEIMAR (ANNA AMELIA, duchess of) a German princess, highly distinguished for her talents and virtues, whose patronage was powerfully exerted for the improvement of taste and learning among her countrymen. She was the daughter of the duke of Brunswick, and the niece of Frederick II of Prussia, and her birth took place October 24, 1739. At the age of seventeen she was married to the duke of Weimar, who left her a widow, after a union of about two years. The commencement of the seven years' war which then took place rendered her situation peculiarly embarrassing, as, while herself a minor, she was called to the guardianship of her infant son, the sovereign of the little state over which she presided. To add to her difficulties, she found herself obliged, as a princess of the empire, to take part against her uncle, the great Frederick. But he treated her personally with kindness; and though her provinces suffered severely, they were preserved from absolute ruin. When peace was established, she directed her cares to the education of her sons, and the public affairs of the duchy. Her regency was attended with great advantages to the country. In the administration of justice, the management of the revenue, in public establishments, she was alike sedulous; and under her fostering patronage a new spirit sprang up among her people, and diffused its influence over the north of Germany. Foreigners of distinction, artists and men of learning, were attracted to her court, either as visitors or fixed residents. The use of a large library was given to the public; a new theatre was erected, and provision was made for the improved education of youth. The university of Jena underwent a revision, and the liberality of the princess was exerted in modifying and extending the establishment. She delighted in the society of men of talents and literature, and succeeded in drawing within the circle of her court many individuals of high celebrity, among whom were Wieland,

Goethe, Schiller, and Herder. In 1778 she took a journey to Italy, partly with a view to the restoration of her health, which had suffered from a recent severe attack of illness; but she also anticipated great gratification from the study of those arts to which she had always been attached, especially music, with which she was intimately acquainted. The conclusion of her life was clouded by misfortune; and the deaths of several of her relatives, the ruin of royal houses with which she was connected, and the miseries occasioned by the French invasion of Germany, contributed to embitter the last moments of her existence. She died in April 1807, and was interred on the 19th of that month at Weimar.—*Athenæum*, vol. ii.

WEIMAR (BERNARD, duke of) a distinguished officer of the seventeenth century. He was descended from a branch of the electoral house of Saxony, dispossessed of its privileges by Charles V. His hatred of the house of Austria induced him to take arms under Gustavus Adolphus. He lost the battle of Nordlingen; but being placed at the head of a powerful army by Louis XIII of France, he obtained several signal victories. He drove the imperialists out of Burgundy; and in 1638 he took Rheinsfeld, after having defeated a body of troops sent to its relief. He then besieged Brisach, of which he made himself master, and an important victory succeeded this conquest. All Alsace submitted to him; and he was on the point of gaining farther advantages, when his career was stopped by death, in July 1639.—*Nouv. Dict. Hist.*

WEISIUS (CHRISTIAN) a native of Zittau in Lusatia, where his father was a teacher of polite literature. He was born in 1642, and at the age of eighteen he was sent to the university of Leipsic. While there he published two volumes of Latin poetry, under the title of "*Parerga Juvenilia*." On leaving Leipsic he became secretary to the count of Leiningen; and in 1670 he obtained the chair of politics, rhetoric, and poetry, at the college of Weissenfels, whence he removed to the presidency of the college of Zittau. He died in 1708. Among his writings are "*Ethica Christiana*;" "*Compendium Politicum*;" "*Quæstiones Politicæ*;" and various other elementary works; besides several publications in the German language.—*Moreri*, *Stollii Int. in Hist. Lit. Saxii Onomast. Lit.*

WEISSE (CHRISTIAN FELIX) a German poet and dramatist, born at Annaberg in Saxony, in 1726. He studied at the gymnasium of Altenburg, and afterwards at Leipsic, where he became acquainted with several students, who rose to eminence in the republic of letters. He concurred with Lessing in translating from the French and English pieces for the stage, and afterwards in furnishing original compositions. Having finished his education he became a private tutor in a family of distinction at Leipsic, continuing to cultivate poetry and the drama with great success. In 1761 he obtained an office in the revenue department, though he did not inter-

mit his literary occupations. Becoming the father of a family, his attention was directed to the subject of education, and in 1772 he published a collection of short tales and moral maxims, which was followed by a periodical work, called "*The Children's Friend*," which became extremely popular, and to which Berquin was indebted, not only for the plan, but also for many of the materials of his *Ami des Enfants*. In 1790 Weisse succeeded to the possession of a fine estate at Stotteritz near Leipsic, which placed his family in affluent circumstances, and afforded him a pleasant residence for the remainder of his life, which terminated in the month of December 1804. His Amazonian Songs and his Lyric Poems have been highly commended; and his dramatic productions are said to have formed an epoch in the history of the German stage. After his death appeared biographical memoirs of Weisse, written by himself.—*Aikin's Gen. Biog. Zopf Hist. Univ.*

WEITBRECHT (JOSIAH) an eminent physician and anatomist, who was professor of physiology at Petersburg, in the middle of the last century. He was also a member of the Imperial Academy of that city, and contributed many interesting papers to the acts of that society. His anatomical researches chiefly related to the ligaments of the human body, and he published an account of them, in a valuable work entitled "*Syndesmologia, sive Historia Ligamentorum Corporis Humani*," Petrop. 1742, 4to, of which a French translation, by M. Tarin, appeared in 1752.—*Eloy Dict. H. de la Med.*

WELCHMAN (EDWARD) a clergyman of the church of England, rector of Lapworth and of Solihull in Warwickshire, and archdeacon of Cardigan. He was a native of Banbury, Oxfordshire, and was educated at the university of Oxford, where he held a fellowship of Merton. Mr Welchman was a divine of considerable polemical talent, as well as a sound classical scholar, and is known as the author of "*A Defence of the English Church*;" a reply to Clarke On the Trinity; "*The Husbandman's Manual*;" and a treatise on the Thirty-nine Articles. He also superintended the publication of a new edition of Novatian in 8vo. His death took place in 1739.—*Nichols's Lit. Anec.*

WELLS, DD. (EDWARD) an able theologian, and eminent scholar, who flourished in the earlier part of the last century. He was born at Corsham in Wiltshire, in 1663, and received the rudiments of a classical education on the foundation at Westminster, whence he was in due course elected off on a Christchurch studentship to Oxford. His literary attainments gained him a high reputation at the university, and he at length obtained the Greek professorship, with the living of Cotesbach, Leicestershire. Besides entering with considerable zeal and ability into the Trinitarian controversy against Dr Clarke, Peirce, &c. he was the author of a voluminous paraphrase and commentary on the New Testament: a valuable work "*On the Geography of the*

WEL

Holy Scriptures," first printed in four, and since in two thick octavo volumes; "A Help for the right Understanding of the Divine Laws and Covenants," in 8vo; "The Young Gentleman's Mathematics," 8vo, 3 vols; and an edition of the Survey of Dionysius Periegetes, with a Latin version, London, 1708. His death took place at Cotesbach in 1727.—*Chalmers's Biog. Dict.*

WELSTED (LEONARD) an ingenious English poet, descended of a respectable Leicestershire family, but born at Abington, Northants, in 1689. He was first placed by his friends at Westminster, and afterwards, as appears from major Cleland's preface to the *Dunciad*, as well as from the "Characters of the Times," said to be written by himself, to have been a member of both universities. The interest of his friend lord Clare, afterwards duke of Newcastle, procured him early in life an official situation in the Ordnance, which he enjoyed till his death in 1747. As an author, Mr Welsted rose above mediocrity, though his genius never reached the sublime; and although he suffered from the sarcastic attacks of Pope, who gave him a place in the *Dunciad*, parodying for the occasion Denham's well known description of the river Thames; yet his talents appear to have secured him the respect and esteem of some of the most illustrious characters and brilliant wits of the age in which he lived. He produced but one dramatic composition, a comedy entitled "The Dissembled Wanton, or My Son get Money," performed in 1726, and afterwards printed. His other works consist of epistles, odes, and a variety of poems on miscellaneous subjects, the principal of which are, "The Duke of Marlborough's Arrival," folio, 1709; "To the Memory of Mr Philips," folio, 1710; odes to general Wade, the duke of Newcastle, the duke of Chandos, &c.; as well as a translation of Longinus's treatise on the Sublime, taken from the French version. There is also a small poem of considerable merit and humour, called "The Apple Pie, a Tale," erroneously attributed to Dr King, and even printed in his works, but since ascertained to have been a juvenile effusion of Mr Welsted's, written before he left Westminster.—*Life by Nichols.*

WELWOOD (THOMAS) a physician and historical writer, who was born near Edinburgh in 1652. He studied at Glasgow, whence he removed to Holland with his parents, who were obliged to flee from Scotland in consequence of being suspected as accessory to the murder of archbishop Sharp in 1679. Having completed his education at Leyden, and taken the degree of MD, he returned to England with king William at the Revolution. He was appointed one of the royal physicians for Scotland, and settling at Edinburgh, he arrived at eminence in his profession, and acquired a considerable fortune. He died in 1716. Dr Welwood was the author of "Memoirs of England from 1583 to 1688," 8vo, a work of considerable merit, though occasionally tainted with the prejudices or prepossessions of one who had been a sufferer in the civil con-

WEN

tests of the period to which his history refers.—*Hutchinson's Biog. Med.*

WENDELIN (GODFREY) a native of Brabant, who studied at Louvain, and after travelling in Italy became professor of philosophy at Digne in France, and died canon of Tournay in 1660. Besides several works on mathematics and astronomy, he published an edition of the *Salic Laws*, enriched with learned notes and a glossary, Antwerp, 1649, folio.—*Moreri. Nouv. Dict. Hist.*

WENTWORTH (sir THOMAS) earl of Strafford, an eminent minister and statesman, was the eldest son of sir William Wentworth, representative of the ancient family of that name in Yorkshire. He was born in Chancery-lane, London, April 13, 1593, and after a preliminary education, was entered of St John's college, Cambridge. On leaving the university he travelled, and on his return received the honour of knighthood, and married. The death of his father, in 1614, gave him possession of a large fortune, and he was soon after appointed *custos rotulorum* of the west riding of Yorkshire, in lieu of sir John Savile. In 1621 he was chosen representative for the county of York; and when Charles I asserted that the Commons enjoyed no rights but by royal permission, sir Thomas Wentworth, already signalized by the vigour and strength of his capacity, strenuously called upon the house to maintain that their privileges were rights by inheritance. In 1622 he lost his first wife, of the noble family of Clifford, and in 1625 married Arabella, second daughter of Holles, earl of Clare. On the convening of the new parliament in the same year, he was one of the six popular members who were prevented serving their country in that assembly by being chosen sheriffs for their respective counties. He submitted to this arbitrary act in silence; and soon after the duke of Buckingham, who began to feel some alarm at the measures taken against him in parliament, made him overtures which proved ineffectual, and the favourite revenged himself by obliging him to restore his office of *custos rotulorum* to sir John Savile, which act increased the enmity which had previously existed between them. When Charles, among other injudicious expedients for raising money, had recourse to a forced general loan, Wentworth decidedly refused to pay his contribution, and was first imprisoned in the Marshalsea, and then confined to a range of two miles round the town of Dartford. This restraint was, however, removed when it was necessary to summon a new parliament in 1628, and he again took his seat for Yorkshire, and became one of the most conspicuous advocates of the famous petition of right. Having now proved the strength of his abilities and the potency of his opposition, high terms were offered him by the court, which he finally accepted, and in 1628 was created baron Wentworth, and some months afterwards a viscount and privy counsellor, and on the resignation of lord Scrope nominated president of the North. The assassination of Buckingham soon after, freed

him from a powerful enemy at court, and he became so influential in the king's councils that his powers in the four northern counties over which he presided became enormous; and, according to Clarendon, his commission contained fifty-eight instructions, of which scarcely one did not exceed or violate the common law. In the exercise of this authority he displayed equal haughtiness, impetuosity, and ability; and by his strictness in levying exactions increased the revenue in his district to four or five times the previous amount. Having assiduously cultivated the friendship of archbishop Laud, who unhappily for the king had succeeded Buckingham in his favour, it was thought that the vigour and decision of his character would be beneficial to Ireland, and he was selected by that prelate to proceed there as lord-deputy in 1632. The particulars of his Irish administration form a subject for history. That he greatly improved the state of the country, both as regarded law, revenue, and trade, (the manufacture of linen being of his own creation), cannot be denied; but at the same time nothing could be more arbitrary than his system of government, it being his boast that he had rendered the king as absolute in Ireland "as any prince in the whole world could be." His severe and vindictive proceedings against several persons of high rank, however, it is thought, produced an influence at court which prevented him acquiring the earldom which he solicited, and gradually produced an opposition, that by the disquiet which it occasioned him, added to the cares of business, produced a dangerous illness. On the first symptoms of resistance to the royal authority, he counselled the strongest measures; and after the failure of the king's first expedition against Scotland, he was sent for from Ireland and created earl of Strafford and knight of the garter. He returned with the full title of lord lieutenant, with a view to gain subsidies and troops, in which he fully succeeded; and again repairing to England, took the command in the North, but found himself obliged to retire before the Scottish army, and retreat to York. Charles was now by his necessities obliged to call the long parliament; on which Strafford, aware of the enmity which he had inspired among the popular leaders, wished to return to his government; but the king, hoping that his great talents would be serviceable, encouraged him by a solemn promise that "not a hair of his head should be touched by parliament." His apprehensions were well founded: the very first movement of the party opposed to arbitrary power was to impeach him of high treason, with which charge Pym appeared at the bar of the house of lords, November 18, 1640. The articles of impeachment, at first nine in number, were afterwards increased to twenty-eight, the great object of which was to convict him of an attempt to subvert the fundamental laws of the country. As in the case of Laud, it was easy to prove that he acted as a friend and promoter of arbitrary measures, but not to substantiate any particular fact to justify a capital charge. Although treated with

the extreme of legal rigour, and debarred the assistance of counsel, his own great abilities and force of mind supplied every deficiency; "and never man," says Whitelock, the chairman of the impeaching committee, "acted such a part on such a theatre, with more wisdom, consistency, and eloquence, or with greater reason, judgment and temper." His defence, indeed, was so strong, that the original impeachment was deserted, for the unjustifiable proceeding of a bill of attainder. The moderate members of the house of Commons were indignant at this violation of the principles of justice, but the bill passed by a great majority; and so great was the animosity borne towards this nobleman as a popular deserter, that the house of lords was intimidated into similar compliance. His only hope was now in the king, who had imprudently endeavoured to stop the bill by his personal interference. Charles had not sufficient firmness to redeem the pledge of safety which he had previously given, but yielded to the advice of his counsellors, backed by a letter from Strafford himself, who urged him for his own safety to ratify the bill. This act has the semblance of being truly heroic, yet it is probable that he did not think that the king would have been swayed by it, since being assured of the fatal truth, he lifted his eyes to heaven, and with his hand on his heart exclaimed, "Put not your trust in princes, nor in the sons of men; for in them there is no salvation." His conduct from this time to his execution was in the highest degree composed and noble. At the scaffold he addressed the people, expressing entire resignation to his fate, and asserting the good intention of his actions, however misrepresented. He fell in the forty-ninth year of his age, lamented by some, admired by more, and leaving behind a memorable but certainly not an unspotted name. The parliament not long after his death mitigated his sentence as regarded his children, and in the succeeding reign his attainder was reversed. He married three times, and by his second wife left an only son and several daughters.—*Biog. Brit. Whitelock's Mem. Aiken's Gen. Biog.*

WEPFER (JOHN JAMES) a physician and medical writer of eminence, born in 1620, at Schaffhausen in Switzerland. He was educated at Strasburg and Basil, and after having visited several Italian universities, he took the degree of MD. at Basil in 1647. He then settled at his native place, and attained an extensive reputation, which procured him the nomination of physician to several German princes. He contributed much to the improvement of science by his dissections and experiments. In 1658 appeared his celebrated work, entitled "Observationes Anatomice ex Cadaveribus eorum quos sustulit Apoplexia, cum Exercitatione de ejus loco affecto," 8vo. In his "Epistola de Dubiis Anatomicis," 1664, 8vo. he asserts the entire glandular structure of the liver prior to Malpighi. His death took place in 1695, owing to dropsy, his constitution having been injured by the fatigue of attending on the duke of Wurtemberg

WER

and the imperial army under his command. Besides the works mentioned, he published a valuable piece entitled "*Cicutæ Aquaticæ Historia et Noxæ*," 1679, 4to; and papers in the *Ej hemerides Naturæ Curiosorum*. After his death appeared his "*Observationes Medico-Practicæ de Affectibus Capitis internis et externis*," 1727, 4to.—*Halleri Bibl. Eloy. Aikin's Gen. Biog.*

WERDENHAGEN (JOHN ANOELUS) a famous German lawyer of the seventeenth century, who was professor of jurisprudence at Helmstadt, afterwards syndic of Magdeburg, and at length privy-counsellor of the archbishop of that city. Entertaining some peculiar opinions on theology, he became engaged in controversy, and suffered the imputation of heresy; in consequence of which he thought proper to retire into Holland, where he ended his days. Among his works are "*Breviarium in Libros Bodini de Republica*," "*Verus Christianismus*," "*Psychologia Vera*," and "*De Urbibus Hanseaticis*."—*Moreri*.

WERENFELS (SAMUEL) an ingenious writer, who was the son of Peter Werenfels, archdeacon of Basil, where he was born in 1637. After completing his education he travelled in Holland, Germany, and France, and at Paris he formed an acquaintance with Malebranche, Montfaucon, and Varignon. He returned to Basil in 1702, and the following year he succeeded his father as professor of theology. In 1708 he was chosen a member of the Academy of Sciences at Berlin; and his reputation for learning procured him the correspondence of many of his illustrious contemporaries in foreign countries, and drew a multitude of students to the university to which he belonged. He died at Basil, June 1, 1740. Werenfels was the author of a famous treatise, "*De Logomachiis Eruditorum*," 1702, 8vo, reprinted in a collective edition of his works, Geneva and Lausanne, 1739, 2 vols. 4to. His sermons, composed in the French language, have been translated into German, Dutch, and English.—*Nouv. Dict. Hist.*

WERKMEISTER (ANDREAS) an eminent German composer, and writer on musical subjects, the son of a brewer at Benneckestein in Thuringia, where he was born in 1645. He received his education in the college of Quedlinburg, and afterwards accepted the situation of organist at Hasselfelde in Blankenburg. In 1674 he went to Elbingerood, being appointed organist and recorder of the town, whence he again removed to fill a similar situation at Walderstadt, and died there in 1706. He was the author of "*Orgel Probe*," printed in 1681; "*Musicæ Mathematicæ*," 1687; a treatise "*On the Use and Abuse of Music*," 1691; "*Hypomnemata Musica*," 1697; "*Cribrum Musicum*," 1700; a translation of Steffani's letters, with notes, in the same year; "*Harmonologia Musica*," 1702; and "*Musical Paradoxes*," printed after his death in 1707.—*Biog. Dict. of Mus.*

WERLHOF (PAUL GOTTLIEB) a German

WER

physician of eminence, who was nephew to Henry Meibomius, and was born at Helmstadt in 1699. He was educated at the university of his native place, where his father was professor of jurisprudence. In 1723 he published a learned dissertation, "*De Medicina sectæ Methodicæ veteris, ejusque Usu et Abusu*," Helmst. 4to. After taking his degrees he settled in practice at Hanover; and in 1729 George II appointed him his first physician in that country. He died in 1767. Among various works which he published on the practice of medicine, may be noticed his "*Observationes de Febribus præcipue Intermittentibus*," Hanov. 1732, 4to, reprinted at Venice in 1757, 8vo, in which he recommends the use of Peruvian bark in intermittents.—*Saxii Onomast. Lit. Eloy Dict. H. de la Med.*

WERNER (ABRAHAM GOTTLÖB) a celebrated mineralogist, born in Germany, September 25, 1750. His father was overseer of iron works in Upper Lusatia, and the son being intended for the same employment, he was sent, after some previous education at school, to the mineralogical academy at Freyburg. Thence he removed to Leipsic, where he applied himself to natural history and jurisprudence, but more especially to the former, which he found the most attractive. The external characters of mineral bodies attracted much of his attention; and in 1774 he published a work on that subject, considered as the basis of his cryptognostic or mineralogical system. It has been translated into various languages, and adopted and commented on by other writers; but the author could never be persuaded to publish a new and enlarged edition. Soon after this publication, Werner was invited to become keeper of the cabinet of natural history at Freyburg, and to deliver lectures on mineralogy. In 1780 he published the first part of a translation of Cronstadt's Mineralogy; and in his annotations on this work he gave the first sketch of his mineralogical system, and published many descriptions in conformity with the methods proposed in his treatise on external characters. In 1791 appeared his catalogue of the vast mineral collection of Pabst von Obaine, captain-general of the Saxon mines. Besides his lectures on mineralogy, he also delivered lectures on the art of mining, which he is said to have rendered peculiarly intelligible and interesting by his simplification of the machinery, and by drawings and figures. His system of geognosy or geology was unfolded only in his lectures; but those he caused to be written out by his approved pupils, and revising them himself, he communicated authority to their manuscripts. Many parts of these lectures have been published in different countries. Werner himself likewise published some mineralogical papers in the Miner's Journal; and in 1791 appeared his "*New Theory of the Formation of Metallic Veins*," which was translated both into French and English. He was nominated counsellor of the mines of Saxony in 1792; and he had a great share in the direction of the Academy of Mineralogy, and in the administration

for public works. The cabinet of minerals which he had collected was unrivalled for its completeness and arrangement, consisting of one hundred thousand specimens. This he sold for 40,000 crowns, reserving the interest of 33,000 as an annuity to himself and his sister, who had no children; and at her death to revert to the Mineralogical Academy of Freyburg. He died, unmarried, in August 1817. A knowledge of the Wernerian mineralogy was first introduced into this country by Kirwan; but a more complete view of it is exhibited in professor Jameson's *System of Mineralogy*, 1804, second edition, 1817. As a geologist Werner is scarcely entitled to the merit of originality, as his geognosy consisted more in the invention of a new language adapted to support a theory, than in the adduction of novel facts, or the discovery of a new and practical method of investigation. But the science of mineralogy is highly indebted to his labours; and in having given a definite and systematic arrangement of mineral bodies, showing their characteristic analogies, he has done that for the branch of natural knowledge he cultivated, which Linnaeus did for the science of botany; and thus attached a permanent celebrity to his name.—*Rees's Cyclop.*

WERNSDORF (JOHN CHRISTIAN) a German critic, who was a professor in the university of Helmstadt, where he died in 1793. He published a good edition of the "*Poetae Latini Minores*," 10 vols. 8vo.—*Zopf Hist. Univ.*

WESLEY (SAMUEL) an English divine, was the son of the rev. John Wesley, the ejected nonconformist minister of Whitchurch in Dorsetshire, where he was born in 1662. He was admitted a servitor of Exeter college, Oxford, and on taking orders obtained the living of South Ormesby in Lincolnshire, and afterwards the rectories of Epworth and Wroote. He obtained some celebrity by his poetical efforts, and published "*Maggots*," a volume of poems; "*The Life of Christ*," an heroic poem; "*The Histories of the Old and New Testament in Verse*," 3 vols. 12mo; elegies on queen Mary and archbishop Tillotson; and "*Dissertationes in Librum Jobi*," which last work did not appear till after his death in 1735.—*Nichols's Lit. Anec.*

WESLEY (SAMUEL) eldest son of the preceding, was born at Epworth about 1692. He received his education at Westminster, whence he was elected to Christchurch, Oxford, where he graduated AM. in 1718. He afterwards became a tutor in Westminster-school, and was so much attached to bishop Atterbury and the Jacobite party, that it impeded his preferment. In 1732 he was appointed master of the grammar-school at Tiverton in Devonshire, where he died in 1739. He wrote poetry with considerable feeling, and was the author of the "*Battle of the Sexes*, and other Poems," published in 1736, 4to. He was a rigid high churchman in his notions, and totally disapproved of the conduct of his brothers John and Charles.—*Ibid.*

WESLEY (JOHN) the second son of the former, and brother of the latter Samuel Wes-

ley, was born at Epworth, June 17, 1703. He received his school-education at the Charterhouse, whence he was removed to Christchurch college, Oxford. After taking his first degree, he was in 1724 elected fellow of Lincoln college, and in 1726 he graduated MA. About this time he was distinguished for his classical attainments, skill in dialectics, and no inconsiderable share of talent in poetry. Soon after he was elected fellow, he was appointed Greek lecturer, and took pupils; and in 1725 he was ordained by bishop Potter. For some time after his residence at Oxford he was only distinguished as a grave, sedate, young man, but after a while the perusal of some devotional tracts, and more especially Law's "*Serious Call*," induced him to consecrate himself more entirely to what he deemed the essentials of a holy life. In 1729 he associated with some friends of similar disposition, who met and read together the classics on week-days, and divinity on Sundays, but shortly after their meetings became exclusively religious. This society, consisting of fifteen members, who by the strictness of their manners and deportment, were variously designated by the gayer students, but more especially obtained the name of methodists, which appellation they themselves sanctioned and retained. His father wished him to make interest for the next presentation of his living of Epworth, but he was too much attached to Oxford and the manner in which he was engaged, to listen to his advice. A mission to Georgia had soon after greater attractions, and in 1735 he accepted the invitation of Dr Burton, one of the trustees for that newly-founded colony, to go over and preach to the Indians. He accordingly embarked the same year in the company of his brother Charles, two other missionaries, and several German Moravians. The disturbed state of the colony prevented all preaching to the Indians, and although the colonists of Savannah were at first attentive to the ministry of Mr Wesley, his notions were too exclusively high church for his hearers. He refused the Lord's supper to dissenters, unless they would be re-baptized, insisted upon immersion in the rite of baptism, and by a variety of ascetical practices, excited an unfavourable opinion of his judgment. What most injured his reputation, however, was his conduct towards a young lady, whom it was expected he would marry, and whom he refused to admit to communion after her marriage with another person, without deigning to assign any reason. Legal proceedings were in consequence commenced against him, previous to the conclusion of which, after a consultation with his friends, he became convinced that "God called him to return to England;" on which he gave public notice of his intention to depart, "shook off the dust from his feet," and left Georgia after an abode of a year and nine months. On his arrival from America, he discovered that he, who had been voyaging to convert others, had never been converted himself, and he felt, as he observed, "a want of the victorious faith of more experienced Chris-

tians." This conviction appears to have been strengthened by a German Moravian missionary, with whom he much communed, until at length he taught himself to expect a sudden conversion, which by his own account occurred on the 24th of May, 1738, at a quarter before nine in the evening, while a person in a society in Aldersgate-street was reading Luther's preface to the Epistle to the Romans. The innate rationality of his character would not however leave him quietly to the influence of enthusiasm, and to strengthen his faith and quiet some occasional misgivings, he went over to Germany, and proceeded to Hernhuth, the head-quarters of the united brethren, most likely with the additional view of becoming acquainted with the discipline and organization of the Moravians. He returned in September 1738, when he commenced the systematic labours which have made him the founder of the great religious body of methodists. He began to exhort and to preach, often three or four times a day, at the prisons and other places in the metropolis, and made frequent excursions into the country, where his followers became rapidly very numerous. His discourses were often attended with the demonstration of the effect produced on the hearers, such as swoonings, outcries, convulsions, and similar results of violent internal emotion and excitement. He soon after accepted the invitation of Whitefield, who had some time before commenced the practice of field-preaching, to join him at Bristol; and in May 1739 the first stone of a methodist meeting was laid in that city. Some difficulties, which arose as to the liability of the fees, nominated in the first instance, to the expenses of erection, by inducing Mr Wesley to take it all into his own hands, laid the foundation of the unlimited power which he obtained over his followers, and which the present managing body of ministers has inherited from him. Whatever chapels were subsequently built by the connexion, were all either vested in him or in trustees bound to give admission to the pulpit as he should direct. It is thought that his original plan was to form a union of clergymen, in order to further his scheme of conversion by their joint efforts; but the dislike of ministers of the establishment to join in it, reduced him to the necessity of appointing lay preachers, and employing them as itinerants among the different societies of the persuasion. At the same time he assumed as his inalienable right the power of nominating those preachers, and thus, as the societies increased, his authority received indefinite augmentation. The opinions of Wesley being derived from the Arminian theology, differed materially from those of Whitefield on the points of unconditional election, irresistible grace, and final perseverance; in consequence of which a coldness grew up between them, and a lasting separation between the societies over which they presided. Nothing so much favoured the progress of Wesleyan methodism as the strict and orderly discipline established by the founder, commencing from the small division of classes, and ending in the annual conferences

of the numerous preachers. The whole was very wisely calculated to bind the society to each other, and to the great source of authority, in the first instance Wesley exclusively, and since his death a sort of presbytery, termed the Conference, as arising out of the annual assemblies originally so denominated. The society in its infant state had to contend with much popular hatred, sometimes fomented by persons in the upper ranks of society; but all this has gradually subsided. At the same time, as the followers of both Whitefield and Wesley were in the first instance chiefly among the uneducated classes, they were little susceptible of being affected by the ridicule heaped upon the occasional displays of enthusiasm and fanaticism by their leaders. In 1749 he married a widow of good fortune, which was however all settled upon herself; and, as his friends foresaw, the union was an unhappy one, and terminated in a final separation in 1781. On the breaking out of the American disputes, he wrote a pamphlet on the side of government, entitled "A Calm Address to the American Colonies," which produced a considerable effect, at least upon his own followers. When the contest terminated in separation, he took a step which appeared a renunciation of the principles of the episcopal church, by ordaining preachers for America, by imposition of hands, and consecrating a bishop for the methodist episcopal church. By this step he deeply offended many of the society, and especially his brother Charles; and it is asserted that he himself repented it, as likely to further that separation from the church, which after his death virtually took place. The approach of old age did not in the least abate the zeal and diligence of this extraordinary person, who was almost perpetually travelling, and whose religious services, setting aside his literary and controversial labours, were almost beyond calculation. Besides his numerous exhortations, he generally preached two sermons every day, and not unfrequently four or five, all which he was enabled to effect by very early rising and the strictest punctuality. His labours were continued to within a week of his death, which took place March 2, 1791, in the eighty-eighth year of his age. John Wesley had a countenance wherein mildness and gravity were very pleasingly blended, and which in old age appeared extremely venerable. In manners he was social, polite, and conversable, without any of the gloom and austerity that might have been expected. In the pulpit he was fluent, clear, and argumentative; often amusing, but never aiming at or reaching, like Whitefield, the eloquence of passion. His style in writing was of a similar description, and he seldom appeared heated even in controversy. His great mental characteristics were energy, and love of power, which he would never share with any one; like many correspondent characters in the Catholic world, who could not have effected what they accomplished upon any other principle. In a similar manner he mixed up no small portion of human policy in his religious sys-

WES

tem; in all which respects he has been closely followed by the governing juntos of ministers who have succeeded him, a tenacity which has produced one separation, and from appearances may eventually lead to more. That, independently of these alloys of human weakness, his objects and purposes were to benefit the best interests of mankind, it would be uncandid to dispute; and he will ever be deemed a memorable person, even by those who feel but little interest in the fortunes of the fabric of which he has apparently laid so durable a foundation. The works of John Wesley on various subjects of divinity, ecclesiastical history, sermons, biography, &c. amounted even in 1774 to 32 vols. 8vo.—CHARLES WESLEY, younger brother of the above, was born at Epworth, Dec. 18, 1708. He was educated at Westminster school and Christchurch, Oxford, where he graduated A.M. in 1732. He accompanied his brother to Georgia, and also became a preacher in the methodist connexion, for which he wrote hymns, now sung in their chapels. Some of his sermons have been printed, and his poetical compositions exceeded those of his brother, from whom he differed on various points. He left two sons, who have obtained considerable eminence as musical composers.—*Lives by Hampton, Whitehead, and Southey.*

WESELIŃG (PETER) an eminent critic, who presided over the gymnasium of Middleburg, was afterwards a professor in the university of Franeker, and at length occupied the chair of eloquence at Utrecht. Besides other works he published "Observationum Variarum Libri duo," Amsterd. 1727, 8vo; "Probabilium Liber singularis," Franecq. 1731, 8vo; "Antonini Itinerarium," Amsterd. 1735, 4to; "Dissertatio Herodotea," Traj. ad Rhen. 1758, 8vo; and a valuable edition of Herodotus, with Annotations, Amst. 1763, folio. He died in 1764, aged seventy-two.—*Saxii Onomast. Lit.*

WESELUS (JOHANNES) an eminent German scholar and philosopher of the fifteenth century, a native of Groningen, where he was born in 1419. Having made a great proficiency in classical as well as theological literature, while studying at Zwoll and Cologne, he declined taking the cowl, and according to some authorities, travelled into the Levant for the purpose of perfecting himself in the Eastern languages. Della Rovere, general of the order of St Francis, held him in great esteem; took him with him to the council of Basil, and on being elevated to the tiara by the name of Sixtus IV, sent for his old friend, and desired him to mention any request he wished to make. Weselus, with great moderation, limited his demand to the possession of a copy of the Scriptures in Hebrew, with a Greek version, which had attracted his notice in the library of the Vatican; and when the surprised pontiff inquired why he had not rather asked for some valuable piece of preferment, replied with great simplicity, "because I did not want it." The same unambitious temperament, aided perhaps by conscientious motives, as he is known to have entertained some

WES

opinions not very dissimilar to those afterwards professed by the reformers, induced him to retire from the papal court to the comparative obscurity of his native city, where he gave lectures in philology and metaphysics till his death, which took place October 4, 1489. There are two editions of his works, both incomplete, as many of his writings have perished; the one printed in 1522 at Leipsic, the other in 1614 at Groningen, in quarto.—*Freheri Theatrum.*

WEST (BENJAMIN) a celebrated painter, born in 1738, near Springfield, in the state of Pennsylvania, (N.A.) His parents were quakers, but perceiving in their son something little short of an innate propensity for the art of drawing, they had the good sense to allow him to cultivate his talents, in opposition to the rigid principles of their sect. After receiving proper instruction, he exercised the profession of a portrait painter in various parts of the United States. He then, with a view to improvement, undertook a voyage to Italy, and visited successively Florence, Leghorn, Bologna, Venice, and Rome; and passing through Savoy into France, he remained some time at Paris. In 1763 he arrived in England, where he met with such encouragement, that he took up his residence here for the remainder of his life. One of his first patrons was Dr Drummond, archbishop of York, who introduced the young American artist to his late majesty; and by order of the king he executed his picture of "The Departure of Regulus from Rome," which procured him much reputation. On the foundation of the Royal Academy of Painting in 1768, he became a member; and in 1791 he succeeded to the office of president, on the death of sir Joshua Reynolds. Among the earlier productions of his pencil, that which attracted most notice was his painting of "The Death of General Wolfe," almost universally known from the admirable engraving by Woollett. After the treaty of Amiens, Mr West visited Paris, for the purpose of taking a survey of the magnificent assemblage of works of art in the galleries of the Louvre. On this visit he experienced from the French artists and from the government a reception alike honourable to all parties; but after his return to England, he had the mortification to perceive some diminution of the royal patronage, which he had so long and so deservedly enjoyed. He however found encouragement from other quarters. The British Institution presented him with three thousand guineas for a painting of "Christ healing the Sick;" and an exhibition of some of his works was, at least in the first instance, productive of considerable profit. One of his latest great works was a representation of "Death on the pale Horse," from the Revelations. In 1817 he lost his wife, an American lady, to whom he had been united more than half a century. He survived her about three years, dying March 18, 1820, at his residence in Newman-street, London; and his corpse was splendidly interred in St Paul's cathedral.—*Ann. Biog.*

WES

WEST, LLD. (GILBERT) a learned and ingenious author, the friend of lord Lyttelton and Mr Pitt, afterwards the celebrated earl of Chatham. He was the son of Dr West, known as the editor of Pindar's works, and was born in the year 1706. Being intended by his friends for the ministry, he was sent to Eton, whence he removed to Christchurch, Oxford; but circumstances rendering it advisable for him to enter the army, he obtained a commission in a cavalry regiment. He did not however long remain in the service, retiring on his marriage to Wickham in Kent, where he devoted his time to literary pursuits and the enjoyment of the society of his noble and talented friends. The patronage of Mr Pitt at length obtained him in 1751 the situation of clerk to the privy council, he having previously held a deputy's place nearly twenty years. The treasurership to Chelsea college was afterwards added through the same interest, but although still in the prime of life, his enjoyment of this improved state of his finances was soon destroyed by domestic misfortunes. The death of an only son, which took place in 1755, rendered him reckless of the world, and his grief in consequence of this calamity at length induced a paralytic affection, which carried him off on the 26th of March in the following year. Dr West obtained his degree from the university of Oxford, as a compliment due to his merit in producing his celebrated "Observations on the Resurrection," first printed in 1747. His other writings are an original poem on the "Institution of the Order of the Garter," and a spirited translation of some of the Odes of Pindar.—*Johnson's Lives of the Poets.*

WEST (RICHARD) chancellor of Ireland, an eminent lawyer of the last century. He was a member of the society of the Temple, and in 1714 published a professional treatise of considerable ability on the law of treason. Three years afterwards he was presented with a silk gown, and in 1725 was farther promoted to the highest law dignity in the sister kingdom. Besides the work already mentioned, he was the author of an "Inquiry into the Method of creating Peers;" a tragedy entitled "Hecuba," and some Essays in a periodical work called *The Freethinker*. Lord chancellor West was by his marriage son-in-law to the celebrated bishop Burnet, and father to Mr West, the friend of Horace Walpole. He did not enjoy his high situation more than a twelvemonth, dying in the course of the year 1726.—*Chalmers's Biog. Dict.*

WEST (THOMAS) an English jesuit of the last century, born about the year 1716. He received his education on the continent, and for some years filled the professor's chair in natural philosophy, in one of the colleges there belonging to his order. On his return to England he took up his abode at Ulverstone in Lancashire, dividing his time in a great measure between that place and the seat of the Strickland family, in the neighbouring county of Westmoreland. While in this retreat he employed his leisure hours in studying the natural beauties and architectural antiquities of

WET

the vicinity, the result of which he gave to the world in an interesting "History of Furness Abbey;" "A Guide to the Lakes," &c. together with some essays on antiquarian subjects, to be found in the *Archæologia*. His death took place at Ulverstone, July 10, 1779.—*Gent. Mag.*

WESTON (ELIZABETH JANE) an English woman, distinguished for her learning and accomplishments in the sixteenth century. She was born in 1560, but quitting this country while a girl, became settled in Bohemia, where she contracted a marriage with a gentleman about the court, named Leon. She was familiar with most of the modern as well as with some of the ancient languages, and wrote Latin verse especially with great purity and elegance.—She must not be confounded with an **ELIZABETH WESTON**, who was born about the year 1672 at Edinburgh, and who acquired a considerable degree of notoriety in the earlier part of the last century, by her fanaticism and eccentricities. The death of the latter lady took place in 1735 at Saline.—*Ballard's Memoirs.*

WESTON (THOMAS) a comic actor of great merit, whose father filled the office of first cook in the royal kitchen in the reign of George II. The son received a liberal education; and being provided with some inferior offices in the king's household, he was sent to sea as a midshipman. This situation proving unpleasant, he left the service clandestinely, and went on the stage. After experiencing for a time the inconveniences of a struggling life, he procured an engagement at Foote's theatre in the Haymarket, where he at first occupied only subordinate characters. At length his performance of Jerry Sneak, in *The Mayor of Garrat* established his fame; and being engaged at Drury Lane, he played Abel Drugger, in *The Tobacconist*, during Garrick's absence in France and Italy. He subsequently performed at Covent Garden, and in parts similar to those already mentioned he was extremely successful; but ruined in his health and circumstances by dissipation, he died in distress, in January, 1776.—*Thesp. Dict.*

WESTON (WILLIAM). There were two learned English divines of this name, father and son. The elder Mr Weston presided for many years with great reputation over the foundation school at Okeham, where his son was educated under him. The latter subsequently became fellow of St John's college, Cambridge, and incumbent of the parish of Campden, Gloucestershire, for which piece of preferment he was indebted to his friend, lord Gainsborough. His "Enquiry into the Rejection of the Miracles of Christ by the Heathen World," printed in 1746, and his "Dissertation on some of the most remarkable Wonders of Antiquity," published two years afterwards, exhibit deep erudition with great antiquarian research, and are much admired. The younger Weston died in 1760.—*Gent. Mag.*

WETSTEIN, the name of a family long resident at Basil, several of the members of which were highly distinguished as scholars

and theologians. The first on record filled the professor's chair of that university in Greek and divinity, and was succeeded in both these honourable situations, by his eldest son, JOHANN RODOLPHUS WETSTEIN, born 1647. The latter, among other devotional tracts, was the author of "An Exhortation to Martyrdom," and published an edition of Origen's writings against the tenets of Marcion. His death took place at Basil in 1611.—HENRY WETSTEIN, younger brother to the above, was born in 1649, and settled at Amsterdam, where he carried on an extensive business as a printer, and published several valuable works, with notices prefixed of his own writing, which are sufficient to stamp his character as a man of considerable erudition and acuteness. He attained the age of seventy-seven, dying in 1726.—JOHN JAMES WETSTEIN, born in 1693, was the son of a third brother, and made so rapid a progress in his studies, that he is said to have graduated at Basil as a doctor in philosophy before he had reached the age of seventeen. Having entered the church, he devoted himself with uncommon ardour and perseverance to the restoration of the purity of the text of the New Testament, and in pursuance of this his favourite object, visited most of the principal libraries of France, Switzerland, Germany, and England, examining and collating their various manuscripts, with a view to confirming an argument which he had maintained with great ability at the university, "that variety of readings were no objection to the general authenticity of the text." On his return to Basil, he declared his intention of publishing a new treatise on this important subject, under the title of "Prolegomena ad Novi Testamenti Græci Editionem accuratissimam e vetustissimis Codicibus Manuscriptis de novo procurandam." This announcement excited considerable uneasiness among the German divines, who exerted themselves with such effect to procure the suppression of a work, which they feared might unsettle the received version, that the council refused to sanction or permit the publication. Wetstein in consequence removed to Holland, where he published his book in 1750, and was soon after appointed by the Remonstrants to the professorship of history and philosophy, then become vacant by the resignation of Le Clerc. In 1751-2 appeared his last work, an edition of the New Testament, in two folio volumes, with the text as generally received, and the various readings, notes, &c. below. To this he also annexed two curious epistles of Clemens Romanus, from a Syriac manuscript, with a Latin version. This learned and acute critic was a fellow of the Royal Societies of London and Berlin, and died at Amsterdam, March 24, 1754.—*Chamfepie*.

WEWITZER (RALPH) a comedian distinguished for his wit and talents, who was a native of London, where he originally followed the occupation of a jeweller, which he quitted for the precarious honours of the stage. He made his first appearance at Covent Garden theatre about 1785, as Ralph in the comic

opera of *The Maid of the Mill*. The ability which he displayed as an actor in low comedy, especially in the characters of Jews and Frenchmen, procured him much reputation. He performed at Dublin under Mr Ryder's management; and returning to Covent Garden, continued there till 1789, when he undertook the management of the *Royalty* theatre. On the failure of that concern, he procured an engagement at *Drury Lane*, and performed there and at the *Haymarket* till the close of his theatrical career. He is said to have invented some pantomimes; and he was the ostensible author or compiler of a jest-book, entitled "*The School of Wit*." He died at the age of seventy-six in 1824, in indigent circumstances, having for several years been a pensioner on the *Theatrical Fund*.—*Thesp. Dict. Ann. Reg.*

WHALLEY (PERRA) a native of Rugby in the county of Warwick, born 1722. From Merchant Tailors' school in the city of London, where he received the rudiments of a classical education, he removed on a foundation fellowship to St John's college, Oxford, where he graduated and took holy orders. Soon after he obtained the living of St Sepulchre at Northampton, and subsequently those of St Margaret Pattens, London, and Horley in the county of Sussex. In 1768 he became head master of the grammar school attached to Christ's hospital, which situation he filled eight years, and then resigned it for a similar one at St Olave's, Southwark. He was the author of "An Inquiry into the Learning of Shakespeare," 8vo; "An Essay on writing History;" an edition of Ben Jonson's works, in 7 vols. 8vo; a "Vindication of the Authenticity and Evidence of the Gospels," 8vo, written in reply to Bolingbroke; some verses prefixed to Hervey's *Meditations*; and a few sermons on miscellaneous subjects. Besides these works he was long engaged in arranging the materials of a history of the county of Northampton; but the book was left incomplete, and did not appear till after his decease, which took place during a temporary visit to Holland in 1791.—*Nichols's Lit. Anec.*

WHARTON (HENRY) an English divine, antiquary, and historian, distinguished for his industry and learning. He was born in 1664 at Worsted in Norfolk, of which parish his father was the vicar. At the age of fifteen he was admitted a pensioner of Gonvil and Caius college, Cambridge; and after taking the degree of B.A. he assisted Dr William Cave in his *Historia Litteraria*. In 1697 he entered into holy orders, and the following year proceeded M.A. He was subsequently engaged in writing or editing some tracts against popery, and in other literary occupations; until he took priest's orders, when he obtained the vicarage of Minster in the Isle of Thanet, and in 1689 the rectory of Chartham. He then undertook the work which has principally contributed to his reputation, "*Anglia Sacra*," 1691, 2 vols. folio, consisting of a collection of original memoirs relative to the English prelates to the time of the Reformation. After his death, which took place in March,

1694-5, appeared a supplement to the preceding work, entitled "*Historia de Episcopis et Decanis Londinensibus; necnon de Episc. et Decan. Assavensibus*," 1695, 8vo. He was also the author of "A Defence of Pluralities;" "The History of the Troubles and Trial of Archbishop Laud;" "A Specimen of some Errors and Defects in the History of the Reformation of the Church of England, by Gilbert Burnet, DD." besides other works.—*Biog. Brit. Aikin's Gen. Biog.*

WHARTON (THOMAS) a physician and anatomist, born in 1610 in the county of York. He was educated at Pembroke-hall, Cambridge; and previously to the civil war he resided at the university of Oxford, where he was private tutor to a natural son of the earl of Sunderland. On the commencement of hostilities he removed to London, and engaged in medical practice. After the surrender of Oxford to the parliament, he returned thither; and on the recommendation of general Fairfax he was created MD. May 8, 1647. He returned again to London, where in 1650 he was admitted a member of the College of Physicians, of which he subsequently became censor. Being appointed professor of anatomy at Gresham college, he delivered lectures on the glandular system, which formed the basis of a work he published in 1656, under the title of "*Adenographia, sive Glandularum votus Corporis Descriptio*," 8vo. Wharton's descriptions are chiefly taken from brute subjects; but his account of the salivary glands and ducts is esteemed accurate, and he has furnished useful observations on diseases of the glands. He died in 1673.—*Eloy Dict. H. de la Med. Aikin's Gen. Biog.*

WHARTON (THOMAS, marquis of) an English statesman, descended from an ancient family of Westmoreland, who was the son of Philip lord Wharton. At the Revolution he was one of the first persons of distinction who joined William III on his arrival in England; and by that prince he was made comptroller of the household, a privy counsellor, justice in Eyre, south of the Trent, and lord-lieutenant of Oxfordshire, and afterwards of Westmoreland. Queen Anne created him viscount Winchendon and earl of Wharton; and in 1709 he was sent as viceroy to Ireland, but the following year he resigned all his employments. Being a zealous whig and firm supporter of the Hanoverian succession, he was favoured by George I, who raised him to the rank of marquis. He died in 1715.—WHARTON (PHILIP, duke of) son of the preceding, was born in 1699. He displayed when quite young talents which attracted notice, and having been educated under domestic tutors, at the age of fourteen he married clandestinely the daughter of major-general Holmes, to the great disappointment of his father, whose death shortly after left him at liberty to follow his own inclinations. In 1716 he set out on his travels, professedly for the purpose of finishing his studies at Geneva. But disgusted with the soter manners of that place, he left his governor there and went to Lyons, and after-

wards to the court of the pretender at Avignon. That prince, highly gratified by his attentions, decorated him with the title of duke of Northumberland. About the end of 1716 he returned to England, and thence proceeding to Ireland, where he possessed a peerage, he was allowed to take his seat in the Irish house of Peers. He then displayed the versatility of his character by defending, with all the powers of reasoning and eloquence, the established government; in consequence of which he obtained promotion to a dukedom. On attaining the age of majority he made his appearance in the English parliament, where he pursued a line of political conduct diametrically opposite to that which he had lately exhibited; distinguishing himself as the warm defender of bishop Atterbury, impeached as an adherent to the house of Stuart. He also published a virulent opposition paper, called "*The True Briton*." Having impoverished himself by extravagance, his estates were, by a decree in chancery, vested in the hands of trustees, who allowed him an annuity of 1200*l*. He then retired to the continent, and visited Vienna and Madrid. His duchess dying in 1726, he married a young lady of Irish extraction, who was maid of honour to the queen of Spain. After practising new intrigues, deceiving by the levity of his conduct the Spanish court and the chevalier de St. George, and rendering himself contemptible alike to all parties, he deprived himself of all his resources, by rejecting an offer of restoration to his title and estate, made him by sir Robert Walpole. Overwhelmed with debts, he went to Paris, where he lived for some time meanly and disreputably. At length he returned to Spain; and ruined in health as well as in fortune, he was proceeding towards a mineral spring in Catalonia, in hopes of relief, when increasing illness obliged him to stop at a small village, where he died May 31, 1731. Towards the close of his life he engaged in writing a tragedy on the story of Mary queen of Scots. His poems, speeches, and letters, with his life prefixed, were published in 1731, 2 vols. 8vo.—*Birch's Lives. Aikin's Gen. Biog.*

WHATELY (THOMAS) a political and miscellaneous writer, who held the office of secretary of the treasury towards the middle of the last century. He was the author of "*Remarks on the Budget*," 8vo, and "*Considerations on the Trade and Finances of this Kingdom, and on the Measures of Administration with respect to those great National Objects since the Conclusion of the Peace*," 1763, 8vo. But besides these two political tracts of temporary interest, he published an ingenious work, entitled "*An Essay on Design in Gardening*," 1760, 8vo. He died in June 1772.—*Biog. Lit. and Polit. Anecd. vol. ii.*

WHEARE (DROOY) Camden professor of history at Oxford, was born at Jacobstow in Cornwall, in 1573. He was a student of Broadgate-hall, and was subsequently chosen fellow of Exeter college in the before mentioned university, which he left in 1608, and

became principal of Gloucester-hall, being also appointed first lecturer on history on Camden's foundation. He died in 1647. He published "*De Ratione et Methodo legendi Historias Dissertatio*," Oxon. 1625, 8vo, which has been translated into English under the title of "*The Method and Order of Reading both Civil and Ecclesiastical Histories*," 1698, 8vo. He also wrote "*Parentatio Historica*," sive *Commemoratio Vitæ et Mortis Gul. Camdeni*," Oxon, 1628; "*Dedicatio Imaginis Camdenianæ in Schola Historica*;" "*Epistolarum Eucharisticarum Fasciculus*."—*Life by Bohun*.

WHEATLEY (CHARLES) a divine of the church of England, who was a native of London, and was educated at St John's college, Oxford, where he obtained a fellowship. He afterwards removed to London, and became lecturer at the church of St Mildred in the Poultry. At length he was promoted to a vicarage in Hertfordshire, where he died in 1742, aged fifty-six. He was the author of a "*Rational Illustration of the Common Prayer*," which has passed through several editions; and he published a volume of Sermons preached at lady Moyer's lecture; a tract against bishop Hoadly on the Sacrament, &c. Some of his Sermons were also published posthumously.—*Nichols's Lit. Anec.*

WHEATLEY (FRANCIS) an eminent painter, born in London in 1747. He received his first instruction in Shipley's drawing school; and while young he obtained several premiums from the Society for the Encouragement of Arts, &c. He was employed by Mortimer to assist him in painting the ceiling at Brockett-hall, a circumstance that contributed to his improvement as an artist; but he appears to have been chiefly indebted for his skill to the study of nature. After practising some years in London, he went to Dublin, where he painted a large picture of the Irish house of Commons, including portraits of distinguished political characters. Returning to England, he employed his pencil with great success on rural and domestic subjects, which he executed with great facility, and thus obtained both fame and money. He was elected an academican 1791, and he died of the gout in 1801.—*Rees's Cyclopæd.*

WHEELOCKE (ABRAHAM) a learned Orientalist and first professor of the Arabic and Saxon tongues in the university of Cambridge. He was born at Loppington in Shropshire, at what date is not recorded; but he graduated A.M. at Trinity college, Cambridge, in 1618, and the following year was elected a fellow of Clare-hall. About 1622 he was appointed professor of the Arabic and Saxon tongues at Cambridge, with which he held the vicarage of Middleton in Norfolk. He was deeply engaged in the production of the celebrated Polyglot Bible; and died at London, while he was printing his Persian Gospels, which were intended to have been introduced into Persia. He also published an edition of Bede's Ecclesiastical History and of Lambard's Archæionomia.—*Fuller's Worthies*.

WHELER, or WHEELER (sir GEORGE) a learned traveller, was the son of colonel Wheler, of Charing, in Kent, and born in 1650, at Breda in Holland. In 1667 he became a commoner of Lincoln-hall, Oxford, on leaving which he travelled into Greece and Asia, in company with Dr James Spon of Lyons, their primary object being to copy inscriptions and describe antiquities. On his return he presented to the university of Oxford a valuable collection of Greek and Latin MSS. for which the degree of master of arts was conferred on him in convocation, he having been previously knighted. In 1684 he took orders, and obtained a prebend in the church of Durham, was made vicar of Basingstoke, and presented to the rich rectory of Houghton-le-Spring, by his patron, bishop Crewe. He was created DD. in 1702, and died Feb. 18, 1723-4. In 1682 he published an account of his journey into Greece, in the company of Dr Spon, in six books, folio, which work is highly valued for its authenticity and information, interesting to the medallist, antiquary, and students of natural history. He also published an account of "*The Churches of the primitive Christians*," 1689; and a work entitled "*The Protestant Monastery, or Christian Ceremonies*." Sir George Wheeler built a chapel on his estate in Spitalfields, which still goes by his name.—*Biog. Brit. Pulteney's Sketches*.

WHETHAMSTEDE (JOHN) an English chronicler, who was abbot of St Albans. His paternal name was Bostock, and he derived that by which he is commonly known from the place of his birth in Hertfordshire. He is said to have been a monk of Gloucester, whence he removed to St Albans, and in 1382 he was admitted to priest's orders by Braybrook, bishop of London. After having been prior of Tinmouth, which was dependant on the monastery of St Albans, he at length became abbot. He resigned this dignity, but again resumed it, and died at a very advanced age in 1464. He was librarian to Humphrey, duke of Gloucester, and contributed much to the formation of the library collected by that prince. Tanner has given a copious list of the writings of this learned monk, among which are a treatise, "*De Viris illustribus*;" and "*Historia brevis Angliæ a Bruto ad Henricum Sextum*."—*Leland. Bale. Pitts. Tanneri Bibl. Brit. Hibern.*

WHICHCOTE (BENJAMIN) an eminent divine, born in 1610, of an ancient family, at Whichcote-hall in Shropshire. Having studied at Emanuel college, Cambridge, and taken his degree, he became in 1633 a fellow of his college, and a distinguished tutor. He was ordained in 1636, when he established a lecture at Trinity church, Cambridge, which he continued for nearly twenty years, with the exception of a short period which he passed at a benefice which he obtained in Somersetshire. In 1644 he was made provost of King's college; and in 1649 he took the degree of DD, and was presented to the rectory of Milton in Cambridgeshire. At the Restoration

he was deprived of his provostship, on which he removed to London, and in 1662 he was chosen minister of St Anne's, Blackfriars. His church being burnt down, he retired to Milton, but returned again to London on obtaining the vicarage of St Lawrence, Jewry, by presentation from the crown. He died in 1683. After his death a volume of his "Select Sermons," 1698, 8vo, was published, with a commendatory preface, by lord Shaftesbury, author of the *Characteristics*; and three more volumes appeared subsequently, edited by Dr Jeffery and Dr Samuel Clarke.—*Rees's Cyclop.*

WHISTON (WILLIAM) a learned divine and mathematician, born in 1667 at Norton, near Twycross in Leicestershire, where his father was rector of the parish. He studied at Clare-hall, Cambridge, where he applied himself particularly to mathematics; and he displayed his predominant disposition by composing devout religious meditations. Having taken his first degree in 1690, he was chosen a fellow of his college, and became an academic tutor. In 1693 he proceeded M.A., and entering into holy orders, he was appointed chaplain to Dr Moore, bishop of Norwich. In 1696 he published a "Theory of the Earth," on the principles of the Newtonian philosophy, an ingenious but fanciful performance, which provoked the animadversions of Dr Keill. His patron the bishop gave him the living of Lowestoffe, in Suffolk, in 1698; and he resided there till 1700, when he was appointed deputy professor of mathematics at Cambridge, by sir Isaac Newton, who three years after resigned the professorship in his favour. Whiston then gave up his benefice, and settled at Cambridge, where bishop Moore nominated him catechetical lecturer at the church of St Clement. In 1706 he published an "Essay on the Revelation of St John;" and the next year he became Boylean lecturer, and his sermons on that occasion, on the "Accomplishment of Scripture Prophecies," were printed in 1708, 8vo. He had now conceived doubts concerning the doctrine of the Trinity, and he was at length led to adopt Arian opinions, in which he was confirmed by the perusal of the Apostolic Constitutions, a manifestly spurious work, but which Whiston pronounced to be "the most sacred of the canonical books of the New Testament." His perseverance in heterodox sentiments occasioned his losing his catechetical lectureship; and in 1710 he was formally expelled from the university, in conformity to a statute against maintaining doctrines contrary to the established religion. The following year he was deprived of his professorship; and having now no employment at Cambridge, he removed to the metropolis, and published an account of the proceedings against him, and also pieces in defence of his peculiar sentiments, which he continued to maintain without any regard to his private interest. He gave lectures on astronomy, which were patronized by Addison, sir Richard Steele, and others; and had he been contented to desist from theological con-

troversy, his talents as a mathematician would have secured him ample encouragement and support. But by the publication of an "Historical Preface to Primitive Christianity revived," in 1711; and by the work itself, which appeared in 5 vols. 8vo the following year, he subjected himself to the notice of the convocation, and was prosecuted as a heretic, though the proceedings were ultimately terminated by an act of grace in 1715. Being refused admission to the sacrament at his parish church, where he had regularly attended, he opened his own house for public worship, using a liturgy of his own composition; but towards the close of his life he became a baptist. In 1719 he published a letter to the earl of Nottingham, "On the Eternity of the Son of God and his Holy Spirit," which afforded that nobleman an opportunity for signalizing his orthodoxy, and prevented Whiston from being chosen a fellow of the Royal Society, where he was proposed as a candidate in 1720. He subsequently distinguished himself by an abortive attempt to discover the longitude; and by his professed opinions relative to an approaching millennium, and the restoration of the Jews. Among his latest labours were his memoirs of his own life, 1749-50, 3 vols. 8vo. This learned and ingenious, but very eccentric scholar, died in London in 1752. Besides his original productions, which are extremely numerous, he published a valuable translation of the works of Josephus, with notes, dissertations, &c.—*Biog. Brit. Aikin's Gen. Biog.*

WHITAKER (JOHN) an eminent divine, historian, and antiquary, born at Manchester about 1735. He was educated at Oxford, and became a fellow of Corpus Christi college, taking the degree of M.A. in 1759, and that of B.D. in 1767. He began to distinguish himself as an acute and erudite inquirer into our national antiquities by the publication, in 1771, of the first volume of his "History of Manchester," including a variety of disquisitions relative to the state of Britain under the dominion of the Romans. The same year appeared his "Genuine History of the Britons asserted;" and this was followed, in 1773, by the second volume of his former work, relating to the Saxon period of our national history. Having taken orders, he was chosen morning preacher at Berkeley chapel, London, in 1773; but he was soon after deprived of this situation. He was so warm a partizan of orthodoxy, that he refused to accept of a valuable benefice offered him by a unitarian patron. In 1778 he obtained the college living of Ruan Lanyhorne, in Cornwall, where he became involved in a contest with his parishioners about tythes, which was the source of much uneasiness to him, but was at length amicably concluded. He published, in 1783, a course of sermons on death, judgment, heaven, and hell; and in 1787, appeared his "Mary Queen of Scots Vindicated," 3 vols. 8vo, in which he exhibited much research and ingenuity, combined with an abundant portion of zeal for the memory of the unfortunate Mary, and of pre-

possession, if not prejudice, against her persecutors. Among the future productions of his pen were, "The Course of Hannibal over the Alps ascertained," 2 vols. 8vo; "The Origin of Arianism disclosed," 8vo; and "The ancient Cathedral of Cornwall historically Surveyed," 2 vols. 4to. He was also a considerable contributor to the English and Antijacobin Reviews, and the British Critic. His death, in consequence of a paralytic stroke, took place at his rectory in October 1808.—*Aikin's Gen. Biog.*

WHITAKER (EDWARD W.) a divine and theological writer, who was the son of serjeant Whitaker, and was born in 1750. After finishing his studies at Christchurch, Oxford, he entered into holy orders, and became curate of St John's Clerkenwell, in London. He afterwards obtained the livings of St Mildred's and All Saint's, Canterbury; and in the latter part of his life he kept an academy at Egham in Surrey, where he died in 1818. Among his works are "Sermons on Education," 1788, 8vo; "Dialogues on the Doctrine of the Trinity," 1786, 8vo; "A General and Connected View of the Prophecies relative to the Times of the Gentiles," 1795, 8vo; "Family Sermons," 1798-99, 3 vols. 8vo; "A Commentary on the Revelation of St John, accompanied with Historical Testimony of its Accomplishment," 1802, 8vo; and "An Abridgment of Universal History," 2 vols. 4to. Mr Whitaker was principally concerned in establishing that useful institution the "Refuge for the Destitute."—*Genl. Mag.*

WHITAKER, LL.D. FRS. and FSA. (ТЮМАН ДУННАМ) an acute and industrious antiquary and author, born at Rainham in Norfolk, of which parish his father was curate, June 8, 1759. The year following, his father succeeding to the paternal estate of Holme by the death of his elder brother, placed his son first with the rev. John Shaw of Rochdale, and afterwards with the rev. W. Sheepshanks at Grassington in Craven, whence he removed in 1775 to St John's college, Cambridge, at which university he graduated. In 1797, having taken orders some years previously, he became perpetual curate of the chapel at Holme, founded by his ancestors, but rebuilt and re-endowed by himself. In 1809 he was presented to the vicarage of Whalley, and to that of Blackburne in 1818. His principal works are, "A History of the Original Parish of Whalley, and Honor of Clitheroe, in the Counties of Lancaster and York," quarto, printed first in 1801, which has passed through three editions; "A History of the Deanery of Craven," 4to, 1805 and 1812; "De Motu per Britanniam Civico Annis 1745 et 1746," 12mo, 1809; "Life and Original Correspondence of Sir G. Radcliffe, Knt." 4to, 1810; "Loidis and Elmete, or an Attempt to Illustrate the Districts described in those Words by Bede," folio, 1816; "Substance of a Speech at Blackburne, February 20, 1817," "The History of Yorkshire," folio, 1821; besides several single ser-

mons preached on different occasions. He also published new editions of Piers Plowman, in 4to; the Works of Archbishop Sandys, with a Life of the Author; and of Thoresby's Ducatus Leodiniensis, folio, 1816; and left behind him in MS. materials for a history of "Richmondshire and Lunsdale." He had the character of being a profound theologian, a good scholar, and an active magistrate, and died December 18, 1821.—*Ann. Biog.*

WHITAKER (WILLIAM) a Calvinistic divine and controversial writer of eminence in the sixteenth century. He was a native of Lancashire, and was educated at St Paul's school, and Trinity college, Cambridge, where he obtained a fellowship. He displayed his learning by Greek translations of the English Liturgy, and of dean Nowell's Catechism; and his zeal for the doctrines of the Genevan reformer by various publications against cardinal Bellarmine, the jesuit Stapleton, and others. He was made professor of divinity at Cambridge, and chancellor of St Paul's cathedral in 1579; and he resigned the last preferment on being appointed master of St John's college. He died in 1595. His works were published collectively at Geneva, 1610, 2 vols. folio.—*Tanneri Bibl. Brit. Hib.*

WHITBREAD (SAMUEL) for several years a leading member of the house of Commons, was the son of the eminent brewer of the same name, to whose extensive business he succeeded. He was born in London in 1758, and was educated at Eton, whence he was removed to St John's college, Cambridge, after which he made the tour of Europe under the care of Mr (subsequently archdeacon) Cox. Soon after his return, he married the daughter of sir Charles (afterwards earl) Grey, and in 1790 was returned to the house of Commons for the borough of Steyning, but for the greater part of his life he represented the town of Bedford, in which borough and county he possessed a large lauded property. He immediately became an active member of the opposition headed by Mr Fox, but distinguished himself by acting on many occasions agreeably to his own views, independently of his party. For many years he was esteemed one of the most shrewd, investigative, and vigorous opponents of the Pitt administration, and of the war growing out of the French Revolution. He was also the conductor of the impeachment against lord Melville, which, although terminating in acquittal, threw a shade over the close of that statesman's life, and proved a source of extreme concern to the premier. Of the political opinions of Mr Whitbread, those who study the history of the period in which he acted a very conspicuous part in parliament, will judge by their own; but few will be disposed to deny him the praise of being for many years a most able, useful, and active senator. The close of his life was melancholy; an over-anxious attention to business in general, but more especially to the intricate concerns of Drury Lane theatre, produced a temporary aberration of intellect, during which he sud-

denly terminated his own life, July 6, 1815, in the fifty-seventh year of his age. The second son of Mr Whitbread is now (1828) member for the county of Middlesex.—*Ann. Biog.*

WHITBY (DANIEL). See Appendix.

WHITE (GILBERT) a writer on natural history and antiquities, born at Selborne in Hampshire, in 1720. He studied at Oriel college, Oxford, where he obtained a fellowship in 1744; he took the degree of MA. in 1746, and in 1752 he filled the office of senior proctor of the university. He afterwards fixed his residence in his native village, devoting his leisure to literature and the study of nature. The fruit of his researches appeared in his "Natural History and Antiquities of Selborne," 1789, 4to, of which a German translation was published at Berlin in 1792. He died in 1793. "A Naturalist's Calendar," extracted from his papers, was published posthumously; and this was reprinted in a collection of his works on Natural History, 1802, 2 vols. 8vo.—*Aikin's Gen. Biog.*

WHITE (HENRY KIRKE) a youthful poet of distinguished ability, who was born at Nottingham, March 21, 1785. He was the son of a butcher, and was intended for the same occupation; but the delicacy of his constitution occasioned his destination to be changed for the more sedentary employment of a stocking-weaver. From his infancy he manifested an extraordinary love of learning; and at the age of fourteen he produced specimens of poetry worthy of preservation. He was now removed from the stocking-loom to be placed in an attorney's office; and he devoted his spare time to the study of Latin and Greek. Increase of knowledge inspired him with the desire to obtain more favourable opportunities for improving his talents; and the advantage of a university education, with the prospect of entering the church, became the great object of his ambition. At length, through the generosity of Mr Wilberforce, and the exertions of the rev. Charles Simeon, he was admitted a student of St John's college, Cambridge. There he applied himself to his studies with such unremitting labour, that his health became deranged, and he died October 19, 1806, deeply lamented both on account of his virtues and his talents. He published in 1803 a poem called "Clifton Grove;" and after his death his "Remains," consisting of Poems, Letters, and Fragments, were edited by Robert Southey, 2 vols. 8vo.—*Brit. Crit.*

WHITE (JOSEPH) an eminent divine and Orientalist, who was the son of a weaver at Stroud in Gloucestershire, where he was born in 1746. An early inclination for reading, in which he indulged while working with his father, enabled him to acquire such a knowledge of literature as attracted the notice of a neighbouring gentleman, who procured him the means of farther instruction, and sent him to Wadham college, Oxford. He took the degree of MA. in 1773, and obtained a fellowship in his college. He directed his studies particularly to Oriental literature, and in 1775 he was elected Laudian professor of Arabic,

when he printed a discourse in Latin on the utility of that language in theological inquiries. He was appointed by the university editor of the Philoxenian Syriac version of the four Gospels, which he published in 1778, 4to, with a Latin translation and notes. About this time he was nominated one of the preachers at the chapel royal, Whitehall. In 1783 he edited major Davey's translation, from the Persian, of The Institutes of Timour, 4to. Being appointed preacher of the Bampton lecture in 1781, he delivered a set of sermons on the evidences of Christianity, printed at the Clarendon press in 1784. They procured professor White an immediate accession to his literary reputation, which was afterwards somewhat lowered by the discovery that he had been materially assisted in the composition of these celebrated discourses by the rev. S. Badcock and Dr S. Parr. He was however presented to a prebend at Gloucester, and soon after took the degree of DD. About 1790 he married, and obtained a college living in Suffolk, where he took up his residence. In this situation he continued to prosecute his studies, and having set up a printing-press in his own house, he published a volume entitled "Ægyptiaca," relating to the antiquities of Egypt, and an account of that country by Abdollatiph, in Arabic, with a Latin version. He died in 1814. Besides the works already noticed, Dr White published an edition of the Greek Testament, from the text of Griesbach; and a Harmony of the Four Evangelists, in Greek.—*Aikin's Gen. Biog.*

WHITE (RICHARD) usually known by the Latinized appellation Ricardus Vitus, an historical and philological writer, who was born at Basingstoke in Hampshire, and studied at Winchester and Oxford. In 1557 he obtained a fellowship at New college, but being a Catholic, he was displaced in the reign of queen Elizabeth, when he went to Douay, and became professor of jurisprudence, and subsequently rector of that university. He obtained from the emperor of Germany the title of count palatine; but at length took holy orders, and died canon of St Peter's, Douay, in 1612. He published "Historia Britannic Insule ab Origine Mundi ad AD. octingentesimum," 1602, 12mo; and an enigmatical epitaph on Ælia Lælia Crispis, purporting to have been discovered at Bologna, which has been often printed.—*Wood's Athen. Oxon.*

WHITE (THOMAS) an English philosopher of the seventeenth century, chiefly known as the friend and correspondent of Hobbes and Descartes. In his writings he designated himself Thomas Albius or de Albiis; and in the controversies to which the Cartesian philosophy gave rise, he distinguished himself as its advocate. He was a native of Essex, and being of a Catholic family he was educated in a seminary abroad; after which he was ordained a secular priest, and was appointed sub-rector of the college of Douay. He died in 1676, aged ninety-four.—*Biog. Brit. Berkenhout.*

WHITE (THOMAS) an English divine, emi-

sent as a benefactor of literature. He was born at Bristol, and studied at Magdalen college, Oxford. Having taken orders, he obtained various preferments in the metropolis; and at length became a prebendary of St Paul's and a canon of Christchurch and of Windsor. He published some Sermons; but his benefaction of property to Magdalen college, for the education of students, and his foundation of Sion college, for the clergy of London, have contributed to preserve his name from oblivion. He died in 1623.—Wood.

WHITEFIELD (GEOXG) founder of the Calvinistic methodists, was born at Gloucester, where his parents kept the Bell inn, Dec. 16, 1714. He was the youngest of six sons and a daughter, and his father dying in his infancy, the care of his education devolved upon his mother. He was sent to a grammar-school at Gloucester, where he distinguished himself by a ready memory, and good elocution, which enabled him to figure highly at the annual visitations of the corporation. Being destined to assist his mother in the business of the inn, he was taken early from school, and for some time officiated in a blue apron as drawer. At the age of eighteen, however, he embraced an offer of being entered as a scribe at Pembroke college, Oxford, where he became acquainted with the Wesleys, and joined the small society which procured them the name of methodists. [See article WESLEY (JOHN).] Here, in addition to the religious preaching, reading, and visits to gaols, and to the poor, he began to exhibit many of the symptoms which, under the Roman Catholic system, usually precede a vocation for the cloister. He describes himself as lying whole days, and even weeks, on the ground, in silent or vocal prayer, choosing the worst sort of food, and dressing in a patched gown and dirty shoes, to acquire a habit of humility. Hearing of his devotional tendencies, Dr Benson, bishop of Gloucester, made him an offer of ordination at the early age of twenty-one, which he accepted, and was ordained a deacon in 1736. Such was his strain of preaching, that at his first sermon at Gloucester, a complaint was made to the bishop that he had driven fifteen people mad, on which the prelate observed, that he hoped the madness would not be forgotten before the next Sunday. The week following he returned to Oxford, where he graduated B.A. and soon after was invited to London to officiate at the chapel of the Tower. He preached also at various other places, and for some time supplied a curacy at Dummer, in Hampshire. The account sent him by the Wesleys of their progress in Georgia, at length excited in him a desire to assist in their pious labours, and embarking at the close of 1737, he arrived at Savannah in the following May, where he was received with great cordiality, and acquired considerable influence. Observing the deplorable want of education in the colony, he projected an orphan-house, for which he determined to raise contributions in England, where he arrived in the beginning of 1739. Although discountenanced by many of the clergy, bishop

Benson did not scruple to confer on him priest's orders, and on repairing to London, the churches in which he preached were incapable of holding the crowds who assembled to hear him. He now adopted the design of preaching in the open air, which he seems first to have practised at Kingswood, near Bristol among the colliers. His ardent and emphatic mode of address attracted several thousands of these people as auditors, on whom his discourses produced a surprising effect, and whose vicious manners and habits he visibly improved. He afterwards preached in the open air in Bristol, and in Moorfields, Kennington, and other places in the neighbourhood of London, to vast assemblages of people, who came from all parts to hear him. In August 1739 he again embarked for America, and made a tour through several of the provinces, where he preached to immense audiences, with an effect which is portrayed in a very forcible manner in the autobiography of Benjamin Franklin. He arrived at Savannah in January, 1740, where he laid the foundation of the orphan-house, and after making another extensive tour, returned to England, where he arrived in the March of the following year. During his absence his cause had been declining at home, and the differences between him and Wesley on the doctrines of election and reprobation, lost him many followers. His circumstances were also embarrassed by his engagements for the orphan-house; but his zeal and intrepidity gradually overcame all difficulties, and produced the two tabernacles in Moorfields and in Tottenham-court-road. After visiting many parts of England, Scotland, and Wales, where, like Wesley, he married a widow, in 1744, he again returned to America, and remained there nearly four years, not returning until July 1748. He was soon after introduced to the noble convert to methodism, the countess of Huntingdon, who made him one of her chaplains, a circumstance which led to his preaching before the lords Chesterfield and Bolingbroke, who were desirous to hear a preacher of whose eloquence so much was every where said. A visit to Ireland, and two more voyages to America followed, and for several years his labours were unremitting. At length, on his seventh voyage to America, he was carried off by an asthma, at Newbury port, in New England, September 30, 1770, in the fifty-sixth year of his age. The person of Whitefield was tall and well-proportioned, and his features good, with the exception of a cast in one of his eyes. That he possessed a high degree of natural eloquence is indisputable, and if in the pulpit he occasionally intermixed buffoonery, it was not the less effective on that account. His learning and literary talents were mean, and he was a writer only for his own followers. That he had much enthusiasm and fanaticism in his composition is evident from his journal and letters; and to what degree they were accompanied by the usual alloy of craft and artifice it is difficult to determine, especially as he possessed both warm

friends and bitter enemies to misrepresent on each side of the question. He was clearly below Wesley as to general intellect and length of view; and while the one has proved himself a Protestant Loyola, the other did little to perpetuate his own name, although the junction of his chapels with lady Huntington's connexion has produced a religious party of considerable strength, which may be denominated a scion of the low church of England. Whitefield's works, practical and controversial, have been published in 6 vols. 8vo.—*Life by Gillies. Ann. Reg.*

WHITEHEAD (GEOFFREY) an eminent early leader among the quakers, was born at Semtey, in the parish of Orton, Westmoreland, about 1636, and received his education at the freeschool of Blancow, in Cumberland. On leaving school he was for some time engaged in the instruction of youth, but so early as the age of eighteen, his journal exhibits him travelling in various parts of England, propagating the principles of quakerism. He endured, as might be expected from the spirit of the times, much persecution, was imprisoned many times, and in one instance sentenced to be whipped, which ignominy he calmly endured, and proceeded to preach as before. After the Revolution he was very serviceable to the society of friends, by his active services during the time the toleration bill was before parliament, and in making those representations which led in civil cases to the admission of an affirmation in lieu of an oath, as well as to other relief. This active, able, and determined character lived to a very advanced period, dying in great respect and esteem, in March 1722-3, at the age of eighty six. Besides various publications, chiefly controversial, he left behind him some memoirs of his life, which were printed in 1725, in one volume, 8vo.—*Memoirs as above.*

WHITEHEAD (JOHN) a physician, and preacher among the Wesleyan methodists. He was born of humble but respectable provincial parents, who gave him a classical education; and early in life he was connected with the Wesleys, but left them, and set up as linendraper in Bristol. Having failed in business, he became a quaker, and was placed in a school by that body at Wandsworth. He subsequently attended a son of Mr Barclay, the brewer, to Leyden, where he studied medicine with such success and perseverance as induced Dr Lettsom to get him nominated physician to the London Dispensary. He eventually, however, quitted the quakers and returned to the methodists, among whom he became at once a successful physician and favourite preacher, so much so, that he attended Mr Wesley in his last illness, and preached his funeral sermon. He afterwards published "The Life of the Rev. John Wesley, M.A. collected from his papers and printed works, and published at the request of his executors." Of this work, which is avowedly a "History of Methodism," the first volume appeared in 1793, and the second in 1796. The publication of this life, which is written with great

candour, caused much party dispute among the Wesley connexion, as the Conference had intended to publish a life of their own. Dr Whitehead was in consequence for some time excluded from their pulpits, but a reconciliation ultimately took place. He died in 1804. —*Gent. Mag.*

WHITEHEAD (PAUL) an English poet of the last century, youngest son of Edmund Whitehead, a respectable master tailor, residing in Castle-yard, Holborn, was born there on the 25th of January (the conversion of St Paul) 1710, and from that circumstance derived his baptismal name. At an early age he was placed under the tuition of a clergyman at Hitchin, Herts, where he imbibed a strong taste for literary pursuits. He was subsequently apprenticed to a mercer in the city, but on the expiration of his indentures he did not hesitate to abandon a line of life for which nature and education had alike unfitted him. His determination was perhaps accelerated by an intimacy which he had formed during this period with Mr Lowth, at that time under articles to the same master, who subsequently introduced him to the acquaintance of Fleetwood, the manager of Drury Lane theatre. This gentleman succeeded in persuading him, who was now become a law student in the Temple, to join him in a bond for 3000*l.*, on which security the latter was eventually arrested, and remained for several years an inmate of the King's Bench prison. His first productions were three poems, entitled "The State Dunces," 1733; "Manners," 1738; and "Honor," a satire: the second produced a prosecution of his bookseller Dodsley, and in the third he ridiculed the annual processions of the freemasons with such success as to cause their discontinuance. These circumstances necessarily drew on him a considerable share of public notice, which was farther increased by a series of political squibs, occasioned by the prosecution and imprisonment of the hon. Mr Murray, which arose out of the Westminster election. The prominent part taken by him on this occasion raised him high in favour at the prince of Wales's court at Leicester-house. The interest of sir Francis Dashwood, afterwards lord Le Despencer, having obtained him the appointment of deputy treasurer to the exchequer, worth about 800*l.* per annum, his circumstances, previously much improved by his wife's portion of 10,000*l.* became still more easy, and the remainder of his days was passed in his retirement at Twickenham, embittered only by occasional ill health, proceeding from a lingering disorder, which at length put a period to his life, on the 30th of December 1774. By his last will, made about three months previous to his decease, he bequeathed his heart, enclosed in a marble urn of the value of 50*l.* to his friend and patron, lord Le Despencer, with a request that it might be placed in his lordship's mausoleum at High Wycombe. This, his last wish, was complied with, and the vase deposited there with much ceremony, on a pedestal prepared for that purpose. Besides the writings al-

ready enumerated, he was the author of a poem entitled "The Gymnasiad," printed in 1744, with a mock dedication to Broughton the pugilist, whose art, then much patronized by William duke of Cumberland, it was intended to ridicule. As an author he appears to have possessed more judgment than genius, and his works, though popular in their day for their temporary allusion, are now little read. As a man his morals may be judged of by the fact of his being a member of the club at Medmenham abbey, the sensual orgies of which were exposed in revenge by Wilkes, himself a party, when prosecuted for his Essay on Woman. Whitehead however was a mixed character, and in the decline of life acted a benevolent, hospitable, and respectable part. He cared so little for his character as a poet, that nothing could induce him to collect his works, a complete edition of which was first published by Kearsley in 1777, with a biographical memoir.—*Memoirs by Kearsley.*

WHITEHEAD (WILLIAM) an ingenious poet and an amiable man, the son of a baker of Cambridge, where he was born in 1715. At the age of fourteen he was placed at Winchester school by the interest of lord Montfort, and though he failed in his object of being elected off to New college, Oxford, on a foundation scholarship, yet he succeeded in obtaining one of inferior value at Clare-hall, Cambridge, which in due course led to a fellowship. To this preferment he was appointed in 1742, and about the same period produced two of his earliest and best dramatic pieces, "Creusa," and "The Roman Father." Three years after he visited Germany, Italy, Switzerland, and the Low Countries, in quality of travelling tutor to lord Nuneham and a son of the earl of Jersey, and on his return to England obtained through the interest of the last-mentioned family the registrarship to the order of the Bath. Some elegant poems, suggested by his visit to the continent, having gained him some popularity as a poet, that circumstance, backed by the interest of his noble friends, procured him to be nominated poet laureat on the vacancy occasioned in that post by the death of Cibber. This appointment he enjoyed till his decease, which took place in Charles-street, Grosvenor-square, April 14, 1785, and was produced by an affection of the heart, under which he had laboured more than forty years. In addition to the writings already spoken of, he was the author of "The School for Lovers," a comedy, 1762; "Trip to Scotland," a farce, 1771; "A Charge to the Poets," a satire; "Variety;" "The Goat's Beard;" with several other miscellaneous poems, of which elegance rather than fancy is the distinguishing characteristic, and a few prose essays in *The World*, a popular periodical of the day. Mr Whitehead lies buried in South Audley-street chapel.—*Life by Mason.*

WHITEHURST, FRIS. (JOHN) an eminent engineer of the last century, born in 1713, at Congleton, in the county palatine of Chester. His father, a watchmaker, brought

him up to the business, which he afterwards followed on his own account at Derby, extending his attention at the same time to the construction of hydraulic machines and other philosophical instruments. Having been fortunate enough to attract the notice of the duke of Newcastle, that nobleman, in 1775, gave him a situation in the Mint, as a stamper of money weights, which induced him to settle in the metropolis. Here, with the exception of a temporary visit to Ireland, made for the purpose of seeing the Giant's Causeway, he continued to reside till his decease, which took place in Bolt-court, Fleet-street, in 1788. As an author, Mr Whitehurst is advantageously known by his highly ingenious "Enquiry into the Original State and Formation of the Earth," 4to, 1778, which procured his admission into the Royal Society. He also published an able treatise on a new method of measuring length, capacity, and weight by means of a chronometer, another on a machine for raising water, and some useful observations on the thermometer, to be found among the Transactions of the Royal Society. After his death Dr Williams edited a posthumous work of his on "Chimneys and Ventilation."—*Life by Dr Hutton.*

WHITELOCK (BUSTRÖDE) an eminent statesman and lawyer, the son of sir James Whitelock, a justice of the King's Bench. He was born in London in 1605, and received his education at St John's college, Oxford. In addition to other branches of study, he gained a knowledge of music, on account of which he was appointed by the benchers of the Temple one of the chief managers of the royal masque presented by the inns of court to Charles I and his queen in 1633. He soon obtained eminence as a lawyer, and was much consulted by Hampden when under prosecution for refusing to pay ship-money. In 1640 he was chosen MP. for Marlow in the long parliament, in which he acted with Selden and the more moderate anti-royalists; but though averse to the commencement of hostilities, he accepted the office of deputy-lieutenant for Oxfordshire and Buckinghamshire, and took the command of a company of cavalry raised for the service of parliament. In January 1642-3 he was one of the commissioners appointed to treat with the king at Oxford; and in 1644 he again interfered to promote a pacification. He appeared as a lay-member of the Westminster assembly for settling the form of church government, when he opposed the assumed divine right of the presbytery; and he was, much to his honour, the opponent of arbitrary power both in church and state. In February 1648-9 he was nominated one of the council of state, and he was subsequently sent by Cromwell on an embassy to the court of Christina, queen of Sweden, with whom he concluded an advantageous treaty. Returning home he became a commissioner of the great seal, which office he resigned, on the regulation and limitation of the court of Chancery, and was then appointed a commissioner of the Treasury. He was member for Buckingham-

shire, in Oliver's third parliament, and he was called by the protector to his house of Peers; but Whitelock declined being made governor of Dunkirk, and also the title of a viscount. During the short government of Richard Cromwell he acted as one of the keepers of the great seal, and he afterwards opposed the designs of general Monk. At the Restoration he narrowly escaped the consequences of a bill of pains and penalties, rejected by a small majority in the house of Commons. He then retired to his estate at Chilton in Wiltshire, where he chiefly passed the last fifteen years of his life, and died in January 1676. He was the author of "Memorials of the English Affairs, from the Beginning of the Reign of Charles I to the Restoration," 1682, folio, an improved edition of which appeared in 1732; "Memorials of the English Affairs from the supposed Expedition of Brute to this Island to the End of the Reign of James I," 1706, folio; "Whitelock's Notes upon the King's Writ for choosing Members of Parliament, 13 Car. II, being Disquisitions on the Government of England," 1766, 2 vols. 4to; "A Journal of the Swedish Embassy in 1653 and 1654 from the Commonwealth of England, &c.," 1772, 2 vols. 4to; and "Whitelock's Labours remembered in the Annals of his Life, written for the Use of his Children," MS.—*Biog. Brit. Rees's Cycl.*

WHITELOCK (sir JAMES) a learned judge, distinguished for his eloquence and general as well as legal knowledge, who flourished in the earlier part of the seventeenth century. He was a native of the metropolis, born about the year 1570, and educated at St John's college, Oxford, on a foundation scholarship from Merchant Tailors' school. In 1594 he quitted the university for the Temple, where he applied himself assiduously to the study of the law, and rose in succession to be chief justice of Chester, and a judge of the Common Pleas, whence he afterwards removed to the court of King's Bench. A remarkable proof of his attainments as a scholar was exhibited on one occasion at Oxford, where he was presiding on the circuit. Some foreigners of rank were accommodated with a seat by him on the bench, and being unacquainted with the English language, the judge repeated for their edification the whole of his charge to the grand jury in elegant Latin. His acquaintance with the Hebrew as well as the Greek tongue is also said to have been extensive. Judge Whitelock sat in the parliament of 1620 for the borough of Woodstock, and received the honour of knighthood about the same period. His death took place in 1632. His writings consist of "Lectures delivered in the Hall of the Middle Temple," &c. and some of his parliamentary speeches have also been printed, besides a few miscellaneous pieces, which Hearne has preserved in his *Curious Discourses*.—*Biog. Brit.*

WHITGIFT (JOHN) an English prelate, born at Great Grimby, Lincolnshire, in 1530. He became a student at Queen's college, Cambridge, in 1548, and afterwards removed

to Pembroke-hall. In 1555 he obtained a fellowship at Peterhouse; and in 1557 he took the degree of MA. He had been a pupil of Bradford, who suffered as a Protestant martyr; and on the visitation of the university by cardinal Pole, he escaped expulsion through the protection of the vice-chancellor. He entered into holy orders in 1560, and about three years after he was appointed Margaret professor of divinity, and then chaplain to queen Elizabeth. He held several other academical situations previous to his becoming vice-chancellor in 1571; and in the exercise of that office he displayed so much zeal for the established church, that he was rewarded by the queen with the deanery of Lincoln and other preferments. In 1577 he was advanced to the bishopric of Worcester, whence, on the death of archbishop Grindal in 1583, he was translated to the metropolitan see of Canterbury. In this exalted station he showed the most decided hostility both to the Catholics and the puritans; his conduct forming a striking contrast with that of his predecessor. Being placed in the direction of an ecclesiastical commission, which he had persuaded the queen to issue, he proceeded with unrelenting severity against those who were regarded as schismatics or heretics. Hume says the court where he presided was a real inquisition, attended with all the iniquities, as well as cruelties, attributed to that tribunal. Such conduct naturally provoked the strong animadversion of those whose principles he attempted to eradicate; and accordingly his character was attacked both with wit and argument by Penry (Martin Marprelate) and other puritan writers. In private life the conduct of Whitgift appears to have been unexceptionable, and he distinguished himself as an encourager of learning; though his own literary attainments were but inconsiderable, and his writings consist only of controversial tracts against the puritans. He died in February 1603-4, and was interred at Croydon in Surrey.—*Biog. Brit. Aikin's Gen. Biog.*

WHITTINGHAM (WILLIAM) a zealous ecclesiastic of the reformed church, born in 1524 in the city of Chester. He matriculated at Brasenose college, Oxford, which he quitted for a fellowship at All Souls in the same university, and that again for a studentship at Christchurch. In 1550 the rigour exercised by Mary against the Protestants caused him to withdraw to the continent, where settling at Frankfurt, he became by marriage nearly connected with the great reformer of Geneva. The attachment which this alliance confirmed in him to the peculiar dogmata of Calvin, with respect to church discipline, occasioned much ill-will between him and the clergy of Durham, when, after her accession to the throne, Elizabeth sent for him, and preferred him to the deanery of that cathedral, his zeal exhibiting itself in the mutilation of statues and monuments, and every thing however venerable or curious in the eye of the antiquary, which he conceived at all to savour of popery. Dean Whittingham assisted in translating the

Geneva Bible, and the initials of his name are affixed to a few of the Psalms in Hopkins and Sternhold's version. He died in 1579.—*Hutchinson's Durham*.

WHITTINGTON (GEORGE DOWNING) an ingenious writer, who was the son of Jacob Whittington, esq. of Thaberton-hall, Suffolk. He studied at St John's college, Cambridge, where he took the degree of LL.B. He adopted the clerical profession, and he published "A Dissertation on the External Evidences of the Christian Religion," 8vo. Having travelled in France, he paid particular attention to the church architecture of that country, on which subject he wrote a work entitled "An Historical Survey of the Ecclesiastical Antiquities of France, with a View to illustrating the Rise and Progress of Gothic Architecture in Europe." His death took place at Cambridge, at the age of twenty-six, in 1807; and two years after appeared the first edition of the work just mentioned, which was republished with a preface by the earl of Aberdeen in 1812, 8vo.—*Orig.*

WHITWORTH (CHARLES, earl) was descended of an ancient family in Staffordshire, one of the members of which had been ennobled in 1720 for his diplomatic services, but dying without issue the title had become extinct. The subject of this article was born in 1754 at Leoburne-grange, Kent, the seat of his father, sir Charles Whitworth, and was educated at Tunbridge grammar-school, on leaving which he obtained a commission in the Guards. The example of his ancestor, however, appearing to point out diplomacy as a surer road to distinction, he soon quitted the army, and after going rapidly through the usual preliminary and subordinate situations, was appointed, in 1786, minister plenipotentiary to the court of Poland, then the centre of intrigues, which terminated in the dismemberment and annihilation of that ancient and unfortunate kingdom. After residing two years at Warsaw, Mr Whitworth was recalled, and in the autumn of 1788 proceeded in the same capacity to St Petersburg, where, in 1793, he received the red ribband of the Bath, in order to give added dignity to his mission, the object of which at that period was a coalition against the French revolutionary government. On his return to England in 1800, sir Charles was created baron Whitworth of the kingdom of Ireland, and was soon after again despatched abroad on an embassy to the court of Denmark, then complaining of the right of search exercised by the English ships. An adjustment, which proved but shortlived, took place through his exertions in the August of the same year. The ambassador accordingly returned home, and in the April following married the duchess dowager of Dorset. After the treaty of Amiens, concluded by lord Hawkesbury and the marquis Cornwallis, lord Whitworth having been previously created a privy counsellor, was accredited as plenipotentiary to Paris towards the close of 1802, and amidst the difficult situations which the heartburnings and jealousies that preceded the dissolution of this

shortlived truce placed him in, conducted himself with equal spirit, firmness, and moderation, till his mission terminated abruptly in the renewal of hostilities, and he quitted the French capital May 13, 1803. Lord Whitworth now retired to Knowle, in Kent, the family seat of the Sackville family, into the temporary possession of which he had come in right of his wife, and there exerted himself in raising, at his own expense, a troop of yeoman cavalry, to aid in repelling the menaced invasion of the country. In the spring of 1813 he was made one of the lords of the bedchamber, and the year following took his seat in the house as an English peer by the title of viscount Whitworth of Adbaston. In the August of 1814 he succeeded the duke of Richmond as viceroy of Ireland, which high dignity he enjoyed till 1817, when the usual period of office being expired he returned to England, having been in the interval still farther advanced to an earldom. Lord Whitworth, who united much private worth to unquestioned talent, died at Knowle, after an illness of only three days' duration, May 13, 1825.—*Ann. Biog.*

WHYT, MD. FR.S. &c. (ROBERT) an eminent Scottish physician of the last century, educated at Edinburgh, of which city he was a native, being born there in 1714. After studying physic at the university of St Andrews, he went to France for the completion of his medical education, and graduated in 1736 at Rheims. On his return to Scotland he commenced practice in the metropolis, of which he was a native, and rose to be professor of medicine in the university there, president of the College of Physicians, and first physician to the king in Scotland. Dr Whyt was the author of some able professional tracts, which were collected and published in one quarto volume, some time previous to his decease. This latter event took place in the spring of 1766.—*Encyclop. Brit.*

WICKLIFF, WICLEF, or DE WYCLIFFE (JOHN) a famous divine and theological and political writer of the fourteenth century, usually regarded by Protestants as an eminent reformer of Christianity, or, as he has been somewhat quaintly styled, the Morning Star of the Reformation. He was born about 1324 in Yorkshire, near the river Tees, in a parish whence he takes his name. He studied at Queen's college, Oxford, and then at Merton, in the same university; and he distinguished himself by his attention to school divinity and the works of Aristotle, the most abstruse parts of whose writings he is said to have committed to memory. He also became intimately conversant with the civil and canon law, and with the laws of England; to which he added a diligent perusal of the Scriptures, and the works of the Latin fathers of the church. As early as 1356 he inveighed against the authority of the pope, in a treatise "Of the Last Age of the Church;" and in 1360 he was active in opposing the encroachments and intrigues of the mendicant friars, who took every opportunity to establish their credit and power in the university. In 1361 Wickliff

was appointed master of Balliol college, and was presented to a college living; and in 1365 Simon Islip, the primate, constituted him warden of Canterbury college, which he had then newly founded at Oxford. An equal number of regular and secular priests having been placed as fellows in this college, by the founder, after his death disputes arose which led to the expulsion of Wickliff and the other three secular members of the college in 1367. On an appeal to Rome, the measure received the sanction of the papal court, a circumstance which naturally exasperated the mind of the ejected warden against the pope. In 1372 he took the degree of DD, and he then delivered lectures on theology with great applause. Disputes at this period existed between king Edward III and the court of Rome relative to the homage and tribute exacted from king John; and the English parliament had determined to support their sovereign in his refusal to submit to the vassalage in which his predecessors had been forced to acquiesce. A monk came forward as the advocate of the church; and Dr Wickliff wrote a reply, which made him favourably known at court, and procured him the especial patronage of John of Gaunt, duke of Lancaster. In 1374 he was sent to Bruges in Flanders, to confer with the pope's nuncio on the liberties of the English church; and the same year the king gave him the valuable rectory of Lutterworth in Leicestershire; and he shortly after obtained a prebend in the collegiate church of Westbury in Gloucestershire. He had now taken a decided part as to ecclesiastical politics; and having, in his writings, not only charged the bishop of Rome with avarice, covetousness, ambition, and tyranny, but also styled him Antichrist, it can be no matter of surprise that he was denounced as a heretic. Nineteen articles of alleged false doctrine, taken from his works, were transmitted to pope Gregory XI, who in 1377 returned three bulls addressed to the archbishop of Canterbury and the bishop of London, ordering the seizure and imprisonment of Wickliff, and requiring the king and government, if necessary, to assist in extirpating the errors he had propagated. Edward III died before the bulls arrived, and the duke of Lancaster, who chiefly ruled the kingdom under his nephew, was the avowed protector of the refractory divine. Therefore, when he appeared at St Paul's church, on the citation of the two prelates, he was accompanied by a vast concourse of people, and was supported by the duke of Lancaster and the earl marshal; and an altercation taking place between the noblemen and the bishops, the meeting was dissolved in a tumultuous manner. Wickliff afterwards attended at Lambeth palace, and delivered to the two prelates a defence or explanation of the propositions objected against him. The populace flocked together in crowds to protect him, and he was dismissed without any judgment taking place, partly, as it appears, owing to a mandate from the queen, Anne of Bohemia. Pope Gregory XI dying in March 1378, the commission he had issued necessarily ex-

pired, and Wickliff escaped farther question for the present. In consequence probably of anxiety and fatigue, he was seized with a severe fit of illness, on his recovery from which he applied himself anew, by writing and preaching, to his task of undermining the papal authority. The disputes then existing in the church between the rival pontiffs, Urban VI and Clement VII, furnished him with a fair opportunity for exposing the exorbitant pretensions of the court of Rome, of which he freely availed himself. Having in some of his works advanced some peculiar notions relative to the Eucharist, they attracted the notice and condemnation of the chancellor of the university of Oxford, on which Wickliff appealed to the king and parliament in 1382; but not being supported, as he had anticipated, by his former patron John of Gaunt, he was compelled to submission; and he accordingly made a confession of his errors at Oxford before archbishop Courtney, six bishops, and other clergymen, who had already condemned his tenets as heretical. A royal letter was procured by the primate, addressed to the chancellor and proctors, directing them to expel from the university and town of Oxford all who should harbour Wickliff or his followers, or hold any communication with them. He was however allowed to retire unmolested to his rectory at Lutterworth, where he continued to preach, and completed a translation of the Scriptures, in which he had engaged some years before. In 1383 he was seized with palsy, and this attack furnished him with an excuse for not making his appearance to a citation of pope Urban VI. A second paralytic stroke terminated his life on the 31st of December, 1384. The works of Wickliff are extremely numerous, but most of them remain in manuscript, in the libraries of Oxford, Cambridge, and Dublin, the British Museum, and Lambeth. Among those which have been printed are, "Trilogus," 1525, 4to, republished at Frankfort, 1753, 4to, containing a body of theology, in the form of a conversation between Truth, Falsehood, and Wisdom; "Wickliff's Wicket, or a Learned and Godly Treatise of the Sacrament," Nuremberg, 1546, 8vo, reprinted Oxford, 1612, 4to; the Prologue to his Translation of the Bible, published by R. Crowley, under the title of "The Pathway to Perfect Knowledge," 1550, 12mo and his version of the New Testament, first edited by the rev. J. Lewis, London, 1731, folio, and more recently by H. H. Baber, MA. 1810, 4to. The version of the Old Testament remains unprinted. Wickliff was a bold and original speculator both in religion and politics; and the influence of his writings on the state of public opinion in Germany, may be estimated from the proceedings against him at the council of Constance, after his death, when his sentiments being condemned on the score of heresy, his bones were ordered to be taken up and burnt: and this sentence, to the disgrace of his adversaries, was afterwards executed. His greatest admirers must indeed admit, that many paradoxical notions are to be

found in his writings. Like some other moral and theological philosophers, he has bewildered himself in the mazes of fatalism, and became involved in the abysses of the supralapsarian heresy. This will be obvious from a short extract of a summary of his doctrines, taken from his famous "Trialogue," mentioned above. He asserts that every thing happens through necessity; that he resisted the admission of that doctrine a long time, because it is inconsistent with the liberty of God; but that he was finally obliged to give way to it, and to allow at the same time that all the sins committed in the world are necessary and inevitable; that God could not prevent the sin of the first man, nor pardon it without the satisfaction of Christ; but the incarnation and its consequences were all matters of absolute necessity. He goes on to state, that God approves of our becoming sinners, that he obliges us to commit sin, and that man cannot act better or otherwise than he does act. As to the doctrine of transubstantiation, the main point of contention between the modern Protestants and the Catholics, this early reformer seems to have entertained no very precise ideas. He indeed positively asserted that the effectual consecration of the elements required personal purity in the priest; and that the guilt of mortal sin destroyed all power and authority, all title to respect and obedience in clerical and lay officers of all descriptions, from the pope to the deacon, and from the king to the constable. To this doctrine, evidently a heated consequence of his great zeal against the papal usurpations, must be attributed much of the antipathy with which the Romanists have ever been accustomed to regard the memory of Wickliff. Even among Protestants, he has met with some severe censurers of his opinions, including Melancthon and Dr Fell. But however mistaken this celebrated divine may have been in some of his speculations, the praise of talents and learning cannot be denied him; and it may be questioned whether he himself intended any thing more than the discovery of truth, and the diffusion of knowledge. Among many biographical memoirs relating to him, may be mentioned "The Life and Opinions of John de Wycliffe, D.D., illustrated principally from his unpublished MSS. by Robert Vaughan," 2 vols. 8vo, recently published.—*Biog. Brit.*

WICQUEFORT (ABRAHAM de) an eminent political character of the seventeenth century, by country a Dutchman, having been born at Amsterdam in 1598. The early part of his life was spent in Germany, where having entered the service of the elector of Brandenburg, that prince in 1626 appointed him to take charge of his interests at the court of Paris. In this capacity he continued to reside at the French capital till 1638, when a suspicion arising against him of having made improper disclosures to the States General, he was arrested by a *lettre de cachet*, at the instance of cardinal Mazarine, and sent to the Bastille. After a twelve month's imprisonment in this fortress he obtained liberty to return

to Holland, which he did, visiting England on his way. De Witt, then at the head of the Dutch government, gave him the appointment of historiographer to the States, and induced him to undertake the task of writing a history of his native country, while the duke of Brunswick Lunenburg made him his resident at the Hague. But the same suspicions which had before proved so injurious to his political career again interfered with his prospects. He was once more arrested, tried, and condemned to perpetual imprisonment, for conveying intelligence to the enemies of his country. The courage and address of one of his daughters, however, opened the way to his escape, after a second confinement of four years' duration, and he fled to Zell in 1679. Here he occupied himself for two years in unavailing attempts to prevail on the duke to interest himself in procuring a reversion of his sentence; but at length finding all his importunities disregarded, he quitted the court in disgust, and is said by some to have died of chagrin in 1682. Besides his "History of the United Provinces," De Wicquefort was the author of a considerable work on the science of diplomacy, entitled "L'Ambassadeur et ses Fonctions," 4to, 2 vols.; "Memoirs concerning Ambassadors and Public Functionaries;" and some excellent translations of books of travels from the Spanish and German languages into Dutch.—*Moreri.*

WIELAND (CHRISTOPHER MARTIN) an eminent German writer, was born in September 1733 at Biberach, a small imperial town in Suabia, where his father was the Protestant clergyman. He received the early part of his education under the paternal roof, and in his thirteenth year began to compose Latin and German poems, and showed a decided attachment to the muses. In the following year he was sent to the celebrated school of Klosterbergen, after which he resided at Erfurt, and imbibed a strong attachment to Sophia de Guterman, afterwards celebrated by her works under the name of madame de la Roche. The lovers were however soon separated, and in 1750 he was sent to Tubingen, in order to study jurisprudence, which he altogether neglected for the belles lettres, and published various poems, moral epistles, and fanciful tales. He also began a poem in heroic verse, on the subject of Arminius, which introduced him to the celebrated Swiss poet Bodmer, who invited him to Zurich. Here in tranquil retirement he composed several of the numerous works which have entitled him to the appellation of the German Voltaire. In 1760 he returned to his native city, where he obtained the place of a director of the Chancery, which office he held until 1769, but without much impediment to his literary avocations. About this time he became known to count Stadion, who had been prime minister to the elector of Mentz; and this nobleman became so attached to Wieland, that he assigned him an apartment in his magnificent castle. He was soon after invited by the elector of Mentz to be professor of philosophy and the belles

lettres in the university of Erfurt, which offered him acceptance. In 1765 he married a woman of good family at Augsburg, who brought him thirteen children, and of whom he always spoke in the highest terms. In 1772, having become introduced to the duchess dowager of Saxe-Weimar, he was appointed tutor to her two sons; and in due time he became aulic councillor to the eldest son, since so distinguished as the liberal and literary reigning duke. He ultimately retired to a mansion and small estate in the neighbourhood of Zurich, where he lived highly venerated and respected for many years. He was even visited in 1808 by Buonaparte, who sent him the cross of the legion of honour. He died in January 1813, in his eightieth year. The works of this eminent writer are so numerous, and of so multifarious a nature, a detailed account, or even a catalogue of the whole of them, would exceed our limits. Of his poems the most celebrated are "Musarion" and "Oberon," the latter of which has become well known to the English reader by Sotheby's very elegant translation. Of his novels and tales the best known are Agathon, Don Sylvio de Rosalba, Peregrinus Proteus, and Combabus. His minor productions of the same class are very numerous. His miscellaneous works are also extremely versatile, some of the best known of which are "Socrates run mad, or the Dialogues of Diogenes of Sinope;" "New Dialogues of the Gods," and "Aristippus and some of his Contemporaries." Among his translations are Lucian from the Greek; the Satires of Horace, and Cicero's Epistles from the Latin; and Shakspeare from the English. His original works alone form 42 vols. 4to, Leipzig, 1794, 1802, and he also had a share in various journals. A German critic of considerable celebrity regards him as possessed of a vivid imagination, inexhaustible humour, true and delicate feeling, and a penetrating and philosophical spirit, which praise is qualified by another with a little censure of his later productions as often too improbable, and abounding in images too licentious and impure. This may be just, as also the imputation of a degree of scepticism and freethinking. He however fully merits the high character for versatile and extraordinary genius, which all Germany have agreed to bestow on him.—*Vies des principaux Savans de l'Allemagne. Nouv. Dict. Hist.*

WILCOCKS, FSA. (JOSEPH) an ingenious writer and benevolent philanthropist of the last century. He was the son of Dr Joseph Wilcocks, bishop of Gloucester, and afterwards of Rochester, who died in 1756. He was born in 1723, and was educated at Christchurch, Oxford. He spent some time in Italy, and at Civita Turchina he made a discovery of subterraneous apartments, with Etruscan inscriptions and paintings, of which he published an account in the Philosophical Transactions. Being at Rome during the pontificate of Clement XIII, he became known to his holiness, who denominated him "the blessed hermit." He died in 1791. His talents and learning are advantageously dis-

played in a work entitled "Roman Conversations," 2 vols. 8vo, published posthumously.—*Month. Rev.*

WILD (HENRY) a learned tailor, was born in 1684. He was educated at the grammar-school of Norwich, until nearly fit for the university, but his friends wanting means to send him there, he was bound apprentice to a tailor, with whom he remained seven years, and afterwards worked seven more as a journeyman. Towards the expiration of the last mentioned period, he was disabled by a fever and ague from attention to his trade; and in this depressed state he was gradually led to study the Hebrew language, and subsequently Greek, Arabic, Persian, and Syriac. By a fortunate accident, his acquirements becoming known to dean Prideaux, he was by his interest employed some years in the Bodleian library, to translate and make extracts from the MSS. there. About 1720 he removed to London, under the patronage of Dr Mead, but where he died is not known. In 1714 he published a translation from the Arabic of Mahomet's Journey to Heaven.—*Gent. Mag.*

WILKES (JOHN) a political character of great temporary celebrity, was born in London in 1717, being the second son of Mr Israel Wilkes, an opulent distiller. After a preliminary education first at Hertford, and then under a dissenting minister at Aylesbury, he was sent to finish his studies at the university of Leyden. He returned to England in 1749, with a considerable portion of classical and general knowledge; and with the manners and accomplishments of a gentleman; and soon after married Miss Mead, a lady of large fortune, but several years older than himself. One daughter was the only fruit of this ill-assorted union, which did not prevent him from living a very free, not to say very licentious life. In 1754 he became a candidate to represent the town of Berwick-upon-Tweed, but was unsuccessful; and soon after he finally separated from his wife. In 1757 he obtained a seat for the borough of Aylesbury, which much involved his affairs by the expense attendant on the election. He went into parliament under the auspices of earl Temple, through whose interest he was also appointed lieutenant-colonel of the Bucks militia. His early career in parliament was by no means conspicuous, but on the secession from the ministry of earl Temple and Mr Pitt in 1762, he attained considerable reputation by some pamphlets in attack of the administration, and more especially of the earl of Bute. He extended his hostility not only to that nobleman, but his country; and by his famous periodical paper, entitled the "North Briton," rendered antipathy to Scotland a prevalent sentiment in England. It is thought, indeed, that the effect produced by these papers hastened the resignation of lord Bute, which took place in April 1763. In the same month appeared the famous No. 45 of the "North Briton," which commented on the king's speech in such caustic terms, that a prosecution was determined upon. The home secretary in consequence

issued a general warrant, or one in which particular names are not specified, ordering the apprehension of the authors, printers, and publishers of the paper in question. On this warrant Wilkes, among others, was apprehended, when, with his characteristic coolness, he asserted the illegality of the warrant, and refusing to answer interrogatories, he was committed to the Tower. Some days after, however, he was brought by writ of habeas corpus before chief-justice Pratt of the Common Pleas, who declared the judgment of that court that general warrants were illegal, and he was consequently discharged, amidst the general rejoicings of the populace. Aided by lord Temple, he brought actions against the secretary of state, under-secretaries, messengers, and every person employed in the transaction, in all of which the prosecutors obtained damages, which were paid by the crown; and whatever opinion may be entertained of the motives or character of Mr Wilkes, gratitude for this important accession to the cause of liberty, was certainly due to him. Not content with this escape, he reprinted the obnoxious "North Briton," which produced a second more regular prosecution to conviction, and in the mean time having fought a duel with a Mr Martin, in which he was dangerously wounded, he withdrew to France. The result of his non-appearance to meet the prosecution, was expulsion from the house of Commons. A second charge was also brought against him for printing an obscene poem, entitled an "Essay on Women," and he was found guilty of blasphemy as well as libel, added to which his continued absence produced outlawry, and thus the ministerial triumph was complete. He in vain made attempts to procure the reversal of his outlawry; but, trusting to his popularity, he ventured to return on a change of ministry, and to deliver himself into custody. Notwithstanding his imprisonment, he was elected to represent the county of Middlesex, by a vast majority; and soon after his outlawry was discussed at various hearings, and solemnly reversed, but this did not procure his liberty; and he was condemned to an imprisonment of twenty-two months, and a fine of 1000*l*. In 1769, in consequence of a pamphlet written by him, in censure of a letter from the secretary of state to a magistrate, advising the employment of the military in repression of the riots which were the result of Mr Wilkes's confinement, he was again expelled the house. This measure being followed by his immediate re-election, he was declared incapable of becoming a member of the existing parliament, and colonel Luttrell set up against him, who was declared the sitting member for Middlesex at the next election, although the votes for him did not amount to a fourth part of those for Wilkes, a decision which produced a great sensation, and excited disgust even among those who disliked the person thus opposed. In return for the loss of his seat, he was elected alderman of the ward of Farringdon Without, and in this civic magistracy displayed his usual spirit against what he deemed illegal authority.

The house of Commons having summoned some printers in the city before them for publishing their speeches, they neglected to attend, when a royal proclamation was obtained for apprehending them; and when, on its authority, one of the printers was carried before alderman Wilkes, he, who deemed the apprehension a breach of the privileges of the city, discharged the printer and ordered the captor to give bail. The lord mayor Oliver, and alderman Crosby, acted in the same way in regard to two other printers, for which, being members of the house of Commons, they were committed to the Tower, while Wilkes, being summoned to the bar of the house of Commons, instead of obeying, wrote to the speaker, and claimed his seat. The house was now sensible of the difficulty in which it had involved itself, and found no better expedient to save its credit than an adjournment beyond the day on which he was ordered to attend. In 1772 he was chosen sheriff, and in 1774 elected mayor; and he knew so well both how to acquire and to retain popularity, that on the dissolution of parliament in the same year he was once more chosen member for Middlesex. In parliament he was a strenuous opposer of the measures which led to the American war, but did not render himself very conspicuous as a speaker. In 1779 he was chosen, by a great majority, chamberlain of London, which lucrative office, so necessary to his broken fortune, he held for the remainder of his life. In 1782, upon the dismissal of the North administration, the obnoxious resolutions against him were, on his own motion, expunged from the journals of the house; from which time, although in 1784 once more re-elected member for Middlesex, he deemed himself "a fire burnt out." He died Dec. 26, 1797, aged seventy; for some years previously to which event he was comparatively forgotten. Of the strict purity of the patriotism of this spirited character much doubt has at all times been entertained; but it is but fair to presume from the whole of his conduct, that his original notions of government were constitutionally popular; and it is equally certain, that both the liberty of the subject and parliamentary law were strengthened by his courage, coolness, and perseverance. Without refining too much upon motives, the occasional spirit and tenacity of men like John Wilkes have done much for the general liberties of England. For the rest, as a writer and speaker, he did not reach beyond mediocrity. His private character was unconcealedly one of great licence; but like many who resembled him in that respect, he possessed points which conciliate esteem, including elegant manners, fine taste, ready wit, and pleasing conversation. The letters and speeches of Mr Wilkes were published by himself in 1787; and much light has been thrown upon his conduct and abilities by the publication of "Letters from the Year 1774 to the Year 1796, written by the late John Wilkes, Esq. to his Daughter," 1804, 4 vols. 12mo. His correspondence, in 5 vols. was also published, with a memoir by Almon, in

1805, 6ve vols. 8vo.—*Almon's Mem. Annual Register.*

WILKIE (WILLIAM) a Scottish poet of some notoriety in his day, was born in the parish of Dalmeny, in the county of West Lothian. His father, a small farmer, contrived to give him a liberal education, and at the age of thirteen he was sent to the university of Edinburgh. Before he completed his academical course, the death of his father obliged him to pay attention to the farm, which was the only inheritance of himself and three sisters. He still however prosecuted his studies, and was admitted a preacher in the church of Scotland. For some years this made no alteration in his mode of living, as he only assisted at some neighbouring churches occasionally. In 1753 he published his "Epigoniad," an attempted epic, which met with so much success in Scotland, that he was induced to print a second edition in 1759, which being but slowly called for, was aided by a printed encomium from Hume, in a letter to the Critical Reviewers. Before the publication of the first edition of this poem, the author was made minister of Ratho; and in 1759 he was chosen professor of natural philosophy in the university of St Andrews. In 1766 he received the degree of doctor of divinity, and in 1768 he sent out a volume of "Fables," in imitation of those of Gay. Dr Wilkie, who with great learning and ingenuity, was remarkable for coarse and slovenly habits, died October 10, 1772. The "Epigoniad" has already fallen into oblivion, nor are the fables much recollected, although often sprightly and ingenious. —*Encyc. Brit.*

WILKINS (DAVID) a learned divine and editor, was born in 1685. His name does not appear among the graduates of either university, although he was honoured with the degree of DD. by that of Cambridge in 1717. In 1715 he was appointed keeper of the archiepiscopal library at Lambeth, and in three years he drew up a curious catalogue of the MSS. in that valuable collection. As a reward for his industry and learning, archbishop Wake gave him three livings in Kent, and subsequently the rectories of Hadleigh, Monk's Ely, and Bocking. He was also collated to a prebend at Canterbury, and to the archdeaconry of Suffolk, in consequence of which he gave up several of his other preferments. He died in 1745. His publications are "Novum Testamentum Copticum," Oxon. 1716, 4to; "Leges Saxonice," London, 1721, folio; an edition of Selden's Works, 3 vols. folio; "Concilia Magnæ Britannie," 1736, 4 vols. folio. —*Nichols's Lit. Anec.*

WILKINS (JOHN) bishop of Chester, a learned and ingenious, though somewhat fanciful prelate of the seventeenth century. He was the son of a goldsmith of Oxford, who was married to a daughter of John Dod, a nonconforming divine, known by the name of the Decalogist, from his work on the Commandments. In the house of his grandfather, situate at Fawley near Daventry, Northants, the future bishop was born in 1614, and after receiving

the rudiments of a classical education at a private seminary in the city, where his father resided, was matriculated at New-inn-hall in 1627, which society he afterwards left for Magdalen-hall, and there graduated. Having taken holy orders, he obtained the appointment of domestic chaplain to the count palatine of the Rhine; notwithstanding which, on the breaking out of the civil wars, he made no scruple of taking the covenant, and both in his opinions and discourses manifested his adherence to the popular party. On the success of the side he had espoused, his conduct was rewarded by the headship of Wadham college, Oxford, a situation for which celibacy was then and is still (though the only one of a similar rank in the university) an indispensable qualification. This, according to the college statutes, he should have vacated on marrying Robinia French, widow of Dr Peter French, one of the canons of Christchurch, an event which took place in 1656. The lady however was sister to Oliver Cromwell, then in the zenith of his power, and the protector hesitated not to give his brother-in-law a dispensation, which prevented his losing his preferment. In 1659 he removed to the sister university, his wife's nephew during his short-lived supremacy having presented him to the headship of Trinity college there; but the restoration of monarchy in the following year not only put a stop to his hopes of farther preferment from the republican party, but his connexion with the family into which he had married was the cause of his being ejected from his present situation. The political sentiments of Dr Wilkins were not however of that stubborn nature which refuses to bend to circumstances. He obtained the appointment of preacher to the society of Gray's-inn; and having succeeded in gaining the esteem of Villiers duke of Buckingham, the sunshine of court favour again opened upon him. His presentation to the rectory of St Lawrence, Old Jewry, followed, and was succeeded by the deanery of Ripon, till in 1668 he was elevated to the episcopal bench through the same powerful interest. The pliability of bishop Wilkins's politics may perhaps be not unfairly ascribed in a great measure to his mind being continually occupied on matters more congenial to his disposition, as on all occasions he exhibited a degree of forbearance and toleration which rendered him in turn unpopular with the more bigoted of both parties. The influence he enjoyed during the protectorate from his matrimonial alliance, was on several occasions exerted with effect in preserving the university in which he was brought up, and which, from its partiality to the royal cause, was particularly obnoxious to the independents, from spoliation. This gained him the ill will of the puritans, while the moderation he afterwards showed towards the dissenters excited against him the minds of the high church party. As a mathematician and a philosopher he exhibited considerable acuteness and ingenuity, especially when the general state of science in England at the period in which he lived is

taken into account. Some ridicule has in later times been attached, and not without sufficient grounds, to his opinions of the practicability of a passage to the moon, which planet he conceived to be inhabited, and wrote a work in support of his theory, entitled "The Discovery of a New World, or a Discourse on the World in the Moon," 8vo, 1638. In 1640 he published a second treatise, the object of which is to prove that the earth is a new planet. His other writings are, "Mercury, or the Secret and Swift Messenger," 1641; "Mathematical Magic, or the Wonders to be performed by Mechanical Geometry," 1648; "Ecclesiastes, or the Gift of Preaching;" "On the Gift of Prayer;" "On the Principles and Duties of Natural Religion;" "A Discourse concerning Providence;" "An Essay towards a real Character and Philosophical Language," folio; and a few sermons. He was one of the literary personages whose association for the purpose of scientific inquiries afterwards took a more decided and permanent form, and received a charter of incorporation from Charles the Second, under the name of the Royal Society. For some little time previous to his decease, the bishop had taken up his residence with his daughter, the wife of doctor (afterwards archbishop) Tillotson, in Chancery-lane, London, where he died of an attack of the stone, November 19, 1672, and was buried in the chancel belonging to the church of St Lawrence in the Old Jewry. His work on natural religion appeared after his decease; and in 1708 some of the earlier productions already alluded to were collected and published together in one 8vo volume.—*Burnet's Own Times*.

WILLAN (ROBERT)—a physician and medical writer of eminence, born near Sedburgh, in Yorkshire, in 1757. He was the son of a physician, who belonged to the religious sect of the quakers; and he studied at Edinburgh, where he took his degree as M.D. in 1780. Soon after he settled in practice at Darlington in Durham, whence he removed to London, and was appointed physician to a dispensary in Carey-street. In 1791 he became a fellow of the Antiquarian Society; and his death took place in 1812, at Madeira, whither he had gone for the recovery of his health. Dr Willan, who had left the society of the quakers, was the author of "The History of the Ministry of Jesus Christ," 1782, 8vo; and among various medical works, he published a valuable treatise on cutaneous diseases, 4to, illustrated with engravings.—*Gent. Mag.*

WILLEMET (PIERRE REMI) a French naturalist, who was the son of an eminent physician, and was born at Nanci in 1762. Having studied the principles of the art of healing under his father, he embarked for the East Indies, where he became surgeon to Tippoo Sahib. He died at Seringapatam in 1790. He was the author of several Latin dissertations relative to physiology, botany, and medicine; and also of a small tract entitled "Herbarium Mauritianum," 1796, 8vo, containing an account of plants found in the island of

Mauritius.—*Nouv. Dict. Hist. Encyclop. Method. Botan. Art. Voyageurs.*

WILLIAM I, surnamed the Conqueror, king of England and duke of Normandy. He was born in 1024, and was the natural son of Robert duke of Normandy, by Arlotta, the daughter of a tanner of Falaise. His father having no legitimate son, on his departure on a pilgrimage to Jerusalem, caused the states of the duchy to swear allegiance to him as his heir. Robert died in 1035, on his return from Palestine; and the guardian of the young duke could not prevent the king of France from reducing the duchy to a very low condition. When William assumed the reins himself his vigour and ability soon repelled these aggressions, and reduced both the French king and his own rebellious barons to the necessity of peace and submission. Edward the Confessor, at this time king of England, being closely connected with the Norman family, was instigated by the archbishop of Canterbury, a Norman, to allow William to be given to understand that the king designed him for his successor. The irresolute character of Edward, however, induced him to keep the secret in his own breast, which enabled Harold, the able son of earl Godwin, to ascend the throne on his death in 1066, without opposition. Harold had previously been carried a captive into Normandy, where he was treated with great distinction by William, who informed him of the intentions of the Confessor, and took from him an oath to do his utmost to carry them into effect. His occupation of the throne himself, and renunciation of his oath as compulsory, therefore led to immediate war, and the celebrated Norman invasion followed, which was rendered successful by the battle of Hastings, fought on the 4th of October, 1066, terminating in the defeat and death of Harold, and two of his brothers. On the Christmas-day of the same year, William was crowned, after a sort of tumultuary election on the part of the English nobles, and took the customary coronation oath. His first measures were mild and judicious; he sought to ingratiate himself with his new subjects, preserved his army in strict discipline, confirmed the liberties of London and other cities, and administered justice impartially. On his return to Normandy, however, the English being treated by the Norman leaders like a conquered people, and exposed to contumely and spoliation, broke out into revolt in various places, and the Kentish men setting the example, a conspiracy was planned for the massacre of all the Normans in the country. On this intelligence, William returned, and began with a show of justice, by repressing the encroachment of his followers; but reviving the tax of Danegelt, which had been abolished by Edward the Confessor, the discontents were renewed. These he repressed with his usual vigour, and a temporary calm succeeded, during which his queen Matilda came over, and was crowned at Westminster. The resistance of the two powerful Saxon nobles, Edwin and Morcar, who had formed an alli-

ance with the kings of Scotland and Denmark, and with the princes of North Wales, soon after drew William to the north, where he succeeded in crushing the attempt in its infancy, and obliged Malcolm, King of Scotland, to do homage for Cumberland. From this time he treated the English like a conquered people, multiplied confiscations in every quarter, and forced the native nobility to desert the country in great numbers. In 1069 another formidable insurrection broke out in the north, and at the same time the English resumed arms in the eastern and southern counties. William first opposed the storm in the north, and executed such merciless vengeance in his progress, that the whole country between York and Durham was turned into a desert, and above 100,000 of both sexes and all ages are said to have perished. There being now scarcely a landed proprietor who had not incurred the forfeiture of rebellion, he put into execution his plan of introducing a total alteration of the state of English law and property, by dividing all the lands into baronies, and adopting the feudal constitution of Normandy in regard to tenure and services. He also reduced the ecclesiastical property to a similar system, and in order to prevent resistance from the clergy, expelled all the English church dignitaries, and placed Normans or other foreigners in their stead. He also admitted the first resident legate from the pope, and inculcated the same respect for the supremacy of Rome, which existed on the continent, but wisely reserved to himself the confirmation of all acts of papal authority in England. Still farther to subjugate the minds of the English, he sought to abolish even their language, causing the French to be spoken at court, and used in courts of justice, and in law proceedings; and ordering it to form a leading part of instruction in all the schools throughout the realm. In 1071 the earls Edwin and Morcar produced a new insurrection in the north, which terminated in the death of the former, and capture of the latter; and the Scottish king having again aided them, William marched an army into Scotland, which soon led to a peace, on which occasion he allowed the return of the weak but rightful Saxon heir, Edgar Atheling, who had taken refuge in Scotland, and promised him an honourable establishment. In 1073 he returned to Normandy, whence he was recalled by a revolt among his Norman barons, which was however quelled by the regent Odo, his half brother. In 1076 he received a letter from the haughty and ambitious pope, Gregory VII, requiring him to do homage for his kingdom, and to pay the accustomed tribute from England to the holy see. William denied the homage, nor would he allow the English prelates to attend a general council summoned by Gregory, but consented to the levy of Peter's pence. A civil war took place between him and his son Robert the same year, in Normandy, which ended in a reconciliation. About the year 1081 he instituted that general survey of the landed property of the kingdom,

BROOD DICT.—VOL. III.

the record of which still exists under the title of Domesday Book, being a minute return of the estates in the different counties, their extent, proprietors, tenure, condition, and value. It might be supposed that his anxiety to acquire an accurate knowledge of the state of his kingdom was to promote its improvement; but his passion for the chase interfered with all laudable views of this nature, and the manner in which he laid waste the New Forest in Hampshire, where he demolished villages, churches, and convents, and expelled the inhabitants for thirty miles round, merely for hunting facilities, forms a notable instance of his cruelty, and love of sporting, which he further protected by a most severe code of game laws. The remainder of his reign affords little matter for biography. In 1087 he went to war with France, whose king had encouraged a rebellion of Norman nobles, and aggravated the injury by an unseemly jest on William's corpulency. He entered the French territory and committed great ravages, but by the starting of his horse received an injury which hastened his death, at the abbey of St Gervais, near Rouen, September 9, 1087, in the sixty-third year of his age. He left three sons; Robert, to whom he bequeathed Normandy; William, who inherited England; and Henry, who received nothing but his mother's property. He also left five daughters. William the Conqueror, before his death, was the most powerful sovereign of his time; he possessed superior talents, both political and martial, and employed them with remarkable vigour and industry. His passions were, however, strong, his ambition severe and merciless; and his love of sway often led him to disregard all restraints of justice and humanity. There never was a more fortunate conqueror, or usurper of a throne, as he transmitted that of England to a long and still subsisting line of descendants; and the establishment of his dynasty may be said to have altered the entire current of English history.—*Hume. Henry.*

WILLIAM II, surnamed RUFUS, from his red hair, second son of the preceding sovereign, was born in 1060. Being nominated king of England by his father, on the death of the latter he hastened over from Normandy, took possession of the royal treasury at Winchester, and was crowned at Westminster in September 1087. The division of England and Normandy did not, however, please the great barons, who possessed territories in both, and a conspiracy was formed for effecting the deposition of William in favour of his brother Robert. As the conspirators were chiefly Normans, the king, who possessed a considerable share of his father's vigour and activity, immediately turned his attention to the English, and by promising a restoration of their ancient laws, and liberty to hunt in the royal forest, he was enabled to levy a force, by the means of which he successively reduced the castles of the confederates, whom he sent to Normandy, after confiscating all their English possessions. Being now firmly seated on

his throne, he quickly forgot his promises to the unhappy English, and the death of Lanfranc, archbishop of Canterbury, freeing him from an authority which he respected, he extended his rapacity to the church, and seized the temporalities of vacant bishoprics and abbey, to which he delayed appointing successors. In 1090 he made an incursion into Normandy, to retaliate on his brother Robert, but a reconciliation was effected between them, and Robert accompanied him back to England, and led an army for him against the king of Scotland, whom he compelled to do homage to William. The two brothers did not, however, long continue friends, and in 1095 William was in France plotting against Robert, when he was recalled to England by a conspiracy of his barons in the north, which he quickly repressed. The following year Robert mortgaged his dukedom to William for the sum of ten thousand marks, to enable him to fit out an expedition and join the crusaders in the Holy Land. William accordingly took possession of Normandy and Maine, and soon after being seized with a dangerous illness, he appointed Anselm, a Norman abbot, distinguished for learning and piety, to the archbishopric of Canterbury, which had remained vacant since the death of Lanfranc. Contrary to his expectation, he found in Anselm a strenuous defender of the claims of the church, and he strove to depose him by means of a synod, but could not succeed. At length Anselm obtained permission to visit Rome, and in his absence the king immediately seized on all the temporalities of his see. He soon after was obliged to visit France, to resist the progress of the lord of La Fleche, who gained possession of the town of Mons, which he soon delivered. In 1100 the duke of Guienne, following the example of the duke of Normandy, applied to William to advance him money on his province, to which the latter readily agreed, and was about to take over the money and acquire possession of the territories, when an unfortunate accident terminated his life. He was hunting in the New Forest, and had alighted from his horse after a chase, when a stag suddenly starting up near him, a French gentleman, named Walter Tyrrel, let fly an arrow at the animal, which glancing from a tree, entered the king's breast and pierced him to the heart. Tyrrel immediately galloped to the coast and embarked for France, where he joined the crusaders. The king's body was found by the country people, and interred without ceremony at Winchester. This event took place August 2, 1100, when William was in the fortieth year of his age, and thirteenth of his reign. The incidents which mark the sway of this prince prove him to have possessed vigour, decision, and policy; but to have been violent, perfidious, and rapacious to a very high degree. The ecclesiastical historians are, naturally enough, peculiarly unfavourable to him, and accuse him of indifference to all religion; and if several of the anecdotes which they relate of

him be true, they were fully justified. William Rufus deserves to be regarded as a promoter of the useful arts, as his erection of the Tower of London, London Bridge, and Westminster Hall, still remain to testify.—*Ibid.*

WILLIAM III, king of England, prince of Orange, and stadtholder of Holland, was the posthumous son of William II, prince of Orange, and of Mary, daughter of Charles I, king of England. He was born November 14, 1650. His youth, passed among violent party contests, originating in the suspicions which the republican party entertained that the house of Orange meditated designs against public liberty; and in the conditions made by Cromwell against it, as a branch of that of Stuart in the peace of 1654. The Restoration in England gradually opened the way to the recovery of the honours and authority possessed by his ancestors; and in opposition to the most strenuous efforts of the party, headed by John de Witt, which had procured the abolition of the stadtholdership, he was, in 1672, chosen captain-general of the force raised in order to resist the unprincipled invasion of Louis XIV. The edict for abolishing the stadtholdership was also soon after revoked, and the execrable murder of the De Witts, who had placed too much confidence in France, by annihilating their party, placed full authority in the hands of William. At this early age he discovered the firmness of mind which was his great characteristic, and created an opposition to the designs of France, that, seconded by his military services, produced the most beneficial consequences to Europe at large. Details respecting the contest between Louis XIV and the United Provinces at this period belong to the historian; it is sufficient to observe, that to humble that monarch henceforward became a ruling passion in the breast of William. It was greatly with a view to fix the English court in the same interest, that in 1678 he sought the hand of, and came to London to be united to Mary, oldest daughter to the duke of York, an alliance which greatly pleased the English people, who entered fully into his animosity to that mischievously ambitious prince. On the conclusion of the peace of Nimeguen, the country being no longer in danger, the jealousy of the house of Orange again revived in the United Provinces, and William took several strong and unconstitutional measures to carry an augmentation of troops to resist some ambitious and equivocal demonstrations on the part of Louis. The succession of his father-in-law to the crown of England in 1685, which ought to have drawn the alliance close between the two countries, had a directly contrary effect, owing to the attachment of James to his religion, which induced him to look with coldness upon a son-in-law, who on the continent was regarded as the great supporter of the Protestant cause. The measures of James in Great Britain, united to the revocation of the edict of Nantes by Louis, served, by the alarm which at this time they excited throughout Protestant Europe, to suspend party opposition to Wil-

nam in Holland, and equally tended to turn upon him the eyes of all the friends of civil and religious liberty in England. It is for the historian to relate the private negotiation which followed, until the issuing of his declaration to the British nation, and embarkation and landing with a numerous force at Torbay, on the 4th of November, 1688. It is equally unnecessary to recapitulate the events attendant upon the memorable Revolution which followed, forming one of the most important events in modern history. It is sufficient to observe, that it terminated in the settlement of the crown upon the prince and princess of Orange for their lives, the sole administration however to remain in the prince. After their deaths the crown was to descend to his issue by Mary, and in default thereof to the princess Anne and her issue, or such issue failing, to that of William by any other wife. At the same time a bill of rights was passed, settling all the disputed points between the king and the people, and circumscribing and defining the royal prerogative. From this time, therefore, a contract has existed between the prince and people, the existence of which had long been theoretically contended for, but which thus became a recorded fact in English government. William was now the sovereign of a powerful kingdom, but one with which he had little personal acquaintance, and in which party differences existed to an extreme degree. Neither were his own habits or manners such as to create personal attachment, partaking of a degree of coldness and reserve which repressed all enthusiasm in his favour, even among those who were strongly attached to his cause. But had he been the reverse, the circumstances under which he received the crown could not fail to embarrass his government. Although the Tories had joined with the Whigs in inviting him to come to protect the establishment, they were, in general, far from inclined to make him king, in prejudice not only of James, but of his infant son. On the other hand, the high church party were too zealous in favour of indefeasible hereditary right, a notion, with its concomitant, passive obedience, by no means extinct even at present, to acquiesce in the transfer of a throne by the will of the people. In Scotland the Whigs alone favoured the exaltation of William; and in Ireland, the majority being Catholics, openly adhered to James. His anxiety for toleration, and the comprehension of the dissenters within the pale of the establishment, still farther indisposed numbers; so that the crown was no sooner placed upon his head, than a large proportion of his subjects were secret or open enemies to the wearer of it. Hence his reign was full of events, domestic and foreign, which occupy an important space in the page of history, but in this summary a few personal points alone can be hinted at. In apprising the States-general of his elevation, he expressed his intention of abating nothing in his zeal for his native country, as also of retaining the important offices which he held in it. War

with France being renewed in 1689 by the States, in conjunction with Austria, he found no difficulty in gaining the concurrence of the English parliament to a league for the humiliation of France. Greatly as he wished to lead in this continental war, James, aided by a force from France, having landed in Ireland in the spring of 1689, he was obliged in the first instance to seek to make himself master of his own kingdom. This he effected, after suppressing a Jacobite insurrection in Scotland, by the famous battle of the Boyne, fought on the 1st of July, 1690, which routed and totally dispersed the Irish army, and quickly sent James back to France. William then invested Limerick, to which place the remnant of the army of James had retired; but being repulsed in an attempt to storm the place, he returned to England. Limerick, however, capitulated the following year, on terms very favourable to the Catholics, and which they say were never adhered to; and although much casuistry has been employed to prove the contrary, it is difficult on the face of the articles themselves to disprove the assertion. The reign of William continued for some time very restless and uneasy; and a French invasion was meditated, which the disaster that befel Louis's fleet at La Hogue alone prevented from producing serious alarm to his government. These events took place in the absence of the king, who had repaired to the continent, and placed himself at the head of the great alliance against France in 1691. The loss of Mons and of Namur, with the failure of a spirited attempt to surprise marshal Lucemburgh at Steenkirk, were of no advantage to his military reputation, although an infamous attempt against his life proved how formidable he was deemed as an enemy. Little was effected on either side in the two following campaigns; and in 1695 William experienced a severe domestic affliction, in the loss of queen Mary, to whom he was strongly and sincerely attached. The death of this princess, without issue, revived the hopes of the Jacobites, and various new conspiracies were formed, one of which involved an atrocious plan for the assassination of William, for which several individuals were condemned and executed. An indecisive campaign followed, until hostilities terminated in 1696, with the congress of Ryswick, which completed a treaty the following year in which France was to acknowledge William king of Great Britain, and to abstain from all future attempts to dispossess him of his throne. On the return of peace, William endured several mortifications from the objections of one party to a standing army, and the dislike of another to himself; and he was obliged to part with his favourite Dutch guards. The death of the king of Spain in 1701, with a testament in favour of the grandson of Louis XIV, again led to active preparations for a war with France, in which the nation appeared heartily to concur, and another extensive alliance was formed by William during a visit to the continent. He was not, however, destined to en-

joy the pleasure he took in the anticipated humiliation of France. A life of care and fatigue had worn down a constitution originally delicate, and a fall from his horse gave it an additional shock. Fever, with increasing symptoms of debility, announced that his end was approaching, and, preparing for it with perfect composure, he expired March 8, 1702, in the fifty-second year of his age, and thirteenth of his reign. The character of king William has been represented with all the diversity of colouring which belongs to opposing party sentiments; with respect, however, to his understanding and temper, opinions have not much varied. His military talents were not brilliant, being seldom successful in the field; but he was never defeated in spirit, and no commander surpassed him in repairing losses and maintaining a respectable countenance under all fortunes. A cold ungracious manner always adhered to him, and did him much injury; but many proofs have been supplied, that it rather proved the disguise than the absence of feeling, inasmuch that his attachment to individuals was often imputed to him as a crime. The part which he acted in the deposition of his father-in-law, being judged of by opposing principles, will necessarily be both attacked and defended. The advocates of the house of Stuart and of passive obedience, which, although virtually, are not sentimentally extinct, still speak of it with the severest reprehension. Their opponents, and doubtless the majority of impartial posterity, who regard the preservation of public liberty as the first of all duties, pronounce directly the reverse. The United Provinces had certainly reason to regard him as their second founder; and he as certainly delivered the British islands from a perverse, perverted, and despotically inclined race, who courted the alliance of the greatest enemy of the religious opinions of the great majority of their subjects with very indefensible views. In his own estimation, William probably acted a higher part still; that of a man who sought to protect the liberty of Europe generally from an ambitious and tyrannical French ascendancy, which would have been equally injurious to civil and religious liberty wherever it prevailed.—*Hume. Henry. Aikin.*

WILLIAM OF NASSAU, prince of Orange and founder of the Dutch republic, was born in Germany in 1533. He was the son of William, surnamed the Old, and of Juliana of Stolberg, who were Lutherans, but having entered into the service of the emperor Charles V, he conformed to the Roman Catholic religion, and became a great favourite at the imperial court. He was trained to high employments, and at length arrived at the dignity of governor of the provinces of Holland, Zealand, and Utrecht. He held this situation in the Netherlands when the establishment of the inquisition, and the arbitrary conduct of Philip II and his minister, the cardinal Granvelle, produced open insurrection. William united with the counts Egmont and Horn in giving all possible opposition to these severi-

ties; and on the arrival of the duke of Alva would have experienced their fate, but that he declined appearing to his citation. On his non-appearance his estates were confiscated, and his eldest son, then studying at Louvain, was carried off into Spain. He soon after declared himself a Protestant, and began that brave and persevering opposition to Spanish tyranny, which terminated in the union of Utrecht in 1579, when the basis of the confederation of the seven united provinces was established. Philip II was so exasperated at this event that he set a price upon the head of the prince of Orange, which stimulus to assassination led, in 1582, to an attempt on the part of one Jauregui, who fired a pistol at the prince as he was rising from table at a public dinner, the ball from which passed from behind his right ear beneath his left jaw. He recovered from his wound, but the murderous attempt was successfully repeated in 1584 by one Balthasar Gerard, whose fanaticism being urged on by a cordelier and a jesuit, he obtained an introduction to the prince, on the plea of business, on the 10th of July, 1584, when he drew out a pistol loaded with three balls, and shot him in the body. William fell, ejaculating, "My God have mercy on me and these poor people," and instantly expired. He was interred at Delft with almost regal honours, in the midst of the lamentations of the whole people, who regarded him as their sole support and protector. William, who at the time of his death had nearly completed his fifty-second year, was four times married, and had issue by all his wives. His eldest son Philip, being detained in Spain, and brought up in religion and politics a Spaniard, his second son Maurice succeeded to his authority in the United Provinces, and proved one of the greatest captains of his age. The character of William is sufficiently conspicuous from the events of his anxious and useful life. He necessarily contracted the caution and reserved habits of a statesman, involved as he was in political intricacies and difficulties, and he has in consequence been accused of ambition and dissimulation; yet his objects always seem to have been pure and patriotic, and if his memory has been reviled by the advocates of despotism, it has received the highest honours from a grateful people, who regard him as the principal author of their freedom, independence, and delivery from the intolerable yoke under which they groaned.—*Grotii Ann. Belg. Univ. Hist.*

WILLIAMS (JOHN) an English divine and statesman of some eminence in the seventeenth century. He was descended from an ancient Welsh family, and was born March 25, 1582, at Aberconway, in Carnarvonshire. He studied at St John's college, Cambridge, where he took the degree of BA. in 1602, and the next year he obtained a fellowship. In 1609 he entered into holy orders, and was presented to a small benefice in Norfolk, and two years after to the rectory of Grafton in Northamptonshire. Being appointed chaplain to

the lord chancellor, Egerton, lord Ellesmere, he ingratiated himself so much with that nobleman, that through his interest he obtained much valuable church preferment. After the death of the chancellor, who left him his MSS. he was nominated one of the royal chaplains; and in 1619 he became dean of Salisbury. Attaching himself to the king's favourite, Villiers, afterwards duke of Buckingham, he was rapidly promoted to high stations both in the church and state. In 1620 he exchanged the deanery of Salisbury for that of Westminster, and the following year he was nominated lord keeper of the great seal, on the disgrace and deprivation of the celebrated Bacon. Almost immediately after he was raised to the bishopric of Lincoln, with which he held various other benefices in commendam. During the remainder of the reign of James I, he retained great influence at court, and was deeply engaged in the intrigues of that eventful period. But having offended Buckingham by his disapproval of the journey of that nobleman to Spain with the prince of Wales, and being on ill terms with Laud, to whose promotion to the bench he had greatly contributed, he was, on the accession of Charles I, ordered not to attend at the coronation, in his office of dean of Westminster, and he was deprived of his post of lord keeper. He subsequently, in parliament, advocated the petition of right, but at the same time proposed the addition of a clause in favour of the crown; and he moved likewise for an act to explain the bill of rights, so as to confirm the king's claim to the duties of tonnage and poundage. He is said to have been reconciled to the duke of Buckingham, whose death however prevented his restoration to favour at court. In 1629 his name was erased from the list of the privy council, and he was subjected to other marks of the royal displeasure. In 1636, being prosecuted in the court of star chamber for scandalous expressions against the king and his ministers, he was sentenced to pay a fine of 10,000*l.* and to be imprisoned in the Tower, and suspended from all his dignities, offices, and functions. He was released, on his petition to the king, in November 1640, and the proceedings against him were rescinded. Among the most important of the future transactions of his life, are his joining in the proceedings against archbishop Laud, and his using his influence with the king to procure his assent to the bill of attainder against the earl of Strafford. In 1641 he was made archbishop of York; but before he obtained possession of the see, he was with other prelates committed to the Tower for opposition to the attempts of the parliament to exclude them from sitting in the house of Peers. During the civil war he fortified his castle of Conway for the king's service; but he acted in general a temporizing part, and at length he died in retirement, in North Wales, on his birth-day, in 1650. Archbishop Williams was the author of sermons, and of a work of temporary importance, entitled "The Holy Table, Name, and Thing," directed against

the church ceremonies introduced by Laud. *—* *Biog. Brit.*

WILLIAMS (DANIEL) An eminent non-conformist divine, born at Wrexham in Denbighshire, about 1644. He appears to have laboured under disadvantages as to his early education, the defects of which he supplied by self-application and diligence. Being of a serious disposition, he devoted himself to the ministry; and at the age of nineteen he became a preacher among the presbyterians. After officiating in various parts of England, he went to Ireland as chaplain to the countess of Meath, and afterwards settled as pastor to a congregation in Dublin. He continued in that situation nearly twenty years, highly respected and esteemed; and having married a lady of an honourable family, he obtained with her a considerable estate. His zeal for Protestantism subjecting him to inconvenience, in the latter part of the reign of James II he removed to London, and after the Revolution he was chosen minister of a presbyterian society in Bishopsgate-street. In 1691 he succeeded the famous Baxter as one of the lecturers at Pinner's-hall chapel; and he continued to officiate there till theological disputes occasioned a secession of many of the subscribers, who established a separate lecture at Salters'-hall, whither Mr Williams, together with Dr Bates, Mr Howe, and Mr Alsop, removed as preachers. In 1692 he published a tract, entitled "Gospel Truth stated and vindicated, &c." 8vo, against the Antinomian doctrines of Dr Crisp; and he afterwards added "A Defence of Gospel Truth, &c." 8vo. These works brought on him the imputation of Socinianism, which he indignantly repelled; as he also did a charge of immorality adduced against him by his malignant opponents, from which, in justice to his character, it must be stated that he was distinctly exonerated by a committee of the united London ministers, to whom he submitted the investigation of his conduct. Having become a widower, in 1701 he took a second wife, with a large fortune, who survived him. In 1709 he was honoured with the diploma of DD. from the universities of Edinburgh and Glasgow. His wealth and talents gave him much influence among his brethren in the early part of the last century; and he distinguished himself by opposing the bills against occasional conformity, and for imposing the sacramental test on the dissenters in Ireland, as well as on other occasions. On the accession of George I he presented a congratulatory address to his majesty, at the head of a deputation of the metropolitan dissenting clergy. He did not long survive that event, dying January 26, 1715-16. Besides numerous benefactions for charitable purposes, he bequeathed estates for the support of six presbyterian students at the university of Glasgow; and also his private collection of books, and a sum of money for the foundation of a public library in London, which led to the establishment of the Red Cross-street Institution, opened in 1729. Dr Williams's works were collected and published

by his directions, in six volumes, octavo, consisting partly of Latin versions of several of his tracts, intended for the benefit of foreigners.—*Aikin's Gen. Biog.*

WILLIAMS (sir CHARLES HANBURY) an English poet and diplomatist, who was the second son of a South Sea director. He sat as a member of the house of Commons for the borough of Monmouth, in several parliaments; and in 1744 he was installed KB. and two years after sent as minister to the court of Berlin. He subsequently was ambassador at St Petersburg, and his death took place November 2, 1759. His poetical compositions display ease and vivacity, but the sentiments they exhibit cannot always be commended on the score of morality.—*Chalmers's Biog. Dict.*

WILLIAMS (DAVID) a learned and ingenious writer on different branches of the belles lettres, who was a native of Cardiganshire in South Wales. He was educated at a dissenting academy, and became minister to a congregation at Frome in Somersetshire. Thence he removed to occupy a similar situation at Exeter, and afterwards to Highgate, in the neighbourhood of the metropolis. While he filled the office of a dissenting teacher, he published "*Essays on Public Worship, Patriotism, and Projects of Reformation*," 1773, 8vo; "*Sermons on Religious Hypocrisy*," 1774, 8vo; and a tract on Education, which was translated into the German language. At length, becoming sceptical as to revealed religion, he quitted his ministerial station among the dissenters; and in 1776 opened a chapel in Margaret-street, Cavendish-square, for the celebration of public worship on the principles of natural religion; and at the same time he published a "*Liturgy on the Universal Principles of Religion and Morality*," for the use of his hearers, to whom he delivered a course of "*Lectures on the Principles and Duties of Religion and Morality*," afterwards published in 2 vols. 4to, and translated into German by J. A. Eberhard, and printed at Halle, 1785, 2 vols. For some time the novelty of Mr Williams's plan attracted the notice of the public; but the numbers of his followers gradually decreased, so that at length the temple of infidelity (as some chose to denominate it) was finally closed, and the lecturer turned his attention to literary speculations and private tuition. He published in 1785 "*Letters concerning Education*," 8vo; and this work was followed by his "*Lectures on Political Principles*," 1789, 8vo; and "*Lectures on Education*," 3 vols. 8vo, all which displayed the abilities of the author to advantage. About 1791 he was employed by some booksellers to write a continuation of Hume's History of England, a task for which his studies and acquirements had in many respects qualified him. But an alarm being raised against the scheme by persons who objected to Mr Williams's religion and politics, the undertaking, so far as he was concerned, was abandoned. He acquired much distinction in the latter part of his life, as the founder or projector of the Literary Fund. His death took place June 29,

1816. Besides the publications already mentioned, he was the author of "*A Letter to Sir George Saville on the Nature and Extent of Intellectual Liberty*," 1779, 8vo; "*A History of Monmouthshire*," 2 vols. 4to; and some single Sermons and Tracts.—*Ann. Biog.*

WILLIAMS, FSA. (JOHN) an antiquary and naturalist, who was employed as a mineral surveyor in Scotland. He published in 1777 "*An Essay on the Vitriified Fossils*," found in various parts of that country; and "*The Natural History of the Mineral Kingdom*," Edinburgh, 1789, 2 vols. 8vo; besides "*A Plan for a Royal Forest of Oak in the Highlands of Scotland*," in the Transactions of the Edinburgh Antiquarian Society, to which he belonged. He died at Verona in Italy, May 29, 1795.—*Gent. Mag.*

WILLIAMSON, knight (sir JOSEPH) the son of an English clergyman, incumbent of the parish of Bridekirk in the county of Cumberland, where the subject of this article was born in 1630. From Westminster grammar school he removed to Queen's college, Oxford, of which he became fellow. King Charles II bestowed on him the honour of knighthood, made him a clerk of the council, and afterwards employed him on a diplomatic mission to Cologne. On his return to England he met with farther advancement, and in 1674 was associated in the government as one of the secretaries of state. But although a favourite at court, he was far from popular with the people; and having issued certain commissions to persons openly professing the Roman Catholic religion, the house of Commons took up the matter, and passed a vote, consigning him close prisoner to the Tower. The disgraced secretary was accordingly conveyed there in custody of the serjeant-at-arms; but the king, on being made acquainted with the strong measure taken against him, exerted his prerogative, and released him before he had been many hours in confinement. His immediate retirement from office was however the consequence, and the remainder of his life was passed as a private gentleman in literary leisure. He was a considerable benefactor to Queen's college, Oxford, bequeathing to that society at his death all his valuable manuscripts and a legacy of six thousand pounds in money. Part of his property went also to the endowment of a school at Rochester in Kent. Sir Joseph Williamson died about the commencement of the last century.—*Martin's Hist of Thetford.*

WILLIS (BROWNE) a distinguished antiquary, grandson of Dr T. Willis, the subject of a following article. He was born at Blandford in Dorsetshire, in 1682, and prosecuted his studies at Westminster school and Oxford university, whither he removed in 1690, and was admitted a gentleman commoner of Christchurch. Having taken his degrees, he continued his studies under Dr W. Wotton. When he came into the possession of the family estate in Buckinghamshire, he was returned a member of parliament for that county in 1705. He seems however to have taken but

little interest in public affairs, devoting himself to the investigation of the constitutional and ecclesiastical antiquities of his native country. In 1715 he published the first part of his "Notitia Parliamentaria, or a History of the Counties, Cities, and Boroughs in England and Wales;" the second part appeared in 1716; and the conclusion not till 1750. He became in 1717, a fellow of the newly revived Society of Antiquaries; and he devoted his time and fortune to the promotion of the objects of that association. Among his literary productions are "Surveys of the Four Welsh Cathedrals;" a "History of the Mitred Parliamentary Abbies, and Conventual Cathedral Churches;" and "The History and Antiquities of Buckingham." He collected a fine cabinet of English coins, which in 1741 he presented to the university of Oxford, where he was honoured with the degree of LL.D. He died at his seat at Whaddon-hall, February 5, 1760, and he was interred at Fenny Stratford, Bucks. To Browne Willis may justly be ascribed the merit of having greatly contributed to the improvement of our national history and archæology, by reference to records and registers, which he assiduously investigated, and made his transcripts and extracts with care and accuracy.—*Rees's Cyclop.*

WILLIS (FRANCIS) a physician, distinguished for his skill in the treatment of cases of insanity. He was a native of Lincolnshire, and was educated at Brasenose college, Oxford, where he obtained a fellowship. He took the degree of M.A. in 1740, and entering into holy orders, he was presented to a college living in the metropolis. He then studied medicine, and devoting his attention to the treatment of maniacal diseases, established a private asylum for lunatics at Greatford in Lincolnshire. The anomaly of a clergyman keeping a madhouse having subjected him to the animadversion of the faculty, he proceeded to take his degrees in medicine, and thus became entitled to engage in regular practice as a physician. When his late majesty was first afflicted with mental disease, and his professional attendants despaired of his recovery, Dr Willis was called in, and on his expressing a decidedly favourable opinion relative to the case of the royal patient, he was entrusted with the management of it. The result proved the accuracy of his judgment; and his success was rewarded with a handsome gratuity from the parliament. The accession of fame which he also obtained, necessarily occasioned a great increase of professional practice; and among those victims of insanity whom he attended, was the late queen of Portugal; but in her case his mode of treatment was unsuccessful. He died suddenly at Greatford, in 1807. His son and successor, Dr Robert Darling Willis, was in 1811 appointed one of the royal physicians in ordinary.—*Gent. Mag.*

WILLIS (THOMAS) an eminent English physician, born February 6, 1622, at Great Bedwin, in Wiltshire. He was in 1636 admitted a student of Christchurch, Oxford,

where he took the usual degrees with a view to the clerical profession. The death of his father, and the breaking out of the civil war, induced him to alter his purpose; and after having served for a time in the royal army, he returned to Oxford, and studied medicine, in which faculty he took his bachelor's degree in 1646. He then commenced practice at Oxford, and became distinguished not only for his professional talents, but also for his attention to science; and he was one of the first members of the philosophical association which preceded the Royal Society. On the restoration of Charles II, he was made Sedleian professor of natural philosophy, and soon after took the degree of M.D. In 1666 he removed to London, and being appointed physician in ordinary to the king, he rapidly advanced to the first rank in his profession. His death took place in London, November 11, 1675. The principal works of Dr Willis are "Anatomie Cerebri, cui accessit Nervorum Descriptio et Usus," Lond. 1664, 12mo, reckoned the best of his productions; "Pathologiæ Cerebri et Nervosæ Generis Specimen, in quo agitur de Morbis Convulsivis et Scorbuto," Oxon. 1667, 12mo; "Affectuonum quæ dicuntur Hystericæ et Hypochondriacæ Pathologia Spasmodica, vindicata contra Responsa. Epist. Nath. Highmori: cui accesserunt Exercitationes Medico-Physicæ de Sanguinis Accensione et Motu Musculari," Lond. 1670, 8vo; and "De Anima Brutorum quæ Hominis Vitalis ac Sensitiva est, Exercitationes duæ, 1672, 8vo. A collective edition of his writings appeared at Geneva, in 1676, 2 vols. 4to, and several republications of them took place previously to the end of the seventeenth century; but though the ingenuity of his physiological and pathological speculations procured their author much temporary renown, his theories have been long consigned to oblivion, and the descriptive portions of his works alone retain any value.—*Hutchinson's Biog. Med. Aikin's Gen. Biog.*

WILLUGHBY (FRANCIS) a celebrated naturalist, born of a good family in Lincolnshire, in 1635. He studied at Trinity college, Cambridge, under the tuition of Ray, with whom he made a tour on the continent in 1663 and 1664. He paid particular attention to ornithology and ichthyology, and formed a rich museum of animal and fossil productions. In 1668 he married the daughter of sir H. Bernard, and settling at Middleton in Warwickshire, he prosecuted his philosophical and scientific researches in conjunction with his friend and frequent guest Mr Ray. The results of their labours were communicated to the Royal Society, of which Mr Willughby had become a fellow in October 1662. His premature death in 1672 prevented him from committing his writings to the press; but Mr Ray, whom he had appointed his executor, published in 1676, "F. Willughbii Ornithologiæ Libri tres," folio; and the same work, translated into English, with additions, in 1678. The same editor also collected and arranged Willughby's papers on ichthyology.

which appeared in 1686, under the title of "F. Willughbeii de Historia Piscium Libri quatuor, jussu et sumptu Societatis Regiæ Lond. editi: totum Opus recognovit, coaptavit, supplevit, librum etiam primum et secundum integros adjecit J. Raius," Oxon. folio. The papers of this naturalist in the Philosophical Transactions relate to vegetation, plants, and insects; and Ray's correspondence includes some of his letters. Schreber has given the appellation of Willughbeia to a genus of plants found in Guiana.—*Bing. Brit. Eloy Dict. H. de la Med.*

WILLYMOT, LLD. (WILLIAM) a learned divine, known as the author of several valuable elementary books, intended for the use of scholars, the fruits of his own experience in tuition. He was a native of Royston, and received his education at Eton college, whence he was elected off on a foundation fellowship to King's college, Cambridge, and there graduated in arts about the close of the seventeenth century. In 1707 he took the degree of LLD. and after devoting many years of his life to the instruction of youth, as an under master at Eton, and subsequently at a private establishment of his own, he returned to Cambridge in quality of vice-provost of his college. Besides the treatises already alluded to, he was the author of a small devotional tract, intended as a companion to the altar, and edited Bacon's Essays, in two octavo volumes. Dr Willymot did not obtain any ecclesiastical preferment till late in life, when he was inducted to the living of Milton in Cambridgeshire, but enjoyed it little more than a twelvemonth, dying in 1737.—*Nichols's Lit. Anec.*

WILMOT (JOHN) earl of Rochester, a witty but profligate nobleman of the court of the second Charles, pre-eminent for licentiousness even in that age of almost universal debauchery. He was born in the spring of 1618, and on the decease of his father, Henry earl of Rochester, succeeded him in his titles and estates, the latter of which his extravagance and sensuality soon contrived to dissipate. From Burford grammar school he was removed to Wadham college, Oxford, where having gone through the usual course of academical study, he followed the example of most of the young men of rank at the period, and made the grand tour through France and Italy, for the purpose of completing his education. He then served in the fleet under Lord Sandwich, and from the gallantry he displayed in the attack made by that commander upon the Dutch fleet at Bergen, gained a reputation for courage, which his subsequently declining a challenge from the lord Mulgrave, if it impaired could not altogether destroy. In fact, it appears that the natural qualities of this young nobleman's head and heart were sufficiently estimable, and that at any other period than the one in which it was his misfortune to live, he might have proved as great an ornament to the rank he held in society as his behaviour, influenced by evil example, a sanguine dispo-

sition, and a considerable share of vanity, rendered him the reverse. On his return to England, he rushed at once into the full vortex of dissipation, became the personal friend and favourite of his sovereign, who, while he enjoyed his sallies, is said to have encouraged and shared many of his most degrading exploits. The reckless levity of his disposition, which in the exercise of unrestrained familiarity sometimes lost sight of the respect due to the monarch, not unfrequently brought him into disgrace, and he was more than once forbidden the royal presence. During one of these temporary banishments, he amused himself by personating a mountebank, and the speech which he delivered in that character on Tower-hill is yet extant. His good nature and companionable qualities, however, which made him necessary to the amusement of his master, prevented his occasional exile from being ever of long continuance. The original strength of his constitution at length gave way under such perpetual excitement, and, together with sickness, came reflection. According to doctor (afterwards bishop) Burnet, who attended him at his own request in his last illness, so material a change took place in his sentiments, that had he survived, the happiest results to himself might have been anticipated. Nature, however, had been worn out by the incessant demands made upon her. The penitent confessed to the divine that he did not believe he had been perfectly sober one hour together in a course of more than five years; and at the age of thirty, he was visited with all the debility and rapid decay of extreme old age. He lingered for some time in this melancholy condition, and at length died, professing great penitence for his mispent life, on the 26th of July, 1680. His poetical works, some of which are of the most disgusting description, have been frequently printed, both separately and collectively. It is, however, but justice to add, that there is every reason to suppose that many of those which go under his name are not the production of his pen, and that other persons equally licentious and less witty sheltered their obscenities under the name of one who had but too often confessedly offended in that respect; thus increasing the load of obloquy on his memory, while the dullness of their ribaldry cast an almost equal imputation on his talents. A few of his poems are of a better description, especially his poem on "Nothing," and his lampoon upon sir Carr Scroope, which exhibit some vigour with careless versification. His satire against Man is little more than a translation from Boileau.—*Johnson's Poets. Life by Bishop Burnet.*

WILMOT (JOHN EARDLEY) the name of two eminent English lawyers, father and son, who flourished in succession for more than a century. Of these the elder and more celebrated was a native of the town of Derby, born in the year 1709. After undergoing a preparatory course of study at Lichfield, he was removed to Westminster, and thence to Trinity-hall, Cambridge. On quitting the university, he entered himself a member of

the society of the Inner Temple, by which he was called to the bar in 1732. His persevering industry, and the extensive legal knowledge to which it led, opened to him in due course the highest honours of his profession, and in 1755 he was raised to the bench. The year following he was appointed chief-justice, which dignified situation he continued to fill till 1771, when he quitted public life, although he survived his retirement more than twenty years. The "Notes and Opinions" of chief-justice Wilmot were printed in one quarto volume, some years after his decease, which took place in 1792.—The younger of the two, born also at Derby in 1748, was, like his father, educated at Westminster, whence he removed to University college, Oxford, and afterwards obtained a fellowship at All Souls. On being called to the bar, he devoted himself to chancery practice, and in 1783 was appointed a master of that court. In this capacity he was named one of the commissioners for arranging the claims of the American loyalists, on the recognition of the independence of the United States by the mother country. Of this commission he afterwards published an account, in one volume, 8vo. His other writings are, "A Treatise on the Laws and Customs of England;" "A brief Defence of the Opposition," 1779; and two biographical memoirs of bishop Hough and of his own father. His death took place at his house in the parish of Tottenham, in 1815.—*Gent. Mag.*

WILSON (ARTHUR) an English historian, born in 1596. He was secretary to Robert, earl of Essex, the parliamentary general in the civil wars; and subsequently steward to the earl of Warwick. His "Life and Reign of James I," 1633, folio, republished in Kennet's Complete History of England, contains some interesting information relative to the earliest of the Stuart kings of Britain and his courtiers. Wilson was also a dramatic writer, and his comedy, entitled "The Inconstant Lady" was published at Oxford in 1814, 4to. He died in 1652.—*Chalmers's Biog. Diet.*

WILSON (FLORENCE) a native of Elgin in Scotland, distinguished as a man of letters in the sixteenth century. He wrote in Latin, and assumed the appellation of Florentius Volusenus, by which he is best known. After having been patronized by cardinal Wolsey and other distinguished ecclesiastics, he became rector of a school at Carpentras, in France, and died at Vienne in Dauphiny in 1547. His works consist of poems, and a treatise "De Tranquillitate Animi," which has been repeatedly printed.—*Moreri's Chalmers's Biog. Diet.*

WILSON (RICHARD) a most eminent English landscape painter, who was the son of a clergyman, and was born at Pineges, in Montgomeryshire, in 1714. After receiving a classical education, he was sent to London, and placed as a pupil with an obscure portrait painter, named Wright. On leaving his master, he first practised in the same branch of his profession in London, but with no great

success. At length he went to Italy, where he occasionally exercised his talents in studies of landscape; and at Venice meeting with Zuccarelli, that artist persuaded him to devote himself wholly to the cultivation of that department of the art, in which he attained so much excellence. After staying some time at Rome and Naples, where he acquired great reputation, he returned to England in 1755, and settled in the metropolis. He had for a while much employment, but he was at length doomed to undergo indifference and neglect; and as an asylum from the severest wants incident to age and the decay of powers, he was reduced to solicit the office of librarian to the Royal Academy, of which he was one of the brightest ornaments. He died in May 1782. Wilson has been termed the English Claude; but the style of these two great artists was extremely different: our countryman does not display the sublimity of the Italian, but his taste was exquisite, and whatever came from his easel bore the stamp of elegance and truth. If posthumous fame could compensate for contemporary neglect, the fate of Wilson might be considered as fortunate, for he has been unanimously ranked among the greatest artists of modern times.—*Pilkington by Fuseli. Raes.*

WILSON (THOMAS) an English prelate, distinguished for his learning and piety, born in December 1663, at Burton-in-Wirral, Cheshire. From a school at Chester he removed to Trinity college, Dublin, where he took his degrees in arts, and studied medicine, which he abandoned for divinity. He was ordained in 1686, and obtained a curacy in Lancashire; and having taken priest's orders in 1689, he subsequently became chaplain to the earl of Derby, whose eldest son he attended as tutor during a tour on the continent. On the death of his pupil he returned to England, and having been nominated by his patron to the bishopric of the Isle of Man, he was consecrated in January 1697-8, the degree of I.L.D. being bestowed on him, by the archbishop of Canterbury. Though the revenues of his see were only 300*l.* a-year, he made them suffice to support the dignity of his station, and to contribute to the comforts of the poor and helpless. He built a new chapel at Castleton, established parochial libraries, and improved the agriculture of the Isle of Man by introducing corn, horses, cattle, and sheep from England. He published ecclesiastical constitutions, which were so much approved that Lord chancellor King said of them, that "if the ancient discipline of the church were lost, it might be found in all its purity in the Isle of Man." As a token of respect for his virtues and talents, he had the degree of DD. bestowed on him by the university of Oxford, in full convocation, in 1707, and afterwards received the same honour from Cambridge. His zeal for the interests of religion involved him in some disputes with the governor of Man, who treated him with harshness and indignity; and the bishop showed his calmness and moderation in passing over the insult, when

he might afterwards have punished his persecutor. This meritorious divine was so attached to his benefice, that he refused the offer of an English bishopric; and such was the public estimation in which his character was held, that during a war with France he procured an order from the French minister that no privateer should commit ravages on the Isle of Man. He died March 7, 1755. Among his works are Sermons, Tracts, a Short History of the Isle of Man, and "The Principles and Duties of Christianity," in the Manks language, being the first work printed in that dialect. He was also the author of Notes on the Bible; and he commenced a Manks Version of the New Testament, which was completed by his successor, bishop Hildesley.—His son, Dr THOMAS WILSON, born in 1703, was educated at Oxford, and entering the church, he at length became rector of St Stephen's Walbrook, London. He died at Bath, April 15, 1784. He was the author of a tract entitled "The Ornaments of Churches considered," 4to; besides some pieces on temporary topics; but he rendered himself chiefly memorable by his enthusiastic patronage of the historian, Mrs Macauley, whose statue, in the costume of the goddess of liberty, he erected in his own church.—*Biog. Brit. Aikin's Gen. Biog.*

WIMPFEN (FELIX de) a French military officer, born of a noble family, on the banks of the Rhine, in 1745. He entered very young into the service of the duke of Deux Ponts, who assisted the French in the seven years' war, when Wimpfen first distinguished himself. In 1768 he went to Corsica, as a captain of volunteers; and at the age of twenty-five he obtained the rank of lieutenant-colonel and the cross of St Louis. He then served in the war of the United States of America with Great Britain, and on his return to Europe he was present at the siege of Gibraltar. He was made a brigadier, and received a pension for his services. After having resided for some time in retirement on his own estate, he was in 1789 elected a deputy to the States General, from the nobility of Caen. He joined those members of the Assembly who wished to unite with the chamber of the Tiers Etat; and he proposed the establishment in France of what he termed a royal democracy. Being appointed a member of the military committee, he drew up the reports of that body, and in the National Assembly, he confined his attention chiefly to the affairs connected with that committee. In 1792 he was nominated to the command of Thionville, which fortress he vigorously defended fifty-five days against the attacks of the Austrians and emigrants. The following year he commanded the army in Brittany; and having been defeated at Vernon by the royalists, and obliged to take flight, he found an asylum at Bayeux. There he remained in obscurity till after the revolution of November 1799, when the first consul gave him a pension, and appointed him to the office of mayor of the commune, where he resided. He was the author of some curious memoirs

relative to the early part of the French Revolution.—*Biog. Nouv. des Contemp.*

WINCHELSEA (ANNE, countess of) an ingenious poetess of the seventeenth century. She was the daughter of sir Richard Kingsmill of Hampshire, and was maid of honour to Mary of Modena, the second wife of James II. She was married to Heneage Finch, the fourth earl of Winchelsea, by whom she had no children; and she died before her husband, Aug. 5, 1720. Lady Winchelsea wrote a poem on the spleen, printed in Gildon's Miscellany, 1701, which, as well as some of her smaller pieces, possess much merit; and she also produced a tragedy, entitled "Aristomenes," which was published, but never acted. Her poetical works were collected and printed in 1713, 8vo.—*Southey's Specimen of Eng. Poets.*

WINCHESTER (ELHANAN) an American divine, who founded a religious sect, called Winchesterians or Universalists, because their distinguishing tenet was the ultimate universal salvation of mankind, and also of the devils themselves. He was a native of the United States, where he appears to have first broached his peculiar sentiments. About 1788 he visited this country, and attempted to found a Philadelphian Society, and also propagated his doctrine by means of a Philadelphian Magazine, as well as by preaching. He maintained the necessity of regeneration, and contended, that as it was certain all are not regenerated in the present life, there must be room for a farther process of purification of fallen creatures in a future state; and that this would be effected chiefly by the means of punishment in the torments of hell, which in some cases might extend to "ages of ages," before the stubborn sinner would be purified thereby, so as to be received into heaven. Finally, however, he believed that not only all mankind, but even devils would be restored to the divine favour, to holiness, and to happiness. Besides other literary productions, Mr Winchester composed an heroic poem, on "The Process and Empire of Christ, from his Birth to the Time when he shall have delivered up the Kingdom to God, even the Father," which he first recited from the pulpit in a chapel in Southwark, and afterwards published in his Magazine. Among his other works are "Lectures on the Prophecies that remain to be Fulfilled," 1790, 4 vols. 8vo; and "The Universal Restoration, exhibited in a Series of Dialogues between a Minister and his Friend," 1788, 8vo, of which a fourth edition, with notes by W. Vidler, appeared in 1799. In consequence of some domestic misfortunes Mr Winchester returned in 1792, to his native country, where he died.—*William's Dict. of Relig. Sects.*

WINCKELMANN (JOHN JOACHIM) a celebrated German antiquary, born at Stendal in the Mark of Brandenburg, in 1713. He was the son of a shoemaker, and was brought up to the same employment; but fortunately meeting with favourable opportunities for the cultivation of his talents, he obtained the professorship of belles lettres at Sehausen. He

afterwards removed to Saxony, and became librarian to count Bunau; and in 1754 he went to the electoral court at Dresden, where he improved his taste by an intercourse with artists and men of letters. He published about this time "Reflections on the Imitation of the Greeks in Painting and Sculpture," which contributed to establish his reputation. Having embraced the Catholic faith, he took a journey to Italy, to survey the treasures of art at the Vatican, and the relics discovered at Herculaneum. Assuming the ecclesiastical habit, he was made keeper of the pope's cabinet of antiquities; and he was also appointed copyist in the Vatican library. Under the patronage of his holiness, Winckelmann completed his "History of Art among the Ancients," and in 1768 he visited Germany, for the purpose of getting his work translated into French, by M. Toussaint of Berlin. On his return to Italy through Trieste, he was basely assassinated at an inn, by a wretch named Arcangeli, who had joined him on the road, and who had so far gained his confidence, that he had shown him some gold medals and other valuable presents, which he had received at Vienna. This unfortunate event happened June 8, 1768. The murderer, who endeavoured to escape with the plunder which had instigated his crime, was taken and executed on the wheel. Among the works of Winckelmann not already noticed, are "Description des Pierres Gravées du Baron Stosch," Flor. 1760, 4to; "Letters on the Discoveries made at Herculaneum," translated into English by Mr Gough; "Unpublished Monuments of Antiquity, such as Statues, ancient Paintings, engraved Stones, Bas Reliefs in Marble and Terra Cotta;" "On Allegory, or Treatises on that Subject," 2 vols. 8vo; and "Remarks on the Architecture of the Ancients." His "Letters to his Friends" were published in German, 2 vols. 8vo, with an account of his life prefixed, by professor Heyne.—*Nouv. Dict. Hist. Res's Cyclop.*

WINDER (HENRY) a dissenting divine, who was a native of Graystock in Cumberland, and was born in 1693. After completing his education at an academy at Dublin, he was chosen minister of a congregation at Tunley in Lancashire, and in 1718 he removed to occupy a similar situation at Liverpool. He subsequently obtained the diploma of DD. from the university of Glasgow; and his death took place in 1752. He published no works of importance during his life, but after his decease appeared a treatise, entitled "A Critical and Chronological History of Knowledge," 2 vols. 4to, edited by Dr. George Benson.—*Biog. Mem. by Benson.*

WINDET (JAMES) a metaphysical writer of the seventeenth century. He studied at Queen's college, Oxford, and afterwards at Leyden, where he took the degree of MD. He afterwards became a member of the College of Physicians in London; and he died in 1680. He is only known as the author of a treatise "De Vita Functorum Statu, ex Hebræorum et Græcorum comparatis Sententiis

conciunatus," Lond. 1663, 4to. reprinted 1677, 18mo. This work displays more erudition than judgment; and its value is materially lessened, by the neglect of the writer in not properly referring to the sources of his information.—*Wood's Athen. Ox. Stollis Int. in H. L.*

WINDHAM (JOSEPH) an ingenious English antiquary, a native of Twickenham, where he was born in 1739. After going through the usual course of academical instruction at Eton and Cambridge, he went to Italy, where he devoted his whole attention to the study of the antiquities of the capital and country. The fruits of his researches are to be found in the "Ionian Antiquities," printed at the expense of the Dilettante Society, for which he furnished the descriptions. There is also a paper of his "On Pliny's Account of the Temple of Ephesus," published in the *Archæologia*; and Mr Stuart is said to have been indebted to him for assistance in his Athens. Mr Windham's death took place in 1810, at Earsham house, Norfolk.—*Gent. Mag.*

WINDHAM (WILLIAM) a senator and statesman of some eminence, was the son of colonel Windham of Felbrigg in Norfolk. He was born in London in 1750, and educated at Eton, whence he was removed first to the university of Glasgow, and subsequently to University college, Oxford. He came into parliament in 1782, as member for Norwich, at which time he was secretary to the earl of Northington, lord-lieutenant of Ireland. He sided with opposition, until the celebrated secession from the whig party in 1793, when he followed the lead of Mr Burke, and was appointed secretary at war, with a seat in the cabinet. This office he retained until the resignation of Mr Pitt in 1801, and he much distinguished himself by his opposition to the ephemeral treaty of Amiens. On Mr Addington's being driven from the helm in 1805, a new administration was again formed by Mr Pitt, which was terminated by his death in 1806, when lord Grenville, in conjunction with Mr Fox, made up the administration so well known by the designation of "All the Talents." In this short-lived cabinet Mr Windham held the post of secretary of war and colonies, in which capacity he carried into law his bill for limited service in the regular army. His death took place May 17, 1810, in consequence of a contusion of the hip, produced by a fall while exerting himself to save the library of his friend Mr North from the flames. The eloquence of Mr Windham was forcible, pointed, and peculiar, and he produced considerable impression both as an orator and a statesman, although possibly rather by the honest ardency of many of his strong opinions, than by their political or philosophical accuracy. He was also a sound scholar and master of multifarious reading; and no man possessed a larger share of general esteem in private life.—*Gent. Mag.*

WING (VINCENT) a mathematician of the seventeenth century, who blended the studies of astronomy and astrology. He published annually, for many years, an *Ephemeris*, or *Alma-*

nac, which became so popular, that his name is still retained in the title of a similar work. He was also the author of "Harmonicon Cœleste," 1651, folio; "Urania Practica, or Practical Astronomy," 1652, 8vo; "Examen Astronomiæ Carolinæ T. S. or Animadversions on T. Streete's Astronomical Tables," 1665, 8vo; and "Astronomia Britannica," 1669, folio. He died September 20, 1669. A Relation of his Life and Death by J. G. [Gadbury] was published in 1670, 4to.—*Lempriere*.

WINGATE (EDMUND) an eminent mathematical scholar of the seventeenth century, a native of Yorkshire, or as others say, of the county of Bedford, born about the year 1593. After graduating as AB. at Queen's college, Oxford, he entered himself of the society of Gray's-inn, with the view of making the law his profession, and in due course was called to the bar. On the marriage of Charles I with Henrietta Maria, he was despatched to the continent, for the purpose of instructing the new queen in the language of the country of her adoption, and continued attached to the household as her English tutor for some time after her arrival in England. Notwithstanding his situation, however, he espoused the popular side when the civil wars broke out; took the covenant, obtained a seat in the house of Commons, and is said to have enjoyed the personal friendship of the protector. His writings are "Natural and Artificial Arithmetic," a useful work, which has gone through many editions, and is still in constant request; "On the Construction and Use of Logarithms;" "Use of the proportional Rules in Arithmetic and Geometry;" "The Exact Surveyor," and "Ludus Mathematicus." He was also the author of an ethical treatise, entitled "Maxims of Reason," and an "Abridgment of the Statutes at Large." This latter is the only professional work ascribed to him, although he appears to have risen so far as to be appointed one of the benchers of the society to which he belonged. His death took place in 1656.—*Hutton's Math. Dict.*

WINSLOW (JAMES BENIGNUS) a celebrated anatomist, born in 1669 at Odensee, in the Danish island of Funen, where his father was a Lutheran minister. His attention was first directed to the study of theology, which he relinquished for medicine, and became the pupil of Borrichius, at the university of Copenhagen. After attending his lectures for a year, he obtained a pension from the king of Denmark, that he might be enabled to travel for improvement. Having visited Holland, he removed thence to Paris, where he pursued his studies under Duverney; and during his residence in the French metropolis he became a convert to the Catholic faith, when he assumed the baptismal name of the learned Bossuet, whose Exposition of the Doctrine of the Church had led to his conversion, and who had received his abjuration of Lutheranism, and administered to him the rite of confirmation. This transaction offended his relations, and occasioned his separation from them and from his native country. His own talents, how-

ever, and the patronage of Bossuet procured him an establishment in France, where he continued his studies, and in 1705 he was admitted to the degree of MD. In 1707 Duverney procured for him the office of assistant anatomist at the Academy of Sciences; and he afterwards read lectures on anatomy and surgery for Duverney at the Royal Garden. He did not however immediately succeed the latter as professor, but after the death of M. Hunald he obtained the chair, January 5, 1743. He had mean while communicated several essays on anatomical and physiological subjects to the Academy of Sciences, of which he was an associate, as he was likewise of the Royal Academy of Berlin. His death took place at a very advanced age, April 3, 1760. Besides other works, Winslow published "A Dissertation on the Uncertainty of the Signs of Death," 1742, 12mo; and "Exposition Anatomique de la Structure du Corps Humain," Paris, 1732, 4to, which has been translated into the German, English, Italian, and Latin languages, and is still considered as a standard work on the branch of science to which it relates. The author had projected a larger treatise on anatomy, but he did not carry his design into execution.—*Haller. Eloy Dict. H. de la Med. Aikin's Gen. Biog.*

WINSTANLEY, DD. (THOMAS) principal of St Alban's-hall, Oxford, Camden professor of ancient history, and Laudian professor of Arabic, a distinguished scholar, versed in most modern as well as ancient languages. In 1780 he edited the Poetics of Aristotle, accompanied with a Latin version, afterwards a lecture-book in the university. He also collected and edited the works of Daniel Webb, in one volume, quarto, now become, from the destructive fire of February 8, 1808, very scarce. He died September 2, 1823, in the seventy-fourth year of his age.—*Ann. Biog.*

WINSTANLEY (WILLIAM) a literary compiler of the seventeenth century, whose original occupation was that of a barber. He published "The Muses' Cabinet stored with variety of Poems," London, 1655, 12mo; "England's Worthies, or Select Lives of Eminent Persons," 1660, 8vo; "The Loyal Martyrology, or Brief Catalogues and Characters of the most eminent Persons who suffered for their Conscience in the late Times of Rebellion; as also Dregs of Treachery, with the Catalogue and Characters of the Regicides," 1663, 8vo; and "Lives of the most famous English Poets," 1687, 8vo. The style of Winstanley is incorrect and vulgar; but his works are worth notice, as containing facts omitted by other writers.—*Granger's Biog. Hist. of Eng.*

WINTLE (THOMAS) a learned divine, was born at Gloucester in 1737. He was educated at his native city, whence he was removed to Pembroke college, Oxford, where he obtained a fellowship, and graduated MA. in 1759. Having taken orders, archbishop Secker made him his chaplain, and gave him the rectory of Wittrisham in Kent, with which he held the living of St Peter, Wallingford, but relinquished

both on being presented to the rectory of Brightwell, in Berkshire, where he died in 1814. His works are, "An improved Version of Daniel, with Notes;" "A Dissertation on the Vision in Zechariah;" "Sermons at the Bampton Lecture;" "Christian Ethics, or Discourses on the Beatitudes;" "A Letter to Bishop Hurd," occasioned by his strictures on archbishop Secker and bishop Lowth.—*Genl. Mag.*

WINTRINGHAM, bart. (sir CLIFTON) an eminent physician and medical writer, who was the son of a physician of the same name, settled at York, where he died in 1748. The son was appointed chief physician to the duke of Cumberland in 1749, became a fellow of the Royal College of Physicians and of the Royal Society, physician extraordinary to the king in 1759, and physician in ordinary in 1762, and he was also physician general to the army. He died in London, January 10, 1794, in the eighty-fourth year of his age. Besides an edition of the medical works of his father, 1752, 2 vols. 8vo, he published "An experimental Inquiry concerning some Parts of the Animal Structure," 1740, 8vo, second edition 1777; "An Inquiry into the Exility of the Vessels of the Human Body," 1743, 8vo; and Dr Mead's "Monita et Præcepta Medica, permutatis Annotationibus et Observationibus illustrata;" besides an original work "De Morbis quibusdam Commentarii," 1782, which was translated into German.—*Hutchinson's Biog. Med.*

WINWOOD (RALPH) an able statesman in the reign of James I, was born at Aynho in Northamptonshire, about 1564. He was educated at St John's and Magdalen colleges, Oxford, and was chosen proctor of that university in 1592. He then proceeded on his travels, and in 1599 accompanied sir Henry Neville on his embassy to France, in the capacity of secretary. In 1603 he was sent by king James I as envoy to the states of Holland, and in 1607 he was knighted, and appointed a joint ambassador with sir Richard Spencer to the same power. He again visited Holland in 1609, on the theological business respecting Vbratius, in which James I so improperly interfered. In 1614 he was made secretary of state, which office he occupied until his death in 1617. Sir Ralph Winwood was an accomplished and able minister, and particularly conversant with commercial and military affairs. In 1725 Edward Sawyer, esq. published "Memorials of Affairs of State, in the reigns of Queen Elizabeth and King James I. collected chiefly from the Papers of the Right Hon. Sir Ralph Winwood, Knt. &c." 3 vols. folio, which are esteemed valuable as records of the political transactions of the period.—*Biog. Brit.*

WIRSUNG, or VIRSUNGUS (JOHN GEORGE) a German physician and anatomist, who was a native of Bavaria, and studied at Padua, in Italy, whither he went in 1629. The discovery of the pancreatic duct in the human subject, which he demonstrated in 1643, has rendered his name famous in the

annals of anatomy. He sent an account of this discovery, with a drawing of the duct, to Riolan, at Paris, in July 1643. On the 23d of August following he was assassinated by a Dalmatian physician, according to Haller, out of revenge for having been silenced by Wirsung in a public disputation.—*Eloy Dict. H. de la Med.*

WISE (FRANCIS) a learned antiquary of the last century, a native of Oxford, where he was born October 3, 1695. He received the rudiments of a classical education in the school then attached to New college, and at the age of sixteen entered himself at Trinity college, where he obtained a fellowship in 1718. Eleven years afterwards he was made keeper of the archives of the university, to which situation in 1748 was added the office of librarian to Dr Radcliffe's institution. He was the author of a variety of ingenious works, principally on subjects connected with the antiquities of this country. Of these the principal are two treatises "On White Horse Hill in Berkshire," in a letter addressed to Dr Mead, and "On the Red Horse in the County of Warwick;" "Annals of the Reign of Alfred the Great," 8vo; "An Enquiry into the State, Literature, &c. of the Aborigines of Europe," 4to; "On the History and Chronology of the Fabulous Ages," 4to; and a catalogue of the ancient coins and medals contained in the Bodleian collection, in one volume, folio. Mr Wise had taken orders at the usual age, and proceeded to the degree of bachelor in divinity in 1727, which enabled him to hold the vicarage of Ellesfield in Oxfordshire (given him by one of his pupils, the earl of Guildford), with the college living of Rotherfield Grays, in the same county. In private life he appears to have been as much beloved for the amiableness of his life and manners as he was generally respected for his literary attainments. His death took place at the parsonage-house of Ellesfield, October 6, 1762.—*Nichols's Lit. Anec.*

WISE (MICHAEL) the name of an English musical composer, educated at the chapel royal soon after the Restoration. In 1668 he was organist and master of the boys at Salisbury cathedral, which situations he resigned in 1675, on being appointed a gentleman of the king's chapel. He stood high in the favour of Charles II, till his presumption and unhappy temper lost him the king's countenance. The immediate cause of his disgrace is said to have been his audacity in interrupting a sermon to which the sovereign was listening, when on one of his progresses, by intruding a voluntary of his own. The violence of his disposition proved at length the cause of his death. Rushing from home one evening in a paroxysm of rage, after a quarrel with his wife, he encountered a watchman, whom he struck; a scuffle ensued, in which he received a blow on the head, which fractured his skull, and proved almost instantaneously fatal. He was the author of "Awake up my Glory," and several other popular anthems, as well as of some glees and catches, printed in the Musical Miscellany.—*Biog. Dict. of Mus.*

WISEMAN (RICHARD) an eminent English surgeon of the seventeenth century. He first distinguished himself in his profession in the civil wars under Charles I, and he accompanied Charles II in his exile in France, Holland, and Flanders. He then served in the Spanish navy, and returning home previously to the battle of Worcester, he was present in that engagement, where he was made a prisoner. Being liberated, he settled in London in 1652; and after the Restoration he became so eminent in his profession, that he was appointed serjeant-surgeon to the king. He appears to have held the same office in the reign of James II, but the time of his death is uncertain. He published the result of his experience in "Several Chirurgical Treatises," 1676, folio, reprinted in 1686 and 1705, and in 2 vols. 8vo, 1719. The subjects of these treatises are tumours, ulcers, king's evil, wounds, fractures, luxations, &c.; and the apparent accuracy and candour of the author in his relations of the numerous cases which fell under his care, have given a permanent value to his writings.—*Aikin's Gen. Biog.*

WISHART (GEORGE) one of the first martyrs to the Protestant religion in Scotland, was born in the beginning of the sixteenth century, and was the descendant of a very ancient and respectable family. He appears to have been early distinguished by his attachment to the principles of the Reformation, originating, it is said, in his travels to Germany, where he became acquainted with the opinions of Luther. Some accounts assert that he was banished from his own country for teaching the Greek Testament, and that he subsequently resided for some years in the university of Cambridge. In 1544 he returned to Scotland, where he was received with the most ardent good will, and began to preach in a very bold and open manner against the corruptions of the church of Rome, and the vices of the clergy. His conduct exceedingly exasperated cardinal Beaton, and the priesthood under his influence, and subjected the life of Wishart to more than one attack, until at last he was arrested, and on the 1st of March, 1546, put on his trial for obstinate heresy, before a convocation of prelates and clergy, assembled for the purpose in the cathedral. No attention being paid to either justice or mercy, he was found guilty and condemned to the flames, which sentence was put into execution the following day, in the castle yard, with great pomp and ceremony. Most accounts assert that the cardinal and clergy attended; and it is certain that so much indignation was apprehended on the part of the people, that the artillery of the castle was pointed towards the place of execution. This zealous reformer was a man of great piety, courage, and comparative moderation; and in the opinion of Dr Henry, his death was a loss to his persecutors as well as to his friends, as he would have exerted his influence to effect the revolution with more regularity and less devastation.—*Mackenzie's Scottish Writers. M'Crie's Life of Knox.*

WISHART or WISCHART (GEORGE) bishop of Edinburgh, was born in East Lothian, 1609, and educated at the university of Edinburgh, where he took his degrees and entered into orders. He became minister of North Leith, but was deposed in 1638 for refusing to take the covenant, and was also imprisoned. On his release, he accompanied the marquis of Montrose as his chaplain, with whom he was taken prisoner. When again at liberty he went abroad, and became chaplain to Elizabeth, queen of Bohemia, with whom he came over to England, in the visit she paid to her nephew Charles II after his restoration. On the restoration of episcopacy in Scotland, he was made bishop of Edinburgh. He died in 1671. He wrote the history of the war in Scotland under the conduct of the marquis of Montrose, in Latin, under the title of "J. G. de Rebus auspiciis serenissimi et potentissimi Caroli Dei Gratia Mag. Brit. Regis, &c. sub Imperio illustrissimi Montisrosarum Marchionis, &c., Anno 1644 et duobus sequentibus, &c." This was first published in 1646, and there have been several English translations of it from that time to 1720, when it was printed with a second part, left by the author in MS.—*Keith's Cat. of Scottish Bishops. Censura Lit.*

WITHER (GEORGE) a name well known among the admirers of old English poetry, was born at Bentworth, near Alton in Hampshire, June 11, 1588. His parents, who were very respectable, gave him an excellent preliminary education, and sent him to Magdalen college, Oxford. He was, however, prematurely removed from the university, with a view to agricultural pursuits; but disliking a country life he came to London, and entered himself a student of Lincoln's-inn. Like many more of his turn of mind, he paid more attention to the Muses than to law; and several of his pieces getting abroad, he acquired the reputation of a poet. In 1613 appeared his celebrated satires, entitled "Abuses Stript and Whipt," the severity and personality of which led to his confinement in the Marshalsea, where he wrote his "Satire to the King," which is said to have procured his release. In 1615 he published his "Shepherds Hunting," written during his imprisonment in the Marshalsea, which is deemed the most feeling and poetical of all his works. From this time he continued to write both poetry and prose to the day of his death, and it is to be lamented with far more attention to quantity than quality. Attaching himself with zeal to the puritans, he was however much exalted by that party, and of course as violently assailed by their opponents. He took an active part on the side of parliament when the civil war broke out, and sold an estate to raise a troop of horse, and obtained the rank of major. He was made a justice of peace by the long parliament for three counties, and major-general of all the horse and foot in the county of Surrey by Oliver Cromwell. On the Restoration he lost all which he had amassed by his previous employment; and having published a piece

denominated "Vox Vulgi," which was deemed seditious, he was committed to Newgate, and afterwards to the Tower, where he was denied the use of pen, ink, and paper. In this confinement he remained more than three years, and wrote several things by the connivance of the keeper, which were subsequently published. When he was released is not recorded; but he reached the age of seventy-nine, and died May 2, 1667. The writings of Wither amount to 112 articles in prose and verse. Some of these have been recently republished by sir Egerton Brydges, including his "Shepherds Hunting," 1814; his "Fidelis," 1815; and his "Hymns and Songs of the Church," 1815. The other works are scarce, and bring good prices, since attention has been drawn to his poetical merits by Mr Gilchrist, sir Egerton Brydges, and other warm admirers of old English literature.—*Bibliographia. Censura Lit. Life by Gilchrist in Gent. Mag.*

WITHERING (WILLIAM) a distinguished physician and writer on botany, who was born in 1741. He studied at Edinburgh, where he took his doctor's degree in 1766. He then settled at Stafford, and afterwards removed to Birmingham, where his skill and assiduity speedily raised him to eminence in his profession. The chief objects of his attention, independent of his duties as a medical practitioner, were chemistry and botany; and the result of his researches appeared in several valuable publications. Being subject to pulmonary disease, he thought it desirable, in 1793 and 1794, to pass the winter at Lisbon; and after his return home he did not again resume to any extent his professional practice. He died at the Larches, near Birmingham, in November, 1799. His principal publications are, "A Systematic Arrangement of British Plants," 2 vols. 8vo, 1776, extended in the edition of 1787 to three volumes, and in that of 1796 to four; "An Account of the Scarlet Fever and Sore Throat, or Scarlatina Anginosa," 1779, 8vo; "An Account of the Foxglove, and some of its Medical Uses, with Practical Remarks on the Dropsy, and other Diseases," 1785, 8vo; "A Chemical Analysis of the Waters at Caldas da Rainha," Lisbon, 1795, 4to; besides a translation of Bergman's *Scia-graphia Regni Mineralis*, and papers in the *Philosophical Transactions* relative to mineralogy. The name of Withering has been bestowed on a genus of American plants by L'Heritier; and the native carbonate of Barites has received the appellation of Witherite, in honour of Dr Withering, who first discovered and described it.—*Rees's Cyclop.*

WITHERS, DD. (PHILIP) a miscellaneous writer, born at Westbury, in Wiltshire, where his father carried on the business of a dyer of woollen cloth. After having been apprenticed to a shop-keeper, at the age of twenty he became a pupil to the rev. Joseph Milner, who kept a school at Hall, in Yorkshire. In 1777 he was admitted a member of Trinity college, Cambridge, whence he removed to Queen's college; and he is said to have made a consi-

derable proficiency in the Greek language. About 1778 he published proposals for a splendid edition of "The Table of Cebes," in Greek, with plates and notes, for which he made an abortive attempt to obtain the patronage of archbishop Cornwallis, the wpo-being advertised as undertaken for the benefit of the sons of the clergy, but it never made its appearance. After leaving Cambridge, Withers opened an academy in St Mary Axe. In 1781 he was lecturer of St Clement's Eastcheap, and in 1783 he resided at Paddington, and was preacher or reader at Ben-tinck-chapel. During the year last mentioned he published an address to Dr Dennis, vice-chancellor of Oxford, in reply to a letter signed "Vindex," in the St James's Chronicle, which he supposed to have been directed against him. In this address he endeavours to vindicate himself from the imputation of ignorance and methodism, and challenges any person of the university of Oxford to a trial of skill in the Greek language. In 1787 he commenced his career as a political writer, by an anonymous pamphlet under the signature of "Cassandra." He afterwards produced some works on grammar and elocution, which display learning and ingenuity; but in 1789 he resumed the occupation of a political partizan, and commenting with little regard to delicacy on public topics, he subjected himself to a prosecution in the court of King's Bench, for a libel on Mrs Fitzherbert. Being convicted, the indiscretion of his behaviour, when brought up to receive judgment, tended to increase his punishment, and he was sentenced to pay a fine of fifty pounds, and be imprisoned twelve months in Newgate. He died in that prison in July 1790, and was interred at Chelsea, in which parish he had been a resident previous to his confinement. His principal production was a treatise entitled "Aristarchus, or the Principles of Composition," 1788, 8vo; and he also published *Remarks on Sheridan's Pronouncing Dictionary*.—*Lysons's Environs of London*, vol. ii.

WITHERSPOON (JOHN) a learned minister of the Scottish kirk, a native of Yester, in the neighbourhood of Edinburgh, born 1722. Having received a theological education in the university of the northern metropolis, he was ordained according to the presbyterian forms to the parish of Beith, and afterwards officiated at Paisley, till in 1768 he crossed the Atlantic, and became president of Princetown college in America. He was the author of a tract written in condemnation of theatrical amusements; three volumes of devotional essays; "Ecclesiastical Characteristics;" and some sermons on miscellaneous subjects. His death took place at Princetown, in 1794.—*Prot. Dissenters' Mag.*

WITKIND, a celebrated Saxon chief, who commanded against Charlemagne in the eighth century, when that sovereign undertook to subdue and christianize the Saxons. His resistance was so pertinacious, that the emperor was induced to make favourable proposals to him, which he accepted, and received the

title of duke of the Saxons, with the principality of Engern. He also consented to be instructed in the Christian religion, and was baptiz'd with his whole family. In his old age he made war upon the Suevi, against whom he lost his life in battle, about 807. From this chief the existing house of Saxony trace their origin.—*Moreri. Mod. Univ. Hist.*

WITSEN (NICHOLAS) a learned Dutch writer, who was a magistrate of Amsterdam, deputy of the council of state from the province of Holland in 1674, and ambassador from the United Provinces to different European courts. In 1671 he published a curious treatise on the naval architecture of the ancients; and he was the author of a chart of Northern and Eastern Tartary, and of a letter to Dr M. Liester, with two draughts of Persepolis, published in the Philosophical Transactions. He died August 10, 1717.—*Moreri. Saxius. Nouv. Dict. Hist.*

WITSIUS (HERMAN) a learned Orientalist, by country a Dutchman, being born in 1626, at Enckhuisen, in the province of North Holland. He applied himself with great industry to the study of Eastern antiquities, his proficiency in which his excellent books on the comparison between the Hebrew ritual and that of the ancient Egyptians sufficiently evinces. This valuable work is entitled "Egyptiaca et Decaphylon," 4to. He was also the author of a treatise, called "Economia Fœderum," a work highly spoken of by Hervey, and translated into our language under the title of "The (Economy of the Covenants between God and Man," 8vo, 3 vols.; "Miscellanea Sacrorum;" and a "History of Jerusalem." Witsius, in his religious opinions, was a rigid supporter of the doctrines of Calvin, and having taken orders, rose by his learning and reputation for controversial talent to be a divinity professor, first at Franeker, and subsequently at Utrecht and Leyden, in which latter city his decease took place in 1708.—*Saxii Onom.*

WITTE or WITTEN (HENNING) professor of rhetoric and history at Riga in Livonia, where he died January 22, 1696, aged sixty-one. He was the author of a work entitled "Memorie Medicorum nostri Sæculi clarissimorum renovatæ, Decades duo," Francof. 1676, 8vo.—*Eloy Dict. Hist. de la Med.*

WODHULL (MICHAEL) a literary gentleman of good private fortune, a native of Thetford, Northants, born 1740. From Winchester grammar school he removed to Brazenose college, Oxford, but does not appear to have graduated. He is advantageously known as the author of a metrical translation of the tragedies of Euripides, 8vo, 4 vols. 1782. There are also some miscellaneous poems of minor importance from his pen. Mr Wodhull's death took place in 1816.—*Gent. Mag.*

WODROW (ROBERT) a Scottish divine and historian, who died in the beginning of the eighteenth century. He was the son of the rev. James Wodrow, professor of theology at Glasgow, who died in 1708. The subject of this article was born in 1679, and he en-

tered as a student of the university of Glasgow in 1691. He was in 1698 chosen librarian to the university, which office he held during four years; and at that time he commenced his researches into the ecclesiastical history of Scotland, which he continued to the end of his life; and he likewise imbibed a taste for the study of medals, inscriptions, and other monuments of Roman, Celtic, and British antiquity. He was also one of the first cultivators of the science of natural history in Scotland; and among his friends and correspondents were sir Robert Sibbald, Edward Lhwyd, and Nicolson, afterwards bishop of Carlisle. Having left Glasgow, Mr Wodrow, in March 1703, obtained a licence to preach the Gospel, from the presbytery of Paisley; and towards the close of the same year he became minister of the parish of Eastwood. In 1712 the magistrates of Glasgow invited him to be one of the ministers of that city, and in 1717 he received a similar application from the town of Stirling; but both these advantageous offers of promotion he thought proper to decline, choosing to continue in the obscure country parish with which he was first connected. He paid a close and regular attention to every part of his duty, as a clerical member of the church of Scotland; and notwithstanding his studious turn, he punctually assisted at the meetings of presbytery, synod, and general assembly, when elected, as he often was, a member of that court. His leisure he dedicated chiefly to the investigation of the history of the national church. Strongly prepossessed in favour of that ecclesiastical establishment of which he was a member, he employed many years of his life in the study and elucidation of its annals; and the result of his labours partly appeared in "The History of the singular Sufferings of the Church of Scotland, during the twenty-eight Years immediately preceding the Revolution," printed at Edinburgh in 1721, 2 vols. folio. This work has been praised by Mr Fox, in the fragment of his History of James II, for its accuracy and fidelity, qualities of the highest importance in a historian; but the extreme minuteness of detail in which the author indulgences, renders his narrative tedious and heavy. Mr Wodrow afterwards undertook a Biography of the principal Persons concerned in introducing the Reformation of Religion into Scotland, and settling the different forms or modes of ecclesiastical government attempted to be established there from about 1560 to 1660, when the "History of the Sufferings" commences. But this latter work was left incomplete at his death, in March 1734; and the MS. is preserved in the library of the university of Glasgow.—*Encyclop. Britan.*

WÖFFINGTON (MARGARET) an actress, highly distinguished for her beauty and talents, who was born at Dublin in 1719. Her father kept a huckster's shop on Ormond quay, and she commenced her theatrical career as the pupil of madame Violante, an exhibitor of feats of activity on the tight rope, who having taken up her residence in the Irish metro-

polis about 1728, among other schemes for the amusement of the public and her own emolument, formed a company of Lilliputian actors. In these exhibitions little Woffington, then in her tenth year, attracted much notice as the representative of Macheath in the Beggar's Opera. A few years after she procured an advantageous engagement at one of the regular Dublin theatres, where she acquired so much reputation, that she was invited to London, and in 1740 she made her appearance at Covent-garden, in the character of Sylvia, in the Recruiting Officer. She then took up the part of air Harry Wildair, in which she was extremely successful. In comic characters, from the finished coquette or haughty lady of high rank and fashion, to the affected old maid, or vulgar termagant, she displayed a truth and facility of personification which has rarely been exceeded. Her attractions in private life were widely felt and acknowledged, and her society sought by persons of rank and talents. She was president of the weekly beef-steak club, held in the green-room of Covent-garden theatre. At length the derangement of her health induced her to retire from the stage in 1759; and her death took place March 28, 1760.—*Davies's Mem. of Garrick. Theop. Dict.*

WOIDE, LL.D. (CHARLES GODFREY) an eminent Oriental scholar, the country of whose birth has been variously described as Poland and the United Provinces. Having taken up his abode in this country about the year 1765, he obtained the appointment of preacher to the German chapel in the Savoy, and also to that adjoining Marlborough house, Pall-mall. In 1782 he was elected by the trustees of the British Museum one of the assistant librarians to that national institution, a situation for which his deep erudition, especially in Egyptian antiquities, eminently qualified him. Four years after he was presented with the honorary degree of LL.D. by the university of Oxford, in testimony of the sense entertained of his services in superintending the publication of La Croze's Egyptian Lexicon, which had continued in MSS. since 1720; and of Scholta's Grammar of the language, which issued from the Clarendon press in 1778, at the expense of that learned body. He also published a facsimile of the Alexandrian manuscript of the New Testament, now in the British Museum. His death took place in the spring of 1790.—*Nichols's Lit. Anec.*

WOLCOT, MD. (JOHN) a humourist, poet, and satirist, was born at Dodbrock in the county of Devon, in 1738. He was educated at the free school of Kingsbridge in the same county; after which he visited France, and on his return was articled to an uncle, who had borne the expenses of his education, and was an apothecary at Fowey. He early showed an attachment to poetry, as also for drawing, in which he became a considerable proficient. He subsequently visited London, to attend the hospitals, and in 1767 obtained the degree of MD. from Scotland, and accompanied sir William Trelawney to Jamaica, of which island the latter was appointed governor. Here meeting
GEN. BIOG.—VOL. III.

but little encouragement as a physician, it is said that he obtained orders, and became rector of a living in the gift of his patron, which being attended exclusively by a black congregation, claimed or at least received very little of his attention. On the death of sir William Trelawney he returned with his widow to England; and on the decease of his uncle, who left him the principal part of his property, he settled as a physician, first at Truro and afterwards at Helstone in Cornwall. While in this situation, he had the merit of discovering the talents of the late celebrated painter Opie, then a mere youthful miner, with whom in 1780 he came to London. Here he soon rendered himself conspicuous by those satirical compositions which he published under the name of Peter Pindar, and which for the drollery and great peculiarity of their humour became in the highest degree popular. His attacks were in the first instance chiefly levelled at the royal academicians; but ultimately the harmless singularities of his late majesty, his consort, and family, formed the principal field for his wit, which was much more conspicuous than either his truth or consideration. So much however was thought of his talents, that a negotiation was at one time entered into with him by the under secretary of the treasury, to become either silent or to direct his satire against the opponents of administration, which treaty however came to nothing, owing to his backwardness to write on that side of the question. Having obtained an annuity from his booksellers of 250*l.* per annum, and being otherwise in easy circumstances by the sale of his productions, he passed the close of his life in ease and convivial enjoyment, interrupted however in the sequel by blindness and other maladies. His death took place in Somers Town, on the 14th of January, 1819, in the eighty-first year of his age. As a man Dr Wolcot assumed much licence, and may be regarded as an Epicurean of the coarser class; as a poet he exhibits freshness, naïveté, and a portion of humour, singularly made up of the playful and the biting. Like all satirists on temporary and personal subjects, however, his works are rapidly verging towards oblivion; but the extreme felicity with which he lowered the importance of much secondary and assumptive pretension, will never allow them to be altogether forgotten. His poetical works were collected in 1812, in 5 vols. 8vo.—*Ann. Biog.*

WOLF (NATHANIEL MATTHEW de) an ingenious but fanciful writer on botany, who practised as a physician at Dantzic, where he died in 1784, at the age of sixty. He contrived a new system of botanical nomenclature, on principles very similar to those adopted in Grey's *Memoria Technica*. This scheme he developed in a work which he published in 1776, under the title of "*Genera Plantarum Vocabulis Characteristicis definita*," 8vo; and also in his "*Genera et Species Plantarum Vocabulis Characteristicis definita*," Regiomont. 1782, 8vo. Whatever may be thought of the utility of Dr de Wolf's plan, few will be disposed to deny him the praise of industry

and originality; and his index, entitled "Concordantia Botanica," which accompanies the former of the above publications, is truly valuable.—*Rees's Cycloped. Art. Nomenclatura.*

WOLFART (PETER) first physician to the prince of Hesse Cassel, was born at Hanau in 1675, and descended from ancestors distinguished in the profession to which he belonged. After having finished his classical studies at his native place, he went to the university of Gießen, to apply himself to medicine, and in 1696 he obtained the degree of MD. In 1698 he visited Holland, and afterwards England and France. Returning home he entered on medical practice, and soon acquired much reputation as a physician and a man of science. He was in 1703 nominated professor of physics and anatomy in the gymnasium of Hanau; and in 1708 he was admitted into the *Academia Curiosorum Naturæ*. His death took place in 1726. Wolfart was the author of "*Clavis Philosophiæ Experimentalis*," 1704; "*Amrenitates Hassiæ Inferioris subterraneæ*," 1711; "*Physica Curiosa Experimentalis*," 1712, 4to; "*Historia Naturalis Hassiæ Inferioris*," 1719, folio; besides other works.—*Eloy Dict. Hist. de la Méd.*

WOLFE (CHARLES) a young Irish divine of great poetical talent and much promise, descended of the same family as the late lord Kilwarden. He was the youngest son of Thomas Wolfe, esq. of Blackhall, in the county of Kildare, and was born in Dublin, December 14, 1791. His mother removing to England on the decease of his father, placed him at various schools in Bath, Salisbury, and afterwards at Hyde abbey school in Winchester, where he remained till 1808, when the family returned to Ireland. The following year he entered himself of Trinity college, Dublin, under the immediate tuition of Dr Davenport, the professor of natural philosophy, and soon acquired considerable distinction by his abilities and assiduity, which were eventually rewarded by a scholarship. Having taken orders, he obtained the curacy of Ballyclog, an obscure and remote village in the north of Ireland, which he afterwards resigned for that of Castle Caulfield, in the diocese of Armagh; but the active labour in which the superintendence of a large and populous parish now involved him, combined with a disappointment of a tender nature, to make rapid inroads upon a constitution naturally far from robust, and unequivocal symptoms of consumption displayed themselves. Although his friends, with the view of averting the evil, prevailed on him to visit the milder climates of Devonshire and Bordeaux, yet the disease, nourished perhaps by a morbid sensibility, had taken too firm a root, and after lingering with the usual fluctuations of his complaint till the winter of 1822, he died about the end of February in the following year. The composition which acquired Mr Wolfe considerable posthumous celebrity in this country, was his "Ode on the Death of Sir John Moore," commencing

"Not a drum was heard," &c.

which lord Byron, in a conversation comme-

morated by captain Medwin, pronounced "the most perfect ode in the language." Besides this piece, which first appeared anonymously in an Irish newspaper, Mr Wolfe was the author of several minor poems of great beauty.—*Ann. Biog.*

WOLFE (JAMES) a very distinguished English general officer, was the son of lieutenant-general Edward Wolfe, and was born at Westerham in the county of Kent, in 1726. He betook himself young to the profession of arms, for which he was particularly adapted, by the bravery, elevation, and decision of his character. Even at the early age of twenty he attracted attention by his military skill, and during the whole of the German war was actively employed and regarded as a great and rising soldier. At length he was called into high and independent command by the discernment of the first Mr Pitt, who appointed him to command the important expedition against Quebec. Here he singly, and alone in opinion, formed that great, hazardous, but necessary plan of operation, which drew out the French to their defeat, and ensured the conquest of Canada. Having surmounted all obstacles, he encountered the enemy on the heights of Abraham, where in the moment of victory he received a ball in the wrist, and another in the body, which rendered it necessary to bear him off to a small distance in the rear. There, roused from fainting in the agonies of death, by the sound of "They run," he eagerly asked "Who run?" and being told the French, and that they were defeated, he exclaimed "Then I thank God, and die contented," and almost instantly expired. This event took place September 13, 1759, in the thirty-fourth year of his age. A national monument is erected to the memory of this much lamented and excellent officer, in Westminster abbey.—*Ann. Reg.*

WOLFF or WOLFIUS (CHRISTIAN) an eminent German mathematician and philosopher, born at Breslau in 1679. After being well instructed in the principles of literature and science, he went in 1699 to the university of Jena, where he prosecuted his studies with great success for three years, and then removed to Leipsic. In 1703 he took the degree of MA. on which occasion he published a thesis entitled "*Philosophia practica universalis Mathematico Modo conscripta*;" and the following year he produced another piece on the Differential and Infinitesimal Calculus. As he had studied theology as well as philosophy, he became a preacher, and was invited to accept the office of pastor to a country congregation; but the advice of the celebrated Leibnitz induced him to decline this situation and devote himself to philosophical studies. His reputation extended to various parts of Germany; and after refusing a professorship in the university of Gießen, he accepted the mathematical chair at Halle in 1707. There he taught for several years, and acquired fame by his writings as well as his lectures; but at length he became involved in literary quarrels, which proved highly prejudicial to his repose, and afforded a temporary triumph to his ene-

mies. Wolf, on quitting the post of professor of the university of Halle in 1721, delivered a dissertation in which he compared the principles of Confucius and the Chinese with those of Christianity, and announced the peculiar opinions which he entertained on the doctrine of necessity. The theological faculty took the alarm, and a controversy arose which was carried on in a manner but little creditable to either party. At length his opponents found means to prejudice his sovereign, the king of Prussia, against him, as a disseminator of dangerous principles, and the philosopher received an order in November 1723 to quit the Prussian territories in two days, on pain of death. He immediately proceeded to Cassel, where he met with the king of Sweden, who appointed him professor of mathematics at Marburg. The enmity of the clergy of Halle still followed him; but he retained his situation, and many of his former pupils removed to Marburg to attend his lectures. He now resumed his literary labours, and published, under the title of "Remarks on Metaphysics," an answer to the principal objections against his doctrine, in which he had manifestly the advantage of his opponents. Having thus vindicated his philosophy from reproach, he received repeated invitations to remove from Marburg; but though after an interval of nine years his sentence of exile was reversed, and tempting proposals made to induce him to resume his former station, he rather chose to continue where he found himself agreeably situated, and at perfect liberty to pursue his speculations. In 1740 appeared the first volume of his "Treatise on the Law of Nature," to which he prefixed a dedication to the hereditary prince of Prussia, afterwards Frederick the Great. On the accession of that monarch to the throne, Wolff was recalled to Halle, and with the permission of the king of Sweden, he accepted the professorship of the law of nature and nations, and also that of mathematics, with a salary of two thousand crowns, and liberty to teach whatever he thought proper. He obtained also the title of privy counsellor, and was made vice-chancellor, and subsequently chancellor of the university. In 1745 the elector of Bavaria raised him to the dignity of a baron of the empire, without any solicitation on his part. At an early period of his career he was chosen a member of the Royal Society of London, and also of the Academy of Sciences at Berlin; in 1733 he became a foreign associate of the Parisian Academy of Sciences; and in 1752 he was made a member of the Institute of Bologna. This last of his scientific honours he did not long enjoy, dying April 9, 1754. Among his numerous and bulky publications are "Theoretical and Practical Philosophy;" "A Course of Mathematics;" "The Law of Nature," 6 vols. 4to; and "The Law of Nations." Brucker thus characterizes this philosopher:—"He possessed a clear and methodical understanding, which by long exercise in mathematical investigations was particularly fitted for the employment of digesting

the several branches of knowledge into regular systems; and his fertile powers of invention enabled him to enrich almost every field of science in which he laboured with some new addition. The lucid order which appears in all his writings enables his reader to follow his conceptions with ease and certainty through the longest trains of reasoning. But the close connexion of the several parts of his works, together with the vast variety and extent of subjects on which he treats, renders it impracticable to give a summary of his doctrines."—*Stollii Introd. in Hist. Litt. Enfield's Hist. of Philos. Aikin's Gen. Biog.*

WOLFIIUS (JEROME) a learned critic and classical scholar of the sixteenth century. He was a native of Oettingen in the country of the Grisons, and he studied at the university of Tübingen, where he acquired an intimate knowledge of the Latin and Greek languages. He then became secretary to the bishop of Würzburg, and afterwards visited several parts of Germany, and was employed in the tuition of youth and in making versions of the Greek classics. At length he settled at Augsburg, as librarian to the great patron of literature, John James Fugger; and the senate appointed him principal of the college in that city, where he died in 1580, aged sixty-four. Wolfius translated into Latin the works of Zonaras, Nicetas, and other Byzantine historians; the orations of Isocrates and Demosthenes; and the productions of several other Greek authors; and he wrote annotations on some of the classics; besides other works.—*Teissier Eloges des Hommes Savans.*

WOLFIIUS (JOHN) an historical and miscellaneous writer, who was born in 1537, at Bergzabern in the duchy of Deux Ponts. He studied jurisprudence at the university of Dole, and took his degrees in that faculty; after which he was employed as a diplomatist by the elector palatine. In 1593 he was appointed counsellor to the margrave of Baden, and was also made governor of Mindelheim. He died in 1600. Wolfius published, in 2 folio volumes, a work entitled "Lectiones Memorabiles," which, amidst a vast deal of dull and unprofitable reading, contains some curious facts and observations.—*Moreri. Teissier.*

WOLFIIUS (JOHN CHRISTOPHER) a learned German divine and philologist, born at Wernigerode in 1683. Removing with his father to Hamburg in 1695, he was educated under John Albert Fabricius, whom he assisted in his Bibliotheca Græca. He then studied at Wittemberg, where he proceeded MA. and in 1706 became an adjunct of the philosophical faculty. After having travelled for improvement in Holland and England, and resided some time at Oxford, he was appointed in 1710 professor extraordinary of philosophy at Wittemberg. He was afterwards advanced to the chair of theology; but in 1712 he removed to Hamburg, to become professor of the Oriental languages in the gymnasium, and in 1715 he was promoted to the rectorship of that institution. He was also a preacher at the cathedral, and pastor of the church of St Catherine; and soon

after he was chosen a member of the Academy of Sciences at Berlin. He formed a vast collection of Rabbinical and Oriental books and MSS. which he bequeathed to the public library at Hamburg, where he died in 1739. Among his works are "Historia Lexicorum Hebraicorum," Witt. 1705, 8vo; "Compendium Historiæ Philosophiæ antiquæ, sive Originis Philosophumena," Hamb. 1706, 8vo; "Bibliotheca Hebræa," 1715—1733, 4 vols. 4to; "Anecdota Græca, Sacra et Profana," 1722—1724, 4 vols. 8vo; "Cursus Philologicæ et Criticæ in Nov. Test. accedunt in Calce quædam ex Photii Amphilochiis adhuc non editis," Basil. 1741, 5 vols. 4to.—JOHN CHRISTIAN WOLFPIUS, brother of the preceding, was the author of a work of considerable research, entitled "Monumenta Typographica," Hamb. 1740, 2 vols. 8vo.—Saxii *Onomast. Lit. Nouv. Dict. Hist.*

WOLFPIUS (PANCRATIUS) a German physician who studied at the university of Altorf, where he took the degree of M.D. in 1674. He practised medicine in several of the cities of Germany, and especially at Halle in Saxony, where he occupied a chair in the schools of that faculty. This professor engaged in a controversy with Stahl, on the subject of aërum fulminans; and he had also several disputes with Michael Alberti. As a physiologist he deserves notice for an ingenious attempt to explain the phenomena of vitality on the principles of mechanism and chemistry, in a work entitled "Physica Hippocratica, qua exponitur Humanæ Naturæ Mechanismus Geometrico-Chymicus," Lips. 1713, 8vo.—*Eloy Diet. Hist. de la Med.*

WOLLASTON, LLD. FRs. (FRANCIS) a mathematician and astronomer, who was preacher of the diocese of St David's, and rector of the parish of St Mary Aldermary, London. Besides several papers in the Philosophical Transactions, he was the author of "A Specimen of a General Astronomical Catalogue, arranged in Zones of North Polar Distance," 1789, folio; "Fasciculus Astronomicus, containing Observations of the North circum-polar Region, together with some Account of the Instrument with which they were made, and a new set of Tables, by which they were reduced to the mean Position for the Beginning of January, 1800," London, 1800, 4to; "A Portraiture of the Heavens as they appear to the naked Eye," on ten plates, London, 1811, folio. Dr Wollaston died in 1815, at the age of eighty-four.—*Reuss. Watt's Bibl. Brit.*

WOLLASTON (WILLIAM) an eminent writer on ethics and theology, who was descended from an ancient family, and born at Cotton Clanford in Staffordshire, in 1659. He studied at Sidney college, Cambridge, and having proceeded M.A. in 1681, he entered into holy orders. His first settlement was as an assistant at a free school at Birmingham, to which was annexed a small lectureship; and he afterwards became second master in the same school. In 1688 the death of a relation put him in possession of considerable

landed property, when he removed to London, and resided in Charterhouse-square. His marriage shortly after with a lady of considerable fortune having rendered him independent, he relinquished all thoughts of rising in the church, devoting his time to literary researches. In 1691 he published "The Design of the Book of Ecclesiastes, represented in an English Poem," 8vo, but this he would afterwards have suppressed, from a conviction that he had no talents for poetry. He printed in 1722, for private distribution only, a work entitled "The Religion of Nature delineated," which he afterwards revised for more extensive circulation. This treatise, in which the author advances some ingenious speculations concerning the principles of ethical science, notwithstanding the abstruse nature of the subject, and the absence of the graces of composition, attracted the notice of the learned, and procured the writer a distinguished station among the philosophers of the last century. His death took place October 22, 1724.—*Nichols's Illustr. of Literat. Aikin's G. Biog.*

WOLSEY (THOMAS) cardinal, an eminent minister of state under Henry VIII. He was the son of a butcher at Ipswich, where he was born in 1471. After receiving a grammatical education, he was sent to Magdalen college, Oxford, of which he was elected fellow. He was also appointed master of a grammar-school dependant on the same college, in which situation he had three sons of the marquis of Dorset under his care, a circumstance which induced that nobleman to present him with the living of Lymington in Somersetshire. Although his conduct was by no means regular, his manners and appearance recommended him to Dean, archbishop of Canterbury, who made him his domestic chaplain. On the death of that prelate, he served sir John Nanfan, governor of Calais, in the same capacity, by which patron he was recommended to Henry VII, who made him one of his own chaplains, and in consequence of his able and expeditious conveyance of a despatch to the emperor at Bruges, he was rewarded with the deanery of Lincoln. On the death of Henry VII he was introduced by Fox, bishop of Winchester, to Henry VIII, whose favour he courted so successfully, that he shortly obtained the first place in the royal favour, and became uncontrolled minister. His progress in advancement was very rapid. In 1510 he was introduced into the privy council, made reporter of the star chamber, registrar, and afterwards chancellor of the Garter. Ecclesiastical preferments were also profusely heaped upon him, of which the principal were the bishoprics of Tournay and Lincoln in 1513, and the archbishopric of York in 1514. The following year, the pope, to ingratiate himself with Henry, elevated him to the dignity of cardinal. His nomination to be the pope's legate à latere, completed his ecclesiastical dignities, by exalting him above the archbishop of Canterbury. Naturally proud and ostentatious, no English subject, either lay or ecclesiastic, ever took so much state upon him-

self, entertaining a train of eight hundred servants, many of whom were knights and gentlemen. In 1515 archbishop Warham, whom he had much annoyed by his contentious ambition, resigned the office of chancellor, to which Wolsey was appointed; and his administration in that capacity is said to have done him credit. His legantine power, on the contrary, was exercised with great severity and oppression, and his rapacity for acquirement was unbounded. At the time the celebrated rivalry between the emperor Charles V and Francis I rendered the friendship of Henry of great importance, Wolsey was treated with the greatest respect by both sovereigns, receiving pensions from each, as well as a third from the pope. He ultimately, however, favoured the side of Charles, who settled upon him the revenues of two bishoprics in Spain, and flattered him with hopes of the popedom, which induced him to involve Henry in a war with France. Insatiable in the pursuit of ecclesiastical emolument, in 1519 he obtained the administration of the see of Bath and Wells, and the temporalities of the abbey of St Albans, and afterwards enjoyed in succession the rich bishoprics of Durham and Winchester. By these means his revenues nearly equalled those of the crown, part of which he expended in pomp and ostentation, and part in laudable munificence for the advancement of learning. He founded several lectures at Oxford, where he also erected the celebrated college of Christchurch. He also founded a collegiate school at Ipswich, and built a palace at Hampton-court, which he presented to the king: but it must be understood much of this was done by the seizure of minor religious establishments, for which he obtained papal authority. The critical affair of the divorce of queen Catherine was one of the first steps to his fall, being thought, by the king, assistant in the artificial delays of the court of Rome. The attachment of Henry to Anne Boleyn still farther involved him; and at length, in 1529, the dukes of Norfolk and Suffolk were sent to require the great seal from him, and he was ordered to quit York-place, his palace in London, and retire to Esher, all his rich plate and furniture being seized in the king's name. After some suspense, owing to some remnant of attachment on the part of Henry, articles of impeachment were exhibited against him in parliament, but he was defended so vigorously by his retainer Cromwell, that they were withdrawn. His enemies then indicted him under the statute of provisors for procuring bulls from Rome, which was made the grounds of a sentence of forfeiture. After the intended effect was produced of making him resign York palace and its riches to the king, he was granted a full pardon, and part of his revenues. In 1530 he was ordered to remove to his diocese of York, where he passed part of the year at his mansion of Cawood, until once more, on the 1st of November in the same year, he was arrested for high treason, and set out under custody for London. Indisposition

of body however combining with mental distress, he was obliged to stop at Leicester, where he was honourably received at the abbey. His disorder increasing, a few days brought him to his end, on the 28th of November, 1530, in the sixtieth year of his age. Shortly before his decease, he exclaimed to the officer appointed to conduct him, "Had I but served God as diligently as I have served my king, he would not have given me over in my grey hairs." There has been considerable disposition in later writers to advance the character of this ambitious minister: but it is impossible with justice to regard him as any other than a fortunate man of talents, lifted up by the caprice of a despotic monarch to an extraordinary degree of power and splendour, which he exercised and displayed with an unexampled degree of pride and presumption. With the exception of some regard for the advancement of learning, neither as a statesman nor ecclesiastic is he to be held in estimation. It has been attempted to be shown that his conduct between Francis I and Charles V was really sagacious and expedient; but his selfish motives have been too clearly exposed to allow of much being effected by this line of reasoning. That he fell a victim to tyranny in the sequel is indisputable, but it was a tyranny that he had himself assisted both to form and to exercise. He will, however, always live in history as one of the most powerful favourites under the crown of England.—*Life by Fiddes. Galt.*

WOOD (ANTHONY) an eminent English antiquary and biographer, was born at Oxford in 1632. He received his school education in that city and at Thame, and in 1647 was entered of Merton college, Oxford. He early met with some books which gave him a turn for heraldry, and the appearance of Dugdale's *Antiquities of Warwickshire* confirmed his taste for the study of antiquities. Having graduated MA. he set himself to transcribe the monumental inscriptions and arms of the parishes of Oxford; and in 1660 he obtained permission to consult the registers and other records of the university in the Schools' Tower. These researches, added to others in the Tower of London and the Cotton library, produced the materials for his "*History and Antiquities of the University of Oxford*." The copy of this work, which he had compiled with greater industry than skill, was purchased of him by the university for 100*l*. It was written in English, but as it was thought proper that it should appear in Latin for the information of foreigners, it was translated into that language under the inspection of Dr Fell, and published at the Oxford press, under the title of "*Historia et Antiquitates Universitatis Oxoniensis*," 2 vols. folio. Of this version he often complained, as exhibiting various mistakes and omissions. In 1691 appeared his more popular and important work "*Athenæ Oxoniensæ*," or an account in English of almost all the writers educated at Oxford, and many of those at the university of Cambridge. A prosecution was soon after instituted against him in the

vice-chancellor's court, for an imputation in this work affecting the character of the deceased earl of Clarendon; and he was sentenced to expulsion until he should formally recant it. He endured this mortification from the party to which he leaned, but he had also to undergo various other attacks from other quarters, owing to his prejudices and partialities in favour of Jacobitism and the popish party. Nothing indeed could be more narrow and unphilosophical than many of his sentiments, or more poor and vulgar than his style. His work however affords valuable materials for biography, and he appears to have been a man of strict veracity, and biassed by crudely formed opinions, rather than by any views of an interested nature. He died in 1695, and left his books and papers to the university of Oxford. A third edition of his "*Athenæ Oxonienses*," corrected and enlarged from the author's MSS. has recently appeared under the superintendence of Dr Bliss.—*Life prefixed to Bliss's edition. Biog. Brit.*

WOOD (ROBERT) an accomplished scholar and statesman, was born at Riverstown in the county of Meath, in 1726. In 1751 he made the tour of Greece, Egypt, and Palestine, in company with Messieurs Bouverie and Dawkins, and at his return published a splendid work in folio, entitled "*The Ruins of Palmyra, otherwise Tadmor in the Desert*," being an account of the ancient and present state of that place, with a great number of elegant engravings. This was followed by a similar "*Description of the Ruins of Balbec*." In 1759 he was appointed under-secretary of state by the earl of Chatham, at which time he was preparing for the press his "*Essay on the Life and Writings of Homer*," which was in consequence delayed, and did not appear until after his death, which took place at Putney, September 9, 1771.—*Lysons's Environs of London.*

WOODALL (JOHN) an English surgeon of the sixteenth century. In 1589 he went to France in a medical capacity with the troops sent by queen Elizabeth to the assistance of Henry IV. He afterwards travelled on the continent, and resided for some time at Stade in Germany; and at length returning home, he settled as a practitioner in the metropolis. He became a member of the surgeons' company, and about 1612 was elected surgeon of St Bartholomew's hospital, and likewise surgeon-general to the East India company. In 1638, when he was in the sixty-ninth year of his age, he published a collection of works which he had previously printed, including, besides other pieces, a "*Treatise on the Plague*," and another "*On Gangrene and Sphacelus*." These productions are important, as showing the state of surgery in England in the early part of the seventeenth century. The period of the decease of this writer is uncertain.—*Aikin's Memoirs of Medicine.*

WOODDESON, DCL. (RICHARD) was born at Kingston-upon-Thames, May 15, 1745. At the age of fourteen he was admitted at Pembroke college, Oxford, which he quitted the

following year for a demyskip at Magdalen, of which college he afterwards became a fellow. In 1776 he succeeded to a Vinerian fellowship, and the year following was elected Vinerian professor on the resignation of sir Robert Chambers. In this capacity he published in 1789 a work entitled "*Elements of Jurisprudence*," and in 1792 "*A Systematic View of the Laws of England, as treated in a Course of Vinerian Lectures read at Oxford*," with a dedication to king George III. Besides these nothing appears under his name, with the exception of a small tract published in 1779, and called "*A Brief Vindication of the Rights of the British Legislature, in answer to some Positions advanced in a Pamphlet entitled Thoughts on the English Government*." He died in London, October 29, 1822, and is buried in the Temple church.—*Ann. Biog.*

WOODFALL (WILLIAM) a printer and parliamentary reporter, whose father, also a printer, was the proprietor of the newspaper called the Public Advertiser. The son was placed in the printing-office of Mr Baldwin, and afterwards assisted his father. He then attempted the stage, but with little success; and he also prepared for exhibition Savage's tragedy, entitled Sir Thomas Overbury, acted at Covent Garden in 1777. In consequence of his being the publisher of the famous Letters of Junius, he was exposed to a prosecution, which induced him to take refuge in Ireland. At length he became a proprietor and editor of the Morning Chronicle, when he distinguished himself by the ability and precision with which he reported the debates in parliament, as given in that paper. He died August 1, 1803, at the age of fifty-eight. Besides his labours as a journalist, he produced, in separate pamphlets, reports of a debate in the Irish house of Commons; and another at the India House.—*Theop. Dict. Watt's Bibl. Brit.*

WOODVILLE (WILLIAM) an eminent physician, born at Cokermonth, in 1732. After having received a good classical education, he became apprentice to an apothecary, and subsequently studied at Edinburgh, where, in 1775, he took the degree of M.D. Having passed some time on the continent, he returned, and settled as a practitioner at his native place, where he remained five or six years. He then removed to London, and was appointed one of the physicians to the Middlesex Dispensary. In 1791 he was chosen physician to the Small-pox Hospital at St Pancras; and he continued in connexion with that institution till his death, which took place March 26, 1805. Dr Woodville was the author of "*Medical Botany, containing systematic and generic Descriptions, with Plates, of all the medicinal Plants, indigenous and exotic*," 4 vols. 4to; "*The History of Inoculation of the Small-pox in Great Britain*," vol. i. 1796, 8vo; the second volume was never published, in consequence of Dr Jenner's discovery, relative to which Dr Woodville made many experiments, and for which he was an advocate.—*Rees's Cyclop.*

WOODWARD (HENRY) an eminent comic actor, born in Southwark in 1717. He received a good education at Merchant Tailors' school, on leaving which he went on the stage. He was first employed in the lowest pantomimical characters, but his abilities soon raised him to distinction. After attracting applause as a harlequin, he entered on the walks of comedy, and became unrivalled in such parts as Marplot, Sir Andrew Aguecheek, Touchstone, Parolles, &c. In 1747 he was engaged by Sheridan, then manager of the Dublin theatre; and on his return to England he became a member of the company at Drury Lane, under the management of Garrick. There he continued till 1758, when he joined Barry in opening a new theatre in Crowstreet, Dublin. This however proved a losing speculation, and Woodward, after having sunk a considerable part of his property, left Ireland, and returning to London, made his appearance at Covent Garden theatre, where, with some intervals, he continued to perform till his death, which took place April 17, 1777. Woodward altered for the stage the old comedy of the London Cuckolds, Shakespeare's *Winter's Tale*, and some other pieces; and he is said to have been the author of "The Male Coquet;" "A Lick at the Town;" besides which he published a sarcastic letter to Dr John Hill, who had abused him in a periodical paper, called the *Inspector*. As a composer of pantomimes he had great merit, and among his productions of that description were "Harlequin Fortunatus;" "Harlequin Sorcerer;" and "Queen Mab," which became extremely popular.—*Theat. Dict.*

WOODWARD (JOHN) an eminent physician and naturalist, who was of respectable parentage, and was born in Derbyshire, May 1, 1665. After receiving a classical education at a school in the country, he was sent to London, where he was apprenticed to a linen-draper. In this situation he became acquainted with Dr Peter Barwick, who took him into his family, and instructed him in the medical sciences. Through the recommendation of his kind tutor he was chosen professor of medicine at Gresham college in 1692. The following year he was admitted a fellow of the Royal Society; and in 1695 he obtained the degree of M.D. by mandate of archbishop Tenison. He now published "An Essay towards a Natural History of the Earth and Terrestrial Bodies, especially Minerals, as also of the Sea, Rivers, and Springs, with an Account of the Universal Deluge, and of the Effects it had upon the Earth," 8vo. This work was followed by "Brief Instructions for making Observations in all Parts of the World," 1696; and new editions of the essay appeared in 1702 and 1723. He became a fellow of the College of Physicians; and in 1714 he defended his geological speculations against the objections of Camerarius, in a Latin treatise, entitled "Naturalis Historia Telluris illustrata et aucta," of which an English translation, by Benjamin Holloway, LL.B. F.R.S. was published in 1726. In 1718 Dr Woodward

published a tract entitled "The State of Physic and Diseases, with an Inquiry into the Causes of the late Increase of them, but more particularly of the Small-pox, with some Considerations on the new Practice of Purging in that Disease," 8vo. The mode of practice on which he animadverted had been adopted by Dr Mead and Dr Freind, with the former of whom Woodward engaged in a controversy, which led to personal hostilities, with as little credit to the courage as to the prudence of either party. Dr Woodward died April 25, 1728, and was interred in Westminster abbey. Shortly after his death appeared the following works: "Fossils of all Kinds, digested into a Method suitable to their mutual Relation and Affinity," 8vo; and "A Catalogue of Fossils in the Collection of John Woodward, M.D.," 2 vols. 8vo. He left by will the sum of 150*l.* a year for the foundation of a lectureship on mineralogy, in the university of Cambridge, which was first held by Dr Conyers Middleton. As a geologist Dr Woodward has the merit of being the first who recurred to actual observation as the basis of theory; and in this point of view his speculations on the formation of the earth are advantageously distinguished from the fanciful hypotheses of Burnet and Whiston; but the stock of materials in his time was by far too scanty for such an undertaking as a system of cosmology; and a similar observation will even hold good at present, notwithstanding the vast additions made to our knowledge of the mineral kingdom during the last hundred years. Besides the works already noticed, Dr Woodward was the author of some archaeological tracts and papers in the *Philosophical Transactions*.—*Hutchinson's Biog. Med.*

WOODWARD (THOMAS JENKINSON) an ingenious botanist, whose skill and accuracy were only equalled by his liberality and zeal in the service of science. He afforded important assistance to Dr Withering in his "Systematic Arrangement of British Plants;" and he was a fellow of the Linnean Society, to whose Transactions he contributed an essay on the British Fuci, written in conjunction with bishop Goodenough, and several other papers on cryptogamic botany. He died in 1820. Sir James Edward Smith dedicated to the honour of this botanist a genus of ferns, denominated Woodwardia. — *Reuss. Ferns's Cyclop.*

WOOLHOUSE (JOHN THOMAS) an eminent oculist, who was a native of London. He settled in the practice of his profession at Paris, where he had chiefly resided many years, when he published in 1711 an account of the different operations he had performed for the cure of diseases of the eyes. This work was translated into Latin, and printed at Frankfort in 1719, under the title of "Quadragesima circiter Operationes Chirurgicæ quas Oculis laborantibus administrat, doctetque in Collegio vulgo dicto de l'Arx Maria, in Universitate Parisiensi," 8vo. Woolhouse carried on controversies with Heister, Morand, St Yves, and others of his professional

contemporaries, on the nature of cataract, relative to which he published "Dissertations," in 1717; and he was also the author of "A Catalogue of Instruments for Operations on the Eyes," Paris, 1696, 8vo; memoirs in the *Journal de Trevoux*, and in other periodical works. He held the office of oculist to king William III.—*Eloy Dict. H. de la Med.*

WOOLLETT (WILLIAM) an eminent engraver, was born at Maidstone in Kent, August 27, 1735. He was the son of a thread-maker, and early attracted the notice of his schoolmaster by his spontaneous display of graphic talents on the slate or on paper. Having attempted some engravings in copper, which were seen by Mr. Finney, an engraver, he took him as an apprentice. When out of his time his rise in his profession was very rapid, and he brought the art of landscape engraving to great perfection. He also engraved historical subjects and portraits with the greatest success. All his best works bring high prices, but particularly his "Niobe," "Phaeton," "Ceyx and Alcyone," "Celadon and Amelina," and the "Fishery," all from Wilson; and his "Death of General Wolfe" and "Battle of the Boyne," from West. He died May 23, 1785, at the age of fifty.—*Strutt's Dict.*

WOOLSTON (THOMAS) an English divine of singular conduct and opinions, was the son of a respectable tradesman of Northampton, where he was born in 1669. He was admitted of Sidney college, Cambridge, in 1685, of which he was subsequently elected fellow, and took orders. Having become an assiduous reader of the works of Origen, he imbibed a fondness for allegorical interpretations of Scripture, the result of which tendency appeared in 1705, in a work entitled "The Old Apology for the Truth of the Christian Religion against the Jews and Gentiles revived." The object of this tract was to prove that all the actions of Moses were typical of Christ and his church, and to show that some of the fathers understood them as such, and not as realities. Although this doctrine was singular, so far from giving offence, the book was issued from the university press. In 1720 he left his college, and went to London, where he published a Latin dissertation concerning the supposed epistle of Pontius Pilate to Tiberius. In the same year he published two Latin dissertations, addressed to Waterland, Whiston, and other disputants, in defence of Origen's allegorical mode of interpreting the Scriptures. His next work was an inquiry "Whether the people called quakers do not the nearest of any other sect in religion resemble the primitive Christians in principles and practice?" His chief object in this publication was apparently to attack the clergy, which conduct, with his refusal to reside at college according to the statutes, lost him his fellowship in 1721. He did not however become altogether sceptical for some years after, as in 1726 he published "A Defence of the Miracle of the Thundering Legion against Mr. Moyle." Although by this time regarded as a

man of singular notions, he was not personally molested, until engaging in the controversy between Anthony Collins and his opponents, he published several pamphlets, in which he not only argued for mystical interpretations of the miracles of Christ, but asserted that they were never actually wrought. He was now regarded as a declared enemy to Christianity, and a prosecution was instituted against him by the attorney-general, which Whiston and other friends to toleration had the interest to get stayed. He was not however silenced, and in 1727 and the three following years published his "Six Discourses on the Miracles," and two "Defences of the Discourses," in which he not only maintained the same opinion of their unreality, but expressed his opinions with a degree of sarcasm and ridicule which gave serious offence, and the law again interfered with renewed vigour. He was tried at Guildhall before chief-justice Raymond for blasphemy, when his counsel pleaded that it was so far from his purpose to bring the Christian religion into contempt, that he intended to place it on a firmer footing. He was, however, found guilty, and sentenced to a year's imprisonment, and a fine of 100*l.* He purchased the liberty of the rules of the King's Bench prison after the expiration of his imprisonment, not being able to pay his fine. He had obtained some money by his publications, which was swallowed up by legal expenses, and he chiefly relied for support on a small annual allowance from his brother, and the contributions of some respectable persons, who regarded him as a man of learning intending well, but misled by mysticism and enthusiasm. Solicitations were made for his release by Dr Samuel Clarke, but he declined giving any security not to offend again in a similar way. He was, however, soon after released by death, being carried off by an epidemic disorder in January 1732-3, in his sixty-second year. His moral character appears to have been unimpeachable, and there is little doubt that his head was more defective than his heart.—*Biog. Brit.*

WOOTTON (JOHN) a painter of animals and landscapes, who was a pupil of John Wyck. He was much employed in the portraits of horses and dogs, and on sporting scenes, especially representations of fox-hunting, on which subject seven of his pictures were engraved by Canot. He also executed a picture of the battle of Culloden, which is but an indifferent performance, though there is an engraving of it by Baron. Wootton, who was very successful in his profession, died in 1765.—*Pilkington by Fuseli.*

WORCESTER (EDWARD SOMERSET, marquis of) an English nobleman, celebrated for his scientific studies, and supposed to have been the first inventor of the steam-engine. This nobleman engaged in the service of Charles I during the civil war, and after its termination he spent his time in retirement, and in the cultivation of natural philosophy and mechanics. In 1663 he published a book entitled "The Scandings of One Hundred

Inventions," in which he first gave a description of the uses and effects of his engine; and he afterwards published a small pamphlet, called "An Exact and True Definition of the most stupendous Water-commanding Engine invented by the Rt. Hon. (and deservedly to be praised and admired) Edw. Somerset, Lord Marquess of Worcester." In neither of these works does he give any statement of the mode of constructing his engine; but from his description and account of its effects, it may be inferred that its action depended on the condensation as well as the elastic force of the steam, and consequently that in principle it resembled the modern steam engine. It seems also that he had actually constructed a machine upon a large scale, though unfortunately for himself, and for the interests of science, he was unable to excite the attention of the public towards his project, and was looked upon by his contemporaries as a visionary speculator. His death took place in 1667, at the age of seventy.—*Collins's Peerage. Mechanics' Weekly Journ.*

WORLIDGE (THOMAS) an ingenious artist, distinguished as a painter and engraver. He executed portraits in miniature and on canvas, but he was principally celebrated for the delicacy and effect of his etchings in the manner of Rembrandt. He was a native of Peterborough, and died at Hammersmith, near London, in 1766, aged sixty-five. Worlidge published "A Select Collection of Drawings from curious Antique Gems," 4to.—*Elmes's Dict. of the Fine Arts. Pilkington.*

WORMIUS (OLAUS) a learned Danish physician, born in 1588, at Arhusen, in Jutland, where his father was a burgomaster. After some previous education he went, in 1605, to the university of Marburg, and then to Strasburgh, where he studied medicine. He subsequently removed to Basil, and took the degree of M.D. having previously travelled in France, Italy, Holland, and England. In 1613 he returned to his native country, and was made professor of the belles lettres in the university of Copenhagen. In 1615 he was transferred to the chair of Greek literature, and in 1624 to that of physic, which he held till his death. His academical engagements did not prevent him from practising as a physician; and the reputation of his skill occasioned his being employed by his sovereign, Christian IV, who in recompense of his services made him a canon of the cathedral of Lunden. His death took place in 1654. He was the author of several works relative to his profession, and he also wrote in defence of the Aristotelian philosophy; but his most important productions are those concerning the antiquities of Denmark and Norway, among which may be mentioned, "Fasti Danici;" "Literatura Danica Antiquissima;" "Monumentorum Danicorum Libri sex;" "Lexicon Runicum;" and "Series Regum Danicæ."—WILLIAM, the son, and CHRISTIERN, the grandson of this writer, were both physicians and men of some note in the republic of literature.—*Hutchinson's Biog. Med. Nicéron.*

WORDSDALE (JAMES) a painter and dramatist of much temporary notoriety. He exercised his talents as an artist in such a manner as to contribute greatly to his own emolument; and he obtained at length a situation under government. Besides many popular songs and other light pieces of poetry, he was the author of five dramatic performances. He was intimate with Mrs Pilkington and her husband; and the former, in her Memoirs, claims the credit of having furnished Wordsdale with some of the poems which he published as his own. He died in 1767.—*Biog. Dram.*

WORSLEY (sir RICHARD) son of sir Thomas Worsley, a baronet of an ancient and honourable family of the west of England, born in 1751 at Apulrecombe, the family seat, situate in the Isle of Wight. He succeeded to the title in his eighteenth year, and soon after visited the continent, where he cultivated his taste for antiquities, by the study of the remains of ancient Rome, and made some large purchases of statues, marbles, and other articles of virtue, which on his return to England, it formed his principal amusement to classify and arrange. A catalogue of this collection was afterwards published under the title of "Museum Worsleianum," in two folio volumes." In 1776 he married Miss Fleming, daughter of a baronet of that name, but after seven years' cohabitation, the union was dissolved by a sentence of the ecclesiastical court, although in a preceding action for damages considerable blame had been thrown upon the husband, for his conduct in the affair which led to the separation. The year previously to this event sir Richard published a "History of the Isle of Wight," in one vol. 4to, with engravings of the principal seats, views, &c. by Godfrey. He was many years in parliament as representative of the borough of Newport, and held a situation about the person of king George III, as comptroller of the royal household. He was also governor of the island in which he resided, and where he died suddenly of an apoplectic attack in the autumn of 1805.—*Gent. Mag.*

WORTHINGTON (JOHN) a learned divine. He was a native of the town of Manchester, born there in 1618; and was educated at Cambridge, where he held in succession a fellowship at Emanuel college and the headship of Jesus. On the restoration of monarchy, Dr Worthington, whose political principles were adverse to the new order of things, resigned his mastership, and came to London, where he officiated as curate to the parish of St Bene't Fink. He eventually obtained the living of Ingoldaby near Grantham, in the county of Lincoln, with a stall in the cathedral belonging to that diocese. Dr Worthington did not however reside much at his rectory, having been elected to the lectureship of the parish of Hackney, Middlesex, where he continued to do duty till his decease. This event took place in the winter of 1671, and he was buried in the church where he had been accustomed to officiate, a

funeral sermon being preached on the occasion, by Dr (afterwards archbishop) Tillotson. This discourse was printed in 1785, prefixed to a volume of his own sermons. His other writings are "The Doctrine of the Resurrection considered," 8vo; "A Scripture Catechism," 8vo; and a treatise "On the Duty of Resignation," 8vo.—*Birch's Life of Tillotson*.

WORTHINGTON (WILLIAM) a native of Merionethshire in North Wales, was born in the year 1703, and in the earlier part of his life commenced his education at the grammar school of Oswestry. From this seminary he removed to Jesus college, Oxford, where he graduated as DD. in 1758. Having obtained the friendship of Dr Hare, then bishop of St Asaph, he was presented through that prelate's influence to a living in the county of Salop, and afterwards to that of Llanrhayader, Denbighshire, with a stall in the cathedral of his diocese. To this preferment archbishop Drummond afterwards added a prebendal stall in York minster. He was the author of a variety of theological works, of which the principal are "An Essay on the Scheme of the Redemption;" two tracts on "The Demoniacs" of the Gospels, written in reply to Mr H. Farmer; "The Scripture Theory of the Earth," 8vo; "Evidences of Christianity, deduced from Facts, &c." "On the historical Sense of the Mosaic Account of the Fall;" and two volumes of sermons preached at the Boyle lecture, 1777-8. His decease took place at his Denbighshire living, in the autumn of 1778. *Nichols's Lit. Anec.*

WOTTON (EDWARD) an eminent physician, was the son of Richard Wotton, beadle of divinity in the university of Oxford, where he was born in 1492. He became demy of Magdalen college, where he graduated BA. in 1513. It appears that he studied physic on the continent, as he had a doctor's degree conferred on him at Padua, as also at Oxford on his return in 1525. He became very eminent in his profession, and was physician to Henry VIII. He was the first among the English physicians who applied himself to the study of natural history, and he made himself famous both at home and abroad by a work entitled "De Differentiis Animalium, Lib. X." Paris, 1552, on which Gessner and Possevin bestowed great praise. He died October 5, 1555.—*Aikin's Biog. Mem. of Med.*

WOTTON (sir HENRY) a conspicuous political and literary character in his own age, was the youngest son of sir Robert Wotton, of Borton or Boughton-hall in Kent, where he was born in 1568. After receiving a classical education at home and at Winchester school, he was entered at New college, Oxford, whence he removed to Queen's college, where he much distinguished himself by his attention to logic and philosophy, and composed a tragedy. He studied civil law under an eminent Italian professor, which led to his becoming an extraordinary proficient in the Italian language. His father bequeathing him a moderate income, he determined in 1589 to

travel, and visited all the principal countries of the continent. On his return he was appointed secretary to the earl of Essex, whom he attended in his maritime expeditions against the Spaniards, and afterwards to Ireland. On the fall of that nobleman he thought proper, although not implicated in his crime, to quit the kingdom and reside at Florence, where he composed a treatise, not printed until after his death, entitled "The State of Christendom." While thus employed, the grand duke of Tuscany, having intercepted some letters disclosing a plot to take away the life of James, king of Scotland, he engaged Wotton to carry secret intelligence of it to that prince. This service he ably performed in the character and guise of an Italian, and returned to Florence. When James came to the English crown, he in return sent for Wotton home, whom he knighted, and in 1604 employed as an ambassador to the republic of Venice. As he passed through Augsburg, he was desired by a literary character to write something in his album, and being a man of humour, he wrote, in Latin, that "an ambassador is a good man, sent abroad to lie for the good of his country." This quip, which he merely regarded as an innocent sally, was, by the malignity of Schioppus, represented as a state maxim, avowed by the religion professed by the king of England. James, who thought nothing relative either to king-craft or state-craft a subject for wit, was in consequence highly displeased, and on his return Wotton remained five years unemployed. At length he recovered the royal favour, and was trusted with a mission to the United Provinces, and subsequently restored to his former post at Venice, where he remained three years. Other missions followed to the duke of Savoy, and to various princes in Germany, on the affairs of the elector palatine. A third embassy to Venice closed his diplomatic labours, from which he did not return until the death of James, when, in 1624, he was made provost of Eton college, as a reward for his various services. A literary retreat was very congenial with his taste, but his circumstances were so embarrassed, he found some difficulty in settling there. The first fruits of his leisure were his "Elements of Architecture," accounted the best work on the subject which had then appeared in England. The statutes of the college requiring him to assume a clerical character, he took deacon's orders, and spent the remainder of his life in literary leisure, social hospitality, and innocent amusement. He had planned a life of Luther, but by the persuasion of Charles I he laid it aside for a history of England, in which he made very little progress. The arrears of his demands on the crown remaining unpaid, he continued embarrassed to his death, which took place in December 1639, in the seventy-second year of his age. Sir Henry Wotton was a person of sound understanding, poignant wit, and great accomplishments, in whom the scholar and the man of the world were very happily blended. He passed too busy a life to write much, so that in addition to the works

already mentioned, there is only under his name a collection of miscellanies published after his death under the title of "Reliquiæ Wottonianæ," several times reprinted. It consists of lives, letters, poems, and characters, in which a lively fancy and penetrating understanding are generally discernible, although somewhat obscured by the pedantry of the age. Of his poems, one entitled "A Hymn to God in a Night of my latter Sickness," is much admired for pointed energy of expression and harmonious versification.—*Biog. Brit. Granger.*

WOTTON (WILLIAM) a clergyman of distinguished learning, was the son of the rev. Henry Wotton, rector of Wrentham in Suffolk. He was born in 1666, and under his father's tuition acquired such a knowledge of languages during his childhood, as caused him to be regarded as the wonder of the time. It appears that in his sixth year he could construe the Latin, Greek, and Hebrew tongues chiefly by the aid of an extraordinarily retentive memory. In consequence of this precocity he was entered at Catherine-hall, Cambridge, before he was ten years old. He took the degree of BA. in his thirteenth year, some time before which he had been celebrated in a copy of verses, not only for his acquaintance with the learned languages, including Arabic, Syriac, and Chaldee, but for his knowledge of geography, logic, philosophy, and mathematics. Visiting London in 1680, he was widely introduced, and commencing BD. in 1691, was made chaplain to the earl of Nottingham, who in 1693 presented him to the rectory of Middleton Keynes in Buckinghamshire. The first fruit of his extensive reading appeared in 1694, in a book entitled "Reflections upon Ancient and Modern Learning," the plan of which was to institute a comparison between the ancients and moderns in all that regarded arts, science, and literature. As this design required more knowledge than mere reading could confer on any man, some mistakes were found in this performance, though in general it added to the reputation of the author. To a second edition, in 1697, was annexed Dr Bentley's Dissertation on Phalaris, and other supposed authors, which circumstance involved Wotton in the controversy relative to the merits of the ancients and the moderns, and subjected him to the satire of Swift in the *Battle of the Books*. In a third edition, therefore, he added a defence of his book against some strictures made by sir William Temple and others, and also wrote some condemnatory observations on the *Tale of a Tub*. In 1701 he published a small History of Rome, from the death of Antoninus Pius to that of Alexander Severus, intended for the use of the young duke of Gloucester. Embarrassed in his circumstances in consequence of certain irregularities of conduct, he was obliged in 1714 to retire into South Wales, where he employed himself in writing on ecclesiastical antiquities and kindred subjects. He also wrote various other pieces, but none which made any addition to his fame: and he may be enumerated among the many instances

in which early proficiency, resting principally on strength of memory, disappoints the expectation which it excites. He died in 1726, at the age of sixty.—*Nichols's Lit. Anec.*

WOTY (WILLIAM) a very ingenious English poet, who was born in 1731. He published, under the feigned name of J. Copywell, a collection of poems, entitled "The Shrubs of Parnassus," 8vo; and he was also the author of "The Muses' Advice," 1761, 4to; and "The Blossoms of Helicon," 1763, 8vo. He then engaged with Francis Fawkes in a work called "The Poetical Calendar, containing a Collection of Scarce and Valuable Pieces of Poetry, original and selected," 1763, 12 vols. He afterwards published several other poetical productions, and his principal compositions were printed collectively in two vols. octavo. Some of his songs display great merit. His death took place March 10, 1791.—*Reuss. Jones.*

WOUFFE (PETER) a distinguished cultivator of the science of chemistry, who was one of the latest believers in the mysteries of alchymy. He occupied chambers in Barnard's-inn, when residing in London; but he usually spent his summers at Paris. His rooms, which were extensive, were so filled with furnaces and other chemical apparatus, that it was difficult to reach his fireside. His breakfast hour was four in the morning, and a few of his select friends were occasionally invited to this philosophical repast, to whom a secret signal was imparted by which they gained entrance, knocking a certain number of times at the inner door of his apartment. He had long vainly searched for the elixir of the alchymists, and ascribed his repeated failures to the neglect of due preparation by pious and charitable acts. Among his peculiarities of conduct and manners by no means the least extraordinary was his mode of treatment, when he found himself seriously indisposed. On such occasions he was accustomed to take a place in the Edinburgh mail, and having reached that city, he would immediately come back in the returning coach to London. A cold, taken in one of these expeditions, terminated in an inflammation of the lungs, in consequence of which he died in 1805. Mr Woulfe was a fellow of the Royal Society, and the author of several papers in the *Philosophical Transactions*. He is also known as the inventor of useful apparatus for experiments on gases.—*Reuss. Journal of Royal Institution.*

WOUVERMANS (PHILIP) an eminent master of the Flemish school of painting, son of an artist in the same profession, and brother to two others, neither of whom attained an equal degree of celebrity with himself. He was born at Haarlem in 1620, and studied painting under John Wynaets. The instructions derived from this master were indeed the sole assistance which his native genius received, as his circumstances rendered it impossible for him to travel for improvement, nevertheless his industry and talents soon raised him to a very high rank in his profession, although the pecuniary recompense

which they received was so inadequate to his merits that all his endeavours and perseverance were insufficient to raise him above want. The disgust which this treatment excited in him was so strong, that when on his death-bed, he committed to the flames a large box filled with sketches and designs, lest the possession of them should induce his son to engage in so ill-requited a pursuit as painting. His hunting pieces and other subjects, where horses are introduced, are especially admired as superior to any others of a similar description in his time. His landscapes and battle scenes also rank high in the estimation of connoisseurs. Wouvermans died at Haerlem, very poor, in 1668.—*D'Argenville Vies des Peint.*

WREDE (CHARLES PHILIP VON) a German general, who was originally a lawyer, or land-steward, but displaying military capabilities, he was recommended by count Rumford to the elector of Bavaria, who gave him a commission in the army. In 1788 he was appointed commander of a detached corps in Carrelia. In 1806 and 1807 he had the command of a division sent against the French; and in 1809 he headed the army of the north, destined to act against Russia. He was also employed as a diplomatist, having in 1810 been sent ambassador extraordinary to Paris; and he was instructed to submit certain proposals of the States-general assembled at Orebo to the king, and he was the first who acquainted the diet with the result. He died in 1824, and agreeably to the directions in his will, his body was interred without any pomp at his country seat, and was carried to the grave by peasants.—*Biog. Nouv. des Contemp.*

WREN (sir CHRISTOPHER) a celebrated architect and mathematician, who was the son of the rector of East Knoyle in Wiltshire, where he was born October 10, 1632. He entered as a student at Wadham college, Oxford, in 1646, previously to which time he had given proofs of his genius, by the invention of astronomical and pneumatic instruments. In 1647 he wrote a treatise on spherical trigonometry, upon a new plan; he took the degree of B.A. in 1650; and the following year he composed an algebraical tract on the Julian period. In 1653 he was chosen a fellow of the college of All Souls, when he proceeded M.A. He was one of the earliest members of the philosophical society at Oxford, which was the origin of the Royal Society. after the institution of which, in 1663, he was elected a fellow, and he distinguished himself by his activity in promoting the objects of that institution. In 1637 he was appointed professor of astronomy at Gresham college; but on being nominated to the Savilian professorship of astronomy at Oxford, he resigned the former office, and in 1661 returned to the university, where he was created LLD. Wren now presents himself to our notice as an architect of the highest eminence in his profession; and thus distinguished, he received a commission in 1663 to prepare designs for the restoration of St Paul's cathedral, then one of the most remarkable Gothic edifices in the kingdom.

With a view to improvement in architectural science, and to the execution of this great undertaking, he made a visit to France in 1665. He then finished the designs; but while they were under consideration, the cathedral was so completely destroyed by the fire of London in 1666, that the plan of repairing it was relinquished, and Wren had an opportunity for signaling his talents by the erection of an entirely new structure. The contemporaneous destruction of fifty parochial churches and many public buildings also furnished ample scope for the exercise of his ingenuity; and he would have had the honour of refunding, as it were, a new city, if the design which he laid before the king and parliament could have been adopted; but private interests were allowed to supersede the vast public benefit which would have resulted from the plan which he proposed. On the death of sir John Denham, in 1667, he succeeded to the office of surveyor of the works; and in order to obtain leisure for the performance of the numerous undertakings in which he was employed, and more especially the rebuilding St Paul's cathedral, he resigned his Savilian professorship in 1673. In 1674 he received the honour of knighthood; and in the following year the foundation of the new cathedral was laid. In 1680 he was chosen to the presidency of the Royal Society; in 1683 he was appointed architect, and one of the commissioners of Chelsea college; and the following year, comptroller of the works at Windsor castle. He was elected M.P. for the borough of Plympton in 1685. To his other public trusts were added, in 1698, those of surveyor-general and commissioner for the repair of Westminster abbey; and in 1699, that of architect of Greenwich hospital. In 1700 he represented in parliament the boroughs of Weymouth and Melcombe Regis. In 1708 he was made one of the commissioners for the erection of fifty new churches in and near the city of London. After having long been the highest ornament of his profession, and fulfilled with so much credit to himself and advantage to his country the duties of his office, he was in 1718 deprived of the surveyorship of the royal works, to the disgrace of the administration, which from political motives alone adopted this measure. Sir Christopher was then in the eighty-fifth year of his life, the remainder of which was devoted to scientific pursuits and the study of the Scriptures. He died in consequence of a cold which he caught in a journey from Hampton-court to London, February 25, 1723. His remains were interred, with the requisite honours, under the choir of St Paul's cathedral; and on his tomb is a monumental inscription, which, had it been placed in the church above instead of the subterranean vault, would have been highly appropriate; it is as follows: "Subtus conditur hujus ecclesiæ et urbis conditor Christ. Wren, qui vixit annos ultra nonaginta, non sibi sed bono publico. Lector, si monumentum requiris circumspice." The edifices constructed by this architect were principally public, including a royal hunting-

seat at Winchester, and the modern part of the palace at Hampton-court. Some of the most remarkable of his buildings, besides St Paul's, are the Monument on Fish-street-hill, the Theatre at Oxford, the library of Trinity college, Cambridge, the hospitals of Chelsea and Greenwich, the church of St Stephen, Walbrook, those of St Mary-le-Bow, St Michael, Cornhill, and St Bride, Fleet-street, and the great campanile of Christchurch, Oxford. Of his character as a man of science we may accept the testimony of Newton, who in his *Principia* joins the names of Wren, Wallis, and Huygens, whom he styles "hujus ætatis geometrarum facili principes." As an architect he possessed an inexhaustible fertility of invention, combined with good natural taste and profound knowledge of the principles of his art. His talents were particularly adapted to ecclesiastical architecture, which afforded domes and towers to his picturesque fancy; while in his palaces and private houses he has sometimes sunk into a heavy monotony, as at Hampton-court and Winchester. The interior of the church of St Stephen's, Walbrook, which has been considered as his chef-d'œuvre, exhibits a deviation from common forms equally ingenious and beautiful. The Monument is grand and simple; and St Paul's cathedral, notwithstanding the severe criticisms to which it has been subjected, may be fairly reckoned among the most magnificent productions of architectural genius which have ever existed. Upon the whole, it may be concluded that sir Christopher Wren's architecture is the perfection of that modern style, which with forms and modes of construction essentially Gothic, adopts for the purposes of decoration the orders and ornaments of classical antiquity.—CHRISTOPHER WREN, son of the preceding, devoted himself to the study of antiquities; and his collections relative to the history of his own family were published after his death, in 1750, by his son, Dr STEPHEN WREN, under the title of "Parentalia," folio.—*Biog. Brit. Aikin's Gen. Biog. Elmes's Memoirs of Sir C. Wren.*

WREN (MATTHEW) an eminent prelate, born in London in 1585. He studied at Cambridge, and obtained a fellowship at Pembroke-hall in that university, and in 1614 the rectory of Teversham in Cambridgeshire. In 1621 he went, as chaplain, to Spain with prince Charles; and after his return to England he was made master of Peterhouse. He attended Charles I to Scotland in 1633; and the next year he was raised to the bishopric of Hereford. Thence he was translated to the see of Norwich, and in 1638 to that of Ely. Belonging to the high church party, and being connected with archbishop Laud, he was impeached by the house of Commons, and being committed a prisoner to the Tower, he remained there eighteen years. On the restoration of Charles II he obtained his liberty, and was restored to his diocese. His death took place in 1667. The published works of bishop Wren consist of *Sermons and Letters*.—His son, MATTHEW WREN, was one of the

earliest fellows of the Royal Society, and he held the office of secretary to the earl of Clarendon, and afterwards to James duke of York. He was the author of some tracts against Harrington's *Oceana*; and he also wrote an "Essay on Revolutions in England." He died in 1672, aged forty-two.—*Biog. Brit.*

WRIGHT (ABRAHAM) a royalist divine of the seventeenth century, born in the English metropolis in 1611. He went off on a foundation fellowship from Merchant Tailors' school to St John's college, Oxford, where he graduated, and became public orator to the university. Having taken holy orders, he was presented to the rectory of Okeham, in the county of Rutland, but was afterwards deprived of his preferment by the parliamentary party, for his attachment to the monarchy, and his consequent refusal to take the "solemn league and covenant." From this period he supported himself by private tuition till the death of Cromwell and the restoration of Charles II, by whom he was reinstated in his living. Besides a volume containing five sermons, he published some notes on the Pentateuch, and the book of Psalms; "*Delicium Deliciarum*;" poems in Latin verse; and "*Parnassus Biceps*," a miscellaneous collection, by various hands. He died in 1690, leaving one son, James, himself known as the author of a "*History of Rutlandshire*;" "*A History of the English Stage*;" and an abridgment of Dugdale's *Monasticon*.—*Chalmers's Biog. Dict.*

WRIGHT (JOSEPH) a celebrated painter, usually styled Wright of Derby, was born September 1736, in that town, where his father practised as an attorney. In 1751 he was placed under Hudson, the most celebrated portrait painter of the day, although of very moderate talents. After deriving what he could from his master, he married, and visited Italy, where he made great advances in his profession. In 1755 he returned to England, and resided first at Bath but afterwards at Derby, where his attention was directed for some years to portrait painting. At a mature age he again visited Italy, and on his return in 1782 was elected an associate of the Royal Academy. His later pictures were chiefly landscapes, which are much admired for elegance of outline and judicious management of light and shade. A large landscape, a view of "The Head of Ulleawater," stands at the head of his productions of this class, while in the historical line, "The dead Soldier" is alone sufficient to stamp him a fine painter. He was much urged to reside in London, but family attachments and love of retirement confined him to Derby, where he fell a victim to his unwearied attention to his profession, dying of a decline, August 29, 1797. His pictures were always in so much request, that he amassed a handsome fortune, and they have seldom or ever been seen in the hands of dealers since his death.—*Edwards's Anc.*

WRIGHT (PAUL) an English divine and historical and topographical writer. He obtained the degree of D.D. and was vicar of

Oakley, and rector of Soorham. He published a new and improved edition of Dr Heylin's *Help to English History*, 1773, 8vo; "The Complete British Family Bible," 1781; and several single sermons. He was a fellow of the Society of Antiquaries, and he made collection for a history of Hertfordshire; but his death, in 1785, prevented the execution of this undertaking.—*Reuss. Lempriere.*

WRIGHT (WALTER RODWELL) an ingenious English poet, the author of a piece entitled "Horns Ionicæ," descriptive of the isles and the adjacent coast of Greece. Lord Byron, in his *English Bards and Scotch Reviewers*, warmly eulogizes this production, which he styles a very beautiful poem. Mr Wright was recorder of Bury St Edmunds, subsequently consul-general for the Seven Islands, and at length he became president of the High Court of Appeal at Malta, where he died in April, 1826.—*Orig.*

WRIGHT, MD. (WILLIAM) a member of the Royal College of Physicians at Edinburgh, and formerly physician to the forces. He was born in March 1735. After a long residence in various parts of the West Indies, and particularly in Jamaica, he returned to his native country, and settled at Edinburgh, where he died in September 1819. Dr Wright greatly distinguished himself by his attention to medical botany, and among his numerous contributions to the *Edinburgh Medical Commentaries*, and other periodical works, may be noticed "A Description of the Jesuits' Bark Tree of Jamaica and the Caribbees;" "A Description and Account of the Use of the Cabbage Tree of Jamaica;" "An Account of the medicinal Plants growing in Jamaica;" and "A botanical and medical Account of the *Quassia Simaruba*." He was also the author of a work on fevers, 2 vols. 8vo.—*Watt's Bibl. Brit.*

WROUGHTON (RICHARD) a judicious actor of the school of Garrick, with whom he was contemporary, born in 1749. In the earlier part of his theatrical career he appeared with success in several first-rate characters, of which his *Hotspur* gained him the greatest reputation. At a more advanced period of life, his personation of Old Norval, and of Darlemont, in the play of "Deaf and Dumb," were much admired, especially the latter, which Mr Fox used to pronounce the best piece of acting he had seen since the days of Garrick. He was much respected in private life, and survived to the advanced age of seventy-three, when he died at his house in Howland-street, Fitzroy-square, February 7, 1822.—*Ann. Bing.*

WURMSER (DAGOBERT SIGISMUND, count) field-marshal in the Austrian service, was a native of Alsace. After having been for some time in the French army, he entered into that of the emperor of Germany, where his bravery and talents conducted him to the first rank in his profession. In 1793 he took the command of the imperial troops to attack the French in Alsace, and having passed the Rhine, he marched to assist the Prussians in

the siege of Mayence. He afterwards assaulted the lines of Weissenbourg, and gained various advantages over the enemy, but he was at length obliged to retreat. In January 1794 he went to Vienna, where he was well received by the emperor. In August 1795 he resumed the command of the army of the Upper Rhine, and in November following he took Mannheim, for which he was raised to the rank of field-marshal. In 1796 he was employed against the French in Italy, where he was at first successful; but being opposed by Buonaparte, he retired to Mantua, and being besieged in that city, after an obstinate defence and the loss of twenty-four thousand men, he was forced to capitulate, February 2, 1797. On his return to Vienna, he was appointed commandant-general in Hungary, and he received a pension of fourteen thousand florins, which he enjoyed but a short time, dying in the summer of the year last mentioned.—*Dict. des H. M. du 18me S.*

WULFEN (FRANCIS XAVIER von) a German divine, who was professor of natural philosophy and mathematics at Klagenfurt, in Carniola, to which charge he was appointed in 1762. Amid the duties of his profession, and those of his academical office, he found time for the study of the botany and mineralogy of the country in which he resided; and his numerous contributions to the publications of Jacquin on the rare plants of Carniola and Carinthia, constitute a treasure of the most valuable and original information. He died March 17, 1806, aged seventy-eight. He was the author of a tract in the German language on the mineralogy of Carinthia; and he is reported to have left behind him in MS. a complete "Flora Norica," descriptive of the vegetable productions of a particular part of Carniola; an "Agrostographia," and several other works, rich in practical and scientific observations.—*Cat. Bibl. Banks. Rees's Cyc.*

WYAT (sir THOMAS) a distinguished courtier of the age of Henry VIII, son of sir Henry Wyatt, master of the jewel office, and born in 1503, at Allington castle, in the county of Kent, the principal seat of the family. He commenced an academical education at St John's college, Cambridge, which he afterwards completed at Oxford, and on quitting the university, went on his travels to the continent. On his return to England he appeared at court, where the reputation he had already acquired as a wit and a poet introduced him to the notice of Henry, who knighted and retained him about his person. In the nice affair respecting the king's divorce from queen Catherine, sir Thomas narrowly escaped losing the royal favour by an indiscreet expression of his opinions on the subject; but finding how the business must terminate, he had sufficient pliability of disposition to veer about in time, and by a facetious remark on the possibility of "a man's repenting his sins without the leave of the court of Rome," so met the king's humour, that his influence in that quarter increased rather than suffered any diminution. He was subsequently employed on several di-

omatic missions to different powers, and if we are to believe his biographers Winstanley and Mrs Cooper, died of the plague during one of them, which he had undertaken to the court of the emperor Charles V. Wood, however, gives a different account, both of the manner and place of his death, which he affirms to have occurred at Sherborne in Dorsetshire, and to have been occasioned by a fever, brought on through over-fatigue, while journeying to meet the Spanish envoy, then just landed at Falmouth. All parties agree in stating that this event took place in 1541. His poetical works, which consist principally of love elegies, odes, &c. and a metrical translation of the Psalms, were published in conjunction with those of his contemporary and personal friend, the gallant earl of Surrey. They evince more elegance of thought than imagination, while his mode of expression is far more artificial and laboured than that of his noble friend. Leland however scruples not to rank him with Dante and Petrarch. He must not be confounded with a sir Thomas Wyatt, who headed an insurrection in the reign of queen Mary.—*Wood's Athen. Oxon. Bibliograph.*

WYATT (JAMES) a distinguished English architect, who was born at Burton in Staffordshire, about 1743. After previous instruction he went to Italy, and studied at Rome the arts of architecture and painting. On his return to England he erected the Pantheon in Oxford-street; and he succeeded to the office of surveyor of the board of works, on the death of sir William Chambers. He was also admitted into the Royal Academy, and for some time he sat as president of that institution. He erected wings in addition to the villa of the duke of Devonshire at Chiswick; and displayed his taste to advantage on many occasions. In his buildings at Kew under the direction of his late majesty, and at Fonthill abbey for Mr Beckford, he was in some respects very unfortunate; but it ought to be observed, that the architect in both cases was not at liberty to act on the uncontrolled dictates of his own taste and judgment. His death took place September 3, 1813, in consequence of the overturning of a carriage, in which he was travelling from Bath to London.—*Gent. Mag.*

WYCHERLEY (WILLIAM) one of the wits and dramatists of the reign of Charles II, was the eldest son of a gentleman of Cleve in Shropshire, where he was born about 1640. After receiving a school education, he was sent for improvement to France, where he embraced the Catholic religion. He returned to England a short time before the Restoration, and resuming Protestantism, was entered a gentleman commoner of Queen's college, Oxford, which he left without a degree, and took chambers in the Middle Temple. He paid however little attention to the law, but became a man of fashion on the town; and as the cultivation of the drama formed at that time a common part of the character, made himself known in 1672 as the author of "Love

in a Wood, or St James's Park," a comedy. This piece brought him into much notice: he became a favourite of the meretricious duchess of Cleveland, and was much regarded by Villiers, the witty and profligate duke of Buckingham, who made him captain-lieutenant in his own company, and one of his equerries or masters of the horse. He was likewise in great favour with the king himself, who once paid him a visit when sick, and recommended a visit to the continent. He lost the king's countenance by a clandestine marriage with the countess of Drogheda, a young, rich, and beautiful widow, whose jealousy of him was so great, that his life was altogether embittered by it. At her death she settled her fortune upon him, but his title being disputed, the costs of law and other incumbrances produced embarrassment which ended in arrest. He remained in confinement seven years, until released by James II, who was so pleased with his comedy of the "Plain Dealer," that he ordered his debts to be paid, and added a pension of 200*l.* per annum. Wycherley's modesty rendering him unwilling to disclose the whole that he owed, he still remained involved until the death of his father, whose estate descended to him, but with considerable limitation, which prevented him raising money on it. He however discovered an expedient, by marrying at the age of seventy-five a young gentlewoman with a fortune of 1500*l.* whom he recompensed with a good jointure, and died about fifteen days after the celebration of the nuptials, January 1, 1715. He is said to have very gravely enjoined his wife not to take an old man for her second husband. Besides the plays already mentioned, he wrote the comedies of the "Gentleman Dancing-Master," and "Country Wife," and a volume of poems printed in 1660. The correspondence between him and Pope, then a youth, whom he requested to revise and correct his miserable versification, is printed in the collection of that poet's letters. He is now only remembered as a dramatist, and that principally by his "Plain Dealer" and "Country Wife," the latter of which is better known by the title of the "Country Girl," a name given to a modern adaptation, which gets rid of much objectionable coarseness. His "Plain Dealer" may be deemed an English counterpart of the Misanthrope of Moliere, displaying more licence with considerable wit, humour, and comic force of character. "The Posthumous Works of Wycherley, in Prose and Verse," were published by Theobald in 1728.—*Biog. Brit. Spence's Anec. Malone's Dryden.*

WYDEVILLE, WIDVILLE, or WOODVILLE (ANTHONY) earl of Rivers, a very accomplished nobleman of the fifteenth century, was the son of sir Richard Wydeville, by Jacqueline of Luxemburgh, duchess-dowager of Bedford. He was born in 1442, and early exhibited marks of gallantry and capacity, which were brought into very active exercise by the marriage of his sister Elizabeth, the widow of sir John Grey, with king Edward IV. He shared in all the vicissitudes which

subsequently befel that warlike and luxurious monarch, and on his ultimate triumph was constituted governor of Calais, and captain-general of all the king's forces by sea and land. On prince Edward being created prince of Wales, he was also appointed his governor, and had a grant of the office of chief-butler of England. He was even on the point of espousing the Scottish princess, sister to James III, when the death of Edward suddenly changed the scene. On that event he raised a body of troops, with the intention of crowning his nephew; but by the machinations of the usurper, Richard duke of Gloucester, this accomplished nobleman was, with lord Richard Grey and sir Thomas Vaughan, captured and beheaded without trial at Pontefract, the same day that lord Hastings was, with equal lawlessness, decapitated in the Tower of London. This event took place in 1483, at which time earl Rivers was in the forty-first year of his age, and esteemed one of the most gallant and accomplished noblemen of his time. Sir Thomas More describes him as a man equally able to advise or to execute; and lord Orford is eloquent in praise of his learning, amiable manners, and gallantry. Lord Rivers was the patron of Caxton, who printed "The Dictes and Sayings of the Philosophers," translated by him from the French, folio, 1477; "The Morale Proverbes of Christyne of Pyse;" "The Book named Cordyale, or Memorare Novissima." According to Caxton, he also composed "Ballades agens the Seven Dedely Synnes." One of these ballads is to be found in Percy's Reliques of Ancient English Poetry; and of all the writings of this nobleman an ample account will be found in Dibdin's *Typographical Antiquities*.—*Walpole's Royal and Noble Authors*.

WYKEHAM (WILLIAM of) bishop of Winchester, and lord high chancellor of England, a distinguished and munificent prelate of the fourteenth century. He derived his designation from Wykeham, a village in Hampshire, where he was born in 1324, of respectable parents, but at the same time so poor that but for the liberality of Nicholas Uvedale, then governor of Winchester castle, and lord of the manor of Wykeham, a liberal education would have been far beyond his reach. On the completion of his studies, he became private secretary to his patron, and was by him eventually recommended to the notice of Edward III. The talents, diligence, and integrity which he displayed in the service of the king, raised him gradually to a distinguished place in the royal favour; and in 1356, Edward, then occupied in his favourite project of rebuilding Windsor castle, appointed him to superintend the erection of the fabric in quality of surveyor of the works. The structure was completed under his directions, and reached the state in which it appeared previous to the recent alterations in our own time; but although the new edifice gave great satisfaction to his employer, a perhaps excusable piece of vanity was near ruining the architect for ever in the

king's favour. On one of the towers he had the imprudence to put up an inscription, "This made Wykeham." So fair an opportunity of injuring him in Edward's esteem was not lost upon his enemies: they affected to read the words inversely, and exclaimed against the presumption which they exhibited. The ingenuity of Wykeham, however, saved him on this occasion, when being called to account in the royal presence, he assured the king that the utmost he had intended to intimate was that his diligence and exertions in forwarding the building had raised him, through the favour of his prince, from a low estate to his present rank. The storm blew over, and Wykeham, having taken holy orders, was presented in the course of the following year to the living of Pulliam, Norfolk, with a stall in Lichfield cathedral. Thence he rose, gradually but rapidly, to the highest dignities both in church and state. The deanery of the collegiate church of St Martin-le-Grand was added to his other ecclesiastical preferments in 1360; but he resigned them all six years after, on being elevated to the rich see of Winchester. The posts of private secretary to the king, warden of the forests, &c. the appointments of lord keeper and president of the council followed in swift succession, till in 1367 he reached the highest point of his career in the chancellorship of England. This arduous and dignified office he discharged with great ability nearly four years, distinguishing himself in the interval as well by his orderly management of the diocese over which he had been called to preside, as by his disinterestedness in dedicating a large portion of his temporalities to the improvement of his cathedral and the foundation of a grammar-school at Winchester, which still exists a worthy monument of his munificence. In 1371, a party about the court, strongly opposed to the increasing wealth and influence of the clergy, and headed by the celebrated John of Gaunt, duke of Lancaster, succeeded in persuading the parliament that his power was too great for a subject, and he was compelled to resign the seals. The same persecution continued to follow him, till two years afterwards the progress of his new foundation was for a time suspended in consequence of the sequestration of his revenues, which his enemies succeeded in effecting, although all their endeavours failed to procure his conviction of the high crimes and misdemeanours laid to his charge. For the remainder of this reign he continued apart from the court, consoled in some degree for his disgrace by the attachment of the people, and his general popularity through the country. This circumstance, and the reviving influence of the churchmen, restored him, on the accession of Richard, to his dignities and emoluments. In 1386 he completed his noble foundation of New college, Oxford, which he had undertaken under the express permission and encouragement of the king, secured by a royal patent, and which occupied six years in the building. In the chapel belonging to this establishment his crezier, or highly ornamented

pastoral staff, is still preserved, supposed to be the only one in England. Scarcely was this college finished, when he commenced erecting another at Winchester, which he also lived to see finished in about the same space of time. In 1591 he a second time resigned the chancellorship, and from that period devoted his attention solely to his ecclesiastical duties, and the superintendence of his two noble establishments. Of his private life, but few particulars have reached posterity; but his general benevolence and charitable disposition may fairly be inferred from the worthy disposition of his immense property. His death took place at South Waltham, September 24, 1404.—*Life by Louth. Milner's Hist. of Winchester.*

WYNANTZ (JOHN) a Dutch landscape painter of considerable eminence, born at Haarlem about the commencement of the seventeenth century. He was remarkable for the delicacy of his tints and the boldness of his designs; and is also known as the instructor of Philip Wouwermans. Like too many of the sons of genius, his prudence was inferior to his talents; yet although his life was passed in alternations of study and sensuality, he survived to an advanced age, and died in 1670.—*Nov. Dict. Hist.*

WYNDHAM (HENRY PENRUDDOCKE) an English gentleman, descended of a good family in Wiltshire, which county he at one period represented in parliament. He was born in 1736, and received his education at Wadham college, Oxford, where he graduated, and passed the remainder of his life in literary leisure, occasionally attending his duties in the senate. His writings consist of a "Picture of the Isle of Wight," 8vo; "A Tour through Monmouthshire and the Principality of Wales," 4to; "Wiltshire, extracted from Domesday Book," 8vo; and "The Diary of George Bubb Doddington, afterwards Lord Melcombe Regis," 8vo. Mr Wyndham was a fellow of the Royal and Antiquarian Societies, and died in 1819, at Salisbury.

WYNDHAM (sir WILLIAM) an eminent senator and statesman, was born at Orchard Wyndham in Somersetshire, in 1687. His father, of the same name, who died in the infancy of the subject of this article, had been created a baronet by Charles II. He was educated at Eton, whence he was removed to Christchurch, Oxford. On quitting the university he made the tour of the continent, and on his return was chosen knight of the shire for the county of Somerset. He soon became conspicuous as one of the most able members of the house of Commons; and on the change of ministry, which produced the treaty of Utrecht, was appointed master of the buck hounds, then secretary at war, and lastly, in 1713, chancellor of the exchequer. On the breach between the earl of Oxford and viscount Bolingbroke, he adhered to the interests of the latter. Upon the death of queen Anne he was displaced, and in the ensuing parliament took a leading part in opposition, and signified himself by his advocacy of the treaty of

Utrecht, and in defence of the duke of Ormond and earls of Oxford and Strafford, when impeached by the house of Commons. On the breaking out of the rebellion in Scotland, under the earl of Mar. in August 1715, he was arrested at his seat in Somersetshire, on suspicion of being concerned in that event, but he made his escape from the messenger. On a proclamation being issued for his apprehension, he soon after surrendered himself, and was committed to the Tower, but was never brought to trial. On his regaining his liberty he continued his opposition, but on more broad and less jacobitical grounds than heretofore, and he remained in strenuous contest with ministers until his death, which took place in 1740. Sir William Wyndham married twice, and by his first wife, lady Catherine Seymour, second daughter of Algernon, duke of Somerset, was father to sir Charles Wyndham, who, on the death of the duke, became earl of Egremont, the title having been granted to that nobleman, with remainder to his grandson. The latter nobleman, who succeeded the first earl of Chatham as secretary of state, died in 1763.—*Birch's Lives.*

WYNNE (EDWARD) a learned barrister and law-writer, was born in 1734. He was the son of William Wynne, esq. serjeant-at-law, and he followed his father's profession, but confined himself principally to the composition of legal works, which unite great elegance of style to considerable professional knowledge and acuteness. He died of a cancer, Dec. 26, 1784, in the fiftieth year of his age. His works are a miscellany containing several law tracts, 1765, 8vo; "Eunomus, or Dialogues concerning the Law and Constitution of England," 4 vols. 8vo, a second edition of which appeared in 1785.—*Bridgman's Legal Bibliog.*

WYNNE (JOHN HUDDLESTONE) a miscellaneous writer, was born of a respectable family in Wales, in 1743. He was brought up to the business of a printer, which he followed for some time in London, and then obtained a commission in the army, which, owing to the eccentricity of his temper, he was obliged to quit. He then settled in London as an author by profession, and experienced all the vicissitudes of that precarious calling. He died in 1788. His principal works are "A general History of the British Empire in America," 2 vols. 8vo; "A general History of Ireland," 2 vols. 8vo; and "Fables of Flowers for the Female Sex."—His uncle, the rev. RICHARD WYNNE, MA. of All Souls, Oxford, was rector of St Alphege, London, and of Ayot St Lawrence, in Hertfordshire. He published the New Testament in English, carefully collated with the Greek, 2 vols. 8vo. He died in 1799.—*Gent. Mag.*

WYNTON, or WINTON (ANDREW) an ancient Scottish chronicler of the fourteenth century. He was a canon regular of St Andrew's, and a prior of the monastery of St Serf, in Lochleven. His "Orygynale Cronykil of Scotland" was undertaken at the request of sir John Wemyss, the ancestor of the existing noble family of that name. His Chronicle was suffered to remain in MS. until in 1793 a

W Y R

specimen of that part of it which relates more immediately to the affairs of Scotland was published in two volumes, octavo. The editor deems Wynton not inferior to Fordun in historic merit, and regards his Chronicle, which is written in the Scottish language, as highly worthy of the ecclesiastical historian and antiquary. He died about 1430.—*Mackenzie's Scottish Writers. Ellis's Specimens.*

WYRLEY, or WIRLEY (WILLIAM) an

W Y R

heraldic writer, descended from an ancient family of that name in Staffordshire. He was appointed rouge-croix poursuivant at arms in 1604, which office he held until his death in 1618. In 1592 he published a book, entitled "The true Use of Armoury, showed by History, and plainly proved by Example." He also made collections for a history of Leicestershire, of which much use was made by Burton.—*Noble's College of Arms.*

X A V

XAVIER (St FRANCIS) a celebrated Spanish missionary, born in 1506, in the castle of Xavier, at the foot of the Pyrenees. He studied at Paris, and lectured on philosophy at the college of Beauvais, in that city. Having formed an acquaintance with Ignatius Loyola, the founder of the jesuits, he became one of his earliest and most zealous disciples, and followed him into Italy, where he attended the sick in an hospital at Venice. At length, on the recommendation of Ignatius, he was sent by John III, king of Portugal, to the East Indies, to preach the Gospel. He arrived at the Portuguese colony of Goa in 1542 and he propagated the Christian faith not only in that city, but also on the coast of Comorin, at Malacca, in the Molucca islands, and especially in Japan. He died in an island belonging to China, in 1552, just as he was about to enter that vast empire as a Christian missionary. He was interred at Goa, and numerous miracles having been ascribed to him, he received the honour of canonization in 1622. Five books of his "Letters" were published at Paris in 1631, and he was the author of some other works.—*Dict. Hist.*

XAVIER (JEROME) a relation of F. Xavier, and like him a jesuit and East Indian missionary. He died at Goa in 1617. His "History of Jesus Christ;" and "History of St Peter," written in Portuguese, and translated into Persian by an Oriental writer, were both published by Ludovicus de Dieu, with Latin versions, Lugd. Bat. 1639, 4to. Jerome Xavier was also the author of a treatise "De Missionem ad Regnum Magni Mogor," Mogunt. 1601, 12mo.—*Moreri.*

XENOCRATES, a Greek philosopher, the pupil of Plato, and successor to Speusippus in the Academia, or Platonic school at Athens. His master, in comparing his character and disposition with those of his fellow-disciple Aristotle, used to say that the former required the spur and the latter the rein. He was remarkable for the severity of his manners, and his incorruptible integrity, the former of which qualities he displayed in resisting the allurments of the beautiful Phryne, and the latter in refusing the presents offered him by Philip,

X A V

king of Macedon, when sent on an embassy to the court of that prince. Notwithstanding his public services, the Athenians ungratefully suffered him to be sold as a slave, because he was unable to pay the taxes. But Demetrius Phalerius, the governor of Athens for Ptolemy king of Egypt, paid the debts of the philosopher, and set him at liberty. His death took place 314 BC. at the age of eighty-two, after he had been a public teacher twenty-five years; and he was succeeded in the Platonic school by Polemon. Xenocrates was the author of a tract on death, published by Aldus in 1497.—XENOCRATES, a Greek physician of eminence, practised his profession at Rome in the reign of the emperor Nero.—*Stanley. Diog. Laertius. Vossius. Bayle.*

XENOPHANES, a heathen philosopher, founder of the Eleatic school, so termed from Elea, the birth-place of Parmenides, Zeno, and Leucippus, who were distinguished members of this sect. Xenophanes was born at Colophon, and became a professor in the school of Pythagoras. He applied himself chiefly to the study of nature, and taught that matter was immutable. He delivered his doctrines in verse; but none of his writings are extant. According to Dr Priestley he was born 620 BC. and lived more than one hundred years.—There was another XENOPHANES, of a later period, called Sillographus, from his having been the composer of "Silli," a kind of poetical satires.—*Diogenes Laertius. Stanley. Stoll's Int. in Hist. Lit.*

XENOPHON, a celebrated Greek philosopher, commander, and historian, the son of Gryllus, an Athenian, was born about BC. 450. He engaged the attention of Socrates while a youth, and was persuaded by that philosopher to become his disciple. He zealously imbibed the doctrines of his master, whom he accompanied to the Peloponnesian war, where he distinguished his valour by fighting for his country. When the younger Cyrus planned his expedition to dethrone his brother Artaxerxes, by the aid of a body of Greek auxiliaries, Xenophon entered as a volunteer, without any particular command. The object of that celebrated attempt being defeated by

the death of Cyrus at the battle of Cunaxa, the Greek auxiliaries were surrounded, and ordered to lay down their arms. Xenophon was among the most strenuous opposers of the required submission, and when, soon after, Clearchus and the other Greek generals were treacherously massacred, by his eloquence in a council of war he roused the troops from the despair in which this circumstance had thrown them, and was chosen among the new chiefs to succeed his friend Proxenus, the leader who had originally induced him to enter this service. The famous "Retreat of the Ten Thousand" then commenced, the success of which, in the narrative supposed to have been drawn up by himself, is chiefly attributed to his councils. When the greater part of the Greeks, on their arrival at Byzantium, embarked for their respective homes, Xenophon, with several of his followers, entered into the service of Seuthes, king of Thrace. Deeming himself ill-treated, he soon quitted Seuthes, and being prevented from returning home by a sentence of banishment passed against him for joining the expedition of Cyrus, he accompanied Agesilaus, king of Sparta, to Greece, and fought with him against the Thebans at the battle of Chæronea. Under the protection of the Spartans, by whom he was greatly esteemed, he ultimately withdrew to a retreat in Elis, near Olympia, where he employed himself in his retirement, in composing works on history and philosophy, and in rural occupations and amusements, until his death at a very advanced age, B.C. 360. Of the principal philosophical works of Xenophon, there are extant the "Memorabilia of Socrates," and the "Apology for Socrates," which are deemed much more authentic accounts of the lessons and conduct of that sage than the writings of his fellow-disciple Plato and others. As a historian he is known to modern times by his "Hellenica, or Grecian History," in which he appears as a continuator of Thucydides; by his "Anabasis," or relation of the memorable expedition under Cyrus, which however appeared under the name of Themistogenes of Syracuse, and is quoted as his work by Xenophon himself in his Hellenica; but on the dubious authority of style, in the face of some striking contradiction, it has been almost universally regarded as the work of the latter. His celebrated "Cyropædia, or Institutions of Cyrus," is now universally regarded as a philosophical fiction rather than history. Among his political works may be enumerated his account of "The Republic and Laws of Sparta;" "The Republic of Athens and its Revenues;" his "Praise of Agesilaus;" and his "Hiero, or Dialogue on Tyranny." Of the miscellaneous class he left treatises "On Economics;" "On Hunting;" and "On the Office of Master of the Horse." The writings of Xenophon exhibit him as a man of kind and genuine feelings, and very pious after the manner of his country, with a great portion of superstitious credulity. His observations are seldom remarkable for depth or acuteness, but with the exception afore-

said, are marked with great good sense and virtuous intention. His style has always been admired for sweetness, Attic purity, and singular clearness, and these qualities, and his exquisite taste, render him one of the most pleasing of instructors and engaging of narrators. The works of Xenophon, which are probably the most popular of all the Greek classics, have often been reprinted, both collectively and separately. The best editions are that of Stephens, folio, 1581; of Wells, Oxford, 5 vols. 8vo, 1703; and of Weiske, at Leipsic, 5 vols. 8vo, 1802.—There was another XENOPHON, a native of Ephesus, who lived in the second or third century, and wrote a romance, entitled "Ephesiaca, or the Loves of Habrocomas and Anthia," printed in London, 1726, 4to, and at Vienna, in Greek and Latin, in 1796, by baron Locella. The style of this author is his chief recommendation.—*Diog. Laert. Brucker. Le Jeune Anachars. Mitford's Greece.*

XIMENES DE CISNEROS (FRANCIS) a celebrated Spanish statesman, born in 1437, at Torrelaguna, in Old Castile. He was descended of an honourable but not wealthy family, and he received an academical education at Alcalá and Salamanca. The circumstances of his parents, combined with his own inclinations, induced him to enter into holy orders, and he soon obtained benefices of considerable value, which placed him in the way to farther preferment. All at once he renounced his benefices, and after undergoing a severe novitiate, assumed the habit of St Francis in a convent of Observantine friars. There he became remarkable for the austerity of his manners, and a rigidly superstitious attention to religious duties. He was made provincial of his order, and his reputation for sanctity procured him the office of confessor to Isabella, queen of Castile, which he is said to have accepted with great reluctance. He preserved at court all the stern austerity which had distinguished him in the cloister. In 1495 the queen nominated him to the archbishopric of Toledo, which, next to the papacy, is the richest dignity in the Catholic church. This honour he resolutely declined, and was at length induced to accept of it only in consequence of an authoritative injunction of the supreme pontiff. Promotion produced no alteration in his manners: under his pontifical robes he wore the coarse frock of a Franciscan friar, which he mended with his own hands. He at no time used linen, but was commonly clad in hair-cloth. In his lodging and diet he was no less attentive to the severe rules of his order. Notwithstanding these peculiarities, so inconsistent with the manners of the world, he possessed a thorough knowledge of its affairs; and when called upon by Ferdinand and Isabella to take a principal share in the administration of the government, he displayed talents for business which rendered the fame of his wisdom equal to that of his sanctity. In 1507 the pope bestowed on him a cardinal's hat; and shortly after the king appointed him prime minister. His conduct in this exalted

station was so satisfactory to his master, that at his death in 1516 he left Ximenes sole regent of Castile till the arrival of his grandson and successor (afterwards the emperor Charles V) in Spain. The national character of the Spaniards, and the existing state of affairs, combined to render the duties of the new regent peculiarly arduous; but by a rare union of prudence, firmness, and decision, he preserved undiminished the authority with which he had been entrusted, in spite of the cabals of the Spanish nobility, and the more dangerous intrigues of the courtiers who surrounded the young king during his residence in the Netherlands, where he continued twenty months after the death of his grandfather. The narrative of the events which marked the regency of cardinal Ximenes must be sought in the pages of history; but the ungrateful requital of his services by the prince, whose interest he had so powerfully promoted, and the melancholy termination of his career, are too interesting to be omitted. Notwithstanding he was nearly fourscore years of age at the period when he held the reins of government, he abated nothing of the rigour of his mortifications, or the regularity of his attentions to religious duties, either public or private. Such occupations and exercises did not prevent him from constantly attending the council of state, reading all papers presented to him, dictating letters and instructions, and inspecting all business, civil, ecclesiastical, or military. The only amusement in which he indulged himself by way of relaxation, was to canvas with a few friars and other theologians some intricate article of scholastic divinity. Wasted by such a course of life, the infirmities of age daily grew upon him. When the king landed in Spain, in September 1517, the cardinal set out to meet him, but illness obliged him to stop short on his journey, at a place called Bos Esquillos. Anxiously wishing for an interview with his master, he wrote to him, entreating a visit, and at the same time warning him against the danger of retaining the Flemish courtiers by whom he was accompanied. Those who thought it their interest to prevent a meeting, industriously kept Charles at a distance from Aranda, the place to which the cardinal had removed. Through their suggestions, every measure that he recommended was rejected; and the utmost care was taken to make him feel, and to point out to the whole nation, that his power was on the decline: even in things purely trivial, such a choice was always made as was deemed most disagreeable to him. While suffering under the mortification such treatment must necessarily inflict, he received a letter from the king, in which, after a few cold and formal expressions of regard, he was permitted, or rather ordered, to retire to his diocese, that after a life of such continued application he might end his days in tranquillity. His high spirit could not brook this unmerited indignity; and worn out with disease and mental agitation, he expired a few hours after reading the letter, November 8, 1517. The variety, the grandeur, and the success of his schemes

during his short regency, leave it doubtful whether his sagacity in council, his prudence in conduct, or his boldness in execution, deserve the highest praise. His reputation has been permanent, not only for wisdom, but for sanctity: and "he is," says Dr Robertson, "the only prime minister mentioned in history whom his contemporaries revered as a saint, and to whom the people under his government ascribed the power of working miracles." Literature was indebted to cardinal Ximenes for academical foundations at Alcalá and at Talavera, and also on account of the famous polyglott Bible, printed under his patronage at Alcalá or Complutum, thence termed the Complutensian Polyglott. Among the biographical memoirs of this statesman may be mentioned the French works of Marsollier and Flechier.—*Moreri. Robertson's Hist. of Charles the Fifth.*

XIMENES (FRANCIS) a Spanish Franciscan, who was one of the twelve friars who first preached Christianity to the Mexicans. Being well skilled in the language of that people, he collected a great deal of information relative to the properties and medicinal uses of the plants and animals of New Spain, and especially of Mexico; whence he composed a treatise, in four books, published at Mexico in 1615, which is often quoted with approbation by De Laet. Plumier consecrated to the memory of this naturalist a genus of plants called Ximonia. Eloy, who calls this writer F. Ximenes de Carmona, says that he was a native of Cordova, and studied medicine at Salamanca, where he afterwards lectured on anatomy. He returned from his mission to Mexico, and settled as a physician at Seville, where he spent the remainder of his life. Besides the work above mentioned, he published a treatise on the medical virtues of water.—*Eloy Dict. II. de la Med. Rees's Cyclop.*

XIMENES (RODERIC) a Spanish divine and historian, who was a native of Navarre, and became archbishop of Toledo. He went in 1247 to Lyons, to defend, before pope Innocent IX and a general council, the rights and privileges of his see, against the archbishop of Compostella, who laid claim to the primacy because his church contained the body of St James, the apostle of the Spaniards, when the dispute was decided in favour of the archbishop of Toledo. He died on his passage down the Rhone, as he was returning to Spain. Ximenes was the author of a "History of Spain," in nine books, which was published in the collection of Spanish Historians by the Jesuit Andrew Schott.—*Moreri. Nouv. Dict. Hist.*

XYLANDER (WILLIAM) was the son of indigent parents, residing at Augsburg, where he was born in 1532. Displaying in early youth strong indications of precocious talent, Relinger, one of the magistrates of the city, benevolently took him under his protection, and gave him a liberal education, for which purpose he placed him first at the university of his native place, and subsequently at those of Tubingen and Basil. The death of Mycillus,

XYL

Greek professor at Heidelberg, in 1553, made an opening there for Xylander, whose reputation as a scholar was now established, and he was accordingly unanimously invited to fill the chair, an honourable distinction for which he was principally indebted to his Latin translation of Dion Cassius, printed in the preceding year. In the year following he published a Latin translation of the book of Marcus Antoninus, but several errors having crept into it, he printed a revised edition in 1568, about which period also appeared similar versions of Strabo and Plutarch from his pen. Xylander was twice secretary to the ecclesiastical councils which sat to discuss the great question as to the eucharist, and died in 1576. Though his erudition is indisputable, yet through either haste or carelessness, his books are very faulty.—*Moreri. Teissier.*

XYP

XYPHILIN (JOHN). The name of two distinguished ecclesiastics, natives of Trebizond, who flourished in the eleventh century. The elder, a man of great erudition and exemplary manners, was patriarch of Constantinople, to which high dignity he was appointed in 1064. No work of his has reached posterity, with the exception of a single sermon, to be found in the *Bibliotheca Patrum*.—The younger was nephew to the first, and is known as the author of a Greek abridgment of Dion Cassius, commencing with the thirty-second book of that writer. Of this work, which is written in a very rude style, there is an English translation by Manning. The two Xiphilins have not unfrequently been confounded.—*Moreri.*

Y A R

YALDEN, DD. (THOMAS) an English divine, of considerable scholastic attainments, and a lively poetical genius. He was the youngest son of Mr John Yalden, a gentleman of Sussex, and was born in 1671, at Exeter. In his nineteenth year he entered himself a commoner of Magdalen college, Oxford, having previously received the rudiments of a classical education at the grammar-school attached to that foundation. Here he commenced a strict intimacy with Addison and Sacheverel, which lasted through life, although the parties were as strongly as possible opposed to each other in politics, in which Yalden's opinions assimilated much more to those of the latter than of the former. In 1700 he was elected fellow, and soon after succeeded to the college living of Willoughby, Warwickshire, and the lectureship in moral philosophy. In 1706 he was received into the family of the duke of Beaufort, and was presented by that nobleman, who held him in great esteem, to the livings of Chalton and Cleanville, two adjoining parishes in Hertfordshire. In 1713 he was appointed to the preachiership of Bridewell hospital, on the resignation of his friend Dr Atterbury, his connexion with whom was afterwards productive of considerable inconvenience to him. On the banishment of the bishop, Dr Yalden was arrested and examined before the council, who committed him to prison in consequence of a libellous copy of verses being found in his pocket-book, but no farther evidence being produced against him, he was at length released. Dr Yalden's writings consist of "The Conquest of Namur," a Pindaric ode; "The Temple of Fame," &c.; and some miscellaneous prose pieces, among which is, "The Medicine," a tale, to be found in *The Tatler*. His death took place July 16, 1736.—*Life by Cibber.*

YART (ANTOINE) a French writer, who was born at Rouen in Normandy, in 1709.

Y A T

He embraced the ecclesiastical profession, and obtained the living of Saussay in the Vexin. His taste for literature produced an intimate connexion with Cideville, the friend of Voltaire and the abbé Rensel. He distinguished himself by his attention to English poetry, and his principal work is entitled "Idée de la Poésie Anglaise," 1756, 8 vols. 12mo, in which he introduced to the knowledge of his countrymen many English bards with whose works they were previously unacquainted.—*Nouv. Dict. Hist.*

YATES, or YEATES (RICHARD) a comic actor of considerable merit, who was long a member of the metropolitan theatres. In conjunction with Shuter, he was accustomed to open a booth for dramatic exhibitions at Bartholomew fair in Smithfield, and at Lady fair in the Borough, till an order of the court of common council, issued June 17, 1762, put a period to their performances. Yates was a great favourite with the public in Fondlewife, in the *Old Bachelor*, and similar characters. From defective memory or bad habit he would not unfrequently repeat a sentence twice or three times, for which he was deservedly censured by Churchill, in the *Rosciad*. He died April 21, 1796, aged ninety, leaving a widow.—His first wife, **ANNA MARIA YATES**, was highly distinguished as a tragedian. Her maiden name was Graham, and she is said to have been a native of Birmingham. She made her first appearance on the stage at Dublin, about 1752; but her efforts were then so unsuccessful, that she for a while relinquished the theatrical profession. Circumstances however induced her to resume it, and in February 1754 she appeared at Drury Lane, in a tragedy entitled *Virginia*. She still attracted little notice, till after her marriage with Mr Yates, to whose instruction she was indebted for the development of her talents; and at length she acquired great popularity, and on

the death of Mrs Cibber, in 1765, she succeeded to her characters, and became for a while the unrivalled heroine of the stage. Quitting the profession in which she had been so prosperous, Mrs Yates, in conjunction with Mrs Brooke the novelist, in 1773, undertook the management of the Opera, and conducted that concern till 1782. During this female regency, the best composers, the greatest singers, and the most celebrated dancers, were brought forward; for between 1773 and 1782, Sacchini, Truetta, and Anfossi, were engaged as composers; Pacchierotti, Anfossi, and the Gabrielli, as singers; and mademoiselle Heinel, Vestris, and Le Picq, as dancers. Mrs Yates did not enrich herself by her speculation; but she had the address to escape that ruin which the government of the Opera has generally entailed on those who have held it. Her death took place in May 1787, at the age of fifty-nine.—*Thesp. Dict. Rees's Cyclop.*

YEARSLEY (ANNE) a poetess, novel writer, and dramatist, born at Bristol about 1756. Her mother was a milk-woman in that city, and she for some time exercised the same occupation. She was taught by her mother and brother to read and write; and having had opportunities of perusing Young's Night Thoughts, and some of the works of Pope, Milton, Dryden, and Shakespeare, her talents were called forth, and she produced some pieces of poetry which excited the attention of Mrs Hannah More. To the assistance and advice of that lady she was much indebted for the improvement of her abilities; and under her patronage she published by subscription a volume of poems in 1785. The profits of this work enabled her to relinquish her business for the more congenial employment of keeping a circulating library at Bristol Hot Wells. Her subsequent publications were a second collection of "Poems on Various Subjects," 1787; a short poem, "On the Inhumanity of the Slave Trade," 1788; "Stanzas of Woe," addressed to Levi Ames, esq. mayor of Bristol, 1790; "Earl Godwin," an historical tragedy, which was performed at the Bristol and Bath theatres; and a novel, entitled "The Royal Captives," 1795, 4 vols. 12mo, founded on the history of the man with the iron mask, imprisoned in the Bastille, whom she supposes to have been a twin brother of Louis XIV. She experienced great encouragement from the public in the course of her literary career; but an unfortunate quarrel with her patroness Mrs More, which, like most affairs of the kind, was carried on in a manner by no means creditable to either party, tended somewhat to injure her popularity. Some years before her death she retired from trade, and resided with her family at Melksham in Wiltshire, in a state of almost absolute seclusion. She died May 8, 1806, leaving a son and two daughters. Another son, who had studied painting as a profession, and who appeared to be a talented individual, was cut off by a pulmonary disease, two or three years previously to the death of his mother.—*Evans's Hist. of Bristol*, vol. ii.

YELVERTON (sir HENRY) an eminent English lawyer, a native of Islington, Middlesex, born there in 1566. Having graduated at the university of Oxford, he became a member of Gray's inn, by which society he was in due course called to the bar. His progress in his profession was rapid, and he was appointed in succession to fill the responsible offices of solicitor and attorney-general, with the honour of knighthood. A temporary quarrel with the duke of Buckingham caused his deprivation and imprisonment; but on the removal of the cause the effect also ceased, and he was subsequently advanced to the bench. Of judge Yelverton's "Reports" there are two editions; the first, written in the French language, appeared in 1661; the second, in English, was printed in 1734. His death took place in 1630.—*Athen. Oxon.*

YORK (FREDERICK, duke of) second son of his majesty George III, was born at Buckingham-house, St James's park, London, August 16, 1763. In the month of February following he was elected prince-bishop of Osnaburgh, in Germany; on the 13th of December, 1767, he was invested with the insignia of the order of the Bath; and installed as first and principal companion of that order June 15, 1772. He was chosen a companion of the most noble order of the Garter, June 19, 1771; and on the 25th of the next month installed at Windsor, with his brothers, the present king and the duke of Cumberland. In the literary part of his education he was associated with his elder brother; and the direction of the studies of the two princes was successively confided to Dr Markham, afterwards archbishop of York, assisted by Dr Cyril Jackson; and to Dr Hurd, then bishop of Lichfield. From his earliest years prince Frederick was destined for the military profession, and in November 1780, having been appointed a brevet-colonel in the British service, he set off for the continent, and after visiting Hanover, proceeded to Berlin to study the tactics of his profession, in the school of that veteran general the great Frederick. He continued abroad till 1787, and during his absence was appointed colonel of the Coldstream guards, with the rank of lieutenant-general. Shortly after this promotion, November 27, 1784, he was created duke of York and Albany in Great Britain, and earl of Ulster in Ireland. In November 1787, he took his seat in the house of Peers, and in the debates on the regency at the close of the following year he made his first speech in parliament. Public attention was much excited in 1789, in consequence of a duel between the subject of this article and colonel Lenox, afterwards duke of Richmond, who had required from his royal highness an explanation or retraction of an observation made by the latter, which he deemed derogatory to his honour. The duke not complying with the requisition, but expressing his willingness to waive the privileges of his superior rank, and give the satisfaction which might be expected from any private gentleman, a meeting took place on Wimbledon-

common, and the word being given for both parties to fire at once, colonel Lenox obeyed, and his ball grazed the hair of the royal duke, who fired his pistol in the air, and the affair terminated without any personal injury to the combatants. In September 1791, the duke of York married the eldest daughter of Frederick William, king of Prussia; and as this union was the result of political arrangements, it may be sufficient to remark that the duke treated his consort with uniform respect and decent attention, though after a few years a separation took place, arising from circumstances which did not involve the slightest degree of impropriety of conduct on the part of the duchess, whose death occurred in 1820. On his marriage, the duke of York received an augmentation of his income, which raised it in the whole to \$5,000*l.* a-year, exclusive of the revenue of the bishopric of Osnaburgh. In 1793 his royal highness was sent to Flanders at the head of a British army, to oppose the French. After obtaining some previous advantages over the enemy, he laid siege to Valenciennes, which surrendered to the troops under his command July 26, 1793. On the 22nd of August he sat down before Dunkirk, whence he was speedily obliged by the French to retire. In the campaign of 1794 he had at first some success, but Pichegru having taken the command of the French army, that of the duke, with his German allies, after experiencing various reverses, retreated into Westphalia; and in April 1795, the remnant of the British army returned to England. In February of the same year the duke of York was appointed to the high office of commander-in-chief. In 1799 he was again employed in active service against the French in Holland; the expedition which he headed being fitted out on the presumption that the Dutch were generally desirous to throw off the yoke of France, and return to their previous subjection to the stadtholder. But the idea proved erroneous; and the ill-planned campaign terminated with a truce, one condition of which was the liberation of 8000 French and Dutch seamen, then prisoners of war in England. This expedition terminated the active services of the duke of York in the field, in the course of which he had various opportunities of displaying that courage which he in a high degree possessed; but opposed as he was by officers indebted for their stations to superior talents alone, the reverses which he experienced were such as might naturally have been expected, where rank formed the principal pretension. In 1809 he became unfavourably distinguished in the opinion of the public, in consequence of the disclosures which took place in the course of a parliamentary investigation, originated by colonel Wardle, who in the house of Commons charged the duke with having suffered a female favourite, named Mary Anne Clarke, to influence him in the disposal of commissions in the army. From the evidence brought forward, it appeared that in a few cases promotion had been extended to persons recommended by this woman, who

doubtless derived pecuniary advantage from such transactions; but as nothing occurred to implicate the duke of York directly in the corrupt transactions between Mrs Clarke and the persons to whom she sold her services, he was acquitted by a majority of eighty-two, who voted against the proposed general inquiry into his official conduct as commander-in-chief. His royal highness, however, thought proper to resign his post, in which, in about two years after, he was reinstated by the prince-regent, with little or no objection on the part of the public, who were disgusted with the means and evidence employed to disgrace him, coupled as it was with the known fact that the army had never been nearly so free from the corruption complained of as under himself. This touch of adversity was not without its salutary consequences, as it produced in the duke a redoubled attention to his duties. From that time he not only exercised the most rigid impartiality in the distribution of promotion, but the humblest petition was sure of attention; the rights and comforts of the soldier were studiously attended to; and without relaxing necessary discipline, some of its more odious and dispensable rigours were discountenanced. Upon the whole, both in a moral and a social, as well as in a military sense, the British army owes much to the exertions and good-will of this prince, whose rank and influence enabled him to effect improvements, which equally good intentions, without such advantages, might have failed to secure. Among the future circumstances of his public life was his appointment to the post of custos of the person of his afflicted father in 1818, to which post was annexed a salary of 10,000*l.* per annum, not without much popular objection, its being deemed very inconsistent with the economy which a long and a wasteful war had rendered necessary. The last speech of the duke of York in parliament was against Catholic emancipation, and might be said to amount to a declaration, in his capacity of heir-apparent, that he would never consent to that disputed measure, should he be ever called on to reign. Not long after this event he was attacked with a dropsy in the chest, which complaint gradually became more dangerous in its symptoms, and after long and protracted suffering, ultimately proved fatal, on the 5th of January, 1827. The duke of York was a prince of great humanity, good temper, and benevolence, especially during the last twenty years of his life; and by his ease and affability, lived to see himself without a public or private enemy in any quarter. Neither forming, nor displaying pretensions to commanding intellect, he gradually rendered himself an able and an active official man of business, and pretended to nothing more. Generally speaking, he kept aloof from the contest of party or politics; but so far as he was active, he countenanced the more confirmed Tories and high churchmen, by whom he was doubtless prompted into his uncalled-for declaration against the Roman Catholic claims. As concerns private life, unhappily for himself, he

assumed the licence too common to his rank, but under circumstances which supply more excuse than can always be produced for similar aberrations. A passion for high play, very fatal to his own repose, and which marked the decline of his life with many melancholy circumstances, cannot receive the same consideration, tending as it did to the injury of others, and to afflict both the early and the later stages of his existence with great and merited disquiet. On the whole, however, his failings were too common to his station to call for particular animadversion: and the kind, and in many respects affectionate tone of public feeling at his decease, cannot but redound to the general credit of the individual by whom it was so spontaneously excited.—*Ann. Biog. New Monthly Mag. Biog. Nouv. des Contemp.*

YORKE (PHILIP) first earl of Hardwicke and lord high chancellor, was born December 1, 1690, at Dover in the county of Kent, where his father practised as an attorney, and brought his son up to the higher branch of his own profession. From a respectable seminary kept by a Mr Morland at Bethnal-green, he was removed to the Middle Temple, and being called to the bar, in 1714, soon rose to great eminence as a counsel. In six years' time the interest of lord-chancellor Parker procured him the office of solicitor-general, in which capacity he displayed great professional knowledge and eloquence, as well as unbending integrity, especially in the Atterbury trials. Four years after he was farther advanced to the attorney-generalship; and on the resignation of lord King, in 1733, was made lord chief-justice of the king's bench, with the barony of Hardwicke, and a salary increased from 2000*l.* to 4000*l.* On the decease of lord chancellor Talbot, in 1737, lord Hardwicke was elevated to the woolsack; and during the long course of twenty years in which he presided in the equity courts, acquitted himself with so much ability, judgment, and integrity, that only three of his decisions, it is said, were ever called in question, and even all of these were on appeal confirmed by the upper house. In 1754 a patent was issued from the crown, advancing him to the rank of an earl, two years after which he resigned the seals, and retired from public life. Lord Hardwicke died at his house in Grosvenor-square, March 6, 1764, and was buried at Wimpole in Cambridgeshire. He was the author of a single paper in the *Spectator*; but his only professional work is an equity treatise, entitled "The Legal Judicature in Chancery stated." He left several children, of whom the eldest succeeded him in his titles and estates.—*Biog. Brit.*

YORKE (PHILIP) second earl of Hardwicke, son of the foregoing, was born Dec. 20, 1720, and was placed by his father at Dr Newcome's school at Hackney, whence he removed to Corpus Christi (Bene't) college, Cambridge. While at the university he distinguished himself by the publication of his "Athenian Letters," in which he was assisted by his brother

Charles, afterwards lord Morden. This elegant work was originally printed only for distribution among his private friends, but was published some years after the decease of the author, in two quarto volumes, 1798. His other publications are "The Correspondence of Sir Dudley Carleton, Ambassador to the States General;" and a collection of state papers, from the commencement of the sixteenth century to the year 1726. His death took place in 1790.—There was a third of this name, and of the same family, who was a native of Erthig, Denbighshire, born 1743. He graduated at Corpus Christi college, Cambridge, and afterwards sat in several successive parliaments for the boroughs of Helstone and Grantham. Mr Yorke, who is known as the author of a work entitled "The Royal Tribes of Wales," died in 1804.—*British Peerage. Gent. Mag.*

YOUNG (ARTHUR) a learned and amiable divine, who for many years held a prebendal stall in Canterbury cathedral, was a native of the county of Norfolk, and a graduate of Cambridge. He is advantageously known as the author of "An Historical Dissertation on Idolatrous Corruptions in Religion," in two volumes, 1734, dedicated to his friend and patron bishop Wilcocks. His death took place in 1759.—*Ann. Biog.*

YOUNG (ARTHUR) son of the preceding, was born in 1741. He applied himself to the study of agriculture as a science, after declining the business of a wine-merchant, for which he had been designed by his father. His experiments however did not improve his circumstances, and he was at length induced to decline in his own person the practice, while he continued to advocate the theory of the science. Mr Young was the author of a work first projected in 1770, and entitled the "Farmer's Calendar;" as also of another which appeared periodically, under the name of "Annals of Agriculture," to which the late king is said to have been an occasional contributor. He was afterwards employed by government to obtain information on the subject of his favourite pursuit throughout the country, and on the appointment of the Board of Agriculture was nominated to the office of its secretary. Notwithstanding a total loss of sight, which afflicted him some years previously to his decease, he continued to employ his mind on the advancement of rural economy up to the time of his death, which took place in the spring of 1820.—*Ibid.*

YOUNG, DD. (EDWARD) an English divine, was born at Woodhay, Berks, in 1642, and was elected off on the foundation from Winchester grammar-school, to a scholarship at New college, Oxford, of which he became in due course a fellow. He enjoyed several valuable pieces of church preferment, among which may be enumerated the rectory of Upham, Hants, a stall at Salisbury, and eventually the deanery of that cathedral. There are extant two volumes of sermons by ~~dean~~ Young, who died in 1705.—*Athen. Oxon.*

YOUNG, DD. (EDWARD) son of the pre-

YOU

eding, was born at his father's living of U, ham in 1681, though some assign the date of his birth at two years earlier. He was educated in the same distinguished seminary as his father, and like him obtained a New college fellowship, which he resigned in 1708 for another at All Souls, in the same university. Although originally designed for the law, which induced him to graduate in that faculty, the predominant bias of his mind towards a religious life at length induced him to take orders. His poems on the "Last Day," and "The Force of Religion," printed in 1713, strongly manifest this prevailing feeling, although at one time his thoughts were so far secularized, that he had aspired to the representation of the borough of Cirencester in parliament. His failure in this undertaking appears to have confirmed a previous inclination for the church, which he soon after entered, and obtained the living of Welwyn, Herts, with a king's chaplaincy. In 1741 the death of his wife, to whom he was much attached, appears to have much increased the melancholy of a mind originally perhaps of a sombre complexion, and to this event may be ascribed the production of his principal poem, "The Complaint, or Night Thoughts," by which latter title it is more generally designated. Besides this poem, Dr Young was the author of three tragedies,—"Busiris;" "The Brothers;" and "The Revenge." Some satires also proceeded from his pen, under the title of "Love of Fame, the universal Passion," which, with a poem entitled "Resignation," written in 1759, conclude his poetical labours. As a prose writer he is chiefly known by his "Centaur not fabulous," levelled against the prevailing manners of the time; and a treatise entitled "Conjectures on original Composition," written at the age of eighty. Dr Young, in his retirement at Welwyn, maintained the situation of a man of easy fortune and respectable connexions. His latter years were, however, subject to much discontent; he had taken deep offence at the youthful irregularities of his son, and like many other aged persons he fell under the sway of a housekeeper, by whom he was entirely governed. On his death-bed he declined an interview with the former, but sent him his forgiveness, and made him his heir. His death took place in April 1765, in his eighty-fourth year. The fame of Dr Young rests altogether on his poetry, comprising his satires, tragedies, and "Night Thoughts." The former are built on the supposition of fame, or notoriety, being the universal passion of mankind, a position, the philosophical accuracy of which may be questioned. They abound more in flashes of wit and in caricature than in grave exposures of vice and folly; but they are nevertheless lively and epigrammatic. As a dramatic writer, with much poetic conception and strong feeling, he is exaggerated and bombastic. "The Revenge," however, keeps the stage, and its hero, Zanga, stands pre-eminent for theatrial interest among the personages of modern tragedy. "The Night Thoughts," on

YOU

the fame of Young for originality is exclusively founded, although occasionally tumid and extravagant, the characteristic fault of the author, exhibit great force of language and occasional sublimity of imagination. They in particular command the sympathetic feelings of the devout, and will also form a study for all lovers of poetry, who will not be deterred by the gloom and severity of their spirit, and the awful rigour of their theology. "The Night Thoughts," which are even more popular in France and Germany than at home, have passed through a great number of editions. An edition of his entire works, in four volumes, octavo, was published by himself,—*Biog. Brit. Life by Herbert Croft, in Johnson's Lives of the Poets.*

YOUNG (MATTHEW) bishop of Clonfert in Ireland, a prelate of considerable learning and research, especially in the sciences of mathematics and natural history. He was a native of the county of Roscommon, born 1750, and educated at the university attached to the Irish capital. In 1775 he obtained a fellowship of his college, to which, eleven years after, was added the professorship of philosophy. Marquis Cornwallis, who much esteemed him for his talents and learning, at length raised him to the see of Clonfert, which he continued to fill with great dignity and ability till his death in 1800. Bishop Young was the author of "An Analysis of the Principles of Natural Philosophy;" "The Method of Prime and Ultimate Ratios;" and an "Essay on Sounds."—*Hutton's Math. Dict.*

YOUNG (PATRICK) a distinguished scholar and Orientalist of the seventeenth century, born in 1584, at Smeaton in Scotland. He received his education in the university of St Andrew's, where he graduated as A.M. in 1603, and two years after was admitted *ad eundem* at Oxford. Having taken holy orders, he obtained a chaplaincy at New college, but quitted the university on being appointed to superintend the king's library. While thus engaged he published in 1637, St Clement's epistle, with a Latin version, and engaged in editing the Alexandrian manuscript of the Bible, presented by Cyrillus Lucaris to king Charles I. The breaking out of the civil wars, however, prevented his doing more in this matter than printing a fac-simile of the opening chapter, with a specimen of his own notes. His other writings are "Expositio in Canticum Canticorum Gilberti Folioti Episcopi Londinensis; and he is said to have afforded material assistance to the learned Selden, in his disquisition on the Arundel marbles. Being deprived of his situation as librarian by the parliament, he took up his abode at Bromfield, Essex, and died there in 1652.—*Life by T. Smith.*

YOUNG (sir WILLIAM) an ingenious political writer of our own times, born about the middle of the last century at Charlton, a small village near Canterbury, in the county of Kent. He was the eldest son of a baronet of the same name, whom he succeeded in the title in 1788.

YSE

From Eton he removed to Clare-hall, Cambridge, and thence again to University college, Oxford, where the present lord Stowell was his tutor. On quitting the university he made a tour over great part of the European continent, an account of which was afterwards printed, but never published. Some years after his return to England, he took his seat in the house of Commons as member for the borough of St Mawes, and in 1807 went out to the West Indies, in quality of governor of the island of Tobago. His writings consist of "The History of Athens," in one volume, quarto, originally printed in octavo, under the title of "The Spirit of Athens;" "The West India Common-place Book;" "The Rights of Englishmen;" and a tract on the Poor Laws. He also edited the "Contemplatio Philosophica" of his maternal grandfather, Dr Brook Taylor. Sir William did not live to return to his native country, but died at the seat of his government in 1815.—*Gent. Mag.*

YRIARTE. See IRIARTE.

YSAURE, or ISAURE (CLEMENTE) a lady of Toulouse, celebrated both for her talents and virtues, who lived in the early part of the fourteenth century. She instituted the famous Floral games, which were annually solemnized at Toulouse in the month of May. For the support of this literary festival she left a fund to provide the prizes for the successful competitors for poetical fame, which consisted of a golden violet, a silver columbine, called at Toulouse the eglantine, and a silver pansy, to which is given the appellation of gauchet. On these occasions it was customary to pronounce a eulogium on the foundress of the games, and to crown with flowers her statue in the hôtel de ville.—*Moreri. Dict. Hist. Art. Floraux. Nouv. Dict. Hist.*

YSDEGERD, YEZDEGERD, or ISDEJERD, the third of that name, king of Persia, of the family of the Sassanides; and not only the last of his race, but also the last sovereign of Persia previous to the Mahometan conquest. He lost the battle of Cadesia, in which he opposed the Moslem invaders, in the califate of Omar, AD. 636. After his defeat he became a fugitive and a wanderer in the provinces of Kerman, Segestan, and Khorassan, for upwards of fifteen years. He was then betrayed by one of his own subjects, the governor of the city of Merou, who invited Tarkhan, king of the Turks, into Persia; and Ysdegerd, after having been conquered by the invader, was killed on his flight from the field of battle.—*Moreri.*

YSE (ALEXANDER de) a French Protestant divine, who was a native of Grenoble. He

YVE

became professor of theology at Die in Dauphiny, but was deprived of his chair in the reign of Louis XIV, in consequence of the suspicion of a secret attachment to the church of Rome, exhibited in a discourse which he composed with a view to promote a union between the Protestants and Catholics. He retired into Piedmont, where he died. He appears to have been the author of a work entitled "Proposition pour la Réunion des deux Religions en France," 1677, 4to.—*Bayle. Nouv. Dict. Hist.*

YVES (CHARLES St) an eminent French oculist, born near Rocroy in 1667. He was educated under the patronage of mademoiselle de Guise, who made him one of her pages; but at the age of eighteen or nineteen his ideas taking a religious turn he entered into the abbey of St Lazarus, and having completed his noviciate, he made his profession October 9, 1686. While in the monastery he studied medicine and surgery, that he might administer assistance to the brethren of his order. Becoming distinguished for his skill and knowledge, his reputation gradually extended even to foreign countries, and in 1711 he left the convent, and settled at Paris. Devoting his attention to the treatment of diseases of the eyes, he continued the practice of his profession with great success till 1732, when illness obliged him to decline it, and he died October 3, 1733. St Yves was the author of "Traité des Maladies des Yeux et de leurs Remèdes," of which there are numerous editions and translations; and "Réponse de St. Yves à la Critique de son Traité," Paris, 1723, 12mo.—He was succeeded in his practice by his pupil, STEPHEN ST YVES, whose family name was Leoffry, but who took the former appellation on his marriage with the niece of his master. His reputation for manual dexterity as an oculist was not inferior to that of the former; but he does not appear to have written on the subject of his profession.—*Eloy Dict. Hist. de la Med.*

YVETEAUX (NICHOLAS VAUQUELIN, seigneur des) a learned writer, who was a native of Normandy, and became tutor to Louis XIII, king of France. After the conclusion of his duties at court, he retired to the faubourg St. Germain, where he led the life of a literary voluptuary. He wrote a treatise in verse, entitled "Institution d'un Prince;" and "Stanzas," "Sonnets," and other poems, published in the *Délices de la Poésie Francoise*, 1620, 8vo. His death took place in 1649, at the age of ninety.—*Huet Origines de Caen. Moreri. Nouv. Dict. Hist.*

Z A C

ZABARELLA, the name of two distinguished ecclesiastics of the Italian church, uncle and nephew. The elder, **FRANCESCO ZABARELLA**, who is also sometimes styled *De Zabarella*, was born in the year 1339, at Padua, and was one of the most celebrated professors of the canon law of the age in which he lived. He commenced the study of ecclesiastical jurisprudence in the university of Bologna, and afterwards lectured on that science with great reputation in his native city. In 1406 the Venetians laying siege to Padua, Zabarella went to Paris with the view of obtaining the interference of that court in behalf of his countrymen; but failing to interest the French government in their favour, he retired to Florence, where he resumed his former mode of life, and became professor of the canon law. The bishopric of Padua was soon after offered to his acceptance, which he declined, but eventually availed himself of a second proposal made him by pope John XXIII, and became archbishop of Florence. The same pontiff in 1411 raised him to the purple, and two years after joined him with another member of the conclave, and Emanuel Chrysoloras, in an embassy to the court of the emperor Sigismund. In this capacity he took a very prominent part in the proceedings at the council of Constance, where the pretensions of the three aspirants to the tiara were discussed, and acquired so great a degree of esteem from all the distinguished personages then present, that after his death, which took place September 26, 1417, the emperor, in person, with his whole court, attended his funeral. Cardinal Zabarella was the author of a variety of learned and elaborate treatises, which altogether occupy six folio volumes. They consist principally of a commentary on the decretals, acts of councils, orations, &c. — **BARTOLOMEO ZABARELLA**, born in 1394, also filled the chair of professor of civil law at Padua, and succeeded his uncle in the see of Florence. He was a prelate of great piety and erudition, and died in 1442. — **COUNT JAMES ZABARELLA**, a descendant of the same family, was a native of Padua, where he flourished about the middle of the succeeding century, and is known as the author of a commentary on Aristotle, and a treatise on the perpetual motion. He died in 1589. — *Moreri*.

ZACAGNI (**LAURENCE ALEXANDER**) an Italian critic and antiquary, who died at Rome about 1720. At an early age he embraced the profession of an ecclesiastic, and being at liberty to pursue his studies without interruption, he devoted his time to researches into archæology and ancient literature. Having acquired reputation by some literary productions, he was appointed keeper of the Vatican Library, an office which afforded him an op-

portunity of rescuing from oblivion many curious remains of former ages, of which he published an account under the title of "*Collectanea Monumentorum veterum Ecclesiæ Græcæ et Latine*," Romæ, 1698. — *Novus. Dict. Hist.*

ZACCARIA (**FRANCESCO ANTONIO**) a learned jesuit of the last century, a native of the Venetian states, born in 1714. Having received his education at one of the colleges belonging to his order, he devoted himself to a literary life, and obtained the situation of librarian at the court of Modena. This he afterwards exchanged for a similar appointment at Mantua, which he held till the general proscription of the disciples of Loyola forced him to take refuge at Rome. In this capital he passed the remainder of his days, subsisting upon a liberal allowance made him by the pope, and on the profits of his literary labours. His writings consist of an elaborate treatise, entitled "*The Library of Ancient and Modern History*," 4to, 6 vols; "*The Literary History of Italy*," 8vo, 14 vols; "*Literary Annals of Italy*," 3 vols.; "*The Lapidary and Numismatic Institutions*," 2 vols. His death took place in 1795. — *Chalmers's Biog. Dict.*

ZACCHIAS (**PAOLO**) a medical writer of the seventeenth century, physician to pope Innocent X. He was a native of Rome, born there in 1584, and in addition to his professional acquirements was considered no mean proficient in the fine arts. His writings consist of "*Questiones Medico-Legales*," Lyons, 3 vols. folio, 1726; a treatise on hypochondriasis, in 4to; and "*La Vita Quadragesimale*," 8vo. His death took place at his native city in 1659. — *Haller Bibl. Med.*

ZACHARIE DE LISIEUX, a French capuchin, who was the author of several treatises, partly moral and partly satirical, which prove that the author was familiar with the works of the Roman writers. His principal productions are, "*Sæculi Genius*," which has been often printed; "*Gyges Gallus*," 1658, Paris, 4to, of which a German translation, with notes, was published at Ratisbon, 1739, 8vo; and "*Rélation du Pays de Jansénie*," an ingenious satire on the Jansenists, under the pseudonym of Louis Fontaines. The proper name of father Zacharie was Peter Firmian. He died in 1661, aged seventy-nine. — *Novus. Dict. Hist.*

ZACUTUS LUSITANUS, a physician, who was born at Lisbon in 1575. He was of Jewish extraction, but was educated in the Christian faith, and studied philosophy and medicine at Salamanca and Coimbra. Afterwards adopting the latter as a profession, he went to the university of Sigüenza, where he was admitted to the degree of MD. He then returned to Lisbon, and practised physic for

Z A M

twenty years with much reputation. In 1625, alarmed at the decree of exile against the Jews issued by Philip IV, he fled to Amsterdam, where he embraced the religious faith of his ancestors. His death occurred Jan. 21, 1642. He left a great number of works, which have been several times printed together, in two volumes, folio. Among them are "De Medicorum principum Historia;" "Praxis Historiarum Lib. V;" "Introitus Medici ad Praxim;" "Pharmacopœa Elegantissima;" and "Praxis Medica admiranda." He also was the author of a treatise "De Chirurgorum principum Historia," and other works remaining in manuscript.—*Eloy Dict. H. de la Med.*

ZAHN (JOHN) a canon regular of the Premonstratensian order, who was prior of a cell near Wurtsburgh. His leisure was devoted to philosophical experiments and the study of physical science. He published at Nuremberg, in 1696, a large work, forming a kind of encyclopædia of natural knowledge, entitled "Specula Physico-mathematico-historica notabilium ac mirabilium sciendorum, in qua Mundi mirabilis œconomia, necnon mirificæ amplius et magnificæ ejusdem abdite reconditæ, nunc autem ad lucem protractæ Thesaurus, in triplici Mundo celesti, æreo et terrestri præponitur." He was also the author of a treatise, entitled "Oculus Teledioptricus," 1702, folio, containing an account of the construction and use of telescopes. His death took place June 27, 1707. Though Zahn had the reputation of being a very ingenious as well as a very learned man, he displayed a degree of weakness or prejudice in rejecting the astronomical system of Copernicus.—*Moreri.*

ZAMBECCARI (JOSEPH) a learned Florentine physician, much distinguished about the middle of the seventeenth century. He removed from Florence to Pisa towards the year 1680, and gave lectures on anatomy. His researches were principally devoted to the anatomy and physiology of brute animals; and from a letter which he addressed to Francis Redi, it appears that he conducted his experiments with a disregard of the bodily sufferings of the unfortunate subjects of them, which has too often been the reproach of physiological experimentalists. An account of his investigations has been published by Manget and by Leclerc; and he was also the author of "Breve Trattato de' Bagni di Pisa e di Lucca," 1712, 4to. He was living in 1726, but how long he survived that period is uncertain.—*Eloy Dict. H. de la Med.*

ZAMOLXIS, a celebrated person among the Scythians, is reported to have been the slave of Pythagoras, and to have accompanied his master into Egypt, where he was manumitted, and whence he carried his doctrine to his countrymen, the Gætes. Herodotus however is of opinion that he was a Thracian, who lived before Pythagoras, and inculcated the doctrine of the immortality of the soul among the Scythians. After his death he was regarded by that people as a divinity, with whom they were to dwell again in the invisible

Z A N

world. With this notion they offered human victims to him, who were put to death by being thrown up into the air, and caught on the points of spears.—*Herod. Brucker.*

ZAMOSKI (JOHN) the son of Stanislaus, castellan of Chelme, a town in Red Russia, distinguished in the annals of Poland in the sixteenth century. He studied at Paris, and afterwards at Padua, where his literary abilities procured him the rectorship of the university. While in that station he wrote a work entitled "The Roman Senate," and another called "The Perfect Senator." Returning to Poland he was raised to considerable employments in the state, and in 1573 he was one of the ambassadors sent to Paris to offer the Polish crown to the duke of Anjou, afterwards Henry III of France. When Stephen Battori came to the throne, he bestowed his niece in marriage on Zamoski, and made him grand chancellor of the realm, and soon after general of his armies. He distinguished himself both as a statesman and a warrior, and in the latter capacity especially, by humbling the czar of Muscovy, and rescuing from his yoke the provinces of Polesia, Volesia, and Livonia. On the death of Battori in 1586, many of the Polish nobles wished to make him king; but he declined their overtures, and promoted the election of Sigismund, prince of Sweden. He died in 1605, honoured with the title of the defender of his country and the protector of the sciences. He established several colleges, whither by his munificence he attracted learned foreigners; and he founded a university in the city which he built, and which bears his name.—*Nouv. Dict. Hist.*

ZAMPIERI.—See DOMENICHINO.

ZANCHIUS. There were two learned ecclesiastics of this name, contemporaries, who flourished in the sixteenth century. They were descended of the same family, but differed in their religious profession; BASIL, the elder of the two, born in 1501 at Bergamo, being to the last in the communion of the Romish church, in which he obtained the office of a regular canon, although suspected of holding opinions of an heretical tendency. He held the situation of librarian to the Vatican, but his heterodoxy becoming more and more in question, he at length fell under the cognizance of the Inquisition, who threw him into prison, where he died in 1560. He is known as the author of a poetical dictionary, printed in 8vo in 1612; "Observations on the Scriptures," 1553; and a volume of poems written in the Latin language, of which there are two editions; that of Rome, 1540, and that of Bergamo, 1747.—JEROME ZANCHIUS, born in 1516 at Alzano, became a member of the congregation of canons regular of St Giovanni di Laterano, when only fifteen years of age, and while in that society formed a close intimacy with the celebrated Peter Martyr, also an associate of their community. The conversation and example of this distinguished convert to the reformed church, made a great impression upon Zanchius, as well as upon many of his brethren, which was farther increased by the

lectures which Peter subsequently delivered at Lucca. The result, though not immediate, was decisive, and Zanchius, after having worn the monastic habit nearly twenty years, at length threw it off in conjunction with eighteen of his companions, and openly seceded from the Romish communion. This abjuration necessarily induced him to quit Italy, and accordingly, in 1550, he took refuge at Geneva, where he remained two years, and then, declining an invitation to England, proceeded to Strasburg. Here he obtained the theological professorship, and read lectures both in divinity and in the Aristotelian philosophy, with great reputation, till 1563, when he removed to Chiavenna in the Grisons, in the capacity of pastor to a reformed congregation there. The divinity chair at Heidelberg becoming vacant in 1568, he was induced to accept of it, and settled there under the immediate patronage of Frederic III, elector palatine, at whose instigation he composed his great treatise against Antinomianism. The death of this prince in 1578 occasioned his resignation of the professorship; but although he took up his abode after this event for a short period at Newstadt, he returned to Heidelberg in 1585, and there passed the remainder of his days. He was the author of a great variety of controversial treatises, of which one "On the Doctrine of Predestination," has been translated into English. The whole of his polemical and devotional writings, his commentary on the epistles, &c. were collected and printed in nine folio volumes, at Geneva, in 1619. Zanchius died at Heidelberg in 1590.—*Moreri. Tiraboschi.*

ZANNICHELLI (JOHN JEROME) an eminent Italian physician, born at Modena in 1662. After some education at home he went to Venice to study pharmacy, and in 1684 he was admitted into the college of apothecaries in that city. He established a laboratory, and applied himself with great assiduity to the preparation of chemical remedies and to philosophical investigations. In 1702 the duke of Parma, by letters patent, constituted Zannichelli doctor of medicine, chemistry, and surgery throughout his dominions. In 1710 he commenced investigations into the nature of fossils; and his partiality for natural history induced him to undertake many journeys, in the course of which he made a curious collection of shells, petrifications, &c. In 1711 he published "Catalogus Plantarum terrestrium et marinarum," &c. He subsequently pursued his researches in Istria, the environs of Feltri, the march of Trevisano, and in the territory of Vicenza. The lords of the Chamber of Health, in 1725, appointed him physician-naturalist to all the states of Venice. He died January 11, 1729. Among the works of Zannichelli are "Promptuarium Remedium Chymicorum," 1701, 8vo; "Lithographia duorum Montium Veronensium, vulgo Monte di Boricolo et di Zoppica," 1721; and "De Rusco ejusque Preparatione," 1727, 8vo.—His son, JOHN JAMES ZANNICHELLI, published from his MSS. "Opuscula Bota-

nica posthuma," 1730, 4to; and "Istoria delle Pianta che nascono ne' Lidi intorno a Venezia," 1731, folio. The younger Zannichelli was also the author of "Enumeratio Rerum Naturalium quæ in Musæo Zannichelliano asservantur," 1736, 4to; and of a letter on the medical properties of the horse-chesnut.—*Eloy Dict. H. de la Med. Haller.*

ZANONI (JAMES) an Italian physician and naturalist, who was a native of Bologna. He published a work, entitled "Historia Botanica," 1675, folio; and he was also the author of a treatise on rare plants, which being left in manuscript at his death in 1682, was long after published by Cajetan Manti.—*Nouv. Dict. Hist. Eloy.*

ZANOTTI (FRANCISCO MARIA) a mathematician, was born in 1692, at Bologna, where he was educated in the jesuits' college, and afterwards applied himself for a while to the study of jurisprudence, with the view of making the law his profession. Subsequently, however, he diverted his attention to the mathematics, of which science he became professor in the university attached to his native city. In addition to this situation he also held those of secretary and librarian. This latter appointment he resigned in 1766, on being elected president of the academy, a dignity for the possession of which he was indebted to his introducing the Newtonian philosophy into the university, to the subversion and exclusion of that of Descartes, which had up to that period been taught there. He published an historical account of the Bolognese Institute, and two catalogues of its library, as well as some miscellaneous poems in the Latin language, which he wrote with much purity and elegance. His death took place in 1777.—JOHN PETER ZANOTTI, a native of Paris, studied painting under Pasinelli, whose life he wrote, and attained to considerable eminence in the art.—*Fabroni.*

ZANZALES (JACOBUS) otherwise called Baradæus, a Syrian priest of the sixth century, who revived the doctrines of the Eutychians or Monophysites. He was made bishop of Edessa, and died in 588. The distinguishing tenet of this heresiarch was the assertion that Jesus Christ had but one nature, whence the term Monophysite. The followers of Zanzales were also called Jacobites, from their leader; and under that appellation they still exist in considerable numbers in Syria.—*Dupin. Mosheim.*

ZAPPI (GIAMBATISTA FELICE) a lawyer and poet, was born of a noble family at Imola in 1667. He was educated at Bologna, and settled as an advocate at Rome, when he married Faustina, the daughter of the celebrated Carlo Maratti, whose poetical talents rivalled those of her husband. Zappi was highly esteemed by pope Clement XI, and by all the learned and accomplished persons in Italy. His poems, which are in several collections, are not numerous, but very much admired, and his best sonnets have elicited considerable observation and criticism. He died in 1719, at the age of fifty-two.—*Tiraboschi.*

Z E I

ZARLINO (GIUSEPPE) an eminent musician and composer, born at Giogga, in the Venetian territories, about the beginning of the sixteenth century. He studied music under Willaert, and eventually succeeded Cyprian Rore as chapel-master to the cathedral of St Mark at Venice. Zarlino was one of the first who wrote scientifically on music, and is said to have discovered the relation between the major and the minor third. He was the author of a variety of operas, one of which, the "Orfeo," was performed at Paris in 1630, by especial command of cardinal Mazarin. Four volumes of his works were printed in folio at Venice in 1538. Laborde fixes the death of Zarlino in the year 1569.—*Burney's Hist. of Mus. Res's Cyclop.*

ZAZIUS (ULRIC) a learned German lawyer of the sixteenth century. He was a native of Constance, where he practised as a notary, which employment he relinquished when he was more than thirty years of age, to commence the study of jurisprudence. He applied himself to this science with so much success, that having taken the degree of doctor, he became professor of law at Fribourg, and he maintained the highest reputation till his death, which happened in 1535, at the age of seventy-four. Zazius was intimately acquainted with Erasmus, and though a Catholic he highly esteemed the great reformer Martin Luther, whom he styled the phoenix of theologians. Henry Cornelius Agrippa, in one of his epistles, ranks Zazius with William Budé and Andrew Alciat, as the triumvirs of the republic of letters. Among his principal works are "Intellectus Legum singulares;" "De Origine Juris;" "Tractatus de Judæorum Infantibus baptizandis;" and "Epitome in Usus Feudales."—*Teissier Eloges des H. S.*

ZEA (DON FRANCISCO ANTONIO) a native of Antioquia, in the province of New Granada, one of the founders of the republic of Columbia, of which he was vice-president. He was a man of considerable talent, and took a principal part in the formation of the new constitution of his native country, which he had the satisfaction of presenting himself to congress, and seeing adopted in all its leading features. In 1820 he arrived in England on a diplomatic mission, and remained here as the agent of the Colombian government till his death, which took place at Bath, in the fifty-first year of his age, November 28, 1822.—*Ann. Biog.*

ZEGEDIN. See SZEGEDIN.

ZEILER, or ZEILLER (MARTIN) a native of the province of Styria in Germany, inspector of the schools at Ulm, and known as the author of several geographical works, of which the principal are his itineraries of Germany and of Italy, and topographical descriptions of Bavaria, Suabia, Alsatia, and Hungary. His death took place at Ulm in 1661, in the seventy-second year of his age.—*Freheri Theatrum.*

ZEISBERGER (DAVID) an American clergyman, of German extraction, distinguished as a philological writer. He applied

Z E N

himself to the study of the languages of the aborigines of America, and composed a grammar of the dialect of the Delaware Indians, of which a French translation, by M. Ferre Etienne Duponceau, from the German original, was published after the death of the author in the Transactions of the American Philosophical Society, vol. iii. Philadelphia, 1827.—*Revue Encyc.* vol. iv.

ZENO, the Eleatic, a Grecian philosopher, was born at Elea, in Magna Grecia, about B.C. 463. He was a disciple of Parmenides, and became a celebrated master in the Eleatic sect. He displayed great subtlety in his logical argumentations, which were afterwards reduced to rule by Aristotle and others. He was a zealous friend to civil liberty, and is supposed to have lost his life in an attempt to supersede the petty tyrant of his native city. Zeno, according to Aristotle, taught that there is only one being, which is God; that in nature there is no vacuum; and that motion is impossible: in maintenance of which last position he argued with extreme but unprofitable acuteness. Seneca even asserts that he carried his scepticism so far as to deny the existence of external objects. His writings appear to have been much esteemed by the ancients, but none of them have reached modern times.—*Diog. Laert. Bayle.*

ZENO, founder of the Stoic sect, was born at Citium, a maritime town of Cyprus, about B.C. 366. His father was a merchant, who occasionally visited Athens, where he purchased many of the writings of the Socratic philosophers for his son, who early displayed a great propensity for learning. When he became a man, he visited Athens himself, where he became a disciple of the Cynic philosopher Crates; but wishing to extend the sphere of his knowledge beyond the narrow limits of a sect, which prided itself in a contempt for all science, he forsook Crates for Stilpo, and various other masters, finishing his course of study in the school of Polemon, who detected his purpose of selecting materials for the formation of a sect of his own. This design he ultimately carried into execution, in a place called the painted porch, from its being adorned with the pictures of Polygnotus and other eminent painters, and more generally the Stoa, or porch, whence all his followers acquired the name of Stoics. Zeno obtained great fame by the acuteness of his reasonings; and his private character being also highly respectable, he was much beloved and esteemed by his numerous disciples, and even by the great. The Athenians placed so much confidence in his integrity, that they deposited the keys of their citadel in his hands, and decreed him a golden crown and a statue. He is said to have come rich into Greece, but he lived with great simplicity and abstemiousness, and the modesty of his disposition led him to shun crowds and personal distinctions. He reached the advanced age of ninety-eight; when hurting one of his fingers in a fall, he interpreted the accident into a warning to depart, and repeating from the tragedy of

Niobe "Here I am, why do you call me?" went home and strangled himself, on the principle that a man was at liberty to part with life whenever he deemed it eligible to do so. The Athenians honoured him with a public funeral and a tomb, with an inscription recording his services to youth, by his rigid inculcation of virtuous principles and good conduct. His death is dated in the first year of the 129th Olympiad, B.C. 264. As the founder of a new school, he seems rather to have invented new terms, than new doctrines, and scientifically agreed in many points with his masters of the Platonic sect. In morals he followed the principles of the Cynics, cleared of their practical indecencies, which induced Juvenal to observe that the two sects only differed in the tunic. The philosophy of the Stoics having risen into high reputation, has been the subject of much elaborate discussion among both the ancients and moderns. It may be sufficient here to observe, that as regards motives and sources of action, their doctrine is more especially opposed to that of Epicurus, who became celebrated towards the decline of Zeno's life, and in whom he found a powerful opponent. The wise man of Zeno was a character of the purest virtue of which he could form a conception; and although for the most part unattainable, his idea of excellence certainly formed some of the most elevated and virtuous public and private characters which the ancient world presents. Strictly inculcating all the self-denial, without which virtue is utterly unattainable under any definition, the alloy of moral pride which in this sect has been a too usual concomitant, has not on the whole prevented an extensive beneficial result.—*Diog. Laert. Brucker. Enfield.*

ZENO (APOSTOLO) an eminent Italian man of letters, was born at Venice in 1688. He was the son of a physician in that city, who was a descendant from a noble family which had long settled in the island of Candia. He was educated in a seminary of religion at Castelli, but principally cultivated polite literature and the study of Italian history and antiquities. In 1696, he instituted at Venice, the academy "Degli Animosi," and was the editor of the "Giornale de' Letterati d' Italia," of which he published thirty-eight volumes, between the years 1710 and 1719. His first musical drama, "L'Inganni Felice," was performed at Venice in 1695; and between that time and his quitting Vienna, to which he was invited by Charles VI in 1718, who made him both his poet and historian, he produced forty-six operas and seventeen oratorios. He continued eleven years in the imperial service, at the expiration of which he obtained his dismissal from the emperor, who allowed him to retain his salary on condition of furnishing annually a sacred drama for music; which he continued to do until the appointment of Metastasio. On his return to Venice he wrote some biographical memoirs of men of letters, principally of the learned typographical family of Manuzio. He also made some valuable additions to the accounts given by

Vossius of the Italian historians, by his "Disertazioni Vossiani." He lived until an advanced age, his death taking place at Venice, Nov. 11, 1750, in his eighty-second year. The dramatic works of Zeno were published at Venice in 10 vols. 8vo, 1744. They rank not very high as poetical compositions; but he is the first Italian poet who gave his countrymen good rules for tragedy, and freed it from the intermixture of low buffoonery with which the Italian serious drama was before infected. His letters, which were published in 1752, in 3 vols. 8vo, contain much sound criticism, and many notices of the literary history of his time.—*Fabroni Vita Ital. Tiraboschi.*

ZENOBIÀ, queen of Palmyra, and one of the most illustrious women who have swayed the sceptre, claimed her descent from the Macedonian kings of Egypt. She was instructed in the sciences by the celebrated Longinus, and made such progress, that besides her native tongue she spoke the Latin, Greek, and Syrian languages. She also patronized learned men, and herself formed an epitome of Egyptian history. She was married to Odenatus king of Palmyra; and accompanied him both in the war and the chase, and the success of his military expedition against the Persians is in a great degree attributed to her prudence and courage. Gallienus, in return for services which tended to preserve the east to the Romans after the capture of Valerian by Sapor king of Persia, declared Odenatus emperor; on whose death, in 267, she assumed the sovereignty, under the title of queen of the East. She preserved the provinces which had been ruled by Odenatus, and was preparing to make other conquests, when the succession of Aurelian to the purple led to a remarkable change of fortune. That martial prince, disgusted at the usurpation of the richest provinces of the East by a female, determined to make war upon her; and having gained two battles, besieged her in Palmyra, where she defended herself with great bravery. At length finding that the city would be obliged to surrender, she quitted it privately; but the emperor, who had notice of her escape, caused her to be pursued with such diligence, that she was overtaken just as she got into a boat to cross the Euphrates. Aurelian spared her life, but made her serve to grace his triumph. The Roman soldiers demanded her life, as that of another Cleopatra; but according to Zosimus she purchased it by sacrificing her ministers, to whose advice she attributed her proceedings, among whom was the illustrious Longinus. She was allowed to pass the remainder of her life as a Roman matron, and her daughters were married by Aurelian into families of distinction. Her only surviving son retired into Armenia, where the emperor bestowed on him a small principality.—*Crevier. Gibbon.*

ZENUS (JACONUS) a Venetian nobleman, who became bishop of Padua in the 15th century, and was eminent for his proficiency in both sacred and profane literature; he was also distinguished for his eloquence, and for

his wisdom and experience as a politician. Trithemius states that he was the author of several works calculated to procure him posthumous fame, among which he particularly notices a treatise "*De Gestis Summorum Pontificum Liber unus.*" He flourished in the reign of the emperor Frederick III; and his death occurred in 1477.—*Trithem. de Script. Eccles.*

ZEUNIVS (JOHN CHARLES) a learned German critic and classical scholar, who was professor of the Greek language at the university of Wittemberg, in the latter part of the last century. He distinguished himself as a philological writer, and published valuable editions of the works of Xenophon, Terence, Macrobius, &c. His death took place in 1788.—*Zopf Hist. Univ.*

ZEUXIS, a celebrated painter, who is said to have begun to practise his art in the fourth year of the ninety-fifth Olympiad, B.C. 397. He was a native of Heraclea, but of which town bearing that name in Greece or Magna Grecia, is not ascertained. He is said by Quintilian to have been the first who exhibited a due understanding of the management of light and shade; but at the same time he was thought to have given too much of bulk and massiveness to the human figure. He stood extremely high in his profession, and many stories are told of the fidelity with which he copied nature. One of his most famous pictures was a Helen, which he executed for the Crotonians as an ornament for their temple of Juno. This figure was celebrated by the poets and amateurs of antiquity as the finest specimen of art existing; and the artist himself, who was very vain and ostentatious, inscribed under it the lines of Homer, in which Priam speaks his admiration of the beauty of Helen. He became very rich, and at length gave his pictures away, affecting to regard them as above all attainable price. One of his finest performances, a Hercules strangling some Serpents in his Cradle, with Alcmena and Amphitryon looking on in terror, was on this principle presented to the Agrigentines. Of the circumstances of his private life little is known, nor is it recorded how long he lived. Tradition, most likely erroneously, attributes his death to a very whimsical cause: it is said, that having painted an old woman, on attentively surveying his work he was seized with so violent a fit of laughter, that he died on the spot.—*Plinii Hist. Nat. Junius de Pictura Veterum.*

ZIEGENBALG (BARTHOLOMEW) a celebrated Protestant missionary, was born at Pullnitz, in Upper Lusatia, June 14, 1683. Having gone through the usual course of school education at Gorlitz and Berlin, he removed in 1703 to the university of Halle, where he applied himself closely to biblical literature. About this time, the king of Denmark being desirous of sending some qualified missionaries to India, Ziegenbalg was particularly recommended to him, and in 1705 he was ordained at Copenhagen for that purpose. He sailed to India the same year, and arrived at

Tranquebar in July 1706, but met with great opposition on the part of the Danish authorities, who for a short time even confined him; nor was he allowed to proceed in a translation of the New Testament into the Malabar language, which he had commenced. Orders, however, arriving from Copenhagen for the Danish authorities to protect the missionaries, and also receiving great pecuniary assistance from England and Germany, he was enabled in 1711 to make a voyage to Madras, and also to visit the territories of the mogul. In October 1714 he sailed for Europe, and reached Copenhagen in the following year. He was received with great respect, and after completing a dictionary of the Malabar language, which was printed at Halle in 1716, 4to, he visited England, where he obtained an audience of George I and the members of the royal family, and obtained a passage to India by the direct countenance of the East India Company. He accordingly embarked at Deal in March 1716, and arrived at Madras the following August, whence he proceeded to Tranquebar, and resumed his functions. Inspired by the encouragement which he had met with in Europe in 1718, he took an extensive journey by land, and was fulfilling the object of his mission with great zeal and success, when he was attacked by the cholera morbus, and died February 23, 1719, in the thirty-sixth year of his age. He was the author of some accounts in German of the particulars of his mission; of "*Grammatica Damulica.*" Halle, 1716, 4to; "*Brevia Delineatio Missionis Operis.*" 1717; "*Explicatio Doctrinae Christianae Damulice.*" 1719, 8vo; "*Biblia Damulica.*" 1723. In some of these works he was assisted by his brother missionaries Grundler and Schultz.—*Chaufepié.*

ZIEGLER. There were three of this name. JAMES, the first in point of time, a Bavarian, or as some say, a Suabian by birth, was an eminent divine and a professor of mathematics at Vienna, in the fifteenth century. He was educated in the Romish church, but abjured it for the reformed religion before his death, which took place in 1549. He is known as the author of "*Notes on Passages of the Bible.*" fol.; "*A Description of the Holy Land.*" fol. 1536; "*On the Construction of the Solid Sphere.*" 4to, and a Commentary on the second book of Pliny.—BERNARD ZIEGLER, a native of Misnia, was born about the close of the fifteenth century, and became the intimate friend of Luther and Melancthon. He filled the divinity chair at Leipsic with considerable reputation, and was the author of several tracts, principally on controversial subjects. His death took place in 1556.—GASPAR ZIEGLER, a German lawyer of much eminence, was born in 1621 at Leipsic, and became professor of jurisprudence at Wittemberg. He published a commentary on Grotius's work, *De Jure Belli et Pacis*, and several treatises on the offices of bishops, priests, deacons, &c. He died in 1697.—*Moreri.*

ZIETEN (JOHN JOACHIM VON) a Prussian

officer who served in the wars of Frederick the Great, and held a distinguished place among the military favourites of that prince. He entered into the army in the reign of Frederick William I, and his courage and attention to his duties gradually raised him to eminence; though his promotion was somewhat retarded by the impetuosity of his disposition. He was present in several of the principal engagements which took place in the seven years' war; and he signalized himself particularly at the battle of Prague, and in attacking the heights of Torgau. His death took place at an advanced age, in 1785.—*Month. Mag. Nouv. Dict. Hist.*

ZIMMERMANN (JOHN GEORGE) an eminent physician and miscellaneous writer, was born in 1728, at Brug, in the canton of Berne, of which his father was a senator. After receiving a regular education, he made choice of the medical profession, and repaired to the university of Gottingen, where he studied under Haller, a relation of whom he subsequently married, and soon after was appointed public physician to his native town of Brug. In this retired situation he employed his leisure in the publication of pieces both in prose and verse, and among others the first sketch of his popular work "On Solitude." This was followed by his essay "On National Pride," which passed through several editions, and was translated into various foreign languages. In 1763 he composed his work "On the Experience of Medicine," which he followed up by several other professional treatises, in consequence of which he received an offer of the vacant post of physician to the king of England for Hanover, which he accepted, and removed in 1768 to that capital. Notwithstanding his literary speculation on solitude, he appears to have been heartily weary of it in his native town; nor in any situation did the constitutional irritability of his temper, and tendency to hypochondriacism, allow him much satisfaction. In 1771 a local complaint induced him to put himself under the care of a celebrated surgeon in Berlin, where he received many flattering attentions from Frederick the Great. Having become a widower, he married a second time in 1782, and was indebted to this union for most of the comfort of his remaining life. His literary occupation for some subsequent years was to re-write his favourite work on solitude, which was ultimately published in 4 vols. 8vo. In 1786 he attended Frederick in his last illness, which afforded little room for medical skill, but enabled him to publish an account of his conversations with that celebrated sovereign. He also undertook a defence of that prince from the censures of the count Mirabeau, which writings exposed him to some severe criticism. His mind was farther disquieted by the part which he took in the controversies which arose out of the discussions that led to the French revolution. Attached by court habits and birth to the cause of royalty and aristocracy, he viewed with extreme jealousy every thing which exhibited the slightest tendency to affect them.

BIOG. DICTION.—VOL. III.

He even proceeded so far as to address a memoir to the emperor Leopold, recommending the suppression of certain societies of which he disapproved, by the hand of power; and involved himself in a prosecution for libel, for a charge which he brought against the baron de Knigge, for an unavowed publication. While his mind was in a state of agitation from these causes, the approach of the French towards Hanover in 1794 almost subverted his reason. He could think of nothing but the pillage of his house and ruin of his fortune, and under this morbid irritation wasted to a skeleton, and died absolutely worn out in 1795, at the age of sixty. Most of his works have been translated into English, and his "Solitude" was at one time very popular.—*Life by Tissot.*

ZIMMERMANN (EBERHARD AUGUSTUS WILLIAM von) a German naturalist and statistical writer, born in 1743, at Weltzen, where his father filled the post of superintendent. He studied at the university of Gottingen, and afterwards at that of Leyden; and having completed his education, he obtained the professorship of natural philosophy in the Caroline College at Brunswick. He published a mathematical treatise on the analysis of curves; and this was followed in 1777 by his "Specimen Zoologie," which was published in French at Cassel in 1784, 8vo, under the title of "Zoologie Géographique." The subject of this tract is an investigation of the native climates of the respective varieties of animated beings; and the inquiry was still further pursued in Zimmermann's subsequent work on "The Geographical History of Man and Quadrupeds," 3 vols. 8vo. During a visit to England in 1787 he published a "Political Survey of the Present State of Europe;" and he subsequently employed his pen in opposing the principles of the revolutionary statesmen of France; and his services in checking the spirit of political innovation among his countrymen, procured him a patent of nobility from the emperor Leopold II. He afterwards published "A Geographical Survey of France, and of the American United States," 2 vols. besides other works. He removed in 1806 from Brunswick to Hamburg; but he some time after returned to Brunswick, where he resided till his death in 1815.—*Biog. Nouv. des Contemp. Life of Zimmermann by Bottiger.*

ZINCKE (CHRISTIAN FREDERICK) a German artist, celebrated for the beauty of his paintings in enamel. He was born in 1684 at Dresden, but passed the greater part of his life in England, where he arrived in his twenty-second year. He was the scholar of Boit, but is considered to have far exceeded his master in the excellence of his productions. He was much patronized by George II. and his queen, and was appointed cabinet painter to Frederick prince of Wales. He died in March 1767.—*Walpole's Anecd.*

ZINGIS, GENGIS, or JENGHIS KHAN, founder of the Mogul empire, was the son of a chief over thirteen hordes of Moguls, in the vast Tartarean range between China and the

Caspian sea. The date of his birth is placed about 1161, and the first name he bore was Temugin. His father dying when he was only thirteen years of age, the greater part of his subjects deserted him, and joined another chief. He took the field against the revolted, and after an indecisive battle, experienced a considerable variety of adventure, in respect to which the Oriental writers are very confused. At length, in his fortieth year, having attained great celebrity as a warrior, he reduced the revolted hordes, and treated the leaders with extreme severity. Confederacies were then formed against him by the other Tartar chiefs, but he baffled all their attempts, until, by the total defeat of the great khan of the Karaites, he rose to the supremacy of the Mogul tribes, of whom, in the year 1206, he was acknowledged sovereign under the title of Chingis, or Zingis, signifying the most great. The laws of Zingis had for their object the preservation of peace at home and the conduct of war abroad. The penalty of death was denounced against murder, adultery, perjury, and the theft of cattle. The future election of the great khan was vested in the princes of his family, and the natives were interdicted all servile labours, which were to be performed by slaves and strangers. In religion he was himself a pure theist, but he allowed all his subjects, Jews, Christians, Mahometans, and idolaters, to pursue their different systems in peace, without distinction as to privileges. Having settled the affairs of his proper Mogul empire, he turned his attention to China, and in two expeditions he completely subdued its five northern provinces. He next invaded the dominions of Mahommed sultan of Karizm, whose territories extended from the Persian gulf to the confines of India and Turkestan. In this expedition he employed an army of 700,000 men, which was commanded by his four sons. They were opposed by 400,000 of the troops of the sultan, and the result was the entire conquest of the dominions of Mahommed, who died a fugitive in a desert island in the Caspian sea. In the mean time two of his generals had conquered Persian Irak, reduced Ardebil and Tauris, and defeated the Georgians. They afterwards returned through the gates of Derbend, crossed the Volga and the desert, and thus completed the circuit of the Caspian sea. After completing his recent conquests, the khan returned to Bochara in 1223. In 1224 he crossed the river Sir, and held a grand diet in the plains of Tonkat, which, although seven leagues in length, was scarcely able to contain the tents of all the great personages assembled from the most remote provinces. In the following year he brought under his dominion the kingdom of Hya or Tangut, in northern China, and then went to pass the summer heats in the province of Shensi, when falling sick, he sent for the generals of his army, before whom he declared his fourth son regent, until the arrival of his brother Octai, whom he named his successor, and then expired in August 1227, at the age of sixty-six. By his many wives he left a

numerous issue, of whom four sons are alone mentioned in history. Zingis possessed the civil and military qualities necessary for the founder of a mighty empire, with a penetrating and inquiring mind, which, by proper culture, might have entitled him to a place among truly great princes. As it is, his memory survives chiefly as that of one of the extensive conquerors whose deeds have contributed at once to devastate and astonish the world. His simple laws were long strictly observed by the people whom he governed, and even now they form the code of the Crim Tartars.—*D'Herbelot. Univ. Hist. Gibbon.*

ZINN (JOHN GODFREY) a distinguished physiologist, who was professor of medicine at Gottingen, where he died April 6, 1758, at the age of thirty-two. Notwithstanding he was cut off so early in life, he had attained high reputation as a man of science; and he had been admitted into the Academy of Gottingen, the Institute of Bologna, and the Royal Academy of Berlin. He was a pupil of Haller, whose physiological doctrines he supported; and he also published new experiments on the insensibility of the pericranium and dura mater, and on injuries of the cerebellum and the spinal marrow. But he chiefly employed himself in researches into the structure of the eye, on which subject he published a valuable work, entitled "Descriptio Anatomica Oculi Humani, iconibus illustrata, Gotting." 1755, 4to. Zinn was also the author of a "Catalogue of the Plants cultivated in the Botanic Garden at Gottingen, together with those Growing in the neighbouring Country," 1757, 8vo.—*Eloy Dict. Hist. de la Med.*

ZINZENDORFF (NICOLAS LOUIS, count) founder or restorer of the sect of the Moravian brethren, was born at Dresden in the month of May, 1700. He was descended from an ancient and noble family in Austria, and his father, who was one of the principal ministers of the elector of Saxony, died a few weeks after his birth. His mother marrying a Prussian general officer, he was educated under the eye of his grandmother, who being of a very pious turn of mind, he early acquired the bent by which he was afterwards so much distinguished. He was entrusted to the care of professor Franke at Halle, and it is asserted that even before he left school he endeavoured to form religious societies, and was accustomed to hold assemblies of young people in remote places. In 1716 he removed to Wittemberg, where he prosecuted his studies with great zeal, and then proceeded on his travels. He staid some time at Utrecht to study history, jurisprudence, and theology, and then proceeded to Paris, distinguishing himself in every place by his zeal to diffuse his own peculiar notions. He returned to Germany in 1720, and having received the management of his property from his guardians, he purchased a lordship in Lusatia, and espoused a sister of the prince of Reuss. It was in the year 1722 that he began to conceive the idea of a purer church discipline, some traces of which were observable among the sect called the Bohe-

mian and Moravian brethren. A leader of these, a carpenter, named Christian David, obtained an introduction to count Zinzendorf, who allowed him and a few followers of both sexes to settle on his estate. These poor people erected on a hill in a wild marshy district, a wooden habitation, where they resided amidst the ridicule and scorn of the neighbourhood, until the contagious properties of this species of enthusiasm gradually increased their numbers. Such was the commencement of the celebrated village of Herrnhut, which arose more from accident than any regular plan on the part of count Zinzendorf. It soon grew into a considerable place, by the accession of more converts; and the count, in conjunction with a Lutheran minister named Rothe, the clergyman of Berthelsdorf, and some others laboured to instruct them, and to give education to their children. At length he endeavoured to form statutes for their government; and from this period the Moravian writers date the renewal of the Union of the Brethren. The whole congregation was divided into classes called choirs, and one of their own sex and station in life was appointed, under the inspection of the elders, to the special care of each. The ministers, according to the apostolic practice, were chosen by lot. They have adopted also other primitive practices, such as the foot-washing, the kiss of charity, and the celebration of the agapæ, or love-feasts. All matrimonial contracts were subject to the approbation and direction of the elders, and their worship is addressed almost exclusively to Jesus Christ. In 1736, on his return from a tour in Switzerland, the count met a rescript, forbidding his return to his native country, on which he repaired to Berlin, where, under the sanction of the king of Prussia, he was consecrated bishop of the Moravian congregation. He then visited England, and formed the commencement of the brethren in London, and became acquainted with John Wesley. He was so anxious to extend his sect, that he travelled over almost all Europe, and twice visited America, in consequence of which numerous settlements of Moravians were formed, and missionaries sent to all parts of the world. In 1747 he received permission by electoral decree to return to Saxony, where he obtained leave for the Moravians to establish a theological academy; he also succeeded in obtaining a commission of investigation into their principles, which commission declared the Moravian community true adherents of the confession of Augsburg. In 1747 he went to England, and countenanced by archbishop Potter, general Oglethorpe, and others, obtained an act of parliament for the protection of his followers throughout the British dominions. This extraordinary character ultimately died at Herrnhut, after a short illness of four days, in the month of May 1760, and his funeral was attended by upwards of two thousand of his followers. Count Zinzendorf was of quick and apprehensive faculties, but as in the case of most persons of very lively imagination, he was by no means retentive or

correct. In his writings he set all rules of grammar at defiance, but produced considerable effect by his extempore preaching. In all respects, indeed, he was eccentric and irregular, which gave his enemies ample scope to assail him, of which they very freely availed themselves. He was accused, like many other religious leaders who aspire to the formation of a sect, with a mixture of finesse and artifice; but, upon the whole, the purity of his general purposes can scarcely be doubted, and possibly looking to the nature of the superstructure which he did so much to raise, more judgment and less vivacity of action and deportment might have failed to produce so striking a result.—*Crantz's History of the United Brethren. Mosheim.*

ZISCA (JOHN) whose proper name was Trocknow, was a native of Bohemia, and was brought up at the court of the emperor Wenceslaus. He went into the army very young, and lost an eye, whence he was called Zisca, which signifies one-eyed. Almost all the Bohemians partaking of the sentiments of the reformer John Hus, whose cruel death produced great exasperation, Zisca became their leader, and soon saw himself at the head of 40,000 men, with which he gained several victories over the Catholics. He built a town in an advantageous situation, which he named Tabor, whence the Hussites were called Taborites. He lost his other eye at the siege of Rubi, which did not prevent his continuing the war, and obtaining great victories, which induced the emperor Sigismund privately to offer him very advantageous terms, which he accepted, and set out to meet the emperor, but died of the plague on his journey in 1424. It is said that he ordered a drum to be made of his skin, at the sound of which he assured his followers that the Catholics would immediately fly. It is added that the Hussites obeyed him, and his predictions were verified: but the whole story is justly deemed an absurd fiction. Zisca has been ranked among the reformers; but he was more a general than a divine, and makes a better figure in belligerent history than in that of the church. Like some who had not the same excuse of the military character, he seems to have modelled himself rather on the example of the prophets and leaders of the Old Testament than of the New. His abilities as a captain were however very great, nor was the end he sought unworthy of his exploits. Devoid of ambition and avarice, he seemed to have no other aim than to put down ecclesiastical tyranny, and to establish civil and religious liberty upon its ruins.—*Gilpin's Lives. Mosheim.*

ZOEGA (GEORGE) a learned antiquary, was born at Kiel in Holstein, in 1751. He resided at Rome for several years as consul of Denmark, and was much countenanced by Pius VI, at whose desire he wrote a work entitled "De Origine et Usu Obeliscorum." He was reduced to great poverty by the French invasion of Italy, but met with relief from the king of Denmark. Besides the work already mentioned, he was author of a "Dissertation

ZON

on Lycurgus and the Menades," and formed a catalogue of the imperial medals found at Alexandria.—*Life by Bernenud.*

ZOFFANY (JOHN) an eminent painter, who acquired the principles of his art in Germany, but came to England in the early part of the late reign. Obtaining the notice of George III and his consort, they sat to him for a large picture, in which the whole family appeared assembled. He was soon after admitted a member of the Royal Academy, and subsequently visited India, where he became a favourite with the nabob of Oude, and amassed a handsome fortune, with which he returned to England, and settled at Kew, where he died in 1810.—*Gent. Mag.*

ZOILUS. The name of a Thracian rhetorician, whose hyper-criticisms on the works of Homer have given him a very unenviable kind of distinction with posterity. He was a native of the town of Amphipolis, said to have been born about two hundred and seventy years before the Christian era, and studied under Polycrates, himself an abusive and illiberal critic. The appellation by which Zoilus delighted to be known was Homero-mastyx, although his censures were by no means confined to the writings of the great father of epic poetry, but extended indiscriminately and impartially to those of Demosthenes, Aristotle, Plato and all others whose works came under his lash. His very name has now become a proverb as applied to all illiberal and captious pretenders to criticism. The period of his death, which was a violent one, is unknown; indeed the precise era in which he lived is not absolutely determined, Vitruvius making him contemporary with Ptolemy Philadelphus, while Ælian refers him to the ninety-fifth Olympiad.—*Life by Parnell.*

ZOLLIKOFER (GEORGE JOACHIM) an eminent Swiss divine, born in 1730, at St Gall. He received the rudiments of his education at Bremen, and completed it afterwards at Utrecht. Having devoted himself to the ministry, he settled as pastor to a congregation at Murten, where, as well as at his subsequent cures in the Grisons and at Isenburg, he distinguished himself by his great purity of character, eloquence and abilities. Eight volumes of his discourses, which are highly esteemed in his native country, have been printed; two of which have within these few years been elegantly translated into English by the late rev. W. Tooke, as also a small volume of his "Devotional Exercises." Zollikofer passed the latter part of his life at Leipsic, and died there in 1788.—*Memoirs prefixed to Translation of Sermons.*

ZOLLNER (JOHN FREDERICK) an eminent German theologian and philosopher, who was minister of a Lutheran church at Berlin. Besides works on divinity, he was the author of "Travels in Silesia." He died in 1804.—*Zopf Hist. Univ.*

ZONARAS (JOHN) a monk of St Basil, by birth a Greek, who lived during the latter part of the eleventh and the commencement of the following century. Before he renounced the

ZOR

world for the cloister, he had filled some distinguished offices about the imperial court, but becoming at length disgusted with its intrigues, gave himself up to a religious life, employing his leisure hours in the compilation of a "History of the World, from the Earliest Periods to the Year 1118." In this work, of which an edition appeared at Paris in two folio volumes, 1687, he follows principally the narrative of Dion Cassius, and all the earlier part of the book is a tissue of fable; but as he approaches his own times he becomes more entitled to attention, as all his mistakes arise evidently more from ignorance than design. There is also extant a commentary on the apostolic canons by him. His death took place about the year 1120.—*Fabricii Bibl. Grec.*

ZONCA (VICTOR) an eminent Italian architect and mathematician, who flourished in the seventeenth century. He is chiefly known as the author of a work, entitled "Novo Teatro di Machini e Edificii."—*Novv. Dict. Hist.*

ZOPF (JOHN HENRY) a German divine and historian of the last century. He was a native of Gera, and became rector of the gymnasium of Essen. In 1729 he published a sketch of universal history, under the title of "Grundlegung der Universal Historie." This work passed through many editions, with alterations and improvements, previous to the death of the author, which took place in 1774. The nineteenth edition, much enlarged, was published by M. Fabri, in 1782; and from a subsequent edition by professor Krause, of Halle, was made a French version, which appeared in 1810, under the following title, "Précis d'Histoire universelle, politique, ecclésiastique, et littéraire, depuis la Creation du Monde jusqu'à la Paix de Schoenbrunn, trad. de l'Allemand d'après la 20me edit. de J. H. Zopf," Paris, 5 vols. 12mo.—*Orig.*

ZOROASTER, a celebrated Eastern philosopher or divine. His history is involved in great obscurity, and it is uncertain whether his name belongs to one or to many persons. Some writers have maintained that there was but one Zoroaster, who was a Persian; while others, in order to reconcile opposing accounts, make also a more ancient Zoroaster, who was a Chaldean. The favourers of the latter opinion make the Chaldean Zoroaster the father of the Chaldean astrology and magic; but all the writings attributed to this probable nonentity are undoubtedly spurious. The other Zoroaster, the Zerdusht of the Persians, appears to have lived at a much later period than that assigned to the former, and is considered as the reformer of the more ancient religion of the magi. This system of religion is contained in a work called the Zendavesta, of which there is a compendium called the Sadder, both being esteemed of sacred authority. Of these the fundamental article is the celebrated doctrine of the two principles, being an attempt on the part of Eastern philosophy to reconcile the existence of moral and physical evil with the attributes of a wise and benevolent creator of the world. The primary

or original being, according to Zoroaster, is "Time without bounds," a mere metaphysical abstraction, which is made to produce the active principles of good and evil, Ormuzd and Ahriman; the former of whom, at the final consummation, will triumph over its opponent, and the latter and his followers will sink into native darkness. These tenets were shadowed in the obscurity of Oriental mysticism and allegory, so as to be comprehended only by the studious; but the simplicity of the rites enjoined by Zoroaster was obvious to common observation. According to Herodotus the ancient Persians rejected the use of temples, altars, and statues, and offered sacrifices on the summits of the mountains. They were charged with worshipping the elements, and the sun and moon, which arose from their particular reverence for fire, light, and the sun, which last they termed Mithra. On their own part they asserted that they only regarded them as symbols of the divine power and nature. A great number of trifling ceremonies are enjoined by the Sadder, but like all religious systems it contains some pure moral precepts, and requires good deeds as well as ritual observances. The magi, or sacerdotal order, in this system were numerous, and formed a regular hierarchy, and the payment of tithes for their maintenance was made a sacred duty. The language of the Zendavesta has from a remote age been obsolete, which indicates its great antiquity. Many other works have been attributed to Zoroaster, but they are all lost except the fragments of a production entitled his "Oracles," which are still extant. Of these a collection has several times been published, but they abound so much in the language of the later Platonists, that Brucker attributes them to some writer of that sect, about the beginning of the second century.—*Univ. Hist. Brucker. Gibbon.*

ZOSIMUS, surnamed the Panopolitan, because he was a native of the city of Panopolis in Egypt. Delrio and Naudé, who state that he was the most ancient Greek writer on chemistry, place him under Diocletian, towards the close of the third century. The titles of his works are a "Treatise on the Composition of Waters;" "The Divine Book of Zosimus on Virtue and Interpretation;" a "Treatise on the Sacred and Divine Art;" and a "Treatise on Instruments and Furnaces." According to Boerhaave the writings of Zosimus exist in manuscript in the library of the king of France.—*Elvy Dict. H. de la Med.*

ZOSIMUS, a Pagan historian, who held the post of advocate to the treasury at the court of Constantinople. He compiled a history of the Roman emperors, from Augustus downwards, of which work the first six books are yet extant. The first, from Augustus to Dioclesian, is a mere abridgment of former authors, the remainder are written more diffusely, and are replete with invective against Constantine, Theodosius I, and the other Christian emperors. There are several editions of this book; the earliest is that of Frankfort, with a Latin version by Leunclavius, 1590;

another printed at Oxford in octavo, 1679; that by Cellarius in 1696; and the last and best published at Leipzig in 1784, in octavo.—*Fabricii Bibl. Græc.*

ZOUCH (RICHARD) an eminent civilian, descended from an ancient and noble family of that name, was born at Anstey in Wiltshire, about 1590. He was educated on the foundation at Winchester, whence in 1607 he was elected to New college, Oxford, and chosen fellow in 1609. Having studied civil law, he was in 1613 admitted at Doctors'-commons, and became an eminent advocate. In 1620 he was appointed regius professor of law at Oxford, and ultimately judge of the high court of admiralty under Charles I. In 1633 he was appointed by Cromwell one of the delegates in the famous cause of don Pantaleon Sa, brother to the Portuguese ambassador, who was executed for killing a gentleman in the New Exchange, Westminster. On the Restoration he was reinstated in his post of judge of the admiralty, but he died the same year, March 1, 1660. He was author of several esteemed professional treatises, the principal of which are "Elementa Jurisprudentiæ," Oxon. 1629, 8vo; "Descriptio Juris et Judicii Feudalis," Oxon. 1634—1636, 8vo; "Descriptio Juris et Judicii Temporalis," Oxon. 1636, 4to; "Descriptio Juris et Judicii Ecclesiastici," 1636, 4to; "Descriptiones Juris et Judicii Sacri; Juris et Judicii Militaris; et Juris et Judicii Maritimi," Oxon. 1640, 4to; "Solutio Questionis de Legati Delinquentis, Judici Competente," 1657, 8vo; "Descriptio Juris et Judicii Feudalis," Oxon. 1650, 4to; "Eruditionis Ingenus Specimini scilicet Artium Logicæ," &c. Oxon. 1657; "Questionium Juris Civilis Centuria," Oxon. 1660; "The Jurisdiction of the Admiralty maintained against Sir Edward Coke's Articuli Admiralitatis," London, 1663, 8vo. He also wrote a poetical work in his youth, entitled "The Dove, or certain Passages of Cosmography."—*Biog. Brit. Cooke's Cat. of Civilians.*

ZOUCH, DD. (THOMAS) a learned divine, was born in 1737, at Sandal, near Wakefield, in Yorkshire. In 1757 he was removed from the school of the latter place, to Trinity college, Cambridge. In 1763 he was chosen fellow of his college, which in 1770 presented him to the rectory of Wycliffe, in the North Riding of Yorkshire. In this retirement he continued until 1793, diligently performing his duty as a parish priest, and augmenting his knowledge of natural history, especially botany. He was then appointed chaplain to the master of the rolls, and rector of Scrayingham. By the death of his elder brother, the rev. Henry Zouch, in 1795, he succeeded to an estate at Sandal, where he resided until his death. In 1805 Mr Pitt presented him with the second prebend in the church of Durham, and in the same year he took the degree of DD. He was offered the bishopric of Carlisle in 1808, but declined it on account of advanced age. He died in 1806. His works are "The Crucifixion, a Seaton Prize Poem;" "An Inquiry into the prophetic Character of

the Romans, as described in Daniel;" "The good Schoolmaster, as exemplified in the Character of the Rev. John Clark;" "Memoirs of Sir Philip Sidney," 4to; "Memoir of John Sudbury, Dean of Durham;" an edition of Isaak Walton's *Love and Truth*; and another of the lives of Donne, Wotton, Hooker, and Herbert, by the same author, with notes, and his life; and a "Memoir of Sir George Wheeler," not printed until after the author's death.—*Gent. Mag.*

ZUCCARELLI (FRANCIS) a member of the Royal Academy of London, and an able artist, was born at Florence in 1710. In early life he studied as a historical painter, but afterwards confined himself to landscape, in which he obtained great mastery. He came to England about 1753, when he met with much encouragement, and several of his pictures were engraved by Vivares. He returned to Florence with a handsome independence, but having placed it on bad security, he was once more constrained to have recourse to his pencil. He died at Florence in 1788. Some of the pictures and etchings of this artist are very highly esteemed.—*Edwards's Anecdotes of Painting.*

ZUCCHERO, the name of two eminent Italian artists, brothers, and natives of the duchy of Urbino. **TADDEO**, the elder, born in 1529, was placed by his father, himself a painter, with Pietro Calabro, at Rome, before he had reached his fifteenth year, under whom he attained to great proficiency in the art; and although his colouring is faulty, excelled in elegance of design. His fame might in all probability have risen higher had he lived to complete many excellent pictures which his untimely death in 1566 left incomplete.—His younger brother, **FREDERICO**, born in 1543, studied under him till his decease, and afterwards finished several of the paintings above mentioned. A quarrel with some of the distinguished persons about the papal court, induced him to revenge his injuries real or supposed, by caricaturing his enemies, whom, in a picture entitled "Slander," he represented wearing asses' ears. This ebullition of his spleen (of which there is an engraving by Cornelius Cort) lost him the patronage of pope Gregory XIII, in whose favour he had previously ranked high, and he found it advisable to quit Rome. Retiring therefore into France, he entered the service of the cardinal of Lorraine, and afterwards went to Madrid, where Philip II gave him employment for a while. His next removal was to England, where he soon grew into great repute, and painted the portrait of queen Elizabeth. His friends at length succeeded in restoring him to favour at Rome; and receiving permission to return, he established an academy of painting in that city, for which he built a handsome edifice, and continued to superintend it till his death in 1609, or as others say 1616.—*D'Argenville Vies de Peint.*

ZUINGER (THEODORE). There were three of this name; the elder, a native of Bictenatzel, in the Turgau, born 1534, was

educated at Basil, where he devoted his attention to the study of medicine, and practised there with great reputation as a physician, after having lectured on that science at several of the French and Italian universities. His death took place in 1588. He was the author of an elaborate and voluminous treatise, entitled "The Theatre of Human Life," which being left incomplete at his decease, was finished by his son James, who published it at Lyons in 1656, in eight volumes, folio.—The second, son of James, and grandson of the preceding, united the character of a physician to that of an ecclesiastic, and became pastor of a congregation at Basil, where he established a high reputation in both capacities, especially during the great plague which devastated that city in 1629. He died in 1651, leaving behind him only a few tracts on devotional subjects.—The third was grandson to the last-mentioned Theodore, son of John Zuinger, Greek professor at Basil, and inherited the talents and industry of the family. He obtained the professor's chair in physics and eloquence in his native university, Basil, and is known as the author of a "Theatre of Botany," written in the German language, in folio; "Fasciculus Dissertationum," 4to; "Triga Dissertationum," 4to; some medical tracts, and a Latin and German Dictionary. His death took place in 1724.—*Moreri. Freheri Theatrum.*

ZUINGLIUS (ULRICUS) celebrated as the Swiss reformer, was born January 1, 1484, at Wildhausen, a village of Tockhausen, which is a member of the Helvetic confederacy. His father was a peasant in easy circumstances, who attained the dignity of first magistrate of the district. His early indications of a studious disposition induced his parents to bring him up to the church, for which purpose he was sent to the universities of Vienna and Basil, in which last he became a teacher of the classics when only in his eighteenth year. He studied theology under Wittenbach, and having graduated M.A. was chosen minister of Glaris, the chief town of the canton of that name. In order to fit himself for his profession, he engaged in an extensive course of biblical reading, and especially in a critical perusal of the New Testament. To this he joined the study of the fathers and of the authors of the middle ages, including those who had been censured by the church of Rome. The effect of this research was gradually to imbue him with the principles of the Reformation, which he exhibited openly in his subsequent office of preacher at the celebrated abbey of Einsiedlen, in the canton of Schwitz. Here, both in the pulpit and as a confessor, he aided the propagation of rational notions of religion, and even ventured to assail the legendary sanctity of the abbey in which he presided. In 1518 he was invited to fill the vacant post of preacher in the cathedral of Zurich, where he soon acquired the influence consequent upon his able upright, and vigorous character. About this time he published his first work, entitled "Observations on Lent," in which he advanced

Z U I

some very free opinions on the obligation of fasting and keeping particular days; which production induced the bishop of Constance to address a charge to his clergy, and letters to the council and chapter of Zurich, urging them not to permit the ordinances of the church to be infringed. This was followed up in 1523 by an examination and colloquy, in which he was called upon to give an account of his doctrines before the deputies of the bishop, and the civil and ecclesiastical authorities of the district, in the town-hall of Zurich. The inquiry terminated in favour of Zuinglius, and with something like an open assent to the doctrines of the Reformers. He however proceeded with great calmness and moderation, but in some disputes relating to the worship of images and the celibacy of the clergy, he openly maintained the principles of the Reformation. Such was the progress he and his coadjutors made, that in 1524 the council of Zurich undertook the reform of public worship according to his ideas, one of the first results of which was the clearing of the churches from pictures and images. This was followed by the abolition of the mass, a suppression of the mendicant orders in the city, and the organization of a system of public instruction, both ministerially and in respect to education, which still in a great measure remains in force at Zurich. His first disquiet arose from the fanatics who imbibed the notions of the celebrated anabaptist Muncer, whose extravagances he in vain attempted to keep down, until the execution of one of the ringleaders, named Mantz, as a disturber of the public peace, assisted him to allay the fermentation. His influence now extended to the canton of Berne, where he assisted Haller and other reformers to effect a similar alteration to that which had taken place at Zurich. This accession produced a great alarm to the other cantons, which broke out into open hostilities, that were not settled until the treaty of Coppel in 1529. Some difference existed between the doctrines of Luther and Zuinglius on the subject of the Eucharist, in which the former advocated a modification of the Roman Catholic real presence, whereas the latter regarded it as a simple commemoration. This produced a violent controversy between the Saxon and Swiss reformers, which terminated in a sort of compromise as to the observance of personal moderation. The animosities between the Catholic and Protestant cantons were only repressed, not extinguished, by the peace of Coppel; and at length political differences also ensuing, hostilities recommenced, and Zuinglius being directed to accompany a small body of Zurichers in a particular expedition, with a view to animate them in battle, was mortally wounded in the conflict which ensued, in which his party was defeated. He was found by some Catholic soldiers alive upon the field of battle, one of whom brutally despatched him, and a military tribunal ordered his body to be burnt, and his ashes scattered to the winds. Thus, in October 1531, at the age of forty-seven, terminated the career of this most

Z U R

calm, able, and philosophical of all the reformers, who happily united the qualities which make a man amiable in private society, with the firmness, ardour, and intrepidity which are indispensable in executing strong, salutary, and efficient purposes. His views were large and generous; and it was no small proof of liberality in that age, that he ventured to assert his belief of the final happiness of virtuous heathens and of good men of all descriptions, who act up to the dictates of conscience. As a reformer he was also original, as he emancipated himself from the superstition of the period by the strength of his own judgment, and with far less regard to the prepossessions produced by the old system than Luther, whom he exceeded in learning and moderation as much as he did Calvin in humanity and good temper. He wrote many works of great utility in those days, and the reform of which he was the author remains still undecayed among a people distinguished for morals and mental cultivation.—*Life by Hess. Mosheim.*

ZUMBO (CAJETANO JULIO) a Sicilian artist, who is said to have been the inventor of wax-work anatomical models. He was born at Syracuse, in 1656. According to some, he was a private gentleman, and others say he was a secular priest; but both statements may be correct as referring to different periods of his life. He displayed particular skill in the art of modelling; and a profound study of anatomy, and the antique enabled him to execute works at Bologna, Florence, Geneva, and Marseilles, which have excited great admiration. Millin observes, that his very accurate representation of the degrees of putrefaction in the human body, and the effects of the plague, particularly attracted the notice of connoisseurs. These preparations were for a long time in the gallery of Florence, till the grand duke Leopold gave them to his physician Lagusi. According to Felibien, Zumbo, who was eminent as a sculptor, died at Paris in 1701.—*Nouv. Dict. Hist. Elmes's Dict. of the Fine Arts.*

ZUMSTEEG (JOHN RODOLPH) an eminent musical composer and performer on the violin, who belonged to the chapel of the duke of Wurtemberg. He was born about 1760, at Gansingen, in the country of Lauffenbourg. His professional education commenced at the academy of Wurtemberg, under the chapel-master Poli, who conceiving a friendship for Zumsteege, took a particular interest in his improvement; and he afterwards studied the works of Mattheson, Marpurg, and D'Alembert. He died at Stuttgart, January 27, 1802. He composed both for the violoncello and for the voice, and his works consist of operas, songs, and a mass; besides pieces for instruments.—*Biog. Nouv. des Contemp.*

ZURLAUBEN (BEAT FIDEL ANTOINE JEAN DOMINIQUE, baron de la Tour Chailion) a military historian, who held the rank of lieutenant-general in the service of France. He was a native of Zug in Switzerland, and died in 1799. His works are, "Histoire Militaire des Suisses au service de la France," 8 vols.

Z W E

12mo; "Mémoires et Lettres de Henri Duc de Rohan;" "Tableaux topographiques, pittoresques, physiques, historiques, moraux, politiques et littéraires de la Suisse," 4 vols. folio; besides several other publications.—*Zopf Hist. Univ.*

ZWELFER (JOHN) a pharmaceutical writer of eminence, born in the palatinate of the Rhine in 1618. After some previous study he went to the university of Pavia, where he took the degree of MD.; and he then settled at Vienna, and gave lectures on chemistry. He is also said to have been appointed physician to the imperial court, but this is probably a mistake, as he does not assume the title in any of his works. He died in 1668. Zwelfer was the author of "Animadversiones in Pharmacopœiam Augustanam, et annexam ejus Mantissam," 1652, folio; "Appendix ad Animad-

Z Y P

versiones in Pharm. August.;" "Pharmacopœia Regia, seu Dispensatorium absolutissimum;" and "Discursus Apologeticus adversus Hippocratem Chymicum Ottonis Tachenii.—*Eloy Dict. Hist. de la Med.*

ZYPE (FRANCIS VANDEN) or Zypæus, professor of anatomy in the university of Louvain towards the close of the seventeenth century. He was a native of the Netherlands; and before he settled at Louvain, he taught anatomy and surgery at Brussels, where he acquired much reputation, and was patronized by the duke of Parma, governor of the Low Countries, to whom he was indebted for his academical situation. He was the author of a work entitled "Fundamenta Medicina Physico-anatomica." Brux. 1683, 12mo, which was long used as a text-book in the university where he presided.—*Eloy Dict. H. de la Med*

A CONTINUATION OF LIVES OF INTEREST AND IMPORTANCE OF DECEASED INDIVIDUALS FROM THE DATE OF ORIGINAL PUBLICATION TO THE PRESENT TIME.

BY JOHN GORTON.

A B B

AARON HARISCHON, a Jewish rabbi of the thirteenth century, author of an esteemed commentary on the Pentateuch.—*Moreri*.

AASCOW (URBAN BRUNN) a Danish physician, who died about 1781, author of "A Journal of Observations on the Diseases which occurred on board the Danish Fleet employed in the Bombardment of Algiers, in 1770;" and papers in the Memoirs of the Royal Academy of Copenhagen.—*Lond. Med. Journ. Biog. Univ. Class.*

ABBATISSA (PAUL) a Sicilian poet of the sixteenth century, who translated Homer and Ovid into Italian.—*Moreri*.

ABBATIUS (BALDUS ANGELUS) an Italian physician of the fourteenth century, author of "De Admirabili Viperæ Naturâ," &c.—*Idem*.

ABBATI (FILIPPO) a Milanese historical painter, who died at the beginning of the eighteenth century, famous for invention and facility.—*Pilkington*.

ABBOT (CHARLES) baron Colchester, was born in 1757, and having received the early part of his education at Westminster school, he removed to Christ Church college, Oxford, where he took the degree of B. C. L. in 1788, and that of D. C. L. in 1792. While at the university in 1777 he gained a prize for a Latin poem in praise of the czar Peter the Great, for which Catherine II sent him a gold medal. Adopting the law as a profession, after studying the usual time at one of the inns of court, he was called to the bar, and soon acquired considerable reputation as a chancery pleader. He entered into parliament in 1790, when he was chosen representative

APP. BIOG. DICT.

A B B

of the borough of Helstone, after a contest followed by a petition to the House of Commons; in 1796, he was elected again for Helstone; and in 1802 for the borough of Woodstock. In February 1800, he made a motion in the House of Commons for the appointment of a committee to inquire into the state of the national records; and its researches were carried on under his direction till 1817. In the early part of his parliamentary career, he acted as chairman of the select committee of finance, and was engaged in some legislative measures of importance, relative to the statutes concerning treason and forfeiture, and the responsibility of public accountants. Soon after this he went to Ireland, became a member of the Irish privy council, and acted as principal secretary of state. In February 1802 he succeeded sir John Mitford (lord Redesdale) as speaker of the House of Commons; and in this very important office he distinguished himself by giving the casting vote against the ministry, on the motion of Mr Whitbread for a censure on lord Melville for malversation while treasurer of the navy. In 1806 Mr Abbot was elected, after a contest, representative of the university of Oxford, which seat he retained till 1810, when, on his resignation of the office of speaker of the Commons, he was raised to the peerage by the title of lord Colchester. He held the posts of a lord of trade and plantations, a privy councillor, and keeper of the privy seal in Ireland, at the time of his death, in 1829. Besides a treatise on the "Jurisdiction and Practice of the Court of Great Session of Wales on the Chester Circuit," 1795, 8. 8vo. he published *Speeches delivered in the House*

B

of Commons on the Catholic Question, 1813, 8vo.—*Wilson's Biog. Index to House of Commons. Burke's Peerage. Watt's Bibl. Brit. Gent. Mag.*

ABBOTT (CHARLES) baron Tenterden of Hendon in the county of Middlesex, an eminent judge and law writer. He was of humble parentage, and was born at Canterbury, October 7, 1762. His education commenced at the free grammar school, in his native city, a seminary of considerable reputation, where he remained longer than the usual period for scholars, devoting himself with ardour to study, in the hope of obtaining a foundation scholarship at the university of Oxford, in which he was not disappointed. Entering as a member of Corpus Christi college, he continued his literary pursuits with unabated vigour and perseverance. In 1784 he gained the chancellor's prize for a copy of Latin verses on Aërostation, entitled "Globus Aërostaticus;" and afterwards for an essay on the Use and Abuse of Satire, which was published at Oxford, 1786, 8vo. He speedily obtained both a fellowship and a tutorship; and his success in the latter office led to his adoption of the legal profession, which proved the means of his advancement to fame and fortune. One of his pupils was the son of Mr Justice Buller, who, struck with the promising talents of young Abbott, advised him to apply to the study of the law, with an encouraging prediction that he would rise high in the profession. In pursuance of this friendly recommendation he entered as a student at the Inner Temple, and in 1796 he was called to the bar. He joined the Oxford circuit, and soon obtained extensive employment as a junior counsel; his judgment and learning being eminently conspicuous, though he was deficient in those powers of oratory which are requisite to command extraordinary attention from a jury. But the defect of eloquence was compensated by the extent and accuracy of his legal knowledge, which were so highly appreciated that his business before he was promoted to the bench was probably more profitable than that of any other barrister; as during the continuance of the income tax his returns for several years were higher than those of his professional contemporaries, averaging, it is said, about 10,000*l.* a year. On the death of judge Buller, Mr Abbott was so fortunate as to meet with a new patron in the person of lord Ellenborough, to whose influence he was principally indebted for his advancement to a puisne judgeship in the Court of Common Pleas, which took place on the death of Mr Justice Heath, in Michaelmas Term, 1816. In consequence of the decease of sir Simon Le Blanc, the same year, Mr Abbott was, in the Easter Term ensuing, appointed his successor in the Court of King's Bench, on which occasion he received the honour of knighthood. Lord Ellenborough's retirement, (which was speedily followed by his death,) made way for the ultimate advancement of sir Charles Abbott, in November 1818, to the office of lord chief justice

of the King's Bench. It has been generally understood that when the late lord Gifford was raised to the peerage, in 1824, a coronet was also offered to the subject of this article, by whom it was declined. However, on the 30th April, 1827, he was created a peer, by the title of lord Tenterden of Hendon in Middlesex. He was supposed to have accepted this honour with a view to retirement from the fatigues of office, and the enjoyment of learned leisure; but he continued to discharge the onerous duties of his judicial station during the remainder of his life. In addition to his judicial dignity he held the post of deputy speaker of the House of Lords; and he was a member of his majesty's privy council. He had been for some years in declining health, though with unimpaired faculties, when on the 26th of October, 1832, presiding at the trial of the Magistrates of Bristol, for alleged neglect of duty during the riots in that city, he was taken so ill that he was unable again to make his appearance in the court. He returned to London, where the violence of his complaint rapidly increasing, he died November 4, 1832, at his residence in Russell-square; and he was interred in the chapel belonging to the Foundling Hospital, of which institution he was a governor. His lordship, in his last moments, is said to have exhibited an instance of what Pope styles "the ruling passion strong in death," the more remarkable, perhaps, as it was a manifestation of wandering faculties influenced by the power of habit. The family of the judge were standing around his bed in silent sorrow, watching his last struggles, when he was observed feebly to move his hand along the pillow, as if in the act of writing; and immediately afterwards he was heard to exclaim, almost in his usual tone, "Gentlemen of the Jury, you may retire:" he then closed his eyes, and expired. He was much better qualified for a judge than for an advocate; and in the former capacity he distinguished himself by his skill and judgment, and by the extraordinary dispatch of business, while his decisions have rarely been set aside. Upon the whole, his powers of mind, though considerable, were not of the highest order: they were more discriminative than creative. To extensive acquaintance with the common law of England, (in which he was unequalled since the days of Holt, or even of Coke,) he united extraordinary calmness of temper, the more remarkable as he was constitutionally vehement and imperious—patience in watching and balancing the arguments of counsel, or the facts disclosed in evidence, and skill in laying the merits of the most complex case before a jury. Like the great bulk of trained lawyers, lord Tenterden had his predilections in favour of authority. He was strongly attached to the ancient institutions of the country in church and state; and it has been alleged that he could not entirely divest himself of these prepossessions where the interests of the crown were in question, but still he was a distinguished and very able judge.

A B D

Although without much personal dignity, beyond what was inseparable from suavity of manners under the guidance of good sense, lord Tenterden contrived to keep his court in admirable order, and the most arrogant spirits sunk habitually under his steady and grave rebuke. As a legislator, his claims to notice are not very considerable: he never had a seat in the House of Commons, neither was he an active law reformer; but he introduced into the House of Lords several useful and important bills, (chiefly drawn up on the recommendation of the common-law commissioners,) which have become the law of the land. He seldom spoke before the peers; and one of his latest speeches was against the bill for the reform of the House of Commons. In 1802 he published, "A Treatise on the Law relative to Merchant Ships and Seamen, in four parts:—1. Of the Owners of Merchant Ships; 2. Of the Persons employed in the Navigation of them; 3. Of the Carriage of Goods in them; 4. Of the Wages of Merchant Seamen." 8vo. This is reckoned a standard work, and it has passed through several editions. Lord Tenterden was also one of the best classical and mathematical scholars of the age; and even to the close of his life he was constantly occupied in mastering every kind of knowledge both popular and scientific. As a token of reminiscence of his own educational advantages, he presented to the free grammar school at Canterbury two annual prizes, one for the best English essay, and the other for the best Latin verses; besides a contribution of five pounds a year to the School Feast Society. By his lady, who survives him, he has left two sons and two daughters.—*Ann. Biog. New Monthly Magazine*.

ABD EL AZIZ, Prince of the Wahebis. He was the son of Ibn Scoud, an Arab chieftain, whom he succeeded about the close of the eighteenth century. He availed himself of the zeal and courage of his followers in subjecting to his power those of the Arabian tribes who had not been before subdued, and in the course of his predatory warfare he collected abundance of treasure, and at length found himself at the head of a great nation of soldiers. In 1801 the pacha of Bagdad attacked the Wahebis by order of the Porte, when Abd el Aziz, being obliged to take flight, had recourse to stratagem, and the Turks, deceived by his negotiations and seduced by his promises and bribes, returned to Bagdad. This gave him time to collect his forces, and he suddenly took Imam Hussein and soon afterwards Mecca; but in the midst of his triumphs he was stabbed by an assassin, and died November 13, 1803. He was succeeded by his son Saoud.—*Biog. Univ.*

ABDUL KERIM, a native of Cashemire, settled at Delhi, in Hindostan. Having escaped the carnage which took place on the capture of that city by Nadir Shah, in 1738, he travelled in various parts of India and Arabia. His "Memoirs of the Life of Nadir Shah, and the Political Events in Hindostan," ap-

A B E

peared in an English translation, at Calcutta 1788, 8vo.—*Biog. Univ.*

ABDUL RAHIM, a Mogul writer, who died at Delhi, in 1628. He translated into Persian the "Commentaries" which the sultan Baber wrote in the language of the Ugar Tartars. An English version of these memoirs, from the original, by Dr J. Leyden and W. Erskine, has been recently published.—*Idem*.

ABEL, MD. (CLARK) an ingenious writer and man of science, who accompanied lord Amherst to China, as chief medical officer and naturalist to the embassy. He published a "Narrative of a Journey in the Interior of China, and of a Voyage to and from that Country in the Years 1816 and 1817," with maps and other engravings, Lond. 1818, 4to. This work comprises a valuable essay on the geology of the Cape of Good Hope. Dr Abel, who was a member of the Linnæan, Geological, and Asiatic Societies, and of the Medical and Physical Society of Calcutta, also held the office of surgeon to the governor-general of India. His death took place in December, 1826, during a journey through the upper provinces of India.

ABERLI (JOHN LOUIS) an eminent Swiss landscape painter, born at Winterthur in 1723. After receiving some instructions from an inferior artist, he studied under John Griman, and at first painted portraits, but his inclination led him to prefer the delineation of landscape scenery, in which he arrived at great excellence. In 1759 he went, with his pupil Zingg, to Paris, but returning to Switzerland, he settled at Berne, where, after having been long esteemed and admired, he died in 1786. His manner has often been imitated, and his coloured designs of Swiss scenery, which are extremely beautiful, have been surpassed by those of his scholars Rietter and Biderman, the former of whom wrote the life of his master, published in the "Helvetic Journal of Arts and Literature," Zurich, 1806.—*Biog. Univ.*

ABERNETHY (JOHN) an eminent surgeon, distinguished for his professional skill, and physiological researches and publications. He was born in 1765, and his parents having removed to London in his childhood, he received some classical education at a day-school in Lothbury; and in 1780 he was apprenticed to Mr Charles Blicke, one of the surgeons of Bartholomew's hospital; after which he studied under John Hunter. Having commenced practice in his profession, he succeeded Mr Percival Pott, at St Bartholomew's, both as a surgeon to the institution, and a lecturer on anatomy and surgery. His first literary production was a small volume of "Physiological Essays," which was shortly followed by a surgical tract describing a new and ingenious method of treating the dangerous disease called a lumbar abscess. The death of Dr Andrew Marshall, a popular lecturer in Holborn, left Mr Abernethy for some time without a rival as an anatomical professor in the central part of the metropolis; and on the

decease of his old master sir Charles Blিকে, he became one of the principal surgeons to Bartholomew's hospital. He added to his reputation by publishing, in 1804, "Surgical Observations, part second, containing an Account of Disorders of the Health in general, and of the Digestive Organs in particular, which accompany Local Diseases and obstruct their Cure." This last work especially procured him a considerable accession of fame, and was the means of adding greatly to his private practice, in cases of dyspepsia, in the treatment of which he was eminently successful. His name appeared as a contributor to the last edition of Dr Rees's Cyclopædia, for which he wrote the anatomical articles under the first two letters of the alphabet. Having been appointed anatomical lecturer to the Royal College of Surgeons, he published in 1814, two lectures delivered before the college, under the title of "An Inquiry into the Probability and Rationality of Mr Hunter's Theory of Life;" and the opinions which he advocated became the source of a controversy with a subsequent lecturer, Mr William Lawrence, who, in opposition to the theory of Hunter, ascribed the phenomena of life to organization, a doctrine which was violently but most unjustly reprobated as leading not only to materialism but to atheism. As a man of science Mr Abernethy was admitted a member of the Royal Society of London, the Royal Medical Society of Edinburgh, and the Medical Societies of Paris and Philadelphia; and he belonged to the court of assistants of the Royal College of Surgeons, and was one of the curators of their museum. His death took place, after a protracted illness, at his house at Enfield, Middlesex, April 18, 1831. At one period he warmly opposed the doctrine of Craniology or Phrenology proposed by Gall and Spurzheim; but he afterwards became a convert to the system, though disposed to question some of the details belonging to it. As a surgeon he established his fame both at home and abroad by the bold and successful operation of tying the external iliac artery, of which he published an account; and under his auspices Bartholomew's hospital obtained higher reputation as a school of surgery than it had ever before enjoyed. Much has been circulated relative to the eccentricities of Mr Abernethy, in his intercourse with his patients, in which he is reported to have displayed extreme bluntness and even rudeness of behaviour; indulging his wit or spleen sometimes very unwarrantably at the expense of those by whose tediousness or dulness of comprehension he was annoyed. But in this respect great exaggeration has certainly taken place; and on the other hand several well authenticated instances of his liberality and benevolence are on record. On the whole he was a man of great originality of character and strong powers of mind, somewhat spoiled by a consciousness of his exciting great public attention, and often tempted into much oddity of conduct because he perceived that something of that description was uniformly ex-

pected from him. He published several essays and tracts on professional topics besides those already mentioned, his works extending to six volumes 8vo.—*Ann. Biog.* vol. xvi. *Month. Mag.*

ABILDGAARD (NICHOLAS ABRAHAM) a distinguished historical painter, who was born at Copenhagen, in 1744. After having studied at the Academy of Arts in his native city, he completed his professional education during five years' residence in Italy; and on his return to Denmark he rose to great reputation, and at the time of his death, in 1809, he was director and professor of painting at the academy of Copenhagen, where his lectures were well attended. His principal works adorn the royal palace, but many of the productions of his pencil were destroyed when the palace of Christiansburg was burnt, in 1794. His paintings are said to display a gloomy grandeur of effect, great originality of manner, and fine colouring. He left several eminent disciples, sculptors as well as painters; and among the former the celebrated Thorwaldsen. He published short essays intended to correct the taste of the moderns by a reference to ancient works of art.—*Biog. Univ.*

ABILDGAARD (PHILIP CHRISTIAN) a Danish physician, who was one of the most eminent naturalists of the eighteenth century. He was the brother of the preceding, and was also a native of Copenhagen. He was one of the principal founders of the veterinary school in that city; and in 1789 he assisted in the formation of the Society of Natural History there. In the memoirs of the Royal Academy of Sciences at Copenhagen, of which he was secretary, are several papers which he wrote relating to medicine, zoology, and mineralogy; and he gave a description of the Megatherium, an immense animal of an extinct species, contemporaneously described by Cuvier.—*Idem.*

ABINGTON (FRANCES) a justly celebrated comic actress, born in London in 1731. Her maiden name was Barton; and she made her first appearance in 1751, at the Haymarket theatre, under the management of Theophilus Cibber. She afterwards performed with great success at Bath and at Drury-lane. On her marriage with Mr Abington she went to Dublin, where she was much admired, not only for her professional talents, but also for her wit and conversational powers, which procured her the acquaintance of many of the Irish nobility and gentry, with whom she corresponded till the time of her death. Returning to London, she was engaged at Drury-lane by Garrick, with whom she acted the principal characters of the comedies of Shakspeare, Ben Jonson, Congreve, Cibber, &c. In 1782 she accepted an engagement at Covent-garden, where she remained several years, and then retired from the stage. Circumstances, however, induced her to resume her situation in 1797; but in 1799 she finally retreated to private life, highly esteemed and respected by her numerous friends and acquaintances. She died March 4, 1815.—*Thesp. Dict. Month. Mag.*

ABRAHAM A SANCTA CLARA, an Augustine friar, who distinguished himself by

ABU

his eccentricity as a preacher. His proper name was Ulrich Megerle, and he was born in Krahenheimstetten, in Suabia, June 4, 1642. He joined the order of bare-footed friars of St Augustine in 1662, and applied himself to the study of theology and philosophy, in one of their convents at Vienna. He was afterwards appointed preacher at Saxa, in Bavaria; and then called to preach before the imperial court of Austria, in which station he continued till his death, in 1709. His sermons display singular notions expressed in a manner bordering on the burlesque; but they were adapted to the taste of his audience, and rendered him a popular preacher. The titles of his writings somewhat resemble those of the English fanatics of the seventeenth century: as "Fye on the World, or concerning Virtue and Vice;" "Abraham a Sancta Clara's Nest of newly-hatched Fools, or curious Workshop of various Fools, both male and female."—*German Conversation Lexicon*.

ABRAHAM (NICHOLAS) a learned French jesuit of the seventeenth century, author of several esteemed commentaries on the classics, and of a Hebrew Grammar in Latin verse.—*Bayle. Nouv. Dict. Hist.*

ABSALOM, archbishop of Lund, one of the greatest men Denmark ever produced. He was born at Finnesleo, in the isle of Zealand, in 1128. He was highly distinguished both as a warrior and a statesman. The code of laws published by Waldemar I, was partly drawn up by this prelate; and he was the sole author of the Ecclesiastical Code of Zealand, which exhibits some remarkable proofs of the liberality of his opinions. He employed Saxo Grammaticus and Swen Agesen to write the History of Denmark. By the erection of Copenhagen castle he laid the foundation of that metropolis. He died in 1203.—*Biog. Univ.*

ABU HANIFA, surnamed AL NOOMAN, a Mahometan doctor, head of the sect of the Hanefites, one of the four orthodox denominations among the Moslems. He wrote "Commentaries on the Koran," held in high estimation by the Turks and Arabs. He died in consequence of poison, at Bagdad, AD. 767.—*D'Herbelot Bibliot. Orient. Biog. Univ.*

ABU'L OLA, a celebrated Arabian poet, who was born at Moarrah, in 973. He lost his sight in consequence of the small-pox, when he was three years old; notwithstanding which he studied at Bagdad, and having acquired a knowledge of literature, he returned home and devoted himself entirely to poetry. His manners and his opinions attracted the censure of the Moslems, and he was accused of following the religion of the Brahmins, but he appears rather to have been a professed libertine. His compositions, which are on trivial subjects, display great facility of writing, and an uncommon extensive knowledge of the Arabic tongue. He died at Moarrah, in 1057. Extracts from his works were published by Fabricius in 1656, and by Golins in 1658.—*Biog. Univ.*

ABU NOWAS, an Arabian poet of the eighth century. His poems were collected in

ACC

a book called "The Divan," or Volume.—*D'Herbelot.*

ABU TEMAM, surnamed AL THAU, from the Arab tribe to which he belonged; the prince of Arabian poets. He was a panegyrist of the caliphs of Bagdad, from whom he received great favours. He died at Mosul, in 845. Some of his poems have been published by Schultens in Holland, and in England by Carlyle.—*Biog. Univ.*

ABUNDANCE (JOHN) the assumed name of a French poet of the sixteenth century, author of various curious Moralities and Mysteries, still in MS. in the royal library of Paris.—*Nouv. Dict. Hist.*

ABYDENUS, a disciple and friend of Aristotle, who wrote a history of Troy. To him are attributed, with some doubt, the histories of Chaldaea and Assyria, fragments of which are preserved by Eusebius.—*Vossius.*

ACACIUS, a disciple of Eusebius, whom he succeeded in 340. He wrote the life of Eusebius, not extant.—*Socrat. Hist. Eccles.*

ACAMAPIXTLI I, king of the Aztecs, or ancient Mexicans, who died in 1420, after reigning forty years. He was the legislator of his subjects, by whom his death was greatly regretted. This prince collected the scattered tribes of the people together, and founded the city of Tenochtitlan, now Mexico.—*Herera. Robertson.*

ACCA (St) an Anglo-Saxon divine, who was bishop of Hagulstadt or Hexham, in Northumberland, in the early part of the eighth century. After having been expelled from his see he was restored, and held it till his death in 740. This prelate enlarged and embellished his cathedral church, having procured artists for that purpose from Rome, whither he travelled in company with the celebrated Wilfrid, whom he had succeeded. He was distinguished for his musical taste, and founded at Hexham a permanent band of performers for the service of the church. He cultivated literature, and among his writings are a treatise entitled "Passiones Sanctorum;" and a letter to Bede on the "Study of the Scriptures."—*Bede Hist. Eccles.*

ACCIAIUOLI (DONATO) of a noble Florentine family, flourished as a statesman and scholar in the fifteenth century. He wrote commentaries on Aristotle, and translated part of Plutarch's Lives, &c.—*Moreri.*

ACCIAIUOLI (JOHN) of the above-mentioned family, in the sixteenth century. He wrote a work entitled "Multa doctissimorum Problematum Monumenta magno studio et ingenio elucubrata."—*Idem.*

ACCIAIUOLI SALVETTI (MAGDALENA) a Florentine lady, who died in 1610. She wrote a poem entitled "David Persecuted," and other metrical pieces.—*Dict. Hist.*

ACCIAIUOLI (ZENOBIO) a noble Florentine, of the same family. He was librarian to Leo X, a churchman, a poet, and a critical writer. He published a collection of Politian's Greek epigrams, &c.—*Idem.*

ACCIO (ZUCHIO) a poet of Verona, in the fifteenth century. He published Æsop's

A C H

Fables translated into Latin verse, each fable preceded by a Latin epigram. This work was reprinted 1491, 1493, and 1497.—*Idem*.

ACEVEDO (FELIX ALVAREZ) a Spanish officer, who was one of the principal actors in the revolution in his native country in 1820. He was originally an advocate at Madrid, but quitted that profession to enter into the body-guard of Charles IV. He became commander of the eighth corps of the volunteers of Leon, in 1808, and colonel the year following; and he distinguished himself against the French, in the campaigns of 1808 and 1814. In 1820 he was placed by the people of Galicia at the head of the insurrection in that province against the authority of king Ferdinand; and the same year he was killed in an ambuscade, after having defeated a party of the royalists.—*Biog. Univ. Class.*

ACHARD (FRANCIS CHARLES) an eminent chemist and natural philosopher, born in Prussia, in 1754. He was a member of the Academy of Sciences at Berlin, and died in 1821. Besides Academical Memoirs, he was the author of "Lectures on Experimental Philosophy;" and "Instruction for making Sugar, Molasses, and Vinous Spirit from Beet Root."—*Dict. Hist.*

ACHARIUS (ERIC) a Swedish botanist, who distinguished himself by his researches concerning cryptogamic vegetables. He died at Stockholm, in 1820. His principal works are "Lichenographiæ Succis Prodrômus;" "A Method of arranging the Lichens, according to their Genera, Species, and Varieties;" and "Universal Lichenography."—*Idem*.

ACHENWALL (GODFREY) a native of Elbing, in Polish Prussia, who lectured on history at Marburg, and afterwards became professor of jurisprudence in the university of Göttingen, and distinguished himself by giving a scientific form to the principles of statistics, which term he is said to have invented. His writings on this subject, which are in German, have been superseded by the productions of more recent political economists. He died in 1772.—*Biog. Univ.*

ACHILLINI (ALEXANDER) one of the most celebrated physicians and anatomists of the sixteenth century. He was a native of Bologna, in Italy, where he became professor of medicine and philosophy, and acquired so great reputation, that pupils flocked to his lectures from almost every part of Europe. He first discovered and described two of the minute bones of the ear called the Incus and the Malleus; and he was the author of various treatises on anatomy and medicine. In philosophy he adopted the opinions of Averroes, on which he carried on a contest with the famous philosopher Peter Pomponatius, in which the latter appeared to have had the advantage. He died at Bologna, in 1512, at the age of 49. His works were published collectively at Venice, in 1545.—*Nouv. Dict. Hist. Biog. Univ. Dr Sprengel's Hist. of Anatomy.*

ACHILLINI (CLAUDIO) grand nephew of

A D A

the preceding, was born at Bologna, in 1574; and died in 1640. He was skilled in philosophy, medicine, theology, and jurisprudence, of which last science he was for several years professor at Parma, then at Ferrara, and at length at Bologna, where his fame procured him public honours; but he was disappointed in his expectations of patronage from the papal government. He wrote poetry in the flowery style of Marino; and his works in verse were published in 1640, at Bologna, and again, together with some prose compositions, at Venice, in 1662.—*Moreti. Nouv. Dict. Hist.*

ACKERMANN (CONRAD) a German comedian, born in the early part of the eighteenth century. He is regarded as the founder of the modern German theatre. In 1765 he became manager at Hamburg, where a great number of the dramas of Lessing were brought out under his direction. Like many of his profession, he seems to have possessed much more talent than prudence; and he died poor, in 1771, having obtained the reputation of being the first comic actor of his time.—*Biog. Univ.*

ACOLUTHUS (ANDREW) a learned professor of languages at Breslaw in the seventeenth century; and his principal work is a specimen of a Polyglot Koran.—*Moreti.*

ACOSTA (CHRISTOPHER) a Portuguese surgeon and naturalist of the sixteenth century, who was a native of Africa. Besides some works on ascetic divinity, he wrote "Voyages to the East Indies;" and "A Treatise on the Drugs and Medicinal Plants of the East Indies."—*Biog. Univ.*

ADAM (JAMES) translator of De Thou's History, Montecuculi's Memoirs, Athenæus, &c.; born at Vendome 1663, died 1735.—*Biog. Univ.*

ADAM SCOTUS, doctor of the Sorbonne, in the twelfth century, author of "The Life of David I, King of Scotland," &c.—*Fossius. Nouv. Dict. Hist.*

ADAMANTIUS, a Greek physician of the fifth century, author of a work on physiology.—*Biog. Univ.*

ADAMANUS, abbot of Icolmkil in Scotland, in the eighth century, author of "De Locis Terræ Sanctæ," and a life of St Columba.—*Bede.*

ADAMI (LEONARDO) a Tuscan writer of the eighteenth century. His principal work was "Arcadica," folio, Rome, 1716.—*Biog. Univ.*

ADAMS (GEORGE) an ingenious writer on astronomy and natural philosophy, who was mathematical instrument maker and optician to his Majesty. His works are, "Micrographia Illustrata; or, the Knowledge of the Microscope explained," London, 1746, 4to; a "Treatise describing and explaining the Construction and Use of the new Terrestrial and Celestial Globes," 1766, 8vo; and "The Description and Use of the Universal Trigonometrical Octant," 8vo. He died March 5, 1786.—**ADAMS** (GEORGE) son of the preceding, who succeeded his father in his official situations, and in his business carried on in Fleet-street, was born in 1750. He published "An

Essay on Vision," 8vo. which was translated into German; "Lectures on Natural and Experimental Philosophy," 1794, 5 vols, 8vo, of which there is also a German translation; and "Geometrical and Graphical Essays," 1791, 8vo; all which are works of great merit. He died August 14, 1795.—*Reuss. Gent. Mag.*

ADAMS (JOHN) a divine, historian, and miscellaneous writer, born about the middle of the last century, at Aberdeen; at the university of which place he graduated. Removing southwards, he established a respectable academy at Putney, over which he presided till the period of his death, in 1814, when he was interred in the new burial ground of that place. He was many years minister of the chapel in Cross-street, Hatton-garden, and distinguished himself very honourably in the literary world. Among his publications, many of which have run through numerous editions, may be enumerated: "Universal History," 2 vols. 8vo; "Original Anecdotes," 2 vols; "Sermons," 1 vol. 8vo; "Histories of Greece and Rome;" with a long list of others, whereof most were popular at the time, and many continue so.—*Orig. Com.*

ADAMS (JOHN) second president of the United States of America. In the account of the life of this politician and statesman in the body of the work, following the authority of Chalmers's Biographical Dictionary, his death was recorded as having occurred in October 1803; whereas he was alive, in close retirement, at the very period our article was composed. How this mistake originally occurred, in a work compiled several years after the presumed event, it is not easy to discover; but the error, which was detected in time for correction in the major part of our impression, has also misled Watkins and other biographers. The mistake is of little consequence, as the details of the active life of Mr Adams are correctly given; and, at worst, it supplies a lesson on the transitory nature of the attention which follows even eminent men, when once fully withdrawn from the public gaze. Mr Adam's decease has since actually taken place, at the advanced age of ninety-one. What is very remarkable, he died July 4, 1826, on the same day with the ex-president Jefferson, being the fiftieth year of that American independence which they had so great a share in advancing.—*Ed.*

ADAMS (SAMUEL) one of the most remarkable men connected with the revolution which separated the States of North America from Great Britain. He was born at Boston, N.E. September 27, 1722, and was educated at Harvard College; where when he took the degree of M.A., in 1743, he proposed the question—"Whether it be lawful to resist the supreme magistrate, if the commonwealth cannot be otherwise preserved?" when he maintained the affirmative. He engaged early in politics, and in 1766 obtained a place in the legislature, from which period till the termination of the revolution war, he on every occasion showed himself to be a most diligent, efficient, and disinterested assertor of the free-

dom and independence of his country. Soon after his admission into the house he was chosen clerk, it being usual then for that office to be filled by one of the members. He was on every committee, had a share in all the reports, and was ever foremost in opposing those measures of the British government, which he deemed oppressive and unjust. He continued in the legislature till 1774, when he was sent to the first congress of the old confederation; and in 1776 he was one of the signers of the declaration against Great Britain. He was an active member of the convention that formed the constitution of the state of Massachusetts; and subsequently presided over the senate of that state. In 1789 he was elected lieutenant-governor, and from 1794 to 1797 he held the office of governor. At the latter period he retired from public life, and remained in seclusion till his death, which took place at Boston, October 2, 1803. As to politics he was a stern republican, so jealous of power that he was scarcely willing to give the constitutions of the states a sufficient degree of conservative strength: in religion he was a strict Calvinist, with a leaning towards the exclusive bigotry of the old Puritans, from whom he was descended.—*Encyclopæd. American.*

ADAMS (sir WILLIAM)—See RAWSON.

ADEMAR, or AYMAR, a monk of St. Martial, of the eleventh century, principally known by his "Chronicon Aquitanie."—*Vossius de Hist. Lat.*

ADENEZE LE ROI, a Flemish writer of romances in the thirteenth century. He was the author of "The Metrical Romance;" "The Romance of William of Orange;" "The Infancy of Ogier the Dane," &c.—*Moreri.*

ADHEMAR (GUILLAUME d') a Provençal poet, who died about 1190. He was the author of a treatise in verse "On illustrious Women," which he dedicated to the empress Beatrice, wife of Frederick Barbarossa, who in recompense bestowed on the bard the castle of Grignan.—*Biog. Univ.*

ADIMARI (ALEXANDER) an Italian poet of an ancient family in Florence, born 1579, died 1649. He left a collection of much admired sonnets, &c.—*Nouv. Dict. Hist.*

ADIMARI (LEWIS) of the same family, born at Naples 1644, died at Florence 1708. He wrote lectures on chivalry, sonnets, satires, dramas, &c.—*Idem.*

ADIMARI (RAPHAEL) an Italian historian of the seventeenth century. He wrote a history of Rimini, his native place.—*Idem.*

ADLZREITER (JOHN) a German historian of the seventeenth century, chancellor to the elector of Bavaria, author of "Annales Boicæ Gentis," being a history of Bavaria to 1662.—*Biog. Univ.*

ADO, archbishop of Vienne, and a chronicler of the ninth century. His works are a universal chronicle, a martyrology, and the lives of Canissius and St Theudier.—*Voss. Hist. Lat.*

ADRIA (JOHN JAMES) a Sicilian historian and topographer of the sixteenth century.

He wrote "Topographia inclytæ Civitatis Mazarinæ," &c.—*Mongitore Bibliot. Sicul.*

ADRY (JOHN FELICISSIMUS) a French bibliographer and philological writer, born in 1749, died in 1818. He was librarian to the congregation of the Oratory at Paris, till the suppression of religious institutions in 1790. He then devoted himself to literature, and became a distinguished contributor to the *Magazin Encyclopédique*; besides editing the works of several ancient and modern writers. He was also the author of some curious articles in the *Journal Encyclopédique* in 1782.—*Biog. Univ. Class.*

ÆGIDIUS ATHENIENSIS, a Greek physician in the eighth century, who wrote "De Pulsibus et de Venenis."—*Friend's Hist. of Physick.*

ÆGIDIUS (PETER) of Albe, a French writer and traveller of the sixteenth century. He was patronized by Francis I, and wrote "De Vi et Natura Animalium;" besides an account of his Grecian, Asiatic, and African travels.—*Thumi Hist.*

ÆELST or **ÆALST** (EVERT, or EVERHARD van) a Dutch painter in the seventeenth century, famous for his skill in painting fruit and game.—*Pilkington.*

ÆPINUS (FRANCIS MARIE ULRICK THEODORE) a German physician, born 1724, died 1802. He wrote "Tentamen Theoriæ Electricitatis et Magnetismi;" and "Reflections on the Distribution of Heat on the Surface of the Earth."—*Encyc. Brit.*

ÆSCHINUS, a Socratic philosopher, called in his article in the body of the work "opponent of Demosthenes," being, in that single observation, confounded with the orator his namesake, who was so. The error was inadvertently copied from a larger work. Dele words "public orator and opponent of Demosthenes."—*Ed.*

AFFRY (LEWIS AUGUSTINE PHILIP, count d') chief magistrate of Switzerland, after Buonaparte had proclaimed himself protector of the Helvetic confederacy. He was born at Freyburg in 1743, and being destined for the army he accompanied his father on an embassy to the Hague, soon became adjutant in the Swiss Guards, and was at length made a lieutenant-general. At the commencement of the French revolution, he commanded the army on the Upper Rhine, till August 10, 1792, when the Swiss having been disbanded, he returned home, and became a member of the secret council at Freyburg. In 1798, when Switzerland was menaced with a French invasion and political commotions, he resumed the command of the troops; but perceiving the inutility of resistance, he applied himself principally to the task of shielding the country from the perils of war and rebellion, and after Freyburg was taken by the French he became a member of the provisional government. He did not interfere in the insurrections of 1801 and 1802; but when Buonaparte, first Consul of France, invited the Swiss to send delegates to Paris, he readily accepted the appointment of Deputy, and assisted greatly in forming an

administration for the government of Switzerland. In February 1803 he received from the first consul the act of mediation, was constituted first magistrate for that year, and invested with extraordinary powers during the interval, previous to the convocation of a diet. He subsequently endeavoured to promote the views of Buonaparte, without, however, neglecting the interest of his native country; and in all respects he acted with ability, displaying the experienced skill of a thorough statesman. His death took place June 16, 1810.—*Encyclop. American.*

AGELET (J. LEPAUTE d') a French astronomer, born in 1751. He became a pupil of the celebrated Lande, and in 1773 he was employed in the expedition to the South Seas, under Bougainville. On his return to France he was elected a member of the Academy of Sciences; and he drew up memoirs on the aphelion of the planet Venus; and on the length of the year. The love of science induced him to embark with La Perouse in the voyage which proved so mysteriously disastrous to those who engaged in it.—*Biog. Univ. Class.*

AGINCOURT (SEROUX d') an eminent French archæological writer, born at Venette, near Compeigne. He passed a great part of his life at Rome, where he distinguished himself by his researches concerning the works of ancient art, and his patronage of artists. He published "Hist. de l'Art par les Monumens, depuis sa Décadence au 4me S. jusqu'à son Renouveau au 16me," Paris, 1809, 2 vols. folio. His death took place at Rome in September 1814.—*Idem.*

AGLIATA E DI PARUTA (FRANCESCO d') an Italian poet, who possessed extraordinary facility in writing verse. He was the son of the prince of Villa Franca, duke of Sala, and was born at Palermo in Sicily in 1629. His application to learning and his poetical talents raised the admiration of his contemporaries, and he is highly praised by Joseph Glareanus in his *Musæ Siculæ*. His works were published at Palermo under the title of "Canzoni Siciliane," 1662, 12mo. He died, at his native place, July 12, 1697.—*Mongitore Bibliot. Sicul.*

AGLIONBY (WILLIAM) an English diplomatist and polite writer of the seventeenth and eighteenth centuries. He was the author of a book entitled "Painting illustrated in three dialogues, with the Lives of the most eminent Painters, from Cimabue to Raphael."—*Athen. Oren.*

AGNOLO (BACCIO) a Florentine sculptor and architect, who died in 1543. He began by carving in wood, and afterwards applied himself to architecture, and acquired great reputation, particularly by the edifices he erected at Florence, which are distinguished for solidity and elegance.—*Biog. Univ.*

AGOP (JOHN) a learned Armenian critic and grammarian of the seventeenth century. His works, entitled "Puritas Haygica," comprising Latin and Armenian grammars, were printed at Rome, 1675, 4to.—*Orig.*

AGORACRITES, a Grecian statuary, who was a native of Paros, and flourished in the fifth century BC. He was a pupil of Phidias, and became one of the most skilful artists of his time.—*Phny.*

AGRICOLA (GEORGE) a German physician, born at Glancken in Misnia, in 1494. He distinguished himself by his researches concerning metals and fossils, and added considerably to the previously existing stock of information on those subjects by visiting mines and studying the processes of metallurgy. His writings display an elegance of style superior to that of contemporary authors who treated on the physical sciences; and he was long regarded as a principal authority in questions relating to spagyric chemistry. He died at Chemnitz, Misnia, Upper Saxony, in 1555. Having given offence to the Lutherans, then become possessed of power, they showed their resentment by leaving his body unburied for several days after his death. His chief works are a treatise, "De Re Metallica," in 12 Books, Basil, 1561, folio; and another, "De Ortu et Causis Subterraneorum," Basil, 1558, folio.—*Biog. Univ. Encyclop. Britan. Suppl. Prelim. Diss.*

AGRICOLA (GEORGE ANDREW) a German physician, born at Ratisbon in 1672, died in 1738. He was the author of a curious work on the multiplication of trees and plants, 1716-17, 2 vols, folio, of which a French translation appeared at Amsterdam, 1720, 2 vols, 8vo.—*Biog. Univ.*

AGRICOLA (JOHN HENRY) a musical composer, who died at Berlin in 1774. He was director of the chapel royal, and left the operas of "Achilles" and "Iphigenia."—*Dict. Hist.*

AGUIRRE (JOSEPH SÆENS d') a Spanish Benedictine of the seventeenth century. He was created a cardinal, wrote voluminously on theology, philosophy, and ethics, and made a collection of the councils of Spain.—*Dupin Bibl. Eccles.*

AHMED SHAH EL ABDALY, founder of the kingdom of Candahar. He was brought up at the court of Nadir Shah, and after the death of that prince he seized on the provinces of Candahar and Caubul, and erecting them into a kingdom, took the royal title. He engaged in several invasions of the north of Hindostan, and in 1761 he defeated the Maharrattas at the battle of Panniput. He died in 1773, leaving the crown to his son Timur Shah.—*Biog. Univ. Class.*

AHMED RESMY HAJI, a Turkish historian, who was counsellor of the Divan, and chancellor to the sultan Mustapha III, about 1758. That prince employed him in two missions, to Vienna and to Berlin, of which he drew up accounts inserted in the "Annals of the Othoman Empire," compiled by Ahmed Wasif Effendi, and printed in Turkish at Scutari, 1804, 2 vols, folio. A German translation of this work appeared at Berlin in 1809, 8vo.—*Edinb. Rev. Biog. Univ. Class.*

AHRENDT, or ARENTS (MARTIN FREDERIC) an antiquary and palæographer, who

was a native of Holstein. He spent forty years in travelling on foot through Norway, Sweden, Denmark, France, Spain, Italy, and other parts of Europe, in search of Scandinavian antiquities and Runic monuments; and carried on an extensive correspondence with his learned contemporaries, relative to the objects of his investigations. His perpetual journeys and various peculiarities subjected him to some unpleasant adventures. Towards the latter part of his life, after having visited France, Spain, Italy, Hungary, and Austria, he remained some time at Mecklenburg, and then proceeded through the south of Germany to Naples, where he was imprisoned on suspicion of being implicated in the conspiracy of the Carbonari. On being liberated, he set out to return to Germany, and died in February 1824, at a small village two leagues from Vienna. His collections of Icelandic MSS. Runic alphabets, and palæographic observations, &c. were transmitted to his native country through the care of the Danish resident at Vienna. Ahrendt published a number of papers on the antiquities of Denmark and Norway, in the Norwegian Topographical Journal and other Danish periodical works.—*Lit. Gaz.*

AIGREFEUILLE (CHARLES d') canon of Montpellier in the eighteenth century, author of "Histoire de la Ville de Montpellier."—*Nouv. Dict. Hist.*

AIKIN (EDMUND) an ingenious architect, son of Dr J. Aikin, died March 13, 1820. He wrote an account of St. Paul's cathedral, annexed to some engravings of that edifice, published by J. Britton, FSA., besides some professional essays; and he furnished designs for the Presbyterian chapel in Jewin-street, London.—*London. Mag.*

AIMAR VERNAI (JACQUES) a French peasant of the province of Dauphiny in the seventeenth century, who professed the art of Rhabdomancy.—See *BLUTON*.

AIMERICH (MATTHEW) a Spanish jesuit, who died at Ferrara in 1799, aged eighty-four. He was the author of several historical and philological works, the most important of which are, "Specimen Veteris Romanæ Literaturæ deperditæ," &c. Ferrara, 1784, 4to; and "Novum Lexicon Historicum," Bassano, 1787, 8vo.—*Dict. Hist.*

AISSE (Mademoiselle) a native of Circassia, who was purchased when she was but four years old, from a slave-merchant, by the count de Ferréol, the French ambassador at Constantinople. He bestowed on her a good education, and returning to France, introduced her to respectable society, though she was understood to be his mistress. She died in 1733, and left some interesting "Letters," which were first collected and published in 1807, 18mo.—*Biog. Univ.*

AKAKIA (MARTIN) a native of France, and physician to Henry III. He wrote "De Morbis Mulierum;" "Consilia Medica," &c.—*Nouv. Dict. Hist.*

AKERBLAD (—) a Swedish antiquary and philologist, who died at Rome in 1819.

A L B

He applied himself to the study of Egyptian antiquities, and discovered the key to the interpretation of the cursive characters of the Copts, previously unknown. In 1802 he published at Paris "*Inscriptionis Phœnicæ Oxoniensis nova Interpretatio*," 8vo; and his erudite researches had afforded the promise of high celebrity as an Oriental scholar, when he was cut off in the flower of his age.—*Biog. Univ. Class.*

AKERMAN (—) a Swedish engraver, settled at Upsal in the eighteenth century, distinguished as a manufacturer of celestial and terrestrial globes, much in request in every part of Europe.—*Idem.*

AKOUI, a Chinese mandarin, of Tartar origin, who was general and prime-minister of the emperor Kien Long, in the last century. He signalized himself in many warlike expeditions to reduce to subjection rebellious provinces of the empire; and he became the counsellor, the friend, and the depository of the secrets of his master, whose esteem he always preserved, as well as that of the Chinese and Tartar nations, whose government he administered. The period of his death is not known.—*Idem.*

ALAIN (JOHN) a Danish author of the sixteenth and seventeenth centuries. He wrote "On the Origin of the Cimbri," &c.—*Nouv. Dict. Hist.*

ALAIN (NICHOLAS) a French dramatic author at the beginning of the eighteenth century. He wrote some trifling comedies.—*Idem.*

ALAMANNI or **ALEMANNI** (NICHOLAS) a learned critic of the sixteenth century, a Greek by birth, who became librarian of the Vatican. He published an edition of the "Anecdota," or secret history of Procopius; and a description of the church of St John Lateran.—*Idem.*

ALAN OF TEWKSBURY, abbot of the monastery there in the twelfth century, and friend of Thomas à Becket, an account of whose exile he composed, besides "*Acta Clarendonensis*," &c.—*Biog. Brit.*

A'LAUWY, a Persian, who was physician to Nadir Shah, and died at Delhi in 1749. He was the author of many learned works, one of which, called "The Collection of Collections," according to the celebrated Orientalist Langles, is a kind of medical cyclopædia.—*Biog. Univ.*

ALBANEZE, an Italian musician, who died at Paris in 1800. He appeared in France in 1747, and obtained great reputation by his excellent method of singing. He composed many "Airs" and "Duets," full of melody, which have all been published.—*Biog. Dict. of Music.*

ALBENAS (JOHN PALLIO d') a French lawyer and antiquary of Nismes, in the sixteenth century. He wrote an historical dissertation on the antiquities of Nismes, &c.—*Nouv. Dict. Hist.*

ALBERGATI (CAPACELLI) a Bolognese marquis, who died in 1802. He passed his youth in dissipation, but, with great talents, redeemed himself at forty, and became a

A L B

very considerable dramatic writer and actor, and was called the Garrick of Italy.—*Tiraboschi.*

ALBERIC, a French Cistercian monk, poet, and historian, in the thirteenth century. He wrote a chronicle from the creation to the year 1241, edited by Leibnitz, 1698.—*Nouv. Dict. Hist.*

ALBERIC DE ROSATI, or **ROXIATI**, a native of Bergamo, the friend of Bartholus, and one of the most learned jurists of the fourteenth century. He wrote valuable commentaries on the sixth book of the Decretals; a Dictionary of Jurisprudence; a treatise "*De Statutis*;" and commentaries on the pandects and the civil code.—*Dict. Hist.*

ALBERT OF STADE, a Benedictine monk in the thirteenth century. He likewise, in compliance with the fashion of the time, compiled a chronicle from the creation to 1256.—*Fossi de Hist. Lat. Nouv. Dict. Hist.*

ALBERT OF STRASBURG, flourished in the fourteenth century. He was the author of a chronicle from 1270 to 1378.—*Idem.*

ALBERT (HENRY CHRISTIAN) professor of the English language at the university of Halle in Germany, where he died in 1800. He published two English and German Grammars; "Essays on Shakspeare;" "Researches concerning the English Constitution;" and a drama on the death of Charles I.—*Dict. Hist.*

ALBERTI (GEORGE WILLIAM) a Hanoverian divine in the eighteenth century. He wrote "Thoughts on Hume's Essays on Natural Religion;" "Letters on the State of Religion and the Sciences in Great Britain;" and an "Essay on the Religion, Worship, Manners, and Customs of the Quakers."—*Nouv. Dict. Hist.*

ALBERTRANDY (JOHN BAPTIST) a Polish historian, bishop of Partibus of Zenopolis, who died at Warsaw in 1808. He went to Italy in 1782, and continued there three years, exploring the different libraries, and making extracts from books and MSS relative to the history of Poland. He filled with his collections, 110 volumes; and afterwards visited Stockholm and Upsal, where he made valuable additions to his literary materials for the history of his country. Gifted with an extraordinary memory, he was enabled to elude the prohibition of the Swedish government against copying any part of the documents he was allowed to examine, by writing down from recollection every evening what he had perused during the day. He was employed to the end of his life in his historical labours; and the result of them appeared in his "*Reigns of Henry de Valois and Stephen Battori, Kings of Poland*," published after his death, from his MSS. by Ignatius Onacewicz, Warsaw, 1824, 2 vols, 8vo.—*Revue Encyclop.*

ALBI (HENRY) a Provencal jesuit in the seventeenth century. He wrote "The History of Illustrious Cardinals." "A French Grammar," &c.—*Nicéron.*

ALBON (CLAUDE CAMILLE FRANÇOIS count d') member of a noble family of France, was born at Lyons in 1753. He was the author of various miscellaneous works, the principal of which are, "A Dialogue between Alexander and Titus," 8vo; "Observations of a Citizen upon the New Plan of Imposts," 8vo; "Miscellaneous Works," 8vo; "Eulogies on Quesnoy, the Count de Gebelin, and Chamouset," 8vo; "La Paresse," a pretended translation from the Greek; "Discourse on the Augustan Age, and that of Louis XIV.;" "Discours Politiques, Historiques, et Critiques sur quelques Gouvernements de l'Europe," 3 vols, 8vo, &c. He died in 1789.—*Biog. Univ.*

ALBRECHTSBERGER (J. G.) a German musician, who was born at Kloster Neubar in 1736. At the age of seven he was employed as a singing boy at his native place, and he afterwards conducted a school at the abbey of Moels. He learnt to play on the organ and studied musical composition under Monn, organist to the court, and was himself subsequently appointed organist at Raal. In 1772 he obtained the situation of court organist, and became a member of the academy at Vienna, and he was afterwards made chapel master at the cathedral of St. Stephen in that city. He has been characterized as one of the most learned of modern contrapuntists, and he formed a great number of eminent scholars, among whom was the celebrated Beethoven. The best known of his works, is his "Elementary Treatise on Composition," published at Leipsic in 1790, of which very useful production there is a French translation, in 2 vols, 8vo. His death took place in 1803.—*Biog. Univ. Biog. Dict. of Musicians.*

ALBRET (CHARLES d') constable of France in the reign of Charles VI, to whom he was related by blood, belonging to one of the most illustrious families of the south of France, whence sprung the kings of Navarre. He was deprived of his post by the Burgundian faction in 1412, but was restored by that of Armagnac the following year. He commanded the French army at the famous battle of Agincourt, in which he lost his life, in 1514.—*Mezerai. Moreri.*

ALBUCASIS, ALSARAVIUS or **ABU'L KASEM KHALAF BEN ABBAS**, an Arabian physician, who was a native of Alzarah, in Egypt. He acquired great reputation in Spain, and died at Cordova, in that country, in 1107. His works, which have been repeatedly published, in Latin, relate rather to surgery than to medicine, and he appears to have been the earliest writer who gave descriptions and figures of chirurgical instruments. An edition of the "Chirurgia" of Albucasis, comprehending the Arabic text, with a Latin translation, by Dr. Channing, was printed at Oxford, 1778, 2 vols, 4to.—*Friend's Hist. of Physick. Biog. Univ.*

ALBUQUERQUE COELHO (EDWARD d') a Portuguese nobleman in the seventeenth century. He wrote "A Journal of the War of the Brazils which began in 1630."—*Biog. Univ.*

ALCAMENES, a Greek statuary, who was the disciple and the rival of Phidias. He executed statues of Venus Aphrodites, of Juno, and of Vulcan, besides the front of the temple of Jupiter Olympius.—*Biog. Univ.*

ALCIATI (TERENCE) a Roman jesuit in the seventeenth century. He left materials for a history of the council of Trent, which history was afterwards completed from those materials by cardinal Pallavicino.—*Dict. Hist.*

ALCMÆON, a Pythagorean philosopher of Crotona, AM. 3520. He wrote on physics, and first studied comparative anatomy by dissecting animals.—*Diog. Laert.*

ALCMAN, a lyric poet, and one of the best writers of Greece. He flourished BC. 672. Some few amorous verses of his, in the Doric dialect, have been preserved by Athenæus.—*Voss. de Poet. Græc.*

ALCOCK (NATHAN) an English physician in the eighteenth century. He studied under Boerhaave, and is distinguished for the anatomical lectures he delivered at Oxford, 1741.—*Gent. Mag.*

ALCYONIUS (PETER) an Italian critic and philological writer, who was professor of Greek at Florence in the sixteenth century. He was patronized by the cardinal de Medici, afterwards Pope Clement VII, whose protection he forfeited by embracing the party of the Colonna family, who were the enemies of that pontiff. He had then no other resource than that of becoming a tutor, his lessons, however, procuring him more honour than profit. He died in 1527, at the age of 40. Alcyonius published a translation of four treatises of Aristotle, under the title of "Aristotelis Opera Varia," Ven. 1521, folio. This version is executed with more elegance than fidelity, and it has become scarce, in consequence of the author, piqued at the remarks of his critics, having bought up and burnt all the copies he could procure. This learned scholar wrote a treatise "De Exilio," Ven. 1522, 4to, republished by Meuckenius, with the title of "Analecta de Calamitate Literatorum," Lips. 1707, 12mo. This work was conjectured to have been taken from the lost treatise of Cicero "De Gloria;" which it was pretended that Alcyonius had destroyed after making use of the manuscript. But the accusation is unjust, the essay on Exile being only in imitation of Cicero's philosophical dialogues, and the style, though pure and agreeable, scarcely resembling that of the celebrated Roman Orator.—*Nouv. Dict. Hist. Biog. Univ.*

ALEGAMBE (PHILIP) a Flemish jesuit in the seventeenth century. He filled many important posts, and wrote some learned and esteemed works on his own order.—*Nouv. Dict. Hist.*

ALENIO (JULIO) a Venetian jesuit in the seventeenth century. He was a missionary in China for thirty-six years, and left several works in the Chinese language on theological subjects, one of which was in verse.—*Idem.*

ALESIO (MATTHEW PEREZ d') a Roman painter and engraver in the sixteenth century. He was the pupil of Michael Angelo, and

caught a portion of his fire. His *St Christopher*, a huge gigantic figure, in fresco, in the great church of Seville, is his best production.—*D'Argenville*.

ALESSI (GALRAS) a celebrated Italian architect in the sixteenth century. His works are spread over Germany and the south of Europe; but his fame principally rests on the monastery and church of the Escorial.—*Cumberland*.

ALEXANDER I, emperor of Russia and king of Poland, was the eldest son of Paul I, by his second wife Sophia Dorothea, princess of Wirtemberg Stuttgart. He was born December 22, 1777, and received his education under the direction of his grandmother, Catherine II, who engaged as his tutor the celebrated M. de Laharpe. He married in 1793 Elizabeth Alexievna, princess of Baden. On the death of his father, in March 1801, he succeeded to the imperial crown; and one of his first measures was the publication of a general amnesty, a single individual among those who were suspected of having assassinated the late emperor being excepted and exiled to Siberia. A change of state policy was adopted, and the maritime confederacy with the northern powers against England, which had been formed in the preceding reign, was broken through, and a treaty concluded at St. Petersburg, June 17, 1801, between the Russian ministers and the British ambassador lord St. Helen's, conceding to this country the right of searching neutral ships in time of war. Alexander was crowned at Moscow in September following, when a ukase was published for diminishing taxes, liberating persons confined for debt, prohibiting prosecutions for the recovery of fines, discontinuing the mode of recruiting the army, and granting a free pardon to all deserters. In 1802 the emperor had an interview with the king of Prussia at Memel; and the ensuing year he offered his mediation to effect a reconciliation between England and France. The seizure and execution of the duke d'Enghien, in 1804, induced him to remonstrate with the French government on the violation of the neutral territory of Baden; and he subsequently appealed to the diet of Ratisbon. But the influence of Buonaparte, at that time, in the German empire, rendered these measures nugatory. In April, 1805, a convention was entered into between Russia, England, Sweden, and Austria, for the purpose of resisting the encroachments of the French on the territories of independent states. A large Russian force was sent into Germany, which did not, however, arrive in time to prevent the capital of Austria from falling under the power of Napoleon. On the 2d of December the battle of Austerlitz took place, in which Alexander appeared at the head of 50,000 men to aid the emperor Francis, whose troops amounted to about half that number. The French were victorious, and Alexander was compelled to retreat to his own dominions. In July, 1806, negotiations for a general peace were commenced at Paris; but the Russian minister, D'Oubril, having signed precipitately

a separate treaty with France, his master refused to ratify it; the negotiations were therefore broken off; and the relations between England and Russia remained undisturbed. Poland now became the seat of warfare. On the 26th of November was fought the battle of Pultush; and on the 7th and 8th of February, 1807, that of Eylau, neither of which engagements was decisive; but on the 14th of June the Russians were completely defeated at Friedland, by Napoleon: the result of whose victory was an interview between the two emperors, which led to the treaty of Tilsit, by which Russia was bound to acknowledge the brothers of Buonaparte as kings of Naples, Holland, and Westphalia, and formally to recognize the Rhenish confederation. It was also by secret articles stipulated that the ports of Russia and Prussia should be closed against the commerce of Britain. The seizure of the Danish fleet by the English government occasioned a declaration of war from Russia against this country; but hostilities only extended to the cessation of trade between the two nations. A second meeting of the French and Russian sovereigns took place at Erfurt, September 27th, 1808, Buonaparte being anxious to secure the friendship of Alexander previously to his meditated subjugation of Spain. While the former was engaged in the prosecution of this undertaking, the latter made himself master of the Swedish province of Finland, his troops taking possession of Abo, the capital, in September 1809; and the annexation of the greater part of the province to the empire of Russia soon followed. The interruption of commerce with England now began to be severely felt by the Russians; and the pride of Alexander revolting against the subjection to which he had been reduced, by the dangerous friendship of Napoleon, he resolved to throw off the yoke. On the 23d of March, 1812, an imperial ukase was issued, ordering a levy of two men out of every five hundred throughout the Russian dominions; a treaty was concluded with the Turks; and all matters of dispute with Great Britain were pacifically arranged. The invasion of Russia which followed, and which paved the way for the downfall of the colossal power of the emperor of France, though the most important event in the history of the reign of Alexander, is not one in which he was so far personally concerned as to require a detailed relation in this article. Napoleon entered Russia at the head of between three and four hundred thousand men, and took possession of the capital Moscow, after having defeated the Russians in several most obstinately contested engagements. But the victor was unable to retain his conquest, and having failed in an attempted negotiation, through the firmness of the Russian sovereign and his ministry, Buonaparte returned almost alone to Paris, like Xerxes from his Grecian expedition, and his army, like that of the Persian prince, was almost annihilated. Alexander became the aggressor in the contest which followed. Joining his army in Poland, in

February 1813, he published the famous manifesto, which served as the basis of the coalition of the other European powers against the rapacity of the French emperor. Germany, and then France, became the scene of hostilities, and the capture of Paris, on the 30th of April, 1814, was followed by the abdication of Buonaparte, and the restoration of the Bourbons. After the conclusion of peace, Alexander visited England, in company with the king of Prussia; and on his return to his own dominions he appears to have zealously employed himself in endeavouring to ameliorate the internal condition of his empire. Early in his reign he had improved the constitution of the state, by reorganizing the senate, and limiting the powers of governors. On being crowned king of Poland, in 1815, he submitted to a limitation of the regal authority, granted the right of legislation and self-taxation to the senate, and a representative body to the people. Throughout his dominions he displayed his regard for literature and the arts, which flourished in his reign; and though he exhibited a tendency towards superstition in religious matters, it did not lead him into any odious measures of constraint or persecution. His death took place suddenly, in November 1825, at Taganrock, on the sea of Azof. Leaving no issue, he was, in the first instance, succeeded by his brother Constantine, who, however, resigned the crown in favour of his younger brother Nicholas, the present sovereign of the Russian empire. Alexander I may be regarded as an able, active, and talented prince, and a very efficient sovereign for an empire like that of Russia, which he carried with considerable dexterity and address through a period replete with vicissitude and danger. It must not, however, be supposed that he was destitute of a portion of the ambition which makes a powerful ruler dangerous to his neighbours, Persia, Poland, and Finland all testifying a passion for sway and aggrandisement; nor is it to be concealed that he anxiously and as duly laboured to extend Russian influence in the south of Europe; and that too in reference to affairs of internal policy with which it had no necessary connexion. On the whole, however, his memory is justly popular in his own country, and he will possibly be regarded by posterity as the most judicious, political, and highly gifted of the legitimate rulers of his age.—*Biog. Nouv. des Contemp.* *London Encyc.*

ALEXANDER POLYHISTOR, a Roman historian about eighty-five years B.C. He was a voluminous writer, but his works have perished, with the exception of a few fragments preserved in some of the classics.—*Vossius*.

ALEXANDER APHRODISÆUS, a peripatetic philosopher in the second century. He was an able commentator on Aristotle, and inscribed his book "De Fato," printed at London, 1688, to the Roman emperor Lucius Septimius Severus.—*Porphy. in Vit. Plotin.*

ALEXANDER (WILLIAM) earl of Stirling, was born at New York, in North America,

and became a major-general in the service of the United States during the American war, in the course of which he was taken prisoner. He died in 1783, aged fifty-seven. This nobleman distinguished himself more by his attention to mathematics and astronomy than by his military talents. He wrote "An Account of the Comet of June and July, 1770," published in the first volume of the American Philosophical Society of Philadelphia.—*Dict. Hist.*

ALEXANDER (THOMAS) earl of Selkirk, known as the founder of a colony in Canada, and for his writings on politics and statistics. He died in 1820. *London Mag.* vol. iii.

ALEXANDER, MD. (WILLIAM) an eminent physician, and medical writer of Edinburgh, where he died in 1788. He published "Essays on the external application of Antiseptics in Putrid Diseases; on the Doses and Effects of Medicines; and on Diuretics and Sudorifics," 1768, 8vo; and an "Inquiry concerning the Causes of Putrid Diseases," 1772, 8vo; German translations of both which productions appeared at Leipsic, in 1773; besides which he was a contributor to the third volume of "Essays and Observations Physical and Literary," read before a Society at Edinburgh. Dr. Alexander was also the author of a "History of Women, from the earliest antiquity to the present time," 1779, 2 vols, 4to; republished in 1782, 2 vols, 8vo; and of this work there is a German translation. *Reuss. Biog. Dict. of Living Authors.*

ALEYN (CHARLES) an English poet in the seventeenth century. He wrote poems on the battles of Cressy, Poitiers, and Bosworth Field, and translated the history of Euryalus and Lucretia from Æneas Sylvius.—*Cens. Lit.*

ALFRAGANI, or AHMED BEN COSSEIR AL FERGAN, an Arabian astronomer, who was born at Ferghana a town in Sogdiana. He became so skilful in making astronomical calculations as to have obtained the appellation of Hacib, or the Calculator. He flourished in the reign of the Calif Al Mamun, in the ninth century, but the period of his death is uncertain. His principal work is an "Introduction to Astronomy," of which three Latin versions have been repeatedly published, including that of Golius, with learned notes, 1669, 4to. Alfragani also wrote a treatise on the Solar Quadrant, and another on the construction and use of the Astrolabe.—*Biog. Univ.*

ALGARDI (ALEXANDER) a Bolognese sculptor and architect in the seventeenth century. He was the pupil of Lewis Caracci, and friend of Domenichino. At Bologna his group of the beheading of St. Paul is much admired.—*Tiraboschi*.

ALHAZEN, or ABU ALI AL HASSAN, an Arabian philosopher, who was a native of Bassora. Having failed in a scheme which he had proposed to prevent or check the inundations of the river Nile, and being alarmed at the displeasure of the Fatemite Calif Hakem Bembrillah, by whom he had been patro-

ALI

nized, he feigned himself to be insane till the death of that prince. Having no other means of support, he employed himself in writing and copying books; but his laborious industry scarcely sufficed to preserve him from indigence. He died at Cairo, in 1038. A catalogue of his numerous works has been published by Caviir, in his *Bib. Arab. Hispan.* vol. i. and some of them are preserved in manuscript in the Bodleian Library at Oxford. Alhazen is chiefly known as the writer of a treatise on Optics, published in Latin, with a Commentary, by Risner, at Basil, in 1572; together with a tract on Twilight, and Atmospheric Refraction, which had been previously edited by Gerard de Cremona.—*Biog. Univ.*

ALIAMET (JAMES) a French engraver in the eighteenth century. His best engravings are six large plates, representing the battle of the Chinese with the Tartars.—*Nouv. Dict. Hist.*

ALI PACHA, an Albanian chief of strong character and great abilities, was born in 1750 at Tepelini. His father, who possessed considerable authority, died of grief, in consequence of being stripped of his territories by the Agas, leaving a widow, a woman of considerable energy of character, who spirited up her son to assume the conduct of a predatory troop of his countrymen. With this band he committed so many depredations, that the adjacent tribes took up arms in their own defence, and the inhabitants of Gardiki, in a nocturnal expedition, carried off his mother and sister from Tepelini, and very nearly surprised himself. The conduct of the victors to their unfortunate captives was so brutal, that the naturally implacable temper of Ali was roused, and he vowed the extermination of the whole race, which oath, in the sequel, he almost literally executed. For some years he was the sport of various fortune, and at one time was reduced to great poverty, from which he was relieved by the discovery of a chest of buried gold, with which he raised a new body of two thousand men. He now assumed great authority, and, as it is said, by counterfeiting a firman of the sultan, he exercised the pashaship of Janina. This event, which took place in 1788, afforded him the desired opportunity to wreak his vengeance upon the Suliotes, whom he treated with the most horrible barbarity. At length the jealousy of the Porte was excited, and steps were taken to arrest his progress, but Ali had now attained despotic rule, and for several years, with a singular mixture of policy, craft, and courage, set the Ottoman power at defiance. During this interval his authority was exercised with all the rigour of the most absolute eastern sway, and innumerable striking acts of political ferocity are on record, in proof at once of the cruelty and the determination of his character. The insurrection of the Greeks in 1821 was an event of which he was taking the necessary steps to avail himself, but his fortunes, which had previously begun to yield, gradually sunk under the powerful efforts of the Porte, and he

ALL

was ultimately surprised like a tiger in his den, by the craft of Hassan Pacha, who had been sent to demand his head. The latter, who had gained access on a view of compromise, no sooner declared his errand than Ali replied, "My head is not to be delivered up so easily," and the fierce old man accompanied the words with a pistol-ball which broke his opponent's thigh. With equal courage and resolution he shot two more dead upon the spot, but fell the same moment himself, on which his head was severed from his body and sent to Constantinople.—*Ann. Biog.*

ALIX (PETER) a French abbot in the seventeenth century. He wrote "Dialogue entre Porte Noir et la Pillori;" "Eponge pour effacer la Censure du P. Dom. Venerey;" and the "History of the Abbey of St. Paul."—*Nouv. Dict. Hist.*

ALLAINVAL (LEONOR JEAN CHRISTINE SOULAS d') a French abbé and dramatic poet of the middle of the eighteenth century. He possessed considerable merit. His best piece is "L'Embarras des Richesses."—*Biog. Univ.*

ALLAN, FSA. (GEORGE) the son of G. Allan, the historian of Durham. He was educated at Hertford, under Dr. Carr, the translator of Lucian; and at Trinity Hall, Cambridge, where he took the degree of M.A. in 1792. He was chosen M.P. for the city of Durham, in 1813, after an expensive contest; and after the dissolution of parliament in 1818 he went to reside at St. Omer, in France, where he died July 21, 1828, at the age of sixty. Mr. Allan was a considerable contributor to the eighth volume of Nichols's *Literary Anecdotes*.—*Ann. Biog.*

ALLARD (GUY) a native of Dauphiny in the seventeenth and eighteenth century. He was counsellor to the king, and wrote several treatises, which have become very scarce, on the history of Dauphiny, valuable for their provincial and genealogical anecdote, together with the history of prince Zizim, an amorous romance.—*Moreri.*

ALLEGRAIN (CHRISTOPHER GABRIEL) a celebrated French sculptor towards the close of the eighteenth century, admitted into the academy for his fine execution of the figure of a young man. His *Venus* and *Diana* are greatly admired.—*Biog. Univ.*

ALLEN (ANTHONY) an English lawyer and antiquary in the first half of the eighteenth century. He collected a biographical account of the members of Eton college, and formed a vocabulary of such English words as have changed their original meaning, as "villain," "knave," &c. which work was never printed.—*Chalmers' Biog. Dict.*

ALLEN (ETHAN) a brigadier-general in the service of the United States during the American war. He was born at Salisbury (N. A.) and removed with his parents into Vermont, at the commencement of the disturbances in that province in 1770. He distinguished himself on many occasions by his daring courage and address; and particularly by the capture of Fort Ticonderago, which enterprise he executed in concert with colonel

Arnold, without firing a shot. He was subsequently taken prisoner by the English, but was exchanged in May, 1778. He published, besides an account of his captivity, "A Vindication of the Opposition of the Inhabitants of Vermont to the Government of New York, and their Right to form an Independent State," 1779; and a work entitled, "Allen's Theology, or the Oracles of Reason," the first professed attack on Christianity which appeared in the United States. General Allen was a confirmed infidel, holding very peculiar opinions, among which was the Pythagorean doctrine of Metempsychosis. He died in 1802.—*Encyclop. Amer. Edinb. Mag.*

ALLEN (IRA) an American officer and topographical writer, born, about 1752, at Cornwall, in the county of Litchfield, Connecticut. He attained the rank of major-general of the militia of the state of Vermont. (N.A.) In 1798 he published, "The Natural and Political History of the State of Vermont, with an Appendix." 8vo.—*Public Characters.*

ALLERSTAIN, or HALLERSTAIN (—) a jesuit missionary, who was a native of Germany, and died at Pekin in China, about 1778. He was mandarin president of the tribunal of mathematics; and he left "Astronomical Observations," published with those of father Kœgler, by F. Hell, at Vienna, 1766, 2 vols, 4to.—*Dict. Hist.*

ALLORI (ALEXANDER) called Bronzino, a Florentine painter in the sixteenth century. He was well acquainted with anatomy, and hence excelled in the naked figure. His portraits are graceful, and he successfully followed Michael Angelo.—*Pilgrington.*

ALLORI (CHRISTOPHANO) son and disciple of the preceding. He excelled in the minuteness and delicacy of his touch. His pictures, which are small, abound with minims figures admirably executed.—*Idem.*

ALMODOVAR (Duc d') a Spanish nobleman, distinguished for his literary talents, who died at Madrid, in 1794. He published in that city, in 1781, a journal entitled, "Decada Epistolem;" and he also produced a work on the Establishments of the Europeans in the East and West Indies, under the pseudo-nym of Odoardo Malo of Lucca. He occupied in succession the posts of minister plenipotentiary from the court of Spain, in Russia, in Portugal, and in England.—*Biog. Nouv. des Contemp.*

ALOMPA, the founder of the Burman empire. He was of obscure birth, but being bold and enterprising, he raised himself to independence and sovereign power, having established a new dynasty about the middle of the eighteenth century. He founded the city and port of Rangoon, and made a treaty with the English. His death took place in 1769.—*Pinkerton's Geography.*

ALP ARSLAN, the second sultan of the dynasty of the Seljucides, in Persia. He died in 1072. This prince enlarged his territories by numerous conquests; and after various encroachments on the eastern empire, he vanquished in a decisive battle and made captive the emperor Romanus Diogenes.—*Gibbon.*

ALPHIUS AVITUS, a Roman poet of the third century, in the reign of Severus. He wrote the lives of illustrious men, and the history of the Carthaginian war in verse.—*Voss. de Hist. Lat.*

ALSOP (RICHARD) an Anglo-American writer, born at Middletown, in Connecticut. He published several fugitive pieces in prose and in verse, which were well received, and he translated various works from the Italian and French languages, among which the most important was the "Natural and Civil History of Chili," from the Italian of Molina, 2 vols. 8vo; reprinted in London. In 1815 he prepared for the press a "Narrative of the Captivity and Adventures of J. R. Jewett among the Savages of Nootka Sound." He died in 1815, at the age of fifty-six.—*Encyclop. Amer.*

ALSTEDIUS (JOHN HENRY) a German philosopher and protestant divine in the seventeenth century. He completed an Encyclopædia, the origin of the works of that description, and was likewise the author of some celebrated theological collections.—*Moreri.*

ALSTROEMER (CLAUDE) a Swedish naturalist, who was the son of Jonas Alstroemer. (See Dict.) He studied botany under the celebrated Linnæus, and having travelled in Spain and several other European countries, he collected specimens of plants, which he sent to that naturalist, who inserted notices of them in his "Species Plantarum;" with references to the scientific researches of his pupil. At Cadiz Alstroemer saw a Peruvian plant, the beauty of which attracted his attention, and having procured some seeds from it, he forwarded them to Sweden, where being planted they grew, and the flower thus produced was generally cultivated under the appellation of the Lily of Alstroemer; and Linnæus, arranging it as the first species of a new genus, gave it the name of *Alstroemeria*. C. Alstroemer devoted his attention to various topics of natural history and agriculture, and he published a description of the Babylonian, a species of ape, in the Memoirs of the Academy of Science at Stockholm. He was born in 1736, and died in 1794.—*Biog. Univ.*

ALTING (MENSON) a burgomaster of Groningen in the seventeenth and eighteenth centuries. He is the author of the best description of the Low Countries now extant.—*Bayle.*

ALZATE Y RAMIREZ (JOS. ANT.) a Spanish geographer and astronomer, who was a native of Mexico, and lived in the last century. He published a Mexican Literary Gazette, and made many astronomical observations. He was a correspondent of the Academy of Sciences at Paris, to which he dedicated a new chart of North America; and he constructed several other charts, and wrote "Geographical Memoirs."—*Dict. Hist. Biog. Univ.*

AMADUZZI (JOHN CHRISTOPHER) born in the papal dominions, was a distinguished

philologist, and became inspector of the printing-office of the Propaganda at Rome, about the middle of the last century. He carried on an extensive literary correspondence, and published a great many learned works.—*Biog. Univ.*

AMALRIC (AUGUSTI) a biographer of the fourteenth century. He wrote a history of the popes, entitled, "Chronicum Pontificale."—*Nouv. Dict. Hist.*

AMAMA (SIXTINUS) professor of Hebrew in the university of Franeker, was born in Friesland, and died in December 1629. He was a Protestant divine, and was induced to attack the authority of the Vulgate translation of the Bible; commencing by animadversions on the Pentateuch, and concluding by a collection of critical dissertations against the translations in use among the Catholics. This work appeared under the title of "Antibarbarus Biblicus," 1656, 4to. The author shows himself to be a bold critic, but he displays an unreasonable degree of prejudice, and particularly against the Council of Trent; at least such is the charge brought against him by Catholics, but Brian Walton and other Protestant writers mention the critical works of Amama with approbation. He was also the author of an Hebrew Grammar, Amsterd. 1625.—*Niceron. Nouv. Dict. Hist.*

AMAND (MARK ANTHONY GERARD, Sieur de St) a French poet in the seventeenth century. His father had a command in the British navy, but being taken prisoner by the Turks, was confined three years in the black tower at Constantinople. He was one of the first members of the French Academy, and distinguished himself in the amatory, burlesque, and comic walks of poetry.—*Biog. Univ.*

AMBROSIUS (THESEUS) a learned writer on dialectics in the sixteenth century. He was a Canon Regular of the Lateran, and superintendent of the Monastery of St. Peter at Pavia, in Italy, where he died in 1540. He distinguished himself among his contemporaries by his knowledge of different languages and he collected the observations of preceding writers, and with his own improvements reduced them to an order calculated to throw light on the subject of his inquiries. This appears from his "Introductio in Chaldaicam linguam, Syriacam, atque Armeniam, et decem alias linguas," Pavia, 1539, 4to. It is a mistake into which several writers have fallen to represent this as merely a new edition of Postel's treatise on the same subject. It is rather a completely new and different work; for of the three languages particularly specified in the title of Ambrosius's publication, and of the ten others which are treated of in a more cursory manner, Postel has only given an account of two, the Chaldee and the Armenian.—*Adelung's Mithridates*, vol. i. *Biog. Univ.*

AMEILHON (HUBERT PASCAL) an eminent French writer, who was born at Paris in 1730. He first attracted notice by the publication of a work entitled, "Histoire du Com-

merce et de la Navigation des Egyptiens sans les Règnes des Ptolemies;" and after the death of Lebeau he continued the History of the Lower Empire, begun by that writer. He successively gained three prizes for literary productions, offered by the Academy of Inscriptions and Belles Lettres; and in 1766 he became a member of that Society. During the latter part of his life he was engaged in editing periodical journals, particularly the Journal of Verdun; and in the arrangement of various libraries, in which he was employed by government, and through his exertions great numbers of books were collected and classed, which had been procured from the convents and other institutions suppressed in the course of the Revolution. Ameilhon, however, did not neglect the cultivation of his favourite study, archaeology; but in the prosecution of his researches he displayed an enlightened understanding which led him to prefer objects of utility to those of mere curiosity. In 1800, when he was dean and president of the Institute, in addressing the young artists, who had obtained prizes that year, he described with admirable sagacity the state of fine arts among the ancients, showing that they did not minister to the purposes of luxury only but were interwoven with the public institutions of the people: and he deprecated their application at present to objects of a mean and trivial nature, instead of which he remarked they ought to be devoted to the improvement of intellectual taste and feeling. He died at Paris in 1811.—*Biog. Univ. des Contemps.*

AMELIA (ANNE) princess of Prussia, sister of Frederick the Great, born in 1723, died in 1787. She distinguished herself by her taste for the arts; and she set to music "The Death of the Messiah," by Ramler.—*Biog. Univ. Class.*—See TRENCK.

AMES (FISHER) a distinguished American statesman and public writer, born at Dedham, in Massachusetts, in 1758. He was admitted, while young, into Harvard College, where he displayed great talents and industry, studying with a view to qualify himself for the legal profession; but after receiving his degree, in 1774, the narrow circumstances of his widowed mother obliged him for a while to become an assistant in a public school. At length, in 1781, he commenced the practice of the law, having previously passed some time in the office of a member of the profession at Boston. He soon attracted notice both as a public speaker and an essay writer; and in 1788 he obtained a place in the Massachusetts convention for ratifying the constitution, whence he passed to the house of representatives in the state legislature. Here his fame increased as an orator and a man of business, so that the voters of the Suffolk district elected him their first representative in the congress of the United States. He remained a member of the congress during the eight years of Washington's administration, and he showed himself a zealous and able defender of the policy of that great and truly patriotic statesman.

After the retirement of the President, Mr. Ames returned to his residence at Dedham, where he devoted his time to the cultivation of his estate, and the practice of his profession. The latter he relinquished after a few years, owing to his declining health; but his anxiety for the welfare of his country prevented him withdrawing his attention from political subjects. He published a considerable number of essays relating principally to the contest between Great Britain and revolutionary France, with reference to its influence on the liberty and prosperity of America. No writer expressed more anxiety for the cause of Britain, or more alarm at the character and tendency of French despotism. In 1804 Mr. Ames was chosen president of Harvard College, which honourable office he declined. When Washington died, this gentleman, then a member of the council of the commonwealth, was appointed to deliver his funeral eulogy before the legislature of Massachusetts. Mr. Ames died July 4, 1808, after a long illness, and he was interred at Boston, with extraordinary funeral honours. His works were published collectively, in a large octavo volume, in 1809, with a preliminary biographical notice of the author, by the Rev. Dr. Kirkland, president of Harvard College.—*Encyclop. Amer.*

AMICO (VITO MARIA) a Sicilian professor of theology, of a noble family in the eighteenth century. He is principally known by his Sicilian antiquities.—*Moreri.*

AMMAN (IGNATIUS AMBROSIVS) a German geographer, who was born in 1753, at Mülheim on the Danube. After having been in the service of the Count de Schenk and that of the Prince Bishop of Augsburg, he became aulic councillor and public surveyor at Dillingen, and councillor of the direction of that country for the king of Bavaria, in 1803, and he at length retired to Ulm with a pension. He obtained great reputation by his work entitled "Détermination Géographique de la Souabe Orientale et des Pays Voisins," Augsburg, 1796, 8vo; and also by the construction of a large and accurate chart of the South-west part of Suabia, contained in six sheets, engraved by Abel, at Stuttgart. Amman died in 1811.—*Biog. Nouv. des Contemp.*

AMMAN (JULIUS) an engraver and painter at Zurich, in the sixteenth century. He was famous for illustrating the classics with his prints, and published portraits of the French kings, with descriptions; but his chief work was his collection of 115 plates of the various artificers at work, Frankfurt, 1564.—*Nouv. Dict. Hist.*

AMMANATI (BARTHOLOMEW) a Florentine architect and sculptor in the sixteenth century. His chief performances are the colossal statue of Neptune at Venice, and the statue of Hercules at Padua; besides which he published "La Cita," an architectural work.—*Tiraboschi.*

AMO (ANTHONY WILLIAM) an African negro, born on the coast of Guinea, about the beginning of the eighteenth century. Having

been taken by slave-dealers to Holland, in 1707, he was presented to the duke of Brunswick, who sent him to study at the university of Halle. He became skilful in astronomy, and learnt to speak the Latin, Greek, Hebrew, German, Dutch, and French languages. He continued his studies at Wittenberg, and afterwards delivered courses of lectures with great success. On the death of his benefactor he fell into a profound melancholy; and at length determined to quit Europe, where he had resided thirty years. He returned to Africa, and in 1753 he was visited by the learned traveller Galland, who found him leading a secluded life with his brother and sister. Some time after he died at Chama, in the fort belonging to the Dutch company.—*Dict. Hist.*

AMONTONS (GUILLAUME) born in Normandy in 1663. He devoted himself to the study of natural philosophy, and became a distinguished member of the Royal Academy of Sciences at Paris. He constructed a new thermometer, hygroscope, and other philosophical instruments. Taking a voyage to England, he laid before the Royal Society a plan for communicating intelligence at considerable distances by visible signals, to be observed with telescopes; and on his return to Paris he made some experiments on the subject. But this scheme, since carried to such perfection in the various modifications of the telegraph, does not appear to have been then applied to any useful purpose. Amontons died October 11, 1705. In 1695 he published "Expériences Physiques sur une nouvelle Clepsydre, et sur les Baromètres," dedicated to the Academy of Sciences.—*Biog. Univ. Dict. Hist.*

AMORETTI (MARIA PELEGRINA) a learned Italian lady. Such was her early proficiency, that at the age of sixteen she maintained theses on philosophy; and when twenty-one, she was admitted LL.D. at the university of Pavia. She wrote a treatise "De Jure Dotium," which was printed, but not published. Her death took place in 1787, at Oneglia.—*Dict. Hist.*

AMORETTI (CHARLES) a mineralogist, born at Oneglia, in the Milanese, in 1740; died in 1816. He entered into the church, and became one of the keepers of the Ambrosian library at Milan. He published in Italian "A Tour from Milan to the Three Lakes of Como, of Lugano, and Major," 1805, 4to. This work contains an exact and curious description of all the mineral bodies discovered in the places explored by the author. The abbé Amoretti composed a great number of memoirs and tracts, which appeared in various Italian journals of literature and science. He also published "Guide des Etrangers dans Milan et les Environs de cette Ville," 1805, for which he was rewarded with the decoration of the order of the Iron Crown. Soon after he was appointed a member of the Institute of Milan, and admitted into the council of mines of the king of Italy. He edited Pigafetta's account of the "First Voy-

age round the World," with notes and illustrations, Milan, 1800, 4to, and translated the same work into French, published at Paris, 1801, 8vo. Another of his literary labours was an edition of the "Voyage of Ferrer Maldonado to the Atlantic, Pacific Ocean by the North-west Passage," Milan, 1811, 4to, which he likewise translated into French, Placentia, 1812, 4to.—*Dict. Hist.*

AMOREUX (PETER JOS.) a French physician, librarian to the faculty of medicine at Montpellier, born about the middle of the eighteenth century. He was the author of numerous works, displaying great research, but defective in respect of perspicuity and arrangement. They treat principally of rural economy and natural history; and among the most important are "Tentamen de Noxa Animalium," 1762, 4to; "Lettres sur la Médec. Vétérinaire," 1771—3, 8vo; "Essai Hist. et Litt. sur la Médec. des Arabes," 1805, 8vo; "Précis Histor. sur l'Art Vétérinaire," 1810, and "Tr. de l'Olivier," 1814, 8vo. His death took place in 1824.—*Idem.*

ANCHERSEN (PETER) professor at the gymnasium of Odensee, in Fionia, one of the Danish islands, in the former part of the eighteenth century. He published "Researches on the Antiquities of Denmark;" and he was one of the most learned men of his age and country.—*Idem.*

ANCHIETA (JOS.) a Portuguese jesuit, surnamed the Apostle of the New World. He was born in 1533, in the isle of Teneriffe; and at the age of twenty-eight he went with other members of his order to Brazil, where he founded the first college for the conversion and civilization of the savage natives. Appointed governor of the converted Indians, he contributed with them to the foundation of St. Sebastian's. He died in 1597. Both the Portuguese and the savages ascribe to Father Anchieta the power of working miracles. He was the author of a long Latin poem in honour of the holy Virgin.—*Biog. Univ.*

ANCKARSTROEM (J. J.) a Swedish officer, born in 1751. He acquired a shocking celebrity by the deliberate assassination of his sovereign, Gustavus III, whom he shot with a pistol, on the night of March 15, 1792, as he was quitting a masquerade. Anckarstroem was condemned to be scourged with rods three days, to have his right hand cut off, and then to be decapitated; which sentence was put in execution April 29, 1792.—*Biog. Univ.*

ANDERSON, MD. (ROBERT) a physician and writer of biography, who was a native of Carnwath, Lanarkshire (N. B.) He was educated at the university of Edinburgh, where he took his medical degree; and after having practised as a physician several years at Alnwick, in Northumberland, he removed to Edinburgh, where he died in March, 1830, at the age of seventy-eight. In 1795 he published a valuable edition of the British Poets, in 14 vols, 8vo, with critical and biographical notices; he afterwards edited the works of Dr. John Moore, and the Miscellaneous Works of Dr. Tobias Smollett, the latter of which

passed through several impressions, and was accompanied with the "Life of T. Smollett, MD. with critical observations on his works;" but the most popular of his productions was the Life of Samuel Johnson, LL.D. with criticisms on his works.—*Gent. Mag.*

ANDERTON (JAMES) a distinguished writer on controversial theology, who was a native of Lancashire, and wrote in the early part of the seventeenth century. He was a layman and a man of fortune, who professed the Catholic faith, and in order to avoid encountering the penal severities of the laws against the Catholics, he published his works under the assumed name of John Brekeley. His principal production was entitled "The Apology of the Protestants for the Roman Religion," 1604, 4to, in which he produced the testimonies of Protestant authors in favour of the doctrines of the Catholic church; in reply to which Dr Morton published, in 1606, an "Appeal to the Catholics for the Protestants;" to whose animadversions, and those of other writers, Anderton replied in the notes attached in a second edition of the Apology, in 1608. He was also the author of an "Explication of the Liturgy of the Mass," Cologne, 1620, 4to; and the "Religion of St. Augustine," 1620, 8vo.—*Biog. Univ.*

ANDOCIDES, one of the ten Greek orators whose lives are written by Plutarch. He flourished BC. 468. Four of his orations, which are extant, were edited by Stephanus.—*Plut. in Decem Orat.*

ANDRADA (ANTONIO) a Jesuit, born about 1580, who, being employed as a missionary in India and Tartary, distinguished himself by his geographical discoveries. In 1624 he penetrated into Thibet, which had probably been visited by Marco Polo in the thirteenth century, but had subsequently become totally unknown to Europeans. On the return of Andrada to Goa, he was employed by his superiors in many affairs of importance. He died, in consequence of having been poisoned, in 1634. The account of his travels was published at Lisbon in 1626; and in French, at Paris, in 1628; and a new translation appeared in the "Recueil de Voyages au Thibet," by MM. Perou and Billecocq, Paris, 1796, 18mo.—*Biog. Univ.*

ANDREANI (ANDREA) a Mantuan engraver in the seventeenth century. He engraved in the style called chiaro-scuro, and executed many pieces from Raphael, Titian, and other great painters.—*Strutt.*

ANDREOSSI (FRANCIS) an eminent French engineer and mathematician, born at Paris in 1633. To him has been ascribed the construction as well as the plan of the canal of Languedoc, though his claim to the sole merit of the undertaking has not been universally admitted.—(See Riquet, PAUL.)—On the subject of his labours "L'Histoire du Canal du Midi," by his descendant, general Andreossi, "L'Histoire du Languedoc," by Messrs. Caraman, and "L'Histoire du Corps du Génie," by M. Allent, may be advantageously consulted. Andreossi published a chart of

the canal of Languedoc, and memoirs concerning its construction. He died in 1688.—*Biog. Univ.*

ANDREOSSY (ANTHONY FRANCIS count) a distinguished French military officer and engineer, descended from the subject of the preceding article. He was born in 1761, and having become a lieutenant of artillery at the age of twenty, he was during the war in Holland, in 1787, taken prisoner by the Prussians. Having been exchanged and returned to France, the revolution afforded ample scope for the exertion of his talents, and in the course of several campaigns he rose rapidly from one rank to another, and had reached that of inspector general of the artillery at the period that Napoleon ascended the throne. He was then nominated grand-cordon of the Legion of Honour; commander of the order of the Iron Crown; and grand chancellor of that of the Three Fleeces, (Trois Toisons,) which was never organized. He distinguished himself at the siege of Mantua in 1796, during the expedition to Egypt, and on other occasions. He was appointed a member of the institute established at Cairo, and as the result of his researches he produced "*Mémoires sur le Lac Manzaleh, sur la Vallée du Lac Nation, sur le Fleuve sans Eau,*" which were published in the "*Mémoires sur l'Égypte,*" and also separately at Paris, 1800, 4to. He returned to France with Buonaparte, who created and placed under the direction of Andreossy a fourth division of the ministry of war, which comprehended the administration of the artillery and engineers. He was subsequently appointed general of a division, commandant of Mayence, and at length chief of the staff of the Gallo-Batavian army. After the peace of Amiens he was sent ambassador to the court of London, and being recalled on the recurrence of war, he was in 1806 nominated president of the electoral college of the Aube, and afterwards a count of the empire. Having been ambassador to Vienna, he was made governor of that city in 1809, after the victory over the Austrians at Wagram. Returning to France he was not long after despatched on an embassy to the Porte, where he remained till the restoration of Louis XVIII, by whom he was recalled in August, 1814, when he was presented with the cross of St. Louis. At the return of Buonaparte from Elba in 1815, Andreossy took an active part in public affairs; he signed the famous deliberation of the Council of State, March 25, 1815; he accepted the transitory honour of a peerage, and the presidency of the section of war. Subsequent events again drove him into retirement, as one of the partisans of the fallen emperor. His death took place in 1828. He published in 1800, "*Histoire Générale du Canal du Midi,*" containing an account of the scientific operations of his ancestor in the construction of the canal of Languedoc, which gave rise to a literary contest.—(See *Riquier*).—In 1802 appeared from his pen "*Relation de la Campagne sur le Mein et la Rednitz, de l'Armée Gallo-Batavia*

aux Ordres du Général Augereau," 8vo; and he laid before the Institute "*Mémoires sur l'Irruption du Pont Euxin dans la Méditerranée;*" and "*Sur le Système des Eaux qui abreuvent Constantinople.*"—*Biog. Novv. des Contemp. Month. Mag.*

ANDRES (JUAN) a learned Spaniard, who was born at Valencia, in 1727. He became a Jesuit, and on the expulsion of his order from his native country he retired to Italy, where he added to the reputation he had previously acquired as a man of letters. In 1776 he published in Italian, an "*Essay on the Philosophy of Galileo;*" and in 1782, at Parma, in the same language, a treatise "*On the Origin, Progress, and Present State of Literature,*" 7 vols, 4to, republished in 12 vols, 8vo, a work of great research, displaying becoming impartiality, and elegance and purity of style. A Spanish translation by his brother, Don Carlos Andres, was printed at Madrid; and the first volume of a French version appeared at Paris in 1805, but the death of the translator, J. E. Ortolani, in 1807, prevented its completion. The abbé Andres was also the author of "*Cartas familiares a su Hermano D. Carlos, con la Noticia del Viage a varias Ciudades de Europa,*" Madrid, 1794. 6 vols, 4to, containing an account of his travels. When the Spanish government permitted the ex-Jesuits to re-enter Spain, he returned home, but after the death of his father he again went to Italy; and he was appointed keeper of the royal library at Naples, which office, notwithstanding political revolutions, he long retained. In 1807 he produced a tract, in which he endeavoured to demonstrate the error of the common opinion that the mariner's compass was the invention of Flavio Gioia, of Amalfi. He became blind in 1813, in consequence of cataracts in the eyes, the removal of which by an operation his very advanced age rendered hazardous. It has been stated in a work of authority that the abbé Andres died in 1803; but he survived that period several years, and is supposed to have been living in 1820, and we have not been able to ascertain the exact period of his decease.—*Biog. Univ. Biog. Novv. des Contemp.*

ANDREW OF PISA, a sculptor and architect, was born in 1270. He built several grand structures at Florence, Venice, and other of the principal cities in Italy, and also obtained great reputation as a painter, poet, and musician. He died in 1345.—*Novv. Dict. Hist.*

ANDREW OF RATISBON, a German historian of the fifteenth century. He wrote a chronicle of the dukes of Bavaria, and a "*History of Bohemia.*"—*Novv. Dict. Hist.*

ANDREWS (HWRAY) a mathematician, who for more than forty years was employed in making calculations for the "*Nautical Ephemeris,*" but was better known as one of the latest editors of the "*Vox Stellarum,*" or Almanac of Francis Moore. His scientific attainments were the result of his own application. He was born of poor parents, at Freiston, near Grantham, in Lincolnshire, in 1744; and he commenced life as a servant, but

afterwards kept a school at Royston, in Hertfordshire, to which occupation he united that of a bookseller and stationer. He died January 26, 1820. The once popular but now extinct and deservedly obsolete publication, which Mr. Andrews long superintended, was originally edited by Francis Moore, who died in London about 1734; it was then compiled and continued by John Wing, and afterwards by his son Tycho Wing, of Pickworth, in the county of Rutland, the latter of whom died in 1750. The care of the publication was next intrusted to William Harvey, of Knipton, near Grantham; and after his death, about 1762, to Thomas Wright, of Eaton, near Melton Mowbray, in Leicestershire; who was succeeded, about 1780, by the subject of this article.—*Gent. Mag.*

ANDRIEU (BERTRAND) a medallist engraver, born at Bordeaux in 1761, and died at Paris in 1822. He engraved a great number of medals from the collections in the royal cabinet and library at Paris, a multitude of vignettes, and various models for the notes of the French national bank. He has been considered as the restorer of the art of engraving medals, which had declined after the reign of Louis XIV.—*Dict. Hist.*

ANDROMACHUS, a native of Crete in the first century, and physician to Nero. He wrote, in elegiac verse, a description of the theriaca, a medicine which he invented, and dedicated it to the emperor. His son wrote a description of the same in prose.—*Galen de Theriac.*

ANGELIS (DOMINICO de) a learned Neapolitan writer of the seventeenth and eighteenth centuries. His merit obtained for him the appointment of historiographer to Philip the Fifth. Besides some poems, he was the author of several biographical and historical pieces in the Italian language.—*Tiraboschi.*

ANGLICUS (GILBERTUS) an eminent English physician in the thirteenth century. He wrote a compendium of physic, the earliest extant, which has frequently been printed.—*Friend.*

ANICH (PETER) a Tyrolese peasant, who distinguished himself as a geographer and astronomer. He was born at Oberporfess, near Inspruck, in 1723; and till the age of twenty-eight he was engaged in his paternal occupation, that of a farmer, though he had at an early period manifested an admiration of the sciences. The Jesuits of Inspruck at length noticed his inclination for study, and gave him instruction in mechanics and mathematics. This enabled him to undertake with success the construction of a celestial and a terrestrial globe, and various mathematical instruments. His teacher, a Jesuit, introduced him to the notice of the Empress Maria Theresa, who ordered him to draw a map of the northern Tyrol. This task was rendered difficult by the superstition of his countrymen, whose interruptions and annoyances were so serious as to threaten his life. At length he finished his survey, and completed the map, but on its being taken to

Vienna it was found to be on too large a scale for publication, and he was consequently directed to reduce it to nine sheets. While engaged in this last labour, he died, September 1, 1766. The map was engraved and published in 1774, with the title "Tyrolia geographicè delineata, a Petro Anich et Blasio Huever, curante Ign. Weinhart."—*Biog. Univ. German Conversation Lexicon.*

ANICHINI (LUIGI) a famous seal engraver, a native of Ferrara, who was contemporary with Michael Angelo. His interview of Alexander the Great with Jaddua the High Priest of the Jews, was declared by Michael Angelo to be the perfection of the art.—*Novv. Dict. Hist.*

ANNO, archbishop of Cologne in the eleventh century. A hymn, composed in honour of this prelate, after his death, is regarded as the only poetical monument of importance of the German national literature of that period. An edition of it was published by Dr. Goldmann, at Leipsic, in 1816. The political importance of Anno as chancellor of the Emperor Henry III. and as administrator of the empire during the minority of Henry IV, his bold spirit of government, as well as the sanctity of his life; his paternal care of his diocese, and his zeal for the foundation of churches and monasteries, and for the reformation of monastic establishments,—gained him the veneration of his contemporaries, and the character of a saint. The hymn of St. Anno commences with the popular traditions of Germany, proceeds to the history of the archiepiscopal see of Cologne, and of its thirty-three prelates who preceded Anno, and among whom were seven saints, and of their residence in the city of Cologne on the Rhine. The poet then describes the secular and spiritual government of the saints, and laments the madness of his countrymen as displayed in their continual discords. In despair at not being able to change this state of things, the German patriot becomes weary of life, and dies of grief at the ingratitude of his contemporaries, whom he had so zealously endeavoured to benefit.—*German Conversation Lexicon.*

ANSART (LOUIS JOS. AUG.) a canon regular of France, born in 1748. He was the author of "Bibliothèque Littéraire du Maine," 1784, vol. i. (no more published,) which has been erroneously ascribed to his cousin AND. JOS. ANSART.—(See Art. Ansart, *Dict.*)

ANSPACH (margravine of) a celebrated lady and lively writer, was the daughter of Augustus the fourth Earl of Berkeley, by Elizabeth the daughter of Henry Drax, Esq., of Charborough, in Dorsetshire. She was born in London, in December 1750; and on the death of her father when she was but five years old, and the second marriage of her mother, she was consigned to the care of a Swiss governess, to whose kindness and attention she seems to have been indebted for the early cultivation of her talents. After having visited Paris and been introduced at Court at home while yet very young, she was in May,

1767, married to William Craven, Esq., who in 1769 succeeded his uncle as Earl Craven. She had by him seven children; but after a union of thirteen years a separation took place, and Lady Craven quitted England for France. She afterwards travelled in Italy, Austria, Poland, Russia, Turkey, and Greece; she was received with the honours due to her rank at the courts of Vienna, Warsaw, and St. Petersburg. She then returned to England, when she published an account of her travels, under the title of "A Journey through the Crimea to England," 1789, 4to. Subsequently she settled at Anspach in Germany, where she became the principal lady of the Court of the Margrave of Anspach; and having established a theatre, of which she was chief manager, she wrote and translated into French some dramatic pieces for the stage. She resided five years at Anspach, and having visited Naples and Lisbon with the Margrave who had become a widower, on receiving news of the death of Lord Craven, which occurred at Lausanne, September 26, 1791, she was, on the 30th of October following, united to the Margrave of Anspach. From Lisbon the Margrave and Margravine went to Madrid, thence through France to Berlin, and afterwards to England. Here they experienced considerable mortification, in consequence of the conduct of the Margravine's relatives, and the refusal of the Queen to receive her at court as Margravine of Anspach. But notwithstanding these circumstances the Margrave, having sold his principality to the King of Prussia, in 1791, settled with his lady in England. He purchased an estate at Benham, in Berkshire; and also Brandenburg House, near Hammersmith, which he made his principal residence, kept a large establishment, and had a private theatre. The Margravine again indulged her taste for theatrical composition, and produced "Princess of Georgia;" "The Twins of Smyrna;" "Nourjahad," and several other pieces; and for the songs in these dramas she composed musical airs. In 1806 the Margrave died, and left to his widow nearly 150,000*l*. She resided in England with little intermission till after the peace in 1815, when she revisited the continent, and at length settled at Naples, where she built a house for her residence, on a piece of ground given her by the King; and there she died, January 13, 1828. She published, in 1825, an autobiographical work, entitled "Memoirs of the Margravine of Anspach, formerly Lady Craven," which is interesting from the accounts it contains of her intercourse with Catherine II, Frederick the Great, Joseph II, and other exalted personages. The Margravine of Anspach claims attention rather from circumstances than talent, she was a light and vivacious woman of a school which is rapidly going by, and which it is of the least possible consequence to renovate.—*Gent. Mag.*

ANTAR or ANDAR, an Arabian chief who lived in the middle of the sixth century, and who was one of the seven great poets, whose works, embroidered with gold upon silk,

were hung up at the door of the Temple of Mecca, forming a portion of the famous Moallakah. His compositions are devoted to the description of his warlike deeds, and his love for the fair Abia. In the Arabian romance entitled "Antar," Asmai, a renowned grammarian in the court of Haroun al Raschid, has formed a collection of the old Arabian traditions concerning Antar, to which he has added stories of the chivalrous adventures of other Arabian heroes. This romance, first described by Sir William Jones and afterwards by Von Hammer, affords the most perfect idea of the manners, opinions, and superstitions of the early Arabians, which have undergone so little alteration, that the picture may be recognised in the state and appearance of the modern Bedouins. The work is composed in the purest Arabic, and is reckoned among the classics of Arabian literature. There is an English version entitled "Antar, a Bedouen Romance, translated from the Arabic by Terrick Hamilton," Lond. 1819, 4 vols, 12mo; and a French translation has more recently appeared at Paris. An edition of the Moallakah, Arabic and Latin, edited by Menil, with observations by Willmet, was published at Leyden, 1816, 4to; and there is an English version by Sir William Jones.—*German Conversation Lexicon.*

ANTHING (FREDERICK) a German military officer, known as the biographer of the famous Marshal Suwarow. He was born at Gotha, in Saxony, travelled through Europe, and went to St Petersburg, where he supported himself by making Silhouette portraits, cut in paper; and the profile likenesses of this kind which he took of the imperial family brought him into notice. He was the companion in arms of Suwarow, with whom he was long on the most intimate terms, till that general fell into disgrace with the Emperor Paul. Antning died at St. Petersburg, in 1805.—*Idem.*

ANTIPATER OF SIDON, a poet and Stoic philosopher of Sidon, in the 171st Olympiad. He is quoted and praised by Cicero and Seneca. Some of his poems are still extant in the Anthologia.—*Cic. Orat.*

ANTIPHON, the Rhamnusian, (from Rhamnus, the place of his birth,) an Athenian orator, who flourished about 430 years BC. He was the first who laid down the rules of oratory, and was put to death 411 years BC. for having, by his talents, contributed to establish the tyranny of the Four Hundred. Sixteen of his orations are preserved in the collections of Greek orators made by Aldus and Stephanus.—*Voss. de Hist. Græc.*

ANTONELLE (PETER ANTHONY, marquis d') a native of Arles in Provence, who was an infantry officer, but quitted the service before the French revolution. Appointed mayor of Arles in 1791, he took a very active part in the troubles at Avignon. He was the same year chosen deputy to the Legislative Assembly. In 1793 he was excluded from the jacobin club on account of his nobility; but he voted for the death of the queen

and the destruction of the Girondists. He was afterwards imprisoned himself, till the overthrow of Robespierre, when he became one of the conductors of the *Journal des Hommes Libres*. He was tried as an accomplice in the conspiracy of Babeuf; and being acquitted, he interfered no more in politics till 1814, at the Restoration, when he published a tract, in which he maintained that there was no prospect of liberty for France but under the Bourbons. He died at Arles in 1817. He wrote a great number of pieces on temporary topics, the most remarkable of which is his "Catéchisme du Tiers-Etat," 1789, 8vo.—*Dict. Hist.*

ANTONI (A. V. PAPACINO d') a Piedmontese, born at Villefranche, in the country of Nice, in 1714, and died in 1786. He raised himself by his merit from the rank of a private in the artillery service to that of lieutenant-general and director of the school of artillery at Turin. He published several works, among which are "Physico-mechanical Institutes," for the use of the students under his care; "An Essay on Gunpowder," which has been translated into English, French, and German; "A Treatise on the Use of Firearms," &c.—*Dict. Hist. Biog. Univ.*

ANTONINI (ANNIBAL and JOSEPH) two brothers, natives of Italy in the seventeenth and eighteenth centuries. They wrote in conjunction the history of Lucania, and Annibal was the compiler of an Italian grammar and dictionary.—*Tiraboschi.*

ANTÓNIO NEBRISSENSIS (ÆLIUS) a Spanish writer, in the fifteenth and sixteenth centuries, on grammar, poetry, history, law, medicine, and theology. Among other things he published a Spanish grammar, and a Spanish and Latin dictionary.—*Moreri.*

ANYTA, an ancient Greek poetess, some fragments of whose compositions are preserved in a collection of eminent female poets published at Hamburg in 1734.—*Foss. de Poet. Gr.*

APELBOOM (—) a Dutch poet, who died about 1780. Among his most distinguished productions may be mentioned "Ovidius in Nederlanden," i. e. Ovid in the Netherlands, Amsterdam, 1752, 8vo.—*Dict. Hist.*

APOSTOLIUS (MICHAËL) a learned Constantinopolitan Greek in the fifteenth century. He wrote a collection of apophthegms, entitled "The Violet-bed," Gr. et Lat.—*Novæ. Dict. Hist.*

APPIANI (ANDREW) a celebrated Italian painter, born in 1755. After having studied his art under the chevalier Giudei, he formed for himself a grand and original style, which rivalled that of Corregio; and he excelled especially in fresco painting. His finest works are in the choir of the church of St. Mary at Milan, in the palace of Busca, and in the castle of Monza. Being appointed member of the Institute of Italy, and of the legion of honour, and painter to the King of Italy, he executed portraits of Napoleon and the principal personages of his court, but he especially distinguished himself by his frescos in the palace of Milan, an immense undertaking,

which he left unfinished at his death in 1818.—*Dict. Hist.*

ARAB SHAH (AHMED BEN) an Arabian historian, who wrote the life of the celebrated Tatar prince Timur, or Tamerlane, under the title of "The Wonderful Effects of the Divine Decrees in the Affairs of Timur." This work, which has been made the subject of pompous eulogy by orientalists, displays that brilliance of imagination and exaggeration of style, which is characteristic of Arabian literature. Sir William Jones, in his treatise on Asiatic Poetry, says—"Quam historiam (Timuri sc.) poema nobilissimum audeo dicere." Arab Shah died in Egypt in 1450. The life of Timur was published in the original, at Leyden, 1636, 4to; and in Arabic and Latin, with Notes by Manger, Leovard, 1767, 3 vols, 4to.—*Biog. Univ.*

ARBOGAST (LOUIS FR. ANT.) a French geometriean, born at Mutzig in Alsace, who became professor of mathematics at Strasbourg, associate of the Institute, and member of many learned societies. He was also a deputy to the National Convention, and died in 1803. His principal work is "Traité du Calcul des Dérivations," 1800, 4to.—*Biog. Univ.*

ARCERE (LOUIS STEPHEN) a celebrated French ecclesiastic, poet, and historian in the eighteenth century. He is principally known by his works on Rochelle and Amiens.—*Idem.*

ARCHDALL (MARRYN) an episcopal clergyman who distinguished himself by his researches concerning the monastic and baronial history of antiquities of Ireland. He was born in Scotland, 1726, and probably received an academical education, as he obtained the degree of Master of Arts; and having entered the church, he was presented to the Rectory of Slane, county of Meath, in Ireland. In 1786 he published at Dublin, in 1 vol. 4to, a work entitled "Monasticon Hibernicum, or an History of the Abbies, Priories; and other Religious Houses in Ireland," illustrated by a map of Ireland and eighteen plates representing the costumes of the various religious orders. He likewise published, in 1789, a corrected and enlarged edition, with a continuation, of Lodge's "Peerage of Ireland." Mr Archdall, who was a member of the Royal Irish Academy, died August 6, 1791.—*Gent. Mag.*

ARCHENHÖLZ (JOHN WILLIAM VON) a very voluminous German writer, who was born in 1743, and died in 1812. He is best known as the author of "England and Italy," a work describing those countries, which has been translated into almost all the modern languages of Europe. He likewise produced "Annals of British History, from 1788," 20 vols, 1789-98; and the "History of the Seven Years' War in Germany," Berlin, 1793, 2 vols, 8vo.—*German Conversation Lexicon. Biog. Nouv. des Contemp.*

ARCHIAS, a Greek poet of Antioch, the contemporary of Cicero, and the intimate friend of Lucullus. His claim to the rights of a Roman citizen were defended by Cicero in the celebrated oration "Pro Archia Poetâ."

He wrote epigrams, some of which have been collected and published by Brunck, in his "Analecta;" and Archias also composed a poem on the Cimbric war, and commenced another on the consulate of Cicero.—*Fossius. Biog. Univ.*

ARCON (J. C. ELEONOR LEMICHAUD d') a French officer, born at Pontarlier in 1733; and died in 1800. He became general of a division, inspector of fortifications, member of the Institute, and senator. He was the inventor of the famous floating batteries used at the siege of Gibraltar in 1782. Among his works are "Réflexions d'un Ingénieur," Amsterdam, 1773, 12mo; and "Considérations Militaires et Politiques sur les Fortifications," 1795, 4to.—*Biog. Univ.*

ARCULPHUS, a French divine in the seventh century. He visited the Holy Land, and wrote an account of his travels, printed in 1619.—*Novus. Dict. Hist.*

ARCY (PATRICK d') a military writer, born at Galway in Ireland, of Catholic parents. He entered into the French service in 1739, and served in Germany and Flanders, as well as in an expedition to Ireland in favour of the pretender. On his return he became a member of the Academy of Sciences, and died in 1779. He published "Traité sur la Théorie de l'Artillerie;" "Théorie de la Lune;" and "Mémoire sur la Durée des Sensations de la Vue."—*Dict. Hist.*

ARENA (JOSEPH de) a native of Corsica, adjutant-general in 1793, deputy from Golo to the legislative body in 1797, and chief of the brigade of gendarmerie till Nov. 9, 1800. He was arrested at the opera on the 10th of August, 1801, and executed the 31st of Jan. following, for an attempt on the life of his countryman Buonaparte, then first consul.—*Dict. Hist.*

ARETIN (CHRISTOPHER, baron of) a German writer on history and politics, who was born at Ingoldstadt, in 1772. He studied at Heidelberg, and afterwards at Gottingen and at Paris, and entered while young into the public service. At one period he was involved in the enterprises of the Illuminati; and in 1799 and 1800 he recommended the abolition of the feudal estates and the convocation of the diet. In the contests between the Bavarian states and the government in 1800 and 1801, he took an active part as a writer. In 1803, after the abolition of the monasteries, he was appointed commissioner by the government for the examination of the conventual libraries; in 1804 he was made vice-president of the Academy of Sciences, of which he afterwards became secretary; and in 1806 chief director of the library of Munich. He now engaged with others, from 1804 to 1806, in the conduct of the Aurora, a daily paper; and afterwards in the New Literary Informer, a continuation of the well-known Leipsic Universal Literary Informer. Among his publications are "Decisions of the Courts of Love;" "A History of the Jews in Bavaria," 1803; "Mémorial on the History of the Divining Rod," 1807; "The Earliest

Consequences of the Art of Painting exhibited in the History of the World," 1809; "An Introduction to the Theory of Mnemonics," 1810; "Historical Literature of Bavaria—Information on the History of Bavaria from hitherto unused and chiefly foreign Sources," 1811; "Annals of the Administration of Justice in Bavaria," 1813—18; and many other works on Bavarian literature and politics. One of his productions involved him in a violent contest with other men of letters at Munich, and by order of the king he resigned his offices, and in 1811 went to Neuburg, as first director of the Court of Appeal, of which in 1813 he became vice-president. In 1819 he was chosen member of the chamber of deputies in the Bavarian Diet, in which assembly he had great influence. In the same year he became a member of the society for collecting the ancient history of Germany. He died at Munich December 24, 1824, in the office of president of the court of appeal in the Circle of Regem.—*Biog. Novus. des Contemp. Germ. Conversation Lexicon.*

ARGENTAL (CHARLES AUGUSTIN DE FERRIOL, comte d') a native of Paris, and a man of wit and pleasure, who died at an advanced age, in 1788. He is supposed to have been the author of a novel entitled "Mémoires du Comte de Comminges," which has by some been attributed to Antoine de Ferriol, Comte de Pont de Veyle, who died in 1774; and by others to his profligate relative Madame de Tencin. The Count d'Argental also wrote letters, which have been given to the public.—See TENCIN (Claudine Alexandrine Guerin de) *Dict.—Zopf.*

ARMFELDT (GUSTAVUS MAURICE, count d') a Swedish statesman, whose public life was marked by singular changes of fortune. He was born in 1757, was the son of a general officer of rank, and having been educated in the military school at Carlscroda, he was appointed ensign in the guard at Stockholm. He gained the favour of his sovereign, Gustavus III, by whom he was rapidly promoted, and honoured with various marks of distinction. In the war with Russia between 1788 and 1790, he signalized himself in the field, and having as lieutenant general concluded the peace of Werelæ, he received honorary tokens of acknowledgment from the Empress of Russia. Gustavus III, on his death-bed, manifested his high esteem for this nobleman, who it was said was to have been made president of the Council of Regency during the minority of his successor, though the guardianship of the young King had by a previous will of his father been assigned to the Duke of Sudermania, who subsequently ascended the throne as Charles XIII. He now became subjected to the displeasure of the regent, whose political enmity seems to have been heightened by jealousy, the Count having been his successful rival in the affections of a lady of the family of Rudenskioeld. In September, 1792, he was deprived of all his offices and dignities, and sent on an embassy to Naples; where, after escaping from secret

and open attempts against his life, he was proclaimed by the Swedish government a traitor and an outlaw, and stripped of his rank and fortune. He afterwards resided in Germany till 1799, when the sentence against him was annulled by Gustavus IV, and he was restored to his former situation. He was then appointed ambassador to Vienna; and in 1807 he was raised to the rank of general of infantry, and as such he commanded the Swedish troops in Pomerania, and in 1808 the western army against Norway. In the autumn of the same year he was nominated president of the military institution at Stockholm; and made a peer of the realm. In 1810 he obtained his discharge from service at his own request, and retired to private life. His connexion with the infamous Countess Piper having involved him in new difficulties, he retired to Russia, where he was well received, was made a count, chancellor of the university of Abo, president of the department of state for the affairs of Finland, and member of the Russian senate. He died August 19, 1814.—*Biog. Nouv. des Contemp. Germ. Conversation Lexicon.*

ARMSTRONG, MD. (JOHN) a physician and medical writer, celebrated for his researches concerning the causes and phenomena of febrile diseases. He was born May 8, 1784, at Ayres Quay, in the parish of Bishopswearmouth, county of Durham, where his father was a superintendent of some glass-works. After having had a common scholastic education, he was placed with a surgeon and apothecary at Monkwearmouth; but not liking the situation he soon left it, and after remaining at home two or three years, he went to Edinburgh, and entered as a student of medicine at the university. He was then about eighteen, and he resided at Edinburgh three years. In June, 1807, he took the degree of Doctor of Medicine, having in the preceding month passed an examination at the Royal College of Surgeons, in Edinburgh. His inaugural thesis was entitled "De Causis Morborum Hydropicorum Rationeque iis medendi." Returning the same year to his native place, he commenced practice as a physician; and shortly after he removed to the adjoining town of Sunderland, where he continued some years. He had hitherto occupied lodgings, but the profits arising from his profession becoming considerable, he was enabled to take a large house, which was situated at Bishopswearmouth. In January, 1811, he was chosen physician to the Sunderland Dispensary, and he continued to discharge the duties of that office until his removal from the North of England. Having become distinguished as a practitioner, he shortly after this period began to make his name known beyond the limits of his own circle by his writings on professional subjects. His first publication was a paper on the Brain Fever, produced by intoxication, in Dr. Duncan's Edinburgh Medical and Surgical Journal, January, 1813; and another of his contributions appeared shortly after in the

same work. The same year he completed his "Facts and Observations relative to the Fever commonly called Puerperal." In 1814 and 1815 he again contributed papers to Dr. Duncan's Journal; and in 1816 appeared his work on Typhus Fever, which passed through three large editions in three years, and procured him the highest distinction at home and in America, where he was styled "the modern Sydenham." He now determined to seek professional employment in the metropolis; and accordingly he resigned the office of physician to the Sunderland Dispensary, and in February, 1818, he fixed his residence in Great James Street, Bedford Row. Soon after his arrival in London he published his "Practical Illustrations of the Scarlet Fever, Measles, Pulmonary Consumption, and Chronic Diseases, with remarks on Sulphurous Waters," which, though possessing less novelty and interest than the work on Typhus, passed through a second edition within a few months. In the summer of 1818 Dr. Armstrong presented himself for examination at the London College of Physicians, to practise as a licentiate, when he suffered the mortification of being rejected; but the circumstance seems to have been productive of no injury to his professional reputation, for he was shortly after elected joint physician (with Dr. Cleverley) to the Fever Hospital at St. Pancras, and he soon rose to eminence as a private practitioner. In 1821 he engaged with Mr. Edward Grainger, surgeon, in the formation of a medical school, in Webb Street, Borough, where he delivered lectures on the practice of physic. In 1822 he published "Some Observations on the Origin, Nature, and Prevention of Typhus Fever," in the Medical Intelligencer; and in 1823, "Some Observations on the Utility of Opium in certain Inflammatory Disorders," in the Transactions of the Associated Apothecaries of England and Wales. Finding the labour and attention required for public and private practice as a physician, and for delivering medical lectures, too oppressive, he, in 1824, resigned his situation at the Fever Hospital; but in 1826 he joined Dr. Boott and Mr. E. Bennett in establishing a new School of Medicine, in Little Dean Street, Soho, his connexion with which, however, he was obliged to relinquish in the ensuing year. Previously to this he had published "An Address to the Members of the Royal College of Surgeons, on the injurious conduct and defective state of that Corporation, with reference to professional rights, medical science, and the public health." His object in this production was to promote the interests of those who were excluded from the opportunity of employing their talents as public teachers; and the strong opposition which the conduct of the College met with from the profession eventually led to a more liberal policy. Dr. Armstrong employed some years in collecting materials for a work on Chronic Diseases; and in 1828 he published the first fasciculus of "The Morbid Anatomy of the Stomach, Bowels, and Liver; illustrated by a Series of

Plates, with explanatory letter-press, and a Summary of the Symptoms of the Acute and Chronic Affections of the above-named Organs." This work was interrupted after the appearance of the fourth part, in consequence of the approach of that disease which occasioned the death of the author. He had for some time been subject to a cough, but it was not till December, 1828, that he manifested symptoms of confirmed phthisis pulmonalis. Notwithstanding his illness, however, he delivered his usual course of lectures in the spring of 1829; and he commenced his lectures for the summer; but the rapid increase of disease obliged him finally to retire from the medical theatre, and though he continued to visit patients occasionally till the month of November, the progress of the complaint was uninterrupted, and after trying in vain the effect of change of air and scene, he died, after a short confinement to his bed, on the 12th of December, 1829, at his residence in Russell Square. Dr. Armstrong's manners were gentle and unassuming, exclusively domestic and retired from the world, when his intercourse with it was not required in the way of his profession. His nature was candid, confiding, and unsuspicious; his sensibilities lively and acute; and his tastes refined and discriminating. He carried that sagacity which he displayed as a physician into his observations on life and character, remarking with a sort of intuitive sensibility the distinctive traits of disposition in those with whom he associated. He was most exclusively and anxiously devoted to the duties of his profession, extending the benefit of his advice with equal readiness to the poor as to the rich; and as a public lecturer he not only exerted his utmost attention to promote the improvement of his pupils, but was also ever ready to afford the most liberal assistance to those who were unable to remunerate his services. He was fond of literature, and especially poetry, in the composition of which he sometimes employed his pen. A few fragments of his compositions have been published by his friend Dr Boott, in his "Memoir of the Life and Medical Opinions of John Armstrong, MD." from which the preceding article has been extracted.

ARNAULT DE NOBLEVILLE (L. DANIEL) a physician, born at Orleans in 1701 and died in 1778. He was the author of "Hist. Nat. des Animaux," 12mo; "Cours de Médecine Pratique," 12mo; and other works.—*Biog. Univ.*

ARNDT (CHRISTIAN GOTTLIEB VON) an eminent writer on jurisprudence and philology, who was a native of Germany, but passed a considerable part of his life in Russia. In the reign of the Empress Catherine II he was attached to the Russian cabinet; and he assisted that princess in her literary pursuits. He wrote several treatises on the laws of the Russians, which are esteemed on account of the purity of style and language which they display. His last production, on the "Origin of the European Dialects," published at

Frankfort, in 1818, excited the attention of literary men, even in America. He held the title of Imperial Russian Councillor; and his death took place at Heidelberg, January 2, 1829, at the age of eighty-five.—*Ann. Reg.*

ARNEMAN (JUSŒ) an eminent German physician, who died in 1806. He composed many professional works, and published a variety of papers in periodical productions.—*Dict. Hist.*

ARRIVABENE (JOHN FRANCIS) an Italian poet in the sixteenth century. He wrote "Maritime Eclogues," and "Maritime Dialogues," besides some pieces in prose.—*Tiraboschi.*

ARTHUR (ARCHIBALD) a native of Scotland, and professor of moral philosophy at Glasgow in the eighteenth century. He left a course of lectures on theological and literary subjects, published in 1803.—*Life by Professor Richardson.*

ARTIGNI (ANTHONY GACHET d') a German divine in the eighteenth century. He is principally remembered for his "Mémoires d'Histoire, de Critique, et de Littérature," 7 vols, 12mo, Paris, 1749, partly compiled from the abbé Brun.—*Nouv. Dict. Hist.*

ARVIEUX (Chevalier LAURENCE d') a native of France and traveller into the East, occasionally residing there in an official capacity, in the seventeenth century. His memoirs, containing his travels, were published at Paris in 6 vols, 12mo, 1735.—*Biog. Univ.*

ASCHAM (ANTHONY) a political writer and diplomatist in the seventeenth century. He was a member of the long parliament, a friend of Cromwell, and envoy in Spain, where, in 1650, he and his interpreter were assassinated by six exiled royalists. He wrote "A Discourse on the Revolutions and Confusions of Governments."—*Athen. Oxon.*

ASCLEPIADES, a Greek philosopher about BC. 350. He, with his friend Menedemus, was so poor as to work at a mill during night, in order to pay the expense of attending Plato's lectures by day. They were both relieved by the magistrates.—*Cic. Tusc.*

ASCONIUS PEDIANUS, a grammarian of Padua, at the commencement of the Christian era, under the rule of Augustus. He was intimate with Virgil and Livy, and wrote notes on Cicero's Orations, which are still extant.—*Foss. de Hist. Lat.*

ASHWORTH (CALEB) an English dissenting minister in the eighteenth century. Originally a carpenter, he rose to clerical distinction by his merit; and left "A Hebrew Grammar."—*Kippis's Life of Doddridge.*

ASPER (HANS) a Swiss painter in the sixteenth century. His forte lay in flowers and animals, for which he had a medal struck in honour of him, and was reckoned little inferior in those branches to Holbein, though he died in poverty.—*Pitkington.*

ASPINWALL, MD. (WILLIAM) an American physician, born at Brookline, state of Massachusetts, in 1743. He was educated at Harvard College, where he took his degree in 1764, but afterwards studied in the

hospital of Philadelphia, and received a diploma from the university in that city, about 1768. He then returned to his native place, and engaged in medical practice, till the revolutionary war broke out, when he was appointed a surgeon in the army, and soon after deputy director of a military hospital near Boston; and at the battle of Lexington he fought as a volunteer. After the conclusion of the war, he engaged largely in inoculation for the small pox, and erected hospitals for the purpose at Brookline. When vaccine inoculation was introduced into the United States, he warmly patronized and adopted the practice, though it greatly lowered his professional emoluments. After having long enjoyed great reputation as a physician, he died in 1823.—*Encyclop. Americ.*

ASSHETON (Dr WILLIAM) an English divine at the close of the seventeenth and the opening of the eighteenth centuries. He wrote some devotional tracts, but distinguished himself chiefly as the author of a scheme for providing a maintenance for clergymen's widows, &c. by a jointure payable by the mercers' company.—*Biog. Brit.*

ASSOUCI (CHARLES COYPEAU Sieur d') a French poet in the seventeenth century. He was an imitator of, and hence called the Ape of Scarron. He led a vagrant life, an account of which he wrote in a buffoonish style; with some poems of little merit. The infamy of his character and conduct appears from an adventure which befell him at Montpellier, as related in the "Voyage de Bachaumont et La Chapelle," the witty authors of which, however, treat the offender with more levity and less reprobation than he deserved.—*Lettres Françaises, avec des Notes, par Richelet. Biog. Univ.*

ATHENODORUS, a Stoic philosopher of Tarsus, about fifty years BC. He was the preceptor of Augustus, and the ultimate moderation of that ruler is attributed to his admonitions. Some of his works are alluded to by ancient writers.—*Cic. ad Fam.*

ATTAVANTI (PAUL) or Father Paul of Florence, flourished in the fifteenth century. He wrote "Breviarium totius Juris Canonici."—*Nouv. Dict. Hist.*

AUBERY (JOHN) a French physician in the seventeenth century. He wrote an apology for physic, in Latin, and an antidote to love, in French. The latter is esteemed a curious book.—*Biog. Univ.*

AUDIFRET (JOHN BAPTIST) a celebrated French geographer in the seventeenth and eighteenth centuries. He wrote a work on ancient and modern geography, which was held in much esteem, though left unfinished.—*Nouv. Dict. Hist.*

AUDOUL (GASPARD) a French civilian in the seventeenth and eighteenth centuries. He wrote "Traité de l'Origine de la Régale et des Causes de son Etablissement," which was condemned by a brief of Clement XI, 1710; but which brief was revoked by the parliament of Paris.—*Nouv. Dict. Hist.*

AUGEREAU (P. F. CHARLES) marshal

and peer of France, duke de Castiglione, was born at Paris, in 1757. He entered young into the army, and served in the French carabineers, and then among the Neapolitan troops till 1787. He afterwards settled as a fencing-master at Naples, which city he quitted in 1792; and returning home, entered into service as a volunteer. He rapidly rose to be general of a brigade in the army of the eastern Pyrenees, in 1794, and he distinguished himself against the Spaniards. Removed to the army of Italy, as general of a division, he greatly increased his reputation, especially by his conduct at the battle of Castiglione and at the bridge of Arcola. After the treaty of Campo Formio he had the chief command at Paris, and he acted an important part on the 18th of Fructidor. In 1798 he succeeded Roche, as commander of the army of the Sambre and Meuse, and of the Rhine. Nominated in 1799 a deputy to the Council of Five Hundred, he became secretary to that assembly; and in 1800 he was sent to head the French troops in Holland, maintained at the expense of that republic. He afterwards seconded the operations of Moreau on the Rhine. In 1804 he was made a marshal of the French empire, and appointed to command the army collected at Brest for the invasion of England. At the close of 1805 he was employed in Germany; and the following year he contributed to the victory over the Prussians at Jena. In 1809 he signalized himself in Poland; and was wounded at the battle of Eylau. General of the army of Catalonia, in 1809, he besieged and took Gironne. In the campaign in Russia, in 1812, he commanded the 11th corps; and supported as far as possible the retreat of the troops through Prussia. At the battle of Leipsic, in 1813, and in the campaign of the following year, he displayed great courage and ability. He was one of the first who submitted to Louis XVIII., who made him knight of St Louis, a peer of France, and governor of the 14th military division. On the return of Buonaparte he offered the renewal of his services, which were not accepted. He resumed his place in the chamber of peers, after the second restoration of the king; but he held no subsequent employment. His death took place June 12, 1816.—*Dict. Hist.*

AUROGALLUS (MATTHEW) a Bohemian professor of languages in the sixteenth century. He assisted Luther in his German translation of the Bible, and compiled a Hebrew and Chaldee grammar.—*Moreri.*

AUSTEN (JANE) a highly gifted and sensible novelist, was born on the 16th of December, 1775, at Steventon, in the county of Hants, of which parish her father was rector for upwards of forty years. At the age of seventy he resided with his family at Bath, and upon his death his widow and two daughters retired to Southampton, and ultimately in 1807 to Chawton in the same county. It was during her residence in the last-mentioned place that Miss Austen composed the novels, which for ease, nature, and a complete knowledge of the features which distinguish the

domesticity of the English country gentry, are very highly estimated. The principal of these productions are "Sense and Sensibility;" "Pride and Prejudice;" "Mansfield Park;" and "Emma." Two more were published after her death, entitled "Northanger Abbey;" and "Persuasion," which were however her most early attempts. The praiseworthy object of Miss Austen in all her works was to advocate the superiority of sound principle, unsophisticated manners, and undesigning rectitude, to more splendid and artificial pretensions, and within the sphere of her delineation she eminently succeeded. At the same time her discrimination was acute, her humour easy and spontaneous, and her power of creating an interest in her characters by slight and reiterated touches, extraordinary. This amiable and accomplished lady, whose personal and mental attractions were otherwise of a high order, died of a decline, on the 18th of July, 1817, in her forty-second year.—*Preface to Northanger Abbey.*

AUSTIN (WILLIAM) an English barrister in the seventeenth century. Besides "Meditations on the Fasts and Feasts of the Church," he wrote "Hæc Homo," or the excellency of woman, partly taken from Agrippa.—*Biog. Hist.*

AUTOLYCUS, a Greek philosopher about B.C. 340, author of astronomical treatises, a few of which are still extant.—*Brucker.*

AUVERGNE (THEOPH. MALO CORRET de la Tour d') the first grenadier of France, born in Brittany, in 1743. He was descended from an illegitimate branch of the family of Bouillon, which gave birth to Turenne. He entered into the army in 1767, and was a captain in 1779, when he served as a volunteer in America; and he became aide-de-camp to the duke de Crillon at the siege of Port Mahon in Minorca. At the commencement of the revolutionary war in 1792, La Tour d'Auvergne, though he had retired on a pension, thought it his duty to take arms to defend his country against foreign invasion. He refused to accept any higher rank than that of captain; but he commanded eight thousand grenadiers in the army of the Eastern Pyrenees in 1793, with great reputation. After the peace with Spain, in 1795, he resumed his literary occupations, and composed successively, "A Glossary of forty-five Languages;" and "A Franco-Celtic Dictionary." He had previously published "Traité des Origines Gauloises." In 1799 he quitted his retirement and his studies, to replace, in the army of Helvetia, the only son of his friend Brigant, who was liable to the conscription. At this period he received from Buonaparte the title of first Grenadier of France; but he refused the pension which he was offered with it. He was killed June 27, 1800, at the combat of Neubourg, and was interred by his comrades on the field of battle, and his grave was covered with branches of laurel and oak. A monument, with an appropriate inscription, was afterwards erected to his memory in the same place.—*Dict. Hist.*

AVERANI (BENEDICT) an Italian scholar

of distinguished reputation towards the end of the seventeenth century. He had a great knowledge of the Greek, into which he translated some of the Latin authors; and wrote in Latin, orations, dissertations, and poems, &c.—*Landi Hist. Lett. de Italie.*

AVERANI (JOSEPH) younger brother of the preceding. With great strength of mind he grasped the languages, mathematics, philosophy, and law. He defended Galileo, and left behind him many learned works in literature and science.—*Idem.*

AVIANO (JEROME) an Italian poet in the sixteenth century. His poems, consisting of three epistles, were three times printed, in 1605, 1615, and 1627.—*Tirabochi.*

AVILER (AUGUSTINE CHARLES d') a French architect in the seventeenth century. He was taken by the Algerines and carried to Tunis, where he left a monument of his art in the shape of a grand mosque. He wrote some valuable works on architecture.—*Moreri.*

AVITUS (SEXTUS ALCIMUS EDCICUS) a Gallic bishop, and nephew to a Roman emperor of the same name in the fifth and sixth centuries. He opposed the Arians. A collection of his poems, letters, &c., is extant.—*Dupin.*

AVOGADRO (LUCIA ALBANI) an Italian poetess in the sixteenth century. Her pieces possessed such merit, that Tasso became her commentator.—*Nouv. Dict. Hist.*

AYLMER (JOHN) an English scholar in the seventeenth century. He was a good Greek and Latin poet, as appears from his "MUSE SACRÆ."—*Biog. Brit.*

AYSCOUGH (CAPTAIN GEORGE EDWARD) an English officer in the Foot Guards. He wrote "Letters from an Officer in the Guards to his Friends in England," containing some account of France and Italy; and "Semi-ramis," a tragedy. He died in 1779.—*Gent. Mag.*

AZUNI (DOMINIC ALBERT) an Italian jurist, born at Sassari, in 1760; died January 1827. He was intimately acquainted with the science of jurisprudence, and especially with what relates to maritime commerce. He became, successively, judge of the tribunal of maritime commerce at Nice, president of the imperial court at Genoa, member of the legislative body in France, judge of the supreme tribunal of the consulate of Cagliari, president of the library of the royal university of that city, and member of various academies. Among the works which he published are "Sistema Universale de' Principii del Diritto Marittimo dell' Europa," 1795, which was translated into French; an "Universal Dictionary of Commercial Jurisprudence;" a "Dissertation on the Origin of the Compass;" and many other productions which display the erudition of the author.—*Revue Encyclopédique.*

AZZO (PORRIUS) an Italian civilian in the twelfth and thirteenth centuries. He compiled "A Summary of the Code and the Institutes," which is much esteemed. He is said to have been publicly executed for killing a man in a personal conflict.—*Biog. Univ.*

BAARSDORP (CORNELIUS de) physician to Charles V. author of "Methodus Universæ Artis Medicæ." He died in 1565.—*Moreri*.

BACHER (GEO. FRED.) a German physician, born in Alsace, in 1709 (given in the body of the work, but repeated to correct error in authorities). He studied in the university of Besançon, and took the degree of MD. in 1733. He was chiefly famous for his skill in the treatment of dropsy. He published at Paris, between 1765 and 1776, several tracts relating to dropsical diseases.—ALEXANDER ANDREW PHILIP FREDERIC BACHER, son of the preceding, followed the same career as his father. He engaged with M. Demangin in conducting the *Journal de Médecine*, from 1776 to 1790, and afterwards continued it alone till 1793. This physician died at Paris, in October 1807. Barbier, in his *Dictionnaire des Anonymes*, states that M. Bacher (whom he has confounded with his father) formed the plan of a course of public law, to consist of several octavo volumes, and to be divided into five parts. In 1803 two volumes of this work were printed. They were not sold, and are very rare; and may be considered as literary oddities.—*Biog. Univ.*

BACKER (JACOB) a Dutch portrait and historical painter in the seventeenth century. His works command high prices. His best pieces are his "Last Judgment," and "Cimon and Iphigenia."—*Pilkington*.

BACKER (JAMES) a Flemish portrait painter in the sixteenth century. He died young, but acquired a great reputation.—*Idem*.

BACKLER D'ALBE (baron AUBERT LOUIS) born at St Pol (Pas de Calais) in 1761, became draughtsman and chief of geographical engineers attached to the war department. He was then successively director of the typographical cabinet, *maréchal de camp* in 1803, and chief of the division of the ministry of war after the return of Buonaparte from Elba in 1815. He died at Paris in 1824. He constructed a valuable "Chart of the Theatre of War, in the first Campaigns of Buonaparte in Italy," and published various collections of picturesque views.—*Dict. Hist.*

BACMEISTER (HARTMAN LOUIS CHRISTIAN) an historical and miscellaneous writer, who was born in 1736, at Hernhorn, in Watteravia, in the principality of Nassau Dillenburg. He completed his education in Germany, and about 1770 he went to Russia, and was appointed director of the German College at St. Petersburg. His death took place in that city, in 1806. He paid much attention to the history, topography, and literature of the Russian empire; and besides a "History of the Swedish Nation," Leipsic, 1767; he published "An Abridgement of the Geography of the Empire of Russia," St. Petersburg, 1773; "A Collection of Memoirs concerning Peter I," Riga, 1785; and the "Russian Library," 1777—1788, 11 vols.

This last work comprises much valuable information concerning the language, poetry, and literary institutions of Russia. He was a member of the Royal Academy of St Petersburg; and was honoured with the decoration of the order of St Vladimir.—*Biog. des Contempor.*

BAGGESEN (JENV OR IMMANUEL) a Dane who distinguished himself as a poetical writer, chiefly in the German language. He was born at Corsoer, in 1764; and he has given the history of his own education, and described the effect of circumstances in the formation of his character, in the *Labrynth*. In 1785 he published "Comic Tales," exhibiting much humour and fancy. The Prince of Holstein Augustenburg furnished him with the means of travelling through Germany, France, and Switzerland; and in 1793 he visited Italy. He afterwards obtained from the Danish government an appointment at Copenhagen. In 1800 he went with his wife, a niece of the celebrated Haller, to reside at Paris. In 1811 he was made professor of the Danish language at the university of Kiel, which post he resigned in 1814, and removed to Copenhagen. At this period he had obtained the highest reputation as a poet. In consequence of the declining state of his health in 1825, he visited the baths of Carlsbad; and he afterwards took up his residence at Dresden; the following summer he went to Toplitz and other watering places, but he experienced no permanent relief from the mineral waters, and returning to Dresden he died October 3, 1826. From an examination after death it appeared that his sufferings, which had been very severe, were occasioned by a disease of the kidneys. The Danish productions of Baggesen chiefly consist of songs and other short pieces, extremely popular among his countrymen. A collection of his German poems was published in two volumes at Hamburg, in 1803; but his principal work is entitled "Parthenais, oder die Alpenreise," a pastoral epic in twelve lays, Amsterdam, 1807; of which a French prose translation, by Fauriel, appeared in 1810. Among his other compositions, in German, which are numerous, may be mentioned "Adam and Eve, or the History of the Fall," a humorous, or mock epic, published posthumously, in 1827.—*New Germ. Necrol. Encycl. Amer.*

BAGRATION (K. A.) a Russian prince, senator, and imperial counsellor. He distinguished himself by his military services in the campaigns in Poland in 1792 and in 1794; and in those in Italy, under Suwarrow, in 1799, and particularly at the battle of Austerlitz. He was afterwards appointed commander-in-chief of the army of Moldavia; and he continued to add to his reputation by the display of skill and courage on several occasions, till at length he was mortally wounded at the battle of Moscow, during the invasion of Russia by Buonaparte in 1812.—*Dict. Hist.*

B A I

BAGSHAW (EDWARD) an English civilian in the seventeenth century. In the Rebellion he first sided with the parliament, then with the king. He was author of some legal, and several controversial works, on the politics of the times.—*Wood*.

BAGSHAW (EDWARD, jun.) son of the preceding, an English divine of a turbulent character, author of some controversial works in opposition to Baxter.—*Calamy*.

BAIL (CHARLES JOSEPH) born at Bethune in Flanders, in 1777, and entered into the French army at the age of fifteen. He marched with the regiment to which he belonged to the relief of Lille, besieged by the Austrians: he afterwards made a campaign in Belgium, then removed into the artillery; and at length was called to the administration of the army. In 1807, being an adjunct of the intendant of Erfurdt, he was appointed director of the offices of the regency in the kingdom of Westphalia. Through his exertions was published the work entitled "Statistique du Royaume de Westphalie," Gottingen, 1809. After having assisted in the administrative organization of the new government, Bail was nominated secretary-general of finance. In 1813 he was made a prisoner of war, when he lost the property which he had acquired in the course of his services. He was restored to his rank in 1814, and employed in the French army, which retreated to the banks of the Loire, in July 1815. Having concurred in the measure of disbanding that army, he returned to Paris. In 1818 he retired into the valley of Montmorency, where he died February 20, 1824. Among his productions are, "Des Juifs au 19me S. ou Considerations sur leur Etat Civil et Politique en Europe," Paris, 1816, 8vo; "Etat des Juifs en France, en Espagne, et en Italie, depuis le commencement du 5me S. jusqu'à la fin du 16me," Paris, 1823, 8vo, an essay which was rewarded with a prize offered by the Academy of Inscriptions; and "Essais Hist. et Crit. sur l'Organisation des Armées, et sur l'Administration Militaire en France," 1817, 8vo.—*Dict. Hist.*

BAILEY (PETER) an ingenious man of literature. He was the son of a solicitor at Nantwich in Cheshire, who had realized considerable property, and was educated at Merton college, Oxford, whence he removed to London, and entered himself a student at the Inner Temple. Like many more of vivid fancy, he neglected his profession, and after a long course of vicissitude found himself confined to the liberties of the King's Bench prison. Here he composed an amusing and characteristic poem, entitled "Sketches from St George's Fields, by Giorgione del Castel Chiuso." He was also author of "Idwal," an unpublished poem on the conquest of Wales; and of an anonymous poem in the Spenserian stanza, entitled "The Queen's Appeal." At the time of his death he was editor of a weekly periodical paper, entitled *The Museum*. He died suddenly, in a coach, on the 25th of January, 1823, on his way to the Italian opera, by the

B A I

bursting of a blood vessel, leaving a wife and three children.—*Ann. Biog.*

BAIRD (sir DAVID) a distinguished military officer, who was of Scottish descent. He entered into the army as an ensign of the 2nd regiment of foot, in 1772; and joined his regiment at Gibraltar in April the year following. In 1778 he obtained a lieutenancy, and the same year was made captain of grenadiers in the 73rd, and in 1779 he sailed for Madras. He was employed under colonel Baillie against Hyder Ally, and was wounded and taken prisoner in the sanguinary battle of Perimbanam. After remaining a prisoner three years and a half at Seringapatam, he was, in March 1784, released, and in July he joined his regiment (then called the 71st) at Arcot. In 1788 he returned with it to Madras; and in October, having previously obtained a majority, he procured leave of absence, and visited Britain. In December 1790, he was made a lieutenant-colonel; and in 1791, he returned to India, and joined the forces under the marquis Cornwallis. He commanded a brigade of Sepoys, and was present at the attack of a number of hill forts, and at the siege of Seringapatam. In 1793, when he commanded a brigade of Europeans, he was present at the siege of Pondicherry. In 1795 he was made a colonel; and in October 1797 he embarked with his regiment for Europe; but arriving in December at the Cape of Good Hope he was appointed brigadier-general, and placed on that staff in command of a brigade. He was promoted to the rank of major-general in 1798, and removed to the staff in India, where he arrived with troops under his command in January 1799. Shortly after he assisted in the capture of Seringapatam. In 1800 he was removed to the Bengal staff, and had a command at Dynypore. His next service was in Egypt, whither he was sent with forces in 1801. He landed at Cosseir, on the Red Sea, marched his army across the desert, embarked on the Nile, and arriving at Grand Cairo, in July, he joined general Hutchinson, a few days before the surrender of Alexandria. In May 1801, he was appointed colonel of the 54th regiment; and in 1802 he returned with his troops across the desert to India. He was removed to the Madras staff in 1803; and commanded a large division of the army forming against the Mahrattas. After the appointment of major-general Wellesley to the command of the greater part of the army, major-general Baird obtained permission to return home. On his passage he was captured by a French privateer; but being retaken he arrived in England in November 1804. He was appointed lieutenant-general in October 1805, and sent in command of an expedition against the Cape of Good Hope, and after a battle with the Dutch army, that colony was surrendered to the British forces. In 1807 he returned to England, and removed from the colonelcy of the 54th to that of the 24th regiment; being also placed on the foreign staff, under Lord Cathcart, with whom he served at the bombardment of Copenhagen,

where he received a wound in the arm. The last service in which he was engaged was in the expedition to Spain, in 1808, under sir John Moore. He joined that officer some time previous to the battle of Corunna, where he greatly distinguished himself; and the general being killed, the chief command devolved on him, but the loss of an arm during the engagement obliged him to relinquish it to general Hope. His services on this occasion were rewarded with a baronetcy; and he had previously been honoured with the order of the Bath, and had received from the Grand Seigneur the Order of the Crescent. Sir D. Baird was promoted to the rank of a general, in 1814: he obtained the post of governor of Kinsale, in 1819: and he was subsequently made governor of Fort St George, (N. B.) He died at his seat at Fernton, in Perthshire, in September, 1829. He was married, but had no children; and the baronetcy devolved to his brother, R. Baird Esq. of Newbyth, Haddingtonshire, agreeably to the limitations of the patent. The *Memoirs and Correspondence* of sir David Baird have been published by Mr Theodore Hook.—*Monthly Mag. Ann. Reg.*

BAKKER (PETER HUZINGA) a Dutch poet, who was born in 1715, and died in 1801. He wrote a poem on the Inundation of 1740, which is greatly esteemed; and he translated into his native language Hight's Latin poem on spring. His works have been published in three volumes, one of which contains satires and songs in ridicule of the English nation. He was the relative and friend of the Dutch historian Wagenaar, of whom he published a biographical notice.—*German Conversation Lexicon.*

BALDINGER (ERNEST GODFREY) a German physician and medical writer, who was born near Erfurt in 1738. He was patronized by Frederic II of Prussia, and in the seven years' war he was charged with the direction of the military hospitals. He afterwards became professor at Gottingen, whence the Landgrave of Hesse called him to Cassel and gave him the post of court physician and director-general of medical establishments. In 1785, residing at Marburg, he assisted in the re-organization of the university of that city. He died of apoplexy, January 2, 1804. Among his works are a "Dissertation on the Maladies of Soldiers," Wirtemberg, 1762; "A Treatise on the Diseases which prevail in Armies," Langensalz, 1774; "The Physician's Magazine," Cleves, 12mo; "The New Magazine," Leipsic, 1779, 2 vols; "Litteraturæ Universæ Medicæ," Marburg, 1793; and several publications on botany.—*Biog. des Contemp.*

BALDOVINI (FRANCIS) a Florentine poet in the seventeenth and eighteenth centuries. His principal work is a pastoral poem, translated into English in 1800 by J. Hunter, under the title of "Cecco's Complaint."—*Tiraboschi.*

BALLETEROS (FRANCIS) a distinguished Spanish officer, born at Saragossa, in 1770.

He was first lieutenant in the light infantry regiment of the Volunteers of Aragon, when in 1793, after the death of Louis XVI. Spain declared war against France. He signalized himself particularly in the campaign which followed, and was promoted to the rank of captain. In 1804 he was accused of having appropriated to himself money which he had received for the purchase of forage; and the minister of war, Caballero, being unfavourable to him, he was deprived of his commission; but the Prince of Peace, the first minister of Charles IV, as a compensation for the loss of his situation, obtained for him the employment of commandant of the Douaniers, or coast-guard to prevent smuggling. On the invasion of Spain by the French in 1808, the Junta of Asturias gave Ballesteros the command of a regiment. Shortly after, under the title of brigadier and major-general, he joined his division to the army of Castile, commanded by the generals Blake and Castanos. On several occasions he acted as commander-in-chief; and at all times he manifested both talent and intrepidity. When a British army was sent to assist in the defence of Spain, it was stipulated that the supreme command of the allied troops should be vested in a British officer, which arrangement was violently opposed by Ballesteros, as well as other Spaniards; but he was obliged to submit to it, and consequently became subject to the control of sir Arthur Wellesley (now the Duke of Wellington.) The reverses which in the first instance followed this appointment gave rise to an accusation against the Spanish general of having been prompted by resentment to betray the interest of his country; and so strong was the feeling of disapprobation of his conduct that he thought it necessary to publish a justificatory memoir. When Ferdinand VII recovered his crown, Ballesteros seems to have enjoyed his confidence, as he was appointed minister for military affairs; but he was ere long disgraced and removed from office, having reason to think himself fortunate in retaining his freedom, when he retired to Valladolid, on half pay. Ballesteros was distinguished among the Spanish officers who fought for independence, not only by his victories over the enemy, but also by the discipline and good conduct of the troops which he commanded, and which he had formed. He was much esteemed by the Andalusians, whose confidence in him however occasioned them some disappointments as to the consequences of the war. It is reported that he had formed a plan to recover Gibraltar from the English; and that being pursued by a French division, in the mountains, near Ronda, he supposed that his retreat being cut off, he should obtain admission for his troops into that fortress, of which he hoped to make himself master; but this dishonourable project did not succeed. This general had subsequently other opportunities for serving his country. He contributed greatly to the resolution taken by the king to accede to the wishes of the people; but in the

mean time, as vice president of the provisional junta he exerted all his influence to prevent the evils of anarchy, and to cause the supreme authority of Ferdinand to be respected, till the Cortes should be assembled.

BALLYET (EMANUEL) a French missionary in the eighteenth century, who wrote an account of his mission, and became bishop of Babylon.—*Nouv. Dict. Hist.*

BALTHASAR (J. A. FELIX de) a juridical and historical writer, who died in 1810, at Lucerne in Switzerland, president of the municipal council of that city. Among his works are, "De Jure Helvetiorum circa Sacra," which has been translated into French; "A Defence of William Tell," 1760, 8vo; and "De Viris illustribus Lucernæ," 1777, 4to.—*Dict. Hist.*

BALTHASARD (THEODORE) professor of mathematics and physics at Erlangen. In 1710 he invented the solar microscope, of which he published an explanatory account entitled "De Micromatorum Telescopiis et Microscopiis applicandorum vera Structura et Usu," Erlang, 1710, 8vo.—*Dict. Hist.*

BALZAC (—) a French architect, member of the committee of arts and sciences in the Egyptian expedition of Buonaparte. He was born about 1750, and died in 1820. He published some fugitive poetry, collected in one volume 8vo, Paris, 1817; and was the author of an allegorical work in verse, entitled "Douleurs et Guerisons," 1819, 8vo.—*Dict. Hist.*

BAMBRIDGE (CHRISTOPHER) an English cardinal, archbishop of York in the fifteenth and sixteenth centuries, distinguished for an embassy from Henry VIII to Julius II. He was poisoned while at Rome by a domestic. Several of his letters are in Rymer's *Fœdera*.—*Biog. Brit.*

BANKES (sir JOHN) an English judge in the seventeenth century, distinguished for his loyalty to Charles I, as his lady was for her gallant defence of Corfe castle against the insurgents.—*Idem.*

BANNAKER (BENJAMIN) a negro, who died in Maryland (N. A.) in 1807. He raised himself to notoriety as a man of science by the force of his abilities; and while employed daily in the labours of agriculture, he instructed himself in mathematics and astronomy, by means of the works of Ferguson and the Tables of Tobias Mayer. He made the necessary calculations, and published for many years almanacks for Maryland and the adjoining states.—*Dict. Hist.*

BARABALLI, a native of Gaeta in Italy, who lived under the pontificate of Leo X, and had the vanity to place himself on a level with Petrarch as a poet. The pope, in order to correct his presumption, allowed him to recite his verses before an assembly of Roman critics and wits, who pretended extravagant admiration of his productions; and he was then paraded through the city on the back of an elephant, exposed to the clamorous derision of the mob.—*Dict. Hist.*

BARABAND (JAMES) a French painter

of flowers and animals, born at Aubusson, in 1772. He studied under the famous Malaine, painter and designer to the manufactory of the Gobelins; and he applied himself particularly to the delineation of birds. He was employed by Le Vaillant, and by the Egyptian committee in making drawings for their magnificent works on natural history. He also executed Arabesques, from the designs of M. Percier, the architect; and left various other admirable productions. He died in 1809, at Lyons, where he was professor of design, in the Special School of the Arts.—*Dict. Hist.*

BARAGUAY D'HILLIERS (LOUIS) a French general, born at Paris, in 1734. He successively ascended from the rank of a lieutenant in the regiment of Alsace, to that of general of a division, in which station he served with reputation in the campaigns in Germany and Italy. Returning to France, he was dismissed in consequence of accusations against him; but was restored after a full justification of his conduct. Being raised under the empire to the post of grand officer of the legion of honour, and colonel-general of dragoons, he distinguished himself greatly in the campaign in Germany, in 1805, and subsequently in Spain. He was also engaged in the unfortunate expedition to Russia in 1812, and on his return he died at Berlin.—*Dict. Hist.*

BARBA (ALVAREZ ALONZO) an Italian priest and mineralogist, in the seventeenth century; author of a scarce book entitled "Arte de los Metaños;" published afterwards both in an abridged and in an enlarged form, the latter with remarks on the ancient mines in Spain, by Alonzo Carilla Lasso.—*Dict. Hist.*

BARBADILLO (ALPHONZO JEROME DE SALAS) a Spanish dramatic writer in the seventeenth century; author of several admired comedies, and "The Adventures of Don Diego de Noche."—*Nouv. Dict. Hist.*

BARBANCOIS (CH. HELLON, marquis de) a French writer on Rural Economy, who died in his castle of Villegongis, in 1823, aged sixty-three. He was the author of a treatise on Merino sheep, and various other works.—*Dict. Hist.*

BARBIER (ANTHONY ALEXANDER) an eminent bibliographer, who was a native of Coulomenière, in Picardy, and at the commencement of the French revolution he was a parochial vicar, or ecclesiastical superintendent. In 1794 he went to Paris, and was chosen member of a committee appointed to collect works of art and literature from the suppressed monasteries. In 1798 he was made keeper of the library of the council of state; and when it was transferred to Fontainebleau in 1807, Buonaparte gave him the appointment of librarian. On the restoration of Louis XVIII he became keeper of the King's private library, which office he held till his death in 1825, at the age of sixty. His works are "Catalogue de la Bibliothèque du Conseil d'Etat," Paris, 1801—3, 2 vols, folio; now very rare; "Dictionnaire des Ouvrages anonymes

BAR

mes et pseudonymes," 1806—9, 4 vols, 8vo, third edit. 1824, reckoned the best work of the kind; and "Examen Critique et Compliment des Dictionnaires Historique," 1820, 8vo.—*Germ. Conversation Lexicon.*

BARBOSA MACHADO (DIZGO) a learned Portuguese, member of the Academy of History at Lisbon, who published an edition of "Memoirs of King Sebastian," 4 vols, 4to, and a "Library of Portuguese Authors," 1741—52, 4 vols, folio.—*Dict. Hist.*

BARBOT (JOHN) a French voyager of the fifteenth century, author of a Description of French and English America, published in Churchill's Collections of Voyages, London, 1732. This traveller obtained his information while employed by the French East India Company.—*Dict. Hist.*

BARCLAY DE TOLLY (count) a Russian field-marshal, and minister at war. He rapidly rose from one rank to another, till he became major-general; and he distinguished himself in the campaigns in Germany in 1806 and 1807. Having succeeded Kutusof, he was commander-in-chief at the famous battle of Leipsic, so disastrous to the French emperor and his followers. He commanded the Russians again in 1814 in Champagne, and marched to the capture of Paris. He was then made a field-marshal; and he joined in the second invasion of France, after the battle of Waterloo, when he received the title of prince. His death took place in 1818.—*Biog. des Contemp. Dict. Hist.*

BARD (JOHN) an American physician, who died in 1799. He deserves to be commemorated for his professional courage in going to New York to attend patients attacked by the yellow fever, when all the resident physicians had fled from the city.—*Dict. Hist.*

BARDESANES, a Syrian heresiarch, in the second century; he denied the resurrection, and acquired reputation by his writings.—Another of the name in the third century, a native of Babylon, wrote a Treatise on the Gymnosophists.—*Euseb.*

BARDIN (JOHN) an eminent historical painter, born at Monbar in France, in 1732; and died at Orleans, in 1809. He was a pupil of MM. Lagrénée and Pierre; and his talents and industry enabled him to establish his reputation as an artist, whose works were distinguished for purity of design and richness of composition. His picture of "St Catherine in the midst of the Doctors" procured him admission into the Academy of Painting; as that of "Tullia ordering her Charioteer to drive over the Corpse of her Father" had been the means of his reception into the school at Rome. When the Institute was established he became one of the first corresponding members. Being placed at the head of the School of the Fine Arts at Orleans, before the Revolution, he supported that institution at his own expense during the period of public confusion and alarm. Besides his larger works, he left a fine collection of designs highly worthy of publication.—*Dict. Hist.*

BAR

BAREBONE (PRAISE-GOD) a leather-seller in Fleet-street, who being a talkative politician, and probably possessed of some influence among his fellow-citizens, was nominated by Oliver Cromwell a member of the legislative convention which succeeded the long parliament, in 1653. In this assembly he greatly distinguished himself by his activity, so that becoming a leading member, the body to which he belonged acquired the appellation of Barebone's Parliament. It was soon dissolved, and Barebone probably interfered no more in public affairs during the life of Cromwell. But in February 1659, 60, when General Monk was in London, occupied in preparing matters for the restoration of the king, Barebone appeared at the head of a numerous mob, and presented a petition to the long parliament, then re-assembled, against the regal interest. General Monk, aware of the popularity of Barebone, mustered his forces; and addressed a letter to parliament, expostulating with the members "for giving too much countenance to that furious zealot and his adherents." The petitioners, however, received the thanks of the house, for the expression of their good affections to the parliament. Shortly after, he was concerned in the publication of a book against the court of Charles II, entitled "News from Brussels, in a Letter from a near Attendant on his Majesty's Person, to a Person of Honour here. Dated March 10, 1659, O. S." The real author of this libellous tract is said to have been Marchmont Needham, Barebone having been no more than the agent in conveying it to the printer. After the Restoration he was naturally regarded with jealousy; and on November 26, 1661, he was arrested, together with Major Wildman, and Harrington the author of the Oceana, and committed to the Tower, for some real or imaginary plot against government. He continued in confinement some time, but the result of the accusation is not known; nor have we any account of his subsequent history, or of the time of his death. He had two brothers, both designated by fanatical names; one of which was, "If Christ had not died thou hadst been damned Barebone;" which some of his profane acquaintance took the liberty of abbreviating to "Damned Barebone."—*Wilson's History of Dissenting Churches.*

BARFORD (WILLIAM) an English divine, who died prebendary of Canterbury, in 1792. He published "In Pindari Primum Pythium Dissertatio habita Cantabrigiæ in Scholiis Publicis," 4to, 1751.—*Gent. Mag.*

BARLÆUS (GASPARD) an eminent scholar and Latin poet of Antwerp, in the sixteenth and seventeenth centuries. He left epistles, orations, and Latin poems, which latter are most esteemed.—*Moreri.*

BARLÆUS (LAMBERT) brother of the preceding, a learned classical critic, who left an edition of Lucian's Timon, with notes; and a commentary on Hesiod's Theogony.—*Idem.*

BARLETTI DE ST PAUL (—) a

B A R

learned writer, of Neapolitan descent but born at Paris, in 1734. He distinguished himself at an early period by his proficiency in his studies, under the direction of the abbé Pluche, father Vinot, and Dumarsais. Consecrating his talents entirely to the art of education, he contrived a plan to facilitate the communication of knowledge. He had already composed an "Encyclopédie de la Jeunesse," in 18 vols, when he was appointed, in 1756, sub-tutor of the royal children of France. Experiencing, however, obstructions to the printing of his great work just mentioned, he went to Spain in 1770, and became professor of the belles lettres at Segovia, which post he resigned three years after. His "Nouveau Système Typographique," which he published in 1776, procured him a donation of 20,000 francs. His talents were respected even during the revolutionary period; and he became successively member of the jury of public instruction, 1793, and professor of grammar and logic at the central school of Fontainebleau. Barletti died in 1808, without being able to execute his vast plan of education, of which a favourable report had been made by Sicard, in 1802. Among the productions of this laborious author not already mentioned, are "Moyen de préserver des Erreurs de l'Usage dans l'Instruction de la Jeunesse." Brussels, 1780, 4to; "Les Dons de Minerve aux Pères des Familles," 1782; and "Plan d'une Maison d'Education," 1784.—*Dict. Hist.*

BARNAVE (ANTHONY PETER JOSEPH MARIE) a native of Grenoble in France, who became a counsellor of the parliament of that city; and being elected one of the members of the first National Assembly, after the Revolution, he distinguished himself by his eloquence, and acquired great popularity. On the return of the royal family to Paris, after the flight to Varennes, he spoke with energy in favour of the inviolability of the king's person; and at the close of the assembly he deprecated the hazard of bestowing on France a constitution too much inclining to democracy. These sentiments gave offence to the Jacobins, and Barnave, returning to Grenoble, was imprisoned, and after fifteen months, removed to Paris, and tried before the revolutionary tribunal; and in spite of an ingenious and spirited defence, he was condemned to death, which sentence was executed November 29, 1793, in the thirty-third year of his age. Many of his speeches and public reports have been printed.—*Dict. Hist.*

BARNES (ROBERT) an English divine in the sixteenth century. He wrote some treatises on Justification, &c. and was chaplain to Henry VIII; but defended Luther so earnestly, that, offending the king, he was condemned to be burnt in 1540.—*Biog. Brit.*

BARRAL (LOUIS MATTH. de) bishop of Troyes, was a native of Grenoble in Dauphiny; and died in 1816, aged seventy. He emigrated at the Revolution; but returning to France in 1801, Buonaparte made him, in 1802, bishop of Meaux, and at length arch-
APP. BIOG. DICT.

B A R

bishop of Tours, and almoner to the empress Josephine. He was appointed senator in 1806; and the king created him a peer in 1814. Having taken his place in the chamber of the nobles during the hundred days, he was excluded on the second restoration of the king. Among his writings are, "Fragmens relatifs à l'Hist. Ecclés. du 19me S." Paris, 1814, 8vo; and "Oraison Funèbre de l'Impératrice Joséphine;" besides which he published a "Justification" of his political conduct.—*Dict. Hist.*

BARRAS (PAUL FRANCIS JOHN NICHOLAS count de) a French statesman, born of an ancient and noble family, at Foxemphoux, in Provence, department of Var, June 30, 1755. He commenced his career in the army as a sub-lieutenant, in the regiment of Languedoc, and in 1775 he served in the Isle of France, and afterwards in India, with the regiment of Pondicherry. He returned to France with the rank of captain, but with dissipated habits and ruined fortune, which rendered him disposed to engage in any rash enterprise. The revolution, which now took place, afforded ample scope for the exercise of his abilities, and he became a distinguished deputy, from the third estate, in the National Assembly. On the 14th of July, 1789, he assisted in the attack on the Bastille, and on the 10th of August, 1792, in that against the Tuileries. In September the same year he became a deputy to the National Convention, from the department of Var; and he was one of the members who voted for the death of Louis XVI. He was afterwards employed on a mission to the south of France, when he exercised great cruelties, especially at Toulon. He assisted in overturning the tyranny of Robespierre, in July, 1794, and was appointed commandant of the armed force which repulsed the troops of Henriot, and captured the dictator and his accomplices. He subsequently displayed his zeal in the public service, and on the establishment of the directory he became one of the heads of the government, and by his spirit and firmness he preserved an ascendancy over his colleagues. After maintaining his position for some time, and overcoming those who opposed him, he at length became one of the victims of the revolution in November 1799, by which Buonaparte was raised to the direction of public affairs. Barras soon afterwards retired to Brussels, where he resided several years in great splendour. In 1805 he obtained permission to remove to the south of France, where he had an estate, at Gnosbois, but he was subsequently banished to Rome, for plotting against the government. In 1814, on the restoration of the Bourbons, he returned to Paris, and as he held no office after the return of Buonaparte from Elba, he was unmolested after the second restoration of Louis XVIII. He died at Paris, January 29, 1829.—*Dict. Hist. des Hommes Marquans. Month. Mag.*

BARRE (FRANÇOIS POUILLAN de la) a French ecclesiastic in the seventeenth and eighteenth centuries. He wrote on the equality
D

BAR

of the sexes and the education of females.—*Dict. Hist.*

BARRE (LOUIS FRANÇOIS JOSEPH de la) a French historian and antiquary in the eighteenth century. He edited Morel's dictionary, assisted Banduri in his *Imperium Orientale*, and Roman medals, and wrote memoirs of the history of France and Burgundy, &c.—*Biog. Univ.*

BARRE (WILLIAM VINCENT) an ingenious writer, who was the son of a Protestant gentleman of respectability in the south of France. At the age of fourteen he was sent to Russia, and entering into the navy, served with great reputation, and obtained the command of a ship. The revolution in France having removed the disabilities under which he had laboured as a Protestant, he returned home, and was appointed a captain under Napoleon, in the campaign in Italy. His talents as a linguist subsequently procured him the post of interpreter to the government; but having written a satire on the First Consul, he was obliged to consult his safety by taking flight to England. Arriving in London he published "The History of the First Consulate," 1807; and he translated into French a pamphlet written by Sir Sidney Smith, on the Expedition to Egypt. In 1815 he published the "Origin, Progress, Decline, and Fall of the Empire of Buonaparte in France," London, 8vo. At one period he was a teacher at Bath, and is said to have obtained a large income by tuition; but he made no provision for the latter part of his life, which was terminated by suicide, at Dublin, in 1829, when nearly sixty years of age.—*Biog. des Contemp. Ann. Reg.*

BARRET (JOHN) an English lexicographer in the sixteenth century. He compiled an English, French, and Latin dictionary, which he entitled *Alvearie*, to which, in a second edition, was added the Greek.—*Chalmers's Biog. Dict.*

BARRINGTON (SHUTE) Bishop of Durham. He was the sixth son of the first Viscount Barrington, and was born at Becket, in Berkshire, May 26, 1734. After studying at Eton he removed, in 1752, to Merton College, Oxford, where he obtained a fellowship, and took the degrees of MA. in 1756, and DCL. in 1762. Having taken holy orders he was appointed a royal chaplain on the accession of George III; in 1761 he obtained a canonry at Christchurch, Oxford; in 1768 a canonry at St. Paul's London, and the following year he was raised to the bishopric of Llandaff. In 1777 he exchanged his canonry at St. Paul's for one in the collegiate church of Windsor; and in 1782 he succeeded Dr Hume in the see of Salisbury, whence, in 1791, he was translated to that of Durham. His death took place March 25, 1826. He was married, in 1761, to Lady Diana Beauclerc, daughter of the Duke of St. Alban's, who died in 1766; and in 1770 he married the daughter of Sir John Guise, Bart. who died in 1807; but by neither of his wives had he any family. Bishop Barrington distinguished himself as

BAR

a senator chiefly by his warm opposition to the petition from some of the clergy against subscription to the Thirty-nine Articles, and by his efforts in 1779 to procure the enactment of a bill for the prevention of adultery. He published, in 1772, a new and improved edition of his father's *Miscellanea Sacra*; and he was the author of several occasional sermons and visitation charges, most of which, with other tracts, were reprinted collectively in 1811, 8vo. He was likewise a contributor to the annotations accompanying Bowyer's critical edition of the Greek Testament. In 1783 he engaged in a literary controversy with the Calvinists; and in 1806 with the Roman Catholics; but though hostile to their doctrines, he signalized himself by his beneficent liberality to the French prelates and clergy, who took refuge in England during the stormy period of the Revolution; and his charitable donations, both for the support of public institutions and for the relief of individual penury, displayed a munificence worthy of his character and fortune.—*Ann. Biog. Georgian Era.*

BARRUEL DE BEAUVERT (ANT. JOSEPH, count de) born at the castle of Beauvert, near Versailles, in 1756. Having adopted the military profession, he commanded a company in the regiment of Belsunce, which he quitted for the militia of Brittany; and in 1790 belonged to the national guard at Baginols. After the flight of the royal family to Varennes, he offered himself as a hostage for Louis XVI, and he received the cross of St Louis as a reward for his conduct on the 20th of June, 1792. In 1795 he was editor of the journal entitled "Les Actes des Apôtres," and on that account he was comprised in the decree for the deportation of the eighteenth Fructidor, but he made his escape. Under the consular government he was subjected to the oversight of the police; but, at length, obtaining the protection of the empress Josephine, he was nominated inspector of the metrical system in Jura and the neighbouring departments. He died in 1817. The best known of his works are "Vie de J. J. Rousseau," 1789; "Caricatures Politiques;" "Hist. de la prétendue Princesse de Bourbon Conti," Besançon, 1811; "Lettres sur quelques Particularités de l'Hist. pendant l'Interregne des Bourbons," 1815, 3 vols, 8vo.—*Dict. Hist.*

BARRY (GZOROK) a Scotch divine, who died in 1805, author of a history of the ancient condition and present state of the Orkney islands.—*Gent. Mag.*

BARRYMORE (GILES) an eminent actor, who was a native of Taunton, in Somersetshire, and the son of a tradesman whose name was Bluett. The son was placed in a counting-house in London; but being fond of society he fell into expensive habits, and imbibing a taste for the stage, he quitted commerce for the drama, on which occasion he adopted the appellation by which he was afterwards known. After performing for some time in the country, he was seen at Brighton by George Colman, sen. proprietor of the Haymarket Theatre, who invited

him to London, but afterwards refused to engage him. He then succeeded Mr Dubellamy, at Drury Lane, where he appeared as Young Meadows in "Love in a Village;" but he did not attract much notice till the removal of Mr Farren to Covent Garden, when he obtained some parts of more importance than he had previously filled, and he at length succeeded in establishing himself in the public favour. During many seasons he was a leading actor at the Haymarket. He performed alike in tragedy and comedy, but his most effective part is said to have been that of Osmond in the "Castle Spectre." He retired from the stage several years before his death, which took place at Edinburgh, July 14, 1830, at the age of seventy-two.—*Thesp. Dict. Month. Mag.*

BARTHES DE MARMORIERES (ANTONY) born at St. Gal in Switzerland, in which country he passed a great part of his life. In 1765 he was secretary to the French ambassador Beauteville, when he interested himself in the affairs of J. J. Rousseau. At the commencement of the Revolution, in 1789, he held the office of private secretary to the count d'Artois, as colonel-general of the Swiss guards. He then became an active partisan among the royalists. The Directory, in 1798, drove him into exile; but he subsequently paid homage to Buonaparte, and returning to France, he died in 1811. He was the author of "Elnathan, ou les Ages des Hommes," a pretended translation of a Chaldean tale, 1801, 3 vols, 8vo, and several other works; and he published "Théorie du Beau dans la Nature et les Arts," 1807, 8vo, from the MSS. of his brother, Paul Joseph Barthes.—*Dict. Hist.*

BARTHOLDY (JACOB SOLOMON) a Prussian diplomatist, who was a native of Berlin, but of Israelitish parentage. He studied at the university of Konigsberg, and afterwards travelled in Greece. Returning to Germany, he abjured Judaism, and became a Protestant. Soon after, the war of 1807 broke out, and he served against the French as an officer in the landwehr of Vienna. He wrote a tract called "Tiroler Krieg," i. e. The War of the Tyrol, which produced a great sensation. In 1813 he became attached to the chancellor's office, under the minister Hardenberg; and he drew up the edict relative to the land-sturm, after the publication of the armistice. In 1814 he accompanied the allies to Paris, and then visited London. The next year Bartholdy was appointed Prussian consul-general at Rome; and after the congress of Aix la Chapelle he was made chargé d'affaires at the court of Tuscany. He died in 1826. He published, besides the work above noticed, "Travels in Greece in 1803 and 1804," of which a French translation appeared at Paris, 1807, 2 vols, 8vo; and "The Life of Cardinal Gonsalvi," Stuttgart, 1824, 8vo. He made various antiquarian collections, and he left in MS. a "Treatise on the coloured Glasses of the Ancients."—*Annales Biog.*

BARTRAM (JOHN) an eminent American botanist, born in Chester county, Pennsylvania,

in 1701. His grandfather was a farmer, who emigrated from England with William Penn, in 1682. He was engaged in the same occupation, to which he added the study of natural history, and by his own exertions acquired so intimate an acquaintance with that branch of it relating to the vegetable kingdom, that Linnæus pronounced him "the greatest natural botanist in the world." He made excursions into Florida and Carolina in search of scarce and curious plants. He formed a botanic garden a few miles from Philadelphia, on the banks of the river Schuylkill, said to have been the first establishment of the kind in America, and which still bears his name. He carried on correspondence with most distinguished naturalists in every part of the world; and several foreign academies and scientific societies bestowed their honours upon him, and published his communications in the Transactions. His death took place in 1777, in the seventy-sixth year of his age.

BARTRAM (WILLIAM) the fourth son of the preceding, and also distinguished as a naturalist. He was born at Kingressing, in Pennsylvania, in 1739. At the age of sixteen he was placed in the counting-house of a merchant in Philadelphia, where he continued six years, and then went to North Carolina, to engage in commerce on his own account; but his inclination led him rather to apply himself entirely to the study of natural history, and having accompanied his father in a journey of botanical research through East Florida, he remained there about a year, on the river St John, and then returned home in 1771. At the request of Dr Fothergill, in 1773, he commenced journeys in the Floridas, Carolina, and Georgia, for the purpose of making researches in natural history, and after five years he terminated his undertaking, and transmitted to London for his employer, the valuable collections and drawings which he had accumulated. In 1790 he published an account of his travels, including interesting notices of the Greeks, Cherokees, and Choc-taws. After his return from his southern tour he continued his scientific pursuits; in 1782 he was elected professor of botany in the university of Philadelphia, but he declined accepting that office in consequence of the state of his health. In 1786 he was chosen a member of the American Philosophical Society; and he was admitted into other scientific associations both in America and Europe. He was the author of the most complete and accurate table of American Ornithology which had appeared previously to the work of Wilson on that subject. His death took place suddenly, in consequence of hæmorrhage from the lungs, July 22, 1823.—*Encyclop. Amer.*

BARUFFALDI (JEROME) an Italian poet and divine. He was born at Ferrara in 1675, and died March 31, 1753. Pope Benedict XIV, by whom he was much esteemed, bestowed on him various ecclesiastical dignities; and he long occupied the chair of professor

B A S

of sacred literature at Ferrara. He wrote a great number of works in prose and verse, among which is a didactic poem on the cultivation of hemp, "Il Canapajo," in eight books, Bologna, 1741, 4to.—*New. Dict. Hist.*

BASIN (THOMAS) a French ecclesiastic in the fifteenth century, author of a history of his own times.—*Dict. Hist.*

BASMADJY (ISRAHIM) a native of Hungary, who embraced the Mahometan faith, and engaged in concert with Seid Effendi in establishing a printing-office at Constantinople. The sultan Achmet III formally countenanced the undertaking; but the printing of any part of the Koran, or any thing relating to the Turkish laws or religion, was interdicted. Works which treated of philosophy, medicine, astronomy, geography, and history, were exempt from prohibition. Basmadjy, however, published only sixteen works, though he experienced the liberal patronage of the emperor. He died in 1746.—*New Mem. of Lit. Dict. Hist.*

BAST (FREDERIC JAMES) a learned Helgenist, who was secretary of legation to the embassy from Hesse Darmstadt, at the congress of Rastadt; and he was also a correspondent of the French Institute. He died in 1811. M. Bast published a "Critical Commentary on the Banquet of Plato;" and "Lettre critique à M. Boissonnade sur Anton, Liberalis, Parthenius, et Aristenète," 1805, 8vo.—*Dict. Hist.*

BASTA (GEORGE) a celebrated Italian commander under the duke of Parma in the sixteenth century, author of two treatises on military discipline, in Italian.—*Traboschi.*

BASTARD (THOMAS) an English poet and divine in the seventeenth century, author of "Chrestoleros," or seven books of epigrams; "Magna Britannia;" sermons, &c.—*Biog. Brit.*

BASTER (JOB) a Dutch philosopher and naturalist, who left a great number of works on botany, &c. Besides papers in the Transactions of the Royal Society of London, and in those of the Philosophical Society of Haerlem, he was the author of "Opuscula subseiva, Observations Miscellaneas de Animalculis et Plantis quibusdam Marinis, eorumque Ovarii et Seminibus Continentia," 1759, 4to; and "Principles of Botany, according to Linnæus," in Dutch, 1768, 4to.—*Gronovii Biblioth. Dict. Hist.*

BASTIEN (JOHN FRAN.) born at Paris in 1747. He became a bookseller and voluminous author, or rather compiler and editor. Among his principal publications are "Lettres d'Héloïse et Abelard," 1782, 2 vols; "La Nouvelle Maison Rustique," 1798, 3 vols, 4to; "Nouveau Manuel du Jardinier," 1807, 2 vols, 12mo; Amyot's Translation of Plutarch's Lives; the works of Montaigne, Charron, Rabelais, &c. He died in 1824.—*Dict. Hist.*

BASTON (ROBERT) an English poet and Carmelite in the fourteenth century, author of several works not contemptible for the period in which he lived.—*Biog. Brit.*

B A U

BATECUMBE (WILLIAM) an English mathematician in the fifteenth century. His writings are chiefly on the sphere, and on the astrolabe.—*Biog. Brit.*

BATES (JOAH) a musician of eminence, born at Halifax in Yorkshire in 1740. Such was his reputation, that at the commemoration of Handel, in Westminster abbey, he was the person unanimously selected to superintend the performance. Till the year 1793 he conducted, with much skill and energy, the choral performances of ancient music, at which period he retired, and was succeeded by Mr Grextorex. His wife was a prima donna singer, celebrated for the excellence of her voice (a fine contralto) and the clearness of her tones and articulation. Her execution of Purcell's celebrated song of Mad Bess is said to have been imitatively fine. The husband died in 1799.—*Biog. Dict. of Mus.*

BATESON (THOMAS) organist of Chester about the year 1600. He is one of the best English writers of madrigals, of which he published a collection, and was a contributor to Morley's Triumphs of Oriana.—*Burney.*

BATHELIER (JAMES LE SIEUR D'AVIRON) a distinguished civilian in the sixteenth century, author of "Commentaries on the Norman Law," reprinted with those of Berault and Godefrois.—*Moreri.*

BATMAN (STEPHEN) an English writer in the sixteenth century, author of "The Doom," 1581; and "A Christal Glass of Christian Reformation," 1569; and various other controversial and poetical tracts.—*Herbert's Ed. of Ames.*

BAUDART (WILLIAM) a Flemish Protestant divine, born in 1565, and died in 1640. He was employed in translating the Bible into Dutch, and published a collection of engravings of sieges and battles, with illustrative Latin verses.—*Dict. Hist.*

BAUDELOQUE (S. LOUIS) a celebrated French accoucheur, born in Picardy in 1746. He studied the sciences connected with his profession at Paris, after which he was appointed chief surgeon of the Hospice de la Maternité, and professor of midwifery at the medical school. He died in 1810. Besides a great number of papers in the Memoirs of the Academy, and various medical journals, he was the author of "Principes des Accouchemens," 1775, and "L'Art des Accouchemens;" both several times reprinted, being considered as works of standard authority.—*Dict. Hist.*

BAUDOUIN (JOHN) a French writer in the seventeenth century. He translated Salust, Tacitus, Lucian, and Suetonius, and was author of a history of Malta, and some novels, &c.—*Moreri.*

BAUER (FERDINAND) a German artist, highly distinguished for his skill as a botanical painter. He came to England and made drawings for a work entitled "Delineations of Exotic Plants cultivated in the Royal Garden at Kew," 1796, folio. He was engaged as a draughtsman to accompany Mr Robert Brown, in Captain Flinders's expedition to survey the coast of New Holland, between 1802 and

BAU

1805, where he made a number of drawings from living plants in their native soil, of which engravings appeared in "Illustrationes Floræ Novæ Hollandiæ, sive Icones Generum quæ in Prodomo Floræ Nov. Hol. et Insulæ Van Diemen, descripsit Rob. Brown," of which the first part was published in 1813. Those figures in this work which were not taken from the living plants, were copied from drawings made under the direction of Sir Joseph Banks, during Captain Cook's first voyage, except a few from dried specimens preserved in the herbarium of this artist, or that of Mr Brown. Bauer died at Vienna, March 17, 1826. He left a most valuable herbal, or collection of dried plants, and a great many botanical drawings, executed with great accuracy.—*Biog. Dict. of Living Authors. New Germ. Necrology.*

BAUREINFEIND (GEORGE WILLIAM) a painter and engraver, who accompanied Niebuhr in his travels in Arabia, and made many drawings illustrative of the Description of Arabia, published by the latter on his return to Denmark. Baureinfeind died at sea in 1763.—*Dict. Hist.*

BAUSCH (LEONARD) a physician of Schweinfurd in Franconia, in the sixteenth century, who wrote commentaries on the works of Hippocrates, published at Madrid in 1594.—**JOHN LAURENCE BAUSCH**, his son, was also a physician. He was born at Schweinfurd in 1605, and after studying at various places, took the degree of MD. at the university of Altdorf. He deserves notice as the founder of a society of physicians in 1652, who met at stated periods for the purpose of communicating such observations on philosophy and medicine as occurred in their practice, and appeared deserving of preservation. This at length gave birth to the *Academia Naturæ Curiosorum*, of which he was the first president; and in 1671 they commenced the publication of their memoirs, under the title of "Miscellanea Curiosa Medico-Physica Academiae Naturæ Curiosorum," 4to. This society still subsists, and its published Transactions amount to a considerable number of volumes. Bausch, who died in 1665, wrote several tracts on natural history.—*Halleri. Bibl. Med. Pract. Eloy Dict. Hist. de la Méd.*

BAUSSET (LOUIS FRAN. de) a French ecclesiastic, born at Pondicherry in 1748. He was sent to France for education at the age of twelve, and studied among the jesuits at La Flèche, and afterwards at the college of St Sulpice. He then took orders, and became vicar-general to the archbishop of Aix. He had held this office ten years, when he was promoted to the bishopric of Alais; and in 1786 he was one of the deputies chosen to present to the king addresses from the states of Languedoc. He became a member of the two assemblies of Notables; but was not elected a deputy to the States-General. In 1791 he protested against the civil constitution of the clergy, which had been decreed by the constituent assembly. During the reign of terror he was confined in the convent of

BAY

Port Royal, and was set at liberty after the fall of Robespierre. He then lived in retirement, till the settlement of the concordat, when, on the requisition of pope Pius VII, he formally resigned his bishopric. In April 1806 he was nominated canon of St Denis, and afterwards titular counsellor of the university. By a decree of the king, dated February 17, 1815, he was constituted chief of the royal council of the university; and Napoleon, on his return from Elba, replaced him in his former situation, but being tormented with the gout, he was unable to take any active part in official affairs. On the second restoration of Louis XVIII he resumed the presidency of the council of the university; and in August 1815 he was created a peer of France. In April the following year he was admitted into the French academy, and soon after made a cardinal. He died at Paris, June 21, 1824. Bausset was the author of an elaborate "Life of Fenelon," 4 vols, 8vo, from original materials, which has been translated into English by Mr Mudford; and a "Life of Bossuet," 4 vols, 8vo. He had projected a history of cardinal Fleury, but his infirmities prevented its completion.—*Biog. Nouv. des Contemp. Dict. Hist.*

BAYLE (G. L.) a French physician, who contributed to the improvement of anatomical pathology. He was attached to the hospital de la Charité, and died prematurely in 1817. Among his writings are "Recherches sur la Phthisie Pulmonaire," Paris, 1810, 8vo; dissertations and observations in the Journal de Médecine; articles in the Dictionnaire des Sciences Médicales of Panckoucke; besides a large work on cancerous diseases, which he left in MS.—*Dict. Hist.*

BAYLEY (RICHARD) an eminent American physician and medical writer, who was born in Connecticut in 1745. After studying at home, he finished his professional education in London, and returning to his native country he settled as a physician at New York in 1772. The prevalence of the croup in that city afforded him an opportunity for the display of his skill and judgment, treating it in a new manner as an inflammatory disease; and his publication, entitled "A View of the Croup," led to the general adoption of his plan. In autumn, 1775, he revisited London, and the following spring he returned to New York as a surgeon in the English army, under sir William Howe. This post he resigned in 1777, and passed the remainder of his life in professional practice in that city. In 1787 he gave lectures on surgery; in 1792 he was appointed professor of anatomy in Columbia College; and in 1793 professor of surgery. In 1797 he published a treatise on Yellow Fever, in which he is said to have proved the disease to have been of local origin. He had previously been appointed Health Physician for the port of New York, and in 1798 appeared his Letters from the Health Office, submitted to the New York Common Council. His death took place in 1801, in consequence of fever, with which he became infected in

the discharge of his professional duty.—*Encyclop. Amer.*

BAYNARD (ANN) a learned lady in the seventeenth century. She was possessed of great classical attainments, and wrote Latin in a pure and elegant style.—*Collier's Hist. Dict.*

BAZIN (JAMES RIGOMER) a native of Mans, who figured as an anarchist in the French revolution, and was imprisoned as an accomplice in the conspiracy of general Mallet against Buonaparte. He was set at liberty in 1815, and was killed in a duel in 1821. He wrote a great number of political pamphlets, besides a novel, a tragedy, and a melo-drama.—*Dict. Hist.*

BEAUFORT LLD. (DANIEL AUGUSTUS) rector of Navan in the county of Meath, and vicar of Collon, in that of Louth, at which last place he died in June, 1821. He was, during nearly sixty years, a beneficed and resident clergyman in Ireland. In both his parishes the churches were rebuilt under his direction; and those edifices sufficiently display his munificence and architectural taste. This gentleman chiefly distinguished himself by the publication of a "Civil and Ecclesiastical Map of Ireland," accompanied by a "Memoir of the Map of Ireland, illustrating the Topography of that Kingdom," 1792, 4to. This production, which is perhaps the most valuable contribution to Irish geography that has yet appeared, has extended the fame of the author not only to England, but also to the continent. Dr Beaufort was a member of the Royal Irish Academy.—*Ann. Reg.* 1821.

BEAUFORT (LEWIS de) a learned writer, who died at Maestricht in 1795, author of a history of Germanicus, a dissertation on the uncertainty of the five first ages of the Roman republic, and of a history of the Roman republic.—*Dict. Hist.*

BEAUHARNOIS (STEPHANIE, countess de) a French authoress, born in 1738, and died at Paris in 1813. She was the daughter of a receiver-general, and married the brother of the empress Josephine's first husband. Her works are a poem on maternal love; "Lettres de Stéphanie," an historical romance, 2 vols, 12mo; &c.—*Dict. Hist.*

BEAUMONT, bart. FRs. (sir GEORGE) distinguished as an amateur of the fine arts, was born at Dunmow, in Essex, in 1753. He succeeded to the baronetcy on the death of his father in 1762, and he received his education at Eton and Oxford. In 1782 he set out on his travels, and visited France, Switzerland, and Italy. He was chosen MP. for Beer Alston in 1790, but he did not actively engage in politics. He distinguished himself not only as a patron of the arts, but was himself an artist of no mean skill. Some landscapes which he painted were exhibited at Somerset House. He died February 7, 1827. About two years previously to his decease, he presented a collection of pictures to the National Gallery.—*Gent. Mag.*

BEAUNE (FLORIMOND de) a French ma-

thematician in the seventeenth century. He invented a problem known by his name, which is said to have been solved by Descartes, for determining the nature of curves by the properties of their triangles.—*Moreri.*

BEAURAIN (JOHN de) an eminent French geographer in the eighteenth century. He constructed for Louis XV a number of plans and charts, and was author of a topographical and military description of the campaigns of Luxemburgh from 1690 to 1694.—*Nouv. Dict. Hist.*

BEAURIEU (GASPARD GUILLARD de) a French writer of eccentric habits in the eighteenth century, author of "The Pupil of Nature," often reprinted; "The Happy Citizen;" and a course of natural history.—*Dict. Hist.*

BEAUVILLIERS (ANTONY) a Parisian cook, celebrated in the annals of gastronomy, who died in 1817. He published a digest of his art, under the title of "L'Art du Cuisinier," 1814, 2 vols, 8vo.—*Dict. Hist.*

BEAVER (PHILIP) an active and enterprising naval officer. He was the son of a respectable clergyman, whose sudden death, in 1777, left a widow and a large family almost unprovided for, and young Beaver, then eleven years old, was sent to sea with Captain, afterwards Admiral Rowley. Such was his progress in professional knowledge and his general merit, that at the age of eighteen he obtained a Lieutenant's commission. The American war being then recently concluded, and having no prospect of active employment, he engaged with Mr Dalrymple in a scheme for colonizing the island of Bulama, near the then newly formed settlement of Sierra-Leone. After two years of unremitting exertion and patient endurance of almost every kind of hardship, Captain Beaver found himself obliged to return to England, with news of the failure of the undertaking; and he not only obtained no recompense for his services, but also lost his half-pay during the whole period of his absence. He was afterwards appointed first lieutenant of the Stately, and was present at the capture of the Cape of Good Hope, in August, 1795. In June, 1799, he obtained his Captain's commission, and was appointed to the Dolphin, 44 guns, which he shortly after quitted for the Aurora, and having joined Lord Keith in the Mediterranean, he was made assistant Captain of the fleet. During this service he distinguished himself at the taking of Genoa, after which he was sent with dispatches to England. He soon returned to his post, and immediately upon his arrival he was employed in the expedition to Egypt, in which he added to his former reputation. Having married Miss Elliot, the daughter of a naval officer, at the conclusion of peace he returned home, and lived in retirement. The war being renewed, on the threatened invasion of England by Buonaparte, Capt Beaver was appointed to the command of the Fencible Yeomanry, on the coast of Essex. Soon after he was sent to the West Indies, as Captain of the Acasta

frigate, in which he was employed in conducting and landing seven thousand men in the expedition against Martinique, and on other occasions. In 1809 he returned home, and was for some time without employment, in consequence of his ship being paid off. At length he solicited and obtained the command of the *Nisus*, in which he greatly distinguished himself at the taking of the Isle of France; and he was appointed commodore, and invested by the admirals on the station with the honourable but laborious post of senior officer in command. His valuable services were at length terminated by his death, which took place, somewhat suddenly, April 5, 1813, at Cape Town, South Africa, in consequence of an attack of internal inflammation. His talents appear to have been much beyond the station which he attained, and to his professional knowledge he added a considerable acquaintance with general literature. Captain Beaver was the author of "*African Memoranda, relative to an Attempt to establish a British Settlement on the Western Coast of Africa, with a brief Notice of the Neighbouring Tribes*," 1805, 4to.—*Life and Services of Capt. Philip Beaver, by Capt. W. Smith*, 1829.

BECKINGHAM (CHARLES) an English dramatic writer in the eighteenth century, author of *Scipio Africanus* and *Henry IV of France*, two tragedies, performed before he was twenty.—*Biog. Dram.*

BECLARD (PETER AUGUSTUS) an eminent French anatomist, born at Angers in 1785. He became professor of anatomy and physiology at Paris in 1818, and had attained great reputation, when he was cut off by death in the midst of his career, in March 1825. He published "*Anatomical Memoirs*," and an improved edition of the "*Tr. d'Anatomie Générale*" of Bichat.—*Dict. Hist.*

BECQUET (ANTONY) a French Celestine in the eighteenth century, who wrote in Latin a history of his order.—*Nouv. Dict. Hist.*

BECTOZ (CLAUDE de) a learned French abess in the sixteenth century, much admired for her classical attainments by Francis I. She left several pieces in verse and prose in her own and the Latin language.—*Biog. Univ.*

BEEHoven (LUDWIG von) a very eminent musical composer, was born at Bonn, where his father was tenor singer in the chapel of the elector of Cologne in 1770. He received his first instructions in music from Neef, the court organist, and at a very early age not only became a finished performer on the organ and pianoforte, but even distinguished himself in composition. In 1792 he was sent, at the expense of the elector, to Vienna, to study the theory of music under the celebrated Haydn, under whose instructions and those of Albrechtsberger, he obtained a degree of proficiency that was soon rendered evident by his productions. The precarious situation of Cologne during the war, and the death of the elector in 1801, in whom he lost a zealous patron, induced Bee-

thoven to choose Vienna for his permanent residence. Original in thinking, eccentric in manners, and above all disdaining to court the great or the wealthy, he lived nearly thirty years in that capital, in open hostility with but too many, and intimate only with a few, whose admiration of his genius would not allow them to take offence at his extreme singularity, and unseasonable resolve to declare his opinions, however repulsive they might be. Thus independent and disdainful, it was late in life before he obtained any other emolument than what he acquired by his compositions. The imperial family, although attached to music, had hitherto altogether neglected him; and it was not until he was about to accept the post of maestro di capella to Jerome Buonaparte, that the archduke Rodolph and the princes Lobkowitz and Kinsky settled on him an annuity of 4000 florins, upon no other condition than that so long as he derived the benefit of it, he would not reside out of the Austrian dominions without express permission. Some years passed away without his seeking leave to quit Vienna, although some time before his death it was reported that he was about to visit England. Considerable feeling was excited just before his death, both in this country and France, by the report that he was suffering severely from pecuniary difficulties; and a handsome sum was collected to be sent over, when the account arrived of his death, together with a warm contradiction of the report that his patrons in Vienna had allowed foreign assistance to be at all necessary. The death of this eminent man took place in the fifty-seventh year of his age. Nothing like a detailed account of the very numerous productions of this great composer can be expected in a work of this nature. As lately enumerated in a popular periodical musical publication, they amount to no less than a hundred and twenty-one. Of these his oratorio of the "*Mount of Olives*," his "*Overture to Prometheus*," and pianoforte concerto in C minor, would of themselves have stamped him a first-rate genius. Few men indeed have attained a higher rank in the loftier walks of composition, and in many of his orchestral symphonies, overtures, quartetts for the violin, concertos, trios, and sonatas for the pianoforte, he may take a place by the side of Mozart and Haydn. His peculiar merit, in the estimation of musical connoisseurs, consists in originality of invention, extraordinary passages, great energy of manner, and profound scientific modulation, the latter possibly occasionally carried to excess. Setting aside the singularity of his humour, Beethoven was kept out of society by extreme deafness, an affliction which gave him heartfelt concern. He could however hear when addressed very loudly and distinctly. Although one of the most uncourtly and abrupt, he was also one of the most upright and honourable of men. Beethoven appears indeed, from all accounts, to have been one of those finely organized men of genius, who pay a correspondent tax for their peculiar

excellence; the derangement' of that mental equilibrium, which is the result of a general harmonious distribution of the intellectual faculties, being usually disturbed by the exquisite refinement of any one of them.—*Biog. Dict. of Mus. Harmonicon.*

BEGUIN (JOHN) a French ecclesiastic who was almoner to Louis XIII. He published a work entitled "Tyrocinium Chemicum;" which has been repeatedly published, and translated into French.—*Moreeri.*

BEK, or BEAK (ANTHONY de) Bishop of Durham, a bold and spirited prelate, who appears to have been a man of considerable talent. He acquired the character of strictness and austerity as a divine, to which he added the courage and skill of a soldier. He was of so active a disposition, and so little disposed to self-indulgence that he always rose when his first sleep was over, and to him is ascribed the saying reported to have been used by a celebrated living warrior, that it was unbecoming a man to turn in his bed. He was so modest that though he could smile at the frown of a king, he could never lift his eyes to the face of a woman; and when the remains of St William, archbishop, were to be removed to York, he was the only prelate present whose conscious chastity permitted him to touch the sacred bones. Bek loved military parade, had knights and soldiers always about him, and spent immense sums on his household and equipage; and a piece of cloth being shown him of which some one had said that it was too dear for the bishop of Durham he immediately bought it to cut up into horse-cloths. He gallantly led the van of the army of Edward I, in an expedition against the Scots, and once when at Rome he singly opposed a band of ruffians who had forcibly entered his house. This haughty priest seized the king's palfrey as a deodand, but at length he broke his heart at being excommunicated by the archbishop of York. His death occurred in 1310. He was the founder and perhaps the architect or designer of Barnard Castle and other fortresses.—*Anglia Sacra*, vol. i. *Surtree's History of Durham*, vol. i.

BEKA, or BEC (JOHN de) a canon of the church of Utrecht in the fourteenth century, author of a chronicle of his church from St Willibrod, first bishop of Utrecht, to 1346.—*Dict. Hist.*

BEKKER (ELIZABETH) an ingenious Dutch lady, who is said to have united great literary talents with much dignity and purity of morals. She was born at Flushing in 1738, and died at the Hague in 1804. Among her numerous works, considered as classics in the literature of Holland, are the romances of "Willem Leevend," 8 vols. "Letters of A. Blankart to C. Wildschut;" and "The History of Sara Burgerhart." She wrote her most important works in conjunction with her friend Agatha Deken, who survived her decease only nine days.—*Germ. Conversation Lexicon.*

BELFOUR (HUGO JOHN) a poetical and dramatic writer, who was the nephew of the Rev. Okey Belfour, minister of St John's

Wood Chapel, near London. He adopted the clerical profession, and having obtained a curacy in the island of Jamaica (W. I.) he died, after a short residence there, in September, 1827, at the age of twenty-five. His works display considerable talent, and command of language; and they include two dramas, "The Vampire," and "Montezuma;" with poems, published under the assumed name of St John Dorset.—*Gent. Mag.*—O. BELFOUR was the author of "The Lyceum of Ancient Literature, or Biographical and Analytical Account of the Greek and Roman Classics," 1809, 12mo; first published in the Monthly Magazine.—*Ed.*

BELIN DE BALUE (JAMES NICHOLAS) born at Paris in 1755, was a distinguished Hellenist, and became a member of the Academy of Inscriptions, and professor of the ancient languages. He was for some time director of the Prytaneum of St Cyr, which office he quitted to go to Russia, where he was employed in public instruction. He translated into French the Hecuba of Euripides, and the works of Oppian and Lucian, and the Characters of Theophrastus. He also published "Hist. Crit. de l'Eloquence chez les Grecs et les Romains," 1803, 2 vols, 8vo; and an edition of Oppian. He died in Russia in 1815.—*Dict. Hist.*

BELKNAP, AM. (JEREMY) an American divine and historian, born at Boston in 1744. He became pastor of a Presbyterian church at his native place in 1787, and died in 1798. He published "The History of New Hampshire;" and "American Biography;" besides other works.—*Reuss. Dict. Hist.*

BELL (ANDREW) the founder of the National System of Education. He was a native of St Andrew's, Fifeshire, (N.B.) and after having completed his studies in the university there he obtained ordination as a minister of the church of England, and went out to the East Indies, as a chaplain on the Company's establishment. He became superintendent of the Male Asylum at Madras, and the Hindoo mode of writing in sand and other peculiarities of tuition having attracted his notice, he introduced them into that institution with great advantage. Returning to England he published "An Experiment in Education made at the Male Asylum at Madras," 1798, 8vo; and "Instructions for conducting Schools on the Madras System," 1799, 12mo. The advantages of the mode of instruction, which he recommended were after a time acknowledged, and the system was adopted, but a similar project having been set on foot about the same time by Joseph Lancaster, a member of the Society of Friends, a controversy arose between their respective partisans, which was warmly carried on for some time, especially in the Edinburgh and Quarterly Reviews. At length two societies were formed, one called the National Society, for the establishment of schools on the plan of Dr Bell, and the other called the British and Foreign School Society, for establishments on that of Lancaster, both which have given rise to great multitudes of

useful institutions. The diplomas of DD, and LLD. were conferred on this meritorious divine, who obtained the rectory of Swanage in Dorsetshire, and subsequently was presented by Dr Barrington, Bishop of Durham, to the lucrative mastership of Shirburn Hospital, in that diocese and county. He died at Cheltenham, January 28, 1832, leaving very extensive property, the greater part of which had been accumulated in the West Indies. To various places and institutions in this country he bequeathed no less than 120,000*l.* for the purposes of literary encouragement and the advancement of tuition, 10,000*l.* being appropriated to the recently founded Royal Naval School. His funeral obsequies took place February 14th in Westminster Abbey. Besides the works already mentioned, he was the author of "A Sermon preached at Lambeth, June 28th, 1807, on the Education of the Poor under an improved System," 8vo; "The Madras School, or Elements of Tuition," 8vo. 1808; and "Elements of Tuition, containing the English School, or the History, Analysis, and Application of the Madras System of Education," 8vo, 1814.—*Biog. Dict. of Living Authors. Edit.*

BELL (BENJAMIN) an eminent surgeon and writer on surgery, who was born at Dumfries (N.B.) in 1749. After receiving a classical education, he commenced his medical studies at Edinburgh in 1766; about 1770 he went to Paris, and subsequently completed his professional education in London. In 1772 he returned to Scotland, and settled in the metropolis, where he obtained considerable reputation as an operator, both at the infirmary and in private practice. In 1778 he published "A Treatise on the Management of Ulcers," which passed through several editions; and the work was afterwards incorporated in his system of surgery, of which the first volume appeared in 1783, and the last in 1788. It soon superseded the comparatively imperfect and inaccurate productions of Heister and Le Dran, and in spite of manifest errors and defects which it exhibited, such was the demand for the work that, in 1801, a seventh edition was published, in 7 vols. 8vo. He was likewise the author of "Treatises on Gonorrhœa Virulenta, and on Hydro and Cancer;" "Essay on Agriculture;" and political tracts, printed anonymously. In consequence of the failure of his health, he made several tours through the country, about 1800; but after continuing some time in a declining state, he died April 4, 1806.—*London Encyclop.*

BELLAMY (JAMES) a distinguished Dutch poet, who was a native of Flushing. He was engaged in the occupation of a baker, when in 1772, at the age of twenty-five, the celebration of the second secular festival in commemoration of the foundation of the Dutch government aroused the energy of his mind, and his genius, prompted by patriotism, was exercised in poetical composition. The success of his first productions induced him to continue his career. He studied Latin, and having also acquired a more accurate ac-

quaintance with his native language he produced some pieces, which were inserted in the collections of the Society of Arts at the Hague. He published, under the title of "Vaderlandse Gezegen," patriotic songs, which entitle him to rank among the first poets of his nation; and with Bilderdijk, Helmers, Loots, and others he may be considered as one of the restorers of Dutch poetry. Some of his productions belong to the class of amatory poetry, and his latter works are said to exhibit a kind of melancholy feeling, which renders them highly interesting. He died in 1796.—*Germ. Conversation Lexicon.*

BELLMAN (CHARLES MICHAEL) the most original among the Swedish poets, was born in 1741, at Stockholm. He grew up in the privacy of domestic life; and the first proofs he gave of the possession of talents for poetry were by the production of pious effusions. The dissipated manners of the youthful votaries of pleasure at Stockholm, afterwards became the subject of his compositions. His fame at length spread over the country; and Gustavus III extended to him his patronage, and gave him an appointment, which afforded him a competent subsistence. He died in 1795. His songs are truly national, and are principally devoted to the description of scenes of revelry.—*Idem.*

BELOSIELSKY (prince) a Russian nobleman, who was ambassador from Catherine II to the court of Turin. Having fallen into disgrace he forsook politics for the cultivation of literature, and he wrote in French "Tr. de la Musique d'Italie," 1778, 8vo; "Poésies Françaises d'un Prince étranger," published by Marmontel, 1789, 8vo; and "Dianyologie, ou Tableau de l'Entendement," 8vo. He died at Petersburg in 1809.—*Month. Rev.*

BELSHAM (THOMAS) an eminent Unitarian divine, and theological writer, who received his education at a Dissenting academy at Daventry, in Northamptonshire. Having finished his studies he became assistant tutor in metaphysics, mathematics, and natural history, at that seminary, which he quitted in 1778, and settled as a preacher at Worcester. In 1781 he returned to Daventry, to fill the offices of minister of the congregation there and principal or theological tutor in the academy. He resigned this station in consequence of changing his sentiments from Calvinism to Unitarianism in 1789; and in justification of his conduct, he published a discourse "On the Importance of Truth, and the Duty of making an Open Profession of it," delivered April 23, 1790, before the supporters of the New College at Hackney, where he was chosen professor of Divinity; and when Dr. Priestley retired to America, he succeeded him as pastor of the Unitarian Congregation at Hackney. The Dissenting College or Academy was dissolved, but Mr Belsham remained as minister at Hackney till 1805, when he became preacher at the Unitarian chapel, in Essex-street, London, on the resignation of Dr John Diney. He resigned the

BEN

pastoral office some years before his death, which took place at Hampstead, in November, 1829, in the eightieth year of his age. Among his principal writings may be specified, "A Review of Wilberforce's Treatise entitled a Practical View of the prevailing Religious Systems of professed Christianity, in a Letter to a Lady," 1798, 8vo, third edit. 1813; "Elements of the Philosophy of the Mind, and of Moral Philosophy; to which is prefixed, a Compendium of Logic," 1801; "A General View of the Evidence and Importance of the Christian Revelation," 1807; "A Calm Inquiry into the Scripture Doctrine concerning the Person of Christ, including a brief Review of the Controversy between Dr Horsley and Dr Priestley, and a summary of the various Opinions entertained by Christians on the subject," 1811; "Memoirs of the late Theophilus Lindsey, M.A.; including a Brief Analysis of his Works, together with Anecdotes and Letters of eminent Persons, his Friends and Correspondents; also a general View of the Progress of the Unitarian Doctrine in England and America," 1812; "The Epistles of Paul the Apostle translated, with an Exposition and Notes," 1823, 4 vols, 8vo; besides which he published various controversial tracts, and numerous single sermons.—*Gent. Mag. Month. Repos. Month. Mag.*

BELSHAM (WILLIAM) the brother of the preceding, a miscellaneous and historical writer of eminence, who died November 17, 1827, at the age of seventy-five. He published, in 1789, "Historical, Political, and Literary Essays," 2 vols, 8vo, which passed through several editions; and he subsequently wrote on the test law, the French Revolution, parliamentary reform, and many other subjects; but his principal work is a "History of Great Britain, from the Revolution to the Treaty of Amiens," forming 12 vols, 8vo, published between 1793 and 1806. This historian was a staunch advocate for both civil and religious liberty.—*Lit. Gaz.*

BENEZECH (PETER) born at Montpellier in 1745. He was made minister of the interior under the French directory, and in 1797 resigned his office to Fr. de Neufchateau. He was afterwards appointed counsellor of state and colonial prefect at St Domingo, on the expedition of general Leclerc in 1802; and he died not long after his arrival in that island.—*Dict. des H. M. du 18me S.*

BENGER (ELIZ. OGILVY) a writer on history and biography, born at Wells in Somersetshire in 1778. At the age of twelve she learnt Latin, and at fifteen she wrote and published a poem, which is said to display some marks of genius. She subsequently removed to London, and attempted the drama, but without success. Her next production was a poem on the abolition of the slave trade, which was followed by two novels. But her principal publications are "Memoirs of Mrs Eliz. Hamilton;" "Memoirs of John Tobin;" "The Life of Anne Boleyn;" "Memoirs of Mary Queen of Scots;" and "Memoirs of Elizabeth Queen of Bohemia." Her

BEN

death took place January 9, 1827.—*New Month. Mag.*

BENNÉT (WILLIAM) a learned antiquary, who was born near London, in 1745. He received his education at Harrow School and Emanuel College Cambridge. After taking the degrees of B.A. and M.A. he obtained a fellowship, and became one of the tutors of his college. He subsequently went to Ireland as chaplain to the lord lieutenant, the earl of Westmorland, who had been his pupil at the university. In 1790 he was raised to the united bishoprics of Cork and Ross; and in 1794, having been made DD. he was translated to the see of Cloyne. He died July 16, 1820. Dr Bennett, who was a fellow of the Society of Antiquaries, directed his studies particularly to the ancient topography and history of Britain, in which he was deeply skilled; but the only remaining monuments of his researches consist of contributions to the *Archæologia*, and to the *Histories of Leicestershire* by Nichols, of Cornwall by Polwhele, and ancient Wiltshire, by sir R. C. Hoare.—*Georgian Era.*

BENSON (WILLIAM) an English critic in the seventeenth and eighteenth centuries. He published, among other things, "Virgil's Husbandry, with Notes, critical and rustical;" "Letters on Poetical Translations;" and an edition of Arthur Johnston's Latin version of the Psalms. Mr Benson erected a monument to Milton in Westminster abbey.—*Nichols's Lit. Anec.*

BENTHAM (JEREMY) a celebrated juridical and political writer, born in 1749. He was heir to a moderate fortune, but studied at Lincoln's Inn, with a view to the bar; and in compliance with the wishes of his father he practised for some time as a barrister in the courts of equity, where he displayed so much ability, as to attract the notice of the profession. But his father's death leaving him in possession of independence, and the free choice of his course of life, he at once abandoned all prospects of legal profits, emoluments, and honours, and devoted the whole of his subsequent existence to those labours which he believed would be most conducive to the welfare of the human race. He passed several years at Cherson, in the Crimea; but during a long period preceding his death he resided in his native country, employing himself in the composition of a variety of works principally relating to the improvement of legislation, and kindred subjects. Among his publications, may be mentioned, "A Fragment on Government, being an Examination of what is delivered on the Subject in Blackstone's Commentaries," 1776, 8vo; "A View of the Hard Labour Bill," 1778, 8vo; "A Defence of Usury, showing the Impolicy of the present legal restraints on pecuniary Bargains," 1787, 8vo; "An Introduction to the Principles of Morals and Legislation," (printed 1780,) 1789, 4to; "A Draught of a new Plan for the Organization of the Judicial Establishment in France," 1790, 8vo; "Panopticon, or the Inspection-House, containing the Idea of a new Principle of Construction applicable to any Place of

BEN

Confinement," 1791, 3 vols, 12mo; "Supply without Burden, or Escheat *vice* Taxation," 1795, 8vo; "Traité de Législation Civile et Pénale, publiée en François d'après les MSS. par Etienne Dumont," Paris, 1802, 3 vols, 8vo; "Letters to Lord Pelham, giving a comparative View of the System of Penal Colonization in New South Wales and the Home Penitentiary System," 1802, 8vo; "A Plea for the Constitution," 1803, 8vo; "Scotch Reform, considered with reference to the Plan proposed for the regulation of the Courts, and the Administration of Justice in Scotland," 1808, 8vo; "Théorie des Peines et des Récompenses rédigée en François par Etienne Dumont," Lond. 1811, 2 vols, 8vo; "On the Law of Evidence," 1813; a "Table of the Springs of Human Action, viz. Pleasures and Pains, with the correspondent Interests, Desires, and Motives, with Explanatory Observations;" "Swear not at all, showing the Needlessness, Mischievousness, as well as Anti-Christianity of all Oaths, and in particular the Use made of them in the English Universities;" "Plan of Parliamentary Reform, in the form of a Catechism; with an Introduction showing the Necessity of Radical and the Inadequacy of Moderate Reform," 1817, 8vo; and "Esquisse d'un Ouvrage en Faveur des Pauvres, trad. en François par Duquesnoy," Paris, 1802, 8vo. Only a portion of his works has been printed, and of those which have passed through the press, some, which have been regarded by eminent men who have seen them as the most valuable, have never in fact been published. Repeated propositions have been made for the publication of a complete edition of his works; and very recently prince Talleyrand, who has ever manifested the highest admiration of the talents of Bentham, offered to get an entire body of his works printed in French, at Paris. A short time before his death he had projected a new work on language, and one on the mathematics. Among the unpublished works he left one on the use of language with a view to the giving certainty to the expression of the will of the legislator. In the earlier part of the year 1832, he suffered severely from attacks of bronchitis, from which he so far recovered as to be able to receive the visits of distinguished foreigners and public men, with whom he was in habits of friendly intercourse; and it was hoped that he might be able to resume and extensively prosecute his literary labours. He began to devote his attention to the portion of his MSS. for the third volume of his unpublished "Constitutional Code," which is reputed by jurists who have been made acquainted with it in its progress to be one of the most valuable of his productions, as it contains the plan for the formation of a judicial establishment, and a code of procedure. Another attack of his disorder finally arrested his labours, and he died at his residence in Queen's-square-place, Westminster, June 6, 1832, in the eighty-fifth year of his age. Mr Bentham was a bencher of Lincoln's Inn, and at the time of his decease he was the father of the bar. He lived

BER

just long enough to be informed of the passing of the Reform Bill in parliament, a measure which he hailed with the utmost satisfaction. In pursuance of a resolution, which was announced during his life, this celebrated philosopher bequeathed his body to his friend Dr Southwood Smith, for the purpose of dissection, and anatomical demonstration; and on the 9th of June, Dr Smith delivered a preliminary lecture at Webb-street school of anatomy, Southwark, in the presence of many personal friends of the deceased, a number of members of the medical profession, law students, and others; the body was afterwards dissected, and the lectures were continued by Edward Grainger, the proprietor of the lecture-room.

BEOLCO (ANGELO) an Italian poet in the sixteenth century, called Ruzzante, from imitating in his rustic poems and farces the rude simplicity of the vulgar, in which he was held unequalled.—*Tiraboschi*.

BEREGANI (NICHOLAS, count) an Italian poet and historian in the seventeenth and eighteenth centuries. He translated Claudian, wrote sacred poems, and a history of the war carried on against the Turks, 1683.—*Idem*.

BERENGER (LAWRENCE PETER) a native of Riom in Provence, who became a member of the academies of Lyons, Marseilles, and Rouen, and professor of rhetoric at the college of Orleans before the Revolution. He was subsequently professor at the central school, at the Lyceum of Lyons, and inspector of the academies from 1816 till his death in 1822. Among the most important of his numerous works are "Voyage en Provence;" "Les Soirées Provençales;" "Le Mentor Vertueux;" "Recueil Amusant de Voyages, en Vers et en Prose," 9 vols, 12mo; "Nouvelles Pièces intéressantes sur l'Education des Princes;" and "La Morale en Action."—*Biog. Nouv. des Contemp. Dict. Hist.*

BERENGER (RICHARD) an English writer, author of "The History and Art of Horsemanship," 2 vols, 1771, with plates. He was gentleman of the horse to George III. He died in 1782.—*Chalmers's Biog. Dict.*

BERGAMO (JAMES PHILIP de) an Italian monk and historian in the fifteenth century, author of a chronicle from the creation to 1503, and a treatise on illustrious women.—*Tiraboschi*.

BERGER (THEODORE) born in 1683, and died in 1773. His "Allgemeine Geschichte," folio, Coburg, passed through five editions, and has been continued by professor Wolfgang.—*Crabb*.

BERINGTON (JOSEPH) a Roman catholic clergyman, and eminent writer on history and polemical divinity, who died at Buckland, Faringdon, in Berkshire, December 1, 1827. His first literary productions appear to have been metaphysical tracts on materialism, in opposition to the opinions of Hartley and Priestley. In 1784 he published "History of the Lives of Abelard and Heloise, comprising a period of 84 years from 1079 to 1163, with their genuine Letters from the Collection

BER

of Amboise," 1784, 4to, of which a second edition appeared in 1787; and which was followed by a "History of the Reigns of Henry II, and of Richard and John, his Sons, with the Events of this Period from 1154 to 1216, in which the Character of Thomas à Becket is vindicated from the Attacks of George Lord Lyttelton;" and in 1814 he published an extensive work entitled, "A Literary History of the Middle Ages, comprehending an Account of the State of Learning from the close of the Reign of Augustus to its Revival in the Fifteenth Century." Besides these, he produced several small tracts, and was engaged in a controversy with Dr James Fordyce, in defence of the Catholics, and with the celebrated Bishop Milner, on some points of Doctrine. In 1796 he announced a "History of the Rise, Progress, and Decline of the Papal Power," on an extensive scale, but the work seems never to have been executed.—*Genl. Mag.*

BERNARD (CATHERINE) a celebrated French literary lady, who died in 1712. She wrote poetry, obtained academical prizes, and was pensioned by Louis XIV. Two of her tragedies, "Brutus" and "Laodamia," were acted with applause. She likewise wrote romances.—*Biog. Univ.*

BERNARD (JOHN) an actor and theatrical historian, who was a provincial contemporary of Garrick, having first made his appearance on the stage at Bristol in 1770, when he was about sixteen years of age. He subsequently obtained an engagement at Covent Garden, where his first exhibition was in the character of Archer, in the "Beaux Stratagem," and he soon became known as the best representative of the fops and fine gentlemen of the day. He founded the celebrated Catch Club at Bath, and in London he succeeded Captain Morris as secretary of the Beef Steak Club. He afterwards became manager of the Guernsey theatre, but owing to the failure of that and other provincial speculations, about 1797, he embarked for America, where he was at one time manager and lessee of the Boston theatre, and in that and other theatres of the United States he was engaged as a manager or an actor during about twenty years. The last American theatre of which he had the management was in Canada, and he took his final leave of the stage in 1820, at Boston, after performing his favourite character of Lord Ogleby. He then returned with his family to England, where he again became embarrassed in his circumstances, and died in the metropolis in great distress, toward the close of 1828. After his death was published an auto-biographical work entitled, "Retrospections of the Stage, by the late John Bernard," an amusing production, on which he was employed during the last two years of his life.—*Times Newsp.*

BERNARD (SAMUEL) a French painter in the seventeenth century. He executed some historical pieces, but excelled in miniatures, and admirably engraved Raphael's history of Attila.—*Biog. Univ.*

BER

BERNARDI (FRANCESCO) called Senesius, an excellent soprano singer, who was born at Sienna, about 1680. He appears to have first attracted great public notice at Dresden, in 1719, and Handel, hearing of his fame, engaged him for the opera in London at a large salary, and he made his first public appearance in this country in 1721. He remained here some time, continuing to be a great favourite of the public, till he was seized with illness in 1726, and as soon as he was able to travel he went to Italy for the benefit of his health; but after remaining there two or three years he returned to London. Senesius's voice was penetrating, clear, equal, and flexible; his intonation was pure, his shake perfect, and he was peculiarly renowned for his delivery of recitative. In 1739 Senesius was residing at Florence. He died about the year 1750.—*Biog. Dict. of Mus.*

BERKHEY (JOHN LE FRANCQ VON) a Dutch naturalist, poet, and physician, born at Leyden, in 1729. He devoted himself warmly to the study of anatomy, and after a time formed at Leyden one of the most complete anatomical cabinets in the Netherlands. In 1761 he was admitted doctor of medicine; and the following year he settled as a physician at Amsterdam, occupying himself chiefly in researches concerning the natural history of Holland. He assisted in the publication of the grand collection of objects of natural history, by Albert Saba. Subsequently removing to Lecaroliet, he there composed his Dutch Idylls, by way of relaxation, while engaged on his great work "On the Natural History of Holland," which appeared in the Dutch language, at Amsterdam, in 1769, 6 vols, 8vo. In 1776 he published Poems, in 2 vols, 8vo; and some years afterwards, other poetical productions. In the beginning of the present century he printed a continuation of the "Natural History of Holland." In 1807 he was buried in the ruins of his house at Leyden, which was destroyed with many others by an explosion of gunpowder, but fortunately he was extricated without suffering any injury. He died at Leyden, March 13, 1812, having been reduced almost to a state of indigence.—*Biog. des Contemp.*

BERRI (CHARLES FERDINAND DE BOURBON, duke de) son of the count d'Artois, the present king of France. He was born at Versailles, in 1778, and at the age of eleven the progress of the Revolution obliged his father to become an emigrant. The young prince entered into the army of the prince of Condé, who gave him the command of a corps of gentlemen styled Chasseurs Nobles, with which he engaged in the service of Russia. After the peace of 1801, the duke de Berri joined his father in England. In April, 1814, he returned in triumph to his native country, and on the re-appearance of Buonaparte from Elba he took the command of the troops in the neighbourhood of Paris, in order to oppose his progress. Being obliged to give way to circumstances, he followed the king and royal family in the retreat into Belgium, and re-

turned to Paris on the 8th of July. The following year he married Maria Caroline Theresa, eldest daughter of the prince-royal of the Two Sicilies. His death was tragical, as he fell a victim to the dagger of an assassin, named Louvel, who stabbed him at the opera, February 13, 1820, and he expired the next morning. The duchess of Berri was delivered of a son on the 29th of September. who was created duke of Bourdeaux.—*Biog. Nouv. des Contemp. Gent. Mag.*

BERRIMAN (WILLIAM) an English divine, born in 1688, and died in 1750. He left five volumes of sermons, and some controversial pieces.—*Chalmers's Biog. Dict.*

BERTHOLLET (AMÉDEUS B.) an ingenious French chemist and natural philosopher, the only son of the celebrated philosopher of the same name [see *Dict. C. L. BERTHOLLET*], with whom he was associated in his scientific pursuits. He assisted his father in the second and enlarged edition of "Éléments de l'Art de Teindre," 1804, 2 vols, 8vo; and he was an active member of the Society of Arcueil, and a contributor to the Memoirs of that philosophical institution. The cause and manner of his death were remarkably and peculiarly melancholy: the circumstances are thus related by Dr Thomson:—"Mr Berthollet, jun "was unfortunately afflicted with a lowness of spirits which rendered his life wholly insupportable. Retiring to a small room, he locked the door, closed up every chink and crevice which might admit the air, carried writing materials to a table, on which he placed a seconds' watch, and then seated himself before it. He now marked precisely the hour, and lighted a brasier of charcoal beside him. He continued to note down the series of sensations he then experienced in succession, detailing the approach and rapid progress of delirium; until, as the time went on, the writing became confused and illegible, and the young victim dropped dead upon the floor." This event, which overwhelmed the father of the unhappy youth with insurmountable grief, took place in 1811.—*Dr. Thomson's History of Chemistry*, vol. i.

BERTIN (ANTHONY) a French officer and elegant poet, born in 1752, and died in 1790. To his poetry are attributed the beauties and the faults assigned to Propertius; a brilliant imagination, and language often unchastened by decorum.—*Biog. Univ.*

BERTIN (NICHOLAS) an eminent French painter, born in 1664, and died in 1736. He was patronised by Louis XIV. His pictures are mostly in Paris, and possess great merit.—*Biog. Univ.*

BERTON (J. B.) a French general, born near Sedan, in 1774. After studying at the military school, he entered into the army as a lieutenant. He distinguished himself at Austerlitz and Friedland; and in Spain, under Sebastiani, he became colonel and chief of the staff; and having taken Malaga, Soult appointed him governor of that place. Promoted to the rank of major-general, he commanded a brigade at the battle of Toulouse;

and the dragoons of general Excelsmans at Waterloo. His political opinions and pamphlets having occasioned his dismissal from the army after the second restoration, he engaged in a plot against the government, for which he was executed, October 5, 1822. He published "Précis Histor., Milit., et Crit. des Batailles de Fleurus et de Waterloo," 1818, 8vo.—*Dict. Hist.*

BERVIC (CHARLES CLEMENT) one of the most distinguished engravers of the French school, who was a native of Paris. He studied under George Wille, and was reckoned the most eminent among his pupils. His works are not very numerous; that which has been chiefly celebrated being a full-length portrait of Louis XVI, after a painting by Callot, the copies of which engraving are of great rarity and bear a high value, on account of the plate having been destroyed during the revolutionary tumults in 1793. His works have been praised for exactness of drawing, firmness, and brilliancy of touch, purity, and correctness of design, and the truth and facility with which he transferred to the copper the peculiar beauties of the work which served as his model. He died in 1822.—*Encyclop. Amer. Biog. des Contemp.*

BESSIERES (J. B.) duke of Istria, marshal of the French empire, colonel-general of the Imperial Guard, &c. He was born in Poitou, in 1769, entered into the service in 1792, and became a captain. He distinguished himself at the battle of Rivoli, and was soon after appointed commander of the guides of general Buonaparte, whom he accompanied to Egypt, where he was made general of a brigade. He became general of a division under the consulate, and marshal on the establishment of the empire. After greatly distinguishing himself at Austerlitz, Jena, and Eylau, he went in 1810 to command a corps of the army in Spain. In the disastrous expedition to Russia, he headed the cavalry of the Imperial Guard; and he served in the same post in Saxony, in 1813; and was killed May 1st, in the combat which preceded the battle of Lutzen.—*Biog. Nouv. des Contemp.*

BETTS (JOHN) an English physician in the seventeenth century, in the service of Charles II, author of "De Ortuet Naturâ Sanguinis," and "Anatomæ Thomæ Parr," &c.—*Wood.*

BEURNONVILLE (PETER RIET, count de) marshal of France, was born in Burgundy, in 1752. After having studied mathematics and geography, he embarked for the East Indies, in a military capacity, with M. de Suffren; and in that country he married advantageously. Being appointed major of the Isle of Bourbon, and afterwards injuriously deprived of his post, he returned to France, where he distinguished himself in the early part of the Revolution. Arriving at the rank of lieutenant-general, he served under Dumouriez; but he was not fortunate against the Austrians. In 1793 he was charged with the portfolio of minister at war; and he narrowly escaped destruction from the Jacobins, by

scaling the walls of his hotel. At this period Beurnonville was despatched on a mission to Dumouriez, then at the head of his army, and suspected of a design to overturn the Convention. The envoy, with four members of that assembly, was arrested by the refractory general, delivered up to the Austrians, and imprisoned at Olmütz; where they continued till November 1795, and were then exchanged for the daughter of Louis XVI. After his return to France, Beurnonville had the command of the army of the Sambre and Meuse, and that of Holland; and he was appointed inspector of troops under the consulate, ambassador at Berlin, and at Madrid, and grand officer of the legion of honour, count and senator under the imperial government. He voted for the creation of a provisional government and the expulsion of Napoleon, and recommended the recall of the Bourbons. He was made a peer of France and minister of state by Louis XVIII, whom he followed to Ghent during the hundred days; and resuming his station on the return of the king, he presided in a committee appointed to examine the titles of the ancient officers. In 1816 he was nominated commander of the order of St Louis, and received the baton of marshal. He died in April 1821.—*Biog. Nouv. des Contemp. Dict. Hist.*

BEWICK (THOMAS) a celebrated wood-engraver, the brother of John Bewick, of whom a notice occurs in the first volume of this Dictionary. He was born at Newcastle-upon-Tyne, about the year 1754; and he became the pupil of Mr Beilby, an artist, who was employed by Dr Charles Hutton in engraving some plates for his "Mensuration" his "Theory of Bridges," and his "Diarian Miscellany." Under the tuition of Mr Beilby, young Bewick became the best wood-cutter, and he is generally allowed to have carried the art he practised to a higher degree of excellence than it had ever before attained in this country. Besides the engravings for "Histories of British Quadrupeds and British Birds," which he executed in conjunction with his brother and Mr Beilby, he prepared the wood-cuts for a system of economical Botany, including four hundred and fifty plants, the text accompanying which was furnished by Dr R. J. Thornton; and just before his death he was engaged in making engravings for a "History of Fishes." He died November 8, 1828, in consequence of the gout, to the attack of which he had long been subject.—*Month. Mag.*

BIANCONI (JOSEPH) an Italian jesuit and mathematician in the seventeenth century, author of "Cosmography demonstrated;" "Chronology of eminent Mathematicians;" "A Dissertation on the Nature of the Mathematics," and an edition of Aristotle.—*Dict. Hist.*

BIBBIENA (FERDINAND GALLI) an Italian painter and architect, born in 1657, and died in 1743. His taste and genius are evinced by the fineness of his structures. He was patronised by the emperor, and left two books upon architecture.—*Idem.*

BIBERSTEIN (FR. A. baron von) a celebrated traveller and botanist, who was born at Aarberg, in the Swiss Canton of Bern, in 1766. After having completed his studies in the university of Stutgard, in 1792 he entered into the Russian military service. In the Crimea he became acquainted with the learned Professor Pallas; and going to St Petersburg in 1795 he was appointed to the command of troops destined to act against Persia in the provinces bordering on the Caspian Sea, where he had opportunities for the prosecution of geological researches. But the Emperor Paul ascending the throne the following year, the army was suddenly recalled, and the baron was prevented from completing his investigations. He was however enabled to publish an interesting account of one province, in his "Description of the Country between the Rivers Tereck and Kur and the Caspian Sea, with a Botanical Appendix," Frankfort on the Main, 1800, 8vo. Shortly after his return from the Caspian provinces he was appointed general-inspector of the establishments for rearing silk worms, which had been formed in the southern provinces of the Russian empire in the reign of Peter the Great. This employment, in which he engaged with great zeal and success, obliged him to reside in the Crimea and the provinces of the Caucasus, where he devoted all his leisure to his favourite study of botany; and as a counterpart to the "Flora Rossica" of his predecessor Pallas, he produced a splendid work entitled, "Flora Taurico-Caucasiaca, exhibens Stirpes Phœnogamas in Chersoneso Taurica et Regionibus Caucasiciæ sponte crescentis," Charkow, tom. i. ii. 1808, tom. iii. Suppl. 1819, 8vo. The larger edition of this Flora is adorned with one hundred beautiful engravings. In 1804 Biberstein undertook, with the approbation of the government, a scientific tour through Germany to Paris, where he had an opportunity of profiting by the conversation of the famous Baron Cuvier, who had been his fellow student at Stutgard. His merit and talents procured him repeated marks of imperial favour; and the Emperor Nicholas bestowed on him the grand cross of the second class of the order of St Wladimir. His death took place at Merosa, 28 wersts from Charkow, October 5, 1826.—*New German Necrology*, tom. ii.—See **CHORIS (LOUIS)**.

BICHENO (JAMES) an anabaptist minister and schoolmaster, at Newbury, in Berkshire, who wrote on the prophecies. His principal productions were, "A Friendly Address to the Jews," 1787, 8vo; "The Signs of the Times, or the Overthrow of the Papal Tyranny in France the Prelude of Destruction to Popery and Despotism," 2 parts, 1792—1794, 8vo; "The probable Progress and Issue of the Commotions which have agitated Europe since the French Revolution," 1797; "A Glance at the History of Christianity and English Nonconformity," 1798; "The Restoration of the Jews, the Crisis of all Nations," 1800; "The Destiny

of the German Empire, and the general Prospects of Europe," 2 parts, 1801—1806; and "An Enquiry into the Nature of Benevolence," 1817. He died April 9, 1831, aged eighty.—*Gent. Mag.* vol. ci.

BICKERSTAFF (ISAAC) an ingenious dramatic writer, who was a native of Ireland. He held a commission as an officer of marines; and during Garrick's management he produced a great number of comedies and farces, several of which still keep possession of the stage. A disgraceful imputation at length obliged him to seek refuge on the continent, where he died in obscurity. Among his best pieces are "Love in a Village," 1762; "The Maid of the Mill," 1765; "Love in the City," altered to the afterpiece called "The Romp," 1767; "Lionel and Clarissa," 1768; "The Hypocrite;" and "Dr. Last in his Charriot," 1769.—*Thesp. Dict.*

BIELSKI (MARTIN) a Polish historian, who died in 1576. He was the author of a "Chronicle," containing a Survey of the National Annals to his own time, and it was continued by his son Joachim to the reign of Sigismund III. He is esteemed an authentic writer, and the elegance of his language has occasioned it to be said that he wrote in a "golden style."—*Rev. Encycl.*

BIGG, RA. (WILLIAM REDMORE) an eminent English painter, chiefly of domestic and familiar subjects, in the treatment of which he displayed much talent and feeling. His "Shipwrecked Sailor Boy;" "Youths relieving a Blind Man;" "Black Monday," with many other equally interesting productions of his pencil, have been engraved, and some of them copied by foreign artists. He was an intimate friend of sir Joshua Reynolds, and was much esteemed by his numerous acquaintance, both for his professional skill and the amenity of his manners. His death took place in London, February 6, 1828.—*Gent. Mag. Ann. Biog.*

BIGLAND (JOHN) an industrious historical and miscellaneous writer, who was a native of Skirlaugh, in Holderness, East Riding of Yorkshire. The principal part of his life was passed in the station of a village schoolmaster, and to his own talents and assiduity he chiefly owed the reputation which he attained in the literary world. He was more than fifty years of age when he published his first work, entitled, "Reflections on the Resurrection and Ascension of Christ," 1803. This being favourably received, it was followed the next year by "Letters on the Study and Use of Ancient and Modern History," which has passed through several editions. He then produced "Letters on the Modern History and Political Aspect of Europe," a kind of supplement to the foregoing; and his success was such, that he was induced to become an author by profession. Among the numerous subsequent fruits of his industry may be specified, "Letters on Natural History," 1806; "A System of Geography and History," 1809, 5 vols, 8vo; "History of Spain," 1810, 2 vols, 8vo; "History of England, from the earliest

Period to 1813," 2 vols, 8vo; History of Europe, from the Peace of 1783 to the present Time," 1811, 2 vols, 8vo; "Letters on French History;" "Letters on English History;" and "An Historical Display of the Effects of Physical and Moral Causes on the Character and Circumstances of Nations," 1817; besides which he drew up the account of Yorkshire, forming the 16th vol. of Britton and Brayley's Beauties of England and Wales; and he was a contributor to some of the magazines. He died in February, 1832, at Farningley, near Doncaster, aged 82.—*Gent. Mag.*

BILDERDYK (WILLIAM) a Dutch lawyer and poet of great eminence, who was born at Amsterdam, in 1750. He studied classical literature at Leyden under Valckenaar and Ruhken; and in 1776, he gained a prize offered by a learned association for a poem on the Influence of Poetry upon Government. The ensuing year he obtained from the same society two more prizes, one for an ode on True Patriotism, and the other for a didactic poem on the same subject. He now acquired an established reputation as one of the greatest poets of the age in his own country. He introduced into Dutch poetry iambics and hexameters, rather however to show his skill in overcoming difficulties, than from any approbation of those kinds of verse, which he considered as ill adapted to the nature of the language. In 1780 he obtained another prize, for a poem on the Connexion of Poetry and Eloquence with Philosophy, to which he afterwards added a critical and philological commentary. He practised as a lawyer at the Hague, with great success, for some years; but on the invasion of the Netherlands by the French, his attachment to the Stadtholder induced him to quit that country; and he removed first to Brunswick, where he studied the language and poetry of Germany, and then to London, in which metropolis he delivered lectures in French on literature and poetry, which were numerously attended. On the establishment of a settled government in Holland, he returned home in 1799, and soon afterwards published some of his principal works, among which may be mentioned a didactic poem on Astronomy, and imitations of Delille's "L'Homme des Champs," and of Pope's "Essay on Man." Louis Buonaparte, on becoming king of Holland, appointed Bilderdyk his Dutch tutor, and he was one of the first members of the National Institute, founded by that prince. After the incorporation of Holland with the French empire the poet's lyre for a while was laid aside; but on the deliverance of his country from a foreign yoke, he resumed it with fresh energy, pouring forth poetic strains almost unrivalled in fire, vigour, and enthusiasm. The production alluded to, "Holland's Verlossing," The Liberation of Holland, was the joint composition of Bilderdyk and his wife, that lady possessing considerable taste and talents for poetry. When Buonaparte returned from Elba, the poet endeavoured to rouse the martial spirit of his

B I N

countrymen by writing war songs, said to be the finest pieces of the kind in the Dutch language. He published at Rotterdam, in 1823, two volumes with the title of "Mengelpoësy," Miscellaneous Poetry, in which are some ballads and imitations of Ossian. In the latter part of his life he resided at Leyden. He died in December 1831, and was interred, with great pomp, at Haarlem, on the 27th of that month. This great poet is said to have entertained strong prejudices against German literature.—*Encycl. Amer. Edis.*

BILLAUD VARENNES (FRANCIS) born at Rochelle, in 1762; and died at Philadelphia (N. A.) in 1819. He entered into the Congregation of the Oratory; and became prefect of studies at the college of Juilly. In 1792 he was chosen a member of the commune of Paris; and he afterwards entered the National Convention. He distinguished himself as one of the most sanguinary terrorists; and after the 9th of Thermidor he was, with Collot d'Herbois, exiled to Cayenne. He made his escape, and after several romantic adventures in Mexico and at Hayti, he settled in the United States. "Memoirs," under his name, were published in 1821, which are said to be supposititious. He wrote various political tracts, and official "Reports to the Convention," &c.—*Dict. des H. M. du 18me S. Biog. Univ. Class.*

BILLAUT (ADAM) a French joiner and poet in the seventeenth century, called Maître Adam. He possessed great genius, which surmounted his humble station, though he refused apartments at Versailles. He was pensioned, and his works greatly admired.—*Biog. Univ.*

BILLINGSLEY (sir HENRY) an English mathematician in the sixteenth century. Though educated at Oxford, he entered into business, and passed with éclat through all the civic honours of London, and was knighted. Whitehead the mathematician, become his inmate by his bounty, caused him to study the mathematics, and he published in consequence the first English translation of Euclid, with notes and a preface by Dr Dee, 1570.—*Wood.*

BINGLEY (WILLIAM) an ingenious naturalist and popular writer, who was a native of Yorkshire. He was left an orphan at an early age, and was educated with a view to the legal profession, but preferring the church, he went in 1795 to Peterhouse College, Cambridge, where he took the degree of MA. While an under graduate, he engaged in two excursions through Wales, which furnished him with information afterwards laid before the public, in his "Tour through North Wales during the Summer of 1798," 2 vols, 8vo. His next production was a work entitled "Animal Biography, or Anecdotes of the Lives, Manners, and Economy of the Animal Creation," 1802, 3 vols, 8vo, which was very successful, a fourth edition having appeared in 1813, and also translations into the French and the German languages. He subsequently published "The Economy of a Christian Life,"

B L A

1808, 2 vols, 12mo; "Memoirs of British Quadrupeds;" "A Biographical Dictionary of the Musical Composers of the three last Centuries," 1813, 2 vols, 8vo; and "Animated Nature, or Elements of the Natural History of Animals," 1814, 8vo. This gentleman, who was in holy orders, and was settled at Christchurch, Hants, for some years was engaged in drawing up a history of Hampshire. He died in 1823.—*Biog. Dict. of Living Authors. New Month. Mag.*

BIONDI (sir FRANCIS) a native of Dalmatia and an elegant historian, in the seventeenth century. Sir Henry Wotton introduced him to James I, who knighted him. He was the author of a valuable history of the civil wars of the houses of York and Lancaster, in Italian; translated into English by Henry Carey, earl of Monmouth.—*Chalmers's Biog. Dict.*

BIRKBECK (MORRIS) an English gentleman who emigrated to the United States of America, and settled in the territory of Illinois. He purchased at one sale 16,000 acres of public land, in consequence of which the Back-woodsmen, it is said, gave him the title of "Emperor of the Prairies." He was drowned in returning home from a visit to Mr. Robert Owen, at Harmony, in 1825. He published in 1815, previously to his transatlantic emigration, "Notes on a Journey through France," 8vo; and subsequently, "Notes on a Journey in America," 1818, 8vo; and "Letters from Illinois," 1818, 8vo; in which latter productions he furnished flattering accounts of the country in which he had settled, holding out powerful inducements to others to resort thither.—*Gent. Mag. Edit.*

BISHOP (SAMUEL) an English poet and divine, born 1731, died 1795. He was master of Merchant Tailors' school. His poems, which appeared in two volumes, are easy and elegant.—*Gent. Mag.*

BISSET (CHARLES) an English physician, who died 1791, aged seventy-five. After serving in Flanders as an engineer, he resumed the medical profession. He was author of "An Essay on the Theory and Construction of Fortifications," "A Treatise on the Scurvy," and "An Essay on the Medical Constitution of Great Britain."—*Gent. Mag.*

BISSY (HENRY PONS DE THIAUD, baron de) a French ecclesiastic, who became bishop of Meaux, and obtained a cardinal's hat. He was one of the promoters of the famous bull Unigenitus, relative to which he published a pastoral letter; and he was also the author of a "Treatise on Theology" in 2 vols, 4to, besides other works. He died in 1737.—*Biog. Univ. Zopf.*

BITO, a mathematician, who flourished about the year 335 BC. author of a "Treatise on Warlike Machines," extant in Mathematici Veteres, Paris, 1593.—*Moreri.*

BLACKWALL (ANTHONY) an English schoolmaster and divine in the eighteenth century, author of a Latin Grammar, an Introduction to the Classics, "The sacred Classics Defended and Illustrated," and an edition of Theognis.—*Biog. Brit.*

BLACKWELL (ALEXANDER) an unfortunate Scottish physician, beheaded in 1748, for a supposed conspiracy in Sweden, where he had retired, upon a failure of practice in England. His wife published, in 1739, a curious herbal, containing 500 cuts of the most useful plants used in physic, 2 vols, folio.—*Gent. Mag.*

BLAIR (JAMES) a deserving divine of the episcopal church in Scotland, in the seventeenth and eighteenth centuries. He acquired reputation as a missionary to Virginia, where he founded a college, of which he became the first president, and left four volumes of sermons.—*Chalmers's Biog. Dict.*

BLAIR (WILLIAM) an eminent surgeon, who wrote on the use of mineral acids in syphilis, &c. He died in 1822.—*Month. Mag.*

BLAKE (WILLIAM) an ingenious but eccentric artist, who was a pupil of Basire, the engraver. Among his earliest productions were eight plates in the *Novelists' Magazine*, which were beautifully executed. In 1793 he published "The Gates of Paradise," 12mo. a very small book for children, containing fifteen plates of emblems; about the same time appeared his "Songs of Experience," with plates; "America, a Prophecy," folio; and "Europe, a Prophecy," in 1794. He commenced, in 1797, an edition of "Young's Night Thoughts," of which every page contained a design, but only one number appeared. He also furnished engravings for the illustration of *Ballads*, by Hayley; and designs for engravings, by Schiavonetti, to accompany a splendid edition of "Blair's Grave," a poem, 4to. Notwithstanding his acknowledged talents, he lived in a state of penury and seclusion in one of the courts near the Strand, which would to most persons of cultivated faculties have appeared almost the extreme of misery, but which he bore with cheerfulness and without repining. At the age of sixty-six he commenced the study of the Italian language, that he might be able to read the works of his favourite Dante in the original; and he succeeded in his undertaking. His death took place August 13, 1827, at the age of 68.—*Ann. Reg.*

BLANCHARD (FRANCIS) a French aeronaut, who distinguished himself by the boldness of his experiments. His most remarkable undertaking was the passage from Dover to Calais, in a balloon, January 7, 1785, in company with Dr. Jeffries, an English physician, who published a "Narrative of Two Aerial Voyages of Dr. Jeffries with M. Blanchard, with Meteorological Observations and Remarks," 1785, 4to. Blanchard made various improvements in aerostation; and he was the inventor of parachutes. He died at the beginning of the present century.—**MADAME BLANCHARD**, his wife, who had frequently accompanied him in his ascents, continued the practice of aerostation, to which she ultimately became a sacrifice. She perished in consequence of an accident which happened at Tivoli, near Paris, in July, 1819.—*Month. Rev. Dict. Hist.*

APP. BIOG. DICT.

BLAND (ELIZABETH) a learned English lady, in the seventeenth and eighteenth centuries. She was the wife of a linen-draper, and was taught Hebrew by Van Helmont, which she wrote with such elegance, that a phylactery of her writings is preserved as a curiosity by the Royal Society.—*Ballard's Learned Ladies.*

BLEULAND (JANUS) a Dutch physician, of the eighteenth century, who was the author of a treatise "De Sana et Morbosa Oesophagi Structura," Leyden, 1787, 4to; and "Difficulté du Passage des Alimens dans le Duodenum," 1787, 4to. He died in the flower of his age, shortly after publishing these very ingenious works.—*London Med. Journ.*

BLOMFIELD (EDWARD VALENTINE) a distinguished classical scholar, who belonged to the clerical profession, and was the younger brother of Dr. Blomfield, bishop of London. He was born in 1788, and received his education at Caius College, Cambridge, where, besides other prizes, he gained in 1809, a medal for writing an elegant Latin ode, "In Desiderium Porsoni." In 1812 he was chosen fellow of Emanuel College. In 1813 he visited Germany, and while in that country he acquired an intimate knowledge of the German language; and he formed an acquaintance with Professor Wolf, at Berlin, and with Schneider, at Breslau. After his return to England he published in the "Museum Criticum, or Cambridge Classical Researches," remarks on German literature. The university of Cambridge appointed him one of the preachers at St Mary's church. Subsequently he went to Switzerland with a young nobleman to whom he was tutor, and hearing while in that country that he had been appointed protonotary by the university for the approaching year, he hastily returned home, and the rapidity with which he travelled brought on a fit of illness which occasioned his death in October 1816. He commenced a translation of "Schneider's Greek and German Lexicon;" and he translated "Matthiæ's Greek Grammar," 2 vols, 8vo.—*Encycl. Amer.*

BOBROFF (——) a Russian poet of eminence, whose literary career extended from 1784 to 1807. His works display considerable powers of imagination, especially his "Khersonider, or Summer's Day in the Peninsula of Taurida," styled by the author a lyrical epic. It is written chiefly in blank verse, and contains, as the title indicates, descriptions of the scenery of the Taurian Chersonesus, interspersed with narratives and episodes; and it is distinguished by its richness of colouring, and depth and varied expression of sentiment. The poem abounds in strains of pure morality, and fervent religious feeling; and it is altogether one of the most interesting pieces of the kind in any language. Bobroff is said to have been much conversant with English literature. His death took place in 1808.—*Bowring's Russian Anthology. For. Rev.*

BOCCHERINI (LUSO) an ingenious mu-

scian and musical composer, born at Lucca in 1740. After having studied music under his father, he went to Rome, where he soon acquired a high reputation for the originality and variety of his compositions; and having remained there a few years, he returned to Lucca, where his sonatas were first performed in public. He subsequently quitted Italy and went to Madrid, where he spent the latter part of his life in the service of the king of Spain. His compositions have been greatly admired, and Dr. Burney says, "There is perhaps no instrumental music more ingenious, elegant, and pleasing than Boccherini's quintetts, in which invention, grace, modulation, and good taste conspire to render them, well executed, a treat for the most refined hearers and critical judges of musical composition."—*Biog. Dict. of Mus.*

BOCHTHOR (ELLIOUS) born in Upper Egypt in 1784. He became attached as interpreter to the French army under Buonaparte. On the return of the troops to France, he accompanied them, and applied himself with great success to the study of the French language and literature. He succeeded Don Raphael, as professor of modern Arabic, at the Royal Library, and his lectures were well attended. He died in 1821. His works are "An Arabic Alphabet, with Examples," Paris, 1820, 4to; and "A Dictionary of the French and Vulgar Arabic," MS. A notice of his books in the Turkish, Persian, Arabic, Coptic, and other languages, was published at Paris in 1821.—*Dict. Hist.*

BODE (JOHN EHLERT) a celebrated German astronomer, born at Hamburg, January 19, 1747. He was intended for a commercial situation, but so strong was his passion for science, that he made observations on the stars with telescopes of his own construction; and at the age of eighteen he was able to trace the courses of the planets, and calculate eclipses of the sun and moon. In 1765 he was introduced to professor Busch, who liberally gave him the use of his library and astronomical instruments. In 1756 he wrote a treatise on the eclipse of the sun of the 5th of August that year; and in 1768 was published his "Introduction to the Knowledge of the Heavens and the Stars," with a Preface, by Busch. He shortly after commenced "An Introduction to the Knowledge of the Situation and Motions of the Moon and other Planets," which he continued annually, from 1770 to 1777. Professor Lambert, of Berlin, in 1772, procured Bode the appointment of practical resident astronomer in that capital, when he entered on the publication of his Ephemerides, or "Astronomical Annals," which were uninterruptedly continued. He made discoveries of comets and fixed stars, and accurately observed the new planets, Uranus, Juno, Pallas, &c. He formed a fresh constellation, called "Frederichshehre," in honour of Frederic II, which has been adopted in new globes, celestial charts, and astronomical works. In 1810 he published his "Atlas of Celestial Maps," on which he had been employed for four

years. It contains a catalogue of 17,340 stars, being 12,000 more than were indicated in preceding charts. Professor Bode died November 23, 1826. His works, besides those mentioned, are very numerous and valuable.—*Revue Ency.*

BOEHMER (JUSTUS HENNING) the most celebrated of a family of juridical writers and professors, who was privy counsellor to the king of Prussia, and chancellor of the Duchy of Magdebourg. His "Consultations and Decisions" have been published, in 5 vols, folio, and he gave an excellent edition of the "Body of the Canon Law." He was also the author of "Introductio in Jus Publicum Universales, ex genuinis Juris Naturæ deductum." Halle, 1716, 8vo. He died in 1749.

—BOEHMER (JOHN SAMUEL FREDERIC) a son of the preceding, who was born at Halle, and became professor of law at Frankfort on the Oder. He distinguished himself by his learning, and published "Elementa Jurisprudentiæ Criminalis," and other works. His death took place in 1772.—BOEHMER (GEORGE LOUIS) brother of the subject of the preceding article, was a native of Halle, and became professor of law at Gottingen. This distinguished jurist published an edition in 6 vols, of his father's "Exercitationes ad Pandectas;" "Electra Juris Civilis," 3 vols, 8vo, besides other works. He died in 1797.—*Biog. Univ.*

BOEHMER (GEORGE RODOLPH) professor of anatomy and botany at Wittenberg, died in 1803. Besides a great number of dissertations on medicine and natural history, he published "Commentatio Physico-Botanica de Plantarum Semine," 8vo; a "System of Natural History," 9 vols, 8vo; a "Technical History of Plants," 8vo; and "Commentatio Botanico-Litteraria de Plantis in Memoriam Cultorum nominatis," 8vo.—*Zopf.*

BOGDANOVITSCH (HIPPOLYTUS FEDOROVITSCH) called the Russian Anacreon, was born at Perewolotschna, in White Russia, in 1743. He was the son of a physician, and was designed for the profession of an engineer, in order to qualify himself for which he entered a military academy at Moscow, in 1754; but the sight of a splendid play, and the perusal of the poems of Lomonosoff turned his inclination to poetry. He wished to become an actor, but was dissuaded from appearing on the stage by the manager of the theatre Cheraskoff, in consequence of whose advice he devoted himself to the study of the belles lettres, and the acquisition of modern languages. In 1761 he was appointed inspector in the university of Moscow, and afterwards translator in the department of government for foreign affairs. In 1762 he went to Dresden as secretary of legation to count Beloselsky, and he there employed his leisure till 1768 in the cultivation of poetry and the fine arts. The beautiful pictures in the Elector's gallery attracted his attention, and inspired the feelings which he displayed in his "Duschenka"—Psyche, the publication of which in 1776 procured him great and

lasting reputation. After this he dedicated his time entirely to music and poetry, living in seclusion at St Petersburg till Catherine II called him again to public life. He then wrote, on various occasions, several dramatic and historical pieces. In 1788 he was made president of the Imperial Archives. In 1795 he quitted the court to live in privacy in Little Russia; but the Emperor Alexander recalled him to St Petersburg, where he continued till his death, in 1803.—*For. Rev. Bowring's Russian Anthology. Encycl. Amer.*

BOGUE (DAVID) an eminent dissenting minister, who was pastor of an independent congregation at Gosport, in Hampshire, where he also kept an academy. He died in 1825, aged seventy-six. He was the author of a treatise on the "Inspiration of the New Testament," 12mo; and a "History of the Dissenters," 4 vols, 8vo, written in conjunction with the Rev. J. Bennett.—*Month. Mag.*

BOHADIN, a celebrated Arabian historian, in the twelfth century. He wrote a history of Saladin, of whom he was the favourite, and is said to resemble Plutarch.—*Moreri.*

BOINDIN (NICHOLAS) a French writer of comedies in the eighteenth century. His works are in two volumes. He was a humane and moral man, but made an avowal of atheism, and was buried, in consequence, without religious ceremonies.—*Diet. Hist.*

BOISSY D'ANGLAS (FRANCIS ANT.) a French politician, born in 1756, of a Protestant family. He became maître-d'hôtel in ordinary to monsieur (Louis XVIII), which office he resigned towards the end of the session of the Constituent Assembly. At the Revolution he embraced the popular cause; but at first he acted only an inferior part as a statesman. In 1792 he was chosen a deputy to the Convention; and he was sent as a commissary to Lyons, with Vitet and Legendre. On the trial of Louis XVI he voted in the first instance for his detention, and banishment after the restoration of peace; and then in favour of the appeal to the people. He subsequently interfered but little in public affairs, till the fall of Robespierre. He was one of the presidents of the Convention on the 20th of May, 1793, during the Jacobin insurrection; and to his courage and firmness may be principally ascribed the prevention of the renewal of the reign of terror, with which France was then menaced. He was regarded as one of the principal authors of the constitution of 1795. He became a member of the Council of Five Hundred, in which he opposed the directory; and at length he was involved in the proscription of the 18th of Fructidor, and sentenced to exile in Guiana. He however kept himself in concealment, and was recalled by Buonaparte in 1799. Under the consular government, he was a member, and then president of the Tribunate; and in 1805 was made a senator and commander of the Legion of Honour. In June 1814 he was created a peer of France; and though he was employed on the return of Buonaparte from Elba, his conduct after the battle of Waterloo restored him to favour. He

was appointed a member of the Chamber of Peers, and also of the Institute on its reorganization, in 1816. He died at Paris, October 20, 1826. For a list of his works see the subjoined authority.—*Annales Biog.*

BOLIVAR (SIMON) the celebrated liberator of South America, was born in the city of Caracas, on the 25th July, 1783. He was of noble parentage, both his father and mother having belonged to the privileged order of persons called Mantuanos. At the age of fourteen he was sent to Spain for education, and having there completed his studies, he visited Paris, and indulged himself in most of the dissipations incident to that gay and luxurious capital. He gained admittance into the best society, and was much noticed for his talents, acquirements, and knowledge of the world. He formed an acquaintance with the celebrated travellers Humboldt and Bonpland, with whom he passed some time, and successively visited England, Italy, Switzerland, and a considerable part of Germany; making himself acquainted with the customs of the different countries and the character and manners of their inhabitants. In 1802 he visited Madrid, to take leave of his personal friends, previously to his return to the land of his nativity. He had formed a strong attachment to the beautiful daughter of the Marquis de Ustariz del Cro, and his affection being returned, the lovers, with the consent of the lady's father, were married; and Bolivar and his lady crossed the Atlantic. The period of connubial happiness was but brief, for within a twelvemonth the lady, who was only sixteen at the time of her marriage, was snatched away by death: the bereaved husband was almost frantic with grief, and for a time gave way to the indulgence of sorrow for his irreparable loss. He was at length roused by the sufferings of his countrymen under the oppression and tyranny of the Spanish government, and Bolivar, yielding to the ardour of his feelings, devoted himself to the patriotic task of rescuing his country. Arriving at Venezuela, he was appointed a colonel in the service of the newly founded republic, and shortly after was employed on an important mission to London, the expenses of which undertaking were defrayed from his private fortune. On his return to South America, general Miranda appointed him commander at Puerto Cabello, but the Spanish prisoners having risen and seized the fort, he was obliged to quit the town, and proceed by sea to Caracas. When Miranda had entered into a capitulation with Monteverde, the royalist general, and resistance seemed to be at an end in Venezuela, Bolivar retired to Curacao, where he formed a connexion with Admiral Brion, and thus procured the advantage of maritime co-operation. He now offered his services to the congress of New Grenada, which were accepted. Finding the Venezuelans once more disposed to throw off the yoke of Spain, he obtained from the congress a body of six hundred men, with which he penetrated through the Andes to Venezuela,

in 1813. After several sanguinary contests, he succeeded in obtaining possession of the whole of that province, except the parts of La Guaya and Puerto Cabello, in the latter of which Monteverde defended himself with the most determined firmness. It was in this campaign that the war of extermination commenced, in consequence of the summary execution of their prisoners by the Spaniards. The authority of the Spanish government over this part of the western world would have now been annihilated, had not Monteverde succeeded in arming the slaves, and spread insurrection throughout the country, which became exposed to all the horrors of war. Bolivar, who had been declared dictator of Venezuela, marched to attack these new and formidable enemies; but he was unsuccessful, and having been defeated in a decisive engagement, distrust and disunion arose among the republicans, while the royalists achieved an unqualified triumph. Bolivar then retired a second time to New Grenada, and served for two years under the banners of the congress. In 1815, when the Spanish forces under Morello landed in South America, he threw himself into Carthagena, and after a most obstinate defence of that place against the Spaniards who were besieging it, with part of his army he cut his way through their lines, and retreated to St Domingo. The spirit of resistance, however, was by no means exterminated; Arismendi drove the Spaniards from the island of Margarita, and Bolivar arriving there, with forces which he had levied at Aux-cayes, was soon joined by Brion. In conjunction with him he made descents on the coasts of Caracas and New Grenada, ascended the Orinoco, and captured Angostura, the capital of Spanish Guiana. There Bolivar increased the strength of his army by volunteers from Europe, and prepared again to encounter Morillo. In 1817 he ascended the river Apure, and penetrated into Caracas, as far as Calabozas, but after several obstinately contested engagements, he was defeated near Orin, and obliged to retire to Angostura. Thus discomfited, but not dismayed, Bolivar altered his plan, embarked the whole of his army, sailed up the Orinoco and the Meta, and thus penetrated into New Grenada, and made himself master of Santa Fé the capital, in August 1819. This bold measure led to important results. He was now joined by numbers, and having at his command the resources of an extensive tract of country, Morillo in vain endeavoured to arrest his career. Towards the close of 1820, that chief found himself compelled to conclude an armistice with Bolivar, in order to afford time for a negotiation between the South Americans and the Spanish government. When hostilities again commenced, his army vanquished at Carabobo the host of the Spaniards, and thus sealed the independence of Columbia. This classical name, and the union of Quito, Cundinamarca, and Venezuela, which it expresses, were the important work of the liberator. This confederation was projected in 1813, and

in 1821 it received the sanction of the Congress of Columbia, composed of representatives from all the states. The union was consolidated under a central government, and Bolivar was chosen president of the republic. The legislative body was subsequently occupied in improving the national institutions, and adopting measures for the internal government of the country, and its cultivation, education, modes of communication, and fiscal and judicial establishments. One of the most admirable traits in the characteristic policy of the Columbian republic is the zeal displayed for the abolition of slavery. Bolivar commenced this measure of national justice by the manumission of his own slaves—a very considerable personal sacrifice. In 1821 an act passed, declaring all the children of slaves born after that period free; the trade in negroes was prohibited, and funds were provided, as well as means secured to the negroes themselves, for purchasing their own freedom. So effectual were these provisions, that within a few months after the enactment of the law, some slaves had taken up their liberty, and the number manumitted has been annually increasing. In 1823 the Congress of Peru, assembled at Guayaquil, sought the aid of Bolivar to settle their internal divisions, and assist in establishing the independence of their country. This call he obeyed, and set out for Lima, where, supported by six thousand troops, he was proclaimed Liberator of Peru. During his absence from Columbia, the executive power devolved on the Vice-President Santander. After overcoming numerous obstacles, Bolivar was invested with supreme authority, on the 10th of September, 1823; but he and his companions becoming the objects of jealousy to the Peruvians, and the Spanish royalists having obtained possession of the fortress of Callao and the city of Lima, he published a proclamation deploring these events, and endeavouring to conciliate the domestic factions, whose suspicion had been excited, declaring his determination to resign his power as soon as his numerous enemies were overcome. For some years Bolivar was generally acknowledged by the Columbians as their beneficent and patriotic deliverer, and under his government the people exhibited an example of social order that is rarely to be found in an infant republic. These first favourable indications inspired the admirers of free constitutions with hopes which unhappily have never been realized. Discontents, jealousies, and divisions ensued. Bolivar's success as a statesman was inferior to that which he experienced as a soldier; he appears to have been treated with ingratitude by his countrymen, and, disgusted with their conduct, he sold his property in Columbia, determined to seek shelter in a foreign land. At length the people, sensible of their injustice to his merit, began to wish for his restoration, but his death, which took place December 17, 1830, at San Pedro, near St. Martha, prevented the accomplishment of their wishes; and the chief who had liberated

his compatriots from the yoke of ages died in exile among strangers. The following description of the personal appearance, mind, and manners of Bolivar, taken from the Memoirs of General Miller, who served under him in the war of liberation, was published whilst he was living. "The person of General Bolivar is thin, and somewhat below the middle size. He dresses in good taste, and has an easy military walk. He is a very bold rider, and capable of undergoing very great fatigue. His manners are good, and his address unaffected. It is said that in his youth he was handsome; he has had now some years of war and patriot anxieties to rob him of that least among many charms. His complexion is sallow, and his hair, originally black, is now mixed with grey. His eyes are dark and penetrating, but generally downcast or turned aslant when he speaks; his nose is well formed; his forehead high and broad; the lower part of his face is sharp; the expression of his countenance is care-worn. His mind is of the most active description. When not stirring employed, he is always reading, dictating letters, or conversing. His voice is loud and harsh; but he speaks eloquently on all subjects. He entertains munificently, but is himself very abstemious. Disinterested in the extreme with regard to pecuniary affairs, he is insatiably covetous of fame. Bolivar invariably speaks of England, her institutions, and her great men in terms of admiration. He often dwells with great warmth on the constancy, fidelity, and sterling merit of the English officers who had served in the cause of South American independence under every varying event of the war. As a collateral proof of his predilection towards England, he has always had upon his personal staff a number of British subjects."—*Month. Mag. Cabinet Ann. Reg.*

BOLTS (WILLIAM) a writer on politics and commerce, born in Holland, in 1740. He entered into the service of the English East India Company, and settled at Calcutta. Having quarrelled with the governor, he was arrested and sent prisoner to England, where he published, as a justification of his conduct, "Considerations on Indian Affairs," 1772, 2 vols, 4to. He afterwards entered into the service of the empress Maria Theresa, who made him a colonel, and gave him authority over her establishments in the Indies. He had formed six settlements on the coasts of Malabar and Coromandel, when the death of the empress put a period to his operations. His death took place in Paris, in 1808.—*Dict. Hist.*

BONCHAMP (ARTHUR de) a distinguished general of the royalists of La Vendée, born in Anjou, in 1759. He had served in America during the war between Britain and the United States; and he was chosen by the Vendéans, on their insurrection, commander-in-chief, in conjunction with M. d'Elbée. He contributed to the taking of Bressuire, Thouars, Fontenai, Saumur, and Angers; and displayed

on every occasion great talents and courage. In September 1793, in endeavouring to effect a passage over the Loire, when assailed by a superior republican force, he received a mortal wound; and being removed to Ancenis, he died in the arms of his wife, regretted both by his friends and enemies. Madame de Bonchamp published memoirs of the scenes of warfare in which she accompanied her husband.—*Dict. des H. M. du 18me S.*

BONINGTON (RICHARD PARKES) an ingenious artist, who was born in 1801, at the village of Arnold, in Nottinghamshire. His father was a drawing master, and had some skill in portrait and landscape painting. This circumstance may account for the very early predilection which the son evinced for the fine arts. He began to make sketches even in infancy, and being instructed by his father, with the view of his becoming a draughtsman, at the age of seven or eight years he made some drawings from old buildings at Nottingham, which displayed extraordinary ability; and about the same time he showed a decided partiality for coast scenery and marine objects. At the age of fifteen, his father took him to Paris, where he obtained permission to draw at the Louvre, and he soon afterwards became a student at the Institute, and likewise under M. le Baron Gros. About this time he produced several fine drawings of coast scenery, fish, markets, &c. with groups of figures, for which he constantly found a ready sale. His talents first attracted attention at home in consequence of the exhibition of two of his pictures of this description at the British Gallery, in 1826. Mr Bonington next visited Italy, where he studied assiduously and with great advantage, and, among the results of his labour and talent, he brought home a beautiful painting of the Ducal Palace at Venice, which was exhibited in the gallery of the British Institution, and in the same exhibition were his pictures of Henry III of France, and a piece of coast scenery. Several of his productions are in the collections of the duke of Bedford, the marquis of Lansdowne, the countess de Grey, Mr Carpenter, Mr Vernon, and others. He died in London, September 23, 1828, in consequence of a consumptive complaint, said to have been caused by anxiety of mind, and too close attention to his professional pursuits.—*Month. Mag.*

BONSTETTEN (CHARLES VICTOR de) an ingenious writer on history, philology, and general literature, who was born at Bern, in 1745. He visited England in 1769, and spent two months with the poet Gray, at Cambridge. In politics he was a liberal, and during the progress of the French Revolution, he held the office of bailiff of Nyon in the Pays de Vaud. For more than half a century, he was distinguished as a cultivator of the belles lettres. He was known as a classical scholar, a traveller, a moralist, a metaphysician, a geologist and a politician; and he retained his faculties and his constitutional vivacity to the last. His death took place at Geneva, (where he had

long resided,) February 3, 1832. Among his works may be mentioned "Principes de la Révolution de la Suisse;" "Voyage sur le Scène des six derniers livres de l'Énéide, suivi de quelques Observations sur le Latium moderne," Genève, 1804, 8vo; and "Recherches sur la Nature et les Loix de l'Imagination," 1807, 2 vols, 8vo; besides which he published various pieces in the German language. Bonstetten was the confidential friend of the celebrated Swiss historian John Muller, his correspondence with whom was published at Zurich, 1810, 8vo. In the later years of his life appeared his "Etude de l'Homme;" "Homme du Midi et Homme du Nord;" and "Scandinavie;" and lastly a sketch of autobiography, called "Souvenirs Cents en 1831," printed at Zurich.—*Biographie des Hommes Vivants. Metropolitain.*

BORLACE (EDMUND) an Irish physician and historian in the seventeenth century, author of a "History of the Irish Rebellion," 1680, folio.—*Wood.*

BOS (JEROME) a Flemish painter in the fifteenth century, whose demons, spectres, and incantations are ably, although repulsively, executed.—*D'Argenville.*

BOS (LEWIS JANSEN) a celebrated Flemish flower painter, in the fifteenth century, remarkable for the lucid beauty of his dew on the leaves of plants.—*Hem.*

BOSSELLINI (CARLO) an Italian advocate, who distinguished himself by his writings on legislation and political economy. In 1816 he published a work entitled "Nuovo Esame delle Sorgenti della Publica e della Privata Ricchezza," in which he freely investigates the theories of Adam Smith and other writers on the sources of national wealth. This treatise was written long previous to its publication, which was delayed till after the fall of Buonaparte, under whose rule the opinions of the author could not have been propagated with safety. He subsequently published various articles on similar topics, in the "Antologia," or Journal of Sciences, Letters, and Arts, published at Florence, and he opposed the doctrines of Malthus and Sismondi. Bossellini was a warm yet dispassionate admirer of civil and religious liberty. He was born at Modena, in 1765; and his death took place July 1, 1827.—*For. Rev.*

BOSSUT (CHARLES) one of the most profound mathematicians of modern times, was a native of the country of Lyonnaise, but of a family originally from Liege. He was educated at the jesuits' college at Lyons, and having finished his studies he obtained the notice of Fontenelle, Clairaut, and d'Alembert. He also became acquainted with Camus, who procured him the professorship of mathematics at the military school at Mezieres in 1752. The same year he published a memoir, entitled "Usage de la Differentiation des Paramètres, &c." He succeeded Camus as a member of the Academy of Sciences, and as examiner of pupils in the schools of artillery and engineers; and he obtained several other employments, which he lost at the Revolu-

tion. On the formation of the Institute, he recovered some of his offices, which he kept four years, and then retired on a pension. He died January 14, 1814. His principal work is "Histoire des Mathématiques," 1810, 2 vols, 8vo, of which two editions appeared within two years after its first publication. He was also the author of "Cours de Mathématiques," 3 vols, 8vo; and an interesting memoir of Pascal, prefixed to an edition of his writings, besides various other valuable works.—*Dict. Hist.*

BOSTON (THOMAS) a Scottish divine, was born at Dunse in 1676, and studied at the university of Edinburgh. He subsequently kept a school at Glencairn, and in 1707 became pastor of Ettrick, where he died in 1732. He is author of a popular work entitled "Human Nature in its fourfold State;" "Memoirs of his Life and Writings;" a curious manuscript in Latin, on Hebrew accents, entitled "Tractatus Stigmologicus Hebræo-Biblicus," &c. All his works were published in folio, in 1768.—*Life by Himself.*

BOTZARIS (MARCO) a modern Greek patriot, who was a native of the mountains of Suli, in Albania. Being appointed stratch of Western Greece in 1821, he fortified Missolonghi, considering it as the rampart of the Peloponnesus. In the beginning of August 1823, receiving information of the approaching invasion of Ætolia by the Turks, he resolved to march against the enemy. He arrived on the 7th of August (old style) at the defiles of mount Collidromos, his troops amounting to about 750. The Turkish army was 20,000 strong: Botzaris, therefore, determined on a nocturnal attack. He placed part of his forces in ambuscade, and with the remainder, having surprised the advanced guard of the Infidels, he penetrated to the midst of their camp, and killed the selictar, Moustai Pacha, and seven of the principal beys. All was confusion and alarm among the Turks; but Botzaris being wounded by a musket ball, the Greeks retreated with their chief towards Missolonghi. His wound proved fatal, and his death took place August 23, 1823, at the age of forty-three. This hero had originally borne arms in the French service, in an Albanian regiment, in which his father and his uncle were majors in 1807.—*Dict. Hist.*

BOUGAINVILLE (LOUIS ANTOINE) a French navigator, distinguished for his maritime discoveries. He was born at Paris in 1729. He studied at the university with a view to practising at the bar, and he was admitted a counsellor of the parliament of Paris. He paid particular attention to the study of mathematics, and in 1752 he published "Traité du Calcul Intégral, pour servir de suite à l'Analyse des Infiniments Petits," 2 vols, 4to. In 1753 he entered as an adjutant into the provincial battalion of Picardy, and he became aide-de-camp to general Chavert, who commanded the camp of Sarre Louis in 1754. He then went to London, as secretary of embassy, and was made a fellow of the Royal Society. On his return he rejoined

Chevert, and afterwards served under the marquis de Montcalm in Canada. He was sent to France, in 1756, to demand reinforcements for the defence of the colony, and he returned to Canada in 1759, having received the rank of colonel, and the decoration of knight of St Louis. On the capture of Quebec he returned home, and in 1761 he was employed in Germany, as aide-de-camp to M. de Choiseul Stainville. Peace taking place, he engaged in the naval service. In 1763 he was employed to make a settlement at the Malouine Islands, but this project was frustrated in consequence of their being claimed by the Spaniards; and Bougainville was therefore charged with the duty of restoring them to Spain, for which purpose he sailed with a small fleet from St Maloes, November 15, 1766. Having executed his mission he sailed into the South Seas, and visited the Society Islands, the New Hebrides, New Guinea, and other places; and he returned to St Maloes, March 16, 1769, having enriched geography with a great number of discoveries. His relation of his voyage round the world was published in 1771. He commanded with distinction ships of the line in the American war, in 1779 he was made a commodore, and the following year he obtained farther promotion. He was employed to allay the disturbances at Brest, in 1790, but his services on that occasion were ineffectual. At length he retired from professional employment, after having served his country in the army and navy, with great reputation, during more than forty years. In 1796 he was elected a member of the geographical section of the Institute, and afterwards a member of the Bureau des Longitudes. He was made a senator on the creation of that body of the state. His death took place August 31, 1811. Commer-san, who accompanied him in his voyage round the world as botanist, gave his name to a new genus of plants, *Bugainvillea*, of the family of *Nyctaginea*, or night blowing flowers.—*Biog. Univ.* An imperfect and incorrect notice of this celebrated navigator having been accidentally inserted in the body of this work, the present article has been introduced to replace it.

BOUILLER (DAVID RENAUD) a Dutch divine, who was a native of Utrecht. He became a preacher of the reformed church at Amsterdam, and afterwards at London; and he published several works, among which may be mentioned a "Philosophical Essay concerning the Soul of Brutes;" "Letters on the True Principles of Religion;" and Sermons. He died in 1759.—*Zopf*.

BOULAI (CÉSAR EGASSE du) a French historian in the seventeenth century, author of a history of the university of Paris.—*Nowv. Dict. Hist.*

BOULARD (ANT. MARIE HENRI) a French lawyer and historical writer, who died at Paris in 1825. He exercised the functions of a notary in the metropolis for many years, but in 1809 he quitted that office to devote himself to literature. Among his principal

publications are a translation of Dr Henry's History of England; a translation of Schomberg on the Roman Law; "*Histoire Littéraire des Grecs dans le moyen Age*," 8vo; and "*Histoire Littéraire des Arabes ou des Sarasins dans le moyen Age*," 8vo.—*Dict. Hist.*

BOURDELIN (CLAUDE) an eminent French physician and natural philosopher, who was born at Villa Franca, near Lyons, in 1621. He paid particular attention to the study of Chemistry, and on the foundation of the Academy of Sciences at Paris, in 1666, he became one of the first members, with the title of Chemist, and in that character he instituted researches into the nature of mineral waters, made experiments on the juices of plants, and on the blood, bile, and other animal fluids, and he engaged in the analysis of oils. The rapid progress of discovery in modern times has rendered chemistry a new science, and reduced almost to insignificance the knowledge of our ancestors, yet the labours of Bourdelin, as an experimental philosopher, still deserve to be commemorated. He died October 15, 1699, after having long practised as a physician in the French metropolis.

BOURDELIN (CLAUDE) son of the preceding, was also a physician and a man of science, distinguished alike for his learning and for the benevolence of his disposition. He was a member of the Royal Academy of Sciences, having first the title of Associate Anatomist, and subsequently that of Associate Botanist; and having visited England after the peace of Ryswick, he was chosen a fellow of the Royal Society. He procured the post of physician to the Duchess of Burgundy, but devoted a great portion of his time to giving medical advice gratuitously to the indigent. He died April 20, 1711, aged 43.—*Fontenelle's Eloges of Academicians.*

BOURDON (FRANCIS LOUIS) a French revolutionary statesman, called Bourdon de l'Oise, who was originally an attorney of the parliament of Paris. He became a member of the convention, and he successively assisted in the overthrow of the Girondists, the Dantonists, and the Terrorists. After the fall of the latter he was appointed a member of the legislative body; and opposing the directory, he was exiled to Sinamari, where he died.—BOURDON (LEONARD L. J. JOSEPH) another revolutionary leader, was a schoolmaster at Paris. Becoming a member of the convention, he voted for the death of Louis XVI; and conducted himself with sanguinary violence on many occasions. He was employed under the directory; but he sank into insignificance, and died at Paris, in obscurity. He published a "Memoir on National Education," 1789, 8vo; and other works.—*Dict. des H. M. du 18me S.*

BOURRIT (MARK THEODORE) born at Geneva, in 1739; and died in 1819. He was precentor of the cathedral of his native city, and distinguished himself by his repeated journeys among the Alps, and especially to Mont Blanc. He published "Voyage aux

Glaciers de Savoie," 1772, 8vo; "Nouvelle Descript. des Glaciers de Savoie," 1785, 8vo. reprinted in 1789 with "Nouv. Descript. des Vallées de Glace et des Alpes Pennines et Rhétiennes," 3 vols, 8vo.—*Dict. Hist.*

BOURSAULT (EDMUND) a French dramatic writer of some note in the seventeenth century. His "*Æop in the City, and Æop at Court*," are still received with applause.—*Nouv. Dict. Hist.*

BOUTERWEK (FREDERIC) a distinguished German writer on philosophy, and polite literature, who was a native of Oken, near Goslar, in Franconia. He was born in 1766, and at an early period of his life he displayed indications of his future eminence. In 1784 he entered the university of Göttingen, as a student of law, and in 1786 he obtained an academical prize. He afterwards relinquished the study of jurisprudence for that of philosophy, especially in its connexion with the fine arts. He first appeared as a public lecturer in 1791, when he disputed on the Kantian philosophy, with considerable success. During the six following years, he spent much of his time in travelling; and in 1797 he was appointed by the Hanoverian government Professor Extraordinary of Philosophy at Göttingen, and in 1806 a Councillor of State. Foreign literary societies had already enjoyed the advantage of his valuable communications; and in acknowledgment of his merit he was admitted a member of several of those institutions. In 1806 he was chosen an associate of the Society of Arts at Lisbon; in 1809 of the Royal Academy at Munich; he received similar honours from the Physical Society of Wetteravia; from the Royal Society of Arts and the Academy at Leghorn, in 1811; from the Royal Academy of Arts at Berlin, in 1812; from the Mineralogical Society of Jena, in 1813; from the Royal Spanish Academy of History, in 1819; and the same year from the Royal Institute of the Netherlands. Bouterwek occupied the attention of the public as a writer for the press during a long period, and his works are very numerous. His earliest production of importance is entitled "Kleine Schriften Philosophischen, aesthetischen und litterarischen Inhalts," with an autobiographical poem, in which he displays not only a powerful intellect, but likewise an extraordinary degree of self-knowledge. Several of his publications relate to transcendentalism, or the Philosophy of Kant and Jacobi; and among his most valuable writings may be specified "Aesthetik," 2 vols, 8vo; "Ideen zu einer allgemeiner Apodiktik," 2 vols, 8vo; "Museum der Philosophie und Literatur," 3 vols, 8vo; "Lehrbuch der Philosophischen Wissenschaften, nach einem neuen System," 2 vols, 8vo; "Religion der Vernunft;" and "Geschichte der Poesie und Beredsamkeit," 12 vols, 8vo. The last mentioned of these works, comprising the history of literature since the conclusion of the thirteenth century, among the Greeks, the Italians, the Spaniards, the Portuguese, the

French, the English, and the Germans, though unequally executed, is the most generally interesting, and is likewise the best known in this country, that portion of it relating to Spanish and Portuguese literature having appeared in an English translation. The lectures of Bouterwek embraced the subjects of logic, metaphysics, the philosophy of religion, practical philosophy, ethics, the laws of nature, the history of philosophy, æsthetics, in connexion with the fine arts and with poetry, and historical and critical discourses on ancient and modern German literature. In the winter of 1827 the professor was seized with a disorder from which he never recovered entirely; and his death took place on the 9th of August, 1828. During the last ten years of his life he devoted himself with much assiduity to the study of the modern Greek, which circumstance induced many young men from Greece to become students at Göttingen.—*For. Rev. Month. Mag. Edit.*

BOWDLER (HANNAH) a lady who distinguished herself by her literary productions, and who was the sister of Thomas Bowdler, FRS. In 1786 she published at Bath "*Poems and Essays*," 2 vols, 12mo; and subsequently "*Sermons on the Doctrines and Duties of Christianity*," which having appeared anonymously, Bishop Porteus, on reading them, was so struck with their merit, that concluding the author to be a clergyman, he offered through the publisher to confer a benefice on the author. This lady appeared in 1810 as the editor of "*Fragments in Prose and Verse*, by the late Miss Elizabeth Smith," which contained biographical notices of that highly gifted female. She died at Bath, where she had long resided, February 25, 1830, aged seventy-six.—*Gent. Mag.*

BOWDOIN (JAMES) an American statesman and philosopher, born at Boston, in New England, in 1727. He became governor of the province of Massachusetts; and president of the American Academy of Sciences, founded at Boston, in 1780. He was also a fellow of the Royal Societies of London and Dublin. He died at Boston, in 1790. Governor Bowdoin published in the Transactions of the Boston Academy, his inaugural discourse as president; "*Observations on the Phenomena of Light*;" "*Observations on the Waste of Matter in the Sun and Fixed Stars, occasioned by the constant Efflux of Light*;" and "*Observations on the Existence of an Orb which surrounds the whole Visible Material System*."—*Reuss. Dict. Hist.*

BOYLSTON (ZABDIEL) an American physician, born at Brookline, in Massachusetts, North America, in 1680. He had the honour of introducing into his native country inoculation for the small-pox. He was chosen a fellow of the Royal Society of London; and besides several papers in the Philosophical Transactions, he published a "*Treatise on Inoculation*," London, 1726. He died in 1766. *Dict. Hist.*

BRADDOCK (EDWARD) major-general in the British service, and commander-in-chief

America during the war with the French in the middle of the last century. He arrived in Virginia in February, 1755; and prepared to conduct an expedition against Fort Duquesne. He arrived at Monongahela July 8, with 12,000 men, and the day following he proposed to invest the fort. In marching through the woods he fell into an ambuscade, when the general and most of his officers were killed, and the army was saved from destruction chiefly by the efforts of Washington, at that time an aide-de-camp to general Braddock.—*Smollett's Hist. of Eng.*

BRADFORD (JOHN) an English martyr, who suffered in Smithfield 1555; eloquent as a preacher, and some of whose letters are extant.—*Biog. Brit.*

BRAINERD (DAVID) a distinguished American missionary, was born at Haddon in Connecticut, in 1718. He was designed for agriculture, but at the age of twenty-one he quitted farming, and entered himself at Yale college, in Newhaven, whence he removed to New York, where he was gradually led to undertake a mission among the Indians. He successively visited Delaware, Susquehannah, and various places on the river of that name, and converted several thousands, until his constitution, which was not strong, at length gave way under so much fatigue, and he died on the sixth of October, 1747, in the thirtieth year of his age.—*Life by Styles.*

BRAND (JOHN) a writer on politics and political economy. He was educated at Caius College, Cambridge, where he obtained great credit as a mathematical scholar, and took the degree of BA. in 1766, and that of MA. in 1769. He published, in 1772, "Conscience, an Ethical Essay," 4to, a poem written for the Seatonian prize, which he failed obtaining, in consequence of a delay in the presentation of the piece to the university. He entered into holy orders, and was presented to the rectory of Wickham-market, in Suffolk, and that of St George, Southwark, both which he held at the time of his decease, in February, 1809. In 1776 he published a second poem, entitled "Illicit Love," 4to, and the same year "Observations on some of the probable Effects of Mr Gilbert's Bill, with Remarks deduced from Dr Price's Account of the National Debt," 8vo. Among his subsequent productions are "The Alteration of the Constitution of the House of Commons and the Inequality of the Land Tax considered," 1793, 8vo; "A Sermon on the Fast Day," 1794, 4to; "Considerations on the Depression of the Funds and the present Embarrassment of Circulation," 1797, 8vo; "A Determination of the Average Depression of the Price of Wheat in War, below that of the preceding Peace, and of its re-advance in the following," 1800, 8vo; "A Letter on Buonaparte's Proposals for opening a Negotiation for Peace," 1801, 8vo; a "Pamphlet in Defence of Mr Reeve's Thoughts on the English Constitution," 8vo; and a "Refutation of the Charge brought against the Marquis Wellesley on account of his Conduct to the Nabob of Oude," 1807, 8vo, which

was drawn up from official documents. He also published an expostulatory pamphlet on the foundation of the chapel connected with the Philanthropic Reform, in St George's Fields, which he considered as an encroachment on his rights as rector of the parish.—*Biog. Dict. of Living Authors.*

BRANDOLINI (AURELIO) a Florentine poet in the fifteenth century, author of "De Ratione Scribendi," a work of merit.—*Tiraboschi.*

BRANDT (JOSEPH) a famous Mohawk chief, of mongrel descent, being half German and half North American Indian, who is stigmatized for his cruelty by Campbell, in his *Gertrude of Wyoming*. In the American war he joined the English, and ravaged the establishments of Susquehannah, in the state of New York. He subsequently retired into Upper Canada, where he died in 1807. This savage appears to have been converted by the Moravian missionaries; and he translated into the Mohawk language the Gospel of St John, and the English Liturgy.—*Missionary Trans. Dict. Hist.*

BRARENS (HENRY) a naval officer in the Danish service, who distinguished himself by his writings on navigation. He was born in 1751, in the island of Fohr, in the North Sea, and like most of his countrymen he became a mariner when quite young. He gradually rose to the rank of captain of a ship, in which situation he continued twenty years, being chiefly employed in the inland seas, but he made a short voyage to the East Sea, afterwards for three years he commanded in Greenland. That voyage occasioned his quitting his profession for a different employment. In 1785 an expedition for the discovery of Old Greenland was undertaken by order of the Danish government, under the direction of admiral Lowenorn, and Brarens being employed in it, he attracted the notice and obtained the patronage and friendship of that distinguished officer. Through his interest the captain, after his return from Old Greenland, was appointed examiner of young mariuers, retaining his rank in the navy. He afterwards gave winter lectures on navigation, and in 1796 opened a regular school for naval instruction, with the full approbation and support of his patron. In 1799 his merit procured him an honourable employment under the Royal Canal Inspector's Commission at Rendsburg; and the following year he quitted the isle of Fohr to settle at Tonnigen, as inspector of naval affairs and examiner of young seamen, and subsequently he became a member of the Quarantine Commission. He died August 4, 1826. Brarens distinguished himself no less by his writings than by his public services. In 1800 he published a "System of Practical Navigation," which was the first complete work on the subject which had appeared in the German language. He gave an improved edition of this treatise, in 1807, in conjunction with his son John Frederick Brarens; and in 1819 a third with further improvements. He pro-

duced another work entitled "*A System of Practical Seamanship*," 1807; reprinted in 1819. Besides these professional productions, so creditable to his talents and industry, he was the author of a philosophico-theological tract, with the following title, "What are we Men? What do we know?"—in which he seems to have strayed beyond his proper sphere. It must be added, that he bore an excellent character in private life.—*New German Necrology*.

BRAY (THOMAS) an English divine, born 1656, died 1730. He distinguished himself as a missionary in America, and as a founder of many religious societies in England, and was author of some theological tracts.—*Biog. Brit.*

BRAY (WILLIAM) a solicitor of considerable eminence, who distinguished himself by his attention to topography and antiquities. In 1778 he published "*A Sketch of a Tour into Derbyshire and Yorkshire*," 8vo, (anonymous); of which a second edition, with the name of the author, appeared in 1783. He also drew up "*An Account of Henry Smith, Esq. and his extensive Charities*," 1800, 8vo, for private distribution, in which he has corrected strange misrepresentations, which have been circulated concerning the subject of the memoir, whose great wealth, which he so munificently distributed, was the result of commercial enterprise and industry, instead of having been collected in the character of a travelling mendicant, as fabulously reported. The principal work in which Mr Bray was concerned is the "*History and Antiquities of the County of Surrey*, compiled from the materials of the late Rev. Owen Manning, and continued to the present time," folio; the first volume of which was published in 1804, the second in 1809, and the third, which completes the work, in 1820. Though the collections of Mr Manning afforded material assistance in the prosecution of this laborious undertaking, yet the chief merit is due to Mr Bray, especially in the later portions of the publication. He was a fellow and was also the treasurer of the Society of Antiquaries; and he contributed several papers to the *Archæologia*. He resided at Shene, in Surrey, where he died December 21, 1832, in the ninety-seventh year of his age. Besides the above works, he edited the *Diary and Memoirs of John Evelyn, Esq.*—*Biog. Dict. of Living Authors*.

BREDOW (GABRIEL GODFREY) professor of history at Breslau, was a native of Berlin, where he was born of poor parents in 1773. He was for some time professor at Eutin, where he was the colleague of the celebrated Voss; afterwards he held a professorship at Helmstadt, and then at Frankfort on the Oder, whence he removed to Breslau, on the transfer of the university thither. He died in 1814. He was distinguished for his patriotism as well as for his literary productions. Among his works are "*A Manual of Ancient History*," the fifth edition of which appeared in 1825; a "*Chronicle of the Nineteenth Century*;" "*Researches concerning History,*

Geography, and Chronology;" and "*Historical Tables*;" all in the German language; and he likewise published, "*Epistolæ Parisienses*," the result of a journey to Paris, where he collected the fragments of the Greek geographers.—*Encyclop. Amer.*

BREGY (CHARLOTTE SAUMAISE DE CHAZAN, comtesse de) an accomplished French lady in the seventeenth century. She was the niece of Salmasius, and maid of honour to Ann of Austria. She was the author of some ingenious letters and poems.—*Nouv. Dict. Hist.*

BREISKLAK (SCIPIO) a celebrated Italian geologist, who was born at Rome in 1768. He was destined for the church, but he became professor of natural philosophy and mathematics at Ragusa, and afterwards he was professor in the Collegio Nazareno at Rome. Going to Paris he formed an intimacy with Fourcroy, Chaptal, Cuvier, and other men of science in that capital. Buonaparte, at the period of his ascendancy in Italy appointed Breislak inspector of the saltpetre works and powder-mills in the kingdom of Italy. He first attracted public attention by his treatise on the Solfaterra in the vicinity of Naples; and in 1798 he published at Florence his "*Topografia Fisica della Campagna*." Having quitted Rome on account of political disturbances, he went to France, where in 1801 he produced that work in a new and enlarged form, under the title of "*Voyages Physiques et Lithologiques dans la Campagne*," 2 vols, including a topographical-mineralogical description of the environs of Rome. The French translation of this work was from the pen of General Pomereuil, and it was translated into German by F. A. Reuss, and published at Leipsic, 1802, 2 vols. Breislak, while in France, visited Auvergne, and studied with attention its once volcanic mountains. Returning to Italy he wrote "*Arte di Salnitraje*"—The Art of making Saltpetre; and in 1811 he published "*Introduzione alla Geologia*," 2 vols, which appeared in French, much enlarged and altered, with the title "*Institutions Géologiques*," 1818, 3 vols. In 1822 he published an admirable geological description of the territory of Milan. His death took place at Turin, February 15, 1826. He had formed a highly valuable cabinet of minerals, which he bequeathed to the family of Borromeo.—*Encycl. Amer.*

BRETEUIL (LOUIS AUGUSTE LE TONNELIER, baron de) a French diplomatist, who was born in 1733. He was appointed minister plenipotentiary at Cologne, and afterwards at St Petersburg; and then successively ambassador in Sweden, Holland, Naples, at Vienna, and at the congress of Teschen. He was subsequently made minister and Secretary of State, was at length President of the Council of Finance. He was a zealous partisan of monarchy, and therefore at the Revolution he became an obnoxious character, being obliged to flee from France after the 14th of July, 1789. Louis XVI, in 1790, intrusted him

with negotiations at some of the courts in the north of Europe; and in 1792 he was proscribed by the National Convention. In 1802, he obtained permission to return to France; and he died at Paris, in 1807.—*Dict. des Hommes Marq. du 18me S. Encyclop.*

BRETONNEAU (FRANCIS) a French jesuit, born in 1675, died in 1741, author of a history of James II, and of some volumes of sermons, &c.—*Moreri.*

BRETONNIER (BARTHOL. JOSEPH) a French advocate, who died in 1727, author of some useful law tracts, especially "Recueil des principales Questions de Droit qui se jugent diversement dans differens Tribunaux du Royaume," 2 vols, 4to.—*Idem.*

BRETSCHNEIDER (HENRY GODFREY von) a man of talent, who was a native of Gera, in Hungary. He became a soldier, a provincial counsellor, librarian at Ofen and Lamberg, the adviser and confidant of the Emperor Joseph II, a travelling adventurer, a poet, a song writer, a collector of paintings and engravings, a reviewer, a satirist, and in short a Peregrinus Proteus; yet amid all changes he appeared the firm friend of truth, and avowed opposer of political and religious imposture, which he exposed on every occasion. Though unconnected with the French encyclopædists, he adopted their principles. In his writings and conversation he displayed his enmity to Napoleon, when grasping at the sovereignty of Europe. Breitschneider was educated under the Bohemian Brethren, at the Academy of Ebersdorf. His writings are numerous; and scarcely any folly of the times escaped his censure. His "Journey to London and Paris," Berlin, 1817, was translated and published in the Edinburgh Magazine. Among his principal productions may be noticed the "Almanack of the Saints, for the year 1788," in which he attacks priest and priesthood. He died at the castle of Kirzinitz, near Pilsen, November 1, 1810.—*Encyclop. Amer.*

BRIAL (DOUR) a learned French Benedictine monk, who was a member of the Academy of Inscriptions at Paris. He was born at Perpignan, May 26, 1743; and died at Paris, in the autumn of 1828. He deserves to be recorded as one of the contributors to the great literary undertakings carried into execution by the French Benedictines, as he was extensively engaged in the "Histoire Littéraire de la France;" and he edited the collection of the "National Historians of France," which had been commenced by Dom. Bouquet, vols. xii. xiii. xiv. xv. xvi. xvii. and xviii. M. Brial was the last member of his order who had a seat in the Academy of Inscriptions; and no election took place at his death, a law having been enacted under the ministry of Corbière, by which the number of members of this academy is reduced from forty to thirty.—*Didon's Bibliographical Tours in France and Germany. For. Rev.*

BRIDAINE (JAMES) a French priest and missionary, who travelled about France preaching to the people with a degree of zeal and perseverance similar to that of Wesley

and Whitefield in England. He was patronized by pope Benedict XIV; and died at Roquemaure, in 1767. His "Cantiques Spirituels" passed through forty-seven editions. The abbé Caron published the life of Bridaine, under the title of "Manuel des Prêtres."—*Nouv. Dict. Hist. Biog. Univ.*

BRIOT (PATRICK FRANCIS) an eminent French surgeon and medical writer, who was born in 1773. Having completed his preliminary studies, in 1792 he was attached to the army as officer of health. Being employed for some time in the hospital at Placentia, he availed himself of the opportunity thus afforded for visiting Pavia, to attend the lectures of the celebrated anatomist Scarpa. At that period he wrote several memoirs on professional subjects, and drew up a "Treatise on Gun-shot Wounds," which has never been published. In 1800 he was chosen a corresponding member of the Medical Society, established in the School of Medicine at Paris. At that period he had quitted the army, and settled at Besançon, where he contributed to the formation of a provincial society, of which he was one of the most active members. Having obtained the degree of Doctor in Surgery, he was, in 1806, attached to the practical School of the Hospital of St James, at Besançon, as professor of anatomy and midwifery, and afterwards as professor of pathology and clinical surgery. He wrote a preliminary discourse to accompany Tourtellé's treatise on the Materia Medica; translated into French Stein's Midwifery; and produced an Essay which gained a prize offered by the Academy of Medicine at Paris, and two others, in which he displayed a profound knowledge of surgical history and science. He died December 29, 1826.—*Rev. Encyclop.*

BRITANNICUS (JOHN) an Italian critic of great learning, who died in 1510. His annotations on Terence, Juvenal, Persius, Ovid, Statius, &c. were greatly esteemed.—*Tiraboschi.*

BRITO (BERNARDO de) a Portuguese monk and historian, who died in 1617, author of a history of Portugal, in Latin, 7 vols, folio, &c.—*Nouv. Hist. Dict.*

BROKESBY (FRANCIS) an English divine, who died in 1718, author of a history of the government of the primitive church, and a biography of Dodwell. He likewise assisted Nelson in his "Feasts and Fasts of the English Church."—*Biog. Brit.*

BROMEL (OLAUS) a Swedish physician and botanist, born in 1639, and died in 1705. Among his works is "Catalog. Gen. seu Prodromus Indicis specialioris Rerum Curiosarum O. Bromelii," 1698, 8vo. Plumier gave the name of Bromelia to a genus of plants which Linnæus has reunited to the Ananas.—*MAJOR. von BROMEL*, son of Olaus, was first physician to the king of Sweden. He contributed greatly to the progress of science in Sweden, and died in 1731, aged fifty-one. He was the author of "Hist. Numismatica Senatorum et Magnat. Suecicæ," 1730; and a treatise on Swedish grasses.—*Biog. Univ.*

B R O

BROOKES (RICHARD) an English physician of the eighteenth century, who distinguished himself as a most industrious literary compiler. He published a "Medical Dispensatory, or Dictionary of the Materia Medica and Pharmacopœia," 12mo, at the end of which is a list of his numerous works including a "Gazeteer," and a "System of Natural History," the former of which has passed through a multitude of editions.—*Original.*

BROOKES (JOSHUA) a distinguished anatomist and lecturer on anatomy and surgery, who died at his residence Great Portland-street, London, January 10, 1833, at the age of seventy-three. He delivered lectures to medical students during the long period of forty years, and formed a valuable cabinet of preparations illustrative of anatomy and zootomy, at a house which he occupied in Blenheim-street; but on his relinquishing the duties of a professor, the curious articles which he had collected were dispersed by public sale. Mr Brookes was a fellow of the Royal and Linnæan Societies, and a member of the Society for the Cultivation of Natural History, at Moscow.—*Med. Gaz.*

BROOKMULLER (JOHN JOACHIM DANIEL) a German lyric poet of some eminence, who was born in 1781. He was the son of a respectable farmer, near Boitzenburg, on the Elbe; and being designed for the ecclesiastical profession, he pursued his studies at the universities of Kiel and Jena, and took the degree of Doctor of Philosophy. The irregularity of his conduct appears to have prevented him from obtaining preferment in the church and he was chiefly employed as a teacher. He formed an acquaintance with professor Tychsen, Vice-chancellor of the university of Rostock, to whom he addressed a congratulatory ode, on his seventy-eight birth-day, in 1811. In 1817 he travelled through the Tyrol, Italy, and Switzerland; after his return he became a private teacher of philosophy at Tübingen; and at length tutor in the family of a nobleman near Libau, in which situation he is said to have been much esteemed by his employer. He died in February, 1826. Among his productions are "War Songs," 1813; "An Address to the Hereditary Prince Frederic Louis of Mecklenburg Schwerin, and his Companions in Arms, on their Return to their Country (Fatherland)," 1814; "Poems on his Travels in the Tyrol, Italy, and Switzerland," 1817; and a fine ode addressed "to the Iron Age."—*New German Necrology.*

BROOME (RALPH) an ingenious writer of humorous poetry, who was a native of one of the western counties of England. He entered into the military service of the East India Company, in which he attained the rank of captain; and he was Persian translator to the army on a frontier station, during a war in India under the government of Warren Hastings. When that gentleman was impeached before the House of Lords, Captain Broome advocated his cause by means of the press with much zeal and ability. He published "An Elucidation of the Articles

B R O

of Impeachment against W. Hastings, Esq." 1790, 8vo; "An Examination of the Expediency of continuing the present Impeachment," 1791, 8vo; "A Comparative Review of the Administration of Mr Hastings and Mr Dundas, in War and Peace," 8vo; but his reputation as a public writer is founded on a production of a different character, destined to serve the same purpose with the preceding. This is a light and playful but poignant satire, entitled "The Letters of Simpkyn the Second, Poetic Recorder of all the Proceedings upon the Trial of Warren Hastings, Esq. in Westminster Hall," 1789, 8vo, an avowed and successful imitation of Anstey's "New Bath Guide." In 1792 he went to France with his family, being then married. Besides the publications already noticed, he was the author of "Observations on 'Paine's Decline and Fall of the English System of Finance,'" 1796, 8vo. "A Letter to a Friend," which Captain Broome wrote from Paris in June 1792, giving a spirited account of the existing state of affairs in that metropolis, was published in a Magazine in 1813, after the death of the writer.—*Month. Rev. Biog. Dict. of Living Authors. Ed.*

BROTHERS (RICHARD) an insane fanatic, who for a time attracted considerable attention from the public, and gained many credulous disciples. He was a native of Placentia, in the isle of Newfoundland; and having entered into the naval service he attained the rank of lieutenant. About 1793 he commenced his career as the apostle of a new religion, by announcing himself as the nephew of the Almighty, the prince of the Hebrews, who was to lead the Jews to the land of Canaan to recover their ancient privileges. He predicted the destruction of the city of London by an earthquake, and promulgated many similar absurdities. Notwithstanding the extravagance and folly of his pretensions he obtained many followers, including persons of some talent and respectability, the most distinguished of whom was Mr N. Brassey Halhed, M. P. (See HALHED.) Besides his own writings, several pamphlets were published advocating his claims, and others in refutation of them; and such was the insatiation of some of his disciples that they sold their property in England, in order that they might be enabled to accompany the new prophet to the Holy Land. At length legal measures were adopted, in pursuance of which Brothers was declared a lunatic, and confined in Bedlam during the remainder of his life, at the charge of government. Among the publications of this madman were "A Revealed Knowledge of the Prophecies and Times, Book I, wrote under the direction of the Lord God, and published by his divine command," 1794; a second part of the same work, containing predictions of the sudden destruction of the Turkish, German, and Russian empires; "An Exposition of the Trinity, with a further elucidation of Daniel, Chap. xii. one Letter to the King, and two to Mr Pitt," 1795; "A Letter to Miss Cott, the

recorded Daughter of King David, and future Queen of the Hebrews," 1798; "A Description of Jerusalem, with the Garden of Eden in the Centre," 1802; "A Letter to his Majesty and her Majesty, a Poem," 1802.—*Biog. Dict. of Living Authors.*

BROUSSON (CLAUDE) a French Protestant divine, who in 1698 was broken on the wheel in consequence of the revocation of the edict of Nantes. He was the author of some pieces in defence of the Protestants, and of "Remarks on Amelot's Translation of the New Testament." The States of Holland pensioned his widow.—*Moreri.*

BROUWER (ADRIAN) an eminent, eccentric, and improvident Dutch painter in the seventeenth century, admired by Rubens. He excelled in scenes of the lowest humour.—*Des Camps.*

BROWN (ANDREW) editor of the Gazette of Philadelphia, was born in Ireland about 1744. He went to America in 1773, and settled in the state of Massachusetts. In the American war he fought against the English at Lexington and Bunker's Hill. In 1788 he set up the Federal Gazette, and in 1793 he removed to Philadelphia, where he changed the title of his journal. He was conducting it very successfully, when a fire took place January 27, 1797, which not only consumed his house, but occasioned also the destruction of his wife and three children. He was himself greatly injured in his attempts to save them, and he died a few days after this shocking catastrophe.—*Dict. Hist.*

BROWN (ROBERT) an eminent Scottish agriculturist and writer on husbandry, born in 1758, at East Linton, in the shire of Peebles. He was at first engaged in trade, which he quitted for agriculture, having settled at Westfortune, whence he removed to Marcle, where he soon distinguished himself both for his practical skill and his literary talents. His "Treatise on Rural Affairs," his articles in the Edinburgh Farmer's Magazine, and in Dr Rees's Cyclopædia, procured him great reputation, several of his essays having been translated into the French and German languages, and under the style of Robert Brown of Marcle he is quoted by continental writers as an authority on agricultural subjects. His death took place February 14, 1831, at Drylawhill, East Lothian.—*Gardener's Magazine.*

BROWN (ULYSSES MAXIMILIAN, count de) a celebrated commander, of Irish extraction, in the imperial service. He eminently distinguished himself against Frederick the Great, and died of his wounds received at the battle of Prague, 1757, aged fifty-two. His memoirs are published in German and French.—*Nouv. Dict. Hist.*

BROWN (WILLIAM LAURENCE) a Scottish divine and theological writer, who was for several years minister of the English church at Utrecht in Holland, and professor of Moral Philosophy, Natural Law, and Ecclesiastical History in the university of that city. Besides some academical orations and single sermons, he published abroad "An Essay of

the Folly of Scepticism, and the Absurdity of Dogmatizing on Religious Subjects, and the proper medium to be observed between these two extremes;" and "An Essay of the Natural Equality of Mankind, the Rights which result from it, and the Duties it imposes;" both which pieces gained prizes offered by the Teylerian Society of Haarlem. In 1796 he succeeded Dr George Campbell, as principal of the Marischal College, Aberdeen; and he likewise became minister of the Grey Friars' church in that place. In 1800 he was appointed one of his Majesty's chaplains in ordinary for Scotland; and at the time of his death, in May 1830, at the age of seventy-seven, he was dean of the Chapel Royal at Edinburgh, and of the Order of the Thistle. Among his works not already mentioned, are "Philemon, or the Progress of Virtue, a poem," Edinb. 1810, 2 vols, 8vo; "An Attempt towards a new Historical and Political Explanation of the Revelations," 1812; a prize essay "On the Existence of a Supreme Being possessed of Infinite Power, Wisdom, and Goodness; containing also the Refutation of the Objections urged against his Wisdom and Goodness," 1816, 2 vols, 8vo; (see BURNETT of Aberdeen, Dict.) and "A Comparative View of Christianity, and all the other forms of Religion which have existed, particularly in regard to their Moral Tendency," 1826, 2 vols, 8vo.—*Gent. Mag.*

BROWNE (EDWARD) son of the celebrated Sir Thomas Browne, and physician to Charles II. He died in 1708, and published an account of his travels in Germany, Hungary, Thessaly, and Italy, and translated some of Plutarch's Lives.—*Biog. Brit.*

BROWNE (MOSES) an English poet and divine, originally a pen-cutter, who died in 1787, aged eighty-four. He published two dramatic pieces, some religious poems, and an edition of Walton's Complete Angler.—*Gent. Mag.*

BROWNE (PETER) a native of Ireland, and bishop of Cork, who died in 1735, author of a "Defence of Christianity against Toland;" "The Progress, Extent, and Limits of the Human Understanding;" a tract against the custom of drinking to the memory of the dead, and sermons, &c.—*Biog. Brit.*

BRUCE (JOHN) an eminent writer on Moral Philosophy, Political Economy, and the History of Commerce. He was descended from the ancient family of Bruce of Earl's Hall, and was educated at the university of Edinburgh, where at an early age he was appointed Professor of Logic. In 1780 he published "First Principles of Philosophy," 8vo; and in 1786 "Elements of the Science of Ethics, 8vo, containing the outlines of academical lectures. The former of these works was translated into German by K. G. Schreiter. Having resigned his professorship, he obtained, through the interest of Lord Melville, a grant of reversion of the patent of King's printer for Scotland, in conjunction with Sir J. Hunter Blair; but several years elapsed before the office devolved to them. Mr Bruce was also made Keeper of the State

BRU

Papet Office, and Historiographer to the E. I. Company, and for a short time he held the post of Secretary to the Board of Control. His death took place April 16, 1826, in his eighty-second year, at his seat of Nuthill, Fifeshire, N. B. Among his later works may be mentioned "An Historical View of Plans for the Government of British India, and the Regulation of the Trade of the East Indies," 1793, 4to; "A Report on the Renewal of the E. I. Company's Exclusive Privileges," 1794; "Annals of the E. I. Company, from their establishment in 1600 to the union of the London and English East India Companies, 1707, 8." 1810, 3 vols. 4to.—*Atlas Newscap. Gent. Mag.*

BRUCK (JAMES de) a celebrated Flemish architect, who distinguished himself by the elegance of his compositions, and the taste displayed in their ornaments. He erected, in 1634, the superb monastery of St. Julian, at Mons.—*Dict. Hist.*

BRUE (ANDREW) director and commandant-general of the French Comp. of Senegal and Africa. He formed several settlements on the African coasts, and extended the commerce of his native country in that part of the world. He was appointed to his office in 1696; and after some years he returned home, but went again to Africa in 1723. He wrote "Nouvelle Relation de la Côte Occidentale d'Afrique," published in 1729, by father Labat.—*Biog. Univ.*

BRUEYS (FRANCIS PAUL) born about 1750, entered into the French navy, and became a lieutenant previous to the Revolution. He attained the rank of admiral under the republican government; and in 1797 he commanded the fleet which sailed from Toulon, with the army under Buonaparte, destined for the invasion of Egypt. After landing the troops, admiral Brueys was attacked by an English squadron under Nelson, in the bay of Aboukir. An obstinate contest took place on the 1st of August, 1798, which terminated in the defeat of the French, and the death of their gallant commander.—*Dict. Hist.*

BRUIX (EUSTACHE) a French naval officer and minister of the marine, born at St Domingo, in 1759. During the American war he served under D'Orvilliers, De Grasse, and D'Estaing; and he was afterwards appointed second captain of a frigate. At the Revolution he obtained the command of an eighty-gun ship; and after the reign of terror he was major-general of the navy, and port-admiral at Brest. Under Buonaparte he became vice-admiral, minister of marine, and commandant-general of the flotilla at Boulogne. He died in 1805. This officer wrote "Essai sur les Moyens d'approvisionner la Marine," Paris, 1794, 8vo.—*Biog. Univ.*

BRUN (PETER LE) a French ecclesiastic, who died in 1729, author of "A Critical History of the Superstitious Practices which have seduced the Vulgar and embarrassed the Learned;" and of treatises "On the Unlawfulness of Dramatic Entertainments, in a re-

BRU

ligious view;" and "On Liturgies," works of merit.—*Nouv. Dict. Hist.*

BRUNE (GEORGES M. A.) marshal of France, was born at Brive la Gaillarde in 1763. He studied at Paris, and quitted his original profession, the law, to become a printer. Adopting with warmth the principles of the Revolution, he attracted notice by his writings, and became one of the founders of the famous club of the Cordeliers, particularly connecting himself with Danton. In 1791 and 1792 he edited a popular journal; and on the invasion of Belgium by Dumouriez, he was sent thither by the executive council as a civil commissary. On his return to Paris, in 1793, he entered into the republican army, and arriving at the rank of general of a brigade, he was employed in the interior, and then in Italy under Buonaparte. He distinguished himself on several occasions, especially at the bridge of Arcola; and he was raised to the command of a division. In 1799 he was placed at the head of the French army in Holland, where he displayed great military talents, and vanquished the Anglo-Russian forces, under the duke of York at Alkmaer. On the establishment of the consular government in 1800, Brune was sent against the insurgents in La Vendée, whom he reduced to subjection. In 1803 he was sent ambassador to Constantinople, and he returned to Paris in 1805. During his absence Buonaparte had mounted the throne, and Brune was made a marshal of the empire. In 1807 he was appointed governor of the Hanse-towns; and being charged with speculation in this office, he was disgraced by Napoleon, and was not again employed under the imperial government. On the Restoration of 1814, he sent to the senate his act of adhesion to the new order of affairs; but not obtaining the notice he expected, he declared in favour of Buonaparte on his return from Elba. He was then made commandant in the south of France, and admitted into the chamber of peers. On the second downfall of his imperial patron he prepared for submission to the royal authority, and was travelling to Paris through Avignon, when a popular commotion took place, in which he was assassinated, August 2, 1815. Notwithstanding the inquiries instituted by order of Louis XVIII, the perpetrators of this outrage were never discovered. Marshal Brune published "Picturesque Travels in the Western Part of France," 1806; and he wrote "Memoirs," which remain in MS.—*Biog. Nouv. des Cont. Dict. Hist.*

BRUNI (ANTHONY) an Italian poet in the seventeenth century. His heroic epistles are spirited, and are adorned with fine engravings from the designs of Domenichino.—*Tiraboschi.*

BRUSCHIUS (GASPAR) a Bohemian historian and poet in the sixteenth century, who ended his days by assassination. He was supposed to have favoured the opinions of Luther. His "Ecclesiastical History of Germany" is his chief work.—*Moreri.*

BRUYS (FRANCIS) a French writer, who died in 1738. Born a Catholic, he went over

to the Calvinists, and then again became a Romanist. His principal work is a history of the popes, in 5 vols.—*Nouv. Dict. Hist.*

BUBNA (count) a German general, born in Bohemia about 1770, and died in 1825. He obtained the rank of lieutenant-field-marshal in the Austrian service; and was engaged in several diplomatic as well as military affairs. At the time of his death he was governor-general of Lombardy.—*Dict. Hist.*

BUCKMINSTER (JOSEPH STREVEN) a distinguished American divine, orator, and man of letters. He was born at Portsmouth, New Hampshire, U. S. May 26, 1784; and he was the son of one of the most eminent among the clergy of that state. In 1797 he entered as a student at Harvard College, Cambridge; and in 1800 he attained university honours, after the display of uncommon proficiency in literature, and the delivery of an oration on the characters of different nations. Quitting the college, he continued at home his studies in theology, and other branches of knowledge. In October, 1804, he first appeared as a public preacher at Boston, and the following year he accepted an invitation to become minister of a religious society there. Too close attention to his clerical duties deranged his health, and brought on epilepsy. With a view to his recovery, he made a voyage to England in 1806, and after remaining there some months he went through Holland to Switzerland, and thence proceeded to Paris, where he staid half a year, and then revisiting England, he returned home. His malady was not cured, but his constitutional strength was improved by the voyage, and he had acquired a large addition to his stores of knowledge. His sermons now procured him a place in the first class of popular preachers. He contributed to the periodical publications of the day several valuable papers, and he prepared a number of occasional addresses of great merit. In 1808 he superintended an American edition of Griesbach's Greek Testament; and in 1810 he digested a plan for collecting and publishing all the best modern versions of the books of the Old Testament; but the scheme failed for want of patronage. In 1811 he was appointed lecturer on Biblical Criticism at Cambridge University. His preparations for the execution of this office brought on a renewed attack of epilepsy, which caused his death June 9, 1812. His sermons were collected and published in 1814, with a biographical memoir; and a second volume appeared at Boston, 1829.—*Encycl. Amer.*

BUFFALMACO (BONAMICO) a Florentine painter, who died in 1340, eminent in history for that early period. He originated the practice of putting labels into the mouths of pictorial figures, now used in caricatures, by recommending that line of proceeding to his friend Bruno.—*Pilkington.*

BUHLE (JOHN ТИХОНИЛУС) a German philologist, professor of philosophy at Göttingen, and afterwards at Moscow, in 1804. He died at Brunswick in 1821. Among his numerous works may be mentioned a very valu-

able "History of Philosophy," Götting, 1806, 6 vols, 8vo, of which a French translation, by Jourdan, was published at Paris, 1816, 6 vols, 8vo.—*Dict. Hist.*

BULOW (—) a Prussian general, who commanded the combined army in the campaign against Buonaparte in 1814; and the following year he contributed to the victory of Waterloo. He died in 1825.—*Dict. Hist.*

BULOW (HENRY VON) a Prussian, who published several works on military affairs, which attracted on the continent much public notice, and rendered the author obnoxious to the government. He wrote "The Spirit of the new System of War," of which a French translation appeared, under the title of "Esprit du nouveau Système de Guerre;" "The Campaign of 1800;" "Theorems of the New Mode of Warfare;" "A Critical History of the Campaigns of Prince Henry of Prussia," 2 vols, 8vo; and "The Campaign of 1805," 2 vols, 8vo. This last production of his pen drew upon the writer the displeasure of the Northern powers, in consequence of which he was arrested at Berlin in the month of August, 1806, and ordered to be sent to Siberia; but he died during his journey thither in July, 1807.—*Zopf.*

BUNAPARTE (NAPOLEON FRANCIS CHARLES JOSEPH) Duke of Reichstadt, the only son of Napoleon, formerly emperor of the French, by his second wife Maria Louisa of Austria, the daughter of the emperor Francis. He was born March 20, 1811, and created by his father King of Rome. In the act of abdication which Buonaparte found himself obliged to sign after the battle of Waterloo, he proclaimed his son as his successor, under the title of Napoleon II; but the progress of events rendered this step wholly ineffective. The boy was placed under the guardianship of his maternal grandfather, and being removed to the court of Austria, he was there educated as a German prince, his titular distinction of King of Rome being exchanged for that of Duke of Reichstadt. The active and enterprising disposition which he displayed at an early age, induced the emperor of Austria and his ministers to decide in favour of the military profession, as that in the pursuit of which he might indulge his passion for fame with the greatest advantage to himself, and the least danger to the state. In the prosecution of this design the example of Prince Eugene of Savoy was set before him, as among all the imperial generals affording the fittest model for his imitation. It was deemed necessary, as a part of the general plan of management, that he should be insulated from all communication with the agitators and adventurers of France; and to effect this object he was kept in utter solitude, surrounded certainly by attendants and instructors, but otherwise in complete seclusion. His orders were obeyed, his every wish anticipated; he had his books, his horses, and his equipages for the promenade or the chase; but for all that the soul or the heart holds dear he was, with slight exceptions, a solitary

prisoner. This, with a child in whose veins flowed the fervid blood of the Corsican conqueror, was a species of moral torture. The spirit chafed against the prison bars, and the victim of restraint pined, sickened, wasted away, and died. Being under five years of age when removed to Austria, no regular attempt had been made to commence his education; but the scenes of his early existence had left indelible impressions on the mind of the young Napoleon. One day when he was at play with some youths of the imperial family, one of the archdukes showed him a little medal of silver, of which numbers had been struck in honour of his birth, and distributed among the people after the ceremony of his baptism. His bust was on it, and he was asked if he knew whom it represented, when he readily replied—"C'est moi, quand j'étais Roi de Rome." Ideas of his own former consequence, and of his father's grandeur, (according to the testimony of his early tutor, M. Foresti,) were constantly present to his mind. Other impressions were not less fixed; he had a love of truth which rendered him perfectly intolerant of fiction even in fable, and probably contributed to his subsequent distaste for poetry. The first instruction attempted to be communicated to him was a knowledge of the German language, to which for a time he would pay no manner of attention; but his dislike of the study having been overcome by the solicitations of his teachers, he speedily learnt to speak German with the utmost facility. He also manifested a great unwillingness to learn to read; but that difficulty was overcome by exciting his emulation. One of his tutors was M. Collin, a German poet and dramatist of some eminence. This gentleman regarding the young Napoleon's abhorrence of fiction as a sort of censure of his own literary pursuits, made a successful attempt to overcome his antipathy to some extent, by making him acquainted with the inimitable fiction of Defoe. "The poetical genius of Collin," says Foresti, "appeared to triumph over the obstinate resolution to reject every thing which did not appear to be strictly and exactly true. On the heights which overlook Schoenbrunn, on the right of the elegant arcades of La Gloriette, and at the bottom of a dark avenue of trees, may be found a spot altogether secluded from the view of Vienna by deep thickets, and an impervious mass of wood. Here a hut has been constructed after the fashion of Switzerland, or rather of the mountains of Tyrol, and hence it is called the Tyrolese House. In this rustic abode, and in its vicinity, there is nothing to remind the spectator of the neighbouring metropolis. To this wild and quiet spot Collin would often bring the young duke, and there he related to him the story of Robinson Crusoe. The imagination of the child was strongly excited by the tale. Solitude and silence completed the illusion: he fancied himself in a desert, and Collin suggested that he should undertake to construct the utensils that would be

necessary were he obliged to provide for his own subsistence in a similar situation. He acquitted himself of the task with much dexterity. A collection has been made of these things, which are placed in a pavilion that still bears the name of the house of the duke of Reichstadt. The tutor and the pupil, by their united efforts and industry, succeeded in scooping out a cavern resembling that described as the abode of Crusoe on his desert island." During the first period of young Napoleon's instruction at Schoenbrunn, his tutors were much perplexed by his extreme curiosity with regard to his father, and the circumstances and causes of his fall. Those about him found themselves obliged to apply to the emperor Francis for instructions, as they found it impossible to put an end to his inquiries by evasive answers. They were very properly directed to tell him the truth; and after his anxiety was satisfied, he became more calm, and at length reserved on the subject. When the news of the death of Buonaparte at St. Helena reached Vienna, the Count de Dietrichstein, the superior governor of the duke, was absent, and M. Foresti was directed by the emperor to communicate the melancholy intelligence to the youth, who wept bitterly, and his sadness continued for several days. Every attention was paid to his education. He was taught the learned languages first by M. Collin, and after the death of that gentleman by M. Obenhaus, who had been classical preceptor to various members of the imperial family. To these studies, however, he paid but indifferent attention, Caesar's Commentaries being the only Latin book which much interested him. To his military studies he devoted himself with the utmost ardour. He left, however, numerous proofs of literary industry. Among the voluminous papers written by the prince in Italian, is mentioned a sketch of the life of prince Schwartzenberg, containing various passages relative to his father, expressed in a calm and candid tone. From the time that he reached his fifteenth year he was permitted to read any books whatever concerning the history of Napoleon and the French Revolution. He fully availed himself of the opportunities for gaining information thus afforded him. His collections in French on history, chronology, and geography, are said to be of immense extent. His military enthusiasm displayed itself in the ardour with which he pursued every thing that had any connexion with the accomplishments requisite for a soldier. At the age of seven he was indulged with the uniform of a private, and he used to stand sentinel at the door of the apartments of the emperor; after a time, in reward of the precision with which he performed his exercise, he was made a sergeant, to his extreme gratification. For a while he was allowed to store his memory with facts, and left to his own judgment for their interpretation; but at length it was thought proper to initiate him into the policy of the Austrian cabinet, and accordingly prince

Metternich, under the form of lectures on history, gave him, in a series of interviews, the whole theory of imperial politics. One of the very few personal friendships which the duke of Reichstadt was allowed to form was with M. Prokesch, a young officer who had distinguished himself by his travels in the East, and by some military publications. With this gentleman he studied with great attention the works of Montecuculi, prince Eugene, Vaudoncourt, Ségur, Norvins, general Jomini, and other military writers. He showed to M. Prokesch a manuscript of singular interest, in which he had speculated on his own situation, and traced for himself the line of conduct which his duty required; but this curious production he shortly after destroyed. The revolution in France in July 1830 produced, as might have been expected, a startling effect on the mind of this young prince. It is, however, reported that he said, on hearing the news,—"I wish that the emperor would permit me to march with his troops to the succour of Charles X;" which, if true, proves that the lectures of Metternich had not been delivered in vain. The author of a "Letter on the Duke of Reichstadt, by one of his Friends," (said to be M. Prokesch,) states, on the other hand, that his hope and aim was the throne of France, on which he expected to be placed, not by a party in France, but in compliance with the general demand of the country, and with the concurrence of the monarchs of Europe. If such were his expectations they were certainly visionary, for there is but little probability that he would have been suffered to accept the throne of Belgium had he been elected; and his elevation to that of France must, if it had been contemplated, have experienced greater opposition. The first appearance of the duke of Reichstadt in society was on the twenty-fifth of January, 1831, at a grand party at the house of the British ambassador, lord Cowley; and on this occasion he became acquainted with marshal Marmont, with whose conversation he is said to have been much gratified. In June, 1831, he was appointed a lieutenant-colonel, and assumed the command of a battalion of Hungarian infantry then in garrison at Vienna. At this period he was labouring under symptoms of consumption of the lungs, and his exertions in the discharge of his new duties hastened the progress of the disease, which had been for some time undermining his constitution. Much against his own wishes he retired to Schoenbrunn, where he soon experienced some relief from relaxation and medical treatment; but his impetuous disposition, impatient of restraint, hastened his fate. The first return of vigour excited him to renewed exertion; he commenced hunting, in all weathers, which, together with exposure to cold in visiting a neighbouring military station, soon occasioned a recurrence of the most dangerous symptoms; and after dreadful suffering he died at Schoenbrunn, July 22, 1832. In the face young Napoleon resembled his father,

ARR. BIOG. DICT.

but he had light hair, and his figure was tall and handsome. His manner is said to have been graceful and elegant; there was somewhat of sadness in the expression of his features; and he was reserved, except to those who could win his friendship, but to such he became confidential, free, and even affectionate. He seems to have been generally beloved, being indisposed to give offence, much less to inflict injury; displaying the greatest kindness and consideration for all with whom he was connected. One passion only appeared to be developed in him—that of military ambition. The present with him was but a preparation, and, in fact, he lived in a future which was never to arrive.—*For. Quart. Rev.*

BUONTALENTI (BERNARDO) a Florentine painter, who died in 1608. Accomplished in his art, he was celebrated for his miniatures and historical pieces, as well as for his Madonnas, which were considered exquisitely beautiful.—*Filkington.*

BURCKHARDT (JOHN CHARLES) a learned astronomer, born at Leipzig, in 1778. He studied mathematics when young, and derived a predominant taste for science from reading the works of Lalande. The calculation of eclipses and the determination of geographical longitudes occupied much of his attention; and he made himself acquainted with most of the living languages of Europe, that he might be able to read the works of modern astronomers. Becoming connected with baron von Zach, that scientific nobleman admitted him into his observatory of Mount Seeberg, near Gotha. After residing there two years, Burckhardt wished to travel, and the baron sent him to Paris, with letters of introduction to Lalande, who took him into his house, and afforded him every facility for prosecuting his studies with advantage. In 1799 he obtained letters of naturalization in France, and was appointed adjunct astronomer to the bureau of longitude. The following year he gained the prize offered by the Institute for the best memoir on the "Theory of the Comet of 1770." He was admitted a member of the astronomical section of the class of the physical and mathematical sciences. On the death of Lalande, in 1806, he was placed at the head of the observatory of the military school; and in 1818, nominated a member of the bureau of longitude. He died in June, 1825. Burckhardt published "Methodus combinatorio-analytica evolvendis Fractionum continuarum Valoribus maxime idonea," Lips. 1794, 4to; a German translation of "La Mécanique Céleste," of Laplace, Berlin, 1801—2, 2 vols, 4to; "Tables de la Lune;" "Tables des Diviseurs pour tous les Nombres du Deuxième Million;" and "Tables des Nombres premiers et des Diviseurs du Troisième Million." The Ephemerides of baron von Zach also contain many interesting articles from the pen of this astronomer.—*Dict. Hist.*

BURDER (GZOROK) an eminent dissenting minister and theological writer, who died at the residence of his son, a physician, in Brunswick-square, London, May 29, 1832, at
F

BUR

the age of eighty. He was for more than twenty years pastor of an Independent congregation at Coventry, whence, removing to the metropolis, he officiated for twenty-nine years at a chapel belonging to the same denomination of Dissenters in Fetter-lane; and it was not till within a few weeks of his death that he was disabled from the performance of his professional duties. During a long period he held the office of gratuitous secretary of the London Missionary Society, and he was one of the editors of the *Evangelical Magazine*. He was extensively known and esteemed as a man of unostentatious piety, enlightened benevolence, and considerable intellectual endowments. Among his publications may be mentioned, "Evangelical Truth Defended," 1788, 8vo; an abridgement of Dr Owen's "Treatise on Justification by Faith," 1797, 8vo; "The Welsh Indians, or a Collection of Papers respecting a People whose Ancestors emigrated from Wales to America, in 1170, with prince Madoc, and who are said now to inhabit a beautiful country on the west side of the Mississippi," 1797, 8vo; "Village Sermons," 1799—1812, 6 vols, a popular production; and "Missionary Anecdotes," 1811, 12mo; besides which he edited Bunyan's *Pilgrim's Progress* and *Holy War*; *Howell's History of the Bible*, and *Henry's Family Bible*.—*Gent. Mag.*—*Ann. Biog.*

BURGH, LL.D. (JAMES) a native of Scotland and popular writer, born 1714, died in 1775; author of "Britain's Remembrancer;" "Thoughts on Education;" "Political Disquisitions," 3 vols; "Crito, or Essays," 12 vols; "The Dignity of Human Nature," 2 vols; "The Art of Speaking."—*Gent. Mag.*

BURGH, LL.D. (WILLIAM) author of an "Answer to Lindsey's Apology," &c. was a native of Ireland, and died at York in 1788.—*Biog. Univ. Class.*

BURHILL, or BURRELL (Dr ROBERT) a learned divine, who was born at Dymock in Gloucestershire, in the latter part of the sixteenth century. He was probably educated at Oxford, and he obtained the degree of doctor of divinity. He has been characterised as a profound and judicious scholar, who published many learned works. But the most interesting circumstances recorded concerning him are that he was the chaplain and friend of Sir Walter Raleigh, whom he assisted in the composition of his "History of the World." He subsequently was presented to the rectory of Northwold, in Norfolk; and his death took place in 1641.—*Athyns's Hist. of Gloucestershire. D'Israeli's Curiosities of Literature, Sec. Series.*

BURIGNY (JOHN LEVESQUE DE) a French historical writer, who was a native of Rheims. His principal productions are a "History of Sicily," 2 vols, 4to; "History of the Revolutions of Constantinople," 3 vols, 12mo; "Lives of Grotius, Erasmus, Bossuet, and Cardinal Du Perron;" and a "Treatise on the Authority of the Popes," 4 vols, 12mo. He died in 1785.—*Biog. Univ. Zopf.*

BURKITT (WILLIAM) an English divine,

BUT

born in 1650, died in 1703; author of "A Practical Exposition of the New Testament," a work of utility, which has passed through many editions.—*Biog. Brit.*

BURN (ANDREW) a military officer, who acquired considerable notoriety by his zeal for what has been termed Evangelical Religion, and by his writings on that subject. He was a native of Scotland, and entering into the army, he attained the rank of major-general in the Royal Marines. His death took place at Gillingham, in Kent, in October, 1814. He published a popular defence of Christianity, entitled, "The Christian Officer's Complete Armour," 1806, 12mo; "Who fares best, the Christian or the Man of the World?" of which a third edition appeared in 1810; and "The Resurrection of the Two Witnesses exhibited in the formation and success of the British and Foreign Bible Society," 1812, 8vo.—*Biog. Dict. of Liv. Authors.*

BURNEY, LL.D. (WILLIAM) an industrious writer and public teacher, who died February 20, 1832, in the seventieth year of his age, at Gosport, in Hampshire. Early in life he established the seminary called the Royal Academy at Gosport, in which many most distinguished naval and military officers received their education, and which he conducted with great ability till about four years preceding his death, when he was succeeded by his son Henry Burney, LL.D., who had long been his assistant. Dr W. Burney published a *Marine Dictionary*; "The Naval Heroes of Great Britain, or Lives of distinguished Admirals and Commanders;" and other works relating to naval affairs.—*Dict. of Liv. Auth. Gent. Mag.*

BURR (AARON) an American divine, born at Fairfield, in Connecticut, in 1714. He was one of the founders of the college of New Jersey, of which he became president. He died in 1757, leaving a "Treatise on Theology;" "Discourses;" "Funeral Sermons," &c.—*Dict. Hist.*

BURROUGH (EDWARD) a celebrated preacher among the early quakers, in the seventeenth century. He commenced churchman, turned presbyterian, and settled in quakerism. He reprov'd Cromwell, obtained concessions from Charles II, and left a folio volume of his Life and Works. He died in 1668.—*Life as above.*

BUTLER (CHARLES) an English divine and writer in the seventeenth century, chiefly known by a popular work on Bees, called "The Feminine Monarchy," and a "Treatise on Music."—*Chalmers's Biog. Dict.*

BUTLER (CHARLES) an eminent lawyer and distinguished writer on jurisprudence, history, and theology. He was the nephew of the Rev. Alban Butler, author of the "Lives of the Saints," and he received his education at the Catholic seminary at St Omer's. On his return to England he entered as a student at Lincoln's-inn, and subsequently practised as a conveyancer with great reputation. In 1778 he published "An Essay on the Legality of impressing Seamen;" in

BUT

conjunction with Francis Hargrave, Esq. he edited Coke's Commentary upon Littleton, with notes, 1788; and he superintended another edition of that work in 1794. As a member of the Catholic church he always displayed the utmost liberality towards Protestants, and so much zeal for religious liberty, that the celebrated Bishop Milner, animadverting on his opinions, was induced to characterise him as "a decided enemy to the hierarchy of his church." His writings on this subject consist of "A Letter to a Nobleman on the proposed Repeal of the Penal Laws against the Irish Roman Catholics," 1801, 8vo; "An Historical Account of the Laws against the Roman Catholics," 1801, 8vo; and "A Letter to a Roman Catholic Gentleman of Ireland on Buonaparte's projected Invasion," 1803, 8vo. Mr. Butler was the first professor of the Catholic faith who was admitted to plead at the bar after the repeal of the prohibitory statutes against Papists, and he was subsequently appointed king's counsel. He died at his house in Great Ormond-street, London, June 2, 1832, in the eighty-third year of his age. Besides the works already mentioned he was the author of "Horæ Biblicæ, being a connected Series of Notes on the Literary History of the Bibles, or Sacred Books of the Jews and Christians," 1799, 8vo; "Horæ Juridicæ Subsecivæ, being a connected Series of Notes respecting the principal Codes of the Grecian, Roman, Feudal, and Canon Law," 1804, 8vo; "A connected Series of Notes on the Chief Revolutions of the States which composed the Empire of Charlemagne," 1807, 8vo; a

BZO

"History of the Geographical and Political Revolutions of the Empire of Germany," 1812, 8vo; "Lives of Fenelon, Bossuet, the Rev. Alban Butler, Michael de l'Hôpital, and Grotius," published separately; and two volumes of "Reminiscences of Contemporary History;" "The Book of the Catholic Church;" and a "Vindication" of that work.—*Biog. Dict. of Living Authors. Edit.*

BUTNER (CHRISTOPHER WILLIAM) a German naturalist and philological writer, born at Wolfenbuttel in 1716. He adopted the profession of pharmacy, and having travelled in Germany, England, and Scotland, he settled at Gottingen, where he died in 1801. He belonged to the Royal Society of Gottingen, and was titular professor at the university of Jena, and aulic counsellor. His works are, "Comparative Tables of the Alphabets of Different Nations," 1771 and 1779, 4to; "An Explication of a Japanese Imperial Almanack," 1773; "Observations on certain Species of the Tape Worm," 1774; "Lists of the Names of the most common Animals in Southern Asia," 1780; and "Tabula Alphabet. Hodiern." 1776.—*Biog. Univ.*

BUTTS (SIR WILLIAM) physician to Henry VIII. He died in 1545; was the friend of Crammer and the Reformation, a circumstance mentioned by Shakspeare in his Henry VIII, and was one of the founders of the Royal College of Physicians.—*Biog. Brit.*

BZOVIUS (ABRAHAM) an eminent Polish writer, born in 1567, died in 1637; author of a "Continuation of Baronius's Annals of the Church," in 12 vols, and many other learned works.—*Moreri.*

CAC

CABARRUS (Fr. count de) a Spanish financier, born at Bayonne, in 1752. In the American war the Spanish exchequer being exhausted through the stoppage of supplies from Mexico, Cabarrus found resources for the government in the creation of royal billets. He founded the bank of San Carlo, was counsellor of finance, minister plenipotentiary at the congress of Rastadt, in 1797, and after diplomatic services in France and Holland, became minister of finance. He died in 1810. Cabarrus published "Letters to the Prince of Peace;" "A Treatise on the System of Contributions most convenient for Spain;" "Mémoires on Finances and Commerce," and other works.—*Dict. Hist.*

CACHIN (JOS. MARIA FRAN.) inspector of bridges and highways, died at Paris, in 1825, aged sixty-seven. He was a skilful engineer; and besides other works, he published "Mém. sur la Digue de Cherbourg comparée au Breakwater ou Jetée de Plymouth," 1820, 4to.—*Dict. Hist.*

CAF

CADALSO (D. JOSEPH) a Spanish poet of the eighteenth century. He followed the profession of arms, and perished in the flower of his age, at the siege of Gibraltar, in 1783. His productions are chiefly of the lighter kinds of poetry, in which he excelled. Under the pseudonym of Joseph Vasquez, he published "Los Eruditos à la Violeta," Madrid, 1772, 8vo.—*Biog. Univ.*

CÆSAR (JULIUS). Name repeated to correct an error in his article in the body of the work, by the omission of the word "left." It is there observed that Cæsar had three wives, "but no children by either of them," instead of "but left no children by either of them." It is the more necessary to point out this small but unlucky typographical error, being rendered so conspicuous by the marriage of Cæsar's daughter Julia with his great rival Pompey; his ultimate difference with whom her premature death in child-bed promoted.—*Ed.*

CAFFARELLI DU FALGA (LOUIS
F 2

MARIE JOS. MAXIMILIAN associate of the Institute of France, and general of engineers, was born at the castle of Falga, in Upper Languedoc, in 1756. After the 10th of August, 1792, he was the only artillery officer who refused to submit to the authority of the National Convention, and being suspended from his functions, he retired to his estate in 1793. Being restored to his rank, he served under Moreau in Germany, and received a wound which obliged him to submit to amputation of the leg. He subsequently remained in obscurity till Buonaparte's expedition to Egypt, in which he was employed as general of artillery. He was wounded in the arm at the siege of Acre, and an amputation took place; but he died soon after, in April, 1799. A life of this officer was published by M. Degeando, 1801, 8vo.—**J. B. MARIE CAPPARELLI**, brother of the general, embraced the ecclesiastical profession; and in 1802, Buonaparte, then consul, nominated him bishop of St Brienne. He died in 1805.—*Biog. Nouv. des Contemp. Dict. Hist.*

CALDER (JOHN) a Scottish clergyman and miscellaneous writer. He was a native of Aberdeen, and at the University there he received his education, and obtained the degree of DD. Having gained the favour of the Duke of Northumberland, to whom he became private secretary, he resided for some years in the neighbourhood of Alnwick Castle, the seat of that nobleman, under whose patronage he afterwards moved to London. At one period he was minister of a dissenting congregation near the Tower, but he relinquished that station and the clerical profession many years previous to his death, which took place at Paddington, June 10, 1815, at the age of eighty-two. Dr Calder wrote notes on the Tatler, published in Nichols's edition of that work, 1786, 6 vols, 8vo; and he translated from the French Le Courayer's "Last Sentiments on Religion," 1787, 12mo; but he is principally known on account of an abortive attempt to prepare for the press an edition of the Cyclopædia, the superintendence of which was subsequently transferred to Dr Abraham Rees.—*Nichols's Illustrations of Literature.*

CALDERARI (count OTTO DE) member of the principal Academies of Italy, and associate of the French Institute, was born at Vicenza, about 1730, and died in 1803. He devoted himself to the study of literature and the fine arts, and was especially skilled in architecture. Besides a number of elegant country seats, he designed the palaces of Loschi, Bonini, and Cordellina, at Vicenza, and the Seminario at Verona, which is considered as his chef-d'œuvre. Calderari wrote on architecture; and left several pieces of poetry.—*Biog. Univ.*

CALDERINUS (DOMITIVS) a learned Italian writer, and a native of the territory of Verona, where he was born in 1445. He was professor of belles lettres at Rome, and died in 1477. He published several valuable commentaries on the Latin poets, especially Martial and Juvenal.—*Moreri.*

CALENTIUS (ELIASINUS) an Italian writer

in the fifteenth century. He was preceptor to the son of Ferdinand I, king of Naples. There have been three editions of his works, containing poems of various character, epigrams, epistles, fables, &c., which are still esteemed. He died in 1503.—*Moreri.*

CALIDAS, or **CALIDASA**, a Hindoo poet, author of a Sanscrit drama, in six acts, entitled "Sacountala, or the Fatal Ring." An English translation of this work, by Sir William Jones, was published at London, 1792, 4to, from which a French version was made by Ant. Bruguière, Paris, 1803, 8vo.—*Biog. Univ.*

CALIXTUS (GEORGE) a Lutheran divine of considerable celebrity, was a native of Holstein, where he was born in 1756. He became professor of divinity at Halberstadt. He wrote "Anti-moguntinus," a treatise against the celibacy of priests, and other works; and was among the first who reduced theology into its more modern scientific form. He also sought to promote a union among the various Christian communities; the only fruit of which exertion was a long and bitter controversy.—*Moreri.*

CALKOEN (JOHN FREDERICK VAN BEEK) a Dutch astronomer and philological writer, who was born at Groningen, in 1772. He wrote an essay to controvert the principles advanced in the treatise of Dupuis on the origin of different modes of worship, or systems of theology, which gained the prize offered by the Teylerian Society of Haarlem; and he produced a work on the time-pieces of the ancients; and another entitled "Euryalus"—on Beauty. He was a professor in the University of Leyden, and afterwards in that of Utrecht; and was also a member of several literary societies. His death took place in 1811.—*Encycl. Amer.*

CALLANDER (JAMES) a political and historical writer, who was a native of Scotland; and died in Virginia (N.A.) in 1805. He was the author of "The Political Progress of Britain, or an Impartial View of the Abuses in the Government;" and "Researches concerning the History of America."—*Dict. Hist.*

CALLIERGUS (ZACHARIUS) an early Greek printer, who carried on business, first at Venice, and afterwards at Rome. He took a part in compiling, as well as printing, the "Etymologicon Magnum," published in 1499. His edition of Pindar, with Scholia, Rome, 1515, 4to, was the first Greek book printed in that capital.—*Fabricii. Bibl. Græc.*

CALLISEN (HENRY) an eminent surgeon, and writer on medicine and surgery, who was the son of a poor clergyman, and was born at Pentz, in Holstein, in 1740. He obtained his education chiefly through his own exertions; and after having served both in the army and navy, and in the hospitals at Copenhagen, he was, in 1771, appointed chief surgeon to the Danish fleet. In 1773 he became professor of surgery in the University of Copenhagen; and in that city he died, February 5, 1824. His principal production is entitled "Institutiones Chirurgiæ Hodiernæ," 1777, which has been received as a work of great authority in

most countries of Europe, and has been used as a text book for lecturers at Vienna, and in the Russian Universities. He was likewise the author of some valuable essays published in medical journals.—*Encycl. Amer.*

CALVERT (JAMES) a non-conformist divine of the seventeenth century. He was educated at Cambridge; and being ordained, obtained the living of Topcliffe, in his native county of York; of which he was deprived by the act of uniformity. He died 1698. He is chiefly known by a learned work on the ten tribes, entitled "Naphthali, seu Colluctatio theologica de Reditu Decem Tribuum, conversione Judæorum," &c. 1672, 4to.—*Calamy.*

CAMBACERES (J. JACQUES REGIS) advocate, deputy to the National Convention, minister of justice, and at length arch-chancellor of the French empire. He was born at Montpellier in 1753, and in 1771 he was admitted a counsellor of the court of aids and accounts in that city. Being chosen a member of the Convention in 1792, he was chiefly occupied in judicial affairs. He declared the king culpable, but denied the right of the Convention to judge him, yet he ultimately voted for the punishment determined by the penal code, and against the appeal to the people and the arrest of judgment. After the 9th of Thermidor he was placed on the committee of public safety, and charged with the direction of foreign affairs. He subsequently resumed his profession as an advocate, which he continued to exercise till the director Sièyes appointed him to the ministry of justice, whence he was raised to the office of second consul. On the assumption of the imperial title by Napoleon, Cambacères was made arch-chancellor, grand officer of the legion of honour, and was particularly charged with the organization of the judicial system. After the return of Louis XVIII he was excluded from the chamber of peers, and during the hundred days he resumed his functions; in consequence of which he was ordered to quit France on the king's second restoration. In 1818 he was restored to his civil and political rights, when he returned from Brussels to Paris, where he died in 1824.—*Biog. Nouv. des Contemp. Dict. Hist.*

CAMPE (JOACHIM HENRY) an ingenious German writer, born in 1764, at Deensen, in the territory of Brunswick. He studied theology at Helmstadt; and in 1773 he became a chaplain in the Prussian army. He afterwards established a private seminary for education near Hamburg, which in 1783 he resigned to professor Trapp, in consequence of ill health. He is best known in England as the author of "The New Robinson Crusoe, or Robinson Crusoe the Younger," a modification of the celebrated fiction of Defoe. This work has appeared in almost every European language, including the modern Greek. His "Theophrastus" also has had a wide circulation. His writings for the instruction of youth were published collectively, at Brunswick, 1806—9, 30 vols, 12mo, with plates. He

was also the author of a copious German Dictionary, Brunswick, 1807—11, 5 vols, 4to; and Letters from Paris, written in 1789, eulogizing the French revolution. His death took place October 22, 1818.—*Encycl. Amer.*

CANAYE (PHILIP de la, seigneur du Fresne) an eminent statesman, was born at Paris in 1551. At the age of fifteen he travelled into Italy, Germany, and even visited Constantinople. On his return he was made counsellor of state, and Henry IV employed him in various embassies, an account of which has been published in three volumes, folio. He also wrote an account of his travels.—*Moreri.*

CANDIDO (PETER) a Flemish painter, whose real name was De Witte. He was born at Bruges in 1548, and worked in conjunction with Vasari at the papal palace in Rome. He afterwards entered into the service of the elector of Bavaria, at which court he died. He is at present chiefly known by the prints engraved from his designs by Sadelen.—*Nouv. Dict. Hist.*

CANISIUS (HENRY) a native of Nimeguen, and a celebrated German canonist of the sixteenth and part of the seventeenth centuries, who became professor of canon law at Ingoldstadt, where he died in 1610. Besides his works on canon law, collected and published in 1649, he wrote "Antiquæ Lectiones," 7 vols, 4to, 1603, and 4 vols, folio.—*Moreri.*

CANNE (JOHN) an English puritan, who fled to Amsterdam in the beginning of the seventeenth century. He succeeded the celebrated Henry Ainsworth as pastor in that city, when he published a Bible with a vast number of marginal references, which has run through several editions, the best being that of Edinburgh, 1727.—*Neal's Puritans.*

CANNING (GEORGE) father of the eminent statesman, and an unfortunate man of literature, was born some time between the years 1740 and 1750, at Garvagh, in the county of Londonderry. The family was originally of Foxcote in Warwickshire, a younger branch of which received the manor of Garvagh, which now gives a title to its representative, in the reign of Queen Elizabeth. The subject of this article having offended his family, by marrying a beauty without fortune, received a very small provision from his father, and was thrown upon his own resources. He accordingly entered himself of the Middle Temple, and was subsequently called to the bar; but having distinguished himself by several popular tracts and poetical pieces of merit, he soon attracted the attention of men of wit, and became the associate of Whitehead, Keate, Churchill, Lloyd, and the elder Colman, and also a warm partisan of John Wilkes. This was not a species of companionship favourable to legal application, and he gave up the pursuit and turned wine merchant, but very soon failed. Repeated disappointment now affected his health, and he died of a broken heart on the 11th of April, 1771, leaving his infant son precisely a year old, and

a widow in such reduced circumstances that she attempted the stage for a support, and ultimately married a person of the same profession. The elder George Canning wrote several poems of reputable pretension, among which may be enumerated "A Poetical Epistle from lord William Russell to lord Cavendish the Night before his Execution," which may be seen in Dodsley and Pearch's collection, published in 1775.—*Memoirs of George Canning*.

CANNING (ΓΕΩΡΓΙΟΣ) a highly gifted orator and distinguished statesman, son of the subject of the last article. He was born in the parish of Marylebone, April 11, 1770, and at a proper age was placed by his father's family at Eton. Here he early displayed talents of a very brilliant description, and became editor, at the age of sixteen, of the *Microcosm*, a periodical work on the plan of the *Spectator*, established by the senior scholars of Eton; and otherwise distinguished himself by the sprightliness and humour of his compositions, both in verse and prose. On quitting Eton he was entered at Christchurch, Oxford, where he gained several prizes for his Latin essays, and attracted considerable notice by his orations; and a high opinion of his talents became general. He left Oxford with the intention of studying law, and entered himself at Lincoln's-inn for that purpose, and soon became so distinguished for wit and eloquence, that his talents attracted the notice of the first lord Lansdowne. It was expected from his known whiggish predilections and intimacy and relation-ship with Mr Sheridan, at whose house he spent most of his vacations, that he would have entered parliament on the side of opposition. This did not prove to be the case; and different opinions have been formed of the nature of the feeling of self-interest and ambition which, in 1793, rendered him a member of the house of Commons under the auspices of Mr Pitt, as the representative of Newport in the Isle of Wight. His subsequent support of that eminent minister was close and undeviating, and his powers in debate, although not deemed weighty in the first instance, gradually ranked him among his most distinguished adherents. In 1796 he was appointed an under-secretary of state; and in 1799 his consequence was much increased by his marriage with Miss Joan Scott, one of the daughters and co-heiresses of general Scott, whose immense fortune had been made by play. As one of her sisters was married to lord Dow, and the other to the marquis of Titchfield, this connexion powerfully strengthened the interest of Mr Canning, who from that time began to assume a degree of importance which indicated his future lead. In the mean time his talents for satire and sarcasm were exercised in conjunction with his friends Messrs Frere and Ellis in the *Antijacobin Examiner*, which journal materially aided the ministerial cause by the poignancy of its wit and spirit of its invective and ridicule, which, however, were too frequently disfigured by virulence. He displayed a similar talent when

united in the general opposition to the Addington administration, after the failure of the peace of Amiens, the defeat of which cabinet was almost as much assisted by his ridicule out of doors as by his oratory within. On the death of Mr Pitt he exercised the same weapons against the Fox and Grenville administration, whom he also opposed during their short and unsatisfactory career with considerable force in the senate, but in a manner so purely that of a partisan, that he even allowed the abolition of the slave trade, which he strongly approved, to pass coldly by as a ministerial measure. Neither on the death of Mr Fox was he deemed a generous opponent; and the unsparing severity of his satire in print, and close junction with the party to whom he himself was strongly opposed on the very ground which afforded them their triumph, produced that strength of feeling against him in many quarters which is so naturally excited by a supposed junction of decided ability with doubtful principle. He now became a leading member in the Percival cabinet as foreign secretary, which post he held until the memorable endeavour to remove lord Castlereagh from the war department produced a duel between the parties, and the resignation of both of them. More blame has been attributed to Mr Canning for his proceeding in this case than was altogether due to him, as the concealment complained of, was rather attributable to others than to himself; yet it was felt, and justly felt, that he acquiesced too long in it. On the assassination of Mr Perceval offers were again made to him to join the administration, which he declined, but soon after a reconciliation was effected between him and lord Castlereagh, but it did not produce his immediate acceptance of office. In 1812 he received a very spontaneous invitation to represent Liverpool, to which he attended; and being triumphantly elected, he became the most serviceable and efficient member ever returned by that great commercial town. His acceptance of an embassy to Lisbon, on the presumption of the return of the prince regent of Portugal to Europe, with a large salary, exposed him to considerable obloquy, although he resigned the appointment as soon as he knew that the regent would not visit Europe. In the early part of 1816 he again accepted office, and became a member of the cabinet as president of the board of control, and formed one of the most strenuous defenders of the celebrated Six Acts, and other strong proceedings adopted in repression of the popular assemblages at Manchester. On the return of queen Caroline from Italy, Mr Canning, who objected to the measures pursued in respect to that unhappy princess, although allowed by his colleagues to take no part in them, retired from office. In 1822 he was nominated governor-general of India; but after making preparations to quit England, he was offered the seals of the foreign office, on the decease of the marquis of Londonderry, an event which may be said to have led to another and more popular course of statesmanship both abroad and at home. The fo-

reign policy of Mr Canning was quickly marked with a studied dissent from the principles of the Holy Alliance, and by a more enlarged acknowledgment of the general rights of mankind. Assisted also by Mr Huskisson and others, he strongly countenanced that amelioration of theory and practice in respect to commerce, navigation, and manufactures, which the changes of the times have seemed to render imperative. The recognition of the republics of Mexico, Columbia, and Buenos Ayres, in 1824, was also hastened, if not caused, by his exertions. In the autumn of 1826 he visited Paris, and was received with great distinction; and it is supposed that he came to some understanding with the French cabinet which led to the subsequent Treaty of London for the settlement of Greece. In the ensuing session he distinguished himself by his able support of the necessity and policy of aiding Portugal against the aggression of Spain, and by the prompt assistance afforded. On the 20th January, 1827, at the funeral of the late duke of York at Windsor, with several more who officially attended that ceremony, he caught a severe cold, which it is thought laid the foundation of the disorder which terminated his life. The melancholy attack of the earl of Liverpool by paralysis followed in February, and after a decorous pause to allow a time for possible recovery, which interval was signalized by strong manifestations both of support and opposition to Mr Canning, he was empowered by the king to form an administration of which he was to be himself the head. The result of this nomination was the secession of no less than six members of the preceding cabinet, for the most part on mere personal grounds of objection, and a consequent junction with several respectable leaders of the Whigs. The new premier struggled manfully against the opposition thus suddenly formed against him, which certainly signalized itself by extreme virulence, especially in the house of Lords. His health was, however, visibly sinking under so much unexpected excitement, although he opened the budget for the year as chancellor of the exchequer, and sat out the session. He was proceeding in the recess to issue orders and form arrangements for an important revision in matters of expenditure and finance, when on the 15th of July he became seriously indisposed, but recovered in a few days, and was again enabled to resume his public duties. A relapse, however, taking place, it was deemed advisable for him to retire to the villa of the duke of Devonshire at Chiswick, where his disorder, which was an inflammation of the kidneys, inflicting great torture, gradually became worse, and at length carried him off on the 6th of August, 1827, in the fifty-seventh year of his age. Although private, the funeral of this eminent statesman, which took place at Westminster abbey, was attended by the duke of Clarence and several persons of great distinction both for rank and talent; and the sum of 10,000*l.* has been raised by subscription for a public monument to his memory. Mr Canning left issue by his widow,

since created viscountess Canning, one daughter, united to the marquis of Clanricarde, and two sons, the eldest a captain in the navy, and the other a student at Eton. The character of a leading English statesman is generally estimated according to the party, or other predilections of the persons who consider it; if this be the case, when even centuries may have passed away since their decease, it is doubly so during the existence of the generation of which they have formed a part. Looking to the political career of Mr Canning, he may be regarded as one of the most respectable of those adventuring statesmen who, entering the career of political life with great natural and acquired abilities, unbacked by rank or fortune, must attach themselves to a person or a party to acquire support and distinction. It would be disingenuous in the greatest of his admirers to deny that place and power were always very desirable to him; and that both in the commencement, and during the progress of his political life, he made some sacrifices of opinion and consistency to secure them. On the other hand, his most illiberal opposers must admit, that he was not one of those servile trucklers for office who cling to it under all sorts of circumstances. Peculiarly the minister of expediency, he was often no doubt too facile in the sacrifice of principle to temporary views and purposes; but his conduct in latter life, and as his independent influence increased, certainly exhibited a natural predilection for the adoption of a theory of broad and manly policy in reference both to the foreign and domestic relations of the country. His views as concerns Portugal, Greece, and the new American republics, have doubtless been much carped at; but it is obvious that humanity, the spirit of the times, and the general feeling of the country, have been with him. At home he was indisputably lending his countenance to much valuable amelioration, and he essentially set his face against that blind alarm at innovation, and enmity to necessary change, which mark the very lowest order of intellect in the political grade. Had he survived a few years longer, his character as a statesman would have most likely come out still more favourably, resting for support, as he chiefly did both in and out of the senate, upon a party embracing the most active and energetic ability in the country. As an orator and debater he stood very high; his eloquence was singularly felicitous, elegant, and correct, abounding with classic beauty and unadulterated copiousness; but very seldom, although sometimes, assisted by elevated flights of passionate declamation and overwhelming ratiocination, when his manner was peculiarly impressive. At no time was his logic confused, nor his resources commonplace; and he possessed a happy vein peculiarly his own, by means of which he turned his opponents into unbearable ridicule, as might be expected from the author of the poetry of the Antijacobin. The literary abilities of this accomplished man and minister have been sufficiently adverted to in the course of this meagre sketch, which may be con-

cluded with the observation that he joined great personal advantages to his other endowments, being at once commanding in form and impressive in features; and these natural advantages, joined as they were to elegant manners and the most bland and conciliatory address, rendered him the object of strong personal attachment and popular admiration wherever he appeared.—*Life of George Canning.*

CAPASSO (NICHOLAS) a Neapolitan divine, born in 1671, whose poetical performances in Latin and Italian are held in great esteem. An edition of these was published at Naples in 1780, 4to. He also translated the *Iliad* into Italian. He died in 1746.—*Dict. Hist.*

CAPELLO (BERNARDO) an Italian poet of the sixteenth century, was a native of Venice, from which he was exiled in consequence of the freedom of his political opinions. He died at Rome in 1559, leaving various poems, which have been frequently reprinted.—*Tiraboschi.*

CAPO D'ISTRIAS (count JOHN) was born at Corfu, where his family, which was respectable, had been possessed of property from an early period. When the Russians were masters of the Ionian Islands he rendered himself useful to them, and on their withdrawing he retired with them, and became so attached to their policy and manners, that he never ceased to consider himself as a Russian. He held an office under the Russian government when the Greek revolution was about to break forth, and he was the agent by which the early events of it were influenced and directed. In 1819 he paid a visit to his native island, and formed a connexion with the Hetaria, the views of whose members he strongly favoured, only so far however as they were consistent with the interest of Russia. When the insurrection took place in Wallachia, under Ypsilanti, and the Russians affected openly to disapprove of it, he also denounced it, and disavowed the proceedings of those who were concerned in it, though it was known that he was secretly connected with them, and adopted their principles. It was generally believed that he always looked forward to the possession of supreme authority when the revolution was effected; hopes of which he was encouraged to indulge through his connexion with the country as a Greek, and his confidence in the support of the Russians. He, however, took no part in the affair till the troubles were over, and the independence of Greece was secured. He then proceeded thither, and in January, 1828, arrived at Napoli di Romania in an English ship of war, and was recognised as president, and chief of the government. His coming was hailed with joy by all as the signal of peace and conciliation. Napoli was distracted by the factions of Griva and Colocotroni, both of whom at once submitted to Capo d'Istrias. All the other chiefs followed the example, and his authority was acknowledged with the general esteem and goodwill of all parties. He displayed his influence most ad-

vantageously, by issuing a proclamation requiring the general surrender of arms, the danger from the external enemy being passed over; and the whole population obeyed, and brought in their weapons, while the country, which had been overrun by armed men, became quiet and secure for travellers. The lands which had belonged to the Turks, and now to the government, were let, on the terms of a rent amounting to thirty per cent. of the produce. Lancasterian schools were generally established, and foreigners were induced to speculate in the purchase of land, both on the islands and the continent. At Napoli di Romania and in other towns new streets were built, improvements were made, and the country seemed to be, like a phoenix, rising from its ashes. The people proposed to settle on the president an annual salary of thirty thousand crowns, which he declined. In a short time, however, he showed that little reliance was to be placed on this seeming patriotism and disinterestedness. He abolished the popular form of government, and established a council called the *Panhellenium*, which was wholly under his control. The contributions which he received from France and Russia were expended in remunerating the agents of his despotic plans. All the Constitutionalists, who had risked life and property in promoting the revolution, were excluded from his confidence. Mavrocordato, Tricoupi, and others, were driven from the situations of trust which they had filled to make way for a host of needy dependents from the Ionian Islands, among whom were the counts Viario and Augustine, the brothers of the president. Informers were encouraged, private correspondence was violated, and tyranny and oppression prevailed. Just at this juncture prince Leopold, now king of Belgium, was announced as about to become sovereign of Greece, to the great joy of the people. Capo d'Istrias, at first, treated the report with incredulity and derision; but on finding it confirmed, he professed his readiness to make way for the new governor. In the mean time he contrived, under hand, to raise difficulties about settling the boundaries of the country, and at length succeeded in frightening the expectant of royalty into a resignation of the offered crown. The president now fancied that his authority was firmly established, and proceeded to the execution of his despotic schemes under the auspices of Russia. When the deputies waited on him to propose calling a national assembly, in order to establish a constitutional government, he told them that they were not fit for liberty, and it was in vain for them to think of forming free institutions. The people naturally became discontented, and the Mainotes, the Hydriotes, the Syriotes, and the Porotes, all concurred in resolving to throw off the yoke of their new tyrant, more galling than that of the Turks. When the Greek insurrection broke out, Pietro Bey Mavromichali, a rude and venerable chieftain, was a kind of sovereign prince in Maina, exercising a feudal and

almost despotic sovereignty among the descendants of the ancient Spartans. Pietro and his sons, notwithstanding, in the ardour of their zeal for the liberty of their country, declared for the insurgents, at the sacrifice of their own authority, and hazarded every thing in order to advance the cause. One of the sons of Pietro Bey was killed in the contest, and when it was over, the father went to reside at Napoli, with his remaining son Constantine and his brother Giorgio, and he was appointed a senator. The proceedings of government soon disgusted him: he joined the constitutional party, and became a proscribed man. He attempted to return secretly to his own province, but the president, knowing and dreading his influence there, caused him to be arrested, and confined in the dungeons of Itaphkalé. His brother and his son adopted his feelings; they also became suspected, and were arrested, and placed under the charge of the police. On the morning of Sunday, October 9th, 1831, George and Constantine Mavromichali proceeded to the church of St Spiridion, situated in the centre of the city of Napoli, to attend, as they said, the early service of the church, a little after daybreak, and they were followed, as usual, by their guards. While standing in the porch of the church, the president also arrived, with his suite, and was entering that part of the church called the Narthex, leaving his body guard at some little distance behind him. In passing the Mavromichali's they saluted him, and when he raised his hand to his head to return the salute, George drew a poniard, which he had concealed in his capote, and plunged it into his body, while Constantine, who stood before him, presented a loaded pistol and shot him in the side, when he instantly fell dead on the steps of the church. The assassins fled. Constantine was pursued, and killed by one of the president's guards; but George, having taken refuge in the hotel of the French minister, was there seized, tried by a court martial, and shot.—*New Month. Mag.*

CAPON (WILLIAM) an eminent scene painter and architectural designer. He was born at Norwich in 1757, and studied portrait painting under his father, who was an artist of some ability. He preferred the profession of an architect, to learn which he was therefore placed with Michael Novosielski, a Russian, who built the opera-house, of which he was also scene painter. After the erection of Drury-lane theatre in 1794, Mr Capon was engaged by John Kemble for the scenic department, and the taste and fidelity with which many of his works were executed sufficiently prove his intimate acquaintance with our national antiquities. He painted other pieces besides scenes, particularly two magnificent interior views of the theatres of Drury-lane and Covent-garden. Among his architectural designs may be mentioned plans of the old palace at Westminster, and of the ancient sub-structure of Westminster abbey. He built in 1794 a theatre at Balan House,

in the county of Kildare, for lord Aldborough; and he projected a grand national monument commemorative of the warlike genius of Britain. His death took place at his residence in Westminster, September, 26, 1827.—*Gent. Mag.*

CARESTINI (GIOVANNI) a celebrated public singer, who was born in the march of Ancona, in Italy, and at the age of twelve he went to Milan, where he was patronised by the Cusani family, whence he was often called Cusanio. His voice, which was at first a powerful and clear soprano, became changed to a remarkably full and deep counter-tenor, the beauty of the tones of which have seldom been surpassed. He appears to have first sung on the stage at Rome in 1721, when he exhibited in the female character of Costanza, in Buononcini's opera of *Griselda*. In 1723 he assisted at the great musical congress at Prague, at the coronation of the emperor Charles VI as king of Bohemia. After having performed for several years at Venice, Rome, and other places in Italy, he was at length engaged by Handel to supply the place of Senesino in London. He remained some time in this country, and continued in the highest estimation long after he had quitted it. He was engaged at Berlin in 1750, 1754, and 1755, and at St Petersburg till 1758, at which time he returned to Italy, where not long afterwards his death took place. In person Carestini was tall, handsome, and majestic; and his acting was marked by animation and intelligence. It has been said, by Haase and other eminent professors, that whoever had not heard Carestini could not be acquainted with the most powerful style of singing.—*Biog. Dict. of Music.*

CAREY, LL.D. (JOHN) an eminent classical scholar and most industrious writer, who was born in Ireland. At the age of twelve he quitted his native country, being sent to finish his education in a French university. His first publication appears to have been "Latin Prosody made easy," 1800, which was followed by several other elementary works relating to philosophy. He edited Dryden's translation of Virgil; the Regent's Classics; Ainsworth's Latin Dictionary; the Abridgement of Schleusner's Greek Lexicon of the New Testament; and several other works of standard merit. He translated from the French "The Batavians," of Bitambé, and "The Young Emigrants," of Mad. de Genlis; "Letters on Switzerland," from the German of Lehman; and he engaged in many other literary undertakings, and was a contributor to periodical journals. He resided at Lambeth, Surrey, where he acted as a private teacher of the classics, the French language, and stenography. The latter years of his life were embittered by sufferings arising from a calculus disease, which occasioned his death December 8, 1830, at the age of seventy-three.—*Gent. Mag.*

CAREZ (JOSEPH) a printer at Toul in Languedoc, who made some important im-

CAR

provements in stereotype printing. He gave to his works the appellation of omotypes. Carex was chosen a deputy to the legislative assembly in 1791; and he died in 1801.—*Dict. Hist.*

CARITEO, an Italian poet, whose real name is unknown. He lived at Naples in the fifteenth century, and published volumes of poems in 1506 and 1509. In 1519 appeared his "Opera Nuova e Amorosa Composta," &c. 8vo, which book is very scarce.—*Dict. Hist.*

CARMONTELLE (—) a French dramatist and miscellaneous writer, born at Paris in 1717, and died in 1806. He was reader to the duke of Orleans, (grandson of the regent,) and manager of fêtes, in the service of that prince. His principal productions are his "Proverbes Dramatiques," 1768—81, 8 vols, 8vo; "Nouveaux Proverbes Dramatiques," 1811, 2 vols, 8vo; and 1825, 3 vols, 8vo. He also wrote romances and conversations.—*Biog. Univ. Class.*

CARPZOV or CARPZOVIVS (BENEDICT). There were two of this name, father and son, each of them exceedingly eminent as jurists. The former was born in 1565, in the marquisate of Brandenburg, and died professor of law at Wittemberg in 1624. The latter was born in 1595, and succeeded his father as professor at Wittemberg, and also became chancellor of Saxony, and died in 1666. He wrote several commentaries on the Scriptures, besides legal works, the principal of which are, "Introductio ad Practicum Rerum Criminalium," folio; "Comment. ad Legem Regiam Germanorum," folio; "Definitiones Ecclesiasticæ;" "Definitiones Forenses;" "Decisiones Saxonice," 3 vols, folio; "Processus Juris Saxonici."—There was also a JOHN BENEDICT CARPZOV, who was professor at Leipsic in the beginning of the eighteenth century. He published in 1721 an esteemed work, entitled "Introductio ad Libros Canonicos Bibliorum Veteris Testamenti," which was reprinted in 1731, and again in 1741.—*Dict. Hist. Marsh's Lect.*

CARR (WILLIAM HOLWELL) a distinguished patron and connoisseur of the fine arts, and a director of the British Institution. He was the son of the Rev. William Holwell, vicar of Thornbury, Gloucestershire, and having been educated at Exeter College, Oxford, where he took the degree of B.D, he obtained the valuable vicarage of Menheniot, in Cornwall. In May, 1797, he married lady Charlotte Hay, daughter of the earl of Errol, who became heiress of her maternal grandfather sir William Carr, Bart. of Etal, in Northumberland; and on the estate of Etal devolving to lady C. Holwell, in 1798, she and her husband obtained the royal licence to take the name and arms of Carr. She died in 1800, leaving an infant son, on whose decease, in 1806, the estate passed to another branch of the family. Mr. Carr, who remained a widower, died in London, December 24, 1830, aged seventy-two. He left his fine collection of pictures to the National Gallery.—*Gent. Mag.*

CAR

CARRINGTON (N— T—) an ingenious poet, the son of a tradesman, who had a situation in the arsenal at Plymouth, in which town he was born in 1777. He was apprenticed to a measurer in the dock-yard, but disliking his occupation, he absconded, and entering on board a man-of-war, served in an action off Cape Finisterre, February 14, 1797. Having written verses on the occurrence, which were shown to his captain, he was discharged as a favour; and returning to Plymouth Dock, now Devonport, he became a public teacher, an office for which he had qualified himself in a great measure by his own exertions. He afterwards opened a school at Maidstone in Kent, where he remained about two years; and in 1806 returned to dock, where he continued to keep a school or academy till near the time of his death, which took place at Bath, September 2, 1830. His works consist of "The Banks of Tamar," 1820; "Dartmoor, a descriptive poem," 1826, written for a premium offered by the Royal Society of Literature; and "My Native Village, with other poems," published posthumously.—*Amer. Biog.* vol. xvi.

CARRON (GUY TOUSSAINT JULIEN) a French ecclesiastic, born at Remes in 1760. After he had entered on his professional career, he founded at Rennes, in 1789, a manufactory of stuffs, cottons, &c. in which 2,000 paupers were employed; and he also opened a penitentiary for the reformation of women of the town. At the Revolution he refused to take the oath required from priests by the Constituent Assembly, and he was therefore imprisoned at Rennes, and afterwards banished to Jersey, where he devoted himself to charitable undertakings. In 1796 he removed to London, and in that metropolis formed schools and hospitals, and was patronized by the exiled king, Louis XVIII. Returning to France in 1814, he was made director of an institution for the support of young females who had been deprived of their property during the Revolution, called the Institute of Maria Theresa. The abbé Carron died March 15, 1820. He published "Réflexions Chrétiennes pour tous les Jours de l'Année," 1796, 12mo; "Pensées Ecclésiastiques," 4 vols, 12mo; "Pensées Chrétiennes," 6 vols, 12mo; "Vies des Justes;" and "Les Confesseurs de la Foi dans l'Eglise Gallicane," 4 vols, 8vo.—*Biog. Univ. Class.*

CARTEAUX (JOHN FRAN.) a French republican general, born in Franche Comté in 1751. He entered into the army as a private at the age of sixteen, and became a non-commissioned officer. Previous to the Revolution he had quitted his regiment, and adopted the profession of a miniature painter. He then was appointed a lieutenant in the cavalry of the National Guard; and he obtained the rank of adjutant-general after the famous 10th of August, 1792, in the events of which day he was concerned. He subsequently was made general of a brigade, and employed against the Marseillais in 1793; and he afterwards commanded the army at

the siege of Toulon. He was then arrested by order of the Convention, and confined in the Conciergerie at Paris. Being set at liberty, he was sent to command on the coasts of Normandy in 1795, when he quelled an insurrection at Caen. Buonaparte (who had served under Carteaux at Toulon) when he became consul, placed him in the administration of the lottery, and at length sent him as a commissioner to the principality of Piombino. He returned to France in 1805, and died about two years after.—*Ibid.*

CARTER (THOMAS) an eminent musician and composer of vocal music, who was born in Ireland. He left his native country while very young, and being patronised by the earl of Inchiquin, he completed his musical education in Italy, where he was much noticed by Sir William Hamilton, English ambassador at the court of Naples. Among his finest compositions are the beautiful ballad of "O Nanny, wilt thou gang with me;" also the celebrated description of a sea-fight, "Stand to your guns, my hearts of oak." He likewise composed a capriccio, commencing with the words "Fairest Dorinda," in which musical science is combined with most humorous comic expression. He went to the East Indies, where he remained some time, and was conductor of the musical department at the theatre of Calcutta. At length he was obliged to return to England in consequence of ill health, labouring under an affection of the liver, which terminated in his death in 1804.—*Biog. Dict. of Mus.*

CARTERET (PHILIP) a naval officer, who, in conjunction with captain Wallis, commanded an expedition to the South Seas in 1766. Some discoveries were made, of which Dr Hawkesworth published an account in the introduction to his Narrative of Captain Cook's First Voyage. Captain Carteret, who was a fellow of the Royal Society, was the author of two papers in the Philosophical Transactions.—*Ann. Reg.*

CARUSIUS or CARUSIO (JOHN BARTIST) a Sicilian historian, was born at Palermo in 1673, and died in 1750. He is author of "Memorie Istoriche della Sicilia," folio; and "Bibliotheca Historica Regni Siciliae," 2 vols, folio.—*Dict. Hist.*

CASANOVA (FRANCIS) an eminent French landscape and battle painter, of Italian parentage, but born in London in 1730. He settled at Paris, where he was admitted a member of the Academy of Painting in 1763. He was employed by the prince of Condé, and Catherine II engaged him to paint the battles and victories of the Russians in her wars with Turkey. He died near Vienna in 1805.—*Biog. Univ. Class.*

CASSAS (LOUIS FRANÇOIS) a distinguished French artist and antiquary, who was born at Azy-le-Feron in 1756. After having employed his youth in the study and delineation of the antiquities of Sicily, Istria, and Dalmatia, he accompanied the Count Choiseul Gouffier to Constantinople, being engaged by that nobleman to make drawings for the con-

tinuation of his "Voyage dans la Grèce." Shortly afterwards he visited the Asiatic shore of the Archipelago with M. Le Chevalier, author of the "Voyage de la Troade," and then proceeded to the ruins of Baalbec and Palmyra, in the desert of Syria. About the commencement of the Revolution he returned to France, having his portfolio stored with treasures highly interesting to the admirers of the fine arts and the relics of antiquity. The result of his labours appeared in the "Voyage pittoresque de l'Istrie et Dalmatie;" and "Voyage pittoresque de la Syrie, de la Phénicie, de la Palestine, et de la Basse Egypte," of which thirty parts had been published in 1813, but the work was left unfinished at the death of the artist, which took place suddenly, in consequence of apoplexy, at Versailles, November 1, 1827. M. Cassas was occupied many years in forming, at a considerable expense, a collection of architectural models in almost every kind of style, which he liberally disposed of, for a small annuity, to the imperial government for the use of the public.—*For. Rev.*

CAULAINCOURT (ARMAND AUGUSTIN LOUIS de) duke of Vicenza, descended of one of the most illustrious families of Picardy, was born in 1773. He entered young into the army, and became aid-de-camp to his father, lieutenant-general the marquis de Caulaincourt, and retired from the service at the same time with him. In 1792 he was imprisoned as a suspected person, with all his family; and he was set at liberty only because he was included in the first requisition for recruiting the republican army. He became a private soldier in a regiment of foot, and removing into the cavalry passed through the lower ranks of promotion. After the 9th of Thermidor he was aide-de-camp to general Aubert du Bayet, whom he attended in his embassy to Constantinople. In 1797 he returned to France with the Turkish ambassador; and he then obtained the command of a squadron, and became aide-de-camp to his uncle, general d'Harville. He next served with distinction under Moreau, and was afterwards made aide-de-camp to the first consul, Buonaparte, who sent him on a mission to Russia. He attended Napoleon in his campaigns in 1805, 1806, and 1807; and was employed in another embassy to Russia, in which he is said to have gained the esteem of the emperor Alexander. He afterwards in vain opposed the expedition of Napoleon into Russia, and in 1813 he was sent to negotiate at the congress of Prague. After the battle of Leipzig he was made minister of foreign affairs, which post he held during the discussions at the congress of Chatillon. After the restoration of the king he held no public situation. His death took place at Paris, February 13, 1827.—*Revue Encyc.*

CAVENDISH (lord FREDERICK) the third son of the third duke of Devonshire, born in 1729. He entered into the army, and arrived at the rank of field-marshal. Having been taken prisoner at the battle of St Cas, on the coast of France, in 1758, the French comman-

der offered to release him on his parole, and when he declined the favour as one which he could not conscientiously accept, because on his return to England he should think it his duty to vote as a member of parliament for supplies for carrying on the war against France, "Let not that prevent you from returning home," said the duke de ———, "for we should no more object to your voting in parliament, than to your getting children, lest they should some day assist in the conquest of France." Lord F. Cavendish died in 1803.—CAVENDISH (lord JOHN) brother of the preceding, distinguished himself as a politician. He was one of the lords of the treasury under the ministry of the marquis of Rockingham, in the American war; and he was a constant opponent of lord North, whom he succeeded as chancellor of the exchequer. He died in 1796.—*Smollett. Belsham's Hist. of George III.*

CENSORINUS, a grammarian and critic of the third century, who lived at Rome, and compiled a work, "De Die Natali," printed at Cambridge in 1695. It is a chronological treatise on remarkable events. His remarks on music are deemed curious.—*Moreri.*

CENTORIO (ASCANIUS) a celebrated Italian soldier and writer of the sixteenth century, who wrote military annals of his own time, printed at Venice in 1565 and 1569, in 2 vols. 4to.—*Dict. Hist.*

CERACCHI (JOSEPH) an eminent sculptor, born at Rome about 1760. He became a pupil of Canova, and had obtained distinction as an artist, when the French invaded Italy. Having adopted revolutionary principles, he relinquished his profession to devote himself to political intrigue. He was obliged to quit his country; and going to Paris he engaged in a plot against Buonaparte, then first consul, for which he was executed, February 10, 1801. See ARENA.—*Biog. Univ.*

CERE (JOHN NICHOLAS) a French botanist, born in the isle of France in 1737. After having served in the navy, he retired to his estate in his native country, and devoted his time to the study of natural history. In 1775 he was appointed director of the botanic garden in the Isle of France, in which he made great improvements, and introduced into the island the cultivation of cloves and various other spices, to a great extent. He was chosen a member of the Agricultural Society of Paris, in whose Transactions for 1789 he published a memoir on the cultivation of rice. His death took place in 1810.—*Biog. Univ. Class.*

CESPIDES (PAUL) an eminent Spanish painter, who wrote a book on his art. His picture of the Last Supper, in the cathedral of Cordova, is much admired. He died in 1668.—*Cumberland.*

CHABANON (M. de) a French writer, who was member of the Academy of Inscriptions and Belles Lettres. He died at Paris in 1792, aged sixty-two. He wrote some dramatic pieces, and translated Pindar and Theocritus. He was also author of a "Treatise on Music," 2 vols. and an account of his own life.—He had a brother named CHABANON de MANGIN,

who also wrote some dramatic pieces.—*Dict. Hist.*

CHALMERS (GEORGE) a miscellaneous writer of some emineuce, was born in 1742 at Fochabers, in the county of Moray, where his family had long been seated. He was educated at the grammar-school of that town, whence he was removed to King's College, Aberdeen. Thence he removed to Edinburgh, where he studied law, which he practised in America until the colonial revolt. On his return to Britain he settled in London, where he applied to literary pursuits, and produced his "Political Annals of the United Colonies;" "An Estimate of the Comparative Strength of Great Britain;" and various other works of a kindred nature; on which account he was selected as a fit person to be chief clerk of the board of trade, which duty he fulfilled for thirty-nine years. A list of the various works of Mr Chalmers, who was a member both of the Royal and Antiquarian Societies, we have not been able to procure; but his most distinguished production, his "Caledonia," is generally esteemed the most complete. He composed in several departments of literature, and much distinguished himself in the controversy concerning Ireland's forgery of Vortigern and Rowena, the authenticity of which he too hastily credited. Besides the office already mentioned, he acted as colonial agent for the Bahama islands. He died on the 21st of May, 1825, aged eighty-two.—*Ann. Biog.*

CHAMPOLLION the YOUNGER (I——F——) a French writer, celebrated for his discoveries relating to Egyptian archaeology, and especially hieroglyphics. He was born in 1790, at Figeac, and became professor of history at Grenoble. He studied the Coptic and other Oriental languages, investigated the ancient inscription on a stone found at Rosetta when the French invaded Egypt, and he examined rolls of papyrus, especially while he was at Turin in 1823 and 1824. The result of some of his researches appeared in the publication entitled "Panthéon Egyptien," Paris, 1824, 4to, a collection of designs from figures on Egyptian monuments, with explanations. The same year he published "Précis du Système Hiéroglyphique des Anciens Egyptiens," 2 vols. 8vo, illustrated with engravings. In this he gave an account of his developement of a Phonetic Alphabet, furnishing a key to the ancient hieroglyphics. In 1825 he delivered lectures on his system at Rome. In 1826 he was appointed by Charles X superintendent of a department of the royal museum at the Louvre, destined for the preservation of Egyptian and other Oriental antiquities. He went to Egypt in 1828 with other men of science to prosecute researches at the expense of the king of France. M. Champollion, who was a member of the Academy of Inscriptions and Belles Lettres, and of other learned societies, died at Paris in the beginning of March, 1832, and he was interred in the church of St Roche, Rue St Honoré.—*Encycl. Amer. Galignani's Messenger.*

CHAPMAN (FRED. HENRY) a Swedish naval officer, who distinguished himself by his attention to marine architecture. He attained the rank of vice-admiral, and died in 1808. His "Treatise on Ship-building" was translated into French by Lemonnier, and subsequently by Vial de Clairbois. Gustavus III bestowed on him a patent of nobility, and the title of commander of the order of the sword. — *Biog. Univ. Class.*

CHAPPE (CLAUDE) the nephew of the Abbé Chappe d'Aueroche. (See *Dict.*) He was born in 1763. In his twentieth year he attracted the notice of men of science by some essays published in the *Journal de Physique*; but his fame is founded on the invention, or rather the introduction into practice, of the mode of conveying intelligence by signals, to which he gave the name of the *Telegraph*. Wishing to communicate with friends who resided at the distance of several miles from him, he conceived the idea of conversing by signals, and having made some experiments to ascertain the practicability of the plan, he so far perfected it as to construct a machine on a large scale, a description of which he laid before the National Assembly in 1792. The first telegraphic line of communication was completed in 1793, and the first news transmitted by it was an account of the capture of Condé. The advantages of this scheme were so manifest that telegraphs were soon erected, not only in different parts of France, but also in other countries, and the invention, which has received many improvements, has long since been generally adopted. The honour of the discovery, however, was contested, and that circumstance, with others, produced so melancholy an effect on the mind of M. Chappe that he put an end to his life, in 1805, by throwing himself into a well. — *Encyclop. Amer.* See **AMONTONS (W. U.)**

CHAPPLE (WILLIAM) a topographer, was born at Witheridge in Devonshire, in 1718. He received a common education, which he improved by self-application, until he became tolerably versed in the classics and mathematics. He acted for some time as clerk to an eminent surveyor, and then as secretary to the county and city hospital at Exeter, and ultimately as steward to Sir William Courtenay. He died at Exeter in 1781. He was an active contributor to the *Gentleman's Magazine*, and *Ladies' Diary*; and a part of an edition of Risdon's Survey of Devon, superintended by him, was published after his death in 1785, 4to, with a sketch of his life prefixed. — *Life as above.*

CHAPTAL (JEAN ANTOINE CLAUDE) count of Chanteloupe, peer of France, a distinguished chemist and natural philosopher. He was born in 1756, at Nozaret, in the department of Lozere. His father supported his family by the cultivation of his own estate, which descended to his eldest son, and the subject of this article was therefore destined for the medical profession. He studied at Mende, and afterwards at the College of Rhodex, and

then went to Montpellier, where one of his uncles was engaged in the practice of medicine. He subsequently passed four years at Paris, whence he was recalled to accept of a professorship of chemistry then founded at Montpellier by the states of Languedoc. His lectures were numerous attended, and his reputation as a chemist raised him to eminence. He published at this time "Éléments de Chimie," 3 vols, 8vo, which became exceedingly popular, and was translated into English and other languages. In 1787, the states, as a mark of approbation of his conduct, obtained for him the order of St Michael, and letters of nobility. He displayed his attachment to liberty on the occurrence of the French revolution, and especially at the assault of the citadel of Montpellier, in 1791. Being summoned to Paris in 1793, to assist in the measures adopted by the government to obtain supplies of gunpowder for the French armies, he succeeded in furnishing from the manufactory at Grenoble, 3,500lbs. a-day. He co-operated in the formation of the Polytechnic school; and having made arrangements for the performance of the gunpowder works, he obtained permission to return to Montpellier, to organize the school of medicine there, in which he was appointed by the government to the professorship of chemistry. In 1798 he returned to Paris, and was made a member of the National Institute. After the revolution of the 18th Brumaire, he was appointed by the first consul, in 1799, counsellor of state; and in 1800, minister of the interior, in which last post he encouraged the study of the useful arts, and established near Paris a chemical manufactory on a large scale. In 1804 he was dismissed from the office of the interior; but Napoleon nominated him a senator, and shortly after grand dignitary and treasurer of the senate. In 1810 he received the title of count and chevalier grand cross of the order of Re-union. After the return of Napoleon from Elba he was appointed director-general of commerce and manufactures, and minister of state. On the second restoration of Louis XVIII, he retired from public affairs; and at this time he entered into some negotiations with the princess of Orleans relative to the estate of Chanteloupe, from which he took his title, and which had been her property. He was, however, in 1816, admitted into the newly organized Academy of Sciences; and he was nominated a member of the council-general of hospitals, of the council of prisons, and the council of agriculture; and at length, by a royal decree of March 5, 1819, he was called to a seat in the chamber of peers. Besides the work already mentioned he published "L'Art de la Teinture du Coton en rouge d'Adrianople;" "Traité de Chimie appliquée aux Arts," Paris, 1807, 4 vols; "L'Art de faire le Vin;" "L'Industrie Française, ou Coup-d'œil sur l'Exposition, &c." 1821, 8vo; and "Chimie appliquée à l'Agriculture," 1823, 2 vols. Count Chaptal, though his name is often associated with those of Lavoisier, Berthollet, Guyton Morveau, and other celebrated men in France, whose labours

contributed chiefly to the vast modern improvements in chemical science, did not distinguish himself by any splendid discoveries, or original views of the theory of chemistry; but he applied his talents with great advantage to the investigation of the methods of conducting various processes in the arts and manufactures of his native country, and he acquired a large share of reputation by his attention to technological chemistry, or what may be styled the chemistry of the arts. His death took place July 29, 1832.—*Biog. des Contemp. Encycl. Amer.*

CHARDON (MATHIAS) a learned French ecclesiastic, who belonged to the Benedictine congregation of St Maur. He was the author of a valuable work entitled "Histoire des Sacrements," Paris, 1745, 6 vols, 12mo, of which there is an Italian translation. Chardon died at Metz in 1771.—*Biog. Univ.*

CHARNOCK (JOHN) an ingenious miscellaneous writer, was born at Barbadoes in 1765. He received his education at Winchester school, and Merton college, Oxford, and subsequently entered the naval service, but was unfortunate in life, and died in the King's Bench in 1807. His works are, "The Rights of a Free People," 8vo; "Biographia Navalis," 6 vols, 8vo; an able "Supplement to Campbell's Admirals;" "A Letter on Finance and National Defence;" "A History of Marine Architecture," 3 vols, 4to; a "Life of Lord Nelson;" &c.—*Chalmers's Biog. Dict.*

CHARKÉRIE (Mad. de St HYACINTHE de) a French authoress, born about 1746, and died in 1806. She was married to a gentleman of the Pays de Vaud, and resided in a village near Neuchâtel. Among her publications are "Calliste, ou Lettres écrites de Lausanne," 1786, 8vo; "Missess Henley" "Lettres Neuchâtelloises;" and novels and dramatic pieces, entitled "Œuvres de l'Abbé de la Tour," Leipsic, 1798, 3 vols, 8vo. Almost all her works have been translated into German by L. F. Herder.—*Biog. Univ. Class.*

CHASTELAIN (GEORGE) a French gentleman, who lived at the court of the duke of Burgundy in 1475. He composed in French verse an account of all the memorable events of his time, 1531, 4to. He was also the author of "Le Chevalier Délibéré, ou la Mort du Duc de Bourgogne," 1489, 4to; "Histoire du Chevalier Jacques de Lalain, &c." 4to—*Moreri.*

CHASTELARD (PIERRE de BOSSCOLE de) a gentleman of Dauphiny, who was, according to De Thou, the grandson of the chevalier Bayard. He accompanied Mary queen of Scots (when widow of Francis II) to her native country, having become violently enamoured of that beautiful princess. He secretly introduced himself into her bed-chamber, and being discovered, he was tried, convicted of treason, and condemned to be beheaded, which sentence was executed. Chastelard cultivated poetry; and one of his compositions in praise of his royal mistress has been published by Laboureur, in the Memoirs of Castlenau.—*Biog. Univ. Class.*

CHASTELER (JOHN, marquis de) an Austrian general, born in Hainault in 1750. He entered young into the artillery, and distinguished himself in the war between Austria and Russia, in 1788. Being afterwards sent into the Netherlands to repair the fortifications of Namur, he was taken prisoner by the French in 1792; and being exchanged some months afterwards, he was made a major-general. In that quality he made the campaign of 1793, and was repeatedly wounded at the siege of Valenciennes. On the renewal of hostilities between France and Austria in 1809, the marquis de Chasteler was employed to organize an insurrection of the Tyrolese against Bavaria; but he was vanquished by the Franco-Bavarians, under marshal Lefevre. He afterwards served in the campaign of 1813; and in that of 1815, in Italy, against Murat. At length he was appointed governor of Venice; and he died at his estate, near Aeth, in the Netherlands, in 1820.—*Biog. des Contemp. Biog. Univ. Class.*

CHASTELET D'HARAUCOURT (LOUIS MARIE FRAN. duke du) son of the celebrated madame du Chastelet, born in Burgundy about 1740. He entered into the army, and obtained the rank of lieutenant-general. In 1789 he was nominated a deputy of the nobility of Bar to the states general; and being imprisoned after the 10th of August, 1792, he was tried before the revolutionary tribunal, condemned, and executed, December 13, 1793. He had been ambassador in England before the revolution; and he wrote "Memoirs" relative to his mission, which were published towards the end of the last century.—*Biog. Univ. Class.*

CHATEAUROUX (MARIE ANNE, duchess de) was born in 1719, and at the age of seventeen married the marquis de la Tournelle. Becoming a widow in 1742, she attracted the notice of Louis XV, who made her his mistress, gave her the title of duchess, and the place of lady of the palace to the queen. She died December 8, 1744. A "Collection" of her Letters was published at Paris, 1806, 2 vols, 12mo.—*Biog. Univ.*

CHAUDET (ANTOINE DENIS) a French sculptor, born at Paris in 1763. He was a pupil of Stouf, and became one of the most eminent artists of his time. He also cultivated painting; and particularly distinguished himself by a picture of "Æneas and Anchises amidst the Conflagration of Troy." He was appointed professor at the Schools of Painting and Sculpture at Paris; and in 1805 he succeeded the sculptor Julian as a member of the Institute. He died in 1810.—*Biog. Univ. Class.*

CHAUDON (LOUIS MAYRUL) a French writer, born in Provence in 1737, died in 1817. Having belonged to the Benedictine congregation of Cluny, which was secularized in 1787, he retained the title of abbé till his death. Among his most important literary labours, was his share in the *Nouv. Dictionnaire Historique*, first published at Avignon, 1766, 4 vols, 8vo, which has since passed through numerous editions, the last of which,

1821—23, extends to thirty volumes. He was the author of "Leçons d'Hist. et de Chronol." Caen, 1781, 2 vols, 12mo; "Elémens de l'Hist. Ecclési. jusqu'au Pontificat de Pie VI.," 8vo; and he was a contributor to many compilations.—*Ibid.*

CHAUNCY, or CHAUNCEY, DD. (CHARLES) an American divine, pastor of the first church at Boston, New England, who died in 1787, aged eighty-two. He was the author of "Thoughts on the State of Religion in New England," 1743, 8vo; "A True Sketch of the Sufferings and Misfortunes of the Town of Boston," 1744, 8vo; "The Mystery hid from Ages and Generations made manifest by the Gospel Revelation, by one who wishes well to the whole human race," 1784, 8vo; "Five Dissertations on the Scripture Account of the Fall and its Consequences," 1785, 8vo; and "The Benevolence of the Deity considered," 1784, 8vo. Dr Chauncy was one of the most eminent writers belonging to the sect of the universalists.—*Reuss. Williams's Dict. of Religious Opinions.*

CHAUSSARD (PIERRE J. B. PUBLICOLA) a poet and miscellaneous writer, born at Paris in 1766. Adopting popular principles at the Revolution, he successively became civil commissary to the army, in Belgium, secretary to the mayoralty at Paris, secretary to the committee of public safety, and at length secretary general to the commission for public instruction. He subsequently was professor of the belles lettres at Rouen, at Orleans, and at Nismes. He died at Paris, October 1, 1823. His works are very numerous, including "Esprit de Mirabeau," 2 vols, 8vo; a translation of Arrian's Expedition of Alexander the Great, 3 vols, 8vo; "Ode sur l'Industrie et les Arts;" "Épître sur quelques Genres dont Boileau n'a pas fait mention dans son Art Poétique;" and he left in MS. a translation of the Odes of Horace. It is to be regretted, that among his most popular productions are some licentious and obscene romances.—*Biog. Univ. Class.*

CHEMNIZER (IVAN IVANOWITCH) a Russian poet and fabulist, of German descent, but born at Petersburg, in 1744. He entered into the Imperial Guards, and made several campaigns; after which he removed into the corps of engineers. After travelling with a person of rank in Germany, Holland, and France, he returned home, and obtained dismission from the army that he might devote himself to literature. He died in 1784, at Smyrna, where he had been appointed consul-general by Catherine II. The Russians compare this poet to La Fontaine, whom he is said to have resembled in his personal character. His works were collected and published at Petersburg, in 1799, under the title of "Fables and Tales, by I. I. Chemnizer," 8vo.—*Ibid.*

CHENEVIX (RICHARD) a native of Ireland, who possessed great versatility of talent, and distinguished himself by his labours in various departments of science and literature, but is

best known for his researches and publications on chemistry. He was a fellow of the Royal Societies of London and Edinburgh, a member of the Royal Irish Academy, and of several institutions on the continent of Europe. He published many papers in the Philosophical Transactions, Nicholson's Journal, the Philosophical Magazine, and other periodical works. His first separate publication was entitled "Remarks on Chemical Nomenclature according to the System of the French Neologists," 1802, 12mo. His observations on mineralogical systems, a defence of the doctrines of Haüy against those of the German professor Werner, first appeared in a French translation in the *Annales de Chimie*. Mr Chenevix wrote "The Mantuan Rivals," a comedy; and "Henry the Seventh," an historical tragedy, which are said to display the spirit of the dramatic authors of the Elizabethan age. He was also the author of "An Essay upon National Character, being an Inquiry into some of the principal causes which contribute to form and modify the character of nations in the state of civilization," 2 vols, 8vo. This work appeared after his death, which took place at Paris, April 5, 1830.—*Month. Mag.*

CHERON (LOUIS CLAUDE) a French writer, born at Paris in 1758. He sat in the legislative assembly in 1791; was imprisoned during the reign of terror, and being set at liberty after the 9th of Thermidor, he was in 1798 elected a member of the council of five hundred, but he refused the office. He became prefect of the department of Vienne, and died at Poitiers, in 1807. His works are numerous, consisting chiefly of dramatic translations or imitations, the best of which is his "Tartufe de Mœurs," taken from Sheridan's School for Scandal.—*Biog. Univ.*

CHEETHAM (HUMPHREY) the munificent founder of the college and library at Manchester. He was born July 10, 1580, and was the third son of Henry Cheetham, of Crampall, a Lancashire gentleman of landed property. He engaged in trade as a dealer in Manchester goods, and realized a large fortune. But little is known concerning him, except that he served the office of high sheriff of the county of Lancaster in 1635, and died, unmarried, October 12, 1653, having, by his will, dated December 16, 1651, made provision for the foundation of the noble establishment to which he owes his fame. A collegiate church was founded at Manchester, in the reign of Henry V, by Thomas West, lord De la Warre, which, being suppressed at the reformation, came into the possession of the earls of Derby, from whom the buildings were purchased, by the trustees of Mr Cheetham, who obtained a charter of incorporation in 1665. The original object of the college, or school, thus instituted, was to maintain and educate forty poor boys, and since 1780, the number has been increased to eighty. Mr Cheetham gave 1,000*l.* to purchase books for the formation of a library, and, after providing for the support of the school, and bequeathing various sums for charitable and other purposes, he appropriated

the remainder of his estate to the augmentation of the library. This is one of the few English literary institutions, the books belonging to which are unrestrictedly and gratuitously submitted to the perusal of the public. It is opened daily during several hours, when any person, whether a resident at Manchester or not, on entering the library and requiring to read, is requested by the sub-librarian to insert his name and address in a book, kept for that purpose; after which he is at liberty to make use of the literary treasures of the institution, a room, properly furnished, being appropriated to visitors. A catalogue of the collection of books and manuscripts was printed in 1791, 2 vols, 8vo; and a third volume, containing subsequent additions, appeared in 1826. Among the printed books are some valuable editions of the classics, a variety of standard works on philosophy, history, and science, and many manuscripts, some of which are extremely curious.—*Hone's Year Book.*

CHIARINI (——) a learned Jew, who was professor of divinity, the Oriental languages, and Hebrew antiquities at Warsaw, where he died, February 28, 1832. He was the author of a work on the "Theory of Judaism," in French, 3 vols, the appearance of which is said to have occasioned a great sensation on the continent. He also published a Hebrew Grammar and Dictionary, in Latin, which subsequently appeared in a Polish translation; and a collection of Italian poetry. At the time of his decease he was engaged in making a complete translation of the Talmud, of which the first part was printed, and other portions of the work were left in manuscript.—*Gent. Mag.*

CHLADNI, or **CHLADENIUS** (ERNEST FLORENS FRIEDRICH) a distinguished German philosopher, who made some important discoveries relating to phonics, or the science of sound. He was born in 1756, at Wittenburg, where his father was first professor of the law in the University. He was educated partly at home, and afterwards at the provincial school of Grimma. He then travelled, and after his return home, he obtained a professorship of jurisprudence, at Leipsic, which on the death of his father he resigned, in order that he might devote himself entirely to the study of natural philosophy. He had some acquaintance with music, and having observed that the theory of sound had been more neglected than many other branches of science, he was induced to institute researches, with a view to the elucidation of that subject. He made many experiments on plates of glass or metal, fixed on one side, but so as to vibrate freely on being struck; and at length he made the curious discovery, that a sonorous plate, fixed horizontally, and having its upper surface regularly strewed with sand, or any other fine powder, on being struck at the edge with a violin bow, not only gave a peculiar sound, but also exhibited a corresponding arrangement of the sand: the first figure which he observed on a round plate, was that of a star with ten or twelve rays. Having varied and multiplied his experiments,

he ascertained that these appearances were produced by the sonorous vibrations, and that they varied according to the shape of the plate, and the manner in which it was struck. Chladni published the result of his observations, at Leipsic, in 1787, in a work entitled "Discoveries concerning the Theory of Sound;" and an account of the researches which he subsequently made, relative to longitudinal vibrations and other acoustic phenomena, appeared in the memoirs of scientific societies, and in periodical journals. Having made additional experiments, he arranged in a more systematic form, his observations and discoveries in his "Treatise on Acoustics," published in 1802, and in French, at Paris, in 1809. He likewise invented two musical instruments; one called the Euphon, in 1790, in which musical sounds are produced by the friction of glass tubes; and the other, called the Clavicylinder, about 1800. Besides the works already mentioned, he published "Additional Contributions to Acoustics," 1817; and "Contributions to Practical Acoustics, and the Theory of Instrumental Construction," 1822. He also engaged in a course of experimental researches, relative to aerolites, the result of which appeared in his treatises "On the Origin of the Masses of Iron found by Prof. Pallas, and other substances of the same nature," Riga, 1794; and a treatise "On Fiery Meteors," Vienna, 1819. This most ingenious, and highly successful investigator of natural phenomena died in 1829. His latest discovery was that of the manner of the propagation of sound, by means of applying the theory of liquid waves to that of aerial ones, strikingly illustrative of the doctrines advanced in his earlier writings on acoustics.—*Encycl. Amer. Biog. Dict. of Mus. Month. Mag.*

CHOISEUL (ETIENNE FRAN. duc de) born in 1719. Having entered young into the army, when he bore the title of the count de Stainville, he rapidly rose to a high rank. After marrying a rich heiress, the sister of the duchess de Gontaut, he was appointed ambassador to Rome. In 1756 he was sent in the same capacity to Vienna, and on his return he became minister for foreign affairs. At the same time he was created a duke and peer of France; and on the death of the marshal de Belleisle, he entered on the office of war minister, being himself succeeded by his cousin, the count de Choiseul, made duc de Praslin; and two years after he had also confided to him the ministry of the marine. One of the most important measures in which he was engaged was the suppression of the order of the Jesuits, which he effected notwithstanding the opposition of the dauphin, the father of Louis XVI. The peace of 1763, inglorious as it was for France, excited discontent against his administration; and the death of the king's mistress, madame de Pompadour, in the following year, deprived him of a friend to whose support he was greatly indebted for the success of his schemes. She was succeeded by madame du Barri; and through her intrigues with the enemies of Choiseul, he was

dismissed from the ministry in December 1770. After the accession of Louis XVI, he was restored to favour; but he did not recover his influence in the state. He died overwhelmed with debts, in 1785. The improvement of the constitution of the French army and navy, the conquest of Corsica, an opposition (though ineffectual) to the first dismemberment of Poland, and the original idea of the separation of the North American colonies from Britain, are the most important circumstances connected with the administration of this nobleman to military affairs; and the family compact with Spain was his principal achievement as minister of foreign affairs. His writings, which were not intended for the public eye, and which were disavowed by the duchess, were published by Soulavie, in 1790, 2 vols, 8vo.—*Biog. Univ. Nouv. Dict. Hist.*

CHORIS (LOUIS) an eminent artist, who was born of German parents, at Eraterinoslaw, in Russia, March 22, 1795. While a boy at school at Charkow he displayed considerable taste for drawing, and his skill in sketching portraits appeared extraordinary. Thus qualified, in 1813 he was engaged to accompany the celebrated botanist, baron von Biberstein, in a journey to Mount Caucasus; and he designed the plants described in the "*Flora Caucasiana*." In 1814 he was chosen a member of the Society of Arts at St Petersburg, and the same year he was appointed draughtsman to the expedition undertaken at the expense of count Romantsoff, for a voyage round the world, in a vessel called the *Rurick*, commanded by Otto von Kotzebue, son of the celebrated dramatist. As the result of his labours on this occasion, he published "*Voyage Pittoresque autour du Monde, offrant des Portraits des Sauvages d'Amérique, d'Asie, d'Afrique, et des Isles du Grand Océan; leurs Armes, Habillemens, Parures, Ustensiles, Canots, Pirogues, Maisons, Danses, et Musique; des Paysages, et des Vues Maritimes; Mammifères et Oiseaux, et plusieurs objets d'Histoire Naturelle*," accompanied with descriptions by baron Cuvier and M. Ad. Chamisso. He also published, "*Les Crânes Humains*," with observations by Dr Gall and others, in 22 parts, folio, 1821—23. As a supplement to the foregoing appeared in 1826, "*Vue et Paysages des Régions Equinoxiales, recueillies dans un Voyage autour du Monde*," folio, 24 plates. He likewise announced a publication entitled "*Recueil de Têtes et Costumes des Habitans de la Russie, avec des Vues de Mont Caucase et ses Environs*;" but it did not make its appearance. In 1827, M. Choris sailed from France with the intention of travelling over a great part of America; but, after visiting some of the West India islands, he passed from Cuba to New Orleans, and having set off for Xalapa in Mexico, with an English gentleman, March 19, 1828, they were attacked by robbers, between Puente Nacional and Plan del Rio, and the subject of this article lost his life; his companion escaping to Xalapa, persons were sent from thence, who discovered the body of the de-

APP. BIOG. DICT.

ceased, which was interred at Plan del Rio. This highly ingenious artist was a member of the Geographical Society of Paris.—*For. Rev. Month. Mag.*

CHRIST (JOHN FREDERICK) a learned German, born at Cobourg in 1700. He became professor of history at Jena, and was afterwards professor of poetry at Leipsic, where he died in 1756. A list of his works may be found in the dictionaries of Meusel, or Adelung. Among the most important are a "*Dictionary of Monograms*," Leips. 1747, 8vo, translated into French, with additions, Paris, 1750, 8vo; "*Noctes Academicæ*," Halle, 1727—29, 4 parts, 8vo; "*Origines Longobardicæ*," 1728, 4to; and "*De Nic. Machiavello Lib. III.*" Lips. 1731, 4to.—*Biog. Univ.*

CHRISTIE (JAMES) a distinguished amateur and critic in the fine arts. He was the eldest son of an eminent auctioneer; and was educated at Eton, and originally designed for the church. He passed through that school with great reputation, and acquired a considerable share of classical knowledge, the results of which were displayed in those able dissertations, which evince the soundness of his learning, the depth of his researches, and the purity of his taste. In 1802 he published an "*Essay on the Ancient Greek Game*, supposed to have been invented by Palamedes antecedent to the Siege of Troy," designed to prove that the game of Palamedes was known to the Chinese, and was afterwards improved into the game of chess. In 1806 appeared his "*Disquisition upon Etruscan Vases*;" and he subsequently published "*An Essay on the earliest Species of Idolatry, the Worship of the Elements*," the purpose of which is to show with what views the elements were referred to by early nations, what was understood of the Deity by their means, and by what misconception they became objects of worship. He had a refined taste for poetry, which he read with uncommon feeling and propriety; and though he seldom indulged the "idle calling," he wrote verse with facility and vigour. He followed his father's profession, in the practice of which he exhibited a correct taste, and general knowledge of pictures, sculpture, and other works of art. He was a member of the Dilettante Society, one of the Registrars of the Literary Fund, and also a member of the Antiquarian Society of Newcastle. He died, after a long illness, February 2, 1831, aged fifty-eight, in King-street, St James's square, London.—*Gent. Mag.*

CHRISTIE (THOMAS) a political writer, who attracted some attention at the commencement of the French Revolution. He was born at Montrose, in 1761, and was brought up to trade, but subsequently studied medicine. He sided strongly with the opening of the Revolution, and published a "*Sketch of the New Constitution of France*," and an answer to Burke. His work entitled "*Observations on the Literature of the Primitive Christians*" is deemed able, and he had a considerable share in the Analytical Review. He died at Surinam in 1796.—*Month. Mag.*

G

CHRISTOPHE (HENRY) king of Hayti, a negro of a strong but ferocious character, was born in the island of St Christopher in the West Indies, about 1768. In 1780, being then in his twelfth year, he was removed by the French, who captured that island, to St Domingo, where he became skilful as a cook, and was employed in that capacity at a tavern in Cape Town. When the Revolution broke out, the ascendancy of his character began to appear, and in 1802 he was intrusted by general Le Clerc with the command of a division at the advanced posts, which trust he betrayed, and on the death of Dessalines he assumed the supreme command of the insurgents, with the title of Henry I, king of Hayti. His abilities and determination, supported by the fire inspired by his ferocious spirit, gradually rendered him formidable, and having established his power by a strong military force, he built a town called Sans Souci, with a splendid palace, defended by forts and regular defensive walls. At length his tyranny produced a successful conspiracy; and perceiving that he could not rely upon his troops, he shot himself through the heart on the 20th of October, 1820. Christophe evinced himself possessed of some enlightened views, but was too harsh and despotic to effect all the good which he intended. Some of his children have been educated in England.—*Ann. Reg.*

CHRYSOLOGUE (NORI. ANDR. called Père) an astronomer and geographer, born in Franche Comté in 1728. He entered young into the order of the Capuchins, and he studied mathematics and astronomy under Lemonnier, who encouraged him to publish, in 1778, a planisphere, representing nine hundred fixed stars of La Caille. He published subsequently three more, besides various maps, charts, and memoirs. In 1806 appeared his "Théorie de la Surface actuelle de la Terre." He died in 1808.—*Biog. Univ. Class.*

CHURTON (RALPH) an eminent divine and controversial writer, born in the parish of Malpas, Cheshire, in December, 1754. He was the son of a yeoman, and being left an orphan while at school, he was enabled to obtain an university education through the patronage of Archdeacon Townson. In 1778 he was chosen fellow of Brazen-nose College, Oxford; in 1785 he was appointed Bampton lecturer; bishop Porteus made him Whitehall preacher in 1788; and in 1792 he was presented by his college to the living of Middleton Cheney, Northamptonshire. His last preferment was the Archdeaconsry of St David's, to which he was collated in 1805. He died March 23, 1831. Besides his Bampton Lectures he published "The Lives of William Sonyth, Bishop of Lincoln, and Sir Richard Sutton, Knt. founders of Brazen-nose Coll. Oxford," 1800, 8vo; "The Life of Alexander Nowell, Dean of St Paul's," 1809, 8vo; "A Memoir of Archdeacon Townson, prefixed to his works;" "A Memoir of Dr Richard Chandler, prefixed to his Travels in Asia Minor;" "A Defence of the Church of England," which led to a controversy with a learned Catholic layman,

Francis Eyre, Esq. of Warkworth; and several detached sermons; besides which he was a contributor to the Gentleman's Magazine, Nichols's Literary Anecdotes, Baker's History of Northamptonshire, and other works.—*Ann. Biog.* vol. xvi.

CICCARELLI (ALPHONSO) an Italian physician, who was executed as a literary impostor, under the pontificate of Gregory XIII, in 1580. He had fabricated a great number of genealogies, and written the history of many noble families, in the hope of profiting by the vanity of the great. Among his publications are "De Clitumno Flumine," with a treatise "De Tuberibus," Padua; "Istoria di Cassa Monaldesca," &c.—*Biog. Univ.*

CIENFUEGOS (ALONZO DE) a distinguished Spanish poet and dramatist of the eighteenth century. He was an imitator of Melendez, with whom he was long upon intimate terms; amidst the political contests that agitated his native country, he joined the opposite party, but like him he died an exile in France. He wrote "Idomeno" and other tragedies; odes, idylls, and ballads; "Elogio del Señor Don J. Almazara," Madrid, 1779; "Elogio del Marques de Santa Cruz;" and "La Pensadora Gladitana," Cadix, 1786, 4 vols, 12mo.—*Maury Espagne Poétique.—Rev. Encyclop.*

CLAGETT, the name of two learned and able divines of the seventeenth century, brothers, and natives of St Edmundsbury. **WILLIAM**, the elder, born in 1646, graduated as doctor in divinity at Emanuel college, Cambridge, in 1683. He is known as the author of a work "On the Operations of the Holy Spirit," 8vo, of which there is an abridgement by Stebbing; "A Reply to the 'Mischiefs of Impositions,'" 4to; "An Answer to the Dis-senters' Objections to the Book of Common Prayer," 4to; with four volumes of sermons, and some pamphlets against the Catholics. His death took place in the spring of 1688.—**NICHOLAS**, born in 1654, was educated in Christ's college, Cambridge, where he graduated as DD. in 1704. He held the livings of Hitcham and Thurlow Parva, Suffolk, with the archdeaconsry of Sudbury. His writings consist of a collection of sermons, and two devotional tracts, entitled "Truth defended," and "A Persuasion to an ingenuous Trial of Opinions in Religion." Dr Nicholas Clagett died in 1727, leaving a son of the same name, afterwards bishop of Exeter.—*Biog. Brit.*

CLAP (THOMAS) an American divine, minister of Windham in Connecticut, and president of Yale college, who died in 1767, aged sixty-four. He was the author of the "History of Yale College," 1766; "An Abridgement of the History of the established Doctrine of the new English Churches;" and "Sermons;" and he is said to have been one of the most learned of the New English writers.—*Biog. Univ. Class.*

CLAPPERTON (HUGH) a naval officer and African traveller, who was born in 1758, at Annan, in Dumfriesshire, N. B. where his father was a surgeon. At the age of seventeen he went to sea as a cabin boy, on

board a merchantman, but soon after entered the Royal Navy, and, through the interest of some friends, was made a midshipman. In 1814 he was ordered to North America, and on his arrival in Upper Canada he was made a Lieutenant; and subsequently appointed to the command of the *Confiance* schooner. In 1817 the British flotilla on the American Lakes, to which Lieutenant Clapperton belonged, was dismantled, and he returned home to be placed on half pay. He then retired to Lochmaben, in his native country, where he remained till 1820, passing his time in rural amusements and social intercourse. He subsequently removed to Edinburgh, where he became acquainted with Dr Walter Oudney, through whose suggestion he engaged in the task of exploring the interior of Africa. In 1823, he was employed by Earl Bathurst to attempt a journey to Timbuctoo, at the expense of Government, in conjunction with lieutenant, afterwards colonel Denham, and Dr Oudney, the latter of whom died at an early stage of the journey, January 12th, 1824. Captain Clapperton, after proceeding as far as Saccato, was obliged to relinquish the undertaking, and return home. He was again employed by Government on a new mission to Africa, in which he was associated with captain Pearce of the Navy, Mr Dickson, and Dr Morrison, a navy surgeon, skilled in natural history. These gentlemen landed on the African coast, in the *Bight of Benin*, on the 28th of November, 1825. Captain Clapperton, having been separated from his companions, arrived at Saccato, which he had visited in his former journey, and after being detained there five months, by the chief or king of the country, he died, April 13, 1827, of dysentery, a disease which was greatly aggravated by the vexation and disappointment which he experienced. In 1825 appeared, in one volume quarto, "*Travels and Discoveries in Northern and Central Africa*, by Major Denham, Captain Clapperton, and the late Doctor Oudney." An account of his second journey was published by his servant, Richard Lander, who returned to England after his death; and who has been subsequently employed by Government in expeditions to Africa.—*Quart. Rev.* *New Month. Mag.*

CLARIDGE (RICHARD) a dissenting clergyman, born in 1649, at Farnborough, Warwickshire. He was educated at Oxford, in the principles of the established church, which he quitted from conscientious scruples, although the loss of the rectory of Peppleton, Worcestershire, which he had enjoyed about eighteen years, was the necessary consequence. On resigning his gown, which he did in 1691, he became a preacher among the anabaptists, but a second time changed his opinions, and embraced those of quakerism. Mr Claridge presided over a considerable school, first at Barking in Essex, and then at Tottenham, and was the author of three polemical treatises, entitled "*Melius Inquirendum*;" "*Lux Evangelica attestata*;" and a tract "*On the Scriptures*," all printed in his lifetime; besides a

few others collected and published, with a biographical memoir prefixed, after his death. This event took place in the metropolis, in 1723.—*Biog. Brit.*

CLARK (JOHN) a Scottish physician and medical writer, born in 1744. After finishing his studies, he became a surgeon in the East India Company's service; and he published the result of his practice, in his "*Observations on the Diseases in long Voyages to Hot Countries, and particularly in the East Indies*," 1773, 8vo. He subsequently settled in practice at Newcastle on Tyne, where he contributed greatly to the improvement of the public hospital, and founded a dispensary. He died in 1805. Besides the work mentioned, of which a new edition appeared in 1792, he was the author of "*Observations on Fevers, especially those of the continued Type*," 1780, 8vo; "*On the Influenza*, as it appeared at Newcastle," 1783, 8vo; and "*A Collection of Memoirs on the Means of preventing the Progress of contagious Fevers*," 1802. He belonged to the Medical Society of Edinburgh, to whose Transactions he was a contributor.—*Reuss. Biog. Univ. Class.*

CLARKE (JOHN) an American divine, born at Portsmouth, in New Hampshire, (N. A.) in 1755. He became minister of a church at Boston, where he died in 1798. He was the author of a popular tract, entitled "*An Answer to the Question—Why are you Christian?*" and of "*Letters of a Student at the University of Cambridge*;" "*Funeral Discourses*;" "*Sermons*," &c.—*Biog. Notice by Theoph. Lindsey, pref. to Tract on Christianity.*

CLARKE (ADAM) an eminent divine, antiquary, and Oriental scholar, who was a minister among the Wesleyan methodists. He was born in 1760, at Magherafelt, in the county of Londonderry, in Ireland. He was instructed in the rudiments of classical learning by his father, who was a schoolmaster; and he was afterwards admitted as a pupil into the seminary established by John Wesley, at Kingswood, near Bristol. In this situation he improved his advantages for study as much as possible; and in addition to his other acquirements he gained a knowledge of Hebrew, and laid the foundation of that high reputation which he subsequently enjoyed as an Oriental scholar. At the age of nineteen he became an itinerant preacher in the methodist connexion; and he continued to travel in various circuits till 1805. After that period he resided for several years in London, devoting a considerable portion of his time to literary researches, and particularly to bibliography. His first production was "*A Dissertation on the Use and Abuse of Tobacco*," 1797. This was followed by a "*Bibliographical Dictionary, containing a Chronological Account of the most curious Books in all Departments of Literature, from the Infancy of Printing to the beginning of the Nineteenth Century, with an Essay on Bibliography, and an account of the best English Translations of each Greek and Latin Classic*," 1802, 6 vols, 12mo; and "*The Bibliographical Miscellany*,"

a supplement to the preceding, 1806, 2 vols. He now obtained the office of Honorary Librarian of the Surrey Institution; and he was chosen a fellow of the Society of Antiquaries. In 1805 he received the honorary diploma of Master of Arts, and the ensuing year that of Doctor of Laws, from the university of St Andrews. He was afterwards chosen a member of the Royal Irish Academy; and he obtained admission into some literary associations in America as well as on this side the Atlantic. In 1807 he published "The Succession of Sacred Literature, in a chronological Arrangement of Authors and their Works, from the Invention of Alphabetical Characters to the Year of our Lord 345," vol. i, a second edition of which has recently appeared, with a continuation to A. D. 1300, by the Rev. J. B. Clarke, the author's son. Dr Clarke was now appointed one of the sub-commissioners for the arrangement of the public records, having, on account of his great learning and industry, been recommended as a person qualified to prepare a supplement and continuation to Rymer's *Fœdera*. The result of his labours was the production of four Reports concerning the state of the Public Records, all abounding with curious and interesting information of various points in English history. He also superintended the printing of the first volume of the new, enlarged, and elaborate edition of the *Fœdera*, now in progress, in which undertaking he was assisted by Mr. F. Holbrooke, and by his son Mr. J. W. Clarke. Another great undertaking in which he engaged was an extensive commentary on the Bible, which appeared under the title of "The Holy Scriptures, &c. with Marginal Readings, a Collection of Parallel Texts, and copious Summaries to each Chapter; with a Commentary and Critical Notes, designed as a help to the better understanding of the Sacred Writings," 1810—26, 8 vols, 4to. In 1815 he was enabled, by the munificence of some friends, to purchase an estate at Millbrook, in Lancashire, where he resided for several years, occupied in his literary pursuits, making agricultural experiments, and studying occasionally astronomy and natural philosophy. In 1822 he was instrumental in establishing a mission to the Zetland Islands, under the patronage of the Methodist Conference; and in the summer of 1826 he made a voyage to Zetland, to ascertain the success of the undertaking, which appears to have been very satisfactory. He sold his property at Millbrook in 1823, and removed to London, but the air of the metropolis affecting his health, he bought a mansion called Haydon Hall, in the parish of Ruislip, Middlesex, which became his residence during the remainder of his life. The last public transaction of any importance in which he was engaged was the establishment of some schools in the province of Ulster, in Ireland, in the spring of 1831. Dr Clarke died of cholera morbus, while on a visit to a friend at Bayswater, August 26, 1832; and he was

a few days afterwards interred in the Wesleyan Chapel, City-road. Besides the works already mentioned, he published a "Narrative of the last Illness and Death of Richard Porson;" "Clavis Biblica, or a Compendium of Scripture Knowledge;" "Memoirs of the Wesley Family;" and Sermons; and he likewise edited Baxter's *Christian Directory*; Fleury's *History of the Israelites*; Shuckford's *Connexion of Sacred and Profane History*; and Harmer's *Observations on Passages of Scripture*. He drew up memoirs of his own life, said to be intended for publication. Though furnished with ample opportunities for enriching himself, he is stated not to have been in affluent circumstances at the time of his decease. However, he left a valuable library of printed books, a large collection of ancient and oriental manuscripts, and a museum of natural and other curiosities.—*Imperial Magazine. Ann. Biog.*

CLARKE (HENRY JAMES WILLIAM) duc de Feltre, minister of state, and peer of France, was born at Landrecies in 1765. He was of Irish parentage, and being left an orphan when young, he entered into the military school at Paris in 1781, and left it the next year, with the rank of sub-lieutenant in the regiment of Berwick. After having been employed in various embassies, he had attained the station of general in chief of the army of the Rhine, when in 1793 he was suspended from his functions as a noble, and imprisoned for some time. He retired into Alsace, and afterwards going to Paris, Carnot had him appointed chief of the topographical bureau established by the committee of public safety, and he continued in office under the Directory. He was sent on a secret mission to Buonaparte when commanding in Italy; and on the elevation of the latter to the empire, to which general Clarke contributed, he was made chargé d'affaires with the young king of Etruria, and subsequently nominated counselor of state, and admitted into the secret cabinet of the emperor, whom he accompanied in various campaigns till 1807, when he became minister at war. On the restoration he attached himself to the royal party, and retired with the king to Ghent. He resumed the office of war minister in 1815, and the disbanding of the army was effected under his direction. In 1816 he received the baton of marshal, and his death took place in 1818.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

CLAVIER (STEPHEN) a learned Frenchman, who before the Revolution was counselor to the Chatelet at Paris. He became in 1804 judge of the criminal court of the department of the Seine; and under the imperial government he was displaced for refusing to condemn general Moreau. He was a member of the Academy of Inscriptions, professor at the college of France, and one of the contributors to the *Biographie Universelle*. He was a native of Lyons, and died at Paris November 18, 1817, aged fifty-five. Clavier published "*Hist. des premiers Temps de la*

C L E

Grèce," 1809, 2 vols, 8vo; and valuable translations of Pausanias, Apollodorus, and other Greek writers.—*Biog. Univ. Class.*

CLAVIJO Y FAXARDO (don Jos.) an eminent Spanish writer, vice-director of the Cabinet of Natural History at Madrid, editor of a journal entitled *El Pensador*, and conductor of the Historical and Political Mercury of Madrid, from 1773 to 1793. He published a translation of the Natural History of Buffon, Madrid, 1785—90, 12 vols, 8vo. He was director of the theatre de los Sitios, and made himself disadvantageously known by an affair of honour with Beaumarchais, in consequence of an intrigue with a sister of that gentleman. The Factum published on this occasion by Beaumarchais, ruined the reputation of Clavijo, who was never able to recover his credit with the public. He died in 1806.—*Biog. Univ.*

CLEMENTI (Muzio) a distinguished musical composer and performer on the piano-forte, who was a native of Rome. He quitted Italy for this country in 1767, and in 1773 he published his celebrated "Opus II," which gave birth to a new era in sonata writing. On his first arrival in England he resided in Dorsetshire with Peter Beckford, Esq. through whose patronage he was enabled to prosecute his musical studies with advantage. Having subsequently settled in London, he was engaged to preside at the harpsichord in the orchestra of the opera-house, and he soon acquired high reputation. In 1780 he visited Paris, where his talents excited great admiration, as they also did at Vienna, and he was treated with attention by crowned heads, and became acquainted with Haydn, Mozart, and other celebrated musicians. In 1784 he returned to the English metropolis, and was for several years most advantageously employed as a teacher of music, producing from time to time a number of admirable compositions, and works destined to facilitate the progress of the student in the art which he cultivated with so much success, particularly an excellent and luminous "Introduction to the Art of Playing on the Piano-forte." About 1800 he entered into business as a music-seller and musical instrument maker in London. In 1802 he again went to Paris, and afterwards passed some time at Vienna, St Petersburg, Dresden, Berlin, Rome, and Naples, not returning to England till 1810. Whilst at Berlin he married a lady who unfortunately soon died in childbed, and in 1811 he entered a second time into wedlock. He long continued to employ his talents in composing new music, and in adapting the works of other composers, and he published a valuable system of musical instruction under the title of "Gradus ad Parnassum," in three parts. His death took place at his country seat, Elm Lodge, near Evesham, Worcestershire, March 10, 1832, in the eighty-first year of his age. His works, which are numerous, consist chiefly of sonatas for various instruments, and especially for the piano-forte.—*Biog. Dict. of Mus. New Month, Mag.*

C L I

CLERCK (CHARLES) a Swedish entomologist, who was a disciple of Linnæus, and a member of the Royal Academy of Sciences at Upsal. He published at Stockholm, in 1757, a work entitled "Aranei Suecici." The subjects are painted by the author, and classed according to the Linnæan method, with descriptions in the Swedish and Latin languages. An English translation of this book, with additions by Mr. Martyn, was published, under the title of "Aranei, or the Natural History of Spiders," Lond. 1793, 4to. Another entomological production of Clerck is his "Icones Insectorum rariorum, cum Nominibus eorum trivialibus, locisque e C. Linnæi Syst. Nat. allegatis," Stock. 1759, 4to. This work, (which is highly praised by Linnæus,) notwithstanding its title, is nothing more than a collection of coloured figures of Lepidoptera, (butterflies,) without any text.—*Ibid.*

CLERISSEAU (CHARLES LOUIS) an eminent French architect, dean of the ancient Academy of Painting and Sculpture at Paris, and architect to Catherine II of Russia. He was born about 1719, and died at Auteuil, January 19, 1820. In 1778 he published "Antiquités de la France, Monumens de Nismes," folio, forty-two plates, of which a new edition appeared in 1806, 2 vols, folio.—*Biog. Univ. Class.*

CLINE, FRs. (HENRY) an eminent surgeon and lecturer on anatomy, who died in Lincoln's Inn-fields, London, January 2, 1827, aged seventy-six. He was a native of the metropolis, and was for many years one of the surgeons at St Thomas's hospital, Southwark, where he gave lectures on anatomy and surgery during the winter season, to a numerous class of pupils. His scientific knowledge, judgment, and skill procured him in a high degree the respect and esteem of his professional brethren, as well as of those who had occasion to avail themselves of his assistance as a practitioner.—*Gent. Mag.*

CLINTON (GEORGE) an American statesman and military officer, born in 1739. He served under general Amherst at the taking of fort Frontenac from the French; and after the conquest of Canada he became a student of law at New York. He sat in the congress in 1775; and resuming the military profession, he served as a brigadier-general against the English, when he, with an inferior force, prevented Sir H. Clinton from succouring Burgoyne. After peace took place, he was vice-president of the United States; and he died at Washington, April 20, 1812.—*Biog. Univ.*

CLINTON (Sir HENRY) an English officer, who served in America during the war of independence, and succeeded Sir William Howe as commander-in-chief. He was afterwards appointed governor of Limerick, and he died in 1795, when he had been recently made governor of Gibraltar. He published narratives relative to his conduct during part of his command of the king's troops in North America, particularly that which respected the unfortunate issue of the campaigns in 1781 and

1782, and other exculpatory pamphlets.—*Revue. Biog. Univ.*

CLOUET (—) a French chemist and mechanic, born in 1751. He was professor of chemistry at the ancient school of artillery at Mezieres; associate member of the Institute of France, and director of the manufactory of forged iron at Daigny; and he distinguished himself by many useful inventions. In the "Journal des Mines," and the "Annales de Chimie," he published some important disquisitions on chemistry and metallurgy. Wishing to make some experiments on vegetation, he took a voyage to Cayenne, where he died of the colonial fever, June 4, 1801.—*Biog. Univ.*

CLOWES (JOHN) a clergyman of the established church, who rendered himself an object of notoriety by embracing the doctrines of baron Swedenborg. He was the son of a barrister, and was born at Manchester, in 1743. At the age of eighteen he entered at Trinity College, Cambridge, where he took his first degree, in 1766, and was afterwards elected a fellow of his college. Leaving the university, he became rector of St John's Church, Manchester, which living he held for the term of sixty-two years, having refused more than one offer of higher preferment in the church. During the latter years of his life he resided entirely at Warwick, his corporeal infirmities having compelled him to relinquish his pastoral duties, though he continued to employ his pen in writing works explanatory and justificatory of the peculiar sentiments he professed. His publications were very numerous, all of them relating to religious topics, and the greater part consisting of translations of the writings of Swedenborg, or pieces in defence of the opinions of that mystical theologian. He died at Warwick, May 29th, 1831. Much obloquy was cast on him in consequence of his retaining his living after his adoption of sentiments inconsistent with the articles of the established church; and some of his parishioners made attempts to remove him from the rectorship, but their opposition to him was rendered abortive by his extremely amiable character, and through the influence of his diocesan, Dr Porteus, then Bishop of Chester.—*Gent. Mag.*

CLUBBE (WILLIAM) an eminent divine and ingenious writer, who was vicar of Bransterton, in Suffolk. He published "Six Satires of Horace, in a style between free translation and literal version," 1795, 4to; "The Epistle of Horace on the Art of Poetry, translated into English Verse," 1797, 4to; "Omnium, containing the journal of a late three days' tour in France," 1798, 8vo; and "Three Lyric Odes on celebrated occasions," 1806, 4to. His death took place at Framlingham, in November, 1814, at the age of seventy. He was the son of the Rev. John Clubbe, rector of Wheatfield. (See *Dict.*)—*Biog. Dict. of Living Authors.*

CLUTTERBUCK (ROBERT) an antiquary and topographer, descended from a respect-

able family, originally from the Netherlands, but long settled in Hertfordshire. He was born at Watford, June 2nd, 1772, and educated at Harrow School and Exeter College, Oxford, where he took the degree of B.A. He subsequently entered at Lincoln's-inn, intending to make the law his profession; but his ardour in the pursuit of chemistry and the art of painting, in which he took lessons from Barry, induced him, after residing some years in London, to relinquish his original plan. In 1798 he married the daughter of Colonel James Copper, and resided for a few years at Cathys, near Cardiff, in Glamorganshire, the seat of his father-in-law. He afterwards removed to his paternal estate at Watford, and became a magistrate for the county of Herts. The duties of his arduous office he executed with great assiduity and impartiality. During his intervals of leisure he collected materials for a new edition of Chauncey's History of Hertfordshire, and announced his undertaking in the Gentleman's Magazine, in 1809. The abundance of his materials induced him, at a later period, to prepare a completely new history of his native county, instead of republishing the work of Sir Henry Chauncey. In the prosecution of this purpose he steadily persevered for eighteen years, and at length finished his undertaking, in three volumes, folio. The first volume appeared in 1816, the second in 1821, and the third in 1827. The plates which illustrate this work have seldom been surpassed in any similar publication, whether as regards the appropriateness of the embellishments, or the beauty and fidelity of their execution. Mr Clutterbuck himself possessed much talent as a draughtsman, and several of the plates were from his own sketches, others from drawings by Edward Blore, FSA. Between 1817 and 1830, Mr Clutterbuck, at intervals, travelled in France, Norway, Switzerland, and Italy. His death took place at Watford, May 25th, 1831.

—*Gent. Mag.*

COBOURG (FREDERICK JOSIAH) duke of Saxe, grand cross of the order of Maria Theresa, and field-marshal in the army of the emperor of Germany. He was commander-in-chief of the Austrian troops opposed to the Turks in 1790, and obtained great advantages over them in conjunction with the Russian general Suwarrow, with whom he formed an intimate friendship. In 1793 he assumed the chief command of the combined armies, destined to act against the French in the Netherlands. Assisted by general Clairfait, he beat the enemy at Aldenhoven, drove them from Liege, Aix-la-Chapelle, and Tirlemont, gained the battle of Nerwinde, and in a short time made himself master of a great part of the Low Countries. On the 5th of April he published a declaration dated from Mons, in which he offered to establish in France the constitution of 1791, and disclaimed all intention of making conquests. This measure is supposed to have been prompted by Dumouries, who had gone over to the Austrians;

but whatever might have been the motive, a new proclamation was issued four days after, which annulled the preceding. The prince of Cobourg continuing successful, Condé, Valenciennes, and Quesnoy surrendered to him, and he took possession of those places in the name of the emperor. He was less fortunate before Maubeuge and Dunkirk, and was forced to raise the siege of those places. The campaign of 1794 opened under favourable auspices, and his advanced posts penetrated as far as Guise; but here his success terminated. Pichegru having taken the command of the French army, the prince of Cobourg found himself obliged, after many bloody combats, to abandon at once all his conquests, and he soon after relinquished the command of the combined forces. As a military man the prince of Cobourg was at one period praised as much beyond his deserts as he was at another depreciated; those who at the moment of his success proclaimed him the first general in Europe, having, after he was defeated, refused to admit that he possessed any talent whatsoever. Prejudice apart, his claims to notice may be considered as arising rather from the station he occupied than from the abilities he displayed. He died in 1815.—*Dict. des H. M. du 18me S.*

COCHRANE (ARCHIBALD) Earl of Dundonald, Lord Cochrane of Paisley and Ochiltree, Lord Cochrane of Dundonald, and a baronet of Nova Scotia. This nobleman was born January 1st, 1749, and was the eldest surviving son of Thomas Lord Dundonald, by his second wife Jean, the daughter of Archibald Stewart, of Torrance. In 1764 he obtained a cornet's commission in a regiment of dragoons, but he soon quitted the army for the navy, in which he had risen to the rank of lieutenant, in 1778, when on the death of his father he succeeded to the earldom of Dundonald. Hethen determined to devote himself entirely to scientific pursuits, principally with the view of making improvements in the commerce and manufactures of the country. In the prosecution of these objects he engaged in a variety of schemes, some of which were beneficial to the public, but it does not appear that any of them were ultimately advantageous to the projector. In 1785 he published "An Account of the Qualities and Uses of Coal-tar and Coal-varnish;" and a pamphlet entitled, "The Present State of the Manufacture of Salt explained," in which he recommends that article as a manure. In 1795 he produced "A Treatise showing the intimate Connexion that subsists between Agriculture and Chemistry, addressed to the Cultivators of the Soil, to the Proprietors of Fens and Mosses in Great Britain and Ireland, and to the Proprietors of West India Estates;" and in 1799, "The Principles of Chemistry applied to the Improvement of the Practice of Agriculture." In 1801 he obtained a patent for a method of preparing a substitute for gum Senegal and other gums extensively employed in manufacture; and in 1803 he procured another patent for an improved

method of preparing hemp and flax. Though he made some useful discoveries, and displayed considerable talents for scientific research, yet his labours were so unprofitable to himself that he became reduced to absolute penury, and at one period received pecuniary assistance from the Literary Fund. Death at length put a period to his misfortunes in 1831. He was thrice married; by his first wife he was the father of Thomas Lord Cochrane, highly distinguished as a naval officer, and several other children; by his second wife he had no issue, but by his third wife, who was the daughter of Francis Plowden, the Irish historian, he had one child, now an orphan, her mother having died in 1822.—*Ann. Biog.*

COCHRANE (JOHN DUNDAS) an enterprising traveller, who was a nephew of the late earl of Dundonald. After having served in the navy, he travelled on foot through France, Spain, and Portugal, and then through the Russian empire to Kamtschatka, between the years 1820 and 1823. Returning to England, he published "A Narrative of a Pedestrian Journey through Russia and Siberian Tartary, from the Frontiers of China to the Frozen Sea and Kamtschatka," Lond. 1824, 2 vols, 8vo. He died in 1825 at Valencia, in Columbia, whither he had gone for the purpose of engaging in a pedestrian expedition across the continent of South America.—*Encycl. Amer.*

COITER or KOITER (VOLCHER) an eminent anatomist, who was born at Groningen, in the Netherlands, in 1534. He studied medicine and anatomy, with great success, in the most celebrated universities of France and Italy. In 1569 he was invited by the magistrates of Nuremberg to take the office of physician in that city, which he afterwards left to become physician to the French army; and in the latter station he remained till his death, the period of which is uncertain, being differently stated to have taken place either in 1576, 1590, or 1600. Coiter was one of the founders of anatomical pathology, and he contributed much to the progress of zootomy as well as human anatomy. He gave the first exact figures of the bones of the fœtus, and he made improvements in myology. Coiter published some valuable works on anatomy and physiology.—*Biog. Univ.*

COLLIN DE BAR (ALEX. GILES HENRY) attorney-general of the superior court of the Indies, born at Pondicherry, in 1768. He published "Hist. de l'Inde Ancienne et Moderne," Paris, 1814, 2 vols, 8vo. His death took place at Paris in 1820.—*Biog. Univ. Class.*

COLLINSON, FRIS. (PETER) a highly respectable and ingenious tradesman of London, who for many years carried on a considerable business as a mercer in Gracechurch-street, devoting the whole of his leisure hours to the cultivation of the science of botany. He was a native of Kendal, in the county of Westmoreland, born about the year 1694, and distinguished himself greatly by his proficiency in his favourite pursuit. Mr Collinson

was the friend and correspondent both of Dr Franklin and Linnaeus, the latter of whom has paid him the compliment of calling one of the plants in his catalogue after his name. His death took place in 1768.—*Pulleney*.

COLLYER (JOSEPH) an industrious literary compiler and translator, who died at Islington, near London, in 1776. His principal work was a "History of England," in 14 vols, 12mo; and he assisted in writing a "Geographical, Historical, and Biographical Dictionary of the World," 1772, 2 vols, folio. He also continued a prose translation from the German of Klopstock's "Messiah," which his wife had commenced, and left imperfect at her death; and translated entirely from the same language Bodmer's "Noah;" and "The History of Sophia Sternheim," a novel written by Madame La Roche.

COLLYER (MARY) the wife of the preceding, who, like her husband, was engaged in writing for the press. In 1750 she published "Letters from Felicia to Charlotte," 2 vols, 12mo, which introduced her to the acquaintance of Mrs. Montagu, of Portman-square; but she is chiefly distinguished as the translator of Gesner's "Death of Abel," which was first published in 1762, and has since been often reprinted. The success of this undertaking induced her to employ herself in making a similar version of the "Messiah" of Klopstock, which she had scarcely begun when her progress was interrupted by death, in 1763.

COLLYER, A.R.A. (JOSEPH) an eminent engraver, was the son of the foregoing, and was born in London, in 1748. He was apprenticed to Anthony Walker, an artist of some eminence; and when young he was admitted a student of the Royal Academy, of which he was elected an Associate Engraver in 1786. Among his finest engravings may be mentioned portraits of George III and Queen Charlotte, Sir William Young, Bart. FRS, and the Rev. William Tooke, FRS; Venus, from a painting by Sir Joshua Reynolds; the Flemish Wake of Teniers, from the Houghton collection; and a Review of the Irish Volunteers, after Wheatley. He died at his house in Constitution-row, New-road, London, December 24, 1827.—*Gent. Mag.* vol. xcvil.

COLOMBIERE (CLAUDE de la) a French jesuit of the seventeenth century, who was born in 1641, at St Symphorien, and coming over to this country became one of the chaplains to James II. Falling into disgrace at the English court, in consequence of a suspicion having arisen that he was concerned in one of the plots of the period, he returned to France, and died there in 1682, at Porai. He is known as the author of some "Spiritual and Moral Reflections," and of six small volumes of sermons, and was the person who introduced the opinions of Goodwin the Independent, respecting devotion of the heart to Jesus, from this country to the continent, where they afterwards made a considerable progress.—*Moreri*.

COLTON (CALEB C.) a very ingenious writer, who rendered himself remarkable not only for his talents, but also for the eccentricity of his character, and the irregularity of his manners. He received his education at Eton school, and King's College, Cambridge, where he graduated as bachelor of arts in 1801, and master of arts in 1804; and he also obtained a fellowship. In 1801 he was presented to the curacy of Tiverton, Prior's Quarter, a benefice which may be held in conjunction with a fellowship. While in this situation he published a tract entitled "A plain and authentic Narrative of the Sampford Ghost," 1810, 8vo. The avowed object of this publication was to prove that some strange occurrences which had taken place in a house at the village of Sampford Peverel, near Tiverton, originated in supernatural agency; and in testimony of his firm conviction of the truth of what he asserted, Mr Colton informed the public that he had deposited in the hands of the mayor of Tiverton an instrument empowering him to call upon the reverend advocate for the ghost for the payment of the sum of one hundred pounds to any person who could give a satisfactory explanation of the alleged supernatural phenomena. In a subsequent publication he boasted that though the proffered reward had been increased to two hundred and fifty pounds, no claimant had appeared after the period of two years had elapsed. The whole affair, however, as might have been expected, was afterwards shown to have been founded on imposition. In 1812 Mr Colton appeared with more advantage as an author, in his "Hypocrisy, a satirical poem, with notes," 8vo; and he also published "Napoleon, a poem," 8vo. In 1818 he was presented by his college to the vicarage of Kew with Petersham, in Surrey. He established his literary reputation by the publication of a volume of maxims, under the title of "Lacon, or Many Things in Few Words," 1820, 8vo, which though partly derived from the essays of Lord Verulam, and from Burdon's Materials for Thinking, is yet highly creditable to the abilities of the writer, and it has passed through several editions. In 1822 he republished his poem on Napoleon, with extensive additions, under the title of "The Conflagration of Moscow." At the period of the murder of Wear, by John Thurtell and his associates, Mr Colton disappeared from his usual places of resort in the metropolis, where he then resided, and as he was a well-known frequenter of gambling-houses, and had been acquainted with Thurtell, it was for a time suspected that he had fallen a victim of an assassin; but it was at length ascertained that he had absconded in consequence of the embarrassment of his affairs. In November 1827, on the latest day allowed by the law, he made his appearance, in order that he might be enabled to retain his living; but he lost it by lapse in 1828, when a successor was appointed by the college. The ensuing two years he spent in travelling in the United

States of America. Subsequently he settled in France, taking up his abode in the Palais Royal at Paris, and devoting his talents to the mysteries of the gaming-table, he was so successful as in the course of a year or two to have gained 25,000*l*. Part of his wealth was employed in forming a picture-gallery; and he printed at Paris, for private distribution, an ode on the Death of Lord Byron. This talented but imprudent individual died by his own hand, having blown out his brains at the house of a friend with whom he was on a visit at Fontainebleau, April 28, 1832. His motive for suicide was the dread of undergoing some painful surgical operation, which was become indispensable in consequence of a disease with which he was affected. He left for publication a poem entitled "Modern Antiquity."—*Gent. Mag. New Month. Mag.*

COLUMBUS (REALDUS) an eminent surgeon of Cremona, in Italy, celebrated for his skill in the anatomy of the human frame, in which science he filled the professor's chair at Padua with great reputation, about the middle of the sixteenth century. He was the author of a very able treatise on the subject, entitled "De Re Anatomica," and died in 1577, at Rome.—*Dict. Hist.*

COLUMNA (Guido) a Sicilian writer, of the age of Edward I of England, who followed in the suite of that prince on his return from the crusade, and is known as the author of a "History of the Siege of Troy," which has gone through several editions. The first is that of Cologne, 4to, 1477.—*Dict. Hist.*

COLVIL (ALEXANDER) an ingenious Scottish divine, principal of the university of Edinburgh, where he had received his education and graduated as doctor in divinity. Dr Colvil was a firm supporter of episcopacy, and wrote several tracts against the presbyterian mode of church discipline, as also a humorous work entitled "The Scottish Hudibras." He died in 1676, at the age of fifty-six.—*Chalmers's Biog. Dict.*

COMBE (CHARLES) an eminent scholar of our own times, born in 1743, in the parish of Bloomsbury, where his father was an apothecary. He was intended for the same business, and in consequence was removed from Harrow school at the usual age, and served his apprenticeship at home. In 1783, determining to practise in the higher branches of medicine, he procured a Scotch degree, and became physician to the London Lying-in-hospital. He was a good classic, and well versed in numismatics, in which latter department of literature he published a catalogue of the coins and medals in the Hunterian collection, as well as a more miscellaneous index of ancient coins in general, both in quarto. An edition of Horace commenced by him, in conjunction with Dr Parr and Mr Homer, was completed by himself after his friends had abandoned it, and it appeared in 1793, in two volumes, quarto. His death took place in the spring of 1817.—*Gent. Mag.*

COMES (NATALIS) the Latin designation

assumed by Noel Conti, a Milanese poet and historian of the sixteenth century. Besides a "History of his own Times," and a volume of poetry in the Greek and Latin languages, he was the author of a treatise on mythology. His poetical writings were published during his lifetime at Venice, but his other works did not appear till some years after his decease, which took place in 1589.—*Moreri.*

COMMANDINE (FREDERICK) a distinguished Italian scholar, a native of Urbino, born in 1509. To a large fund of classical learning he united a great proficiency in the mathematics, and published editions of the works of many of the most eminent writers on the latter science among the ancients, now extant. Among these we may enumerate those of Euclid, Archimedes, Pappus, Aristarchus, and Apollonius of Perga. His other productions are a treatise "On the Construction of Time-pieces;" another "On the Centre of Gravity in Solid Bodies;" and a "Commentary on the Planisphere of Ptolemy," all in 4to. He died in 1575.—*Moreri.*

COMMERSON (PHILBERT) an eminent French naturalist, born in 1727, at Chatillone les Dombes, and bred a physician. He sailed with Bougainville as botanist to the expedition in 1773, but accompanied that circumnavigator no farther than the Mauritius, when he fell a victim to his eagerness in the search after knowledge, his constitution being unequal to the fatigues of a long sea voyage, and the vicissitudes of climate. He left behind him, singularly enough, an account of others who had perished similarly in the same pursuit, which he had entitled a "Botanical Martyrology." M. Commerson was also the author of a treatise on ichthyology, in two quarto volumes.—*Eloge par La Lande.*

COMNENUS (DEMETRIUS STEPHANOPOLI CONSTANTINE) descended from the Comnenian family, which once sat upon the throne of the Eastern empire, was born in 1749, in the island of Corsica, where his ancestors had settled in the seventeenth century. Demetrius being intended for the ecclesiastical profession, studied at the college of the Propaganda at Rome, which he quitted at the age of eighteen, and entered into the service of France. He obtained a company of cavalry in 1778; and at the Revolution he followed the royal family into exile. The count d'Artois employed him at the court of Naples; and after having been obliged to take refuge in Bavaria, he returned to France in 1802. He lived in retirement till the restoration, when he was made *maréchal-de-camp*. He died at Paris in 1821. Comnenus cultivated literature, and published several works, including "Précis Historique de la Maison Imp. des Comnènes," 1784, 8vo.—*Biog. Univ. Class.*

COMTE, the name of two French ecclesiastics who lived in the seventeenth century, and both acquired some reputation as connected with Oriental literature. NICHOLAS, the elder of the two, was born in the French capital, and died there in 1689. He edited Manni's History of Tonquin and Laos, Cou-

CON

lon's History of the Jews, and De la Valle's Travels, as well as some other works of merit.—LEWIS J. R. COMTE was a member of the Jesuits' college at Bordeaux. He went on a mission from his order into China in 1685, and on his return published an account of his journey under the title of "Mémoires sur la Chine," a work which gave great offence to the clergy, and was publicly condemned by them. His death took place in 1729.—*Dici. Hist.*

CONDE (don Jos. ANTON.) a learned Spaniard, born about 1765, and died at Madrid, October 20, 1820. He was employed in the royal library, was a member of the Spanish Academy, and was intimately acquainted with Arabic literature. He published "Descripción de España, hecha por Zerif Aledris, conocido por el Nubiense, con Traducción y Notas," 1799; "Hist. de la Dominación de los Arabes en España," Madrid, 1820—21, 3 vols, 4to; besides other works.—*Biog. Univ. Class.*

CONGREVE, Bart. (Sir WILLIAM) a celebrated military engineer, who invented the formidable instruments of warfare called Congreve Rockets. He was born in 1772, and was the eldest son of Sir William Congreve, Bart. of Walton, in Staffordshire. Entering young into the artillery service, he in 1816 attained the rank of lieutenant-colonel, and was then also equerry to the Prince Regent. Retaining the latter honourable appointment, he retired from the army in 1820. In 1808 he invented the rocket to which his name has been attached, and which he succeeded in bringing into permanent use in military and naval tactics. It was employed (after being tried in the Basque roads by Lord Cochrane) in the Walcheren expedition, in the attacks on several places in Spain, at Waterloo, and with most important effect in the assault on Algiers. In the battle of Leipsic, in 1813, the Congreve rockets were used, and with so much advantage, that the emperor of Russia thought fit to reward the inventor by making him a knight of the order of St. Anne. In 1816 and 1817 Sir W. Congreve accompanied the Russian prince, now the emperor Nicholas, in a tour through England. The Congreve rockets are of various dimensions, and are differently armed according to the purposes for which they are designed, whether for the field or for bombardment. Those of the first kind carry shells or case-shot; the others are armed with highly combustible materials, and are called carcass rockets. Their form is cylindrical, and they are partly composed of strong metallic cases, with sticks attached of various lengths according to the size of the rocket. The carcass rockets are armed with strong iron conical heads pierced with holes, and containing a substance as hard and solid as iron itself, which when once inflamed is inextinguishable, and scatters its burning particles in every direction. When this substance is consumed the ball explodes like a grenade. The rocket is projected horizontally, and whizzes loudly as it flies through

CON

the air. The ammunition is divided into three classes, heavy, medium, and light; the heavy including all above forty-two pounds weight; the medium those between forty-two and twenty-four pounds; and the light from eighteen to six pounds. Experience is said to have shown that this instrument is not so efficient as was generally imagined, the wind and other causes occasioning an inappreciable effect on their progress and direction, and they sometimes recoil upon their employers. Hence they are less formidable than common artillery, and in sieges do less injury than red-hot shot and bombs. Their composition has not been kept a secret from foreigners, as appears from their having been used in the Austrian, Saxon, and other services, with improvements on the original invention. Sir W. Congreve, in 1812, published an "Elementary Treatise on the Mounting of Naval Ordnance, showing the true Principles of Construction for the Carriages of every Species of Ordnance," 4to; and in 1818, "A Description of the Construction, Properties, and Varieties of the Hydro-pneumatic Lock," for which he obtained a patent; the same year he procured a patent for a new mode of manufacturing gunpowder; and in 1819, a patent for an improved mode of enlarging or combining different metals; and another for improvements in the manufacture of bank-note paper, to prevent forgery. In 1823 he published, by order of Government, an interesting report on the Gas-light Establishments of the metropolis. He unfortunately became involved in a speculation for working mines, the result of which obliged him to become an exile from his native country. In 1811 Sir W. Congreve was elected a fellow of the Royal Society; in 1812 he was returned to parliament for the borough of Gatton, and in 1820 and 1826 for Plymouth. He succeeded to the baronetcy on the death of his father in 1814; and his death took place at Toulouse, in France, in May 1828.—*Encycl. Amer. Gent. Mag.*

CONNOR (BERNARD) an Irish physician, born in 1666, in county Kerry, who studied medicine at several of the continental universities, and at length obtained the appointment of first physician to John Sobieski, king of Poland. Towards the close of the 17th century he settled in London, was elected a fellow of the Royal Society, and having renounced the Roman Catholic communion for that of the established church, lectured publicly in medicine at Oxford. His lectures he afterwards printed under the title of "Disquisitiones Medico-Physicæ;" and was also the author of a "History of Poland," and a singular treatise on the miracles of Scripture, which he reduces to natural causes. This curious work is called "Evangelium Medici," or "The Physician's Gospel." His death took place a few years after his arrival in this country.—*Biog. Brit.*

CONSTABLE (HENRY) a native of Yorkshire, was successively a member of both universities, and was thrown into prison about the

commencement of the seventeenth century on account of his adherence to the Roman Catholic party. He obtained his liberty in 1604. His writings consist of an octavo volume of sonnets on miscellaneous subjects, entitled "*Diana*," 1594. The time of his decease is uncertain.—*Warton's Hist. of Poet.*

CONSTABLE, bart. (Sir THOMAS HUGH CLIFFORD) born in London in 1762; died at Ghent in 1823. He published, in conjunction with his brother, "*A Topographical and Historical Description of the Parish of Tixall, in Staffordshire*," Paris, 1818, 4to; and he translated into English verse the *Fables of Lafontaine*; and left in MS. some works of ascetic divinity, and an unfinished "*History of the Normans*." He was devotedly attached to the Catholic faith, and was intimately connected with the abbé Carton.—*Ann. Biog.*

CONSTANT (BENJAMIN) a celebrated French political writer, who was born at Geneva, in 1767. His parents were Protestants, and his father, after having been a general officer in the Dutch service, had returned to his native country at the close of his military career. Young Constant obtained a situation at the court of Brunswick, but becoming a zealous partisan of the new philosophy, he quitted it to go to Paris in the midst of the Revolution, and in 1796 he appeared at the bar of the Council of Five Hundred, to demand admission to the privileges of a French citizen, as being a descendant of a family expelled from France in consequence of the revocation of the edict of Nantes. About that time he published a tract "*On the Strength of the existing Government (the Directory) of France, and the necessity of supporting it*," which displayed considerable talent, and attracted much notice. In 1797 he wrote a treatise "*On Political Reaction*," and another entitled "*An Examination of the Effects of Terror*," animadverting on the terrorism of the Revolution. Another of his publications at this period was "*On the Consequences of the Counter-Revolution in England in 1660*." After Buonaparte had gained the ascendancy of affairs, M. Constant became a member of the Tribunal, and in the first session of that chamber he seemed disposed to put himself at the head of the opposition, vehemently attacking the communication between different powers in the state. He supported the Conscription law, and the law for abrogating the rights of primogeniture, but he opposed the establishment of a sinking fund, and also the institution of the Civil Code, which was under discussion in 1801. In consequence of his systematic opposition to the measures of the consular government, he was comprehended in Buonaparte's first purification of the assembly, consequently in 1802 he had ceased to be a member of the Tribunal. Madame de Stael had also given offence to the First Consul, and M. Constant having been politically connected with her, they were ordered to quit Paris at the same time; and the two exiles, leaving that capital, travelled

together over different countries. Some time after M. Constant was permitted to return to Paris, where, however, he staid but a short time, and then went to Gottingen, and devoted himself to literary studies. It was here that he wrote his "*History of the different Modes of Worship*;" and he also produced "*Walstein, a tragedy in five acts*," in verse, preceded by *Reflections on the German Theatre*. In 1814 he returned to Paris in the train of the prince royal of Sweden. At that period he appeared as an advocate for the Bourbons, and he employed his pen in supporting their cause, particularly on the occasion of the landing of Buonaparte in France, after his escape from the island of Elba. He censured the whole conduct of Buonaparte, and expatiated on the folly of trusting to promises of liberty from one who had made France suffer so many years under the most severe despotism. He continued to write in the same style, even when the exile of Elba was within a few leagues of Paris. On the 19th of March he inserted an article in the *Journal des Debats*, with his signature; in which he protested that he would never purchase a dishonourable existence by bending before such a man. Yet this seeming firmness and independence of spirit was by no means supported by becoming conduct. On the 20th of April he received from Buonaparte the title of Counsellor of State; he assisted in drawing up the constitution presented at the Champ de Mai, which he defended and enforced both by his writings and his speeches; and immediately before the second and final overthrow of Buonaparte he called upon the French to rally round their imperial chief as the first general in the world. The events which followed showed the imperfection of M. Constant's political sagacity; and the restoration of Louis XVIII obliged this versatile politician to retire to Brussels, whence he removed to England, but in November 1816 he returned to Paris. Subsequently he wrote in opposition to the government, in several periodical journals, especially in *Le Mercure*, and by advocating the cause of the liberals; he obtained a seat in the chamber of deputies in 1818. He continued to display the same principles, both as a writer and a statesman, during the remainder of his career. In consequence of exposure and fatigue at the period of the memorable commotions at Paris in July 1830, preceding the abdication of Charles X, M. Constant became extremely ill from a violent cold, and his health continued in a declining state till his death, which took place at Paris, December 8th, 1830. His remains were interred on the 12th of the same month in the cemetery of Père la Chaise, and his obsequies were attended by the chamber of deputies and a vast multitude of persons. Hewas one of the editors of *La Minerve*, and was generally admitted to be one of the ablest political writers of the age. He was well acquainted with the German language, and contributed greatly to the introduction and extension of the literature and philosophy

of Germany among the French. Besides the works already noticed, he wrote "On the Spirit of Conquest and Usurpation as they influence European Civilization;" "Reflections on Constitutions, the Distribution of Powers and Guarantees in a Constitutional Monarchy;" "Observations on the Speeches of the Minister of the Interior on the Liberty of the Press;" "On the Responsibility of Ministers;" "Political Principles applicable to Representative Governments, and particularly to the Existing Constitution of France;" "Principles of Public Law;" "On the Elections of 1807 and 1808;" "Letter on the Massacre of the Protestants at Nismes;" "Letters on the Hundred Days;" and "Adolphus, an anecdote found among the papers of a person unknown," a romance intended to shew the fatality attendant on a disregard to the established opinions of society; he was also one of the contributors to the *Biographie Universelle*.—*Month. Mag.*

CONTAT (LOUISE) dame de Parny, a celebrated French actress, born in 1760. She made her first appearance on the stage in 1776, in a tragic character, and attracted little attention; but at length she established a decided reputation in the part of Suzanne, in the *Marriage of Figaro*. She married M. Parny, nephew of the famous poet of that name; and having retired from the theatre at the age of fifty, she died of a cancer in 1815.—*Biog. Univ. Class.*

CONWAY (HENRY SEYMOUR) descended of the noble English family of that name, was born in 1720. Being a younger son, he entered the army, and served abroad in the seven years' war. On his return to England he obtained a seat in the House of Commons, rose to be joint secretary of state with the duke of Grafton, and held that situation from 1765 till 1768. In 1782 he was again called to office as commander of the forces. Besides his talents civil and military, he was an elegant scholar, and is advantageously known as the author of "False Appearances," a comedy, with a variety of miscellaneous pieces in verse, and a few political tracts which excited some attention in their day. General Conway, who was the bosom friend of Horace Walpole, earl of Orford, died in 1795.—*British Peerage.*

CONZ (CHARLES PHILIP) a German poet of eminence, who was professor of classical literature in the University of Tubingen. He wrote some anacreontic pieces, which unite liveliness of fancy with philosophical reflection, and which may be reckoned among the best compositions of the kind in the German language. He also produced a translation of the tragedies of Æschylus, which, notwithstanding some defects, added much to his reputation. Besides the works already noticed, he was the author of numerous essays on history and general literature, published in periodical journals. His death took place July 26, 1827, in the sixty-fifth year of age.—*For. Rev.*

COOKE (WILLIAM) an eminent lawyer, and law writer, who was born in 1757, in Lon-

don, where his father carried on business as a jeweller. He received his education in the neighbourhood of the metropolis; and afterwards devoted himself to the study of jurisprudence. The laws relating to bankruptcy occupied his particular attention; and in 1785 he published "A Compendious System of the Bankrupt Laws, with an Appendix of Practical Precedents," 8vo; in which he reduced the whole subject to a methodical distribution and arrangement, with great professional skill. This work passed through several editions, and was long reckoned the best treatise on the subject; but the great alterations which have taken place in this department of law, in consequence of new enactments, have at length rendered it obsolete. The success of this work probably induced him to enter as a student at Lincoln's Inn, and in 1790 he was called to the bar. Lord Chancellor Eldon selected him for the office of a commissioner of bankruptcy, which he filled with credit to himself for many years. In 1816 he was appointed king's counsel; but shortly afterwards he became so afflicted with the gout that he was often obliged to absent himself from Court, and at length he relinquished his attendance there, confining himself entirely to chamber practice, chiefly in questions relating to bankruptcy and arbitrations, in which kind of business he had an extensive share. In 1818 he was sent to Milan, as a commissioner to take the depositions of witnesses against the wife of George IV. When subsequently censured in parliament for his conduct of that affair, he intimated that the matter had proceeded further than he contemplated, and that he had not been fairly treated. He finally quitted practice in 1825, and subsequently resided at Lenham in Kent, where he died in September, 1832.—*Legal Observer. Ann. Biog.*

COPLEY (JOHN SINGLETON) an eminent painter, who was born at Boston, in the State of Massachusetts, N.A., in 1738. He commenced the study of his art at a very early age, without the assistance of a master, and before he left his native place he executed works of great merit, scarcely surpassed by his later productions. In 1774 he visited Italy; and in 1776 he came to England, where, in consequence of the distracted state of affairs in his own country, he determined to settle, with a view to the future practice of his profession. He consequently took up his residence in London, devoted himself to portrait painting, and became a member of the Royal Academy. His first properly historical picture was the Youth rescued from a Shark; but that called the Death of Lord Chatham, (representing the fainting of that great statesman in the House of Lords, after his memorable speech in favour of America,) established the fame of the rising artist. In 1790, Copley was sent by the Corporation of London to Hanover, to take the portraits of four Hanoverian officers, in order that he might introduce them into his painting of the Siege and Relief of Gibraltar, now at Guildhall. He followed his profession with great success till his sudden death in 1815.

Besides the paintings already specified, his *Death of Major Pierson at Jersey*; *Charles I in the House of Commons*; and *Surrender of Admiral de Winter to Lord Duncan, off Camperdown*, are among his most prominent productions, of all which there are engravings. Lord Lyndhurst, late Lord Chancellor of Great Britain, now Chief Baron of the Exchequer, is the son of this distinguished artist.—*Encycl. Amer.*

CORDEMOI (GERARD de) a native of Paris, and a member of the French Academy, appointed, through the interest of his friend Bossuet, reader to the dauphin. Besides a variety of philosophical and ethical tracts, he wrote a "*History of France*," in two folio volumes, and died at a very advanced age in 1684. His history was continued after his decease, by his son, *LOUIS*, who was born in 1651, and who having entered the church, obtained the valuable abbey of Famieres, and became a doctor of the Sorbonne. His death took place in 1722.—*Moreri.*

CORNIANI (JOHN BAPTIST) born at Ornizovi, near Brescia, in Italy, in 1742; was the author of two pieces applauded in all the theatres of Europe. These are "*Il Matrimonio Segreto*," and "*L'Inganno felice*," set to music by Cimarosa and Pasiello. He also published "*Secoli della Letteratura Italiana*," Brescia, 1804, 9 vols, 8vo; besides other works. He died in 1813.—*Ibid.*

CORT (CORNELIUS) a Dutch artist, the friend of Titian, many of whose best paintings he engraved in a very masterly style. He was a native of Hoorn, born about the year 1536, but spent the greater part of his life in Italy, where he died in 1578.—*Strutt.*

CORVISSART (JOHN NICHOLAS) a celebrated French physician and anatomist, born in Champagne in 1755. On completing his studies at Paris, he was appointed adjunct professor of anatomy on the foundation of Anthony Petit; and he afterwards succeeded Desbois de Rochefort, as physician to the hospital of La Charité. On the establishment of the School of Health in 1795, Corvissart was made the first clinical professor. Buonaparte, when first consul, appointed him his physician; and under the empire he received the decoration of officer of the legion of honour, and the title of baron. In 1811 he became a member of the Institute; and an honorary member of the Academy of Medicine, on its foundation in 1821. He died September 18th that year. Corvissart published several works, the best known of which is his "*Essai sur les Maladies et les Lésions Organiques du Cœur et des gros Vaisseaux*," 8vo, of which an English translation appeared in 1816, 8vo. Dr Ferrus, physician to the hospital of the Salpêtrière, published "*Notice Histor. sur J. N. Corvissart*," Paris, 1821, 8vo.—*Biog. Univ. Class.*

CORYATE (GEORGE) an English poet of the age of Elizabeth, rector of Odcombe in the county of Somerset, and prebendary of York Minster. He was a native of Salisbury, and having gone through Winchester grammar

school was elected off from that foundation to a fellowship at New college, Oxford. Besides a quarto volume of miscellaneous poetry, composed in Latin verse, he was the author of a "*General Description of England, Scotland, and Ireland*," written in the same language. His death took place in 1606.—*Wood.*

COSSALI (PETER) an Italian philosopher, born at Verona in 1748. He studied theology, and took the habit of a Theatine friar; and he became professor of physics and astronomy at Parma; he afterwards occupied the chair of mathematics at Verona, and then that of analysis at Padua. He was at length appointed inspector-general of bridges and highways by the new Italian government. His death took place in 1815. Besides a variety of academical memoirs, he was the author of a "*Dissertation on the Equilibrium of Air-balloons*," Verona, 1784, 8vo; and a "*History of the Origin and Progress of Algebra in Italy*," Parma, 1797, 2 vols, 4to.—*Biog. Univ. Class.*

COSSART (GABRIEL) a French jesuit of the seventeenth century, born in 1615 at Pontoise, and known as the learned and indefatigable assistant of Labbe in his Collection of the Councils, a laborious compilation, occupying eighteen folio volumes. There are two editions of his other writings, which consist of some speeches and miscellaneous pieces both in prose and verse. His death took place in 1674.—*Moreri.*

COSTARD, FRIS. (GEORGE) born in 1710, was a native of the town of Shrewsbury, and received his education at Wadham college, Oxford, where he graduated and took holy orders. He is known as the author of letters to Martin Folkes, esq. "*On the Astronomy of the Ancients*," in three separate publications; "*On the Use of Astronomy in History and Chronology*," 4to; a "*History of Astronomy*;" and a commentary on the book of Job. He also superintended the publication of a new edition of Hyde on the Ancient Religion of the Persians. Mr Costard held in succession the livings of Whitchurch in Dorsetshire, and Twickenham, Middlesex, at which latter place he died in 1782.—*Gent. Mag.*

COTES (FRANCIS) an English artist, who rose to great eminence as a portrait painter both in oil and crayons. He was a native of the metropolis, born in 1726, and was one of the original members of the Royal Academy. His death took place in 1770.—*Strutt.*

COTIN (CHARLES) a French poet of the seventeenth century, who although not without talent as an author, is now principally known by the sarcasms of Molière and Boileau, of which he was the object. Cotin was an ecclesiastic, and had a seat in the Academy.—*Dict. Hist.*

COTOLENDI (CHARLES) an ingenious French writer, who in the latter part of the seventeenth century published at Paris the lives of madame de Montmorenci, St Francis de Sales, Columbus, &c. the latter in two 12mo volumes; "*Texeira's Voyages and Travels*," 12mo, 2 vols; "*A Book without a Name*;"

"On the Writings of St Evremond;" "Arlequiniana, &c." M. Cotelendi practised as an advocate at the Parisian bar, and died about 1701.—*Ibid.*

COTUGNO (DOMINICO) an Italian physician, born in the kingdom of Naples in 1736. He practised medicine and taught anatomy at Naples; and he discovered a part of the organ of hearing, which has been denominated *Aquæductus Cotunii*. He was appointed physician of the queen of Naples, and first physician to the king. His death took place in 1822. He published "*De Aquæductibus Auris Humanæ internæ Dissertatio*," 1761, 8vo; and several other works.—*Biog. Univ. Class.*

COURIER (PAUL LOUIS) an ingenious French writer, distinguished from his earliest years from the singularity of his character. At his baptism he was registered by the appellation of Courier de Méré, but he would never adopt the latter name lest he should be suspected of an intention to insinuate that he was of a noble family. His education was superintended by his father, a man of great erudition; and at the age of fifteen he was well versed both in Greek and the mathematics. In 1792 he was appointed an officer in the artillery; and he remained in the army till 1809, having served during the campaigns in Italy and Germany, without, however, neglecting his literary studies. His republican principles and the frankness of his character were obstacles to his advancement under the government of Buonaparte; and after the battle of Wagram he resigned his commission. On quitting the service he went to Italy, when he discovered the celebrated manuscript of the Pastoral Tale of Longus, in the abbey of Monte Cassino, of which he published an account in his Letter to M. Renouard; a most curious production, designed as a vindication of his character from the ridiculous charges of plagiarism or fraud brought against him by the Italians. Returning to France without a passport, in 1812, he was arrested on suspicion of being concerned in the conspiracy of general Malet, but he was soon set at liberty. In 1819 Courier was living quietly in one of the provinces, when the political reactions caused a general alarm, and more than five hundred individuals were imprisoned. He then published his "Petition to the two Chambers," which contributed to the discontinuance of arbitrary arrest. Being refused a seat in the Royal Academy, he avenged himself by a letter to the members of that learned association, in which he displayed a spirit of raillery and finesse worthy of a Pascal. He was assassinated at a short distance from his own house, and the public voice accused his wife of being the instigator of this shocking crime. The writings of Courier are said to combine the excellences of Montaigne, Rabelais, and La Fontaine, the wisdom of Franklin, and the logic of Pascal. In 1828 appeared "*Correspondance et Opuscules inédites de Paul Louis Courier*," Paris, 2 vols, 8vo.—*Renouard, Catalogue de la Bibliothèque d'un Amateur. For. Rev.*

COURTILZ (GAMEN de) an ingenious

French writer, descended of the noble family De Sandras, and born in 1644 in the metropolis. Like most of the young nobility of his time he entered the army, and served a campaign in the Low Countries, but appears to have had a strong bias in favour of literature, the fruits of which appeared in the lives of Coligni, of marshal Turenne, and of Rochefort; "*The Annals of Paris*;" "*A History of the Dutch War*;" "*Political Testament of M. Colbert*;" "*The conduct of France since the Peace of Nimeguen*;" &c. Some of these proving obnoxious to the French court, the author was, by means of a lettre de cachet, consigned to a nine years' imprisonment in the Bastille. Eventually however he recovered his liberty, and died in 1712.—*Dict. Hist.*

COVELL, DD. (JOHN) a learned divine, a native of Horningsheath, Suffolk, born 1638. From the grammar-school of Bury St Edmund's he removed to Cambridge, and obtained a fellowship at Christ's college there, of which society he eventually became the head. Going into Turkey in 1670, in the capacity of chaplain to the English embassy, he there acquired considerable information with respect to the early constitution of the Greek church, a history of which he published many years after in one folio volume. Dr Covell held some valuable preferment in the church, together with the chancellorship of the diocese of York. His death took place in 1722.—*Biog. Brit.*

COX (THOMAS) a learned and industrious compiler and translator of works on history and topography, who was Vicar of Bromfield in Essex. He was a man of considerable knowledge and great application; and according to Morant, he compiled that part of the "*Magna Britannia*," 6 vols, 4to, 1715–1731, subsequent to the county of Cumberland. He also translated, from the French, Dupin's "*Life of Christ and his Apostles*;" and his "*Abridgment of Ecclesiastical History*," 4 vols, 12mo; from the Latin, "*Pancirollus of Things Lost*," 2 vols, 12mo; from the Greek, "*Plutarch's Morals by way of Abstract*;" and he compiled the lives of Henry IV, Henry V, Henry VI, and Richard III, in the "*Complete History of England*." He died January 11th, 1733.—*Bray's History of Surrey*, vol. iii.

COXE (WILLIAM) a celebrated traveller and historical writer. He was the eldest son of Dr W. Coxe, physician to the Royal Household, and was born in London, March 7, 1747, O.S. He received his education at Eton school, and King's College, Cambridge, where he distinguished himself by his classical acquirements; and in 1768 he obtained a fellowship. Having adopted the clerical profession, he was ordained a deacon in 1771, and the year following a priest, when he became tutor to the marquis of Blandford, son of the duke of Marlborough; but after holding that situation two years he relinquished on account of ill health. In 1775 he accompanied the late earl of Pembroke, then lord Herbert, on a continental tour. They visited several parts of Europe, particularly Switzerland, a country at that time with which the English were but im-

perfectly acquainted. Mr Coxo therefore performed an acceptable service to his countrymen, by publishing "Sketches of the Natural, Civil, and Political State of Switzerland," which after a second tour in 1779 appeared in an improved form, under the title of "Travels in Switzerland and the Country of the Grisons," 3 vols, 8vo. In 1780, he published "Russian Discoveries," comprising an account of the conquest of Siberia, and the commercial intercourse between Russia and China; and in 1784 "Travels into Poland, Russia, Sweden, and Denmark," 5 vols, 8vo. He subsequently travelled on the continent with the late Samuel Whitbread, and then with H. B. Portman, of Bryanston, Dorset. In 1786 he was presented to the college living of Kingston-on-Thames, which he resigned in 1788, on obtaining from lord Pembroke the rectory of Bemerton, near Salisbury. During the remainder of his life, Bemerton became the principal place of his residence, though in 1794 he again quitted England for a few months, during a tour through Holland, Germany, and a part of Hungary, with lord Brome, son of the marquis Cornwallis, by whom he was presented to the chaplaincy of the Tower. In 1803 he was chosen one of the Canons Residentiary of the Cathedral of Salisbury; in 1805 he was appointed archdeacon of Wilts; and in 1811, he obtained the rectory of Fovant, Wilts, on which he resigned that of Stourton, which he had held previously. His literary productions not already noticed are numerous, including "Memoirs of Sir Robert Walpole, Earl of Orford, with Original Correspondence and Authentic Papers," 1798, 3 vols, 4to; "An Historical Tour in Monmouthshire," 2 vols, 4to; "Memoirs of Horatio Lord Walpole," 1802, 4to; "Historical Memoirs of the Kings of Spain of the House of Bourbon," 1813, 3 vols, 4to; "Memoirs of John Duke of Marlborough," 1817—19, 3 vols, 4to; "Private and Original Correspondence of the Duke of Shrewsbury, illustrated with Narratives Historical and Biographical," 1821, 4to; and "Memoirs of the Administration of Mr Pelham," left unpublished at his death; besides "A Vindication of the Celts," against Pinkerton; "A comparative View of the Russian Discoveries with those made by Captains Cook and Clerke;" and various tracts and sermons. He died at Bemerton, June 8, 1828, aged 81.—*Gent. Mag.*

COYER (GABRIEL FRANCIS) a native of Franche Comté, born in 1707. He was educated among the jesuits, but renounced the order and obtained the appointment of tutor to the young prince de Turenne. He was the author of a French translation of Blackstone's Commentaries on the Laws of England; an elementary work on education, in 1 vol, 12mo; a "Life of John Sobieski, King of Poland," 3 vols, 12mo; and two volumes of travels. His death took place in 1782.—*Biog. Univ.*

CRABBE (GEORGE) a celebrated English poet, who was a native of Aldborough in Suffolk, where his father was an officer of the Customs. After having finished his education, he became tutor to the Duke of Rut-

land, whom he subsequently attended as chaplain during his vice-royalty in Ireland. He commenced his literary career by the publication of a poem entitled "The Library," in 1781; and in the preface to a new edition of that piece, he states that while he was composing it he was honoured by the advice of Mr Burke, in whose presence part of it was written, and to whose judgment the whole was submitted. This gentleman introduced him to Dr Johnson, who bestowed on the young poet warm approbation. This production was followed by "The Village, a poem," in 1783; "The Skull, a tale;" and "The Newspaper, a poem," 1785. On the death of his patron the Duke of Rutland, he preached a funeral sermon in the chapel at Belvoir Castle, which was printed in quarto, 1788. Through the recommendation of the Duchess Dowager of Rutland Lord Thurlow, in 1789, presented him to the crown livings of Muston, in Leicestershire, and West Allington, in Lincolnshire. The year following he communicated to Mr John Nichols, for his History of Leicestershire, the Natural History of the Vale of Belvoir. During several years from this period he devoted his attention almost entirely to his clerical duties, and the education of his family; poetry being only occasionally adverted to in his hours of relaxation. In 1807 he published a volume of poems, including revised editions of his previously published works, together with a new poem, entitled "The Parish Register," the manuscript of which had been read, during his last illness, by Fox, and been reviewed by Lord Holland. In 1810 Mr. Crabbe published "The Borough, a poem;" and in 1812, "Tales in Verse." About this time he was presented to the rectory of Trowbridge, with the curacy of Staverton, Wilts, in the patronage of the Duke of Rutland; and going to reside at Trowbridge, he passed the last eighteen years of his life in that town. He died February 3, 1832, in the seventy-sixth year of his age, at the rectory at Trowbridge, after having been confined to his house about a week; and he is said to have been at the time of his decease the most aged of our poets. As a poet Crabbe was distinguished for the graphic accuracy of his descriptions, especially of natural objects and scenes in common life. His portraits appear to be exact copies of existing originals, and in the same way he describes landscapes, houses, thoughts, and feelings with such perfect verisimilitude, that those who have seen and felt what he writes about are surprised to perceive their recollections brought back with all the strength and vivacity of original perception. Some critics have asserted that Mr Crabbe was no poet, but it may with more truth and justice be affirmed that he was one of the greatest of poets in the particular class to which he belonged. His scenic descriptions, like the scenic delineations of Hogarth and Wilkie, are alike of the highest order in their peculiar kind, and there can be no more reason for refusing to Crabbe the title of a poet, be-

cause his writings are inferior to the sublimities of Shakspeare and Milton, than for withholding the title of a painter from Hogarth or Wilkie because their works are inferior to those of Raphael and Michael Angelo. Even those who are most disposed to detract from his merit as a writer of poetry, and sarcastically recommend that his tangled rhymes should be turned into easy prose, yet admit that his strong plain sense, shrewd humour, acute observation, and faithful portraiture, would be instructive and delightful, and (thus reduced to prose) give us what we have not, a standard book on the manners and characters of the great masses of English society. The peculiar precision with which this writer has delineated the scenery of a seaport, and the character, manners, and habits of its population, is extremely striking, particularly in his poem called "The Borough," his poetical pictures in this case doubtless being the result of personal observation and reflection while residing at the place of his nativity. The private and professional character of this distinguished individual appear to have been highly respectable and amiable. On his first settling at Trowbridge, a town crowded with Dissenters, he was unpopular; but when they became acquainted with his goodness of heart, strength of intellect, and his kindness to the poor of all persuasions, he became a great favourite, and was warmly welcomed to all Bible societies and other associations for the benefit of the labouring classes. He however mixed but little with genteel society, and though friendly with all he was intimate with but few. He gave his neighbours the benefit of his influence and talents by acting as a magistrate, and one of his most intimate friends was one of his colleagues in the magistracy, Mr Waldron. His income amounted to about 800*l.* a year, which was less than it would have been but for his liberality and forbearance with regard to tithes. His charity was general, but not indiscriminate, and he has even been known to search obscure lodging-houses in Trowbridge, to bestow his bounty on sufferers whom misfortune had driven to beggary. His feelings were not blunted, neither was his hand checked by frequent impositions and feigned tales of woe, on discovering the falsehood of which he would say, "God forgive them, I do." He paid much attention to the education of the poor, in forwarding which he spent both time and money; and in his latter days he devoted his frequent attention to the Sunday school. His sermons were short but pointed and impressive; in his declining years his voice had failed, and frequently could not be heard distinctly. As a proof of the general esteem which his conduct excited, it may be mentioned that one hundred of his fellow townsmen requested leave to attend his funeral.—*Biog. Dict. of Living Authors. Athenæum. Metropolitan.*

CRADOCK (JOSEPH) born at Leicester, 1742, died in London, December 15, 1826. He was the author of "Village Memoirs, in a

Series of Letters between a Clergyman and his Family in the Country, and his Son in Town," 1774; "An Account of some of the most Romantic Parts of North Wales," 1777; "Literary and Miscellaneous Memoirs," 1826, 2 vols, 8vo; two tragedies; and other works.—*Gent. Mag.*

CRAIG (JAMES) a Scottish clergyman, much celebrated for his eloquence in the pulpit during the early part of the last century. He was born in 1682, at Gifford, in East Lothian, and was the author of three volumes of sermons, now become extremely rare. Mr Craig was many years minister of Haddington, but died at Edinburgh in 1744.—*Chalmers's Biog. Dict.*

CRAIG, knt. (SIR THOMAS) a celebrated Scottish lawyer, born in 1548, at Edinburgh, but educated chiefly on the continent, where he studied the principles of jurisprudence. Returning to his own country he rose to great eminence in his profession, and wrote a valuable work on the feudal law. He was also the author of a treatise on the pretensions of the Scottish king to the English succession, which was perhaps as instrumental as his good reputation in procuring him the honour of knighthood. His death took place in 1608.—*Ibid.*

CRAIG, DD. (WILLIAM) minister of Cambusnethan, and afterwards of St. Andrew's, Glasgow, of which city he was a native. He was the author of a volume of sermons, much admired for their eloquence, and an "Essay on the Life of Christ." His death took place in 1784, in the seventy-fifth year of his age.—*Ibid.*

CRAWFURD (QUINTIN) a learned writer, who was a native of Scotland, but resided many years in France, and died at Paris in 1819. He was the author of "Essai sur la Littérature Franç." Paris, 1803, 2 vols, 4to; "Mélanges d'Hist. et de Litt." &c. 1809, 4to; "Sketches of the History of the Hindus," 1792, 2 vols, 8vo; and other works in French and English.—*Biog. Univ. Class.*

CREMONINI (CÉSAR) an Italian writer, a native of Cento, in the dukedom of Modena, born there about the middle of the sixteenth century. He filled for several years the professor's chair in philosophy, first at Ferrara and afterwards in the university of Padua. Cremonini held the soul to be material, and was the author of several works, the principal of which are "De Sensibus et Facultate appetitiva," 4to; "De Physico auditu;" "De Calido innato;" "Il Nascimento di Venetia," 12mo; and a pastoral, entitled "Amyntas and Chloris." His death took place in 1630.—*Tiraboschi.*

CRENUS (THOMAS) a German philologist of great industry and ability, born at Brandenburg in 1648. He supported himself by the exercise of his talents, and by the instruction of youth at Gissen, Zell, and other places, but at length settled at Leyden. Of his numerous writings the best are "De Philologia;" "De Eruditione comparanda;" and "Consilia et Methodi Studiorum optime instituendorum." His other works are "Mu-

C R O

sæum Philologicum," 12mo, 2 vols; "*Fasciculi Dissertationum*," 12mo, 2 vols; "*Commentationes in varios Auctores*," 12mo, 3 vols; "*De Furibus Librariis*," 12mo; and "*The-saurus Librorum Philologicorum*," 8vo, 2 vols. His death took place at Leyden in 1728.—*Biog. Univ.*

CRESCENTIUS, or DE CRESCENTIIIS (PETER) a native of Bologna, born there in 1233, and educated for the profession of the law, in which he rose to great eminence. It is however by his partiality for agricultural pursuits that his name has been handed down to posterity, and his treatise "*Ruralia Com-moda*" is yet extant, while his professional writings have perished. There are two editions of this work; that of Augsburg, folio, 1471, and Naples, 8vo, 2 vols, 1724. His death took place in 1320.—*Moreri.*

CRISPUS, or CRISPO (GIOVANNI BAT-TISTA) a Neapolitan ecclesiastic of great learning, and considerable talent as an author both in prose and verse. He was a native of the town of Gallipoli, and read lectures in the capital in ethics and theology with such reputation, that a bishopric was offered him by the pope in consequence; he died however previous to his investiture, in 1595. Besides a volume of poems written in his native language, and printed about ten years previously to his decease, he was the author of a "*Life of Sannazarius*," and a treatise "*On the Caution to be observed in reading the Works of the Heathen Philosophers*."—*Moreri.*

CROFT (HERBERT) bishop of Hereford in the seventeenth century, third son of sir Herbert Croft, knt. of Croft castle, Herefordshire, and father of the first baronet of the same name. He was born at Great Milton, Oxfordshire, in 1603, and was educated in the principles of the Romish church, at St Omer's, but through the persuasion of bishop Morton abjured that communion, and after taking the usual degrees at Christchurch, Oxford, was presented to the living of Harding. His subsequent rise in the church was a rapid one, and after holding in succession stalls at Salisbury, Worcester, and Windsor, he resigned the latter in 1644, for the deanery of Hereford. Of this he was deprived during the civil wars, for his adherence to the royal cause, but on the return of Charles II was raised by that monarch to the see of Hereford. Bishop Croft was the author of a variety of sermons and other devotional writings, besides some strictures on Burnet's Theory of the Earth, and a tract in favour of toleration, called "*The Naked Truth*." His death took place in 1691.—*Biog. Brit.*

CROIX DU MAINE (FRANÇOIS GRUDE DE LA) so called from his estate near Mans, was born about the middle of the sixteenth century. He was an eminent book collector, and printed a catalogue of all the known works in the French language, with an account of their authors. This work, which is entitled "*The French Library*," appeared in 1584, in one large folio volume. Eight years after its publication the compiler was inhumanly murdered in the city of Tours.—*Dict. Hist.*

APP. BIOG. DICT.

C R U

CROWE (WILLIAM) an ingenious poet, who was a native of Winchester, and at an early age became one of the choristers at the college chapel. His promising talents attracted notice; he was admitted into the school, and at the usual period removed to a fellowship at New College, Oxford, where he took the degree of BCL in 1773, and was appointed to a tutorship. In 1781 he published "*A Sermon preached before the University of Oxford*;" and the following year he was presented by his college to the rectory of Alton Barnes, in Wiltshire. In 1784 he was appointed to the office of Public Orator at Oxford; in consequence of which he delivered the Creweian Oration, on the subject of the revolution; and another oration in 1800, —both which were published. His principal poetical composition, entitled "*Lewesdon Hill*," is written in blank verse, and contains an interesting and elegant description of scenery in Dorsetshire. In 1819 appeared a specimen of a new edition of the works of Shakespeare, consisting of Hamlet and As you Like it, projected by Mr Crowe in conjunction with Mr Thomas Caldecote of the Inner Temple. He published in 1827 a collection of his poems, and a treatise on English versification. His death took place in London, February 9, 1829, at the age of eighty-three.—*Gent. Mag.*

CROWLEY (ROBERT) a protestant divine in the sixteenth century, who obtained some distinction as a writer of poetry and religious controversy. He studied at Magdalen College, Oxford, where he took the degree of BD. and in 1542 was chosen a probationer fellow. In the beginning of the reign of Edward VI he settled in London, as a printer and bookseller, also becoming an occasional preacher; but being a zealous reformer, he, on the accession of queen Mary, fled to Frankfort, in Germany. He returned home in 1556 and was made Archdeacon of Hereford, and the next year he obtained a prebend in that cathedral, but he resigned both benefices soon after, and in 1558 he was collated to a prebend at St Paul's, London. Subsequently he became vicar of St Giles's, Cripplegate, and in 1575, he was presented to the vicarage of St Lawrence Jewry. He died in 1588. Among his poetical productions may be mentioned "*Thirty-one Epigrams*;" and a translation of the psalms; but he is now chiefly known as the first editor of the "*Vision of Piers Plowman*."—*Birkenhout's Biog. Litt.*

CRUSIUS, or KRAUS. There were two learned German professors of this name. MARTIN, the first in point of time, was a native of Grebern, born in 1526, and filled the chair of the Greek language and of ethics at Tübingen. He published a curious abridgement of the sermons delivered by various divines in that university, which occupies four quarto volumes; it is called "*Corona Anni*," and is written in the Latin and Greek languages. His other works are eight books entitled "*Turco-Græcia*," folio; "*Germano-Græcia*," in six books, folio; "*The Acts and Writings of the Divines of Wirtemberg and the Patriarch of Constantinople*," Gr. et Lat. and two folio volumes of Swedish Annals.

H

His death took place in 1607.—**CHRISTIAN**, a native of Wittemberg, was born in 1715, and after receiving a classical education at the universities of Halle and Leipsic, obtained the professorship of rhetoric in that of the city which gave him birth. He was the author of "Probabilia Critica," in 8vo; a treatise on the "Origin of Money," in which he derives the Latin word "Pecunia à Pecore," from the barter of cattle before the invention of coin; and a small volume of miscellaneous tracts. He was a member of the Historical Academy of St Petersburg, and died in 1767.—*Moreri*.

CUNNINGHAM, MD. (WILLIAM) an eminent physician, who practised with great reputation at Norwich, about the middle of the sixteenth century. His professional writings are a commentary on the works of Hippocrates, and a treatise on syphilis. Dr Cunningham was also the author of a tract "De Aere, Aquis, et Regionibus;" and "The Cosmographical Glass," an elementary work on cosmography, navigation, &c. He lectured occasionally at Surgeons'-hall, in the metropolis, and was a good engraver. The time of his death is uncertain.—*Aikin's Mem. of Med.*

CURAUDAU (FRANCIS RENE) an eminent French chemist, born at Sees, in 1765. He was a member of several scientific societies; and he published "Tr. sur le Blanchissage à la Vapeur," Paris, 1806; besides a number of memoirs and papers in various periodical works. He died in 1813.—*Biog. Univ. Class.*

CUSPINIAN, the name by which John Speisshammer, a German physician, was known at the court of the emperor Maximilian I. He was a native of Sweinfurt, born in 1473, and rose high in the imperial confidence, being employed on several diplomatic missions, while his ostensible employment was that of keeper of the library at Vienna. He was the author of "A History of the Turks;" another of "Austria;" a commentary on Sextus Rufus "De Regia;" and "A History of the Cæsars and Emperors of Ancient Rome," in folio. His death took place in 1529.—*Moreri*.

CUVIER (BARON GEORGE) a celebrated French naturalist, particularly distinguished for his writings on oryctology and comparative anatomy. He was the son of a protestant minister, and was born at Montbéliard, in the ancient province of Franche Comté, in 1769. His attention appears to have been first directed to the study of the structure and physiology of animals, on which he gave public lectures at Paris, which were published under the title of "Leçons d'Anatomie comparée," 1805, 5 vols, 8vo, of which there is an English translation. He was a member of the Institute or Academy of Sciences, to the memoirs of which learned body he contributed many valuable papers, as he likewise did numerous articles to the Annals of the Museum of Natural History. In 1811 appeared an "Essay on the Mineralogical Geography of Paris," which he wrote in conjunction with Alexander Brogniart. In 1812 he published his most elaborate "Recherches sur les Ossements Fossiles," 4 vols, 4to, to which was subsequently added a fifth.

This work made a most important addition to the stores of natural science, and entitled the author to the highest place among the naturalists of Europe. It has been justly regarded as one of the greatest improvements in modern science, that a naturalist can now, on the discovery of a fossil tooth, merely by the examination of that seemingly unimportant relic, decide with certainty on the nature of the animal to which it belonged, the distinguishing points of its structure, and even the prominent characteristics of its nature and habits. That this has been done, and that too with animals, which, like the mammoth and the mastrodon, have long disappeared from the face of the earth,—that we have been enabled to form in some degree a natural history of the world before the creation of man—all this we owe principally to Cuvier, who has thus, as it were, laid open to our inspection a world over which time seemed to have spread an impenetrable veil. The discovery of a few bones, such as our early writers have described as the skeletons of giants, has in our times led to an extension of the authentic history of nature, of which those who lived but half a century ago could have formed no conception. Another highly important production of this writer is his "Règne Animal," 4 vols, 8vo. In this work, Cuvier has done as much to facilitate the study of the animal kingdom of nature as Linnaeus and Jussieu did for that of plants. By an exact classification of animals according to their nature, he has enabled us to take a comprehensive survey of the links of being between the different species, and thus contributed to the attainment of a general and correct knowledge of the subject. This work, which has also been translated into English, is perhaps the most useful and the best known of all Cuvier's publications. Towards the end of 1829 he commenced, in conjunction with Valenciennes, a Natural History of Fishes on an extensive scale. This department of natural history has experienced so much comparative neglect, that the prospect of a work on such a topic, enriched by the labours of so accurate an observer of nature, was hailed with delight by the lovers of science. Among the writings of Cuvier must be noticed those which relate to the history of science. He was perpetual secretary to the Institute of France, and afterwards to the Academy of Sciences, and in that character he published "Rapport Historique sur le Progrès des Sciences Naturelles depuis 1789, et sur leur Etat actuel," 1810, 8vo; and Eloges on the deceased members of the Academy, which were collected and published in 2 vols, 8vo; and just before the revolution of 1830, he commenced, at the College of France, a course of lectures on the History of the Natural Sciences from the earliest records to the present time. This great man was a member of most of the scientific associations of Europe; and it is a circumstance honourable to the English nation, that, in the midst of war between Great Britain and France, in 1806, he was elected a Fellow of the Royal Society. In the letter which announced the election of Cuvier, and that of Lacedpède,

CUV

which took place at the same time, Sir Joseph Banks expressed a hope that the animosities of nations might never be transferred to the realms of science. Cuvier, like some of his brother philosophers, was induced during the government of Buonaparte to interfere in politics. At this period he was made a baron, and appointed a member of the senate, but he never took a very active part in public affairs, nor committed himself, by servile adulation to his imperial patron, or by the display of zeal for the opposite party after the downfall of that great potentate. He appears indeed to have had too sincere an attachment to science to be seduced by prospects of political fame or fortune. His death took place May 15, 1832. Though he had reached the last stage of paralysis, he retained his faculties entire even to the last day of his life. He repeatedly expressed regret at being obliged to leave so many of his works unfinished, referring especially to that on Comparative Anatomy, on which it is said he had been actively employed almost immediately previous to his death. His countrymen and their sovereign have promptly displayed their estimation of the great merits

CZW

of this illustrious philosopher; the King of the French has conferred on the widow of Cuvier the highest pension which he has it in his power to bestow,—six thousand francs a year; and a public subscription has been proposed for the purpose of raising a monument to his memory.—*French Reviews and Papers.*

CZARTORISKY (ADAM CASIMIR, prince) a descendant of the ancient family of Jagellon, born in Lithuania in 1731; died at Warsaw in 1823. He partook in all the various attempts of the Polish nobility to recover the independence of their country; and engaged in several foreign missions for that purpose. When, after the congress of Vienna in 1815, the emperor Alexander, recognised as sovereign of Poland, bestowed on the nation a constitution distinct from that of Russia, prince Czartorisky was chosen a member of the committee appointed to prepare the plan of the new government.—*Biog. Univ. Class.*

CZWITTINGER (DAVID) a learned Hungarian, born at Chemnitz, about the close of the seventeenth century. He was the author of a "History of Hungarian Literature," in Latin, Altorf, 1711, 4to.—*Ibid.*

DAL

D'ACOSTA (JOHN) a political and miscellaneous writer of eminence, who was a native of Bengal. He was of Portuguese extraction, and was born in 1785, and died in 1821. He distinguished himself as the editor of the Times journal of Calcutta.—*Month. Mag.*

DAGOBERT (LOUIS AUGUSTUS) a French general, who was a native of St Lo. He obtained the rank of *maréchal-de-camp*, and served in that capacity in Italy, under general Biron, in 1792. In the year 1793 he was chief commander of the army of the Eastern Pyrenees, and he died the following year of wounds which he had received at the capture of Urgel, where he greatly distinguished himself. He was the author of "Nouv. Méthode d'ordonner l'Infanterie combinée d'après les Ordonnances Grecq. et Rom." Paris, 1793, 8vo.—*Biog. Univ.*

DALBERG (CHARLES THEOD. ANT. MAIR, baron de) archbishop of Tarsus, prince-primate, grand duke of Frankfurt, &c. was the eldest son of the burgrave of Friedberg, and was born at Herrusheim, near Worms, in 1744. Having embraced the ecclesiastical profession, he successively became canon capitulary of Mayence, of Worms, and of Wurtzburg, privy counsellor, civil governor of the principality of Erfurt, president of the Academy of Sciences in that city, and bishop of Constance. He died at Ratisbon, February 10, 1817. This learned and liberal-minded prelate was the author of "Réflexions sur l'Univers," of which the tenth edition appeared in 1768; "Des Rapports entre la Morale et la Poli-

DAL

tique," 1780; "De la Connaissance de soi-même, comme Principe Gén. de la Philos." Erfurt, 1793, 8vo; "Du Maintien des Constitutions des Etats," 1795, 4to; "De l'Utilité de la Stéatite pour les Œuv. de l'Art, et surtout pour les Grav. en Pierres fines," 1800, 8vo; and "Réflexions sur le Caractère de l'Emp. Charlemagne," 1806, 8vo. He also published many memoirs on ecclesiastical government, mathematics, and the fine arts.—WOLFGANG HERIBERT, baron DALBERG, brother of the preceding, was minister of state to the grand duke of Baden. He distinguished himself as a dramatist, and besides several imitations or translations of the works of Shakspeare and Cumberland he was the author of "Montesquieu, ou le Bienfait inconnu;" and other original works. He died at Mannheim, in 1806, aged fifty-five.—JOHN FREDERICK HUGH DALBERG, a third brother of the same family, was a canon of Worms, and died in 1812. Among various literary productions he published an oriental romance, entitled "The History of a Family of Druses," of which there is a French translation, published at Paris, 1811, 2 vols, 8vo, under the title of "Mehaled et Zedli."—*Month. Mag. Biog. Univ. Class.*

DALBERG (NILS, or NICHOLAS) a Swedish physician, born about 1735. After finishing his studies, he accompanied Gustavus III, then prince-royal, to Paris, where Dalberg formed an acquaintance with many distinguished philosophers and men of science. In 1781 he retired from court in disgrace; but he

DAL

was recalled to attend the king in his last moments. He died at Stockholm in 1820. He published memoirs in the collection of the Academy of Sciences at Stockholm; and wrote a journal of his travels, preserved in MS. at Linköping. Linnæus the younger gave the name of *Dalbergia* to a genus of plants, in honour of Dr Dalberg and his brother, who was also eminent as a naturalist.—*Biog. Univ. Class.*

DALLAS (ALEXANDER JAMES) an American lawyer and public writer, who was born in the island of Jamaica, in 1759. He was the son of an eminent physician; and he received his education partly at Edinburgh and partly at Westminster. His mother becoming a widow and again marrying, he was prevented from obtaining any share of his father's property; and in 1783 he quitted the place of his nativity and settled in Philadelphia, (U.S.) Having taken the oath of allegiance to the state of Pennsylvania, in June, 1783, he was, in July, 1785, admitted to practise as an advocate in the supreme court of Pennsylvania; and in the course of four or five years he became a practitioner in the courts of the United States. During this period, as his business was not very extensive, he employed himself in preparing reports of law cases for the press, and in other literary undertakings. He also wrote in the public journals, and at one time was editor of the *Columbian Magazine*; in his contributions to which he is said to have displayed considerable ability. In January, 1791, he was appointed secretary of Pennsylvania, by governor Mifflin; and in December, 1793, his commission was renewed. Not long after he was constituted paymaster-general of a body of forces, which he accompanied in an expedition to Pittsburg. In December, 1796, he again obtained the post of secretary of state; and while in office he published an edition of the laws of the Commonwealth, with notes. On the election of Jefferson to the presidency of the United States, in 1801, Mr Dallas was appointed attorney of the United States for the eastern district of Pennsylvania, and he continued to occupy that post till his removal to Washington. October 6, he was made secretary of the treasury of the United States; and in that highly responsible and difficult situation, he exhibited so much ability and energy of character as to command the general confidence and approbation of his fellow citizens. In March, 1815, he undertook the additional duties of the office of war secretary, and performed with success the delicate task of reducing the army. In November, 1816, peace and tranquillity being restored, he resigned his post, and returned to the practice of the law at Philadelphia. He died, in consequence of an attack of gout in the stomach, at Trenton, January 16, 1817.—*Encycl. Amer.*

DALRYMPLE (Sir HUGH WHITEFORD) was born in 1750, and entering young into the army he obtained a colonel's commission in 1790. He served on the continent under the duke of York in 1793, and was present at the battle of Famars, the siege of Valenciennes, and on other occasions. At the end of the campaign

DAM

he returned to England, and for several years he was not engaged in active service, but between 1794 and 1806, he was advanced to the rank of lieutenant-general, and for some time commanded in Guernsey. He was removed to the staff at Gibraltar in 1806; and in August, 1808, he was sent to take the command of the British army in Portugal. He arrived just after the battle of Vimiera; and the convention of Cintra, which he entered into with the French general Junot, subjected the English commander to great but probably unmerited obloquy, which was heightened by the conduct of the ministry, who censured him in the name of his majesty, though he was justified by the sentence of a court of inquiry. He was subsequently appointed colonel of the fifty-seventh regiment, and governor of Blackness castle; and in 1812 he obtained the rank of general. He was created a baronet in 1814. His death took place April 9, 1830. Very shortly after his decease was published an exculpatory "Memoir written by Sir H. W. Dalrymple, Bart., of his Proceedings as connected with the Affairs of Spain, and the Commencement of the Peninsular War," 8vo.—*Month. Mag.*

DAMER (ANNE SETMOUR) a distinguished amateur sculptor, who was the daughter of Field Marshal Conway, the friend of Horace Walpole. In 1767 she was married to the Hon. John Damer, eldest son of the first Lord Milton, by whose unfortunate voluntary death, in August 1776, she was left a widow, without any children. From this period she appears to have particularly devoted her time to the cultivation of her talents, and the indulgence of a taste for the fine arts. She took lessons in sculpture from Ceracchi, and from the elder Bacon, and for the sake of improvement she visited Italy. As an amateur artist she certainly had much merit, though it may be questioned whether she was not sometimes the subject of higher encomium than she absolutely deserved. Among the best known productions of her chisel may be mentioned a bust of Lord Nelson, at Guildhall; a statue of George III in the Register Office at Edinburgh; a bust of Sir Joseph Banks, at the British Museum; and masks of the Thames and the Isis, on the bridge at Henley on Thames. She occasionally displayed her talents as an actress in private theatricals, and at length she fitted up a small theatre at her residence at Strawberry Hill, near Twickenham. She had acquired this house through the bequest of Horace Walpole, who also left her a considerable legacy, and she lived there from the time of the decease of the legatee till about 1810, when she gave it up to the late Lady Waldegrave, who had a reversionary interest in the property. Mrs. Damer died in London, May 28, 1828, in the eightieth year of her age.—*Genl. Mag.*

DAMP MARTIN (ANNE HENRI, viscount) a French writer, born at Uzes in 1750, died at Paris in 1825. He was a member of the Academy of Nîmes, imperial censor in 1811, deputy of Gard in 1813, and librarian and

DAN

keeper of the dépôt of the war department. Among his principal works are "Hist. de la Rivalité de Carthage et de Rome," 1789, 2 vols, 8vo; "Evénemens qui se sont passés sous mes Yeux durant le Temps de la Révolution Fran." 1800, 2 vols, 8vo; "Annales de l'Emp. Fran." 1805, 8vo; "La France sous les Valois," 1810, 5 vols, 8vo; and "Quelques Traits sur la Vie privée de Fréd. Guill. III," 1811, 8vo.—*Ibid.*

DANCHET (ANTOIN) a French dramatic poet of considerable repute. He was born in 1671, and became one of the under librarians in the king's library. He appears to have been as much esteemed in private life for his integrity as admired for the brilliance of his talents. Three years after his death, which took place at Paris in 1748, his works were published in four duodecimo volumes.—*Biog. Univ.*

DANCKERTS. There were several artists of this name, all eminent to a certain extent in the different branches of their profession, and all connected with each other more or less by the ties of consanguinity. Of these, two were named CORNELIUS. The elder, born in 1561 at Amsterdam, settled at Antwerp, and distinguished himself towards the close of the century as a portrait and historical engraver.—The second resided at Amsterdam, where he enjoyed a considerable degree of reputation as an architect, and was employed by the government in the construction of several of their public edifices. He left a son, who devoted himself to the study of painting, and was employed in the household of the king of Poland.—**DANCKERT DANCKERTS**, son of the first Cornelius, was born about the commencement of the seventeenth century, at Antwerp, where he succeeded his father in his business as a printseller and engraver, and in the latter capacity somewhat eclipsed the reputation of his predecessor.—**JOHN** and **HENRY DANCKERTS**, two brothers, came over from Amsterdam to England soon after the middle of the seventeenth century, and obtained employment about the court. The engravings for Juvenal's Satires, executed by Hollar, were designed by John, while Henry was occupied in taking views of many of the principal towns in this country for the king.—There was also a **JUSTUS DANCKERTS**, an engraver, of Amsterdam, who executed a variety of portraits in a very superior style.—*Strutt.*

DANDINI. There were several of this family, distinguished in various professions. **CÆSAR** and **VINCENT**, brothers, and natives of Florence, studied under Cortona, and are known as eminent historical painters. Cæsar, born in 1595, exercised his talents principally in the composition of devotional pieces for churches, and died in 1658. Vincent, who was twelve years his junior, survived him, but the precise time of his decease is uncertain.—Their nephew **PETRO**, born also at Florence in 1646, excelled in copying the style of the ancient masters, and died in 1712.—**ERCOLE FRANCESCO**, count di Dandini, descended of a noble family at Ancona, was

DAN

born in that city in 1696, and studied jurisprudence at Padua, in which university he obtained the professorship of law. He was the author of two professional treatises "De Servitutibus Prædiorum," and "De Forensi Scribendi Ratione." His death took place in 1747.—**JEROME DANDINI**, a native of Cesena, born in 1554, was brought up at one of the jesuits' colleges, and at the usual age became a member of the order. He rose to be rector of more than one of their seminaries, and was sent by pope Clement VII into Syria, on a mission to the Maronites. On his return to Europe he printed his travels, and is also known as the author of some notes on Aristotle "De Anima." His death took place in 1634.—*Pittington. Dict. Hist.*

DANIELL (SAMUEL) an ingenious artist and traveller, who died in the island of Ceylon in December 1811, at the age of thirty-six. Early in life he went to the Cape of Good Hope, whence after some stay he proceeded to the interior of Africa, and collected much valuable information, and made drawings of various interesting objects. In this journey he was accompanied by two scientific friends; and this small party went farther in a north-eastern direction than any preceding European travellers. Many of the drawings he made on this occasion were engraved and published in his work entitled "African Scenery." He also amassed another very large collection of drawings and illustrations of the scenery, animals, and native inhabitants of Africa, which he brought with him on his return to England in 1804. About two years after he embraced an opportunity which offered for visiting Ceylon, where, during a residence of nearly six years, he found abundant occasions for prosecuting his favourite researches, and increasing his graphic stores. As the fruit of his labour, one volume, relating to "The Scenery, Animals, and Native Inhabitants of Ceylon," has been published; in addition to which he left an extensive collection of drawings, chiefly illustrative of the natural history of the island.—*Gent. Mag.*

DANNEMAYER (MATTHE.) a German divine and theological writer, born in Suabia in 1741. He became professor of theology and ecclesiastical history at Fribourg, and afterwards at Vienna, and died in the latter city in 1805. He published "Introductio in Hist. Eccles. Christi. Univ." 1778, 8vo; "Institutiones Hist. Eccles." 1783, 8vo; and "Institutiones Hist. Eccles. Nov. Test." Vienna, 1788.—*Biog. Univ.*

DANZI (FRANCIS) a distinguished musical composer and performer on the violoncello. He was of Italian parentage, but was born at Manheim, May 15th, 1763. His father was an excellent performer on the violoncello, and by him he was instructed in music while very young; subsequently he studied under the celebrated Abbé Vogler, then chapel-master to the elector of Bavaria. He employed himself in composition at an early age, and in 1779 he produced his first opera, *Azasia*, for the theatre of Munich, to the cathedral of

which town he obtained the employment of chapel-master. Since that period he has published several other operas, the best of which are said to be the "Midnight Hour," and "Iphigenia." He also produced a great variety of instrumental music, among which his "Quatuors" for two viols, tenor and violoncello, opera forty-four, published at Leipsic, have been particularly admired. In 1807 he was appointed chapel-master to the king of Wurtemberg, at Stuttgart, and subsequently he became director of the opera at Carlsruhe. His death took place April 13, 1826. Besides his other works he produced masses, Te Deum Laudamus, Magnificat, Cantatas, Psalms, and other compositions for the service of the church.—*Biog. Dict. of Music. New German Necrology.*

DAQUIN (JOSEPH) a French physician, born at Chambéry in 1757, who died librarian of that city in 1816. He was professor of natural history at the central school of the department of Mont Blanc; and was engaged for more than half a century in medical practice. Among various useful works which he published may be mentioned, "Topogr. Médicale de la Ville de Chambéry, et de ses Environs," 1786, 8vo.—*Biog. Univ. Class.*

DARU (PIERRE ANTOINE NOEL BRUNO, count) a peer of France, distinguished as a statesman, a poet, and an historian. He was born at Montpeller, and after having received a good education, at the age of sixteen he entered into the army. At the breaking out of the revolution he joined the party of the friends of freedom; but though engaged in active service as a military man, he devoted much of his time to literary pursuits. In 1800 he published a translation of the works of Horace, which established his reputation as a poet; and about the same period appeared his "Cléopâtre," or Theory of Literary Fame, a poem displaying great spirit and elegance of style. His talents procured him the patronage of Buonaparte, and in 1805, 1806, and 1809, he was employed as intendant general in Austria and Prussia; and he had a seat in the council of state, where his diligence and industry attracted the highest approbation. After filling several offices in the higher departments of administration, he held the portfolio of the war department at the time of the first restoration of the Bourbons. Blücher sequestered his estate at Meulan, but it was soon restored, and in 1818 he was called to the chamber of peers by Louis XVIII. The latter part of his life was chiefly devoted to historical researches, the result of which appeared in his "Life of Sully," and his "History of Venice;" the latter first published in 1819, and reprinted with additions in 1821 and 1825, is the most elaborate of his productions, and is a truly valuable work. Daru in 1805 was chosen a member of the National Institute. His death took place towards the end of the year 1829.—*Encycl. Amer. Biog. Nouv. des Contemp.*

DAUBENEY (CHARLES) an episcopal clergyman and theological writer of eminence,

born in 1744. He was educated at New College, Oxford, where he took the degree of BCL. in 1773. He was appointed prebendary of Sarum in 1784, archdeacon in 1804, and he held the living of North Bradley in Wiltshire. In 1822 the university of Oxford conferred on him the degree of DCL.; and he died July 10, 1827. His principal work is entitled "A Guide to the Church, in several Discourses, with an Appendix," 179—9, 2 vols, 8vo, second edition, 1804. He carried on controversies with Sir Richard Hill, the reverend John Overton, and other advocates for what is styled evangelical theology; and he published "Eight Discourses on the Connexion between the Old and New Testaments, demonstrative of the great Doctrine of Atonement," 1802, 8vo; besides a number of single sermons and other works.—*Gent. Mag. Month. Mag.*

DAUBENTON (madame) wife of the celebrated naturalist, (see DICR.) was born at Montbar in 1720, and died at Paris in 1818. She wrote a romance called "Zélie dans le Désert," 1788, 2 vols, 8vo, which has passed through many editions.—*Biog. Univ. Class.*

DAUBET (ROBERT) a French engraver, born at Lyons in 1737, and died at Paris in 1824. He was a pupil of Balechou and Ville, and was chiefly distinguished as a landscape engraver.—*Ibid.*

DAUDIN (FRAN. MARIE) an eminent naturalist, who was a native of Paris, and died there in 1804. He was the author of "Histoire Naturelle des Reptiles," 1802—3, 8 vols, 8vo, and other zoological works.—*Ibid.*

DAUSQUE (CLAUDIE) a French jesuit, canon of Tournay, born about the year 1566, at St. Omer's. He was the author of several works, now become extremely scarce; of these the principal are "Terra et Aqua, seu Terræ fluctuantes," 4to; a Latin translation of St Basil's works in octavo; "Antiqui norique Latii Orthographica," folio, 1632; and an edition of Q. Calaber's works. His death took place at Tournay in 1644.—*Biog. Univ.*

DAVID (FRANCIS ANNE) an eminent French engraver, who was a member of the academies of Berlin and Rouen, and died at Paris in 1824. He published "Elémens du Dessin," with twelve plates of figures from the antique, 1797, 8vo; "Histoire de France sous le Règne de Napoléon le Grand, représentée par Figures," together with "Précis Historique depuis le 18 Brum. an VIII," Paris, 1811—13, 4 vols, 4to; "Histoire d'Angleterre sous le Règne de George III," with "Précis Historique," 1812, 4to, of which only a part appeared; "Bible des Enfans," 1814, 12mo; and "Le Cabinet du Roi, &c. par une Société d'Amateurs et d'Artistes," 1816, 12mo.—*Biog. Univ. Class.*

DAVID DE ST GEORGE (JOHN JOSEPH ALEXIS) born at St Claude in 1759, and died at Arbois in 1809. He was a member of the Celtic Academy, the Academy of Legislation, and the Academy of Besançon; and he formed the scheme of an arrangement of the roots of all languages, so as to show their connexion, according to the idea of the president

des Brosse. He collected, with immense labour, a quantity of materials, which at his death he confided to M. Charles Nodier, who has published prolegomena of the work, to be entitled the "Archæologue." David translated some of Smollett's novels and other English works.—*Biog. Univ. Class.*

DAVIDSON (LUCRETIA MARIA) an American poetess, remarkable for the early display of her intellectual powers. She was born September 27, 1808, at Plattsburgh, on Lake Champlain, (U. S.) and was the second daughter of Dr Oliver Davidson, a physician. Her parents were in straitened circumstances, which rendered it requisite that much of her time when young should be devoted to domestic employments, which she always attended to with alacrity, devoting every interval of leisure to those intellectual and imaginative pursuits which were peculiarly agreeable to her feelings. Instead of playing with her school-mates she generally retired to some secluded place with her little books, and with pen, ink, and paper, of which last article she consumed so much as to excite the curiosity of her parents. Her mother at length found, in a dark closet, a considerable number of little books, made of the writing paper she had procured, and filled with rude drawings and strange characters. These with some difficulty were deciphered, and the writing, imitated from print, was found to consist of regular verses, generally in explanation of figures sketched on the opposite pages. When she found that her treasures had been discovered she was greatly distressed, and upon their being given up to her she took an early opportunity of secretly destroying them. When she was but eleven years old she wrote a few stanzas on General Washington, which being shown to her friends one of them expressed a doubt of their being her genuine composition; at which she was very indignant, but speedily put an end to the suspicion by writing a remonstrance in verse addressed to the person by whom her talents had been thus underrated. Before she was twelve years old she had read most of the standard English poets, the plays of Shakspeare, Kotzebue, and Goldsmith, many popular novels and romances, and much history, sacred and profane. She continued her studies for some years under great disadvantages, arising from domestic circumstances. In general she seems to have paid but little attention to her productions after they were completed, except a few which she preserved with care for future revision; but a great portion of her compositions she destroyed. When she was but thirteen she wrote a complete poem, in five cantos, entitled "Rodri," which did not satisfy her critical taste, and which she therefore burnt, except one canto and part of another rescued from the flames by her mother, who also in the same manner preserved several of her other poems. In October 1824, through the beneficence of a gentleman who admired her talents, she was placed for improvement in an academy for females at Troy, and after-

wards at another school at Albany. Too close attention to her studies combined with the strong excitement of her feelings to occasion an alarming illness, from which she only so far recovered as to be enabled to return to her friends at Plattsburgh, where she died August 27, 1825. Her industry seems to have been as extraordinary as her talents: her poetical writings which were preserved amounted in all to two hundred and seventy-eight pieces, varying in length, including five regular poems of several cantos each, besides three unfinished romances, a complete tragedy, school exercises, and letters. After her death her productions were published under the title of "Amir Khan and other Poems, the remains of Lucretia Davidson, with a Biographical Sketch by F. L. B. Morse, AM." New York, 1829.—*Quart. Rev.*

DAVIES (EDWARD) a clergyman, who distinguished himself by his investigations into the ancient history and archæology of Britain. He was probably a native of Wales, as he obtained the rectory of Bishopstone in the county of Glamorgan, which is in the patronage of the Bishop of Llandaff; and he held it to the time of his decease, which occurred in February, 1831, at the age of seventy-five. Besides his living he held the chancellorship of Brecon. He published in 1788 "Vacunalia, Essays in Verse on various subjects," in 1801; "Twelve Dialogues on different subjects;" and in 1811 "Church Union, a Series of Discourses," 8vo; but the works on which his reputation is founded are "Celtic Researches on the Origin, Traditions, and Language of the Ancient Britons," 1804, 8vo; and "The Rites and Mythology of the British Druids ascertained," 1809, 8vo.—*Gent. Mag.*

DAVOUST (LOUIS NICHOLAS) duke of Auerstadt and prince of Eckmühl, marshal and peer of France, was born of a noble family at Annoux in Burgundy, in 1770. He studied at the college of Brienne at the same time with Buonaparte, and entered as a sub-lieutenant into a regiment of cavalry in 1785. He adopted with ardour the principles of the Revolution, and after the 10th of August, 1792, he gave in his adhesion at the bar of the legislative assembly. Having served as chief of a battalion under Dumouriez, he was nominated to the command of a brigade after the defection of that general, on account of the zeal which he displayed for the interest of the republican government. He was obliged for a short time to quit the army, because of his noble descent, but he was recalled after the overthrow of Robespierre. He then assisted at the blockade of Luxembourg, was employed in the defence of Manheim, and he distinguished himself particularly at the passage of the Rhine, April 20, 1797. He engaged in the expedition to Egypt, where he signalized himself on several occasions. In 1800 he returned to France with Dessaix, after having been detained a month a prisoner at Leghorn by admiral Keith. He was well received by the first consul, whom he aided in his projects

of ambition, and served with zeal and ability in the brilliant campaigns which took place between 1803 and 1809. The titles of duke of Auerstadt and prince of Eckmühl were bestowed on him as the immediate reward of his valour on the field of battle. Marshal Davoust had for several years the command of the army which occupied Poland, and he is represented as having exercised his authority with more severity than justice over that unhappy country. At the opening of the campaign against Russia in 1812, he was recalled to the grand army; and he subsequently fixed his headquarters at Hamburg, where he sustained a siege, and exerted himself to support the power of Buonaparte. At length, on learning the progress of events, he sent in his adhesion to the provisional government, when he was immediately replaced by general Maurice Gerard. Being exiled from Paris, in consequence of the complaints brought against him by the citizens of Hamburg, Davoust published, in justification of his conduct, "*Mémoire de M. le Maréchal Davoust, Prince d'Eckmühl, au Roi*," Paris, 1814, 8vo. On the return of Buonaparte from Elba he was made minister at war, when he zealously supported the interest of his ancient patron; and he had the command of the army under the walls of Paris when the capitulation of that city took place. After having resided some time at his estate at Savigny, Davoust repaired to court in 1818, and the following year he entered into the chamber of peers. He died June 4, 1823.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

DAVY (Sir HUMPHREY) one of the most celebrated philosophers of the present age, distinguished for the variety and importance of his discoveries in chemistry. He was descended of a respectable family, and was born at Penzance, in Cornwall, December 17, 1779. He received the rudiments of education at the grammar schools of Truro and Penzance; and at an early period he displayed indications of literary talent. His first attempts at composition were in verse, and some of his juvenile productions were published in the *Annual Anthology*. At the age of fifteen he was apprenticed to Mr. Borlase, a surgeon, as a preliminary step to his becoming a medical student at the university of Edinburgh. Natural history now attracted his attention, and especially mineralogy; his residence in a mining country afforded him peculiar facilities for the study of that branch of science by means of a collection of mineral specimens. With all the ardour and independence of genius he began to extend his views to the examination of natural phenomena in general, and a review of the theories and systems which had been promulgated concerning them. He formed for himself a method of study, and by the time he was eighteen he had made himself acquainted with the principles of botany, anatomy, physiology, chemistry, and other branches of natural philosophy, together with the elements of mathematics and metaphysics. The recent researches of Black, Priestley, and Cavendish,

in England, of Bergman, Gahn, and Scheele, in Sweden, and of Lavoisier and other experimental philosophers in France, had given birth to the new science of pneumatic chemistry, which presented to the Cornish student a splendid career of discovery, on which he entered with avidity. Some interesting experiments which he made on the decomposition of air by marine plants, were communicated to Dr Beddoes, of Bristol, with whom he entered into a correspondence, and who invited him to superintend an establishment called the Pneumatic Institution in Doury-square, near the Hot Wells, Clifton, formed for the purpose of investigating the effects of inhaling some of the artificial gases in the cases of persons labouring under phthisis pulmonalis and some other diseases. Mr Davy accepted the proposed situation, which afforded him opportunities for the prosecution of his favourite studies. He now formed an acquaintance with Davies Gilbert, Esq., Mr W. Clayfield, and other men of science. He discovered the curious properties of Nitrous Oxide, or Gaseous Oxide of Azote, producing when respired an agreeable excitement resembling the first stage of intoxication; an account of his experiments on which and on other bodies appeared in his "*Researches Chemical and Philosophical, chiefly concerning Nitrous Oxide and its Respiration*," 1800, 8vo. This work introduced him to the notice of Count Rumford, through whose influence he was chosen professor of chemistry at the Royal Institution in Albemarle-street, London, succeeding in that office Dr Thomas Young. The new professor here found himself in a situation which afforded abundant facilities for pursuing scientific inquiries, especially by means of the chemical and electrical apparatus belonging to the institution. In 1802 he commenced a course of lectures before the Board of Agriculture, designed to show the connexion between agriculture and chemistry, which formed the basis of his "*Elements of Agricultural Chemistry*," published in 1813. He was elected a fellow of the Royal Society in 1803, of the Royal Irish Academy in 1805, and the following year he was appointed a secretary of the Royal Society. For some years he was diligently engaged in making experiments with the Galvanic battery, chiefly with a view to its powers in producing chemical decomposition; and at length his labours were rewarded by the splendid discovery of the bases of the fixed alkalies, which formed the subject of his Bakerian lectures delivered before the Royal Society in 1806 and 1807. He likewise succeeded in decomposing some of the earths, and demonstrating that they, as well as the alkalies, are metallic oxides. His attention was also directed to the investigation of the nature of the gaseous body termed Oxymuriatic Acid, which he concluded to be a simple substance having an analogy to oxygen, and thus he confirmed the theory of its original discoverer Scheele. His ideas relative to this gas, which he called Chlorine, being inconsistent with the then

generally received anti-phlogistic theory of chemistry, doubts arose among men of science as to their correctness, and a warm controversy on the subject was for some time carried on in Nicholson's Philosophical Journal between Dr John Davy, the discoverer's brother, and Dr John Murray of Edinburgh; but the subsequent development of various similar facts has verified his hypothesis, and occasioned a modification of the system of chemical science. The important investigations of the British philosopher excited admiration both at home and abroad; and notwithstanding the state of hostility existing between England and France the prize of the French Institute in 1810 was awarded to him on account of the discoveries just mentioned; and in 1814, the same year in which he was elected a vice-president of the Royal Institution, he was chosen a corresponding member of the Institute. In 1812 he married Mrs Apreece, a widow lady of large fortune; and a few days previously to that event he had the honour of being knighted by the Prince Regent, having been the first person on whom his Royal Highness conferred that dignity. Sir Humphrey Davy's next discovery led to an invention of great national importance. In 1815 a committee was formed at Sunderland to inquire into the cause of fire-damp in mines, with a view to the future prevention of explosions so dangerous and destructive of life and property as those which had frequently occurred. His assistance having been requested, Sir Humphrey examined some of the principal collieries in the North of England, and made experiments on the explosive gas, from which he discovered that the inflammation was incapable of being extended through minute apertures, as those of wire-gauze, and in consequence he contrived his safety lamp, which has been found to afford almost absolute security to the miner in the prosecution of his hazardous occupation, and which the coal proprietors of the district of the Tyne and Wear considered to be of so much importance that they presented him with a service of plate worth 2,000*l*. In 1817 he was elected one of the Associates of the Royal Academy; and in 1818 and 1819 he travelled in France and Italy. While in the latter country he exercised his talents in analyzing the colouring matter employed in the ancient fresco paintings discovered at Pompeii, and in endeavouring to find out a chemical solvent which might facilitate the unrolling of the Herculanean manuscripts, but in the latter instance his labours were attended with imperfect success. On the twentieth of October, 1818, during his absence from England, Sir H. Davy was created a baronet. About the time of his return home, the death of Sir Joseph Banks, in July 1820, leaving vacant the presidency of the Royal Society, he was elected to that office, his friend Dr Wollaston, who had been proposed, having declined in his favour, and Lord Colchester, who was also a candidate, being rejected by a large majority. He presided over that institution

about seven years, when the delicate state of his health rendering a residence on the continent desirable, he resigned his post, and was succeeded by his old friend Davies Gilbert, Esq. M.P. Sir Humphrey Davy went abroad, and travelled in different places, without, however, deriving the anticipated benefit from the change of scene and climate. Accompanied by his lady he arrived at Geneva, May 29, 1829, and he was then in a state of great suffering, but no immediate danger was apprehended. During the night, however, he was attacked with a fit of apoplexy, and he expired at three o'clock on the morning of the following day. His widow received the most kind and respectful attentions from the most distinguished individuals of Geneva, particularly M. de Candolle the naturalist, and M. Sismondi the historian. The funeral of Sir H. Davy was attended by the members of the government of the Canton, the Academy of Geneva, the consistory of the Genevan church, and the societies of arts, and natural philosophy, and history, together with nearly all the English residents in the city. Besides the works already mentioned, he published "A Syllabus of a Course of Lectures on Chemistry, delivered at the Royal Institution," 1802, 8vo; "A Lecture on a Plan for improving the Royal Institution, and making it permanent," 1810, 8vo; "Elements of Chemical Philosophy," vol. i. 1812, 8vo, left unfinished; "Salmonia, or the Days of Fly-fishing," 1828; besides numerous contributions to the Philosophical Transactions and scientific journals. Sir Humphrey Davy possessed a poetical imagination, the effect of which is visible in the somewhat too ambitious style of his writings on subjects of practical philosophy; and he has been accused of pedantry on account of his elaborate disquisitions on the very unimportant circumstances of giving new names of Grecian origin to newly discovered bodies, as Chlorine and Iodine. He is said to have displayed either absurd affectation or a strange deficiency of taste on being shown the beautiful and interesting works of art collected at the Louvre at Paris, under the government of Buonaparte, hurrying through the exhibition, and scarcely deigning to look at any thing except the Belvidere Apollo, at which he stopped only to notice the mineralogical character of the material, characterizing it as a beautiful stalactite. But notwithstanding these or other defects of character, he must be admitted to have been one of the most distinguished and successful cultivators of science, whose labours have greatly increased our store of natural knowledge, and done honour to his age and country.—*Month. Mag. Memoirs of the Life of Sir H. Davy, by Dr Paris. Edit.*

DAVY (WILLIAM.) This most ingenious man and industrious scholar died June 13, 1826. He was educated at the free grammar school Exeter; and having finished his studies at the university he entered into holy orders, and settled at Lustleigh, in Devonshire, as

DEC

curate of that parish. After the completion of the singular and laborious undertaking of which an account has been given elsewhere, he printed in the same manner a volume of extracts from his "System of Divinity;" and having made additions to his last production, it was printed and published in the usual manner in 1825. His persevering and useful industry at length attracted attention and patronage, and he was presented to the living of Winkleigh, which, however, he had held but a few months at the time of his decease. His ingenuity and activity were directed to subjects connected with the arts, for he constructed clocks, and other pieces of mechanism; and he is stated to have contrived a plan for recovering the property from the Royal George man-of-war, sunk in Portsmouth Harbour.—*Genl. Mag.*

DAWE, RA. (GZOROK) an eminent painter, who was a member of the imperial and royal academies of arts at St. Petersburg, Stockholm, and Florence, and first painter to the emperor of Russia. From 1809 to 1818 he was a constant exhibitor at Somerset-house. Among the various portraits which he produced were those of Dr Samuel Parr, the Prince and Princess of Saxe Cobourg, the Archbishop of Tuam, the Bishop of Salisbury, and Lord Eardley; and among his historical paintings, Andromache imploring Ulysses to spare the life of her son Astyanax; Genevieve, from a poem by Coleridge; a Child rescued by its mother from an Eagle's Nest; and a Demoniac, in the Council-room of the Royal Academy. He was chosen an associate of the academy in 1809, and an academician in 1814. His death took place October 15, 1829, at Kentish-town, near London. He was the author of "The Life of George Morland, with remarks on his works," 1807, 8vo.—*Ann. Reg.*

DAWES (MANASSEH) a barrister of the Inner Temple, who distinguished himself as a writer on morals, politics, and jurisprudence. He died at his residence at Clifford's-inn, Fleet-street, April 2, 1829, having long previously relinquished practice as a lawyer. Among his publications may be noticed a tract "On Intellectual Liberty and Toleration," 1780, 8vo; "On Crimes and Punishments," 1782, 8vo; "The Nature and Extent of Supreme Power," 1783, 8vo; pamphlets on the Law of Libel, and on the Regency Question; "Commentaries on the Law of Arrests in Civil Cases," 1789, 8vo, &c.—*Reuss. Ann. Reg.*

DE COETLOGON (CHARLES EDWARD) an eminent Calvinistic divine of our own times, born in London, of French parents, his father being a physician of some note, both in his profession and in the belles lettres. His son, the subject of this article, was educated at Christ's hospital, whence he removed to Pembroke-hall, Cambridge, and there graduated. He commenced his clerical career as assistant chaplain to the Lock hospital, and afterwards obtained the living of Godstone, Surrey. His writings consist of "A Portraiture of a Christian Penitent," 8vo, 2 vols;

DEL

"Theological Miscellany," 8vo, 6 vols; "Character of King George the Third;" "The Temple of Truth," 8vo, 3 vols; and a volume of Sermons. Mr. De Coetlogon died September 16, 1820.—*Ann. Biog.*

DECRES (DANUS) a French admiral, born of a noble family at Chateau Vilain in Champagne, in 1765. He entered into the sea service in 1799, and rose to the rank of vice-admiral. At the battle of Aboukir he commanded the light squadron, and having made his escape on board the William Tell, he sailed to Malta, but was taken by the English. On the establishment of the maritime prefectures, Decres was appointed to that of L'Orient. In 1802 he was made minister of the marine, in which office he remained till the fall of the imperial government; and he was recalled in March 1815, but finally retired in June following. He died at Paris in 1820, in consequence of wounds he received in an attempt on his life made by his valet de chambre.—*Biog. Univ. Class.*

DELANDINE (ANTHONY FRANCIS) a member of the constituent assembly, was born at Lyons in 1736. He became librarian of that city, and member of several academies; and he exercised the profession of an advocate previous to the Revolution. His "Histoire des Anciens Etats-généraux," published in 1788, contributed to his being elected a member of the states on their convocation the following year; and till the closing of the constituent assembly, he took an active part in the deliberations which occurred, and distinguished himself by his judgment and moderation. He was afterwards obliged to conceal himself in the mountains of Forez, and being discovered in 1793, he was dragged from prison to prison, and only owed his safety to the revolution which overthrew the reign of terror. The remainder of his life was devoted to literature; and he died in 1820. He published, in conjunction with Chaudon, the eighth edition of the "Dictionnaire Historique;" and among his other works are, "Catalogue des Livres de la Bibliothèque Publique de Lyon;" and "Mémoires Bibliographiques et Littéraires," 1816, 8vo.—*Biog. Univ. Class.*

DELEYRE (ALEXANDER) a French Jesuit, born in 1726, in the vicinity of Bordeaux. He acted as librarian to the prince of Parma, and was one of the authors who assisted Diderot in the Encyclopédie. His other writings consist of "A General History of Voyages," in nineteen volumes; "Le Génie de Montesquieu," 12mo; "L'Esprit de St Evremond," 12mo; and an "Analysis of Bacon." Deleyre had ceased to be a member of the fraternity of Jesuits for some time previous to his decease, which took place in 1797.—*Biog. Univ.*

DELFT (WILLIAM JAMES) so named from the place of his nativity, where he was born in 1619. He was a good painter as well as an engraver, in which latter branch of art he is however considered to have been most successful. His death took place in 1661.—*Strutt.*

DELMORE (MARION) a celebrated French courtesan, the contemporary and friend of Ninon de l'Enclos. She was born about 1615, at Chalons in Champagne. After having been connected with the royal favourite Cinq Mars, who was executed for a conspiracy against cardinal Richelieu, she formed a connexion with that minister. Her house became the resort of the partizans of the princes of Condé and Conti; and being alarmed at the arrest of those nobleman, she fled to London, spreading at the same time a report of her death, and on the day of her pretended funeral, in 1650, she took her departure from Paris. In England she is said to have married a very rich nobleman; and becoming a widow, she returned to France with a fortune of 100,000 francs, when she was robbed by a party of highwaymen, whose captain made her his wife. He died in about four years, and Marion married an attorney named Lebrun, who left her a widow after a union of seven years. She was then eighty-one, and having taken up her residence at Paris two of her domestics decamped with all her property, and she was reduced to absolute distress. To complete her misery, she learnt that her old friend Ninon, the only person from whom she could expect relief, had recently died (1706), and she is believed to have perished herself soon after. Some biographers, however, extend her existence to the extraordinary term of 134 years, relying on the extract of a parish register, purporting that Anne Oudette Grappin, widow (for the third time) of Lebrun, died at Paris, January 5, 1741.—*Biog. Univ.*

DENHAM (Colonel Dixon) an enterprising military officer and African traveller, who was born in London, in 1785. He entered young into the army, and had attained the rank of Lieutenant, when, after the death of Mr Ritchie at Mourzouk, and the return of captain Lyon to England from Africa, he volunteered his services in an attempt to pass from Tripoli to Timbuctoo. It being intended that his researches should commence from Bornou, where Dr Oudney had been appointed British consul, he was associated in the expedition which had been planned under the direction of captain Clapperton. Mr Denham, who was separated from his companions, after encountering great dangers, returned to England, without being able to reach the place of his ultimate destination. An account of his researches was published in the work entitled "Travels and Discoveries in Northern and Central Africa by Major Denham, Captain Clapperton, and the late Dr Oudney," 1825, 4to. He was afterwards appointed to the office of Commissioner of Inquiry into the state of the settlement of Sierra Leone; and upon the death of Sir Neil Campbell, he succeeded that officer as governor of the colony. This appointment gave great satisfaction, and sanguine hopes were entertained that important improvements would be effected under his direction. Among various judicious regulations, he took measures for inviting the native chiefs to come down to the seat of govern-

ment to trade; he promoted friendly intercourse between them and the colonists, and he encouraged the establishment of savings' banks. The excellence of his constitution for some time prevented the pestilential climate from injuring his health, but at length, like most of his predecessors, he fell a victim to it, his death taking place in the month of June, 1828. He was interred with all the military honours due to his profession, and the deep regret of those who surrounded his grave testified a strong sense of his merit and of their own loss.—*Month. Mag.*

DENIS (MICHAEL) a learned German writer, principal librarian of the imperial collection at Vienna. He was a Bavarian by birth, born at Selarden in 1729. His works consist of "A Topographical Description and History of Vienna," in one vol. 4to; "A Catalogue of Butterflies," 4to; "An Introduction to the Knowledge of Books," 4to, 2 vols; an edition of the unpublished works of St Augustine, in one vol. folio; "Codices Manuscripti theologici Latini aliarumque occidentis Linguarum, Biblioth. Palat. Vindobonae," in two folio volumes; a translation of Ossian's Poems into German; a collection of songs, with a dissertation on ancient northern poetry prefixed; and a volume of Latin poems. His death took place at Vienna about the commencement of the present century.—*Biog. Univ.*

DENON (DOMINIQUE VIVANT, baron) a celebrated French traveller, director of the Museum at Paris. He was born at Chalons sur Saône of a noble family, and was destined for the office of magistracy. He was sent to the metropolis to study the law, and at the age of sixteen he had become a favourite of the ladies; but he was attacked with a disease which obliged him to undergo the operation of lithotomy, and after severe sufferings he recovered. He now devoted himself with enthusiasm to the study of literature and the fine arts, and formed an acquaintance with the most distinguished persons of that period. Being appointed gentleman in ordinary of the bed-chamber to Louis XV, that prince, who had formed collections of engraved gems and medals, confided them to the care of Denon. He now wrote a comedy entitled "Le Bon Père," which was performed at the theatre Français; and he devoted his leisure to the study of drawing. Subsequently he went to St Petersburg, in the suite of the French ambassador. After the death of Louis XV he obtained the patronage of the Count de Vergennes, minister for foreign affairs, who sent him on a mission to the Swiss government, when he visited Voltaire at Ferney. He next became attached to the embassy at Naples, where he remained some years, part of the time as Chargé d'Affaires of France; and he transmitted to M. de la Borde and the Abbé de St Non a journal and designs of views in Naples, Apulia, Calabria, Sicily, and Malta, which were published in a splendid style by those gentlemen. On the death of Count de Vergennes he

returned to Paris, and was admitted into the French academy. He then determined again to visit Italy to study the great schools of painting in that country; but his plans were interrupted by the opening of the French revolution, and after seeking an asylum in Switzerland, he was recalled to Paris by the decree of the Convention against emigrants. He was without resources, and exposed to danger as an ex-noble, when the great painter David procured an order for him to engrave the newly projected national costume. He afterwards attracted the notice of Buonaparte, whom he accompanied in his expedition to Egypt. There he collected materials for his great work "Travels in Upper and Lower Egypt during the Campaign of General Buonaparte," of which there is an English translation. The French dictator rewarded the services of Denon by appointing him director and administrator-general of the Museum and Medal Mint. On the overthrow of Napoleon the learned antiquary was retained in his situation by Louis XVIII, but having joined his old patron on his return from Elba, he was displaced after the second restoration of the Bourbons; and he passed the remaining part of his life in retirement. He formed a cabinet of curious works of art, Egyptian antiquities, drawings, and paintings, which he liberally opened to the public several days in the week. The latter part of his life was employed in the composition of a History of Art, illustrated with plates of subjects from his own cabinet. He died at Paris, April 27, 1825, aged about eighty; and he was interred in the cemetery of Père la Chaise.—*Biog. Novv. des Contemp. Ann. Reg.*

DENORES (JASON) a Cypriot by birth, who flourished during the latter part of the sixteenth century, and distinguished himself both as a philosopher and a rhetorician. The subjugation of his native country by the Ottoman forces in 1570 drove him for refuge into Italy, where he obtained a professorship in the university of Padua, and enjoyed it till his death in 1590. His works consist of "An Introduction to the Ciceronian Philosophy," 8vo; "On the Art of Rhetoric;" "On the Aristotelian Philosophy," 4to; and a treatise on Horace's Art of Poetry, all written in the Latin tongue; together with "Dell' Ottima Republica," 4to; "Poetica," 4to; "Della Rhetorica," 4to; and "Del Mondo," 8vo, composed in the language of the country of his adoption.—*Dict. Hist.*

DERING (Sir EDWARD) a baronet of an ancient family in Kent, situated at Surrenden Dering, in the parish of Pluckley, in that county, from the time of Edward the Confessor. At the commencement of the disputes between Charles I and his parliament, Sir Edward embraced the popular side, and delivered many speeches in parliament, which have been collected and printed in one quarto volume. When, however, the parliamentarians proceeded to extremities, he went over to the court party, and became a cavalier. A lineal descendant of his, of the same name, still en-

joys the family title and estates, which latter are of great value.—*Strype's Life of Abp. Parker.*

DERSCHAWIN, or DERJAVINE (GABRIEL ROMANOWITCH) a celebrated Russian lyric poet, who was born in 1743. In 1760 he entered as a common soldier into the army; and he distinguished himself in the war with the impostor Pugatschef, in 1774. At that period he cultivated poetry, and in 1784 he published his famous ode entitled "God," which has been translated into the English, French, German, Polish, Latin, and Chinese languages. Under Catherine II in 1800 he held the office of treasurer of the Russian empire, and in 1802 he was minister of justice; but he ere long retired from public life to the more congenial occupations of literary privacy. His death took place in 1816. It has been said of this poet that it is almost impossible to speak of him too highly. He truly possessed the "mens divinior" of the bard, and poured forth strains full of sublimity and inspiration. His powers and those of his great predecessor Lomonosof are thus characterised by a Russian critic:—"Lomonosof always follows his subject; Derschawin directs it according to his own will. The flight of the former is lofty and steady, but the latter flashes suddenly like lightning, and then disappears from his astonished reader. We may compare the one to a noble river flowing majestically between its banks; the other to a waterfall such as he himself has depicted dashing its impetuous stream amidst rocks, unrestrained in its course, and lending an air of wildness to nature. The style of Lomonosof is more pure and exact, more cautious and uniform; that of Derschawin is more brilliant, more varied, and more luxuriant; he elevates the soul, and makes us constantly feel the sublimity of his genius." Specimens of the poetical compositions of Derschawin may be found in Bowring's "Russian Anthology." He likewise wrote on politics and on topography.—*Encycl. Amer. Foreign Review*, vol. ii.

DÉSBOIS (FRANÇOIS ALEXANDRE AUBERT DE LA CREMAIXE) a French Capuchin monk, born about the close of the seventeenth century, at Ernée in the Maine. He was an industrious though not an original writer, and besides a laborious catalogue of the French noblesse, with their titles and pedigrees, in fifteen volumes, left behind him several similar compilations of agricultural, philosophical, and other dictionaries. He quitted his order some time before his decease, which took place in his eighty-fifth year, a few years previous to the breaking out of the French Revolution.—*Biog. Univ.*

DESEINE (LOUIS PIERRE) a French sculptor, born at Paris in 1759, and died in 1822. He was a member of the Academy of Painting and Sculpture, and published several works on the fine arts, including "Lettres sur la Sculpture destinée à orner les Temples Catholiques," 1802, 8vo; and "Notices Historiques sur les Académies de Peinture, Sculp-

ture, et Architecture," 1814, 8vo. Among the principal productions of his chisel are the busts of Louis XVI, Louis XVII, and Pius VII; the statues of L'Hôpital and D'Aguesseau, at the foot of the steps of the façade of the chamber of deputies, bas-reliefs in the church of St Roch, &c.—*Biog. Univ. Class.*

DESERITZ (JOSEPH INNOCENT) a learned and dignified ecclesiastic of Hungary, born in 1702, at Nitra, in that kingdom, and more familiarly known among scholars by his Latin designation Desericus. Pope Benedict XIV raised him to the purple, and sent him as his legate into Wallachia. He published in Latin a "History of the Diocese and City of Warsaw," in folio; "A Vindication of the Literature of Hungary," 4to; and a "Commentary on the Origin and Ancestors of the People of Hungary," in five folio volumes. The cardinal died at Rome in 1765.—*Dict. Hist.*

DESGODETZ (ANTOINE) a Parisian architect and engineer, born in the French capital in 1653. He was employed by the court to superintend the public buildings, and also to make drawings of the most celebrated remains of ancient Rome, which he gave to the world in one folio volume, the French king defraying the expense. Of this work, originally printed at Paris in 1682, there are two subsequent editions, that of 1771, and one in 1776, both published in London. Another valuable work, entitled "Les Lois des Bâtimens," was printed from his papers after his decease, which took place in 1728.—*Biog. Univ.*

DESMAHIS (JOSEPH FRANÇOIS EDOUARD, de CORSEMELLE) a French poet of the last century, equally celebrated for the mildness and benevolence of his manners and disposition, and for his lively genius. He was a native of Sully on the Loire, born in 1722, and besides two volumes of miscellaneous poetry, was the author of a comedy entitled "The Impertinent." M. Desmahis died much regretted by all parties in 1761.—*Biog. Univ.*

DESPEISSES (ANTOINE) an able lawyer of the sixteenth century, a native of Montpellier, born in 1594. He joined his friend De Beques in compiling an entire system of Roman jurisprudence, which formed the occupation of nearly forty years of his life. Of this laborious work there are two editions, that of 1658 in 4 vols, folio, and that of 1750 in 3 vols. There is also a treatise on Wills by the same authors, in one folio volume. Despeisses died soon after the completion of his great work, in 1659.—*Novv. Dict. Hist.*

DEVENTER (HENRY) an ingenious writer on midwifery, in which branch of the medical profession he was a great proficient. His principal treatises are entitled "Operationes Chirurgicæ Lumen exhibentes Obstetricantibus," 4to; and "Uterius Examen Partuum difficultum, &c." 4to. Deventer was born in Holland, and there is a posthumous work of his written in his native language on the disorder in children called the rickets, 4to, 1739.—*Eloy. Biog. Univ.*

DEVONSHIRE (ELIZABETH HERVEY, duchess of) a lady descended from the Herveys, earls of Bristol, who was distinguished for her talents and patronage of literature. In 1815 she took up her residence at Rome, where she was surrounded by eminent artists and men of letters. She was the friend of cardinal Gonsalvi, Canova, Camuccini, Thorwaldsen, and other talented individuals. She published at her own expense an edition of the translation of the works of Virgil, into Italian, by Annibal Caro, with engravings from the designs of some of the first Roman painters. She also caused an edition of the fifth Satire of Horace (Book I), to be published in the same ornamental style; and she was about to engage in an edition of the works of the celebrated Italian poet Dante, at the time of her death, which occurred at Rome, March 30, 1824.—*Encycl. Amer.*

DICKINSON (JONATHAN) an American presbyterian divine, who died in 1747. He was the author of a "Defence of Presbyterian Ordination," Boston, 1724; five sermons on "The True Doctrine of Scripture," 1741; and "An Account of the Deliverance of Robert Barrow, shipwrecked among the Cannibals of Florida."—JOHN DICKINSON, an Anglo-American statesman, was a member of the first congress of the United States, and president of the state of Pennsylvania. He died in 1789. He was the author of "Letters" against the acts of the English parliament, which are said to have had a great effect on the minds of his fellow-citizens, and which were published with his other political pieces at Philadelphia, 1801, 2 vols, 8vo.—*Biog. Univ. Class.*

DICKSON (JAMES) an eminent botanist, born in Scotland. He became a vice-president of the Horticultural Society, and he was one of the founders of the Linnæan Society, and a contributor to the Transactions of both those associations. He died in London in 1822. He published "Fasciculi quatuor Plantarum Cryptogamicarum Britannicæ," London, 1785—93, 4to; "A Collection of Dried Plants named on the Authority of the Linnæan Herbarium, and other original Collections," 1789—99, folio; and a Botanical Catalogue, 1797, 8vo.—*New. Month. Mag. Biog. Univ. Class.*

DICKSON (DAVID) a Scottish clergyman, born in 1583, and educated in the university belonging to his native city, Glasgow, where he filled the professor's chair in philosophy, and afterwards that of divinity. He obtained the living of Irvine in 1618, and retained it till 1662, when he was ejected for refusing to take the oaths. He is known as the author of some able commentaries "On the Gospel of St Matthew;" "On the Epistle to the Hebrews," 8vo; "On the Epistles" generally, with a Latin version, in one folio volume; "On the Psalms;" "A Treatise on the Promises," 12mo; "Therapeutica Sacra;" and a series of lectures on the confession of faith. He did not long survive the loss of his preferment, but died in the course of the same year.—*Mackenzie's Scottish Writers.*

DICQUEMARE (JAMES FRANCIS) a dis-

tinguished French naturalist, born at Havre in 1733. He adopted the ecclesiastical profession, but he devoted his time to the study of nature, and he became a correspondent of the Academy of Sciences at Paris, and a member of several other learned associations. He cultivated astronomy, navigation, geography, and painting; and among the proofs of his ability he left five large pictures in the church of the hospital at Havre. He was the author of "Connaissance de l'Astronomie rendue aisée et mise à la portée de tout le monde;" and "Description d'un Cosmoplane inventé et construit par l'Abbé Dicquemare." He was also a contributor to the *Journal de Physique*, in which he published a curious account of animal flowers.—*Biog. Univ.*

DICUIL, an Hibernian geographer of the ninth century, who is only known as the author or compiler of a treatise "De Mensura Orbis Terræ," published by M. Walckenaer, at Paris, 1807, 8vo. It was republished, with commentaries and illustrations, by M. Letronne, 1814, 8vo.—*Biog. Univ. Class.*

DIEBITSCH SABALKANSKY (Count) a distinguished military commander in the Russian service. His father was a Silesian by birth, and an officer of considerable merit in the service of Frederick the Great, after whose death he quitted the Prussian army, and entered into that of Russia, leaving his son to complete his education in the academy for cadets at Berlin. Having himself obtained an important command, he soon procured for his son a commission in the Russian guards, and the military studies of the latter were therefore perfected at St Petersburg. He rose rapidly in his profession, through the influence of his talents, and particularly distinguished himself while with the division of Wittgenstein, during the campaign of 1812. In those of 1813 and 1814 he was lieutenant-general, and quarter-master-general to the emperor Alexander. He was wounded in the hand at the battle of Austerlitz; at Dresden he suffered severe contusions, and had two horses killed under him; and he displayed great courage in the fields of Eylau and Friedland. He subsequently became head of the staff; and in 1829 he was intrusted by the emperor Nicholas with the supreme command of the Russian armament against Turkey. His brilliant success during that campaign was rewarded by promotion to the rank of field marshal, of which there are only four or five in Russia, the title of count Sabalkansky, or the Crosser of the Balkan; the orders of St Andrew and St George; a million of rubles, or about 40,000l. sterling; six cannon taken from the enemy; and the honour of having a regiment called after his name. On the breaking out of the Polish revolution marshal Diebitsch was immediately selected to command the Russian force, destined for its suppression. In this expedition his plans were baffled, and he ultimately perished, yet there seems no reason to doubt that he conducted this campaign with skill and courage, but the impediments to his successful progress were insurmountable. The

interruption of his course by the sudden thaw of the Vistula, the destruction of numbers of his troops by the cholera, and above all the disunion of his army, will sufficiently account for the failure of his plans, without any imputation of imprudence, or want of ability. He himself fell the victim of that scourge of humanity which has desolated the east. The approach of death in his case was unusually sudden and unexpected. Without having made any previous complaint of illness, about two o'clock in the morning of the 10th of June, 1831, he was seized with symptoms of indisposition, which increased so rapidly that at three the physician was called in. His sufferings from the usual symptoms of cholera soon became very distressing, and such was the rapid progress of the disease, that death took place at about eleven o'clock in the morning of the same day. Count Diebitsch married in 1815 Jane, baroness de Tournau, niece to the lady of prince Barclay de Tolly, but by this lady, who died in 1830, he had no issue.—*Month. Mag. Cab. Ann. Reg.*

DIEPENBECK (ABRAHAM VAN) a Dutch landscape painter of the seventeenth century, born in 1655 at the Hague. He came over to this country and obtained the patronage of the earl of Bath, for whom he executed many excellent pictures of views principally taken in the west of England. His death took place in 1704.—*Walpole.*

DIGNUM (CHARLES) a musician and public singer, a native of the metropolis, where his father was a master tailor. He became a pupil of Lindley, and in 1784 made his first appearance on the stage, in the character of Young Meadows, in *Love in a Village*. Though destitute of abilities as an actor, his talents as a singer rendered him a great favourite; and for a long series of years he was in high reputation at the theatres, Vauxhall, and other public places. He died March 29, 1827, after having for many years retired from the stage. He was the composer of many pleasing ballads, and he published, by subscription, a collection of popular vocal music.—*Thesp. Dict. Month. Mag.*

DILLENIUS (JOHN JAMES) a native of Germany, born in 1681 at Darmstadt, and educated at Giessen. At the age of forty he left Germany for this country, where he was appointed the first professor of botany at Oxford, on the then recent foundation of his personal friend Dr Sherrard. His botanical writings consist of "A Catalogue of Plants found in the Vicinity of Geissen;" "Hortus Elthamensis;" and a "History of Mosses;" besides which he superintended the publication of a new edition of Ray's *Synopsis Stirpium Britannicarum*. Dillenius took the degree of doctor of medicine in 1735, and died in 1747.—*Pulteney's Bot. Sketches.*

DILLON (JOHN TALBOT) an Irish traveller who visited various parts of the continent, and at length settling at Vienna was made a count of the Roman empire. He published "Travels through Spain," 1780, 4to, of which there is a German translation; "Letters from an

English Traveller in Spain," 1778, 8vo; "History of the Reign of Peter the Cruel, King of Castile and Leon," 1788, 2 vols, 8vo; and "Historical and Critical Memoirs of the General Revolution in France in 1789," 4to, besides other works.—*Reuss. Biog. Univ.*

DINIZ DA CRUZ (ANTHONY) a celebrated Portuguese lyric poet, born at Castello de Vide in 1730. He filled several offices in the magistracy, and was a member of the Royal Academy of Sciences at Lisbon. His works display happy imitations of the classic models of antiquity, and especially of the odes of Pindar.—*Biog. Univ. Class.*

DIOCLETIANUS (CAIUS VALERIUS) a military officer, who in the latter part of the third century was raised to the throne of the Roman empire. He was born in Dalmatia, and his father, who appears to have been a slave, was scribe or private secretary to the senator Anulinus. From his birth-place, Dioclea or Doclea, he derived the name of Diocles, which he elongated into the more honourable Latinized appellation Diocletian, by which he is known in history. He was serving in the army in Mœsia, under the emperor Numerian, A.D. 284, when that prince was killed by his father-in-law, Arrius Aper, who, concealing the manner of his death, endeavoured to secure for himself the imperial crown. The suspicions of the soldiers were excited, and a tumult took place, in the course of which the assassin was put to death by Diocletian, who was immediately proclaimed emperor by the troops, and his election was confirmed by the senate. On assuming the reins of empire he associated with himself in the government, with the title of Augustus, Maximianus Herculeus, appointing also two inferior potentates, Galerius Maximianus and Constantius Chlorus, called Cæsars; and the empire was divided into four grand departments, over each of which the Augusti and Cæsars respectively presided; but Diocletian, through the influence of his age and talents, retained a superintending authority over the whole. The wars which were carried on under these princes in Gaul, Britain, Persia, and Egypt, though with immediate advantage to the Romans, yet tended to weaken the empire and hasten its decay. Under this emperor took place what has been termed the tenth and last great persecution of the christians by the heathens. After a reign of twenty years Diocletian abdicated the empire at Nicomedia, in favour of the Cæsar Galerius, his son-in-law; and he obliged his colleague Maximian to resign the imperial crown on the same day, A.D. 304, at Milan, in Italy. Diocletian passed the remainder of his life in retirement at Salona, in Dalmatia, where he died, A.D. 313, at the age of sixty-eight, or, according to some authors, seventy-three.—*Gibbon.*

DMOCHOWZKI (FRANCIS) a Polish writer, who belonged to the congregation of the pious schools, which he quitted some years before his death in 1803, at the age of forty-six. He is said to have taken an active part in the insurrection in Poland in 1794,

and he became a member of the government established at that period. He translated into Polish the Iliad, Horace's Art of Poetry, Milton's Paradise Lost, and the Last Judgment of Young; and he began a version of the Æneid, which was finished by M. Jakubowski. For some years he edited a literary journal entitled the "Memorial."—*Biog. Univ. Class.*

DOBNER (GELASIVS) an ecclesiastic belonging to the order of the pious schools, born at Prague in 1749. After having been a professor elsewhere, he became rector of the university of that city, where he died in 1790. He published many important works on the history of Bohemia and Moravia, besides memoirs inserted in the collection of the Scientific Society of Prague.—*Biog. Univ.*

DOBREE (PETER PAUL) an eminent scholar and professor of the Greek language, in the university of Cambridge. He was born at Guernsey in 1782, and was sent at an early age for education to the school at Reading, under the care and direction of Dr Richard Valpy. From Reading he was removed to Trinity college, Cambridge, where he highly distinguished himself for sagacity of criticism, laborious research, and exquisite taste in the beauties of the Greek and Latin languages. He was intimately acquainted with Porson, whose professorship he ultimately attained. When arrested by death he was preparing public lectures on the Greek language, in respect to which the highest expectations were entertained. In 1820 Trinity college published his notes to Porson's Aristophanica; and at the request of the same learned society in 1822 he corrected and edited the lexicon of Photius. He was also the author of some valuable articles in the Classical Journal; and had collected materials for a new edition of Demosthenes. His death, on the 24th of September, 1825, at the early age of forty-three, excited great regret in the university to which he belonged, and in the learned world in general. Although deemed a somewhat precise and fastidious critic, he obtained the admiration not only of the most finished classical scholars at home, but of the most distinguished of those in France and Germany.—*Ann. Biog. Gent. Mag.*

DOBRITZHOFER (MARTIN) a learned German jesuit, who was sent in 1735 as a missionary to Paraguay, where he remained twenty-two years, and returning to Europe, died in 1791. He was the author of a valuable work, entitled "Historia de Abiponibus, Equestri, Bellicosaque Paraguariæ Natione," Vienna, 1783—4, 3 vols, 8vo.—*Ibid.*

DOBROWSKI (JOSEPH) a learned Bohemian ecclesiastic, who distinguished himself by his researches concerning Slavonian literature and antiquities. Among his works may be mentioned "Institutiones Linguae Slavicae Dialecti veteris;" and a "History of the Bohemian Tongue." He was a Doctor of Philosophy, and a member of the Royal Bohemian Academy of Sciences, who for some time resided in the family of count Noslitz. His death took place at Borno, in Moravia, in

1828, at the age of seventy-four.—*Encycl. Amer. Edit.*

DODD (GZORON) civil engineer, the original designer of Waterloo bridge, died in Giltspur-street compter, London, September 25, 1827, aged about forty-four. This talented but imprudent individual, was the son of Ralph Dodd. (See DICT.) On the undertaking of Waterloo bridge he was appointed resident engineer, with a salary of 1,000*l.* a-year, which situation he resigned, though the sums he received from the proprietors are said to have amounted to 5,000*l.* He afterwards engaged in the building of steam-boats, and other undertakings, the failure of which affected his intellects. He was placed in the compter in consequence of being found in the streets in a state of intoxication; and being taken before the lord mayor, the most humane attentions were bestowed on him, and at his own request he was suffered to stay in prison, where he died, after remaining there about a week.—*Gent. Mag.*

DODD (WILLIAM) a divine of the establishment, whose abilities, dissipated career, and disgraceful death, afford a striking and memorable example for consideration and avoidance. He was born in 1729 at Bourne in Lincolnshire, of which parish his father was vicar. After receiving a grammatical education at a private school, he was entered in 1745 as a sizer at Clare hall, Cambridge, where in 1750 he took the degree of B.A. with considerable reputation. The following year he married a lady of much personal attraction and accomplishment, but unhappily without sufficient fortune to render the connexion prudent, or discretion and economy to supply the place of it. In 1753 he was admitted into orders, and repaired to London, where his eloquence and impressive oratory in the pulpit rapidly rendered him one of the most admired and popular preachers of the day. He successively obtained several lectureships, and published various sermons and devotional pieces, which met with a very favourable reception. Rendered vain by the attention paid him, which very much resembled that excited by a favourite actor, although his income was handsome, his expenses far exceeded it, and the very considerable sums which he received as author and editor proved altogether inadequate to expenses to which an opulent private fortune would alone have been adequate. In the year 1757 he graduated M.A. and about the same time took an active part in the institution of the Magdalen hospital, which owed much of its support to the zeal and ability with which he recommended it, and to his eloquent sermons as a preacher to the charity. For his services in this situation he received a handsome annual stipend; and in 1762 Dr Squires, bishop of St David's, who had previously made him his chaplain, collated him to a prebend of Brecon. By the friendship of the same prelate the celebrated earl of Chesterfield appointed him tutor to his godson and heir, the late earl, created marquis before his death. In the following year he was made one of the

king's chaplains, and in 1766 took the degree of L.L.D. In the year 1772 he commenced a subscription which gave rise to the truly benevolent Society for the Relief of Persons confined for Small Debts, and about the same time was presented to the rectory of Hockliffe in Buckinghamshire. His extravagance, however, was such, that he was involved in debts which he could not discharge; and in 1774 he had recourse to a miserable expedient to procure the rich living of St George's, Hanover-square, by means of an anonymous application to the Lord Chancellor's lady, to whom an offer of 3000*l.* was made for her interest to procure the living. The letter being traced to its author, he was ignominiously struck out of the list of royal chaplains; and, together with Mrs. Dodd, being almost openly ridiculed by Foote in his farce of *The Coseners*, he deemed it prudent to retire to Geneva, where his pupil then was, who received him with unmerited kindness, and as a means of relief procured for him the living of Winge in Buckinghamshire, with a dispensation to hold it with his other preferment. His embarrassments, however, continued as great as ever; and at length they tempted him, in 1777, to the forgery of lord Chesterfield's name to a bond, by which he obtained a large sum of money. He flattered himself with the power of withdrawing it in time to prevent discovery; but detection almost immediately followed. Being brought to trial, he was capitally convicted on the 24th of February, 1777; and, notwithstanding the most strenuous exertions to procure a mitigation of his sentence, executed on the 27th of June in the same year. He died with all the marks of due compunction for his errors and vices, and with expressions of the most bitter remorse for the scandal which his conduct had brought on his profession. He published abridgements of Grotius on Peace and War, and Locke on the Human Understanding; the Hymns of Callimachus, translated into English verse; various sermons, and devotional tracts in verse and prose; "Reflections on Death;" "A Commentary on the Bible;" "The Frequency of Capital Punishments inconsistent with Justice, sound Policy, and Religion;" "The Visitor," in 2 vols, 12mo; an "Account of the Rise, Progress, &c. of the Magdalen Charity," and many other pieces which it is unnecessary to detail. In his "Prison Thoughts," published after his death, he was assisted by Dr Johnson. —*Life prefixed to Prison Thoughts.*

DOEDERLEIN or **DODERLEIN** (JOHN CHRISTOPHER) a learned Lutheran divine and scripture critic. He was professor of divinity at the German university of Jena, where he formed a great number of disciples, and obtained a high reputation. He was the author of a work entitled "*Institutio Theologi Christiani nostris Temporibus accommodata*," containing a distinct account of the state of religious opinions among the protestants of Germany. He also published "*Scholia in Libros Veteris Testamenti Poeticos*," Halle, 1779, 4to; and a Latin "*Translation of the Prophecies of Isaiah from the Hebrew text*,"

collated with ancient manuscripts and versions, accompanied with notes and illustrations," 1788, 8vo. This production, according to Rosenmüller, displays profound and elegant learning and great power both of judgment and genius. He also edited, in conjunction with Meisner, the Hebrew Bible of Reineccius, with various readings selected from Kennicott and De Rossi, which was not published till after his death, which took place in 1792.—*Zopf*.

DOHM (CHRISTIAN WILLIAM VON) a German statesman, and literary writer, who was born at Lemgo, in 1751. He was the son of a Lutheran minister, and he is said to have formed his taste by the study of the Greek and Roman classics, and of the works of the best English authors. For some time he lived in obscurity at Berlin, but he at length made himself known by his writings; and he obtained various employments under the Prussian government. In 1797 he was sent ambassador to the congress of Rastadt, when he in the name of the whole diplomatic corps drew up a report concerning the murder of the two French envoys. Having estates in Westphalia, he continued to reside in that country after its separation from Prussia by the treaty of Tilsit, in 1807; and in September that year, he went to Paris at the head of a deputation from the states of the province and the administrative authorities. After his return, in the month of December following, he was appointed a member of the council of state; and in February 1808, he was sent ambassador from the king of Westphalia to the court of Dresden. Illness obliged him to request his dismissal, in April 1810; and he was permitted to retire to his estate of Putsleben, in the county of Hohenstein. He subsequently devoted his time to historical investigations, the result of which was a work entitled "Denkwürdigkeiten meiner Zeit, oder Beiträge zur Geschichte, von 1778 bis 1806," Lemgo and Hanover, 1814—19, 5 vols. This work, which contains the fruit of the author's own observation and experience, as well as what he obtained from other sources, is esteemed on account of its perspicuity, correctness, and impartiality. Dohm died at Putsleben, May 29, 1820.—*Encycl. Amer.*

DOMBAY (FRAN. de) an eminent orientalist, born at Vienna, in 1758. He was employed as interpreter at Morocco, at Madrid, and lastly at Agram in Croatia, till 1792, when returning to Vienna, he became counsellor in the private chancery of the court and state, and court interpreter of the eastern languages. He was the author of a "History of the Kings of Mauritania," 2 vols, 8vo; "History of the Scherifs," 8vo; and other works relating to the history, literature, and the languages of the Arabians, &c.—*Biog. Univ.*

DOMBEY (JOSEPH) a French naturalist, born at Meaux, in 1742. He studied medicine at Montpellier, and afterwards travelled in South America. In 1785 he returned home, and subsequent to the Revolution, was sent on a mission to the American United States. He died in 1793, in prison, at Montserrat. He

APP. BIOG. DICT.

published a herbal, including sixty new species of plants of Chili and Peru; and his contributions to the Museum of Natural History at Paris were very considerable.—*Ibid.*

DONATI (VITALIANO) an Italian physician, professor of natural history in the university of Turin. He was a native of Padua, born in 1717, and is known as the author of a treatise on black coral, and a "Natural History of the Adriatic Sea," folio, 1750. His death took place in 1763, at Bassora, in the East, whither he had gone on a tour for scientific purposes.—*Dict. Hist.*

DONDI (JAMES) better known by his Latin designation, Dondus; an Italian physician of great eminence in the fourteenth century, who practised at Padua, and from the great variety of medicines which he invented was surnamed by his contemporaries Aggregator. He was the author of a treatise "On the Ebbing and Flowing of the Tides;" "On the Warm Mineral Springs in the Neighbourhood of Padua;" and a medical tract printed at Venice, and entitled "Promptuarium Medicinæ." Dondi was also a good mathematical scholar. His death took place in 1350.—*Dict. Hist.*

DONDUCCI (ГЕОРГІЙ АНДРЕЙ) a Bolognese artist, born in 1755. He studied painting under Annibal Caracci, and his pictures are remarkable for their depth of shade. Of his life but few particulars are known, and the precise time of his decease is uncertain.—*Pilkington*.

DOODY, FRAS. (SAMUEL) a native of Staffordshire, eminent for his knowledge of botany. He was a member of the medical profession, and settled finally at Chelsea, as superintendent of the botanical garden there. The branch of science to which he more particularly devoted his attention is indebted to him for some useful and ingenious discoveries respecting the description of plants called Cryptogamia. He also assisted in the publication of Ray's Synopsis, and furnished some valuable papers to the Royal Society, of which he was elected a fellow in 1695. Mr Doody died in 1706.—*Pulteney's Botanical Sketches*.

DORAT (CLAUDE JOSEPH) a French poet, born at Paris, in 1734; died in 1780. He was the author of tragedies, comedies, fables, odes, epistles, romances, and other works, which procured him great reputation among his contemporaries, and which formed altogether twenty volumes octavo. A selection of his works, by Sautereau de Marsy, appeared in 1786, 3 vols, 12mo. He is said to have sometimes approached to the manner of Voltaire, and some of his theatrical pieces were very successful.—*Biog. Univ.*

DORISLAUS (ISAAC) a learned Dutch civilian, memorable as having been one of the public prosecutors of Charles I, before the High Court of Justice, in 1648. He appears to have originally settled in England, in consequence of being appointed, on the recommendation of the celebrated John Gerard Vossius, to a professorship of history, founded at Cambridge by Fulke Greville, lord Brooke, in 1628. His lectures, from the democratic

D R A

sentiments they contained, seem to have given offence; and Fuller states that Dorislaus was accused to the king, troubled at court, and after his submission, hardly restored to his place. In consequence apparently of this affair he was desired by his patron to retire to his own country, with the promise of having his stipend continued during his life; but lord Brooke, just at this period, being assassinated by his servant, this Dutch lawyer remained in England, and he became one of the professors of Gresham College. On the breaking out of the civil war, he took an active part in public affairs, becoming the counsellor and agent of the partisans of the popular cause. After having acted as judge advocate in the army of the earl of Essex, he was made one of the judges of the Admiralty, and at length, on the trial of the king, he was appointed, in conjunction with the attorney and the solicitor-generals, Cooke and Aake, counsel for the commonwealth of England. His services were rewarded with the appointment of ambassador from England to the Dutch United States, but he had scarcely entered upon his office, when he lost his life, having been assassinated at the Hague by twelve English cavaliers, May 3, 1649.—*D'Irasci's Curiosities of Literature*.

DOSSI (Dosso) an eminent Italian painter of the sixteenth century, by birth a Ferrarese, whose productions have been thought not unworthy comparison with those of some of the first masters. A fine specimen of his talents is exhibited in the Lateran church of his native city, a head of St John. Dossi died in 1560.—*D'Argenville*.

DOW (ALEXANDER) an English military officer, historian, and dramatist, who died in Hindostan, in 1799. He was a native of Scotland, and rose from the situation of a common sailor, to be a lieutenant-colonel in the East India company's service at Benecoolen. Among his works are "A History of Hindostan," 1772, 3 vols, 4to; a translation of the Bahar Danush, published under the title of "Tales of Inatullah of Dehly," London, 1768, 2 vols, 12mo; and two tragedies, "Zingis," and "Sethona."—*Theop. Dict. Biog. Univ.*

DOYEN (GABRIEL FRANCIS) an eminent French painter, who was a disciple of Vanloo. He settled in Russia, where he died in 1806. He painted "The Death of Virginia," which procured him admission into the Academy of Painting at Paris in 1758; "The Death of St Louis," for the chapel of the School of Invalids; and many other works of merit, before he left his native country.—*Biog. Univ. Class.*

DRAPARNAUD (JAMES PHILIP RAYMOND) a French physician, born at Montpellier in 1772; died in 1805. He was professor of natural history at the School of Medicine; and he left in MS. two important works. "Hist. Nat. des Mollusques Terrestres et Fluviales de la France," published by M. Clos, Paris, 1805, 4to; and "Monographie des Conferves," to be edited by M. Bory de St Vincent.—*Biog. Univ. Class.*

DRAYTON (WILLIAM HENRY) an Ame-

D R U

rican magistrate and historical and political writer, born in South Carolina in 1742; died member of the national congress at Philadelphia, in 1779. He published some political tracts; and he is said to have left prepared for the press, a "History of the American Revolution."—*Ibid.*

DRESSERUS (MATTHEW) a native of Erfurt, professor of oratory in the university of Leipsic. He was born in 1536, and is known as the author of "Tres Libri Progymnasmatum Litteraturæ Græcæ," 8vo; "De Festis Diebus Christianorum, Judæorum, et Ethnicorum," 8vo; "Isagoge Historica," 8vo; and of four books on rhetoric. He died in 1607.—*Moreri*.

DROUET (JOHN BAPTIST) a member of the National Convention, born in 1763. He was post-master at St Menehould, in June, 1791, when Louis XVI and his family passed through that place with an intention to flee from France; and through his interference the royal party was led back to Paris. Drouet refused the offer of 30,000 francs from the National Assembly for this service. In 1792 he was nominated a deputy to the Convention, in which he accused Dumouriez, assisted in the ruin of the Girondists, and distinguished himself by his violence on several occasions. Being sent a commissioner to the army of the north, he was taken prisoner by the Austrians; and in 1795 exchanged with others of his party, for the daughter of Louis XVI. He was afterwards a member of the Council of Five Hundred; and under the consulship sub-prefect of St Menehould. In 1815 he was chosen deputy from the department of Marne to the chamber of representatives; and being excepted out of the amnesty published January 6, 1816, and condemned to exile, he returned to Macon, where he died in obscurity in April 1824.—*Biog. Univ. Class.*

DRUMMOND (SIR WILLIAM) an ingenious and learned antiquary and cultivator of polite literature. He belonged to a distinguished Scottish family settled at Logie Almond, where he possessed an estate. He was a knight of the Order of the Crescent, a privy councillor, and a fellow of the Royal Societies of London and Edinburgh; and at one period he filled the office of envoy extraordinary and minister plenipotentiary from Great Britain to the king of the Two Sicilies. In 1794 he published his first work, "A Review of the Governments of Sparta and Athens." At the close of the year 1795 he was chosen MP. for St Mawes; and in the parliaments which met in 1796 and 1801, he had a seat for the borough of Lostwithiel. In 1798 he published a translation of the Satires of Persius. In 1801, while on an embassy at Constantinople, he was invested with the Turkish order of the crescent, his title to which was confirmed by license in the London Gazette, September 8, 1803. His death took place at Rome, March 29, 1828. Besides the works above-mentioned he was the author of "Academical Questions," 1805; "Herculanensis, or Archaeological Dissertations, containing a MS. found among

DUC

the Ruins of Herculaneum," 1810, 4to; "An Essay on a Punic Inscription found in the Isle of Malta," 1811, 4to; "Odin, a Poem," 1818; and "Origines, or Remarks on the Origin of several Empires, States, and Cities," 1824, 2 vols, 8vo; and likewise an unpublished treatise entitled "Œdipus Judaicus," designed to show that some of the stories in the Old Testament are merely allegorical, and this involved him in a controversy with the Rev. George D'Oyley, DD.—*Gent. Mag.*

DUBOIS DE CRANCE (EDMUND LOUIS ALEXIS) minister at war under the French directory, was born at Charleville in 1747. He was a deputy to the states general in 1789, when he displayed his enmity to the nobility, arising partly from personal motives. In the Convention he voted for the death of the king, and against the appeal to the people. The republican army owed to him its first organization, as he procured the decree for the levy of 300,000 men; the arrangement of promotion according to seniority; and the union of the troops of the line with the battalions of the national guard. He was a member of the committee of public safety, and being sent with some of his colleagues, in 1793, to suppress the insurrection at Lyons, he was accused of moderation, recalled, and arrested; he however recovered his liberty and reappeared in the Convention. At this period he made a motion purporting that each member of the Convention should be obliged to answer this question, "What have you done to deserve hanging, if a counter-revolution should take place?" Dubois attracted but little notice in the Council of Five Hundred; but the Directory appointed him inspector-general and war-minister. He opposed Buonaparte, who, on gaining the ascendancy, deprived Dubois of his posts, when he retired into Champagne. A report of his death was circulated in 1800, and again in 1805; but that event did not take place till June 1814. Among his numerous publications may be noticed, "Observations sur la Constitution Militaire," 1789, 8vo; and "Tableau des Persécutions que Barrère a fait éprouver à Dubois-Crance pendant 15 Mois, 1795, 8vo.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

DUBY (PETER AUCHER TOBISEN) a Swiss medalist of considerable antiquarian research, especially with respect to ancient numismatics. He was born at Housseau in 1721, and the earlier part of his life was passed in military service, till having lost a limb at Fontenoy, he retired, turned his attention to literature, and became linguist to the king's library at Paris. He made a curious collection of French coins, especially of those struck by the earlier feudal seigneurs; and was the author of a work on medals, in three quarto volumes, printed in 1790, eight years after his decease.—*Dict. Hist.*

DUCASSE (JOHN BAPT.) a French naval officer, who was a native of the province of Bearn. After having been in the service of the company of Senegal he entered into the royal navy, and was made captain of a ship by Louis XIV. In 1691 he was appointed

DUC

governor of St Domingo, in which post he rendered himself formidable to the English; and during the war about the Spanish succession he gained a victory over admiral Benbow, for which he was raised to the command of a squadron, with the title of lieutenant-general of marines. He headed the fleet which invested Barcelona in 1714; but his infirmities obliged him to retire from the service, and he died in the following year.—*Biog. Univ.*

DUCCIO DI BONINSEGNA, an eminent Italian artist, known as the inventor or rather restorer of the *lavoro di commesso*, a peculiar description of mosaic work. He was also an excellent painter, and a very favourable specimen of his abilities exists in an altar-piece at Sienna. The date of his birth is uncertain, but his death took place about the year 1311.—*Traboschi.*

DUCHANGE (GASPARD) an eminent French engraver, who was a disciple of John Audran. He was born at Paris in 1662; died in 1756, counsellor of the Academy of Painting.—*Elmes's Dict. of the Fine Arts.*

DUCIS (JOHN FRANCIS) a distinguished French tragic poet, born at Versailles, in 1733. He studied at the college of Orleans; and his earliest essays betrayed few tokens of his future celebrity. He was thirty-three when his first drama, "Amelise," was represented, and which he withdrew after it had been once performed. Not disheartened by his want of success, Ducis had recourse to the stage again the following year, taking for his model our celebrated countryman Shakspeare. He produced in succession "Hamlet," 1769; "Romeo et Juliette," 1772; "Le Roi Lear," 1783; "Macbeth," 1784; "Jean Sans-Terre," 1791; and "Othello," 1792; all which, except "Jean Sans-Terre," were eminently successful. These are rather imitations than translations of the productions of the English dramatist; but though Ducis, in compliance with the taste of his countrymen, has thrown a veil over some of the bolder features of the original, he has preserved more of the spirit of Shakspeare than any other French theatrical writer. In "Œdipe chez Admète," which appeared in 1778, the author imitated the early Greek tragedians, and this work is considered as his chef-d'œuvre. He was soon after chosen to succeed Voltaire in the French Academy. His "Famille Arabe," an entirely original composition, displays many beauties, but is, like his other works, defective in the connexion of its parts; for Ducis, while he excelled in detached scenes, was unsuccessful in his attempts to form a harmonious combination, so as to produce a proper effect. Devoted wholly to the drama, he took no part in the events of the revolutionary era; and he rejected the favours which were proffered him by Buonaparte. He survived the restoration of Louis XVIII, and his interview with that prince was a circumstance which brightened the latter days of his lengthened existence. He enjoyed the use of his physical and moral faculties till his death, which happened in the beginning of 1817. His works were published in 3 vols,

DUI

8vo, and in 6 vols, 32mo; and M. Campenon published "Les Œuvres Posthumes de Ducis," with his Life, 1825, 8vo.—*Biog. Nouv. des Contemp. Lit. Gaz.*

DUCREST (CHARLES LOUIS, marquis) brother of madame de Genlis, was born near Autun, in 1747; and died in the neighbourhood of Orleans in 1824. He entered young into the navy, which he quitted for the army, in which he rose to the rank of colonel commandant of the royal grenadiers. In 1787 he presented a memoir to Louis XVI, announcing himself as the only person capable of re-establishing prosperity in the financial affairs of France. His pretensions exposed him to ridicule, and he shortly after left his native country, but returned in 1790, to make a claim of a large sum from the duke of Orleans, then in the height of his popularity. The latter refused payment, and Ducrest sued him for the debt, pleaded his own cause, (which no advocate would undertake,) and gained it. He then quitted France again, and did not return till 1800, from which period till his death, he occupied himself in literary undertakings. In 1817 he published "Traité de la Monarchie Absolue," Paris, 12mo, in which he proposed, among various strange innovations, to abolish the ministry of the marine, to teach the military exercise by the Lancasterian system, and to pay soldiers with lottery-tickets.—*Dict. des H. M. du 18me S. Biog. Univ. Class.*

DUFAU (FORTUNE) an eminent French painter, who was a native of St Domingo, and died at Paris in 1821. He studied under David; and after the restoration he was appointed professor at the school of St Cyr. Among his principal works are "Count Ugolino in Prison," and "St Vincent de Paul."—*Biog. Nouv. des Contemp.*

DUFRENOY (ADELAIDE GILLETTE) whose family name was Billett, a French lady distinguished for her literary compositions. She published, besides other works, a collection of "Elegies," 1807; "Les Beautés de l'Hist. de la Grèce Moderne," 1825, 2 vols, 12mo; and several romances for the instruction of youth. She was born at Nantes in 1765, and died March 7, 1825.—*Biog. Univ. Class.*

DUIGENAN, LL.D. (PATRICK) an Irish civilian of our own times, born of humble parents, who with difficulty afforded him the means of education as a sizer at Trinity college, Dublin. By indefatigable industry, united to a considerable share of zeal, he raised himself to the post of vicar-general of the diocese of Armagh, with a seat in the Irish House of Commons, and the rank of a privy counsellor. Dr Duigenan was a strong promoter of the Union, after the carrying of which measure he obtained a seat in the English parliament, and exerted himself there with great perseverance in opposition to Catholic emancipation. He was the author of a few political tracts, the principal of which was entitled "An Address to the Nobility and Gentry of Ireland;" also of a small work called "Lachrymæ Academicæ," 8vo. He died in the spring of 1816, in his eighty-second year.—*Genl. Mag.*

DUM

DULON (LOUIS) a distinguished flute player and composer of instrumental music, who was born in 1769. He was the son of a civil officer, at Orianenburg, near Berlin; and he lost his sight in early infancy, in consequence of inflammation of the eyes. While very young he manifested a taste for music, in consequence of which, his father, who was a musical amateur, was induced to instruct him in playing on the German flute when he was about eight years old. He studied the works of Quanz and Telemann; and in 1781 he went with his father to Berlin, where he became the pupil of the chamber-musician Reif. So greatly did he profit by these advantages, that he became a most skilful performer, and from his sixteenth year may be dated the commencement of that high reputation which he enjoyed not only in Germany, but also in Holland and England, both which countries he visited, and remained some time at Amsterdam and in London. At Hamburgh he formed an intimate acquaintance with the famous musician Charles Philip Emanuel Bach, for whose talents he always expressed the highest admiration. He derived much advantage, both as a performer and a composer, from a palpable alphabet, invented in 1796 by the Aulic counsellor Wolke, which afforded him the means of attaining a high degree of excellence in the art which he professed. This ingenious musician appears to have passed the latter part of his life at Wurtzburg; and he died there July 7, 1826. Dulon composed an autobiographical work, entitled "The Life and Opinions of the Blind Flutist," edited by the celebrated Wieland, 2 vols, 1807—8.—*New Germ. Necrol.*

DUMESNIL (MARIE FRANÇOISE) a celebrated actress, born at Paris in 1713. She first appeared on the stage in 1737, and rose to the highest eminence as a tragic performer. In 1775 she retired to private life, and died in 1803 at Boulogne, where she had long resided. In 1800 was published "Mém. de M. F. Dumesnil, en réponse aux Mém. d'Hyppolyte Clairon," 8vo.—*Biog. Univ. Class.*

DUMONT (STEPHEN) a Jesuit, and a distinguished writer on legislation. He was a native of Geneva, and was born about 1750. For some time he was the coadjutor of M. Duveroy in the editorship of a journal designed as a continuation of that of Mirabeau. In 1792 he held the office of librarian to the marquis of Lansdowne, and during his residence in England he contracted an intimate friendship with the celebrated Jeremy Bentham, who intrusted him with the manuscript of his great work written in French, and entitled "Traité de Législation Civile," which Dumont published in 1802, 3 vols, 8vo. In 1812 he appeared as the editor and translator of Bentham's "Théorie des Peines et des Récompenses," 2 vols, 8vo. He also published Bentham's "Tactics of Legislative Assemblies, to which is added a Treatise on Political Sophisms," 1816, 2 vols, 8vo. He died at Milan in 1829, on his return to Geneva, whither his remains were conveyed and there

DUP

interred beside those of M. Charles Pictet. Since the decease of M. Dumont a very interesting production of his pen has been published, under the title of "Souvenirs sur Mirabeau," of which there is an English translation.—*Month. Mag.*

DUNDAS (Sir David) an English general, born at Edinburgh about 1735; died in 1820. He was a member of the privy council, commander of the first regiment of dragoon guards, and executed the functions of adjutant-general of the army. He enjoyed the reputation of being a profound tactician; and after the peace of 1783 he obtained permission to go to Potsdam, to be present at a general review of the Prussian army by Frederick the Great. On his return, he published, with a dedication to the king, "Principles of Military Movements, chiefly applied to Infantry," 1788, 8vo; and shortly after "Regulations for the Cavalry;" both which have been adopted as standard works for the direction of military men. Sir D. Dundas, in 1809, succeeded to the chief command of the army, on the temporary resignation of the duke of York.—*Ann. Reg. Biog. Univ. Class.*

DUNN (SAMUEL) a schoolmaster, many years resident at Chelsea, where he acquired considerable property, which at his death he bequeathed towards the foundation of a mathematical school at Crediton in Devonshire, the place of his nativity. Mr Dunn was himself an able mathematician, and was appointed by the honourable East India Company to examine their cadets in astronomy and navigation. He was the author of a tract on the doctrine of the sphere, and of an atlas in two folio volumes, as well as of some miscellaneous papers to be found in the Transactions of the Royal Society. His death took place in 1792.—*Gent. Mag.*

DUNSTER (SAMUEL) an English clergyman, known as the translator of the Satires and Art of Poetry of Horace into English prose.—**CHARLES DUNSTER**, son of the preceding, received his education at Trinity college, Oxford, and died at Petworth in the county of Sussex, of which living he had been many years the incumbent. Mr Dunster was a good classical scholar, as well as an able divine. Of his theological works the principal are, "Discursory Considerations on the Gospels of St Matthew and St Luke," 8vo, which brought him into a controversy with Mr Churton, the editor of Dr Townson's works; "A Letter to the Lord Bishop of London on a Passage in St Matthew's Gospel," 8vo; and "A Letter to Granville Sharpe, Esq. on the Lord's Prayer." He also published a translation of The Frogs of Aristophanes, and commentaries on Phillips's poem Cyder, and the Paradise Regained, with a separate treatise on "The Early Reading of Milton." His death took place in 1816.—*Gent. Mag.*

DUPATY (CHARLES) son of the president Dupaty, one of the most distinguished sculptors of the modern French school. He was a member of the class of fine arts of the Institute, and died November 13, 1825. This artist studied under Lemot, and resided seven

DUR

years at Rome. Among his finest productions is a group representing "Religion consoling France," for the sepulchral monument of the duke of Berri.—*Biog. Univ. Class.*

DUPONT DE NEMOURS (P. SAMUEL) a French political economist, member of the Institute, &c. born at Paris in 1739; and died in America, August 6, 1817. He filled some diplomatic situations, and under the ministry of M. de Vergennes he was appointed counsellor of state. He was afterwards chosen a member of the States-general; and he twice sat as president of the Constituent Assembly. He subsequently edited a constitutional journal, in which he opposed the anarchists, and he narrowly escaped becoming their victim. After having been a member of the Council of Ancients, he encountered new perils on the revolution of the 8th of Fructidor, 1797, in consequence of the strong expression of his sentiments in the Historian, a journal of which he was the editor. His liberty was preserved through the friendship of Chenier, and at length he went to the United States, whence he returned in 1805, and became secretary of the chamber of commerce. Notwithstanding his great age, he accepted the office of secretary of the provisional government, in 1814; and in March 1815 he finally retired to America, bearing with him the esteem of the king, who, on his second restoration, replaced him on the list of counsellors of state, and retained for him his place in the Institute. Besides a great number of memoirs and political essays, he was the author of "Réflexions sur l'Écrit intitulé Richesses de l'État," London, 1763, 8vo; and "Philosophie de l'Univers, 1790, 8vo.—*Biog. des Hommes Vivans. Biog. Univ. Class.*

DUPPA (RICHARD) FSA. a barrister, who was educated at Trinity college, Oxford, and took the degree of LL. B. at Trinity hall, Cambridge in 1814. He published a number of works on different subjects, including "A Journal of the most remarkable Occurrences that took place at Rome upon the Subversion of the Ecclesiastical Government in 1798," "The Life and Literary Works of Michael Angelo Buonarroti, with his Poetry and Letters," 1806, 4to—3d edit. 1816; "Elements of Botany," 1809, 3 vols, 8vo; "The Life of Raffaele," 1816; "Travels in Italy," 1828; "Travels on the Continent, Sicily, and the Lipari Islands," 1829. He died at Lincoln's Inn, London, July 11, 1831.—*Gent. Mag.*

DURAND DE MAILLANE (PETER TOUSSAINT) a French lawyer, born in Provence in 1729, and died about 1810. He was deputy from Arles to the States-general in 1789, member of the National Convention, and at length member of the Council of Ancients. He was deeply skilled in the canon law, on which subject he published many works, which may still be consulted with advantage. Among his productions is an "Apologetical History of the Ecclesiastical Committee of the National Convention," to which he belonged.—*Biog. Univ. Class.*

DURAS (duchesse de) a literary lady of eminence, distinguished for her virtues as well

DUV

as her talents. She was the daughter of count Kersaint, who voted in the National Convention against the execution of Louis XVI, and fell a victim to his integrity. To madame de Duras, Paris owes the foundation of a primary school for the education of the children of the poor. She published two works of fancy, "Ourika," and "Edward," which entitle her to be ranked with Tencin and Lafayette. Her death took place at Nice, after a long and painful illness, towards the end of 1827.—*Morning Chronicle*.

DUREAU DE LA MALLE (JOHN BAPT. JOS. RENZ) a French writer, member of the legislative body, and of the Institute. He translated the treatise of Seneca, *De Beneficiis*, Paris, 1776, 12mo; and left in MS. a poetical translation of the *Achilleis* of Statius; but his principal productions are versions of the works of Tacitus, first published in 1790, 3 vols, 8vo; and the "History of Sallust," 1808, 8vo. He had commenced a translation of Livy, which was finished by M. Noel, and printed with the original, in 15 vols, 8vo, 1810, &c.—*Biog. Univ. Class.*

DUSSAULT (JOHN JOSEPH) a French journalist and miscellaneous writer, who was made librarian of St Genevieve, and received the decoration of the legion of honour from Louis XVIII. He died in 1824. Dussault was a critical contributor to the *Journal des Débats*, and a collection of his articles was published at Paris, 1818—24, under the title of "Annales Littéraires," 5 vols, 8vo.—*Ibid.*

DUVERNEY (JOS. GUICHARD) a celebrated French anatomist, born at Feurs, in Forez, in 1648. He was admitted into the

DUV

Academy of Sciences at Paris, in 1676, and three years after appointed professor of anatomy at the royal garden. He died in 1730. His principal work is "Tr. de l'Organe de l'Ouie," Paris, 1683, of which there are numerous re-impressions. He was also the author of a "Treatise on the Diseases of the Bones," of which an English translation appeared in 1762, 8vo; and his "Œuvres Anatomiques," 2 vols, 4to, were published at Paris in 1761.—*Haller. Eloy. Biog. Univ.*

DUVOISIN (JOHN BAPTIST) a French ecclesiastic, born at Langres in 1744. He was a doctor of the Sorbonne, and grand vicar of the diocese of Laon, in 1792, when he suffered deportation with a great number of his clerical brethren. He went to Brussels, and afterwards to Brunswick, where he employed himself in teaching mathematics and the belles lettres. Returning to France in 1802 he was raised to the bishopric of Nantes, and obtained the confidence and esteem of Buonaparte, who created him a baron and made him a member of the legion of honour. He was one of the four prelates who resided near the pope at Savonne, and at Fontainebleau, and he is said to have endeavoured as much as possible to lighten the captivity of the fallen pontiff. He died at Paris in 1813. The abbé Duvoisin was the author of "L'Autorité des Livres de Moïse établie et défendue contre les Incrédules," Paris, 1778, 12mo; "Examen des Principes de la Rév. Fran." 1795, 8vo; and "Démonstration Évangélique," 1802, 12mo, besides other works.—*Biog. Univ. Class.*

EAT

EANDI (JOS. ANT. FRAN. JENOME) a learned Piedmontese, born at Saluces in 1735, and died in 1799, professor of experimental philosophy at Turin. His principal work was composed in conjunction with his nephew, M. Vassali, and is entitled "Physicæ Experimentalis Lineamenta ad Subalpinos," Turin, 1793, 8vo. He belonged to the Academy of Sciences at Turin, and contributed many interesting memoirs to the collection of that society.—*Biog. Univ.*

EATON (WILLIAM) an American officer, remarkable for his adventures, who was born at Woodstock, in Connecticut, February 23, 1764. He was the son of a farmer, in straitened circumstances, with a large family; but he fortunately obtained the rudiments of a good English education. At the age of sixteen he enlisted as a soldier; and in 1783 he was discharged, with the rank of sergeant. He then undertook the study of Latin and Greek, which enabled him to get admitted into Dartmouth College. From the beginning of 1788 to 1791 he taught in a school

EAT

in Vermont, devoting his time to classical literature, that he might be qualified for the degree of BA., which he obtained. In October 1791 he was appointed clerk to the house of delegates of the state of Vermont; and in 1792 he received a captain's commission in the American army. He proceeded with his company down the Ohio to the western army at Legionville, with which he continued till 1794, when he obtained the appointment of American consul at Tunis, in consequence of which he became engaged in some singular transactions. War was declared, in 1801, against the United States by the Bey of Tripoli, who was an usurper, the lawful bey, his brother, being then an exile at Tunis. With him Mr. Eaton formed a project for making an attack on the usurping bey by land, while the American squadron in the Mediterranean carried on operations against him by sea. In 1803 he returned home, and laid his plan before the government; but finding he could receive no assistance from that quarter, he set sail for Egypt, merely

with the character of American agent. Proceeding with the squadron for the Mediterranean in July, 1804, he reached Alexandria in Egypt in November, and in the ensuing month he arrived at Grand Cairo. He there learnt that Hamet Pacha, the ex-bey, after a series of vicissitudes and disasters, had been obliged to join the Mamelukes, and that he was actually with them, commanding a few Tripolitans, and their Arab auxiliaries in Upper Egypt. Mr. Eaton contrived to obtain from the viceroy of Egypt an amnesty for Hamet, and permission for him to pass the Turkish army unmolested. A rendezvous was appointed, and a meeting took place between the exiled bey and the American officer near Alexandria, when it was stipulated, among other articles, that the latter should be recognised as general and commander in chief of the land forces, to be called into service against the common enemy, the reigning pacha of Tripoli. The force consisted of nine Americans, twenty-five cannoniers, and a company of thirty-eight Greeks, the pacha's suite of about ninety men, and a party of Arab cavalry, which, with footmen and camel drivers, made in all about four hundred. With this body the expedition was undertaken, and after a variety of adventure and suffering they arrived on the 15th of April at Bombay, where the United States' vessels, the *Argus* and the *Hornet*, furnished them with provisions, and the army was thus enabled to reach Derne. That place was captured, but it afforded no secure position. The reigning pacha of Tripoli approached with a large body of troops, when three engagements took place, in all which the adventurers were successful. Eaton, however, was stopped in the midst of his victorious career by the official intelligence that the Americans had concluded a treaty of peace with the enemy. He and his associate Hamet repaired on board the American squadron, and their troops dispersed. Mr. Eaton on his return home was received with flattering marks of public favour; and the president, in his message to the Congress, made honourable mention of his services. The legislature of Massachusetts bestowed on him a tract of land consisting of 10,000 acres, in testimony of their sense of his "undaunted courage and brilliant services." He died in 1811, as is stated, in consequence of having contracted habits of intemperance after his return to America. He was acquainted with history and geography, military tactics, and with the French and Italian languages, and he left letters and a journal, containing an account of his adventures on the coast of Barbary and his expedition to Derne, in which he has displayed no common powers of observation and reflection. A life of General Eaton has been published by one of his friends in Massachusetts.—*Encycl. Amer.*

EBERHARD (JOHN AUGUSTUS) a German divine and philosopher, born at Halberstadt in 1739. He studied at the university of Halle, and having adopted the ecclesiastical profession, his advancement was impeded by

the sentiments which he published, especially in his "Apology of Socrates," 1772, in which he maintained the possibility of the salvation of heathens. At length, through the intervention of Frederick the Great, he was appointed preacher at Charlottenburg; and he afterwards became professor of theology at Halle, privy counsellor to the king of Prussia, and a member of the Royal Academy of Berlin. He died in 1809. Eberhard distinguished himself by his opposition to the philosophy of Kant; and he was the author of "A General Theory of the Faculty of Thought and Sentiment," 1776, 8vo; "A Theory of the Belles Lettres and the Fine Arts," 1783, 8vo; "A General History of Philosophy," 1787, 8vo, and various other works.—*Biog. Univ.*

EBERT (J. J.) an eminent German philosopher and geometrician, born at Breslau in 1737, and died in 1805. He was professor of philosophy and mathematics at Wittenberg, and he published "Dialogues on the Principal Wonders of Nature;" "The Leisure of a Father consecrated to the Instruction of his Daughter;" and several other valuable elementary works, besides conducting two literary journals.—*Biog. Univ. Class.*

ECKHARD (JOHN FRED.) a learned Saxon writer on philology and bibliography, born in 1723. He became rector of the college of Frankenhausen in 1748, and was director and librarian of that of Eisenach from 1758 to 1793. He died in 1794. A list of his works, to the number of ninety-two, may be found in the first of the annexed authorities.—*Meusel's Dict. of Living Authors. Biog. Univ.*

EDEN, bart. (SIR FREDERICK MORTON) a writer on statistics and political economy. He was director of the Globe Insurance Company, and died in Pall Mall, November 14, 1809. His works are, "The State of the Poor, or a History of the Labouring Classes in England, from the Conquest to the present Time," 3 vols, 4to; "Porto Bello, or a Plan for the Improvement of the City of London," with plates, 1798, 8vo; "An Estimate of the Number of Inhabitants in Great Britain and Ireland," 1800, 8vo; "Observations on Friendly Societies, for the Maintenance of the Industrious Classes during Sickness," 1801, 8vo; "Eight Letters on the Peace, Commerce, and Manufactures of Great Britain," 1802, 8vo; "Address on the Maritime Rights of Great Britain," 1808, 8vo.—*Gent. Mag.*

The former part of the article relative to Sir F. M. Eden, as given in the Biographical Dictionary, vol. i. is erroneous—all the circumstances, except the date of his decease, and the account of his principal publication, relating to Sir Morton Eden, who after filling various diplomatic situations, as there stated, was raised to the peerage by the title of Lord Henley, and died in 1802. The mistake originated from the similarity of name in these individuals.—*Ed.*

EDWARDS (JONATHAN) the son of an American divine of the same name.—(See

DICT.)—He was born at Northampton, North America, in 1745, and died in 1801. He was educated in a school founded by his father at Stockbridge, where he acquired a knowledge of the dialects of the native Indians, relative to which he published some interesting observations. He became president of Union college, in the state of New York. Among his theological writings are a "Dissertation on Liberty and Necessity;" and "Observations on the Doctrine of Universal Salvation."—*Biog. Univ. Class.*

EGLY (CHARLES PHILIP MONTHEAULT d') a French writer, born at Paris in 1696, and died in 1749. He was an advocate by profession, but devoted himself chiefly to literature. His principal production is "Histoire des Rois de Sicile de la Maison de Bourbon," 1741, 4 vols, 12mo; and he translated from the Greek of Achilles Tatius "The Amours of Clitophon and Leucippe," 1734, 12mo.—*Biog. Univ.*

EHRMANN (FRED. LOUIS) professor of natural philosophy and chemistry at the central school of the Lower Rhine, died at Strassburg in 1800. He invented inflammable air lamps, wrote "Elements of Physics," and translated into German Lavoisier's Memoir on the Action of Fire supported by Oxygen Gas.—*Biog. Univ. Class.*

EICHHORN (JOHN CONRAD) a Prussian entomologist, who was a Lutheran preacher at Dantzig. He made a number of microscopical observations, of which he gave an account in a German treatise on "The Aquatic Animals of Dantzig and its Environs not visible to the Naked Eye," 1775, 4to, republished with a supplement, in reply to the criticisms of Fuessli in 1783. Eichhorn died in 1790, aged seventy-one.—*Biog. Univ. Class.*

EICHHORN (JOHN GEO.) a celebrated German divine and biblical critic, born in 1752 in the principality of Hohenzollern Oehringen. He applied himself with great success to the study of Oriental literature, and became professor at Jena, where he published his "History of the Commerce of India before Mohammed," 1775. In 1788 he removed to the university of Gottingen, and after having been long one of the greatest ornaments of that establishment, he died June 25, 1827. Eichhorn was highly distinguished not only as an orientalist and a divine, but also as a bibliographer and historian. Among his principal works are "History of Literature from the Earliest to the Latest Times," 11 vols; "A General History of Cultivation and Literature in Europe," 2 vols; "History of Eloquence in the Modern Languages," 3 vols; "History of the Last Three Centuries," 6 vols; "General Library of Biblical Literature," 10 vols; "Repertory of Biblical and Oriental Literature," 18 vols; "Introduction to the Old Testament," 5 vols; "Introduction to the New Testament," 5 vols; "Translation of the Hebrew Prophets," 3 vols. He was likewise editor of the "Goettingen Anzeigen." Eichhorn is best known in this country on account of his hy-

pothesis relative to the origin of the first three Gospels, which has been developed by bishop Marsh in his notes on Michaelis's Introduction to the New Testament, and other works.—*Foreign Review.*

EIDOUS (MARK ANTHONY) a French writer, who was a native of Marseilles, and died towards the close of the eighteenth century. He published translations of Dr James's Medical Dict., 1746, 6 vols, folio; Father Gumilla's Natural History of the River Orinoco, 1758, 3 vols, 12mo, &c.; besides an original work, entitled "Hist. des principales Découvertes faites dans les Arts," Lyons, 1767, 12mo.—*Biog. Univ.*

EINARI, or EINARSON (HALFDAN) an Icelandic writer, who died in 1787. He published "Sciagraphia Hist. Litt. Islandicæ," Copenhag. 1777, 8vo; an abridgement of ecclesiastical history; and a chronological catalogue of all the ancient Scandinavian poets to the end of the fourteenth century.—EINARI (GISSUR) the first Lutheran bishop of Schalholt, contributed greatly to the introduction of the Reformation into Iceland. He translated into the Norwegian language the Proverbs of Solomon.—EINARI (OTHO) another bishop of Schalholt, who died in 1630, was distinguished as an Icelandic poet.—*Biog. Univ. Class.*

EKEBERG (ANDREW GUSTAVUS) an eminent Swedish chemist, who was born at Stockholm, January 16, 1767. He was the son of a captain in the Swedish navy, and was educated at Calmar, whence in 1784 he went to the university of Upsal, where he devoted his time principally to the study of mathematics. In 1788 he took his degree, on which occasion he produced a thesis "De Oleis Seminum expressis." In 1789 he went to Berlin, and after his return home, in 1790, he published a poetical piece entitled a "Discourse concerning the Peace between Sweden and Russia." He subsequently directed his attention to the prosecution of researches in chemistry; and in 1794 he was appointed to the office of Chemia Docens (Chemical Teacher) in the university of Upsal. His writings consist chiefly of chemical analyses. He published a paper on phosphate of lime, and another on the analysis of the topaz, the object of which was to explain Klaproth's method of dissolving hard stone substances. But he chiefly distinguished himself by his analysis of the mineral called Gadolinite, his determination of the chemical properties of the earth Yttria, and his discovery of a new metal, to which he gave the name of Tantalum, which, however, Dr Wollaston subsequently proved to be the same with Columbium, a metal discovered by Mr. Hatchett, in an American mineral. Ekeberg likewise published Analyses of the Automalite, of an ore of Titanium, and of the Mineral Water of Medevi. His death took place February 11th, 1813, for some time previously to which his health had been so bad as to render him quite unable to discharge the duties of his station.—*Dr Thomson's History of Chemistry.*

EKEBERG (**GUSTAVUS**) a celebrated Swedish voyager, captain of the admiralty, and member of the Academy of Sciences at Stockholm. He was born in 1716. In the service of the Swedish East India company he visited India and China, and he was the author of several inventions, which procured him the patronage of his own sovereign and of the king of Prussia. He first introduced the tea-tree into Sweden. Among the works which he published are an account of the rural economy of the Chinese; a description of the island of Fernando de Noronha; and "Voyages to the Indies in 1770 and 1771." He also wrote on inoculation for the small-pox, and contributed to the introduction of that practice into Russia. He died in 1784.—*Biog. Univ. Class.*

EKEBLAD (**CLAUDE**, count) a Swedish minister of state, member of the Academy of Sciences at Stockholm, and chancellor of the university of Abo, was born about 1700, and died in 1771. He was for many years Swedish ambassador at Paris, whence he was recalled to become minister of foreign affairs. He opened those negotiations with the French court which terminated in the revolution in Sweden in 1772.—*Ibid.*

EKSTROEM (**DANIEL**) a mathematical instrument-maker, member of the Academy of Sciences at Stockholm, distinguished for his skill and acquaintance with mathematical science. He died in 1755.—*Ibid.*

ELICAGARAY (**DOMINIQUE**) a French ecclesiastic, member of the royal council of public instruction, was born in the diocese of Bayonne, about 1760. He quitted France in 1791, because he did not choose to take the oath required by the new constitution of the church; and returning under the directorial government, he rejected the offered patronage of cardinal Maury, and contented himself with exercising the functions of rector of the Academy, professor of philosophy, and dean of the faculty of letters. During the "hundred days" he accompanied the duchess of Angoulême to England, as almoner; and after his return to Paris he was appointed inspector of the university. He died in 1822. A journalist at Marseilles having published in his name a ridiculous discourse, he was so chagrined at the circumstance, that it was supposed to have hastened his death.—*Ibid.*

ELIO (**FRANCIS XAVIER**) a Spanish general, who defended with courage the independence of his country against Napoleon, and at the restoration of Ferdinand VII he was appointed governor of Valencia, in which station his devotion to the interests of the king procured him new favours from the court. On the revolution in 1820, part of the population of Valencia rose in opposition to the governor, who escaped from their fury in the first instance, but being taken prisoner, was tried by a military commission, declared guilty of tyrannical and arbitrary acts, and condemned to be strangled, which death he accordingly suffered. Ferdinand, on recovering his authority

in 1823, reversed the proceedings against general Elio, and granted a pension to his widow and children.—*Ibid.*

ELLIOT (**WILLIAM**) an eminent landscape engraver, born in 1717, died in London in 1766. His engravings after Cuyp, Van Goyen, Pölenberg, &c. have been much admired.—*Ibid.*

ELLISTON (**ROBERT WILLIAM**) an eminent comic actor, who was the son of a watchmaker, in Orange-street, Red Lion-square, London, where he was born April 7, 1774. He was educated at St Paul's school, and was intended for the church, but his destination was otherwise directed. He appears to have first conceived a partiality for dramatic display in consequence of the applause bestowed on a school speech, which he delivered in public in 1789; and shortly after he performed the character of Pierre in "Venice Preserved," at a private theatre. He quitted school at the age of sixteen without the knowledge of his friends, and went to Bath, where, to secure the immediate means of subsistence, he engaged himself as clerk in a lottery office. After remaining in that station a few weeks, he found an opportunity of making his theatrical début, but in the humble character of Tressel, ("Richard the Third,") April 21, 1791. He was, however, unable to procure an engagement at Bath, but being recommended to Tate Wilkinson at York, he became a member of the company under that manager. He subsequently returned to his family, but he could not be persuaded to relinquish his taste for the drama; and in 1793 he went a second time to Bath, where for three or four years he continued during the seasons to play a variety of characters, in tragedy, comedy, opera, or pantomime. In 1796 he married, in opposition to her friends, Miss Rendall, a teacher of dancing at Bath, and shortly after he made his first appearance before a London audience at the Haymarket theatre, in the very opposite characters of Octavian in the "Mountaineers," and Vapour in "My Grandmother." Having performed a few nights, he returned to Bath till the latter end of the season, when he again appeared at the Haymarket as Sir Edward Mortimer in Colman's "Iron Chest," his success in which character, after John Kemble had failed in it, secured him the favour of the manager. From the Haymarket he went to Covent-garden, but soon rejoined Mr Colman, under whose new arrangement, in 1803, he became not only his principal performer, but also his acting manager. The succeeding year, Kemble having quitted Drury-lane, Mr Elliston was engaged to supply his place; but that theatre being burnt, he performed with the company at the Lyceum, which he left at length in consequence of some quarrel with Thomas Sheridan. He then took the Circus, and having given it the name of the Surrey Theatre, commenced performing the plays of Shakspeare and other regular dramatists under new titles, and with such ingenious alterations

as brought them within the license granted to the minor theatres, which practice he defended with some tact in a pamphlet which he then published. He himself acted the principal parts, and was equally applauded in Macbeth and Macheath. His speculation at the Circus was far from being successful; he therefore resigned his lease, in debt, and returned to Drury-lane. On the reopening of that theatre, October 12th, 1812, he delivered the address written for the occasion by Lord Byron, and personated the character of Hamlet. For a very considerable period he was a public favourite, displaying much excellence in a varied range of character. In 1819, unfortunately for himself, he became the lessee of that theatre, at an annual rent of 10,200*l.*, and so continued till he was declared a bankrupt, in 1826. After some speculations in the Olympic theatre, he a second time undertook the superintendence of the Surrey, and occasionally performed on that stage, in Cumberland's Jew, Dr Pangloss, and some other light parts. In this last undertaking he seems to have been successful, and the theatre under his management advanced to a more improved state than at any former period. Mr. Elliston, who was left a widower in 1821, died of apoplexy, July 7, 1831; and his body was interred in St John's church, Lambeth. He published in 1805 "The Venetian Outlaw, a drama, in three acts," which he had himself adapted from a French piece entitled "Abellino, le grand Bandit." Mr Elliston has been characterised, by a periodical writer, as the best comedian of his time, in the highest sense of the word. Others equalled him in some particular points; Lewis surpassed him in airiness, but there was no gentleman comedian who comprised so many qualities of his art as he did, or who could diverge so well into those parts of tragedy which find a connecting link with the graver powers of the comedian in their gracefulness and humanity. He was the best Wildair, the best Archer, the best Aranza, and carrying the seriousness of Aranza a little further, or making him a tragic gentleman instead of a comic, he became the best Mortimer, and even the best Macbeth of any performer who excelled in comedy. The tragedy of this accomplished actor was, however, only an elongation or drawing out of the more grave and sensitive parts of his comedy. It was in comedy that he was the master. In comedy, after the death of Lewis, he remained without a rival. He had three distinguished excellencies, dry humour, gentlemanly mirth, and fervid gallantry. His features were a little too round, and his person latterly became a great deal too much so. But this refers to him in his best days. His face in one respect was of that rare order which is peculiarly fitted for the expression of enjoyment; it laughed with the eyes as well as the mouth. His eyes, which were not large, grew smaller when he was merry, and twinkled with glee and archness, his smile was full of enjoyment, and yet the moment he shook his head

with a satirical deprecation, or dropped the expression of his face into an inuendo, nothing could be drier or more angular than his mouth. There was a generosity in his style, both in its greater and smaller points. He understood all the little pretended or avowed arts of a gentleman, when he was conversing, or complimenting, or making love, every thing which implied the necessity of attention to the other person, and a just, and, as it were, a mutual consciousness of the graces of life on his own.—*Ann. Biog.*

ELMENHORST (GEVERHART) an eminent scholar, who flourished about the commencement of the seventeenth century, at Hamburgh, of which city he was a native. He superintended the publication of new editions of various ancient authors, among others of the works of Sidonius Apollinaris, Minutius Felix, Arnobius, Gennadius de Dogmatibus, &c. and the Table of Cebes, from the text of Cassellius. His death took place in 1621.—*Moreri.*

EMMETT (ROBERT) an eminently gifted Irish insurgent chieftain against the British government towards the close of the last century. He was the son of a physician at Cork, and was educated for the legal profession, on the practice of which he was about to enter with every prospect of success, when the rebellion took place, in which he became involved. He was secretary to the secret directory of the United Irish, and being arrested at Dublin in 1803, he was executed for rebellion against the state.—*Biog. Univ. Class.*

EMMETT (THOMAS ADAMS) an Irish lawyer and political writer. He was the elder brother of the subject of the preceding article, and was educated with a view to practise as a barrister, but becoming involved in the schemes of the United Irishmen, he was driven an exile from his native country, and he settled in the United States of America, where he acted as a counsellor in the courts of law. In 1807 he published, in conjunction with another expatriated Irishman, Dr William James Mac Newin, "Pieces of Irish History, illustrative of the condition of the Catholics of Ireland." He died at New York in 1827.—*Biog. Dict. of Living Authors. Edit.*

ENZINAS, surnamed DRYANDER (FRANCIS) a learned Spaniard of the sixteenth century, born at Burgos in 1515, and one of the first of his countrymen who came over to the reformed religion. At the instance of Melancthon he produced a Spanish version of the Scriptures at Antwerp in 1543. For this work he suffered an imprisonment of two years' duration at Brussels, and then was fortunate enough to make his escape to this country about the very time when his brother was brought to the stake for heresy at Rome. He is known as the author of "A History of the State of Religion in the Pays Bas and in Spain."—*Dict. Hist.*

EPHORUS, a Greek historian, a native of Cumæ, and the scholar of Isocrates, under whom he studied rhetoric and philosophy. At the instigation of his master he com-

menaced a history of Greece, from the return of the Heraclidæ to the twentieth year of king Philip of Macedon, at whose court he flourished—a period of 750 years. Of this work a few fragments only are extant, of which there is a Dutch edition, printed in 1697.—*Vossius*.

EREMITA (DANIEL) a Dutchman by birth, who settled at Florence, and towards the close of the sixteenth century obtained the situation of secretary to the grand duke there. He was very unsettled in his religious opinions, and after changing them once or twice, ended in avowed atheism. Eremita was the author of a work of some talent, "*De Aulicâ Vitâ ac civili*," to be found with his other writings printed at Utrecht in 1702. His death took place in 1613, at Leghorn.—*Moreri*.

EROLES (baron d') captain-general of the troops of his most catholic majesty, officer of the legion of honour, and commander of the order of St Louis, was born in Catalonia about 1785, and died in September 1825. He first engaged in military service during the war of independence, and in 1822 he was appointed commander-in-chief of the army of faith, and the same year was nominated a member of the supreme regency of Spain established at Urgel. He displayed his zeal against his countrymen the insurgent constitutionalists, and employed all his talents and influence to support the power of the Catholic priesthood in Spain.—*Gazette de France*, Sept. 29, 1825. *Biog. Univ. Class.*

ERSCH (JOHN SAMUEL) professor and principal librarian at Halle, in Saxony, who from his extensive knowledge of books was termed the father of German bibliography. He was the author of several useful indexes to the periodical literature of Germany, and he published "*Literary France, or a Dictionary of French writers, from 1771 to 1805*," Hamburg, 1797—1806, 5 vols, 8vo; and a "*Manual of German Literature, from the middle of the eighteenth century to the present time*," Leipsic, 1809—1814, 8 vols, 8vo, a most useful work, of which an improved edition was subsequently printed. He was also joint editor with professor Gruber of the "*Universal Encyclopædia of Arts and Sciences*," on a large scale, published at Leipsic. His death took place in January, 1828, at the age of sixty-two.—*For. Rev.*

ERSKINE (DAVID) Lord Dun, a Scottish judge of the last century, who drew his title from the place of that name, where he was born in 1670. From the university of St Andrew's he removed to that of Paris, and having there completed the study of general jurisprudence, returned to his native country, and rose to a seat on the bench in 1711. In 1750 his age and infirmities induced him to resign his situation as a commissioner of the high court of justiciary, and to retire from public life. He survived this secession about five years. A small volume of "*AdVICES*," which bears his name, is the only work by which he is known to posterity.—*Chambers's Biog. Dict.*

ERSKINE (DAVID STEWART) earl of Buchan, a nobleman distinguished for his attachment to literature. He was born 1742, and succeeded to his title in 1767, on the death of his father. He was educated in the university of Glasgow, where he applied himself ardently to study, and also devoted some time to the arts of designing, etching, and engraving, in the academy of Robert Foulis, an eminent drawing master. As Lord Cardross, he commenced his political career in the diplomatic department, under the celebrated earl of Chatham. But after succeeding to the earldom, he relinquished the harassing pursuits of public life, for which he seems to have had little taste. The fortunes of his family having been greatly impaired, he determined upon a plan of the most rigid economy, yet he continued to patronize public works and institutions. He offered premiums for competition between the students of the high school of Edinburgh and those of the university of Aberdeen, and to his exertions the Society of Antiquaries at Edinburgh is greatly indebted for its existence. He bestowed his patronage and friendship on Burns the poet, Barry the painter, Pinkerton the historian and antiquary, and other men of talent and learning; and he also instituted an annual festival in commemoration of Thomson, the author of the Seasons, at Ednam, in Roxburghshire, where the poet was born. He died at his seat of Dryburgh Abbey, Berwickshire, in April, 1829. His publications from the press consist of a "*Speech intended to have been spoken at the Meeting of the Peers of Scotland in 1780*;" a "*Life of Napier, of Marchieston*," 1790; and in conjunction with Dr Minto, an "*Essay on the Lives and Writings of Fletcher of Saltoun, and of Thomson the poet*," 1792, 8vo.—*Month. Mag.*

ERLEBEN (JOHN CHRISTIAN POLYCARP) a German professor of the last century, born in 1744, at Quedlinberg, and educated at Gottingen, where he filled the chair in natural philosophy. He was the author of some elementary treatises on medicine, chemistry, and natural history, as also of some observations on the veterinary art. Erleben died at Gottingen in 1777.—*Biog. Univ.*

ESCHENBACH (WOLFRAM VON) a celebrated German poet of the twelfth century. He is only known as the author of two romantic poems, "*Titarel*," and "*Parcival*," printed at Strasburg in 1477 and 1577.—*Retrospective Rev. Biog. Univ.*

ESCHENBURG (JOHN JOACHIM) a distinguished German critic, born at Hamburg in 1743, died in 1820. He was public governor of the Caroline college at Brunswick, and the author of a "*Theory and Course of the Belles Lettres*;" and he also published the posthumous works of Lessing, and a translation of the plays of Shakspeare.—*Biog. Univ. Class.*

ESPENCE (CLAUDE d') a dignified French ecclesiastic, a native of Chalons sur Marne, where he was born in 1511. The cardinal of Lorraine carried him to Rome, and he after-

wards assisted with great credit to himself both at the council of Trent and the conference of Poissy. D'Espence was one of the doctors of the Sorbonne, but had moderation sufficient to induce him to decline the honour of the purple, to which he might have been elevated. An edition of his writings appeared at Paris several years after his decease, which took place in 1571.—*Dict. Hist.*

ESTE (CHARLES) a popular public writer, in early life connected with the newspaper press. He belonged to the clerical profession, and was at one period one of the reading chaplains at Whitehall. In 1787 he published a pamphlet entitled "My own Life," 8vo; and in 1795, "A Journey in the year 1793 through Flanders, Brabant, and Germany, to Switzerland," 8vo. This gentleman was a proprietor and editor, in conjunction with Major Topham, of the daily journal called "The World," and on his advertising for sale his share of the paper, in 1790, a controversy took place between Mr Este and Mr Topham, which for some time attracted public attention. He died in 1829, at the age of seventy-six.—*Ann. Reg.*

EUMENIUS, a rhetorician of Autun, of the age of Constantine the Great, to whom he delivered two addresses at Treves, on the occasion of that emperor's visiting the city. He was born of Greek parents, but his orations, some fragments of which are still to be found in the "Panegyrici Veteres," are composed in the Latin tongue.—*Moreri.*

EUPHRANOR, an eminent artist of antiquity, equally celebrated in painting and sculpture. He was an Athenian by birth, and flourished about the middle of the fourth century before the Christian era. Among his principal productions were pieces taken from the story of Theseus, and the battle of Mantinea. Pliny speaks highly of his talents.—*Dict. Hist.*

EVANS (JOHN) a topographical and miscellaneous writer, who was educated at Jesus College, Oxford, where he took the degree of Bachelor of Arts. Having been ordained a clergyman of the established church, he opened a school for young gentlemen at Bristol, and subsequently he kept a school or academy at Euston-square, in the northern part of London. He published the following works:—"A Tour through part of North Wales in 1798, and at other Times, principally undertaken with a View to Botanical Researches in that Alpine Country, interspersed with Observations on its Scenery, Agriculture, Manufactures, Customs, History, and Antiquities," 1800, 8vo; "Letters written during a Tour in South Wales in the year 1803, and at other times, containing Views of the History, Antiquity, and Customs of that Part of the Principality," 1804, 8vo; "War not Inconsistent with Christianity, a Discourse," 1804, 8vo; "The Doctrine of Philosophical Necessity considered, in reference to its Tendency," 1807, 8vo; "The Ponderer, a Series of Essays," 1812, 12mo; "Remains of William Read, late of Thornbury, including Rambles in Ire-

land, Correspondence, Poems, &c, with Memoirs of his Life," 1816, 8vo; and "A Brief History of Bristol."—*Ann. Biog.*

EVANS (JOHN) a general baptist minister and theological writer, born at Uske in Monmouthshire, in 1767. He studied in a dissenting academy at Bristol, and afterwards in the universities of Aberdeen and Edinburgh, where he took the degree of Master of Arts. In 1792 he became pastor of a congregation of general baptists in Worship-street, London. He subsequently opened an academy for youth at Hoxton, whence he removed it to Islington, where it was continued till 1825, when he relinquished it. In 1819 he obtained the diploma of doctor of laws from Brown university, in Rhode island, America. His death took place January 25, 1827. As a writer Dr Evans is chiefly known by the publication of "A Brief Sketch of the several Denominations into which the Christian World is divided, accompanied with a Persuasion to Religious Moderation," 1794, 12mo, which has passed through a vast number of editions. He also published a sequel to this work; "A Preservative against the Infidelity and Uncharitableness of the Eighteenth Century," 12mo; "An Attempt to account for the Infidelity of the late Mr Gibbon, founded on his own Memoirs," 1797, 8vo; and many sermons and religious tracts, besides "A New Geographical Grammar," 1809, 2 vols, 8vo; and various other compilations.—*Theological Repository.*

EVANS (LOUIS) an eminent American geographer and engineer. He published at Philadelphia, in 1749, a chart of the interior of the British colonies in North America, and of the Indian countries adjacent on the north and west. In a second edition, which appeared in 1755, he exhibited a general chart of the colonies of Virginia, Maryland, Delaware, Pennsylvania, New Jersey, New York, Connecticut, Rhode island, and the country of the confederated Indians.—*Biog. Univ. Class.*

EVANS (WILLIAM DAVID) an eminent English lawyer and writer on jurisprudence. He obtained a judicial office at Bombay, and died in 1821. Mr Evans translated from the French of Pothier a treatise on the law of contracts, and was also the author of essays on actions for money lent and received, &c. He likewise wrote on the laws against the Roman Catholics and Dissenters.—*Ibid.*

EWING (JOHN) an eminent American divine and mathematician, who was born in Maryland, in 1732. In early youth he displayed a taste for mathematics; and in 1754 he joined the senior class at Princeton college, where he acted also as teacher of the grammar school. He took his degree in 1755, and was appointed a tutor in the college. Having studied divinity, he returned to his native province, and obtained a license as a preacher. At the age of twenty-six he was chosen instructor of the philosophical classes in the college of Philadelphia. From 1759 to 1773

EWI

he held the office of pastor to the first Presbyterian church in that city; and during the same period he collected materials for a valuable course of lectures on Natural Philosophy, which he afterwards published. In 1773 he took a voyage to Great Britain, and on visiting Edinburgh he received from the university the diploma of DD., and there and in London he became acquainted with distinguished literary men. He returned home in 1775; and four years afterwards he was made provost of the university of Philadelphia, which office he held during the remainder of his life. He became one of the vice-presidents of the American Philosophical Society, to whose transactions he contributed several valuable memoirs. He made some important additions to the astronomical articles in the edition of the *Encyclopædia Britannica* published in America; and his reputation as a mathematician occasioned his being made one of the commissioners for settling the boundary line of the State of Delaware, and those be-

EZR

tween Massachusetts and Connecticut, and between Pennsylvania and Virginia. His death took place September 8, 1802.—*Encycl. Amer.*

EYRE (FRANCIS) a gentleman descended of a respectable family in Northamptonshire, many years resident at Warkworth castle. He was of the Romish church, and entered into a controversy with Mr Churton in defence of its principles. His other writings consist of some "Remarks on the History of the Decline and Fall of the Roman Empire," and "A short Essay on the Christian Religion," 8vo, 1795. Mr Eyre died in 1804.—*Gent. Mag.*

EZRA (JUAN JOSAPHAT BEN) a Spanish divine, born in America, who professed himself a convert from Judaism to the Catholic faith. Towards the middle of the eighteenth century he published an account of his sentiments, under the title of "Venida del Mesias en Gloria y Magestad," reprinted at Paris in 1825, 5 vols, 12mo.—*Biog. Univ. Class.*

FAC

FABRE (JOHN CLAUDIUS) an ingenious French writer, born in 1668 at Paris. Having entered into holy orders, at the usual age he became a priest of the Oratory and divinity professor. He published translations into French of the works of Phædrus and Virgil, the latter in four volumes; a dictionary, Latin and French, in 8vo; a continuation of Fleury's Ecclesiastical History; and a work entitled "Entretiens de Christine et de Pélagie sur la Lecture de l'Ecriture-Sainte." His death took place about the middle of the last century.—*Moreri.*

FABRE D'OLIVET (ANTOINE) a French writer, born in 1767, and died at Paris March 27, 1825. Besides some dramatic pieces, he published "Lettres à Sophie sur l'Histoire," 1801, 3 vols, 8vo; "Histoire Philosophique du Genre Humain;" a translation of Lord Byron's Cain, &c.—*Biog. Univ. Class.*

FABRICIUS (JOHN) a bibliographical writer, who died in 1729. He published "Historia Bibliothecæ Fabricianæ," Wolfenbützel, 1717—24, 6 vols, 4to.—*Biog. Univ.*

FABRY (JOHN BAPT. GERMAIN) born at Cornus in France, in 1780. He was educated for the bar, was admitted an advocate in 1804, and at length became secretary to Fouché, duke of Otranto, Buonaparte's minister of police. His death took place January 4, 1821. He was the author of "Le Spectateur Français au 19me Siècle," 1805—12, 12 vols, 8vo; and many other works, of which a list may be found in the *Bibliographie de la France*, an 1825.—*Biog. Univ. Class.*

FACIO (BARTOLOMEO) a Genoese by birth, who about the middle of the fifteenth century filled the post of secretary to the king of Na-

FAI

ples. He was the author of some biographical "Memoirs of the Illustrious Characters of his own Times;" a "History of the Life and Actions of Alphonsus, King of Naples;" a treatise "On the Happiness of Human Life;" and another "On the Venetian War, &c." Facio died in 1457.—*Moreri.*

FAGES (JOSEPH) an eminent French surgeon, born at Thoulouse in 1764. He obtained the office of first surgeon to the Hôtel Dieu at Montpellier in 1785; and after having served in a medical capacity in the army of the eastern Pyrenees, during the revolutionary war, he was in 1814 appointed professor of operative medicine. He died at Montpellier, June 4, 1824.—*Biog. Univ. Class.*

FAGET DE BAURE (JOHN JAMES) an advocate-general of the parliament of Paris, born at Orthez in 1755, and died in 1817. He was the author of "Histoire du Canal de Languedoc," 1815, 8vo; "Essai Historique sur le Bearn," 8vo, besides other works.—*Ibid.*

FAGNANI (PROSPERO) a celebrated Italian civilian, born in 1598, who acted as secretary to the papal see under several pontiffs of the seventeenth century. There are three folio volumes of his "Commentaries on the Decretals" yet extant, a work originally undertaken to alleviate the tedium occasioned by total blindness, which seized him at the age of forty-four. His death took place in 1678.—*Moreri.*

FAILLE (GERMAIN de la) a French writer of the seventeenth century, syndic of Thoulouse, of which city he compiled a history, first published in two folio volumes in 1687, and reprinted in 1701. He was also the author of a "Life of Goudelin de Thoulouse," written

for an edition of that poet's works; some miscellaneous pieces in verse for the *Journal de Verdun*; and "*Traité de la Noblesse des Capitouls*." Faillie died at Thoulouse in 1711, at the advanced age of ninety-five.—*Morevi*.

FAIPOULT (GUILLAUME MARIE) a French republican statesman, born of a noble family in Champagne in 1752. He served in the army in his youth, and under the imperial government he for ten years was prefect of the department of the Scheld. He subsequently held the office of minister of finance under Joseph Buonaparte in Spain, and returning to his native country in 1813 he was employed on a mission to Italy by Napoleon, who on his second restoration nominated Faipoult prefect of the department of Saone et Loire. He died near Auxerre, in October 1817.—*Annales Polit. Moral. et Litt. pour* 1817.

FALCO DA BENEVENTO, secretary to Innocent the Second, and known as the author of a Chronicle of the kingdom of Naples from the commencement to about the middle of the twelfth century. The date of his birth and of his decease is equally uncertain.—*Tiraboschi*.

FALCONBRIDGE (ALEXANDER) an English surgeon, who made two voyages to the coast of Africa, and died at Sierra Leone in 1792. He published an "Account of the Slave Trade on the Coast of Africa." 1789, 8vo.—His wife, ANNA MARIA FALCONBRIDGE, who accompanied him in his voyages, published an account of the settlement of Sierra Leone, London, 1793, 8vo. reprinted in 1794 and 1795.—*Reuss. Biog. Univ. Class.*

FALETTI (JERONIMO) a Genoese, born at Savona, who enjoyed a considerable reputation at the court of the grand duke of Ferrara, both as a poet and a diplomatist. He was employed by the duke on an embassy to the Venetian states, and on other missions of a similar nature, and is known as the author of an heroic poem in ottava rima, having for its subject the wars of Charles the Fifth in the Low Countries, printed in 1557. Some other of his productions, both in prose and verse, appeared in the course of the following year. The time of his death is uncertain.—*Morevi*.

FALIERI (MARINO) doge of Venice, who succeeded Andrew Dandolo in 1354, at the age of seventy-six. Being disappointed in his expectations of redress for an injury or an affront which he had received from a member of the council of forty, he determined to take vengeance on the whole body of the Venetian nobility, for which purpose he joined in a conspiracy against the state, with a number of discontented plebeians. The plot was discovered, and Falieri was executed April 17, 1355. This event is the subject of a tragedy written by lord Byron.—*Biog. Univ.*

FALKENSTEIN (JOHN HENRY) a learned German antiquary, born in 1682 in Franconia. He was educated in the tenets of the reformed faith, and rose to be superintendent of the college at Erlangen, but changing his religious opinions, became a convert to the church of Rome. This lost him his situation, which he

resigned, and soon obtained the patronage of the bishop of Eichstadt. Under the auspices of this prelate he compiled a laborious "History of the Antiquities of Nordgau," in three folio volumes. Falkenstein afterwards became a member of the household of the margrave of Anspach, at whose court his death took place in 1760.—*Dict. Hist.*

FALKNER (THOMAS) an English jesuit, who died in 1780. In the early part of his life he was a surgeon, and in that capacity he visited the coast of Guinea, and afterwards Buenos Ayres, where he became connected with the jesuits, and entering into the order, he was employed as a missionary in Paraguay. After the suppression of the community to which he belonged, he returned to England, and passed the latter part of his life in retirement. He was the author of a "Description of Patagonia, and the Neighbouring Parts of South America," 1774, 4to.—*Biog. Univ. Class.*

FALLOWS (FEARON) a distinguished mathematician and astronomer, who was educated at the university of Cambridge. In 1821 he was appointed to the office of Astronomer Royal at the Cape of Good Hope, whither he proceeded, provided only with a small transit, and an altitude, and azimuth instrument, a time-keeper, and a few other absolutely necessary appendages of an observatory. During the two succeeding years he formed a catalogue of two hundred and seventy-three stars belonging to the southern hemisphere, which was published in the Philosophical Transactions for 1824. The delays which afterwards took place in the erection of the observatory, and the want of those capital instruments which were necessary to furnish it, prevented him from pursuing his researches to their utmost extent; and although it did not interrupt the progress of his investigations, yet by making them necessarily imperfect deprived them of a considerable part of their value. When at length a grand mural circle arrived, and he imagined himself in possession of the means of effecting the great object of his ambition, that of making the catalogues of the stars of the southern hemisphere equal in accuracy and completeness to those of the northern, he found new difficulties occurring in the derangements occasioned in so large an instrument by embarking, disembarking, and fixing it, thus producing errors which it was hardly possible to remedy without the assistance of an artist of great ability. In the midst of his embarrassments he was seized with a severe illness, and at the same time deprived of the aid of his assistant by a similar cause. Yet notwithstanding his affliction he continued to attend to the duties of his office, and in a letter written to one of his friends in England a short time previous to his death, he represented himself as being carried daily in a blanket by his servants from his chamber to the observatory, for the purpose of winding up his clocks and chronometers. His disease at length assumed the form of an incurable dropsy, and he died

in 1831, shortly before the period that had been fixed on for his return to England, on which he had at length decided when his recovery at the Cape was pronounced to be hopeless. In the course of the year 1829 he made, in conjunction with captain Romade and Mr Johnstone, a very complete series of Observations on the Pendulum, which were published in the Philosophical Transactions for 1830. Mr Fallows was a Fellow of the Royal Society. He left a very extensive series of astronomical observations, made during the last seven years of his life, which are in possession of the Lords of the Admiralty, and will probably be published.—*Ann. Biog.*

FANTIN DESODOARDS (ANTOINETTE NICOLAS) a French historian and political writer, born in Dauphiny in 1738, and died at Paris in 1820. Before the Revolution he was an ecclesiastic, and subsequently becoming connected with Danton and Robespierre, he employed his pen in writing the history of his contemporaries. Among his numerous works are, "Nouvelle Abrégé Chronologique de l'Histoire de France, par le Président Hénault, continuée jusqu'à la Paix de 1783," 3 vols, 8vo; and "Histoire Philosophique de la Révolution Française," 1796, 2 vols, 8vo, enlarged in the sixth edition to 6 vols, 8vo. He also continued to the death of Louis XVI the History of France commenced by Velley, and carried on by Villaret and Garnier, 1808—10, 26 vols, 12mo.—*Biog. Univ. Class.*

FAREY (JOHN) an eminent surveyor and writer on mineralogy and geology, who was born at Woburn, in Bedfordshire, in 1766. After having studied mathematics, natural philosophy, drawing, and surveying, at a school at Halifax, in Yorkshire, he became acquainted with Smeaton, the celebrated engineer. In 1792 the Duke of Bedford appointed him to the agency of his estates in Bedfordshire, in consequence of which he took up his residence at Woburn, where he remained till the death of his patron in 1802. In 1809 and the year following he made a survey of the county of Derby for the Board of Agriculture, which was published in 1811—13, 2 vols, 8vo. He availed himself of every opportunity which occurred for examining the relative position of the strata throughout Britain, and collected mineral specimens to illustrate this important topic of geological science, concerning which he wrote some papers which appeared in Nicholson's Philosophical Journal. He also formed maps and sections of various parts of the country to show the order of arrangement of the mineral strata, which he intended to have published with observations; but his labours were interrupted by an attack of apoplexy, which proved fatal, in January, 1826.—*Ann. Reg.*

FARREN (ELIZA) a celebrated actress, who became countess of Derby. Her father was a surgeon in the city of Cork, in Ireland, but being too fond of convivial society, he failed in his profession, and became a provincial actor, and died young, leaving his family in

destitute circumstances. The daughter was born in 1759, and at the age of fourteen she made her first appearance on the stage at Liverpool as Rosetta, in the opera of "Love in a Village." In 1777 she appeared at the Haymarket theatre in London, in the character of Miss Hardcastle, in "She stoops to Conquer;" she afterwards played at Covent-garden and Drury-lane, and it was at the latter theatre that she attracted particular notice in the part of Almeida, in Pratt's tragedy of "The Fair Circassian," which had an uninterrupted run of twenty-three nights, in 1780. Mrs. Abingdon having quitted Drury-lane for Covent-garden, Miss Farren was induced to undertake the part of Lady Townley, which completely established her theatrical fame; and from that time she succeeded Mrs. Abingdon in her chief characters, and supported them with great success. Though she had obtained much applause as a tragic actress, her forte lay chiefly in comedy, and among the characters in which she excelled was that of Lady Teazle, in Sheridan's "School for Scandal." After she left the Haymarket theatre, she paid a summer visit to Dublin, where the display of her talents attracted general approbation. On the opening of the new theatre of Drury-lane, in April, 1794, she delivered an amusing epilogue, written by George Colman the younger. At this period she was noticed by persons of distinction, and at the request of several of the nobility she conducted the private theatricals at the Duke of Newcastle's house in Privy-garden, where that nobleman had fitted up a small theatre, on the stage of which Lord Derby, Lord Henry Fitzgerald, Charles Fox, General Fitzpatrick, Lord John Townshend, the Hon. Mrs. Damer, and others assumed the principal characters. The Earl of Derby, at that time separated from his countess, formed a warm and honourable attachment to this accomplished actress, and becoming a widower in March, 1797, he married her shortly after. Miss Farren took leave of the stage April 8th, 1797, after performing the character of Lady Teazle, and on the 8th of the ensuing month her nuptials took place. Soon afterwards she was introduced at court, and was greatly esteemed by their majesties George III and his queen, as well as by the late king, and she walked in procession at the marriage of the princess royal to the prince of Wirtemberg. Her death took place, after several years of ill health, April 23, 1829, at Knowsley Hall, in Derbyshire.—*Theop. Dict. Month. Mag.*

FAUJAS DE ST FOND (BARTHELEMI) a learned geologist, born at Montelimart in 1750, and died at Paris, July 26, 1819. He was administrator and professor at the museum of natural history, and he enriched the science which he cultivated with many new observations and discoveries. Among his works are, "Voyage en Angleterre, en Ecosse, et aux Iles Hébrides," 1797, 2 vols, 8vo; "Recherches sur les Volcans éteints du Vivarais et du Velay," 1778, folio; "Histoire Naturelle du

FER

Dauphiné," 1782, 4 vols, 12mo; and "Minéralogie des Volcans," 1784, 8vo.—*Biog. Univ. Class.*

FAUQUE (—) a French authoress, known in England under the name of madame de Vaucluse. She was born about the beginning of the eighteenth century, in the territory of Avignon. Having been forced by her family to become a nun against her inclination, she procured a dispensation from her vows, and retired to England, where she supported herself by writing for the press till her death, which took place about 1777. Among the productions of her pen are "Dialogues Moraux et Amusans," in English and French, 1777, 12mo; and "Hist. de Mad. la Marquise de Pompadour, trad. de l'Angl." 1759. 12mo.—*Ibid.*

FELLER (JOACHIM FREDERIC) son of Joachim Feller, professor of poetry at Leipsic, and born in that university in 1673. He was educated under his father, and graduated in philosophy. His works consist of "A Genealogical History of the House of Brunswick;" "Otium Hanoverianum," both in 8vo; and "Monumenta varia inedita." His death took place in 1706, at the court of the duke of Saxe Weimar, to whom he acted as private secretary.—*Moreri.*

FERNEHAM (NICHOLAS) Bishop of Durham, a learned prelate, who is celebrated by the historian Matthew Paris for his great skill in medicine, on which subject he wrote several treatises. He is said to have been with difficulty persuaded to accept the bishopric, and to have soon resigned it. He died in 1257. This bishop seems to have had a knowledge of architecture, as he rebuilt the cathedral of Durham, in conjunction with the prior Thomas Melsonby. Before his elevation to the episcopal see he held the office of physician to the queen.—*Leland's Itinerary*, vol. viii. *Godwin.*

FERNOW (LOUIS) a learned German philosopher, was born at Weimar in 1775, and died in 1809. His zeal for learning induced him to travel on foot to Rome, where he delivered a course of lectures on the Kantian philosophy. He published, under the patronage of the duchess dowager Amelia, the works of Dante, Petrarch, and Ariosto; and he was the author of "Tableau des Mœurs et de la Culture des Romains," Gotha, 1802, 8vo.—*Biog. Univ. Class.*

FERRARIS (JOSEPH, Count de) an Austrian general officer, distinguished as a geographer. He was born at Luneville in 1726. He entered into the army in 1741, and arrived at the rank of lieutenant-general in 1775. Being a skilful engineer, he was in 1776 appointed director general of artillery for the Netherlands, when he commenced the construction of a chart of those provinces, which was finished in 1777. He served against the French in the campaign of 1793, and he subsequently became vice-president of the aulic council of war at Vienna. In 1808 he was made a field-marshal, and he died in 1814.—*Ibid.*

FES

FERRRETUS, the Latin designation of Ferreti, a native of Vicenza in Italy, who flourished in the fourteenth century, and may be ranked among the restorers of literature. His history of his own times, embracing a period from the middle of the thirteenth century to the year 1318, is a valuable and highly interesting work. Ferreti was also the author of a Latin epic poem, of which De la Scala is the hero.—*Dict. Hist.*

FERRI (CISO) an eminent Italian painter and architect, the scholar of Pietro da Cortona, born, in 1634, of a respectable family at Rome. His pictures bear a strong resemblance to those of his master, both in design and execution. His death took place in 1689.—*D'Argenville.*

FERRIER (ARNOLD du) a French lawyer and diplomatist of great ability, who flourished at Paris during the reigns of Henry II and Charles IX, was born in 1506, at Thoulouse. After graduating in the faculty at Padua, he commenced life as an advocate; and although educated in the communion of the Romish church, was in heart a Protestant, and distinguished himself by the boldness of his language at the council of Trent in 1562. At length, through the persuasion of Du Plessis Mornai, he openly avowed his preference for opinions which he had long cherished in secret, and availed himself of the patronage of the king of Navarre, who made him his chancellor. Father Paul was much indebted to his assistance in compiling his great work, the History of the Council of Trent. He died in 1585.—*Moreri.*

FERRIER (CLAUDE) an eminent French civilian, born in 1639. He enjoyed an extensive practice at Rheims, and was a voluminous writer on subjects connected with jurisprudence. Of these the principal are "La Jurisprudence du Code," 4to, 2 vols; "Sur la Coutume de Paris," 12mo, 2 vols; "La Droit du Patronage," 4to; "Introduction à la Pratique," 12mo, 2 vols; "Traité des Fiefs," 4to; "Du Digeste," 4to, 2 vols; "La Science des Notaires," 4to, 2 vols; "Des Nouvelles," 4to, 2 vols; "Recueil des Commentateurs de la Coutume de Paris," folio, 4 vols; and "Institution Coutumière," 12mo, 3 vols. His death took place in 1715.—

JOSEPH FERRIER, son of the above, was dean of the faculty at Paris, and is known as the author of a valuable law dictionary.—*Ibid.*

FESCH (SEBASTIAN) an ingenious antiquary, born in 1647, at Basil, where he eventually filled the professor's chair in jurisprudence. He was the author of several legal tracts, but is principally known by his essays "De Insignibus," and as the collector of a highly valuable assortment of medals and other articles of virtù. He died in 1712.—*Ibid.*

FESTUS (POMPEIUS) a Latin critic of the fourth century, known as the author of an abridgement of the treatise De Significatione Verborum of Valerius Flaccus, which, having undergone some further curtailment, may be found in the quarto edition of classical

writers, printed by Dacier in 1681, for the use of the dauphin.—*Dict. Hist.*

FETTI, or, as his name is more commonly spelt, FETTI (DOMENICO) the pupil of Civoli of Florence, an historical painter of great merit, whose works, never numerous, are now become extremely rare. He was a native of Rome, born in 1589, and bade fair to reach the summit of his art; but giving way to all kinds of excesses, his constitution, naturally weak, sunk under them, and he died at Venice in his thirty-fifth year.—*D'Argenville.*

FEVRE (JEAN BAPTISTE le) a learned ecclesiastic, who flourished in the earlier part of the last century. He was a native of Coutance, and rose to be grand vicar of Bourges. He distinguished himself by his writings against the Protestants, especially by a nervously written tract, entitled "Irrefragable Arguments towards the Conviction of those who profess the Reformed Religion, falsely so called." Le Fevre became a doctor of the Sorbonne, and died in 1716.—*Dict. Hist.*

FEVRET. There were several able and ingenious persons of this name and family. CHARLES, the first in point of time, born in 1583, at Semur, in Auxois, was an advocate of great reputation at Dijon, who gained the favour of Louis XIII by his eloquent address in behalf of some condemned criminals, whose pardon the king granted to his oratory, and further rewarded it by making him his own secretary, with a pension of 900 livres. He was the author of a small tract, "De Claris Fori Burgundici Oratoribus;" a translation of Pibrac's Quatrains; and "Traité de l'Abus," a work undertaken at the instigation of the Prince de Condé. His death took place in 1661.—PIERRE FEVRET, his son, was an excellent classical scholar, and collected a valuable library, which at his death in 1706 he bequeathed to the college of jesuits at Dijon.—CHARLES MARIE FEVRET de Fontette, born in 1710, reprinted the Historical Dictionary of Le Longue, in five folio volumes, and died director of the university of Dijon in 1772.—*Dict. Hist.*

FICHET (WILLIAM) a learned French writer of the fifteenth century, rector of the university at Paris. His works, which are now become extremely scarce, consist of a treatise on oratory, and epistles. They were originally printed in one volume, quarto, at the Sorbonne, of which society their author was a doctor. The precise time of his birth and of his decease is alike uncertain.—*Dict. Hist.*

FICHTE (JOHN GOTTLIEB) a celebrated German philosopher and metaphysician, who was born near Bischoffswerda, in Upper Lusatia, May 19, 1762. His parents were in low circumstances, and he was indebted for his early education to a gentleman named Von Miltitz. He subsequently studied in the universities of Jena, Leipzig, and Wittenberg, passed several years in Switzerland and in Prussia Proper, and at length became a private tutor at Konigsberg, where he associated with

Kant, the founder of the philosophical system which has given celebrity to his name. In 1792 he published his "Versuch einer Kritik aller Offenbarung"—Essay towards a Criticism on all Revelation, Konigsberg, in consequence of which he was appointed professor of philosophy at Jena, in 1793. Here he acquired great reputation; and he published, under the title of "Wissenschaftslehre"—Theory of Science, a philosophical system originally founded on that of Kant, from which, however, he afterwards deviated so far as to form a system of his own, to which he gave the name of the Doctrine of Science. A paper written by him "On the Reasons of our Belief in the Divine Government of the Universe," which appeared in the "Philosophical Journal" of Jena, subjected him to the imputation of scepticism. An inquiry ensued, the result of which was the resignation of his professorship, and he removed to Berlin. In 1805 he was nominated professor of philosophy at Erlangen, which office he lost in consequence of the war between Prussia and France; and after the peace of Tilsit, in 1809, through the influence of M. de Humboldt, he was constituted rector of the newly founded university of Berlin. He died January 29, 1814. He was married in 1793 to a niece of the poet Klopstock, who survived him; and he left a son who devoted himself to the study of philosophy. Fichte, whose speculations superseded the transcendental idealism of Kant, had the mortification to witness the establishment of the new philosophical system of Schelling on the ruins of his own. An account of the philosophy of Fichte may be found in M. Ancillon's "Essai sur l'Existence, et sur les Derniers Systèmes de Métaphysique qui ont paru en Allemagne;" or in the author's own book entitled "Fundamental Principles of the whole Doctrine of Science, to serve as a Text-book; and Sketches of the distinctive Character of that Science relatively to the Theoretical Faculty." He was the author of several works besides those above mentioned.—*Biog. Nouv. des Contemp. Germ. Conversation Lexicon.*

FINCH (ROBERT) an ingenious antiquary, who was the only son of Thomas Finch, FR.S. of Great Ormond-street, London, where he was born in 1783. He was educated at St Paul's school, whence he removed to Baliol College, Oxford, and he took the degree of MA. in 1809, having previously entered into holy orders. On the restoration of peace in 1814 he went to Portugal, and passing through France, he visited Switzerland, Italy, Greece, and the most interesting parts of Palestine. In 1817 he returned to his native country, but he quitted it in the autumn of the following year, and went to Rome, where he chiefly resided till his death, in 1830. He bequeathed his valuable and extensive library, and his collections of medals, coins, pictures, prints, and antiquities, to the Ashmolean Museum, at Oxford. He was a man of very considerable attainments, well versed in classical literature, and familiarly acquainted with modern languages,

K

FIT

especially Italian, which he spoke with fluency and elegance. Antiquities and topography were his favourite objects of research. He was an occasional contributor to the *Gentleman's Magazine*, and other publications; but though he is supposed to have left considerable collections in manuscript, he published nothing except two sermons, entitled "The Crown of Pure Gold," and "Protestantism our surest Bulwark." 1809.—*Ann. Biog.*

FINCH (Sir **HENRY**) an eminent lawyer, an ancestor of the noble family of that name, and son to Thomas Finch, Esq. of Eastwell park, Kent. From Oriel college, Oxford, he removed to Gray's-inn, and making the law his profession, obtained the coif of a king's sergeant and the honour of knighthood. He is now principally known as the author of an elaborate treatise on jurisprudence, entitled "Nomotechnia," of which he afterwards printed an English translation. He was father to lord-keeper Finch, afterwards baron Fordwich.—*Biog. Brit.*

FISCHER (JOHN CHRISTIAN) a native of Friburg, in the Brisgau, celebrated for his performances on the oboe. He came to England, where he was much admired during the latter part of the last century, till, in the spring of 1800, he was seized with apoplexy, while executing a movement of peculiar brilliancy at the Queen's concert, and died in less than an hour after.—*Biog. Dict. of Mus.*

FITZGERALD (LORD EDWARD) a political partisan, who fell the victim to his ill-directed zeal for the cause of liberty. This young nobleman, who was the son of the Duke of Leinster, being piqued by an affront which he had received from a person high in office in Ireland, engaged in an ill-omened conspiracy against the government. The country at that time was agitated by two parties, who watched the course and progress of that popular excitement which had been principally occasioned by the French revolution. On the one side were the restless and practised malecontents, who hoped to profit by political convulsion, and how it might, and on the other were the cool calculators, who, possessed of sure intelligence, traversed the plans of the conspirators, and suffered them to mature their plot in order to cut them off more effectually in the overt act. Lord E. Fitzgerald thus involved in the trammels of treachery, having become the object of proscription, took refuge in a house in Thomas-street, Dublin. He was lying on a couch, disguised in the dress of a countryman, and reading *Gil Blas*, when the party commissioned to apprehend him arrived, under the guidance of one of his perfidious associates. They were headed by the two town majors, Sirr and Swan, and a captain Ryan, who had joined them just as they were setting out from the castle. Swan and Ryan entered the room together, and summoned Lord Edward to surrender, but he relying on his extraordinary activity and personal strength, made a bold attempt to escape, and closing with captain Ryan, who rushed on before his companion,

FLA

killed him with a dagger on the spot. Swan, who was by no means deficient in courage, pinioned him round the body before he could well disengage himself from the dying man, and threw him back upon the couch from which he had sprung on their entrance, when Sirr, who had been standing at the door during the conflict, came in, and putting a pistol to his shoulder, as he lay under Swan, shot him through the body. He was instantly removed to a place of security, where, after lingering for a day or two in extreme agony, death closed his unfortunate career. Thus perished a high-minded but hot-headed man, who, born for better things, suffered himself to fall, blindfold as it were, into the hands of a set of sanguinary dastards, who, as they betrayed his counsels and schemes, would have deserted him in the field. His death took place in 1798. He married a lady called Pamela, who was the protégée, and, according to some, the natural daughter of the Duke of Orleans and Madame de Genlis. This lady, who long survived him, went to France, and married a second husband, from whom she was separated, and after having passed some years in retirement, she removed to Paris, where she died in 1831.—*Month. Mag.*

FITZGIBBON (JOHN) first earl of Clare, and lord chancellor of Ireland, an eminent lawyer of the last century. He was born in 1749, and received his education at Trinity college, Dublin, and at Oxford, with a view to practising at the Irish bar, of which his father was a member. His rise in his profession was a rapid one. till in 1789 he attained its highest dignity, with the title of baron Fitzgibbon. In 1793 he was created viscount Clare, and two years after received an earl's coronet; to these honours was added an English barony in 1799. Lord Clare was a main promoter of the Union, and died in 1802.—*Gent. Mag.*

FITZHERBERT (NICHOLAS) grandson of Sir Anthony, the celebrated judge, was born about the middle of the sixteenth century, and received his education at Exeter college, Oxford, of which university he published a description. He was also the author of a life of cardinal Alan, under whom he held the situation of secretary while in Italy. There is besides a treatise on the "Antiquity and Duration of the Roman Catholic Religion in England," ascribed to his pen. He came to an untimely death by drowning, in 1612.

FLAUST (JEAN BAPTISTE) a learned French advocate, born in 1711, who was engaged for upwards of half a century in compiling a most laborious treatise on the "Laws and Customs of Normandy," in two folio volumes. His death took place at Rouen, where he practised in 1783.—*Dict. Hist.*

FLAVIUS (BLONDUS) the Latin designation of Flavio, a learned Italian, who in the fifteenth century held the situation of secretary to the papal see under four successive pontiffs. He was a native of the town of Forlì, born in 1388, and dedicated much of his leisure time to the study of the antiquities

of his country, the fruits of which appeared in a variety of able treatises, of which there is an entire edition, printed in 1531, at Basil. The principal of these are entitled "Romæ triumphantis;" "Romæ instauratæ;" "De Origine et Gestis Venetorum;" and "Italia Illustrata." His death took place in 1463.—*Dict. Hist.*

FLAXMAN (JOHN) professor of sculpture at the Royal Academy, was born at York, July 6, 1755. His father, who was also a sculptor, was for many years employed by Roubilliac and Scheemakers, and also kept a shop for the sale of plaster figures in the metropolis. Mr Flaxman studied the models in his father's warehouse, and in 1770 he was admitted a student of the Royal Academy. In 1782 he married Miss Anne Denman, a lady distinguished for her literary attainments; and in 1787 she accompanied him to Italy, where he pursued his studies for seven years. While at Rome he executed a group of figures, representing the fury of Athamas, from Ovid's *Metamorphoses*, for the late earl of Bristol. Soon after he made some designs from the *Iliad* and *Odyssey*; and subsequently others to illustrate the works of Dante and the tragedies of *Æschylus*. These productions established his fame as an artist, and he was elected a member of the academies of Florence and Carrara. In 1794 Mr Flaxman returned to England, and took up his residence in Buckingham-place, near the New-road, London. The first work which he executed after his return was a sepulchral monument for Lord Mansfield, which was erected in Westminster abbey. From this period he was almost uninterruptedly employed for a long series of years in works of the highest importance. In 1799 he published "A Letter to the Committee for Raising the National Pillar or Monument, under the patronage of his Royal Highness the Duke of Gloucester," in which he proposed the erection of a colossal statue of Britannia, two hundred feet high, on Greenwich hill, to be seen from the river. Mr Flaxman also drew up a sketch of the professional character of Romney the painter, for Hayley's *Life* of that artist; and he contributed several articles to *Dr Rees's Cyclopædia*. In January, 1818, he finished a set of drawings and a model of the shield of Achilles, as described in Homer's *Iliad*; from which casts in silver gilt have been made by Messrs Rundell and Bridge, who paid Flaxman 620*l.* for his designs. This artist was elected an associate of the Royal Academy in 1797, and in 1810 he was appointed professor of sculpture to that institution. In 1820 Mr Flaxman had the misfortune to lose his wife, from whose classical taste and knowledge he is said to have derived much assistance in the composition of many of his works. He died December 9, 1826, and was interred in the burial-ground of St Pancras. Among his principal productions may be specified, a monument for Collins the poet, and another for Miss Cromwell, in Chester cathedral; one for the countess Spencer, at Brington church, Northamptonshire; a

monumental bas-relief for "his beloved scholar," Thomas Hayley, son of the poet Hayley, at Earham, in Sussex; and a monument at Micheldever in Hampshire, to the family of Baring.—*Ann. Biog.*

FLEMING (ROBERT). There were two learned Scottish divines of this name, father and son. The elder, born in 1630 at Bathens, after graduating at St. Andrew's, was minister of Cambuslang, till the establishment of prelacy induced him to retire into the Netherlands. He is known as the author of a work entitled "The Fulfilling of the Scriptures," folio, 1726, which attracted a good deal of attention in its day. His death took place in 1694. The son accompanied his father to the continent, and was a member of the universities of Leyden and Utrecht. Towards the close of his life he came to England, and was chosen pastor to a presbyterian congregation in the metropolis, occasionally lecturing also at Salter's-hall. Besides a volume of sermons he published a variety of theological tracts, among others "Christology," "The Mirror of Divine Love," "History of Hereditary Right," "Theocracy," "Speculum Davidicum Redivivum," &c. The younger Robert Fleming died in London in 1716.—*Chalmers's Biog. Dict.*

FLETCHER (JAMES) an historical and miscellaneous writer, who was born in 1811. He resided for some time as an assistant with a gentleman who kept a school at St John's Wood, near London, which situation he relinquished to devote himself to writing for the press. His principal production was a "History of Poland," 8vo, a work creditable to his talents and industry. He was also the author of some poems entitled "The Siege of Damascus;" "The Gem," &c. and he was a contributor to several periodical publications. The success of his work on Poland induced him to give up his situation as a teacher, but meeting with some unexpected disappointments as to pecuniary affairs, within a few weeks afterwards, they had such an effect on his mind as to drive him to the commission of suicide, which he committed by shooting himself with a pistol, the ball of which passed through his breast, and occasioned immediate death. This melancholy event, which was attributed to temporary insanity, took place at Lisson-grove, near London, February 3, 1832.—*Ann. Biog.*

FLETCHER, or DE LA FLECHERE (JOHN WILLIAM) a Calvinist clergyman of the last century, descended of a good family in the canton of Berne, but born at Nyon in the Pays de Vaud, and educated at Geneva. In the earlier part of his life he served a short time in the Portuguese army, after which he came to England, and lived for a while with Sir Richard Hill in quality of tutor to his children. Having taken orders he became a member of "Lady Huntingdon's connexion," as it is called, and held a situation in the seminary at Trevecca, which he quitted on obtaining the living of Madely, Salop. Mr Fletcher was the author of ten volumes, con-

taining sermons and other devotional tracts, and died in 1785.—*Life by Gilpin.*

FLEURIAU (JEROME CHARLEMAGNE) a French writer, better known under the title of the marquis de Langle. He was born in Brittany about 1740, and died at Paris in 1807. His principal production is an eccentric work, entitled "Voyage en Espagne, par L. M. de Langle;" and he was also the author of "Voyage de Figaro en Espagne;" and "Voyage en Prusse, ou Mém. Secrets sur Fred. le Grand et sur la Cour de Berlin," 8vo.—*France Littéraire, par Ersch. Biog. Univ. Class.*

FLEXMAN (ROGER) a dissenting divine and theological writer, who was a native of Devonshire, and died in London in 1795. He published "The Method of Divine Worship in Dissenting Churches justified;" and he was employed in various compilations and literary labours, among which was the formation of an index to Dr Johnson's Rambler, in executing which he entered a reference to some criticism on Milton, thus—"Milton (Mr John) observations on," to the great displeasure of the learned lexicographer.—*Biog. Univ. Class.*

FLOWER (BENJAMIN) a popular political writer, who was originally engaged in commercial pursuits. In 1783 this gentleman, then a partner in a house of trade in London, lost the whole of his property by speculation in the funds. He subsequently became a printer at Cambridge, where he appears to have first distinguished himself by the publication of a work entitled "The French Constitution, with remarks on some of its principal articles, in which the Necessity of Reformation in Church and State in Great Britain is enforced," 1792, 8vo. In 1793 he commenced the publication of a weekly newspaper, called the "Cambridge Intelligencer," which he conducted for some time with extraordinary success; but the freedom of his remarks at length attracted the notice of the officers of government, and being prosecuted for libel and convicted, he was subjected to imprisonment, when his paper declined, and was discontinued. He afterwards resumed his occupation as a printer, and took up his residence at Harlow, in Essex, where he commenced a new periodical journal, entitled the "Political Review," which was continued for some years in monthly numbers, forming 8 vols, 8vo, 1807–1811. In the latter part of his life Mr Flower retired to Dalston, in Middlesex, where he died in February, 1829, at the age of seventy-four. Besides the works already mentioned, he published "National Sins considered, in two Letters to the Rev. Thomas Robinson," 1796, 8vo; "Reflections on the Preliminaries of Peace between Great Britain and the French Republic," 1800, 12mo; and "Proceedings on the Trial of an Action brought by the Author against his Brother-in-law, the Rev. John Clayton, for Defamation," 1808. *Biog. Dict. of Living Authors.*

FONBLANQUE (JOHN) an eminent English lawyer, who in 1764 published a "Trea-

tise on Equity," reprinted in 1799 and in 1805, with notes and improvements.—*Bridgeman's Legal Bibliography.*

FONTANA (FRANCIS LOUIS) an Italian cardinal, who died in 1822, member of the principal academies in Italy. He adhered to pope Pius VII, whom he accompanied to Paris in 1804; and he was afterwards imprisoned in the castle of Vincennes. Among his literary productions are contributions to Fabroni's History of Italian Literati; and a Life of Father Gerdil, prefixed to his works, 1806—1811, 20 vols, 4to.—*Biog. Univ. Class.*

FONTANELLE (JOHN GASPARD DUBOIS) a popular French writer, born at Grenoble in 1737, and died in 1812. Among his works may be noticed "Aventures Philosophiques," 1765, 12mo; "Naufrage et Aventures de Pierre Viaud," 1768, often republished; a translation of Ovid's Metamorphoses; and "Cours de Belles Lettres," 1813, 4 vols, 8vo. He was also the author of several plays.—*Ibid.*

FORBES (ALEXANDER) Lord Forbes of Pitaligo, a Scottish nobleman who is said to have been the prototype of the baron of Bradwardine in Sir Walter Scott's Waverley. Lord Forbes commanded a troop of horse in the rebellion in 1745; and after the battle of Culloden he fled to France, but returned to Scotland in 1749, and died in Aberdeenshire in December 1762, at a very advanced age. In 1734 he published a volume of "Moral and Philosophical Essays;" and a second work of the same kind appeared in 1761, a short time before his death.—*Ibid.*

FORESTA or **FORESTI** (JAMES PHILIP) better known as Philip of Bergamo, an Augustine monk, so called from the place of his nativity. He was born about the year 1434, and is known as the author of a chronicle from the earliest period to the commencement of the sixteenth century. A treatise on illustrious females is also ascribed to him. His death took place in 1520.—*Moretti.*

FORFAIT (PIERRE ALEXANDRE LAURENT) an eminent French engineer, born at Rouen in 1752, and died in 1807. He was the author of a Latin "Memoir on Navigable Canals," for which he obtained a prize from the academy of Mantua in 1773; "Traité Élémentaire de la Mâture des Vaisseaux," Paris, 1788, 4to; besides many memoirs presented to the Academy of Sciences, and several articles relating to navigation in the Encyclopédie Méthodique.—*Biog. Univ. Class.*

FORKEL (JOHN NICHOLAS) a distinguished German writer, chiefly on the history and theory of music. He was born in 1749, and died at Gottingen, in 1819. He had obtained the degree of doctor of philosophy, and was director of the music in the university of Gottingen. His acquaintance with musical literature was very extensive, and his works relative to the theory of music are regarded as possessing the highest authority. The following are his principal productions:—"Über die Theorie der Musik"—Of the Theory of Music, Gottingen, 1774, 4to; "Musicalis Kritische Bibliothek," Götta, 1778, 3 vols,

8vo; "Allgemeine Geschichte der Musik"—"A General History of Music," Leipsic, 1781, 2 vols, 4to, reckoned the most valuable of his works; a "Life of John Sebastian Bach;" an "Almanack of Music for the year 1782, &c." and "General Literature of Music," containing critical accounts of various treatises on that subject published in different parts of Europe from the earliest times to the present age, in the form of a dictionary. Forkel also composed much music, both vocal and instrumental, and he was an excellent pianist of the school of Bach; he was also a man of extensive general knowledge.—*Biog. Dict. of Mus.*

FÖRSKAL (Pēter) the name of a promising young naturalist, a Swede by birth, and the scholar and friend of Linnæus. After completing his studies at Upsal, he travelled into the East with Niebuhr, but died before he had completed the second year of his expedition in 1763, at Jerim in Arabia, at the age of twenty-seven. His remarks on the productions of the countries through which he passed, occupying three quarto volumes, were published by Niebuhr on his return to Europe.—*Dict. Hist.*

FOSCOLO (Ugo) a celebrated Italian writer, born about 1776 on board a frigate belonging to the government of Venice, near Zante, of which island his father was provéditeur, or governor for the republic. He was educated at the university of Padua, and while there he incurred the suspicion of being a democrat, and was summoned before the state inquisitors; but he was dismissed with an admonition, and advised to proceed on his travels. He went to Tuscany, and ere he had reached the age of twenty he wrote his tragedy "Tieste." The government, under the influence of Buonaparte, no longer affording him any grounds for apprehension, he returned to Venice, and in January 1797 he procured his tragedy to be represented at the theatre of St Angelo, when it was received with the most extraordinary applause. Foscolo was soon after employed as secretary to Battaglia, who was sent as ambassador to Buonaparte, to endeavour to preserve the independence of the Venetian republic. The embassy was unsuccessful, and Foscolo, dissatisfied with the Austrian government, retired into Lombardy, then the Cisalpine republic. There he wrote and published the "Ultime Lettere di Jacopo Ortis," a romance, portraying in the most powerful language the depth of passion and feeling. He subsequently adopted the military profession, and having enlisted in the first Italian legion that was formed, he was shut up in Genoa during the famous siege of 1799, with general Massena. There he wrote two Italian odes of great beauty, both addressed to Luigia Pallavicini. After the battle of Marengo he remained in the Italian army till 1805, when he was sent to Calais with the troops professedly destined for the invasion of England. Disliking the service of Napoleon after he had become emperor, he quitted it, but retained his military rank as captain. In 1808 and 1809 he published an edition of the works of

Montecuccoli, the rival of Turenne, which he dedicated to general Caffarelli, minister of war for the kingdom of Italy, to whom Foscolo was aide-de-camp. About this time he succeeded Monti, as professor of literature in the university of Pavia, when he commenced his lectures by an oration "Dell' Origine e dell' Ufficio della Letteratura;" and the boldness of his language is supposed to have alarmed the jealousy of Napoleon, as the professorship was suppressed, and he was thus displaced, after he had held the office only two months. In 1812 he produced another tragedy, "Ajace," which was represented in the theatre Della Scala, at Milan. He went to Milan in 1814, and was promoted to the rank of major, by the regency of the kingdom of Italy, after the fall of Napoleon. He is said afterwards to have engaged in a conspiracy to drive the Austrians out of Italy, when a discovery taking place he retired to Switzerland, and in 1815 removed to England. His reputation procured him a good reception from some of our most eminent literati, and he was noticed by persons of the highest rank and fashion. He published "Ricciarda," a tragedy; "Esays on Petrarch," 1821; and "Discorso sulla Testa di Dante," 1826; besides which he wrote various articles in the Edinburgh, Quarterly, Retrospective, and Westminster Reviews, and in the London Magazine, and other periodical works. He might, by his writings alone, have insured himself independence if he had acted with prudence and moderation; but he involved himself in difficulties by erecting and expensively furnishing a cottage in the Regent's-park, and his pride and violence of temper disgusted his friends. He died near London, September 10, 1827. Besides the works already mentioned, he published "Chioma di Berenice;" "Didymi Cle-rici Prophetæ Minimi Hypercalypseos, liber singularis," a curious satire against living Italian authors, reviewers, and politicians, a key to which he printed in London; and he translated into Italian verse the first and third books of Homer's Iliad.—*London Mag. Révue Encyc.*

FOSTER (HENRY) a naval officer, distinguished as a man of science. After having accompanied Sir Edward Parry in his voyages to the Arctic regions, he was, in 1828, appointed to the command of the Chanticleer sloop of war, to prosecute a voyage of scientific research in the southern regions of the globe, and determine points relative to the figure of the earth, magnetism, meteorology, and other subjects. He sailed from Spithead in April 1828, and after having visited Madeira, Teneriffe, Rio de Janeiro, and St Catherine's, at Monte Video, he commenced experiments on the pendulum and other objects of research. The vessel afterwards proceeded to Statenland, and Prince William's Island, the most southerly tract of land known on the globe. Thence she went to St Martin's Cave, about eight miles from Cape Horn, where the experiments and observations were again repeated. From Cape

Horn the Chanticleer, in twenty-eight days, ran to the Cape of Good Hope, where she remained four months, during which period Captain Foster was assiduously employed in the government observatory. After having visited St Helena, Fernando Noronha, and other places, the vessel proceeded to Porto Bello, where, in addition to the usual experiments to be made at this place, captain Foster had to ascertain the difference of meridian between Panama on the Pacific, and Porto Bello, or some other station, on the Atlantic, by means of rockets. In the prosecution of his undertaking he ascended the river Chagres in a canoe, and was returning down the stream February 5, 1831, when he accidentally fell into the water, and was drowned. His body having been found by the Indians, was interred at Chagres, and an inscription to his memory on a brass plate was placed by the officers of the Chanticleer in Fort St Lorenzo.—*Ann. Biog.*

FOUCAULT (NICHOLAS JOSEPH) a learned Frenchman, born in 1643 at Paris, and known as the discoverer of the ancient town of the Vindocassi in Normandy. It is to his researches also that the recovery of Lactantius's treatise *De Mortibus Persecutorum* is mainly owing. His death took place in 1721.—*Dict. Hist.*

FOUCHE (JOSEPH) duke of Otranto, was born at Nantes in 1753. He displayed in his youth a steady disposition, and a strong taste for the acquisition of learning. Successively student and professor, he had already distinguished himself among the fathers of the Oratory, when the commencement of the Revolution opened to him the prospect of playing a more important part than that of regent of a college, which had previously been the summit of his ambition. He adopted the profession of an advocate, in which he was not very successful; but having become the founder of the popular society at Nantes, he was, in 1792, elected a deputy to the National Convention. On the trial of Louis XVI, he voted for his death. As an associate of the Jacobins he was sent, with Collot d'Herbois, to Lyons, to wreak the vengeance of his party on that devoted city. The cruelties which he there committed are recorded in his own letters and reports, published in the *Moniteur*. Returning to Paris, he joined in the destruction of Robespierre, but only with a view to save himself from sharing in his fate. He was accused before the Convention of fraud in the management of the revolutionary impost; and when Tallien and Legendre would have defended him, by alleging his co-operation on the 9th of Thermidor, Boissy d'Anglas exclaimed, "Fouché had no part in the event of that day: it was an undertaking too noble to be dishonoured by his interference!" In consequence of this accusation, a decree was passed for his arrest; but he was set at liberty by the amnesty of the 4th of Brumaire, in the fourth year of the republic. He was then sent on a mission to the frontiers of Spain; and on his return he retired, in a kind of disgrace, to a

country house near Paris. At length his talents were again put in requisition, through the recommendation of Barras, and he was sent ambassador to the Cisalpine republic in the year seven. There, supported by general Joubert, he resisted the orders of the directory, who recalled him from Italy. His return to Paris was at the period of the overthrow of his enemies; and their successors having determined to discredit the constitution of the year three, Fouché was judged worthy to second their design, and he was appointed minister of the general police. By his order the clubs were shut up, the journals seized, their editors imprisoned, and, in one word, all his illegal acts were executed, and the revolution of the 18th of Brumaire was consummated. Buonaparte himself could not behold without astonishment and alarm this old conventionalist so readily initiated into all the secrets of arbitrary government. He was doubtful of his sincerity, and it was not till after the explosion of the 3rd of Nivose, the arrest of Carbon and St Regent, and the deportation of one hundred and fifty jacobins, that Buonaparte could place confidence in his new minister. Some months after the peace of Amiens, Fouché was sacrificed to the caprice of Lucien, who hated him; but it was soon perceived that he alone was capable of smoothing the way for the passage of his master from the consulate to the empire; and Lucien in his turn was obliged to quit France. Buonaparte being called to the theatre of war, the whole power of the government was centered in Fouché, who used it with wisdom and moderation. After the peace of Presburg, December 1805, the emperor conferred on him the title of Duke of Otranto. Fouché did not, however, surrender his independence. He loudly censured the invasion of Spain, and he gave still greater offence by recommending the employment of Bernadotte to defend Belgium against the invasion of the English, saying in a proclamation, "the presence of Napoleon is not necessary to repel our enemies." On the return of the emperor to Paris, he successively (Oct. 1809, and June 1810) deprived his obnoxious counsellor of the portfolios of the interior and of the police, which he had unitedly held. He was then sent into a sort of honourable exile, with the empty title of governor of Rome. He travelled through Italy, and returning fixed his residence at Aix, in the department of the mouths of the Rhone, where he remained till 1813, when Napoleon called him to Dresden to give his advice as to the means of repairing the disasters of that period. He again gave offence by his frankness; and he was sent as governor-general into the Illyrian provinces. Thence he was driven by foreign invasion; and that he might not return to France, he was ordered to go to Naples. Murat was then about to join the coalition against Buonaparte; and Fouché, without entering into his scheme, gave him some prudent advice. (See "Lettre au Roi Joachim," 1814.) He returned to France when the face of affairs was entirely changed, and he was well received by those in

power. His opinion was asked, but his counsels were neglected, which became the subject of regret when it was too late. Napoleon reappeared in France, and Fouché being suddenly called to the ministry, executed his duties with the skill and devotion of a man who preferred the interests of his country to those of his sovereign. He told the emperor that his only means of safety would be to restore to the French the energy of liberty. After the battle of Waterloo he was appointed president of the provisional government; and it was he who pressed the abdication of Buonaparte, and who treated with the duke of Wellington, though he was disposed to have resisted, if the defence of Paris had not been judged useless. Under Louis XVIII Fouché continued to belong to the ministry; but the law of the 6th of January, 1816, drove him into banishment. He then retired to Dresden, where he had been minister plenipotentiary; and after travelling some time in Germany, he took up his abode at Trieste, where he died in 1820. Several works have been published relating to Fouché, among which the most remarkable is that entitled *Mémoires de J. Fouché*, Paris, 1824, 2 vols, 8vo.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*
